## PREFACE TO FIRST EDITION

FOR many years a need has been felt by chemists for a book which shall collect into convenient form for ready reference the various data concerning the solubility of chemical substances that have been published from time to time in chemical periodicals and elsewhere

The first mention that can be found of such a plan was made in 1731, when Peter Shaw delivered Chemical Lectures in London, as may be seen from the following —

EXTRACTS from PETER SHAW's Chemical Lectures, publickly read at London in 1731 and 1732 London Second Edition, London 1755 8vo

Page 97 Experiment I — That Water as a Menstruum dissolves more of one body and less of another

[He shows that two ounces of water dissolve two ounces of Epsom salt, five drachms of common salt, and eight grains of cream of tartar Only in the latter case much remained undissolved until boiled ]

"It might be proper for the further Improvement of Chemistry and Natural Philosophy to form a Table of the Time and Quantity wherein all the known Salts are dissolvable in Water Such a Table regularly formed might ease the Trouble of refining Salts, by shewing at once without future Trial or Loss of Time how much Water each Salt required to dissolve it for Clarification, Filtration, or Crystallization It would likewise supply us with a ready and commodious Way of separating any Mixture of Salts, by shewing which would first shoot out of the Mixture upon Crystallization The same Table might also direct us to a ready and commodious Method of separating two Salts without waiting for Crystallization "

It was many years, however, before the scheme suggested by Peter Shaw was put into execution Professor F H Storer published the first work that undertook to carry out the idea in its entirety, in 1864, in a book, which he entitled "First Outlines of a Dictionary of Solubilities of Chemical Substances," and which contained a compilation of nearly all the data on the subject published before 1860 It was at once recognized as a most valuable contribution to chemical literature, but for many years it has been difficult to obtain this work, as the limited edition which was published was soon wholly exhausted Since then nothing has appeared on the subject except the brief tabulations found in various reference books, and no attempt has been made to cover the whole subject

It is needless to state that the growth of chemical science since the publication of Professor Storer's book has been so enormous that that work has lost, at least to a great extent, the practical value it possessed thirty years ago This growth has been indeed so great, and the data which have accumulated since 1860 so far surpass the earlier in volume, that a simple revision of Professor Storer's book was impracticable, and it therefore seemed best to start afresh

With the facilities offered by the various scientific libraries at Harvard University, the Massachusetts Institute of Technology, and other libraries in Boston, it has been possible to collect nearly all the data relating to the subject. For the work before 1860 Professor Storer's work has been found invaluable.

The method pursued has been to form a preliminary list of compounds with more or less data by consulting the two most complete works on inorganic chemistry—Gmelin-Kraut's "*Handbuch der anorganischen Chemie*" and Graham-Otto-Michaelis's "*Lehrbuch*." These statements have been verified and elaborated by consulting the original memoirs in all the periodicals devoted to chemical literature which were obtainable. The "*Jahresbericht der Chemie*" also has been used extensively in tracing references, but the original memoirs have always been consulted and references given to them when possible.

It has been found impracticable to draw any distinction as to reliability between the various data given by different observers. It was manifestly impossible to attempt to verify experimentally the statements of those who have carried on the researches, for the most assiduous labor of many could only cover a small portion of the attested facts. Therefore, even when two statements are directly contradictory, both have been given with the authority for each. The only exception to this has been made when more recent discoveries have shown beyond any reasonable doubt the falsity of previous work. In this way some of the older manifestly inaccurate work has been omitted. In a majority of cases the more recent work may be considered to be the more accurate, but this is not the invariable rule. A Synchronistic Table of the more common periodicals is given in the Appendix, whereby it is easy to determine the date of the publication of a research to which reference is made.

It may be objected by the practical chemist that most of the work previous to 1850 might well have been omitted, but a great deal of this work possesses at least a historical value, and often furnishes facts which have not since been verified. Much of the earlier work, when obviously of less importance, has been printed in smaller type.

The aim has been to include in this volume all analyzed inorganic substances, that is, all substances which do not contain carbon, but exception has been made in the case of  $\text{CO}_2$ ,  $\text{CO}$ ,  $\text{CS}_2$ , the carbonates, cyanides, ferro-cyanides, etc., which are here included.

The work has been brought up to March, 1894, when this volume went to press, and the results of researches published since that time are not included in the present edition.

It is hoped that this book will fill to some extent the want that has been felt by chemists for a compilation of this nature. While it has been attempted to make the book as free from errors as possible, nevertheless it is naturally impossible to avoid many mistakes, and the compiler will be very grateful to those who may call his attention to any errors or omissions.

A M C

## PREFACE TO SECOND EDITION

DURING the twenty-five years which have elapsed since the publication of the first edition of this dictionary, a very large amount of work has been published in chemical periodicals, containing data concerning the solubility of inorganic chemical compounds. As it was impossible for the compiler of the first edition to devote the time necessary for the collecting of the published data, it was necessary to employ assistance, and Dr Dorothy A Hahn, Professor of Chemistry, Mt Holyoke College, was engaged for this work. Dr Hahn has collected the larger part of the material in this book, which work in spite of its arduous and tedious nature, she has performed in a most painstaking manner.

The compilation and arrangement of the data collected by Dr Hahn, which devolved upon the original author, took much time. This, together with difficulties in printing, caused by the general conditions after the war, has delayed the publication until the present year, although the work was begun in 1916, and it has only been brought up to January 1st of that year.

Since the publication of the first edition of this work, Dr Atherton Seidell has brought out two editions of his book, entitled "Solubilities of Inorganic and Organic Substances," which covers quite a different field, as he considers only quantitative data and those only for the commoner substances. Dr Seidell has followed the plan in most cases where there are several available solubility determinations of a substance, of selecting and averaging the more reliable results, and embodying them in tables. Although this undoubtedly facilitates ready reference, it has seemed better to adhere to the original plan of the first edition, and to publish all the data in the form of the original authorities with references and dates, so that the user may be at liberty to use his own judgment in selection. Some few of the tables arranged by Dr Seidell, however, have seemed to possess decided advantages over any other published data and they have been incorporated in the present volume. It is desired also to acknowledge indebtedness to Dr Seidell's work for certain other tables where the original sources were not available to the present compilers.

The same plan and arrangement used in the first edition has been followed with certain elaboration, however, of the arrangement of data on the solubility of two or more salts in a solvent, which is explained in the Explanatory Preface.

Data published since the first edition on the cobalt and chromium ammonia compounds and those of the platinum group have been omitted, as it seemed that solubility data on those compounds possessed very little general interest.

As stated in the preface of the first edition, while every possible attempt has been made to avoid errors, it is manifestly impossible to avoid many mistakes in a work of this nature, and the compiler will be glad to have his attention called to any errors or omissions.

WILMINGTON, Del , Jan , 1921

A M C

## EXPLANATORY PREFACE

In order to reduce this volume to a convenient size the subject-matter has been abbreviated and condensed as far as seemed compatible with clearness, but it has been the aim not to use any abbreviations which are not at once intelligible without consulting the explanatory table. The more common chemical formulæ have been universally used, thereby saving a large amount of space without detracting from ready intelligibility to chemists.

The solubility of the substance in water is first given, the data being arranged chronologically in the longer articles. Then follow the specific gravities of the aqueous solutions, and also any data obtainable regarding their boiling-points, other physical data concerning solutions are not included. Following this is the solubility of the substance in other solvents—first the inorganic acids, then alkali and salt solutions, and finally organic substances.

Owing to the great increase of data, published during the last twenty years, on the simultaneous solubility of two or more salts in a given solvent, it has been found necessary to plan some arrangement, whereby such data can easily be found, and the plan adopted is as follows. The data for the solubility of two salts in a solvent is placed under the salt which comes first according to the alphabetical arrangement in this dictionary, and the order of the data on various salts under the same heading follows the alphabetical order of the salts considered. Thus the data on the solubility of  $\text{NH}_4\text{Cl} + \text{BaCl}_2$ ,  $\text{NH}_4\text{Cl} + \text{CuCl}_2$ , and  $\text{NH}_4\text{Cl} + \text{PbCl}_2$ , and  $\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$  are placed under Ammonium Chloride and arranged in the given order. Certain exceptions have been made to this rule, where the data directly concerns the solubility of a salt in a solution of another salt, in which case, it is placed under the former. Numerous cross references, however, are given, which it is hoped will avoid confusion.

In many cases no definite distinction can be drawn between the phenomena of solution and decomposition. At present the theory of solution is in a confused state, and until what really takes place when a substance dissolves is thoroughly understood no distinct line can be drawn. The whole subject is unsettled at the present time, for while many chemists believe in the so-called "dissociation" theory, yet the "hydrate" theory is not without its supporters. It is not my intention to discuss the theoretical side of the question, which has been so well treated in many recent works. It is, however, obvious that the phenomena are essentially different, when, for example, sodium carbonate is dissolved in water, in which case the original salt is deposited on evaporation, and when iron is dissolved in sulphuric acid, and the solution deposits a sulphate of iron. Yet it is still the custom to speak of iron as soluble in sulphuric acid, although it would be much more accurate to say that the sulphuric acid was decomposed by the iron. It has thus been found impracticable to draw a sharp line between solu-

tion and decomposition, and the term "soluble" has in general been used where a solution of some sort is formed by the action of the solvent

The matter of alphabetical arrangement of chemical compounds, in the present somewhat confused state of chemical nomenclature, has been a difficult question to decide. The plan followed has been practically that of the standard Dictionaries of Chemistry, whereby the compounds of metals with one of the non-metallic elements have been classified under the metals, while the salts of the other acids (the oxygen acids so called and some few others) have been arranged alphabetically under the acids. Thus barium chloride is found under barium, while barium chlorate is found under chloric acid. No exception has been made in the case of the rare metals, as is usually the custom in Dictionaries of Chemistry. Double salts are to be found under the word which comes first alphabetically, thus, "common alum," potassium aluminum sulphate, is found under aluminum sulphate as aluminum potassium sulphate (under sulphuric acid), but ammonia chrome alum is found under ammonium sulphate as ammonium chromium sulphate. In the same way the double sulphate and chromate of potassium is found under potassium chromate (chromic acid), and not under potassium sulphate (sulphuric acid). The double chloride of ammonium and magnesium is found under ammonium chloride (ammonium), while the double chloride of potassium and magnesium is found under magnesium chloride (magnesium). An exception is made, however, in the case of double compounds of salts of oxygen acids with salts containing a single non-metallic element, in which case they are always found under the oxygen acid. Thus the double sulphate and chloride of lead,  $\text{PbSO}_4$ ,  $\text{PbCl}_2$ , is found under lead sulphate (sulphuric acid), and not under lead chloride (lead).

The above method in some cases widely separates analogous compounds but it was found to be the only practical way to a strictly alphabetical arrangement, which is no necessary in a book containing so many very short articles.

The ammonia addition-products furnished another difficulty. While their nature is more or less definitely understood in the cobalt-platinum etc., compounds, and a definite nomenclature is in general use, there is an absolute lack of anything of the kind in the less definite compounds. It is good usage to speak of cuprummonium compounds, but how shall we designate the analogous cadmium compounds? "Cadmummonium" has not yet received the sanction of chemists, and  $\text{AlCl}_3$ ,  $\text{NH}_3$  is a still worse case for naming. I have therefore not attempted to name these compounds, but classified them all under the salts to which the ammonia is added, affixing the word ammonium thus aluminum chloride ammonium, cadmium chloride ammonium, and also cupric chloride ammonium for the salt now almost universally known as cuprummonium chloride.

The ammonia compounds of cobalt, chromium, mercury, and the platinum metals are arranged alphabetically according to their universally accepted names, a list of which is given under each of those elements.

It has further been necessary to settle arbitrarily the question whether a substance should be considered as a double salt or a salt of a compound acid con-

taining one of the metals For example, "fluosilicates" (or silicofluorides, as some may prefer) is the general name for the double fluorides of  $\text{SiF}_4$  and a metal, but this unanimity in usage gradually disappears as the basic elements become more nearly alike, so that it is impossible to draw a line between such compounds and a compound such as the double chloride of magnesium and potassium, for which indeed the name "potassium chloromagnesate" has been proposed The aim has been in all these cases to follow the best usage rather than make an absolutely homogeneous system of nomenclature out of the existing confusion

In the matter of formulæ no attempt at uniformity has been made Thus in the case above some chemists write the formula of the double chloride of magnesium and potassium as  $\text{KMgCl}_3$ , others as  $\text{KCl}, \text{MgCl}_3$  The form here used has been in most cases that of the author from whom the data are taken

The prefixes mono, di, tri, ortho, pyro, etc, have in general been disregarded in the alphabetical arrangement, and have been printed in italics Exceptions to this have been made, however, in the cobalt, chromium, etc, ammonium compounds, and in a few others, as dithionic, perchloric, etc, acids Cross references have been used, so as to prevent any confusion arising from lack of uniformity in this respect

In the Appendix will be found formulæ and tables for the conversion of the degrees of various hydrometer scales into specific gravity, and a Synchronistic Table of the Periodicals to which references are most frequently made

A DICTIONARY OF CHEMICAL SOLUBILITIES  
INORGANIC

# DICTIONARY

OF

## CHEMICAL SOLUBILITIES

### INORGANIC

#### Actinium emanation

Solubility coefficient of actinium emanation in  $H_2O$  at room temp is 2

If the solubility of actinium emanation in  $H_2O$  is made=1, the relative solubility of the emanation in sat  $KCl+Aq=0.9$ , in conc  $H_2SO_4=0.95$ , in ethyl alcohol=1.1, in amyl alcohol=1.6, in benzaldehyde=1.7, in benzene=1.8, in toluene=1.8, in petroleum=1.9, in  $CS_2=2.1$  at  $18^\circ$

(Hevesy, Phys Zeit 1911, 12 1221)

#### Air, Atmospheric

See also Nitrogen and Oxygen

100 vols  $H_2O$  at  $15^\circ$  and 760 mm absorb about 5 vols atmospheric air (Saussure)

1 vol  $H_2O$  at  $t^\circ$  and 760 mm pressure absorbs V vols atmospheric air reduced to 760 mm and  $0^\circ$

$t^\circ$	V	$t^\circ$	V	$t^\circ$	V
0	0.02471	7	0.02080	14	0.01822
1	0.02406	8	0.02034	15	0.01795
2	0.02345	9	0.01192	16	0.01771
3	0.02287	10	0.01953	17	0.01750
4	0.02237	11	0.01916	18	0.01732
5	0.02179	12	0.01882	19	0.01717
6	0.02128	13	0.01851	20	0.01701

(Bunsen's Gasometry)

1 l  $H_2O$  absorbs cc N and O from air at  $t^\circ$  and 760 mm pressure

$t^\circ$	cc N	cc O	cc N+O
0	16.09	8.62	24.71
5	14.18	7.60	21.78
10	12.70	6.79	19.49
15	11.67	6.25	17.92
20	11.08	5.93	17.01

(Bunsen, Gasometr Methoden, 2te Aufl 209, 220)

1 l  $H_2O$  absorbs cc N and O from air at  $t^\circ$  and 760 mm pressure (dry)

$t^\circ$	cc N	cc O	N+O	%O
10	15.47	7.87	23.34	33.74
15	13.83	7.09	20.92	33.86
20	12.76	6.44	19.20	33.55
25	11.78	5.91	17.69	33.40

(Roscoe and Lunt, Chem Soc 55 568)

1 l  $H_2O$  absorbs cc N and O from air at  $t^\circ$  and 760 mm

$t^\circ$	cc N	cc O	%O
0	19.53	10.01	33.88
6.0	16.34	8.28	33.60
6.32	16.60	8.39	33.35
9.18	15.58	7.90	33.60
13.70	14.16	7.14	33.51
14.10	14.16	7.05	33.24

(Pettersson and Söndén, B 22 1439)

1 l  $H_2O$  absorbs cc N ( $0^\circ$  and 760 mm) from atmospheric air at  $t^\circ$  and 760 mm pressure (dry)

$t^\circ$	cc N	$t^\circ$	cc N	$t^\circ$	cc N
0	19.14	10	15.14	20	12.63

4	17.34	14	13.98	24	11.95
6	16.54	16	13.48	25	11.81
8	15.81	18	13.03		

(Hamberg, J pr (2) 33 447)

1 l  $H_2O$  absorbs cc N from air at  $t^\circ$  and 760 mm pressure

$t^\circ$	cc N	$t^\circ$	cc N	$t^\circ$	cc N
0	19.29	10	15.36	20	12.80
5	17.09	15	13.95	25	11.81

(Dittmar, Challenger Expedition, vol 1 pt 1)

1 l H<sub>2</sub>O sat with air at t° and 760 mm contains cc O (red to 0° and 760 mm)

t°	cc O	t°	cc O	t°	cc O
0	10 187	11	7 692	22	6 114
1	9 910	12	7 518	23	5 999
2	9 643	13	7 352	24	5 886
3	9 387	14	7 192	25	5 776
4	9 142	15	7 038	26	5 669
5	8 907	16	6 891	27	5 564
6	8 682	17	6 730	28	5 460
7	8 467	18	6 614	29	5 357
8	8 260	19	6 482	30	5 255
9	8 063	20	6 356		
10	7 873	21	6 233		

(Winkler, B 22 1773)

1 vol H<sub>2</sub>O absorbs 0 01748 vol air at 24 05° and 760 mm pressure (Winkler, B 21 2851)

Composition of the absorbed air between 0° and 24° is 34 91% O and 65 09% N (Bunsen), between 15° and 16°, 32 17% O and 67 83% N (König and Kranch, Z anal 19 259), 32% O and 68% N (Regnault), at 0°, 35 1% O, 10°, 34 8% O, 20°, 34 3% O, 25°, 33 7% O (Winkler, B 21 2483) See also Roscoe and Lunt, and Pettersson and Söndén, page 1

Solubility of atmos oxygen and nitrogen in 1000 cc H<sub>2</sub>O at 760 mm pressure (calc)

Temp	Oxygen	Nitrogen	Temp	Oxygen	Nitrogen
	cc	cc		cc	cc
0°	10 19	18 45	29°	5 33	10 30

45	1351	12 24	100	110	00
50	1297	11 40			

(Winkler B 1901 34 1409)

Sea-water absorbs less O and N from than pure H<sub>2</sub>O, but the ratio between O and N remains constant. In sea-water sat with at 6 22° the oxygen was 33 50% of the gas absorbed (Pettersson and Söndén)

1 l sea-water absorbs cc N and O from at t° and 760 mm pressure

t	cc N	cc O	N+O	% O
0	14 41	7 77	22 18	35 0
5	13 22	6 95	20 15	34 3
10	12 04	6 29	18 37	34 2
15	11 01	5 70	16 71	34 1

(Tørnøe, Norwegian North Atlantic Exp Chem 18)

1 l sea water absorbs cc N from air at  $t^\circ$  and 760 mm

$t^\circ$	cc N	$t^\circ$	cc N	$t^\circ$	cc N
0	15 60	10	12 47	20	10 41
5	13 86	15	11 34	25	9 62

(Dittmar)

1 l sea-water absorbs cc N ( $0^\circ$  and 760 mm) from atmospheric air at  $t^\circ$  and 760 mm pressure (dry)

t	cc N	$t^\circ$	cc N	t	cc N
0	14 85	10	12 06	20	10 25
2	14 20	12	11 62	22	9 98
4	13 60	14	11 23	24	9 73
6	13 04	16	10 87	25	9 62
8	12 53	18	10 54		

(Hamburg)

Absorption of air which is free from carbonic acid by  $\text{H}_2\text{SO}_4$  at  $18^\circ$  and 760 mm  $\alpha$  = coefficient of solubility

$\text{H}_2\text{SO}_4$	$\alpha$	$\text{H}_2\text{SO}_4$	$\alpha$
98%	0 0173	70%	0 0055
90%	0 0107	60%	0 0059
80%	0 0069	50%	0 0076

(Lower,  $Z$  anorg 1906, 50, 388)

Absolute alcohol absorbs 0 11 vol gas from air  $\frac{1}{3}$  of which is  $\text{O}$  and  $\frac{1}{3}$   $\text{N}$ . On mixing with an equal vol  $\text{H}_2\text{O}$   $\frac{1}{3}$  of the dissolved gas is given off (Dobereiner)  
100 vols alcohol (95 1 %) absorb 14 1 vols air (Robinet C R 58 608)

100 vols petroleum absorb 6 8 vols air  
oil of lavender 6 89  
benzene 14 0  
oil of turpentine 24 15  
(Robinet  $l c$ )

1 vol ether at 760 mm pressure absorbs 0 290 vols air at  $0^\circ$ , 0 267 vols at  $10^\circ$ , 0 286 vols at  $15^\circ$  (Christoff  $Z$  phys Ch 1912, 79 459)

### Alcohol $\text{C}_2\text{H}_5\text{OH}$

$\gamma_p$  gr of pure ethyl alcohol + Aq at  $25^\circ$

% alcohol	$\gamma_p$ gr	% alcohol	$\gamma_p$ gr
0	0 997077	55	0 898502
2	0 993359	60	0 886990

35	0 941459	98	0 791170
40	0 931483	99	0 788135
45	0 920850	100	0 785058
50	0 909852	—	—

(Osborne, McKelvy and Bearce, Bureau of Standards, Sci Paper No 197)

### Alum, Ammonia

See Sulphate, aluminum ammonium

### Alum, Chrome

See Sulphate, aluminum chromium

### Alum, Iron

See Sulphate, aluminum ferric

### Alum, Potash

See Sulphate, aluminum potassium

### Alumina

See Aluminum oxide

### Aluminic acid, $\text{H}_2\text{Al}_2\text{O}_4 = \text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$

Aluminum hydroxide possesses acid properties and salts corresponding to an acid of the above formula exist

See Aluminum hydroxide

### Aluminates

All aluminates are insol in  $\text{H}_2\text{O}$  except those of K and Na (Fremy) and Ba (Beckmann, J pr (2) 26 385)

### Barium aluminate, $\text{BaAl}_2\text{O}_4 + 4\text{H}_2\text{O}$

Sol in 10 pts  $\text{H}_2\text{O}$ , can be recryst from alcohol (Deville J pr 87 299)

+5H $_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  with decomp (Allen, Am Ch J 1900, 24 313)

+7H $_2\text{O}$  Sl sol in cold, not completely sol in hot  $\text{H}_2\text{O}$  Sol in cold dil  $\text{HCl} + \text{Aq}$  (Beckmann, J pr (2) 26 385)

$\text{BaAl}_2\text{O}_4 + 5\text{H}_2\text{O}$  Sol in 20 pts  $\text{H}_2\text{O}$  by boiling (Beckmann, B 14 2151)

Insol in alcohol

Sl sol in  $\text{H}_2\text{O}$  with decomp insol in alcohol (Allen, Am Ch J 1900, 24 311)

$\text{Ba}_3\text{Al}_2\text{O}_8 + 7 - 11\text{H}_2\text{O}$  Sol in 15 pts  $\text{H}_2\text{O}$  with decomp into  $\text{BaAl}_2\text{O}_4 + 5\text{H}_2\text{O}$ , insol in alcohol (Beckmann)

### Barium aluminate bromide, $\text{BaAl}_2\text{O}_4 \cdot \text{BaBr} + 11\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Beckmann, J pr (2) 26 385, 474)

### Barium aluminate chloride, $\text{BaAl}_2\text{O}_4 \cdot 3\text{BaCl}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Beckmann  $l c$ )

$\text{BaAl}_2\text{O}_4 \cdot \text{BaCl}_2 + 11\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Beckmann,  $l c$ )

### Barium aluminate iodide, $\text{BaAl}_2\text{O}_4 \cdot \text{BaI}$

Sol in  $\text{H}_2\text{O}$  (Beckmann  $l c$ )

### Calcium aluminate, $\text{CaO} \cdot \text{Al}_2\text{O}_3$

Decomp by  $\text{H}_2\text{O}$  but does not "set" Sol in  $\text{HCl}$ , insol in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{HF}$  (Dufay, C R 1900, 131 545)

$\text{Ca}_2\text{Al}_2\text{O}_5 + 7\text{H}_2\text{O}$  Slowly decomp by  $\text{H}_2\text{O}$ , sl sol in  $\text{H}_2\text{O}$  (Allen, Am Ch J 1900, 24 316)

$\text{Ca}_3\text{Al}_2\text{O}_8$  Insol in  $\text{H}_2\text{O}$ , not decomp by  $\text{KOH} + \text{Aq}$ , sol in acids (Tissier, C R 48 627)

+6H<sub>2</sub>O Ppt, sl sol in H<sub>2</sub>O, insol in alcohol (Allen, Am Ch J 1900, **24** 316)  
 3Al<sub>2</sub>O<sub>3</sub>·4CaO+3H<sub>2</sub>O Ppt (Friedel, Bull Soc Min 1903, **26** 121, C C 1904, I 430)

#### Cobalt aluminate

"*Thenard's* or *Leuthner's* blue" Insol in H<sub>2</sub>O

CoAl<sub>2</sub>O<sub>4</sub> Insol in H<sub>2</sub>O and acids (Ebelmen)

Cobalt magnesium aluminate, [MgCo]Al<sub>2</sub>O<sub>4</sub>

"*Spinel Blue*" Insol in H<sub>2</sub>O or HCl+Aq (Ebelmen)

Glucinum aluminate, GlAl<sub>2</sub>O<sub>4</sub>

Min *Chrysoberyll* Not attacked by acids, but decomp by KOH+Aq

Iron (ferrous) aluminate, FeAl<sub>2</sub>O<sub>4</sub>

Min *Hercynite* Not attacked by acids

Lithium aluminate, LiAlO<sub>2</sub>

Sol in H<sub>2</sub>O (Weyberg, C C 1906, II 1659)

Lithium hydrogen aluminate, LiHAl<sub>2</sub>O<sub>4</sub>+5H<sub>2</sub>O

Sl sol in H<sub>2</sub>O, decomp on boiling (Allen, Am Ch J 1900, **24** 310)

Magnesium aluminate, MgAl<sub>2</sub>O<sub>4</sub>

Min *Spinel* Insol in H<sub>2</sub>O

Insol in HNO<sub>3</sub>+Aq, very sl sol in HCl+Aq, partly sol in H<sub>2</sub>SO<sub>4</sub> at boiling temp (Abich, Pogg **23** 316)

Sol by standing 2 hours at 210° with a mixture of 3 pts H<sub>2</sub>SO<sub>4</sub> and 1 pt H<sub>2</sub>O, or by boiling with this mixture together with HF (Mitscherlich, J pr **81** 108)

Sl sol in HCl, HF, and H<sub>2</sub>SO<sub>4</sub>, insol in HNO<sub>3</sub> (Dufau, Bull Soc 1901, (3) **25** 669)

#### Manganous aluminate

Insol in H<sub>2</sub>O and acids (Fbelmen, A ch (3) **22** 225)

MnAl<sub>2</sub>O<sub>4</sub> Insol in HCl+Aq, readily attacked by HF, HNO<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>

Decomp by fusion with alkali chlorate, nitrate, oxide or carbonate (Dufau, C R 1902, **135** 963)

#### Nickel aluminate

Insol in H<sub>2</sub>O

Potassium aluminate, K<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>+3H<sub>2</sub>O

Decomp by dissolving in pure H<sub>2</sub>O with separation of Al<sub>2</sub>O<sub>3</sub> (Fremy, A ch (3) **12** 362) Can be recrystallised from water containing a little alkali, without decomposition (Fremy)

Insol in alcohol

Sodium aluminate, Na<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>

Easily and completely sol in cold H<sub>2</sub>O (Schaffgotsch, Pogg **43** 117)

+4H<sub>2</sub>O Insol in alcohol (Allen, Am Ch J 1900, **24** 308)

Na<sub>2</sub>Al<sub>2</sub>O<sub>4</sub> Miscible with hot H<sub>2</sub>O, and as sol as NaOH in cold H<sub>2</sub>O Insol in alcohol but decomp thereby (Tissier, C R **43** 102)

Strontium aluminate, Sr<sub>2</sub>Al<sub>2</sub>O<sub>6</sub>+6H<sub>2</sub>O

Sl sol in H<sub>2</sub>O (with slow decomp in Aq solution) (Allen, Am Ch J 1900, **24** 314)

Thallium aluminate, Tl<sub>2</sub>Al<sub>2</sub>O<sub>6</sub>+7H<sub>2</sub>O

Not completely sol in, but slowly hydrolysed by H<sub>2</sub>O

Readily sol in dil acids and in the fixed alkalies

Insol in abs alcohol (Hawley, J Am Chem Soc 1907, **29** 303)

Zinc aluminate, ZnAl<sub>2</sub>O<sub>4</sub>

Insol in acids or alkalies

Min *Gahnite* (*Automolite*)

+2H<sub>2</sub>O Sol in KOH, and NH<sub>4</sub>OH+Aq (Berzelius)

#### Aluminicoantimoniotungstic acid

Ammonium aluminicoantimoniotungstate, 6(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+17H<sub>2</sub>O

A shellac-like gum (Daniels, J Am Chem Soc 1908, **30** 1856)

Barium aluminicoantimoniotungstate, 5BaO, 2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+6H<sub>2</sub>O

Somewhat insol in dil HCl (Daniels, J Am Chem Soc 1908, **30** 1857)

Silver aluminicoantimoniotungstate, 6Ag<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+12H<sub>2</sub>O

Ppt

Sol in NH<sub>4</sub>OH+Aq but requires HNO<sub>3</sub> (1 10) to dissolve it (Daniels, J Am Chem Soc 1908, **30** 1857)

#### Aluminicoarseniotungstic acid

Ammonium aluminicoarseniotungstate, 6(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+14H<sub>2</sub>O

Springly sol in H<sub>2</sub>O (Daniels, J Am Chem Soc 1908, **30** 1854)

Barium aluminicoarseniotungstate, 4BaO, 2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+12H<sub>2</sub>O

Vcry sl sol in H<sub>2</sub>O

Sol in very dil HCl or HNO<sub>3</sub> (Daniels, J Am Chem Soc 1908, **30** 1855)

Cadmium aluminicoarseniotungstate, 4CdO, 2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>5</sub>, 18WO<sub>3</sub>+17H<sub>2</sub>O

Sol in dil mineral acids and in strong NH<sub>4</sub>OH+Aq (Daniels, J Am Chem Soc 1908, **30** 1855)

#### Aluminicomolybdic acid

Ammonium aluminicomolybdate, 3(NH<sub>4</sub>)<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+19H<sub>2</sub>O

Ppt (Hall, J Am Chem Soc 1907, **29** 696)

+20H<sub>2</sub>O More sol in H<sub>2</sub>O than potassium

**aluminicomolybdate** (Struve, Bull Acad St Petersb 12 147)  
+22H<sub>2</sub>O (Marckwald, Dissert 1895)

**Barium aluminicomolybdate**, 4BaO, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+14H<sub>2</sub>O

Ppt (Hall, J Am Chem Soc 1907, 29 712)

**Lead aluminicomolybdate**, 4PbO, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+21H<sub>2</sub>O

Ppt (Hall, J Am Chem Soc 1907, 29 712)

**Potassium aluminicomolybdate**, 3K<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+20H<sub>2</sub>O

1 pt of the salt is sol in 40 67 pts H<sub>2</sub>O at 17°. Very difficultly sol in acids (Struve)  
H<sub>3</sub>Al(MoO<sub>4</sub>)<sub>3</sub>, 2KHM<sub>2</sub>O<sub>4</sub> Sol in H<sub>2</sub>O (Parmentier, C R 94 1713)

**Silver aluminicomolybdate**, 4Ag<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+16H<sub>2</sub>O

Ppt (Hall, J Am Chem Soc 1907, 29 712)

**Sodium aluminicomolybdate**, 3Na<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+22H<sub>2</sub>O

Efflorescent Easily sol in H<sub>2</sub>O (Gentele J pr 81 413)

### Aluminicophosphotungstic acid.

**Ammonium aluminicophosphotungstate**, 9(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+13H<sub>2</sub>O

Sl sol in cold and in hot H<sub>2</sub>O (Daniels, J Am Chem Soc 1908, 30, 1851)

**Barium aluminicophosphotungstate**, 4BaO, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+13H<sub>2</sub>O

Sl sol in H<sub>2</sub>O Sol in very dil HCl or HNO<sub>3</sub> (Daniels, J Am Chem Soc 1908, 30 1853)

**Silver aluminicophosphotungstate**, 4Ag<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+6H<sub>2</sub>O

Nearly insol in H<sub>2</sub>O Sol in NH<sub>4</sub>OH and in dil HNO<sub>3</sub> Insol in acetic acid (Daniels, J Am Chem Soc 1908, 30 1852)

**Zinc aluminicophosphotungstate**, 5ZnO, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+11H<sub>2</sub>O

Sol in dil acids and in a large quantity of conc ammonia when NH<sub>4</sub>Cl is present (Daniels, J Am Chem Soc 1908, 30 1853)

### Aluminicotungstic acid

**Ammonium aluminicotungstate**, 3(NH<sub>4</sub>)<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+4H<sub>2</sub>O

Sol in conc HNO<sub>3</sub> and in conc HCl When the solution in conc HCl was boiled, a yellow colored ppt separated (F F Smith J Am Chem Soc 1903, 25 1230)

**Ammonium silver aluminicotungstate**, 11Ag<sub>2</sub>O, 21(NH<sub>4</sub>)<sub>2</sub>O, 4Al<sub>2</sub>O<sub>3</sub>, 36WO<sub>3</sub>

The dry salt is insol in pure H<sub>2</sub>O, but

readily sol in H<sub>2</sub>O containing NH<sub>3</sub> or HNO<sub>3</sub> (E F Smith, J Am Chem Soc 1903, 25 1231)

**Barium aluminicotungstate**, 8BaO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+7H<sub>2</sub>O

Not sol in acids when dry Somewhat decomp by boiling with conc HCl, HNO<sub>3</sub> or aqua regia (Daniels, J Am Chem Soc 1908, 30 1848)

**Copper aluminicotungstate**, 2CuO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+16½H<sub>2</sub>O

Sol in large quantities of H<sub>2</sub>O (Daniels, J Am Chem Soc 1908, 30 1847)

**Mercurous aluminicotungstate**, 5Hg<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>

Sl sol in H<sub>2</sub>O Sol in HNO<sub>3</sub> (1 5) (Daniels, J Am Chem Soc 1908, 30 1849)

**Zinc aluminicotungstate**, 1½ZnO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+8H<sub>2</sub>O

Insol in H<sub>2</sub>O (Daniels, J Am Chem Soc 1908, 30 1850)

ZnO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+20H<sub>2</sub>O Sol in H<sub>2</sub>O (Daniels)

### Aluminum, Al

Less easily attacked than ordinary metals (iron, copper, lead, zinc, tin) by air, H<sub>2</sub>O, wine, beer, coffee, milk, oil, butter, fats, etc Vinegar dissolves 0 349 g from a sq decimetre in 4 months, and 5 % NaCl+Aq, only 0 045 g in the same time (Ballaud, C R 114 1536)

The action of various substances contained in foods and drinks on compact Al as it occurs in utensils is very slight Hard or soft water, whether cold or hot, showed no action in 8 days, 1 % solutions of tartaric, tannic, and acetic acids had no action in same time, also 5 % boric, carbolic, and salicylic acids 4 % and 10 % acetic acid dissolved only 0 4 mg of Al, while 10 % acetic acid dissolved 2 1 mg from a roughened piece of Al foil in 8 days 1 % soda solution dissolved 15 mg in 8 days (Rupp, Dingl 283 119)

Similar results were obtained by Arche (Dingl 284 255)

Liquids which are ordinarily contained in foods and drinks do not attack sheet Al except in a very small degree The following losses in weight in mg by the action of the given liquids on 100 sq centimetres sheet aluminum for 6 days were obtained

Liquids	Loss in mg
Claret	2 84
Hock	3 27
Brandy	1 08
5 % alcohol	0 61
5 % tartaric acid + Aq	1 69
1 % " " " "	2 58
5 % acetic acid + Aq	3 58
1 % " " " "	4 38

Liquids	Loss in mg
5 % citric acid + Aq	2 15
1 % " " " "	1 90
5 % lactic acid + Aq	4 77
5 % butyric acid + Aq	1 31
Coffee	0 50
Tea	0
Beer	0
4 % boric acid + Aq	1 77
5 % carbolic acid + Aq	0 23
1 % " " " "	0 49
1/2 % salicylic acid + Aq	6 35

(Lunge, C N 65 110)

The apparent solubility of this metal in H<sub>2</sub>O is due to the presence of minute quantities of Na. Absolutely pure Al does not lose any weight to H<sub>2</sub>O and the H<sub>2</sub>O remains perfectly clear. Also dil acids remain perfectly clear (Moissan, C R 1895, **121** 794-98, C C 1896, I 193).

Sl attacked by H<sub>2</sub>O at 80° (W Smith, J Soc Chem Ind 1904, **23** 475).

Easily sol in dil or conc HCl + Aq, whether hot or cold, also in HBr, HI, or HF + Aq. Insol in dil H<sub>2</sub>SO<sub>4</sub> + Aq (de la Rive), sl attacked by cold, easily by hot conc H<sub>2</sub>SO<sub>4</sub>. Not attacked by HNO<sub>3</sub> + Aq even when conc and boiling (Wohler), easily sol in dil H<sub>2</sub>SO<sub>4</sub>, or HNO<sub>3</sub> + Aq in vacuo (Weeren, B **24** 1798), slowly sol in 27 % HNO<sub>3</sub> + Aq, 100 cem HNO<sub>3</sub> + Aq requiring 2 months to dissolve 2 g Al (Montemartini, Gazz ch it **22** 397), very sl sol in most organic acids, but solubility is increased by presence of NaCl.

Not attacked by dil or conc HNO<sub>3</sub> at ord temp, but attacked by hot HNO<sub>3</sub>. Attacked by H<sub>3</sub>PO<sub>4</sub> (Smith, J Soc Chem Ind 1904, **23** 475).

Completely sol at 100° in two hours in HNO<sub>3</sub>, sp gr 1.15-1.16 (Stillman, J Am Chem Soc 1897 **19** 714).

Very easily sol in HNO<sub>3</sub> (contrary to the usual statement in text books) (Woy, C C **190**, II 94).

Slowly attacked by HNO<sub>3</sub> + Aq (20-25 %), at 25-30° (Deventer, Chem Weekbl 1907 **4** 69).

Dil HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub> does not attack Al on account of formation of layer of gas. Action is increased by vacuum. Solutions of metallic chlorides, the metal of which is insol and attaches itself to the Al (Pt, Au, Cu, Hg) increase the solubility, but when metal is soluble in the acid (Fe, Zn, etc.) there is no increase of solubility (Ditte, C P 1890, **110** 573).

Violently attacked by dil or conc H<sub>3</sub>PO<sub>4</sub> + Aq (Winteler).

Not attacked by solution of HCl in liquid HCN (Kahlenberg, J phys Chem 1902, **6** 662).

Very easily sol in conc or dil KOH, or NaOH + Aq. Slowly attacked by NH<sub>4</sub>OH +

Aq (Wohler), sol in BaO<sub>2</sub>H<sub>2</sub> + Aq (Beckmann, J pr (2) **26** 385), slowly sol in CaO H<sub>2</sub> + Aq.

Sol in excess of 10 % KOH + Aq and in NaOH and LiOH + Aq, sol in hot conc Ba(OH)<sub>2</sub>, Sr(OH)<sub>2</sub>, and Ca(OH)<sub>2</sub> + Aq (Allen, Am Ch J 1900, **24** 304-331).

Attacked by hot conc NH<sub>4</sub>OH + Aq (Smith, J Soc Chem Ind 1904, **23** 475).

Sl attacked by sulphates, or nitrates + Aq, but all chlorides, bromides, and iodides, except those of the alkalis and alkaline earths, even AlCl<sub>3</sub> + Aq, dissolve the metal. Insol in alum, or in NaCl + Aq, but sol in alum + NaCl + Aq (Tissier, C R **41** 362), sol in NaCl + Aq (Deville, A ch (3) **43** 14), sol in neutral FeCl<sub>3</sub> + Aq in vacuo (Weeren, B **24** 1798). Violently attacked by CuCl + Aq (Tommasi, Bull Soc (2) **37** 443).

Rapidly sol in K<sub>2</sub>S<sub>2</sub>O<sub>8</sub> + Aq, more slowly sol in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> + Aq (Levi, Gazz ch it 1908, **38** (1) 583).

Attacked by (NH<sub>4</sub>)<sub>3</sub>PO<sub>4</sub> + Aq. Sl attacked by NaNO<sub>3</sub> + Aq or KNO<sub>3</sub> + Aq at 100° (Smith, J Soc Chem Ind 1904 **23** 475).

Not affected by NH<sub>4</sub>NO<sub>3</sub> + Aq (Hodgkinson, C N 1904, **90** 142).

Attacked by POCl<sub>3</sub> at 100° (Renzler, B **13** 845).

Insol in liquid NH<sub>3</sub> (Gore, Am Ch J 1898, **20** 826).

Insol in liquid CO (Buchner, J phys Ch 1906, **54** 674).

Attacked by NOCl (Sudborough, Chem Soc 1891, **59** 659).

92 % alcohol attacks Al less than H<sub>2</sub>O. Pure Al is attacked less than commercial (Hugonnet, J Pharm 1895 (6) **1** 537).

Sol in organic acids containing chlorides (Smith, J Soc Chem Ind 1904 **23** 475).

Acetic, tartaric and citric acids attack Al only at first. Metal is covered by layer of hydro de but on addition of haloid salts gradual solution ensues (Ditte, C P 1898, **127** 919).

Not attacked by sugar + Aq (Klein, C R **102** 1170).

### Aluminum arsenide

Decomp by H<sub>2</sub>O with evolution of AsH<sub>3</sub> (Wohler, Pogg **11** 160).

Decomp by H<sub>2</sub>O (Lonzes, Diction C R 1900 **130** 131).

### Aluminum boride, AlB<sub>4</sub>

Very slowly sol in hot conc HCl + Aq and hot NaOH + Aq, but easily in moderately strong warm HNO<sub>3</sub> + Aq (Hamp, A **183** 7).

AlB<sub>4</sub> Not attacked by HCl or KOH + Aq. Scarcely attacked by boiling H<sub>2</sub>SO<sub>4</sub>. Hot conc HNO<sub>3</sub> + Aq dissolves gradually but completely (Hamp, l c).

### Aluminum borocarbide, Al<sub>3</sub>C B<sub>4</sub>s

Insol in H<sub>2</sub>O, HCl + Aq, H<sub>2</sub>SO<sub>4</sub> + Aq, or

KCH + Aq, slowly sol in hot conc  $\text{HNO}_3$  + Aq (Hampe, l c)

### Aluminum bromide, $\text{AlBr}_3$

*Anhydrous* Dissolved by  $\text{H}_2\text{O}$  with great violence and evolution of much heat Very sol in alcohol More sol in  $\text{CS}_2$  than  $\text{AlI}_3$  (Weber, Pogg 103 264)

Sol in  $\text{SOCl}_2$  (Besson, C R 1896, 123 884)

Sol in  $\text{C}_2\text{H}_5\text{Br}$  (Plotnikoff, C C 1902, II 617)

Sol in acetone (Naumann, B 1904, 37 4328), (Fidmann, C C 1899, II 1014)

### Solubility of $\text{AlBr}_3$ in organic liquids

Solvent	t°	Mols per 100	t°	Mols per 100	t°	Mols per 100
Benzo-phenone	48°	0	130°	43 2	50°	66 0
	45	8 5	140	48 4	38	67 2

	30	24 6	40	59 5	90	95 5
	50	31 8	20	63 1	96	100
	70	40	7	65 5		
	80	44 3	20	67 9		

(Menschutkin, Ann Inst Pol P-1-c-Ga, 13 1)

+6H O Very sol in H O

+15H O (Plotnikoff, J B 1895 785)

### Aluminum antimony bromide, $2\text{AlBr}_3 \cdot \text{SbBr}_3$ + 24H O

Hygroscopic Decomp by  $\text{H}_2\text{O}$  (Wenland, B 1903, 36 258)

### Aluminum potassium bromide, $\text{AlBr}_3 \cdot \text{KBr}$

Sol in H O (Weber, Pogg 103 267)

### Aluminum bromide ammonia, $\text{AlBr}_3 \cdot x\text{NH}_3$

Decomp by H O (Weber, Pogg 103 267)

### Aluminum perbromide carbon bisulphide, $\text{AlBr}_3 \cdot \text{Br}_4 \cdot \text{CS}_2$

Sol in ether, ethyl bromide, ethylene bromide and benzene, decomp by H O (Plotnikoff, J Russ phys Chem Soc 1901, 33 91, C C 1901, I 1193)

$2\text{AlBr}_3 \cdot \text{Br}_4 \cdot \text{CS}_2$  Sol in ether and benzene, insol in petroleum ether (Plotnikoff, l c)

### Aluminum bromochloride, $\text{AlClBr}$

Deliquescent Somewhat less violently dissolved by H O than is  $\text{AlBr}_3$  (v Bartal, Z anorg 1907, 55 154)

+6H O Deliquescent Sol in H O without evolution of heat (v Bartal, Z anorg 1907, 55 155)

### Aluminum carbide, $\text{Al}_4\text{C}_3$

Decomp by fused KOH at 100°, insol in fuming  $\text{HNO}_3$  in the cold, decomp by  $\text{H}_2\text{O}$ , and dil acids (Moissan, Bull Soc 1894, (3) 11 1012, C R 1894, 119 16-20)

Insol in acetone (Naumann, B 1904, 37 4328)

### Aluminum chloride, basic, $\text{AlO}_4\text{H}_{10}$ , HCl

Easily sol in H O (Schlumberger, Bull Soc 1895, (3) 13 56)

### Aluminum chloride, $\text{AlCl}_3$

*Anhydrous* Very deliquescent Sol in  $\text{H}_2\text{O}$  with a hissing noise and evolution of heat Solution of  $\text{AlCl}_3$  in H O loses HCl on evaporation, and  $\text{AlCl}_3$  is finally wholly converted into  $\text{AlO}_3$

Sol in 1 432 pts  $\text{H}_2\text{O}$  at 15° (Gerlach)

$\text{AlCl}_3$  + Aq containing 19 15 %  $\text{AlCl}_3$  boils at 103 4°  $\text{AlCl}_3$  + Aq containing 38 3 %  $\text{AlCl}_3$  boils at 112 8° (Gerlach)

### Sp gr of $\text{AlCl}_3$ + Aq at 15°

% $\text{AlCl}_3$	Sp gr	% $\text{AlCl}_3$	Sp gr

(Jones & Pearce, Am Ch J 1907, 38 726)

Sol in 1 pt strong alcohol at 12.5° (Wenzel), easily sol in ether, sl sol in  $\text{CS}_2$ , insol in ligroine or benzene

Difficultly sol in  $\text{AsBr}_3$  (Walden, Z anorg 1902, 29 374)

Sol in  $\text{AlBr}_3$  (Isbekow, Z anorg 1913, 84 26)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1893, 20 826)

Insol in  $\text{CS}_2$  at ord temp (Arctowski, Z anorg 1894, 6 257)

Sol in benzonitrile (Naumann, B 1914, 47 1369)

Difficultly sol in acetone (Naumann, B 1904, 37 4328)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Insol in methylal (Eidmann, C C 1899, II 1014)

#### Solubility of $\text{AlCl}_3$ in organic liquids

Solvent	t°	Mols per 100	t°	Mols per 100	t	Mols per 100
Benzo-phenone	48°	0	130°	43 2	130°	66 0

(Menschutkin, Ann Inst Pol P-le-Gr, 13 1)

+6H<sub>2</sub>O Very deliquescent, very sol in H<sub>2</sub>O Sol in 0.25 pt H<sub>2</sub>O (Thomson)  
Sol in 2 pts abs alcohol at ordinary temp, and 1.5 pts at b-pt (Thomson)

Completely insol in a solution of ether in H<sub>2</sub>O sat with HCl (Havens, Am J Sci 1898, (4) 6 46)

**Aluminum ammonium chloride**,  $\text{AlCl}_3, \text{NH}_4\text{Cl}$   
(Baud, A ch 1904, (8) 1 46)

**Aluminum antimony chloride**

See Chlorantimonate, aluminum

**Aluminum barium chloride**,  $2\text{AlCl}_3, \text{BaCl}_2$   
(Baud, C R 1901, 133 869)

**Aluminum calcium chloride, basic**

$3\text{CaO}, \text{CaCl}_2, \text{Al}_2\text{O}_3 + 10\text{H}_2\text{O}$  (Steinmetz, Z phys Ch 1905, 52 466)

$10\text{CaO}, \text{CaCl}_2, 6\text{Al}_2\text{O}_3$  Slowly decomp by boiling H<sub>2</sub>O (Gorgeu, Bull Soc 1887, (2) 48 51)

**Aluminum calcium chloride**,  $4\text{AlCl}_3, 3\text{CaCl}_2$   
(Baud, A ch 1904, (8) 1 51)

**Aluminum nitrosyl chloride**,  $\text{AlCl}_3, \text{NOCl}$

Deliquescent, and decomp by H<sub>2</sub>O (Weber Pogg, 118 471)

**Aluminum palladium chloride**,  $\text{AlCl}_3, \text{PdCl}_2 + 10\text{H}_2\text{O}$

See Chloropalladite, aluminum

**Aluminum phosphorus pentachloride**,  $\text{AlCl}_3, \text{PCl}_5$

Decomp violently by H<sub>2</sub>O (Baudrimont)

**Aluminum phosphoryl chloride**,  $\text{AlCl}_3, \text{POCl}_3$

Deliquescent Sol in H<sub>2</sub>O with decomp Sol in warm  $\text{POCl}_3$ , from which it separates on cooling (Casselmann, A 98 220)

**Aluminum platinum chloride**,  $\text{AlCl}_3, \text{PtCl}_4 + 15\text{H}_2\text{O}$

See Chloroplatinite, aluminum

**Aluminum potassium chloride**,  $\text{AlCl}_3, \text{KCl}$

Slowly deliquescent Sol in H<sub>2</sub>O with evolution of heat and decomp (Degen, A 18 332)

**Aluminum selenium chloride**,  $2\text{AlCl}_3, \text{SeCl}_4$

Sol in H<sub>2</sub>O with evolution of heat and separation of traces of selenium (Weber, Pogg 104 427)

**Aluminum sodium chloride**,  $\text{AlCl}_3, \text{NaCl}$

Much less deliquescent than  $\text{AlCl}_3$  Sol in H<sub>2</sub>O with evolution of heat Upon evaporating, NaCl crystallises out (Wohler)

**Aluminum strontium chloride**,  $4\text{AlCl}_3, 3\text{SrCl}_2$   
(Baud, A ch 1909, (8) 1 52)

**Aluminum sulphur chloride**,  $2\text{AlCl}_3, \text{SCl}_4$

Decomp by H<sub>2</sub>O with evolution of much

Heat and separation of some sulphur (Weber, Pogg, 104 421)

$\text{AlCl}_3, \text{SCL}_4$  Decomp by  $\text{H}_2\text{O}$  (Ruff, B 901, 34 1757)

**Aluminum tellurium chloride**,  $2\text{AlCl}_3, \text{TeCl}_4$   
Very sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Weber, J pr 16 313)

**Aluminum chloride ammonia**,  $\text{AlCl}_3, \text{NH}_3$

Sol in  $\text{H}_2\text{O}$  (Rose, Pogg, 24 248)

Completely sol in  $\text{H}_2\text{O}$  (Baud, C R 1901, 132 135)

$\text{AlCl}_3, 2\text{NH}_3$  Very hygroscopic (Stillman, Am Ch J 1895, 17 750)

$\text{AlCl}_3, 3\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$

$\text{AlCl}_3, 5\text{NH}_3$  M pt  $380^\circ$  (Baud, C R 1901, 132 135)

$\text{AlCl}_3, 6\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  (Stillman, Am Ch J 1895, 17 752) Somewhat hygroscopic (Baud, C R 1901, 132 135)

**Aluminum chloride nitric oxide**,  $2\text{AlCl}_3, \text{NO}$

Very hygroscopic Decomp rapidly in the air Sol in  $\text{KOH} + \text{Aq}$  (Thomas, C R 1895, 121 130)

**Aluminum chloride phosphine**,  $3\text{AlCl}_3, \text{PH}_3$

Decomp by  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Rose Pogg, 24 295)

**Aluminum chloride hydrogen sulphide**

Deliquescent Decomp by  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Wohler)

**Aluminum chloride sulphur dioxide**,  $\text{AlCl}_3, \text{SO}_2$

Decomp by  $\text{H}_2\text{O}$ , alcohol, or benzene (Adrianowski, B 12 688)

$2\text{AlCl}_3, \text{SO}$  (Baud, A ch 1904, (8) 1 32)

**Aluminum cobalt**,  $\text{Co}_3\text{Al}_4$

Sol in strong acids (Brunck, B 1901, 34 2734)

**Aluminum copper**,  $\text{Cu}_4\text{Al}_9$

Sol in aqua regia, decomp by  $\text{HCl}$  (Brunck, B 1901, 34 2733)

**Aluminum fluoride**,  $\text{AlF}_3$

*Anhydrous* Not attacked by  $\text{H}_2\text{O}$  or acids, and only very slightly by boiling conc  $\text{H}_2\text{SO}_4$  Insol in boiling  $\text{KOH} + \text{Aq}$  (Deville, C R 42 49)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4328)

$+ \frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sl sol in  $\text{HF}$  (Baud, C R 1902, 135 1104)

$+ \text{H}_2\text{O}$  Completely but only sparingly sol in  $\text{H}_2\text{O}$  (Mazzuchelli, Real Ac Linc 1907, (5) 16, I 775, Chem Soc 1907, 92, (2) 549)

$+ 3\frac{1}{2}\text{H}_2\text{O}$  Two modifications (1) Easily sol in  $\text{H}_2\text{O}$  Sol in  $\text{HF}$  (2) Insol in  $\text{H}_2\text{O}$  Sl sol in  $\text{HF}$  (Baud, C R 1902, 135 1104)

$+ 7\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Deville, A ch (3) 61 329)

Min *Fluellite*

$+ 8\frac{1}{2}\text{H}_2\text{O}$  Very efflorescent Sat solution contains 3.85 g  $\text{AlF}_3$  per 100 g at  $11^\circ$  and 1.2 g at  $-0.2^\circ$  (Mazzuchelli, Real Ac Linc 1907, (5) 16, I 775, Chem Soc 1907, (2), 92 549)

**Aluminum hydrogen fluoride**,  $3\text{AlF}_3, 2\text{HF} + 5\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , precipitated by alcohol (Deville)

$2\text{AlF}_3, \text{HF} + 5\text{H}_2\text{O}$  (Deville, A ch (6) 61 329)

**Aluminum ammonium fluoride**,  $\text{AlF}_3, \text{NH}_4\text{F}$

Somewhat sol in  $\text{H}_2\text{O}$ , insol in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  or  $\text{NH}_4\text{F}$  (Berzelius, Pogg 1 45)

$\text{AlF}_3, 2\text{NH}_4\text{F} + 15\text{H}_2\text{O}$  Sol in 100 pts  $\text{H}_2\text{O}$  at  $16^\circ$  (Baud, C R 1902, 135 1338)

$\text{AlF}_3, 3\text{NH}_4\text{F}$  Nearly insol in  $\text{H}_2\text{O}$ , easily sol in dil acids (Petersen, J pr (2) 40 35)

Quite easily sol in  $\text{H}_2\text{O}$ , but insol in  $\text{NH}_4\text{F} + \text{Aq}$  (Helmholtz, Z anorg 3 129)

**Aluminum barium fluoride**

Apparently not obtained in pure state (Roder)

**Aluminum calcium fluoride**,  $\text{AlF}_3, \text{CaF} + \text{H}_2\text{O}$

Min *Engtokite*

**Aluminum calcium sodium fluoride**,  $\text{AlF}_3, \text{CaF}_2, \text{NaF} + \text{H}_2\text{O}$

Min *Pachnolite*

**Aluminum cobaltous fluoride**,  $\text{AlF}_3, \text{CoF} + 7\text{H}_2\text{O}$

Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 272)

**Aluminum cupric fluoride**,  $2\text{AlF}_3, \text{CuF}$

Very slowly but completely sol in  $\text{H}_2\text{O}$  (Berzelius)

$\text{AlF}_3, 2\text{CuF} + 11\text{H}_2\text{O}$  Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 272-76)

$2\text{AlF}_3, 3\text{CuF} + 18\text{H}_2\text{O}$  Sol in dil  $\text{HF} + \text{Aq}$  (Weinland)

**Aluminum cupric hydrogen fluoride**,  $\text{AlF}_3, \text{CuF}, \text{HF} + 8\text{H}_2\text{O}$

Efflorescent in the air Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 272)

**Aluminum iron (ferrous) fluoride**,  $\text{AlF}_3, \text{FeF}_2 + 7\text{H}_2\text{O}$

Sl sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 270)

**Aluminum lithium fluoride**

Insol in  $\text{H}_2\text{O}$  (Berzelius)

**Aluminum magnesium fluoride**

$2\text{AlF}_3, \text{MgF}$  (?) (Roder)

**Aluminum nickel fluoride,  $\text{AlF}_3, \text{NiF}_2 + 7\text{H}_2\text{O}$** 

Sl sol in dil HF + Aq (Weinland, Z anorg 1899, **22** 271)

**Aluminum potassium fluoride,  $\text{AlF}_3, 3\text{KF}$** 

Very sl sol in acid solutions, and still less in  $\text{H}_2\text{O}$  (Gay-Lussac and Thénard)

$\text{AlF}_3, 2\text{KF}$  As above

**Aluminum silicon fluoride**

See Fluosilicate, aluminum

**Aluminum sodium fluoride**

$2\text{AlF}_3, 3\text{NaF}$  Min *Chiolite*  
 $\text{AlF}_3, 2\text{NaF}$  Min *Chodnevite*  
 $\text{AlF}_3, 3\text{NaF}$  Min *Cryolite* Sl sol in  $\text{H}_2\text{O}$  Insol in  $\text{HCl}$  + Aq Decomp by  $\text{H}_2\text{SO}_4$ , or by boiling with  $\text{NaOH}$  + Aq

**Aluminum strontium fluoride**

As the Ba salt (Roder)

**Aluminum thalious fluoride,  $2\text{AlF}_3, 3\text{TlF}$** 

Ppt Sl sol in  $\text{H}_2\text{O}$  (Ephraim, Z anorg 1909, **61** 243)

**Aluminum zinc fluoride,  $\text{AlF}_3, \text{ZnF}_2 + 7\text{H}_2\text{O}$** 

Sol in dil HF + Aq (Weinland, Z anorg 1899, **22** 272)

$2\text{AlF}_3, \text{ZnF}_2$  Slowly but completely sol in  $\text{H}_2\text{O}$  (Berzelius)

**Aluminum hydroxide,  $\text{Al}_2\text{O}_3, \text{H}_2\text{O}$** 

$= \text{Al}_2\text{O}_3(\text{OH})_3$

Dehydrated by conc acids, without dissolving (Bequerel, C R, **67** 108)

Min *Diaspore* Insol in  $\text{HCl}$  + Aq, and not attacked by boiling conc  $\text{H}_2\text{SO}_4$ , unless it has been ignited

$\text{Al}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Al}_2\text{O}_3(\text{OH})_3$  Pptd Al hydroxide, when boiled twenty hours with  $\text{H}_2\text{O}$  is insol in acids and alkalis and has the above composition (St Gilles, A ch **3**) **46** 57)

Min *Bauxite*

**Soluble modifications**—(1) *Meta aluminum hydroxide from basic Al acetate* Sol in  $\text{H}_2\text{O}$  and more readily in  $\text{HC}_2\text{H}_3\text{O}_2$ . The aqueous solution is coagulated by traces of alkalis, many acids, and salts, while other acids and salts have no effect. Thus, 1 pt  $\text{H}_2\text{SO}_4$  in 1000 pts  $\text{H}_2\text{O}$  added to 7000 pts of above solution containing 20 pts  $\text{Al}_2\text{O}_3$ , converts the liquid into a nearly solid mass. Citric, tartaric, oxalic, chromic, molybdic, racemic, suberic, salicylic, benzoic, gallic, lactic, cinnamic, butyric, valeric, camphoric, picric, uric, meconic, comenic, and hemipinic acids act in the same way.  $\text{HCl}$  and  $\text{HNO}_3$  have far less action, 600 mols being necessary to produce the same effect as 1 mol  $\text{H}_2\text{SO}_4$ , while acetic, formic, boric, arsenious, pyro-

meconic, and opianic acids do not coagulate the solution, except when moderately conc. 1 pt  $\text{KOH}$  in 1000 pts  $\text{H}_2\text{O}$  coagulates 9000 pts of the solution.  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ , and  $\text{Ca}(\text{OH})_2$  have the same effect.

The solution is not coagulated by acetates, unless added in large quantity, and even then the ppt is redissolved when treated with  $\text{H}_2\text{O}$ . Nitrates and chlorides coagulate with difficulty,  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ , and  $\text{CaSO}_4$  + Aq, however, have as strong an action as a liquid containing the same amount of  $\text{H}_2\text{SO}_4$ . A teaspoonful of the solution introduced into the mouth solidifies at once from the action of the saliva. The ppt formed by acids is not sol in an excess of the acid, but by the long continued action of conc  $\text{H}_2\text{SO}_4$  especially if hot, the ppt is dissolved, boiling conc  $\text{HCl}$  + Aq also dissolves it, but less readily than  $\text{H}_2\text{SO}_4$ . The ppt is sol in boiling conc  $\text{KOH}$  + Aq. The residue, when the solution is evaporated at  $100^\circ$ , has composition  $\text{Al}_2\text{O}_3, 2\text{H}_2\text{O}$ , and is insol in acids (Cium, Chem Soc **6** 225)

(b) *By Dialysis* Sol in  $\text{H}_2\text{O}$  from which it is separated by extremely small amounts of various substances, as acids, ammonia, salts (especially  $\text{K}_2\text{SO}_4$ ), caramel, etc. An excess of acid dissolves the coagulum. If the solution contains 0.5%  $\text{Al}_2\text{O}_3$  or less, it may be boiled without change, but the hydroxide separates out suddenly when it is reduced to  $\frac{1}{2}$  its vol, and even very dil solutions gelatinise spontaneously in a few days. The solution is not coagulated by alcohol or sugar (Graham A **121** 41)

$\text{Al}_2\text{O}_3, 3\text{H}_2\text{O} = \text{Al}(\text{OH})_3$  **Crystallised** Difficultly sol in acids and alkalis (Cossa N Csm **2**) **3** 228) Insol in boiling  $\text{HCl}$  + Aq (Wohler, A **113** 249) Sl sol in  $\text{KOH}$  + Aq nearly insol in cold  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HNO}_3$  + Aq very slowly sol in hot  $\text{HCl}$  + Aq more readily in hot  $\text{H}_2\text{SO}_4$  (v. Bonsdorff, Pogg. **27** 27)

**$\alpha$ -modification** Unstable. Changes into  **$\beta$ -modification**. Sol in  $\text{N-NaOH}$  at ord temp. Sol in  $\text{N-NaOH}$  and in hot  $\text{NaOH}$  of concentration 5N (O 100H O) (Russ Z anorg 1904 **41** 226)

**$\beta$ -modification** Insol in  $\text{N-H}_2\text{SO}_4$  at ord temp. Difficulty sol in warm  $\text{N-NaOH}$  but easily sol in hot  $\text{NaOH}$  of concentration 5N (O 100H O). Its solubility in  $\text{NaOH}$  increases with increase in concentration of the hydroxyl ions (Russ)

**$\delta$ -modification** Easily sol in conc  $\text{H}_2\text{SO}_4$ , only sl sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or acetic acids, or in alkali + Aq (Commens C C **1905**, II 605)

Min *Gibbsite* Sol in  $\text{HCl}$  + Aq and dil  $\text{H}_2\text{SO}_4$  + Aq. Readily sol in conc  $\text{KOH}$  and  $\text{NaOH}$  + Aq

**Preprecipitated** Completely insol in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{CO}_3$  + Aq. Easily sol in acids when freshly pptd, but solubility diminishes on standing.

Easily sol in  $\text{KOH}$  or  $\text{NaOH}$  + Aq (Sonnenschein)

Herz (Z anorg 25 155) found that aluminum hydroxide which has been dried in a vacuum desiccator requires for solution in  $\text{NaOH} + \text{Aq}$  3 atoms Na to 1 atom Al (Z Elektrochem 1911, 17 261) was unable to obtain this result. Herz says Slade's error is due to insufficient shaking of the solution (Herz, Z Elektrochem 1911, 17 403).

New solubility determinations verify the statement of Herz (Z anorg 25, 155) that the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{NaOH} + \text{Aq}$  is proportional to the concentration of  $\text{NaOH}$ . They do not, however, verify his statement that the ratio Na : Al in the solutions is always 3 : 1, for the author finds that the ratio Na : Al varies from 2 : 1 to 10 : 1 depending on the conditions of precipitation and the method and duration of drying of the  $\text{Al}(\text{OH})_3$  (Slade, Z Elektrochem, 1912, 18 1).

Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd, but presence of  $\text{NH}_4$  salts diminish its solubility, and it separates out completely after long standing (Fresenius).

Somewhat sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , the more readily the larger the vol of  $\text{H}_2\text{O}$ . Somewhat sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but less than in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sl sol in dil  $\text{NH}_4\text{Cl} + \text{Aq}$ , unless that salt be in large excess. It is finally wholly pptd if allowed to stand several days.

18752 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (4 %  $\text{NH}_4\text{OH}$ ) dissolve an amt of  $\text{Al}(\text{OH})_3$  corresponding to one pt  $\text{Al}_2\text{O}_3$ .  $\text{NH}_4\text{Cl}$  prevents this solubility almost completely (Hanamann, Pharm Verh 12 527).

$\text{Al}(\text{OH})_3$ , prepared by ppt of a solution of  $\text{Al}(\text{NO}_3)_3$  with  $\text{NH}_4\text{OH}$ , filtered and washed, is insol in  $\text{NH}_4\text{OH} + \text{Aq}$ .

$\text{Al}(\text{OH})_3$ , prepared by pptn of a solution of potassium aluminate with  $\text{NH}_4\text{Cl}$  is sol in a large excess of  $\text{NH}_4\text{OH}$  if this is added to the ppt at once. This modification which is sol in  $\text{NH}_4\text{OH}$  is unstable and easily goes over into the modification which is insol in  $\text{NH}_4\text{OH}$  (Renz, B 1903, 36 2751).

Conc  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  does not dissolve  $\text{Al}(\text{OH})_3$  and not vice versa dissolved by boiling conc  $\text{NH}_4\text{Cl} + \text{Aq}$  (Weber, Pogg 92 97).

With  $\text{NH}_4\text{I} + \text{Aq}$ , it forms a double salt,  $\text{AlI}_3 \cdot 3\text{NH}_4\text{I}$  which is sol in  $\text{H}_2\text{O}$  but not in  $\text{NH}_4\text{I} + \text{Aq}$  (Helmholtz, Z anorg 3 127).

Insol in  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Mullguth and Durocher, A ch (3) 17 421). Fuchs found, on the contrary, that it is not wholly insol in  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Fresenius, Quant).

Insol in  $\text{FeCl}_3 + \text{Aq}$  (Bechamp).

Determinations of the solubility of aluminum hydroxide in  $\text{AlCl}_3 + \text{Aq}$  show that put goes into solution to form a compound while the greater part is in the colloidal form (Fischer, Z anorg 1904, 40 46).

Only sl sol in conc  $\text{Al}(\text{SO}_4)_3 + \text{Aq}$ , but solubility increases with decrease in concentration of  $\text{Al}_2(\text{SO}_4)_3$  until it reaches a maximum at a concentration of 32 %  $\text{Al}(\text{SO}_4)_3$  at 20°, 28 % at 40°, and 38 % at 60°. With further decrease in concentration of  $\text{Al}(\text{SO}_4)_3$

the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{Al}_2(\text{SO}_4)_3$  diminishes (Kremann, C A 1909 2422).

Sol in  $\text{Ba}(\text{OH})_2 + \text{Aq}$  (Rose).

Sol in boiling  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{Cr}(\text{NO}_3)_3$ ,  $\text{Bi}(\text{NO}_3)_3$ ,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgNO}_3$ ,  $\text{SnCl}_2$ , and  $\text{SbCl}_3 + \text{Aq}$  (Persoz).

Insol in  $\text{HCN}$  or cold  $\text{KCN} + \text{Aq}$ , but sl sol in hot  $\text{KCN} + \text{Aq}$  (Rose).

Insol in  $\text{KC}_2\text{H}_3\text{O} + \text{Aq}$  (Osann, 1821).

When moist, sol in  $\text{H}_2\text{SO}_3 + \text{Aq}$ , from which it is pptd on boiling (Berthier, A ch (3) 7 76).

Somewhat sol in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Mercer).

Not pptd by  $\text{NH}_4\text{OH} + \text{Aq}$  in presence of Na citrate (Spiller).

Sol in ethyl amine, amyl amine, sinkaline, ethyl picoline hydroxide, stubethylum hydroxide, triethyltoluanyl ammonium hydroxide +  $\text{Aq}$  (Friedlander).

Sol in alkyl amines (Renz, B 1903, 36 2751).

Insol in acetone (Naumann, B 1904, 37 4328).

Sol to a considerable extent in  $\text{K}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .

Very sl sol in cane sugar +  $\text{Aq}$  (Ramsey).

Solubility in glycerine +  $\text{Aq}$  containing about 60 % by vol of glycerine. 100 cc of the solution contain 0.25 g  $\text{Al}_2\text{O}_3$  (Muller, Z anorg 1905, 43 322).

$\text{Al}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and alcohol. Sol in  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq}$  (Zunino, Gazz ch it 1900 30 (1) 194).

$\text{Al}_6\text{O}_{14}\text{H}_{10}$ , Tri-aluminum hydroxide

Not sol in conc acids in the cold, not sol in  $\text{KOH}$  (cold) and only sl sol in hot  $\text{KOH}$ . Characterized by its solubility in exactly one mol dil  $\text{HCl}$ . Dil solutions do not gelatinize even on long standing. Conc solution of  $\text{NH}_4\text{Cl}$  and other salts cause ppt which redissolves on addition of  $\text{H}_2\text{O}$ .

Alkalis and alkali carbonates decompose the salt with  $\text{HCl}$  and ppt tri-aluminum hydroxide.  $\text{H}_2\text{SO}_4$  and sol sulphates give insol compds with the hydrate.  $\text{HNO}_3$  like  $\text{HCl}$  gives soluble compds with the hydrate (Structural formula given) (Schlumberger, Bull Soc 1895 (5) 13 41-65. C C 1895, 1 421).

#### Aluminum iodide, $\text{AlI}_3$

*Anhydrous*. Fumes on air and deliquesces. Sol in  $\text{H}_2\text{O}$  with evolution of much heat. Sol in  $\text{CS}_2$  and crystallizes from the hot sat solution on cooling (Weber). Sol in alcohol (Weber), ether and tetrachloroethane (Gustafson).

Sol in  $\text{AlBr}_3$  (Isbckow, Z anorg 1913 84 26).

+6 $\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$

#### Aluminum mercuric iodide, $\text{AlI}_3 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$

Very deliquescent, sol in  $\text{H}_2\text{O}$  without decomposition (Duboin, C R 1908, 146 1028).

**Aluminum potassium iodide,  $AlI_3$ , KI**

Sol in  $H_2O$  with evolution of much heat (Weber, Pogg **101** 469)

**Aluminum iodide ammonia,  $AlI_3$ ,  $3NH_3$** 

Decomp by  $H_2O$  (Weber, Pogg **103** 263)

**Aluminum iodide mercuric oxyiodide,  $2AlI_3$ ,  $HgO$ ,  $3HgI_2 + 15H_2O$** 

(Duboin, C R **1907**, **145** 714)

**Aluminum iron,  $FeAl_3$** 

Readily sol in strong  $HNO_3$  (Brunck, B **1901**, **34** 2734)

**Aluminum manganese,  $Mn_2Al_7$** 

Sol in strong  $HCl$  (Brunck, B **1901**, **34** 2735)

**Aluminum molybdenum,  $Al_4Mo$** 

Easily sol in hot  $HNO_3$  or  $HCl$  (Wohler, A **1860**, **115** 103)

$Al_2Mo$  (Guillet, C R **1901**, **133** 293)

$AlMo$  (Guillet)

$AlMo_4$  Not attacked by dil  $HCl + Aq$  (Guillet)

$AlMo_{20}$  Not attacked by  $HCl + Aq$  (Guillet)

**Aluminum nickel,  $Al_3Ni$** 

Sol in strong acids (Brunck, B **1901**, **34** 2734)

**Aluminum nitride,  $Al_2N$** 

Slowly attacked by hot or cold  $H_2O$ . Decomp by acids and aqueous solutions of the alkalis, especially when they are concentrated (Mallet, A **186** 155)

Easily decomp  $H_2O$  when finely powdered (Rossi, C R **1895**, **121** 942)

Decomp by moist air and by boiling  $H_2O$  and by alkalis +  $Aq$  (Frank, Ch Z **1897**, **21** 263)

**Aluminum oxide,  $Al_2O_3$** 

*Crystalline* Min *Corundum*, *sapphire*, *ruby*, *emery* Insol in acids

*Amorphous* Ignited  $Al_2O_3$  is insol in acids except that it dissolves slowly when heated with a mixture of 1 pt  $H_2SO_4$  and 1 pt  $H_2O$  (Berzelius). Slowly sol in boiling  $HCl + Aq$  (Rose, Pogg **52** 595)

Sol in 22 pts of a mixture of 8 pts  $H_2SO_4$  and 1 pt  $H_2O$  (Mitscherlich). The lower the temperature at which  $Al_2O_3$  has been heated, the more sol is it in acids and alkalis

Solubility in (calcium succate + sugar) +  $Aq$

1 l solution containing 418.6 g sugar and 34.3 g  $CaO$  dissolves 1.35 g  $Al_2O_3$ , 1 l solution containing 296.5 g sugar and 24.2 g  $CaO$  dissolves 0.32 g  $Al_2O_3$ , 1 l solution containing 174.4 g sugar and 14.1 g  $CaO$  dis-

solves 0.19 g  $Al_2O_3$  (Bodenbender, J B **1865** 600)

Insol in acetone (Naumann, B **1904**, **37** 4328)

See also **Aluminum hydroxide**

**Aluminum peroxide,  $Al_2O_3$ ,  $Al_2O_4 + 10H_2O$** 

Ppt, sol in acids with decomp (Term, C A **1912** 3068)

**Aluminum oxybromide**

Basic aluminum bromides containing three equivalents or less of  $Al_2O_3$  to one of  $AlBr_3$  are sol in  $H_2O$ . Those containing more than three equivalents are insol (Ordway, Am J Sci (2) **26** 203)

**Aluminum oxychloride**

Sol in dil acids or alkalis. Decomp by  $H_2O$  (Hautefeuille and Perrey, C R **100** 1220)

Basic aluminum chlorides containing two equivalents or less of  $Al_2O_3$  to one of  $AlCl_3$  are sol in  $H_2O$ . Those containing more than two equivalents are insol (Ordway)

$Al_2O_3$ ,  $3AlCl_3 + 3H_2O$  (Tommasi, Bull Soc (2) **37** 443)

$Al_2O_3$ ,  $8AlCl_3 + 3H_2O$  (Tommasi)

$3Al_2O_3$ ,  $AlCl_3 + 15H_2O$  (Tommasi)

**Aluminum phosphide,  $Al_3P$** 

Unstable (Frank, Ch Z **1898**, **22** 240)  
 $Al_2P_2$  Decomp by  $H_2O$  (Fonze-Diacon, C R **1900**, **130** 1315)

Unstable (Frank, Ch Z **1898**, **22** 240)  
 $Al_3P_7$  Decomp by  $H_2O$  and acids (Frank)

$Al_3P_7$  Decomp by  $H_2O$  and acids (Frank, Ch Z **1898**, **22** 255)

$Al_5P_3$  Unstable (Frank, Ch Z **1898**, **22** 240)

**Aluminum platinum,  $Pt_3Al_{10}$** 

The  $Al$  is dissolved out by  $HCl$  (Brunck, B **1901**, **34** 2735)

**Aluminum selenide,  $Al_2Se_3$** 

Decomp by  $H_2O$  (Fonze-Diacon, C R **1900**, **130** 1315)

**Aluminum silicide,  $AlSi_4$** 

More easily sol in acids than  $Al$  (Winkler, J pr **91** 193)

**Aluminum chromium silicide,  $AlCr_4Si_6$** 

Insol in hot conc  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$  and aqua regia. Sol in cold  $HF$  or in  $HF + HNO_3$ . Sol in molten alkali. Insol in  $NaOH + Aq$ ,  $KOCl + Aq$  or fused  $KClO_3$  or  $KHSO_4$  (Manchot and Kieser, A **1904**, **337**, **356**)

$Al_2Cr_4Si_6$  Insol in hot conc  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$  and aqua regia. Sol in  $HF$  and in molten alkali (Manchot and Kieser, A **1904**, **337**, **358**)

**Aluminum tungsten silicide**

Insol in most acids and aqua regia. Easily sol in HF, HNO<sub>3</sub> and in molten alkali. Not attacked by dil NaOH + Aq (Manchot and Kieser, A 1904, **337** 360)

**Aluminum vanadium silicide, Al<sub>2</sub>V<sub>3</sub>Si<sub>13</sub>**

Sol in HF. Not attacked by hot conc HCl, HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub> or aqua regia. Decomps by fusing with NaOH. Stable toward fused KClO<sub>3</sub> (Manchot, A 1907, **357** 134)

**Aluminum sulphide, Al<sub>2</sub>S<sub>3</sub>**

Decomp by H<sub>2</sub>O. Sol in acids and alkalis (Regelsberger, Z Elektrochem, 1898, **4** 548). Al<sub>2</sub>S<sub>3</sub>. Decomp in moist air and by H<sub>2</sub>O (Wohler). Insol in acetone (Naumann, B 1904, **37** 4328)

**Aluminum chromium sulphide, Al<sub>2</sub>S<sub>3</sub>.CrS**

Sl attacked by HCl + Aq. Gradually decomp by HNO<sub>3</sub> (Houdard, C R 1907, **144** 1115)

**Aluminum magnesium sulphide, Al<sub>2</sub>S<sub>3</sub>.MgS**

Decomp by H<sub>2</sub>O, alcohol and acids (Houdard, C R 1907, **144** 1116)

**Aluminum potassium sulphide**

Violently decomposed by H<sub>2</sub>O (St Clare Deville, J pr **71** 293)

Does not exist (Gratama, R t c **3** 4)

**Aluminum silver sulphide, 5Al<sub>2</sub>S<sub>3</sub>.4Ag<sub>2</sub>S**

(Cambì, Real Ac Linc (5) **21**, II 838)

**Aluminum telluride**

Decomp by H<sub>2</sub>O (Wohler, Pogg **11** 160)

**Aluminum titanide, Al<sub>4</sub>Ti**

Not attacked by H<sub>2</sub>O or by cold HNO<sub>3</sub>. Sl sol in warm HNO<sub>3</sub>. Sol in cold conc H<sub>2</sub>SO<sub>4</sub> or HCl. Sol in warm KOH + Aq (Levy, A ch 1902, (6) **25** 449)

Sol in HCl and in aqua regia (Guillet). Al<sub>3</sub>Ti. Sol in hot dil H<sub>2</sub>SO<sub>4</sub> and in hot KOH + aq. Sol in hot conc acids (Manchot, A 1907, **357** 142)

Al<sub>3</sub>Ti<sub>2</sub>. Aluminothermic product is sol in HCl and aqua regia (Guillet)

**Aluminosulphuric acid, Al<sub>2</sub>(SO<sub>4</sub>H)<sub>6</sub> + 7 H<sub>2</sub>O**

Sol in H<sub>2</sub>O with decomp into Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub> (Silberberger, M 1904, **25** 222)

**Diamide, N<sub>2</sub>H<sub>4</sub>**

See Hydrazine

**Amidochromic acid****Amidochromates**

Do not exist. Those described by Darm-

städter and Lowenthal are impure bichromates (Wyrouboff, Bull Soc 1894, (3) **11** 845-53, C C 1894, II 610)

**Ammonium amidochromate, (NH<sub>4</sub>)NH<sub>2</sub>CrO<sub>3</sub>**

Very sol in H<sub>2</sub>O (Lowenthal, Z anorg 1894, **6** 363)

Is ammonium dichromate (Wyrouboff, Bull Soc (3) **11** 845)

**Lithium amidochromate, LiNH<sub>2</sub>CrO<sub>3</sub>**

Very sol in H<sub>2</sub>O and acids (Lowenthal, Z anorg 1894, **6** 364)

**Potassium amidochromate, KCrO<sub>3</sub>NH<sub>2</sub>**

Sol only in H<sub>2</sub>O. Sat solution in H<sub>2</sub>O contains 13 % of the salt (Heintze, J pr (2) **4** 214)

**Amidophosphoric acid, HPO<sub>3</sub>(NH<sub>2</sub>) = PO(NH<sub>2</sub>)(OH)<sub>2</sub>**

Sol in H<sub>2</sub>O, but decomp on standing or by heat (Stokes, Am Ch J **15** 198)

**Aluminum amidophosphate**

Ppt. Sol in NH<sub>4</sub>OH + Aq (Stokes)

**Ammonium amidophosphate,**

Very sol in H<sub>2</sub>O (Stokes)

**Barium amidophosphate, BaPO<sub>3</sub>(NH) + H<sub>2</sub>O**

Very sl sol in H<sub>2</sub>O (Stokes). BaH<sub>2</sub>(PO<sub>3</sub>NH<sub>2</sub>)<sub>2</sub> + 2½ H<sub>2</sub>O. Quite difficultly sol in H<sub>2</sub>O (Stokes)

**Calcium amidophosphate, CaPO<sub>3</sub>(NH<sub>2</sub>)**

Much less sol in H<sub>2</sub>O than Ba salt (Stokes)

CaH<sub>2</sub>(PO<sub>3</sub>NH<sub>2</sub>)<sub>2</sub>. Much less sol in H<sub>2</sub>O than the Ba salt (Stokes)

**Chromic amidophosphate**

Ppt. Sol in warm NH<sub>4</sub>OH + Aq (Stokes)

**Cobalt amidophosphate**

Neutral Ppt

Acid Sl sol in H<sub>2</sub>O, sol in NH<sub>4</sub>OH + Aq

**Cupric amidophosphate**

Neutral Sl sol in H<sub>2</sub>O

Acid Nearly insol in H<sub>2</sub>O

**Ferrous amidophosphate**

Neutral Sol in much H<sub>2</sub>O, and in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, or NH<sub>4</sub>OH + Aq

Acid Nearly insol in H<sub>2</sub>O or NH<sub>4</sub>Cl + Aq. Sol in NH<sub>4</sub>OH + Aq

**Ferric amidophosphate**

Neutral Ppt. Sol in excess of alkali

amidophosphate and in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol  
in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

*Acid* As the neutral salt

**Hydroxylamine amidophosphate,**  
 $(\text{NH}_3\text{O})\text{HPO}_3(\text{NH}_2)$

Sl sol in  $\text{H}_2\text{O}$  (Stokes)

**Lithium amidophosphate,  $\text{LiHPO}_3(\text{NH})$**

Sl sol in  $\text{H}_2\text{O}$  (Stokes)

**Magnesium amidophosphate,  $\text{MgPO}_3(\text{NH}_2) + 7\text{H}_2\text{O}$**

Very sl sol in  $\text{H}_2\text{O}$ , quite easily sol in dil  
 $\text{NH}_4\text{Cl} + \text{Aq}$  Sol in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Stokes)

$\text{MgH}_2(\text{PO}_3\text{NH}_2)_2 + 3\frac{1}{4}\text{H}_2\text{O}$  Insol in  
 $\text{NH}_4\text{Cl} + \text{Aq}$  (Stokes)

**Manganese amidophosphate**

*Neutral* Ppt

*Acid* Sl sol in  $\text{H}_2\text{O}$

**Nickel amidophosphate**

*Neutral* Ppt Sol in  $\text{HC}_2\text{H}_3\text{O}_2$  or  
 $\text{NH}_4\text{OH} + \text{Aq}$

*Acid* Sl sol in  $\text{H}_2\text{O}$

**Potassium amidophosphate,  $\text{K PO}_3(\text{NH}_2)$**

Very sol in  $\text{H}_2\text{O}$  and not decomp by boiling (Stokes)

$\text{KHPO}_3(\text{NH}_2)$  Easily sol in cold  $\text{H}_2\text{O}$ ,  
insol in alcohol (Stokes)

**Silver amidophosphate,  $\text{Ag}_2\text{PO}_3(\text{NH})$**

Almost insol in  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3$  or  
 $\text{NH}_4\text{OH} + \text{Aq}$

$\text{AgHPO}_3(\text{NH}_2)$  Sl sol in  $\text{H}_2\text{O}$ , easily sol  
in dil  $\text{HNO}_3$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , also in  
 $\text{NH}_4\text{OH} + \text{Aq}$

**Sodium amidophosphate,  $\text{Na}_2\text{PO}_3(\text{NH})$**

Not deliquescent, very sol in  $\text{H}_2\text{O}$  pptd  
from aqueous solution by alcohol (Stokes)

$\text{NaHPO}_3(\text{NH}) + \frac{1}{4}(\text{?})\text{H}_2\text{O}$  Newly insol  
in cold, and decomp by hot  $\text{H}_2\text{O}$  Insol in  
alcohol

**Zinc amidophosphate**

*Neutral* Perceptibly sol in  $\text{H}_2\text{O}$

*Acid* Sl sol in  $\text{H}_2\text{O}$ , sol in  $\text{NH}_4\text{OH}$  or  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

**Diamidophosphoric acid,  $\text{PO}(\text{NH}_2)_2\text{OH}$**

Sol in cold  $\text{H}_2\text{O}$ , almost insol in alcohol,  
stable in the air but decomp when heated and  
by boiling in aq solution (Stokes, Am Ch  
J 1894, 16 130)

**Barium diamidophosphate,  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Ba}$**

Very sol in  $\text{H}_2\text{O}$ , insol in alcohol, aq  
solution decomp slowly (Stokes, Am Ch  
J 1894, 16 134)

**Magnesium diamidophosphate,  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Mg}$**

Sol in  $\text{H}_2\text{O}$ , insol in alcohol (Stokes)

**Potassium diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{OK}$**

Sol in  $\text{H}_2\text{O}$ , not deliquescent, insol in  
alcohol (Stokes)

**Silver diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{OAg}$**

Very stable, insol in  $\text{H}_2\text{O}$  Very sol in  
 $\text{NH}_4\text{OH} + \text{Aq}$  (Stokes)

**Sodium diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{ONa}$**

Sol in  $\text{H}_2\text{O}$ , not deliquescent, insol in  
alcohol (Stokes)

**Diamidotrihydroxylphosphoric acid**

**Silver diamidotrihydroxylphosphate,**

$(\text{AgO})_3\text{P}(\text{NHAg})_2$

(Stokes, Am Ch J 1894, 16 147)

$(\text{AgO})_3\text{P}(\text{NH}_2)(\text{NHAg})$  Insol in cold  
 $\text{H}_2\text{O}$  (Stokes)

$(\text{AgO})_3\text{P}(\text{NH}_2)_2$  Decomp by cold  $\text{H}_2\text{O}$   
(Stokes)

$+ 2\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$   
(Stokes)

**Amidoimidophosphoric acid**

**Amidohexiimidoheptaphosphoric acid,  $\text{OH}$   
 $\text{PO}(\text{NH}_2)[\text{NH PO}(\text{OH})]_5\text{NH PO}(\text{OH})_2$   
 $= \text{P}_7\text{N}_7\text{O}_{15}\text{H}_{16}$**

Known only in solution in  $\text{H}_2\text{O}$  (Stokes  
Am Ch J 1898 20 758)

**Silver diamidopyrimidophosphate,**

$\text{NH}(\text{PO NH OAg})$

Almost insol in  $\text{H}_2\text{O}$ , sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
(Stokes, Am Ch J 1894 16 136)

**Silver amidoheptamido pentaphosphate,**

$\text{P}_5\text{N}_5\text{O}_{11}\text{H}_5\text{Ag}_5$

Ppt (Stokes Am Ch J 1898 20 752)

**Silver amidohexiimidoheptaphosphate,**

$\text{P}_7\text{N}_7\text{O}_{15}\text{H}_5\text{Ag}_7$

Ppt, decomp by acetic acid (Stokes  
Am Ch J 1898, 20 759)

**Sodium amidoimidodiphosphate,**

$\text{NH PO}(\text{ONa})$

$\text{PO ONa} < \text{NHPO}(\text{ONa})\text{NH}$

$= \text{P}_3\text{N}_3\text{O}_7\text{H}_4\text{N}_4 + \text{H}_2\text{O}$

Unstable sol in  $\text{H}_2\text{O}$ , insol in alcohol  
(Stokes, Am Ch J 1896, 18 643)

**Sodium amidohexiimidoheptaphosphate,**

$\text{P}_7\text{N}_7\text{O}_{15}\text{H}_5\text{Na}_7$

Sol in  $\text{H}_2\text{O}$ , pptd by alcohol (Stokes,  
Am Ch J 1898, 20 758)

**Amidophosphoric acid****Silver amidophosphimate**,  $P(NH)NH_2(OAg)_2$ Decomp by heat, decomp in contact with  $H_2O$  (Stokes, Am Ch J 1894, 16 139)  
 $(AgO)_2P(NAg)(NHAg)$  (?) Sl sol in  $NH_4OH + Aq$  (Stokes, Am Ch J 1894, 16 149)**Amidosulphonic acid**,  $HOSO_2NH_2$ Easily sol in  $H_2O$ , less easily in alcohol (Berglund, B 9 252 and 1896)Very stable, less easily sol in  $H_2O$  than its K salt (Raschig, A 241 177)Stable in air Non-deliquescent when cold Sol in 5 pts  $H_2O$  at  $0^\circ$  and in  $2\frac{1}{2}$  pts  $H_2O$  at  $70^\circ$  Solution in  $H_2O$  can be boiled several minutes without decomp Solubility is decreased by addition of  $H_2SO_4$ , so that if  $1\frac{1}{5}$ – $1\frac{1}{4}$  pt  $H_2SO_4$  is added to  $H_2O$ , 100 pts of the liquid dissolve only 3 pts  $HOSO_2NH_2$  in the cold Pptd from solution by  $HNO_3$  or glacial acetic acid, but not by  $HCl$  Solubility is decreased by presence of  $NaHSO_4$  (Divers and Haga, Chem Soc 1896, 69 1641)**Amidosulphonates**Easily sol in  $H_2O$ , sl sol in alcohol**Aluminum amidosulphonate**Very sol in  $H_2O$  (Berglund, Bull Soc (2) 29 422)**Ammonium amidosulphonate**,  $(NH_4)NH_2SO_3$ Deliquescent Sol in  $H_2O$ , insol in alcohol**Ammonium silver amidosulphonate**, $NH_4SO_3(NH_5)$ ,  $AgSO_3(NH)$ 

(Ephraïm &amp; Grunewitsch, B 1910, 43 148)

**Barium amidosulphonate**,  $Ba(NH SO_3)_2$ Sol in 3 pts  $H_2O$  (Berglund, l c)**Cadmium amidosulphonate**,  $Cd(NH SO_3)_2 + 5H_2O$ Very sol in  $H_2O$  (B)**Calcium amidosulphonate**,  $Ca(NH SO_3)_2 + 4H_2O$ Very sol in  $H_2O$  (B)**Cobalt amidosulphonate**,  $Co(NH SO_3)_2 + 3H_2O$ Sol in  $H_2O$  (B)**Copper amidosulphonate**,  $Cu(NH SO_3)_2 + 2H_2O$ Sol in  $H_2O$  (B)**Gold (auric) potassium amidosulphonate**,  $K_3Au_2(NSO_3)_3$ 

Very sl sol in cold, more easily sol in hot

 $H_2O$  Sol in dil  $HCl + Aq$  (Hofmann, B 1912, 45 1735)**Lead amidosulphonate**,  $Pb(NH_2SO_3)_2 + H_2O$   
The most sol of all amidosulphonates (B)**Lithium amidosulphonate**  $LiNH SO_3$   
Deliquescent (B)**Magnesium amidosulphonate**  
Very sol in  $H_2O$ **Manganese amidosulphonate**,  $Mn(NH_2SO_3)_2 + 3H_2O$   
Very sol in  $H_2O$  (B)**Mercuric amidosulphonate, basic**,  
 $Hg(HgOSO_3NH_2)_2$ Insol in 35 %  $HNO_3 + Aq$  Very sol in 3 %  $HCl + Aq$  (Hofmann, B 1912, 45 1733)  
 $+ 2H_2O$  Insol in hot  $H_2O$  Sol in  $KOH + Aq$  (Divers and Haga, Chem Soc 1896, 69 1649)**Mercuric potassium amidosulphonate**,  
 $KHgNSO_3$ Very sl sol in cold  $H_2O$  and cold dil  $KOH + Aq$  Sol in 3 %  $HCl + Aq$  (Hofmann, B 1912, 45 1732)**Mercuric sodium amidosulphonate**,  
 $NaHgNSO_3$ Nearly completely sol in hot  $H_2O$  (Hofmann, B 1912, 45 1734)**Nickel amidosulphonate**,  $Ni(NH SO_3)_2 + 3H_2O$ Sol in  $H_2O$  (B)**Potassium amidosulphonate**,  $KNH SO_3$   
Sol in  $H_2O$  (Berglund)**Potassium silver amidosulphonate**,  
 $NHAgSO_3K + H_2O$ Decomp by  $H_2O$ , sol in  $NH_4OH + Aq$  (Hofmann, B 1912, 45 1734)**Silver amidosulphonate**,  $AgNH SO_3$   
Sol in 15 pts  $H_2O$  at  $19^\circ$  (B)**Sodium amidosulphonate**,  $NaNH_2SO_3$   
Sol in  $H_2O$ **Strontium amidosulphonate**,  $Sr(NH SO_3)_2 + 4H_2O$   
Sol in  $H_2O$ **Thallium amidosulphonate**,  $TlNH SO_3$   
Sol in  $H_2O$ **Uranyl amidosulphonate**  
Sol in  $H_2O$ **Zinc amidosulphonate**,  $Zn(NH SO_3)_2 + 4H_2O$   
Sol in  $H_2O$

**Amidosulphurous acid****Ammonium amidosulphite,  $\text{NH}_4 \text{SO}_2 \text{NH}_4$** 

Very deliquescent Decomps in the air with loss of  $\text{NH}_3$  Sol in  $\text{H}_2\text{O}$  with decomp Sol in anhydrous alcohol Sl sol in dry ether (Divers, Chem Soc 1900, 77 330)

**Ammonia,  $\text{NH}_3$** 

Very sol in  $\text{H}_2\text{O}$ , with evolution of much heat

1 vol  $\text{H}_2\text{O}$  absorbs 670 vols ( $\frac{1}{2}$  pt by weight)  $\text{NH}_3$  at  $+10^\circ$  and 29.8 in pressure sp gr of solution = 0.875 (Davy)

At low temperatures  $\text{H}_2\text{O}$  absorbs more than  $\frac{1}{2}$  its weight of  $\text{NH}_3$  and sp gr of solution = 0.850 (Dalton)

100 pts  $\text{H}_2\text{O}$  absorb 8.41 pts  $\text{NH}_3$  at  $24^\circ$  5.96 pts at  $55^\circ$  (Osann)

1 vol  $\text{H}_2\text{O}$  absorbs 780 vols  $\text{NH}_3$  6 vols  $\text{H}_2\text{O}$  increasing to 10 vols sat  $\text{NH}_4\text{OH} + \text{Aq}$  1 vol sat  $\text{NH}_4\text{OH} + \text{Aq}$  contains 468 vols  $\text{NH}_3$  (Thomson)

1 vol  $\text{H}_2\text{O}$  absorbs 450 vols  $\text{NH}_3$  at  $15^\circ$  (Dumas)

1 vol  $\text{H}_2\text{O}$  absorbs 700 vols  $\text{NH}_3$  at ordinary temperature (Otto)

100 pts  $\text{H}_2\text{O}$  absorb in  $\text{NH}_3$  gas 47.7 pts  $\text{NH}_3$  by weight (Berzelius)

1 vol  $\text{H}_2\text{O}$  absorbs 505 vols  $\text{NH}_3$  and vol is increased to 1.5 vol and sp gr becomes 0.900 (Ure)

1 vol  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm absorbs 1177.3 vols  $\text{NH}_3$  (Sims)

1 vol  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm absorbs 1146 vols  $\text{NH}_3$  (Roscoe and Dittmar)

1 vol  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm absorbs 1049.6 vols  $\text{NH}_3$  (Carius)

1 vol  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm absorbs 1270 vols  $\text{NH}_3$  (Berthelot)

1 vol  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm absorbs 1050 vols  $\text{NH}_3$  (Bunsen)

100 cc  $\text{H}_2\text{O}$  absorb 64.50 g  $\text{NH}_3$  (Raoult)

**Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at 760 mm and  $t^\circ$** 

1 g  $\text{H}_2\text{O}$  absorbs g  $\text{NH}_3$ , according to Roscoe and Dittmar (A 122 347) (RD), and according to Sims (A 118 345) (S)

(Roscoe and Dittmar, A 112 349)

In proportion as the temperature is higher, so much the more nearly does the solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  conform to the law of Henry and Dalton, but only obeys it completely when the temperature is  $100^\circ$ , as is seen in the following table

solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at various pressures and temperatures  $P$ =partial pressure,  $1 e$  total pressure minus the tension of aqueous vapour at the given temperature,  $G$ =grams  $\text{NH}_3$  dissolved in 1 g  $\text{H}_2\text{O}$  at the given pressure,  $G$  at 760=grams  $\text{NH}_3$  that would be contained in 1 g  $\text{H}_2\text{O}$  if the solubility was proportional to the pressure

## Readily sol in ether

Sol in 0 4 vol petroleum from Amiano (Saussure)

1 vol oil of turpentine absorbs 7 5 vols  $\text{NH}_3$  at  $16^\circ$

1 vol oil of lemon absorbs 8 5 vols  $\text{NH}_3$  at  $16^\circ$

1 vol oil of rosemary absorbs 9 5 vols  $\text{NH}_3$  at  $29^\circ$

1 vol oil of lavender absorbs 47 v s  $\text{NH}_3$  at  $20^\circ$  (Saussure)

1 vol caoutchine absorbs 3 vo  $\text{NH}_3$  (Himly)

Valerol absorbs much  $\text{NH}_3$  (Carr irdt, A ch (3) 7 278)

1 vol ether at 760 mm pressure absorbs 17 13 vols  $\text{NH}_3$  at  $0^\circ$ , 12 35 vols at  $0^\circ$  and 10 27 vols at  $15^\circ$  (Christoff, Z p ys Ch 1912 79 459)

+  $\text{H}_2\text{O}$  Colorless crystals

+  $\frac{1}{2}\text{H}_2\text{O}$  Large transparent crystals (Rupert, J Am Chem Soc 1909, 3 868)

## Ammonia, with metal salts

For the ammonia addition-products of metal salts, see under the respective metal salts, except in the case of Co, Cr, Hg and the Pt metals, for which see cobalt ammonium, chromium ammonium, etc, compounds, for

further reference New data on Co and Cr ammonium compounds and those of the Pt metals, published since the first edition, has not been included in the present edition

### Ammonium amalgam, $\text{NH}_4, \text{zHg}$

Decomp by  $\text{H}_2\text{O}$ , but more easily in presence of naphtha, alcohol, or ether

### Ammonium azoimide, $\text{N}_4\text{H}_4=\text{NH}_4\text{N}_3$

Easily sol in  $\text{H}_2\text{O}$ , sl sol in absolute alcohol, easily in 80% alcohol Insol in ether or benzene (Curtius, B 24 3344)

### Ammonium cobalt azoimide, $\text{NH}_4\text{N}_3, \text{CoN}_3$

Rather sol in  $\text{H}_2\text{O}$  (Curtius and Rissom, J pr 1898, (2) 58 302)

### Ammonium bromide, $\text{NH}_4\text{Br}$

Easily sol in  $\text{H}_2\text{O}$  with absorption of much heat

1 pt  $\text{NH}_4\text{Br}$  dissolves in pts  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts $\text{H}_2\text{O}$	$t^\circ$	Pts $\text{H}_2\text{O}$	$t^\circ$	Pts $\text{H}_2\text{O}$
10	1 51	30	1 23	100	0 78
16	1 39	50	1 06		

(Eder, W A B 82 (2) 1284)

$\text{NH}_4\text{Br} + \text{Aq}$  containing 41.09%  $\text{NH}_4\text{Br}$  is sat at  $15^\circ$  (Gerlach)

Sp gr of  $\text{NH}_4\text{Br} + \text{Aq}$  at  $15^\circ$

(Herz, l c)

Sol in 809 pts ether (0.729 sp gr) (Eder, *lc*)  
 Sol in acetone (Eidmann, C C 1899 II, 1014), (Naumann, B 1904, 37 4328)  
 Insol in benzonitrile (Naumann, B 1914, 47 1370)  
 Insol in methyl acetate (Naumann, B 1909, 42 3790)  
 Insol in ethylacetate (Naumann, B 1910, 43 314)

### Ammonium tribromide, $\text{NH}_4\text{Br}_3$

Gives off Br in air Sol in  $\text{H}_2\text{O}$  (Roozeboom, B 14 2398)

Decomp in the air Very sol in  $\text{H}_2\text{O}$  (Chattaway, Chem Soc 1915, 107 106)

### Ammonium antimony bromide, $3\text{NH}_4\text{Br} \cdot 2\text{SbBr}_3$

Easily sol in abs alcohol (Caven, C C 1905 II, 293)

$7\text{NH}_4\text{Br} \cdot 3\text{SbBr}_3$  Easily sol in abs alcohol (Caven, C C 1905 II, 293)

See also Bromantimonate, ammonium

### Ammonium bismuth bromide, $\text{NH}_4\text{Br} \cdot \text{BiBr}_3 + \text{H}_2\text{O}$

Deliquescent Decomp by  $\text{H}_2\text{O}$  Sol in alcohol (Nicklès, C R 51 1097)

### Ammonium cadmium bromide, $\text{NH}_4\text{Br} \cdot \text{CdBr}_2 + \frac{1}{2}\text{H}_2\text{O}$

Sol in 0.73 pt  $\text{H}_2\text{O}$ , 5.3 pts abs alcohol, 280 pts ether (sp gr 0.729), and 24 pts alcohol ether (1 l) (Eder, Dingl 221 89)

Sol in  $\text{H}_2\text{O}$  without decomp between 1° and 110.1°

100 pts of the solution contain at

1° 14.8° 52.2° 110.1°

53.82 58.01 65.32 75.83 pts of the salt (Rimbach, B 1905, 38 1555)

$4\text{NH}_4\text{Br} \cdot \text{CdBr}_2$  Sol in 0.96 pt  $\text{H}_2\text{O}$ , from which it is pptd by alcohol or ether (Eder)

Solubility in  $\text{H}_2\text{O}$  at t°

Below 160° the salt is decomp by  $\text{H}_2\text{O}$ , at 160° it is sol in  $\text{H}_2\text{O}$  without decomp

t°	100 pts of the solution contain			Solid phase
	Pts Cd	Pts Br	Pts $\text{NH}_4$	
0.8	14.72	50.46	6.67	Double salt + $\text{NH}_4\text{Br}$
13.0	14.94	51.48	6.85	"
44.5	15.01	53.85	7.35	"
76.4	14.60	55.28	7.80	"
123.5	15.50	59.50	8.45	"
160.0	14.70	62.67	9.43	Double salt

(Rimbach, B 1905, 38 1558)

Not sol in  $\text{HBr} + \text{Aq}$  without decomp (Rimbach)

Not sol without decomp in  $\text{LiBr} + \text{Aq}$ ,  $\text{CaBr}_2 + \text{Aq}$ ,  $\text{MgBr}_2 + \text{Aq}$ ,  $\text{NiBr}_2 + \text{Aq}$ , or

$\text{CoBr}_2 + \text{Aq}$ , even though very conc solution are used Sol without decomp in  $\text{ZnBr}_2 + \text{Aq}$  (Rimbach, B 1905, 38 1551)

### Ammonium chloromolybdenum bromide, $2\text{NH}_4\text{Br} \cdot \text{Cl}_4\text{Mo}_3\text{Br}_2$

Decomp by pure  $\text{H}_2\text{O}$  Can be crystallized from  $\text{HBr} + \text{Aq}$  Apparently sol without decomp in alcohol (Blomstrand)

### Ammonium cuprous bromide

$4\text{NH}_4\text{Br} \cdot \text{Cu}_2\text{Br}_2$  Fairly stable in air  
 $2\text{NH}_4\text{Br} \cdot \text{Cu}_2\text{Br}_2 + \text{H}_2\text{O}$  Fairly stable in air (Wells, Z anorg 1895, 10 159)

### Ammonium cuprous bromide ammonium, $\text{NH}_4\text{Br} \cdot \text{Cu}_2\text{Br}_2 \cdot 3\text{NH}_3$

(Fleurent, C R 1891, 113 107)

### Ammonium cupric bromide, $2\text{NH}_4\text{Br} \cdot \text{CuBr}_2 + 2\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (de Koningck, B 21 777 R)

### Ammonium iridium bromide

See Bromiridate, ammonium

### Ammonium iron (ferric) bromide, $(\text{NH}_4)_2\text{FeBr}_4 + 2\text{H}_2\text{O}$

Very deliquescent, sol in  $\text{H}_2\text{O}$  (Walden Z anorg 1894, 7 332)

### Ammonium lead bromide, $12\text{NH}_4\text{Br} \cdot 7\text{PbBr}_2 + 7\text{H}_2\text{O}$

Decomp on air, or with cold  $\text{H}_2\text{O}$  (André G R 96 1502)

$6\text{NH}_4\text{Br} \cdot \text{PbBr}_2 + \text{H}_2\text{O}$  Decomp by cold  $\text{H}_2\text{O}$  (A)

$7\text{NH}_4\text{Br} \cdot \text{PbBr}_2 + 1\frac{1}{2}\text{H}_2\text{O}$  Stable on air decomp by cold  $\text{H}_2\text{O}$  (A)

None of the above compounds 1st (Wells Sill Am J 146 25)

$2\text{NH}_4\text{Br} \cdot \text{PbBr}_2$  Decomp by  $\text{H}_2\text{O}$  Sol in conc  $\text{KOH} + \text{Aq}$  and in strong acids (Fonze-Diacon, Bull Soc 1897 3) 17 351)  
 $\text{NH}_4\text{Br} \cdot 3\text{PbBr}_2$  (Wells)

### Ammonium magnesium bromide, $\text{NH}_4\text{Br} \cdot \text{MgBr}_2 + 6\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  (Rich, J pr (2) 28 338)

### Ammonium mercuric bromide, $2\text{HgBr}_2 \cdot \text{NH}_4\text{Br}$

Decomp by  $\text{H}_2\text{O}$  into its constituent salts (Rây, Chem Soc 1902, 81 648)

### Ammonium molybdenum bromide, $2\text{NH}_4\text{Br} \cdot \text{MoBr}_3 + \text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg 1905, 46 322)

### Ammonium molybdenum bromide chloride See Ammonium chloromolybdenum bromide

**Ammonium osmium bromide***See Bromosmate, ammonium***Ammonium osmyl bromide**,  $(\text{NH}_4)_2\text{OsO}_2\text{Br}_4$

B-pt of  $\text{NH}_4\text{Cl}$  + Aq, containing pts  $\text{NH}_4\text{Cl}$  to 100 pts  $\text{H}_2\text{O}$  G = according to Gerlach (Z anal **26** 439), I = according to Isgard (A ch (2) **59** 436)

B pt	G	I	B pt	G	L
101°	6.5	7.8	109°	50.6	53.5
102	12.8	13.9	110	56.2	59.9
103	19.0	19.7	111	61.9	66.4
104	24.7	25.2	112	67.8	73.3
105	29.7	30.5	113	74.2	80.5
106	34.6	35.7	114	81.3	88.1
107	39.6	41.3	114.2		88.9
108	45.0	47.3	114.8	87.1	

Sat  $\text{NH}_4\text{Cl}$  + Aq boils at 115.8° at 718 mm pressure (Alluard, C R **59** 500)

$\text{NH}_4\text{Cl}$  + Aq containing 74.2 pts  $\text{NH}_4\text{Cl}$  to 100 pts  $\text{H}_2\text{O}$  forms a crust at 113°, highest temperature observed, 114.8° (Gerlach, Z anal **26** 426)

$\text{NH}_4\text{Cl}$  + Aq containing 10%  $\text{NH}_4\text{Cl}$  boils at 101.7°, 20%  $\text{NH}_4\text{Cl}$  at 104.4° (Gerlach)  
 $\text{NH}_4\text{Cl}$  + Aq containing 10.6%  $\text{NH}_4\text{Cl}$  gives off  $\text{NH}_3$  at 37° (Leeds, Am J Sci (3) **7** 197)

When  $\text{NH}_4\text{Cl}$  + Aq is boiled, or even evaporated on water bath, a little  $\text{NH}_3$  is expelled (Fresenius)

30 pts  $\text{NH}_4\text{Cl}$  mixed with 100 pts  $\text{H}_2\text{O}$  lower the temp from 13.3° to -5.1°, that is 18.4° (Rudorff, B **2** 68)

Freezing-point of sat solution is -15.4°, the same temp which is caused by mixing 25 pts  $\text{NH}_4\text{Cl}$  with 100 pts snow (Rudorff, Pogg **122** 337)

Conc  $\text{HCl}$  + Aq precipitates part of  $\text{NH}_4\text{Cl}$  from sat  $\text{NH}_4\text{Cl}$  + Aq (Vogel, J pr **2** 199)

Solubility of  $\text{NH}_4\text{Cl}$  in  $\text{HCl}$  + Aq at 0°  $\text{NH}_4\text{Cl}$  = mols  $\text{NH}_4\text{Cl}$  (in milligrammes) dissolved in 10 cc of the liquid,  $\text{HCl}$  = mols  $\text{HCl}$  (in milligrammes) dissolved in 10 cc of the liquid

rec+2NH<sub>4</sub>Cl, CuCl<sub>2</sub> 2H<sub>2</sub>O  
 2NH<sub>4</sub>Cl, CuCl<sub>2</sub> 12H<sub>2</sub>O

(Meerburg, Z anorg 1905, 4 8)

Somewhat sol in liquid  $\text{NH}_3$  (Franklin and Kraus, Am Ch J 1898, 20 827)

Is the only hydrate of  $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$  existing between  $-11^\circ$  and  $+80^\circ$  (Meerburg, C C 1904 II, 1362)

$+3\text{H}_2\text{O}$  (Bourgeois, Bull Soc 1898, (3) 19 786)

**Ammonium cupric chloride ammonia**,  $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$ ,  $2\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$ , less easily by alcohol  
Decomp by acids (Rutthausen)

**Ammonium indium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{InCl}_3$ ,  $+\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Meyer)

**Ammonium iodine chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{ICl}_3$

More sol in  $\text{H}_2\text{O}$  than  $\text{KCl}$ ,  $\text{ICl}_3$  (Fihlhol, J Pharm 25 441, Berz J B 20 (2) 110)

**Ammonium iridium trichloride**

See Chloriridate, ammonium

**Ammonium iridium tetrachloride**

See Chloriridate, ammonium

**Ammonium iron (ferrous) chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_2$

Easily sol in  $\text{H}_2\text{O}$ , insol in alcohol (Winkler)

**Ammonium iron (ferric) chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_3$ ,  $+\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  without decomp (Fritzsch), sol in 3 pts  $\text{H}_2\text{O}$  at  $18.75^\circ$  (Abl)  
Sol in  $\text{H}_2\text{O}$  (Walden, Z anorg 1894, 1 332)

**Ammonium iron (ferric) potassium chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_3$ ,  $\text{KCl}$ ,  $+1\frac{1}{2}\text{H}_2\text{O}$

Min Kremerside Deliquescent

**Ammonium lead chloride**,  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$ ,  $+3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  without decomp (?) (André, C R 96 1502)

$6\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2$ ,  $+\text{H}_2\text{O}$

$9\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2$ ,  $+1\frac{1}{2}\text{H}_2\text{O}$

$9\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$ ,  $+2\frac{1}{2}\text{H}_2\text{O}$

$10\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2$ ,  $+\text{H}_2\text{O}$

$11\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$ ,  $+3\frac{1}{2}\text{H}_2\text{O}$

$18\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2$ ,  $+4\frac{1}{2}\text{H}_2\text{O}$

All these salts are decomp by  $\text{H}_2\text{O}$  (André, A ch (6) 3 104)

Of the salts prepared by André, only one  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  exists (Wells, Sill Am J 146 25)

Solubility determinations show that  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  is the only double salt formed at  $25^\circ$  (Foote, Am Ch J 1907, 37 121)

$\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2$ ,  $+1\frac{1}{3}\text{H}_2\text{O}$  (Wells, l c)

**Ammonium lead tetrachloride**

See Chloroplumbate, ammonium

**Ammonium magnesium chloride**,  $\text{NH}_4\text{MgCl}_2$ ,  $+6\text{H}_2\text{O} = \text{NH}_4\text{Cl}$ ,  $\text{MgCl}_2$ ,  $+6\text{H}_2\text{O}$

Deliquescent Very sol in  $\text{H}_2\text{O}$

Sol in 6 pts cold  $\text{H}_2\text{O}$  (Fourcroy)

Solubility in  $\text{NH}_4\text{Cl}$  + Aq at  $t^\circ$

$t^\circ$	Per 1000 Mol $\text{H}_2\text{O}$	
	Mol $\text{NH}_4\text{Cl}$	Mol $\text{MgCl}_2$
3 5°	27 5	55 7
25 0	42 1	56 4
50 0	62 9	59 1

(Biltz, Z anorg 1911, 71 170)

$4\text{NH}_4\text{Cl}$ ,  $5\text{MgCl}_2$ ,  $+33\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Berthelot and André, A ch (6) 11 294)

**Ammonium manganous chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_2$ ,  $+\frac{1}{2}\text{H}_2\text{O}$

Sol in  $1\frac{1}{2}$  pts  $\text{H}_2\text{O}$  at ordinary temp (Hautz, A 66 280), does not exist (Saunders, Am Ch J 14 134)

$2\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_2$ ,  $+\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Rammsberg), does not exist (Saunders)

$+2\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$ , but with decomp into  $\text{NH}_4\text{Cl}$  and  $\text{MnCl}_2$  (Saunders)

**Ammonium manganic chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_3$

Sol in  $\text{H}_2\text{O}$ , less sol in  $\text{NH}_4\text{Cl}$  + Aq Unstable (Neuman, M 1894, 15 490)

$+\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{HCl}$  apparently without decomp (Rice, Chem Soc 1898, 73 260)

**Ammonium mercuric chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$ ,  $+\text{H}_2\text{O}$  (sal alembroth)

Sol in 0.66 pt  $\text{H}_2\text{O}$  at  $10^\circ$ , and in nearly every proportion of hot  $\text{H}_2\text{O}$

$\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$  Easily sol in  $\text{H}_2\text{O}$   
 $+1\frac{1}{2}\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Kane)

$2\text{NH}_4\text{Cl}$ ,  $3\text{HgCl}_2$ ,  $+4\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Holmes, C N 5 351)

$\text{NH}_4\text{Cl}$ ,  $2\text{HgCl}_2$  Very sol in  $\text{H}_2\text{O}$  (Rây, Chem Soc 1902, 81 648)

$\text{NH}_4\text{Cl}$ ,  $5\text{HgCl}_2$  (Stromholm, J pr 1902, (2) 66 441)

**Ammonium mercuric sodium chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$ ,  $4\text{NaCl}$  (?)

Sol in  $\text{H}_2\text{O}$  (Kossmann, A ch (3) 27 243)

**Ammonium molybdenum chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MoCl}_3$ ,  $+\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Nearly insol in alcohol and ether (Chilesotti, C C 1903 II, 652)

See also Ammonium chloromolybdenum chloride

**Ammonium molybdenum chloride iodide**

See Ammonium chloromolybdenum iodide

**Ammonium molybdenyl chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MoO}_2\text{Cl}_2 + 2\text{H}_2\text{O}$

(Weinland, Z anorg 1905, 44 98)

$2\text{NH}_4\text{Cl}$ ,  $\text{MoOCl}_3$  Sol in  $\text{H}_2\text{O}$ , insol in  $\text{H}_2\text{O}$  sat with  $\text{HCl}$  (Klason, B 1901, 34 149)

**Ammonium nickel chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 6\text{H}_2\text{O}$

Deliquescent in moist air Easily sol in  $\text{H}_2\text{O}$  (Hautz)

$4\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 7\text{H}_2\text{O}$  (?)

**Ammonium osmium tetrachloride**

See Chlorosmate, ammonium

**Ammonium osmium sesquichloride**

See Chlorosmte, ammonium

**Ammonium osmyl chloride**,  $(\text{NH}_4)_2\text{OsO}_2\text{Cl}_4$

Sol in  $\text{H}_2\text{O}$  Decomp by  $\text{HCl}$  (Wintrebert, A ch 1903, (7) 28 92)

**Ammonium osmyl oxychloride**,

$(\text{NH}_4)_2\text{OsO}_3\text{Cl}_2$

Very sl sol in  $\text{H}_2\text{O}$  Sol in  $\text{KOH} + \text{Ag}$  with decomp (Wintrebert, A ch 1903, (7) 28 116)

**Ammonium palladium chlorides**

See Chloropalladate, ammonium and chloroammonium

**Ammonium rhodium dichloride**,  $4\text{NH}_4\text{Cl}$ ,  $\text{RhCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , but decomp slowly (Willm B 16 3033)

Does not exist (Leidé, A ch (6) 17 277)

**Ammonium rhodium trichloride**

See Chlororhodite, ammonium

**Ammonium rhodium chloride ammonium nitrate**,  $\text{Rh}_2\text{Cl}_6$ ,  $6\text{NH}_4\text{Cl}$ ,  $2\text{NH}_4\text{NO}_3$

See Chlororhodite nitrate, ammonium

**Ammonium ruthenium trichloride**

See Chlororuthenite, ammonium

**Ammonium ruthenium tetrachloride**

See Chlororuthenate, ammonium

**Ammonium tellurium chloride**

See Chlorotellurate, ammonium

**Ammonium thallic chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{HCl}_3$

Easily sol in  $\text{H}_2\text{O}$  (Willm)

$+2\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  and alcohol (Nickles, J Pharm (4) 1 28)

**Ammonium thorium chloride**,  $8\text{NH}_4\text{Cl}$ ,  $\text{ThCl}_4 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Chydenius)

**Ammonium tin (stannous) chloride (ammonium chlorostannite)**,  $\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  Resembles K salt (Richardson, Am Ch J 14 93)

$2\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , it decomp by boiling (Rammelsberg)

Contains  $2\text{H}_2\text{O}$  (Richardson)

$4\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + 3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Poggiale, C R 20 1182)

Does not exist (Richardson)

**Ammonium tin (stannic) chloride**

See Chlorostannate, ammonium

**Ammonium titanium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4 + 2\text{H}_2\text{O}$

Ppt, decomp in moist air, sol in fuming  $\text{HCl}$ , insol in ether (Rosenheim, Z anorg 1901, 26 242)

**Ammonium titanium chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4$

Sol in  $\text{H}_2\text{O}$

$6\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4$  Sol in  $\text{H}_2\text{O}$  (Rose)

**Ammonium tungsten chloride**,  $(\text{NH}_4)_3\text{W}_2\text{Cl}_7 = 3\text{NH}_4\text{Cl}$ ,  $2\text{WCl}_6$

Easily sol in  $\text{H}_2\text{O}$  Nearly insol in most organic solvents (Olsson, B 1913, 46 5 7)

**Ammonium uranyl chloride**

Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Lilgott)

$2\text{NH}_4\text{Cl}$ ,  $(\text{UO}_2)_2\text{Cl}_2 + 2\text{H}_2\text{O}$  Solution at  $5^\circ$  contains in 100 g 3.51 g,  $\text{NH}_4$ , 40.67 g  $\text{O}_2$  and 19.15 g  $\text{Cl}$ , hence there is considerable decomp (Rumbach, B 1904, 37 466)

**Ammonium vanadium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{VCl}_3 + \text{H}_2\text{O}$

Difficulty sol in  $\text{H}_2\text{O}$  and alcohol (Staer, B 1904, 37 4412)

**Ammonium zinc chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + 2\text{H}_2\text{O}$

Deliquescent Very sol in  $\text{H}_2\text{O}$  (Hautz, A 66 287)

$2\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  Sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 94 507)

$+ \text{H}_2\text{O}$  Deliquescent in moist air Sol in  $\frac{1}{3}$  pt cold  $\text{H}_2\text{O}$  with absorption of heat Sol in 0.28 pt hot  $\text{H}_2\text{O}$  (Goltz-Bass, Z anorg 1901, 70 344), sol in  $\frac{1}{2}$  pt cold  $\text{H}_2\text{O}$  (Hautz, A 66 287)

$3\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  Sol in  $\text{H}_2\text{O}$  (Mangin, C)

$+ \text{H}_2\text{O}$  (Berthelot, A ch (6) 11 294)

$4\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  (Deherun)

$6\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + \frac{2}{3}\text{H}_2\text{O}$  (Berthelot, )

**Ammonium chloride zinc oxychloride**,  $2\text{ZnCl}_2$ ,  $8\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$

Sol in a little  $\text{H}_2\text{O}$ , but decomp by excess (Andric)

$3\text{ZnCl}_2$ ,  $10\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$  As above (Andric, A ch (6) 3 88)

**Ammonium chloride antimony fluoc de**,  $\text{NH}_4\text{Cl}$ ,  $\text{SbF}_3$

Easily sol in  $\text{H}_2\text{O}$  (de Haen, B 21 90 R)

**Ammonium chloride arsenic trioxide**

See Arsenite chloride, ammonium

**Ammonium chloride bismuth bromide,**

Deliquescent, decomp by  $\text{H}_2\text{O}$  (Murr, Chem Soc **31** 148)

$2\text{NH}_4\text{Cl}, \text{BiBr}_3 + 3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Murr)

$5\text{NH}_4\text{Cl}, 2\text{BiBr}_3 + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Murr)

**Ammonium chloride chromic oxychloride,**

Decomp in the air Sol in conc  $\text{HCl}$  without decomp (Weinland, B 1906, **39** 4045)

**Ammonium chloride cuprocupric thiosulphate,**

See Thiosulphate ammonium chloride, cuprocupric

**Ammonium chloride lead iodide,  $3\text{NH}_4\text{Cl}, \text{PbI}_2$** 

Decomp with  $\text{H}_2\text{O}$  (Behrens, Pogg **62** 252)

$4\text{NH}_4\text{Cl}, \text{PbI}_2 + 2\text{H}_2\text{O}$  Decomp with  $\text{H}_2\text{O}$  (Poggiale, C R **20** 1180)

**Ammonium chloride mercuric bromide,**

(Edhem-Bey, Dissert **1885**)

**Ammonium chloride platinum sulphite**

See Chloroplatosulphite, ammonium

**Ammonium chloride tin (stannous) bromide,**

Sol in  $\text{H}_2\text{O}$  (Rymann and Preis, A **223** 323)

**Ammonium dichloroiodide,  $\text{NH}_4\text{Cl I}$** 

Slowly decomp when exposed to dry air at ord temp. Vgry sol in  $\text{H}_2\text{O}$  (Chattaway, Chem Soc 1915 **107** 107)

**Ammonium tetrachloroiodide,  $\text{NH}_4\text{Cl}_4\text{I}$** 

Decomp in the air (Chattaway, Chem Soc 1915, **107** 107)

**Ammonium lead chloroiodide,  $\text{NH}_4\text{PbClI} + 2\text{H}_2\text{O}$  and  $(\text{NH}_4)_2\text{PbCl}_2 + 2\text{H}_2\text{O}$** 

Sol in  $\text{KOH} + \text{Aq}$  and in strong acids, decomp by  $\text{H}_2\text{O}$  (Ionizes Drwon, Bull Soc 1897, (5) **17** 318)

**Ammonium fluoride,  $\text{NH}_4\text{F}$** 

Abundantly sol in  $\text{H}_2\text{O}$ , sl sol in alcohol (Marignac, Ann Min (5) **15** 221)

Insol in liquid  $\text{NH}_3$  (Ruff und Giesel, B 1903, **36** 820)

Almost insol in liquid  $\text{NH}_3$  at  $50^\circ$  (Moissan, C R 1901, **133** 713)

Sol in methyl alcohol (Curara, Gazz ch 1896, **26** 119)

**Ammonium hydrogen fluoride,  $\text{NH}_4\text{F}, \text{HF}$** 

Deliquescent in moist air Sol in  $\text{H}_2\text{O}$

**Ammonium antimony fluoride,  $2\text{NH}_4\text{F}, \text{SbF}_3$** 

Deliquescent, sol in 0.9 pt cold  $\text{H}_2\text{O}$  Insol in alcohol or ether (Flückinger, A **84** 248)

$\text{NH}_4\text{F}, 4\text{SbF}_3$  3 pts sol in 2 pts  $\text{H}_2\text{O}$  (Raad and Hauser, B 1890, **23** R 125)

$\text{NH}_4\text{F}, \text{SbF}_3$  Easily sol in  $\text{H}_2\text{O}$  (Marignac, A **145** 239)

**Ammonium bismuth fluoride,  $2\text{NH}_4\text{F}, \text{BiF}_3$** 

Insol in  $\text{H}_2\text{O}$  Rather difficultly sol in acids (Helmholtz, Z anorg **3** 115)

**Ammonium cadmium fluoride,  $\text{NH}_4\text{F}, \text{CdF}_2$** 

Insol in  $\text{H}_2\text{O}$  Sol in acids on boiling (Helmholtz, Z anorg **3** 115)

**Ammonium chromium fluoride,  $3\text{NH}_4\text{F}, \text{CrF}_3$** 

Easily sol in  $\text{H}_2\text{O}$  Sl sol in  $\text{NH}_4\text{F} + \text{Aq}$  (Petersen, J pr (2) **40** 52)

$2\text{NH}_4\text{F}, \text{CrF}_3 + \text{H}_2\text{O}$  (Wagner, B **19** 896)

**Ammonium cobaltous fluoride,  $2\text{NH}_4\text{F}, \text{CoF}_2 + 2\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  (Wagner, B **19** 896)

Easily sol in  $\text{H}_2\text{O}$  (Helmholtz, Z anorg **3** 132)

**Ammonium columbyl fluoride**

See Fluoxycolumbate, ammonium

**Ammonium columbium fluoride oxyfluoride,  $3\text{NH}_4\text{F}, \text{CbF}_5, \text{CbOF}_3$** 

See Fluoxycolumbate columbium fluoride, ammonium

**Ammonium copper fluoride,  $2\text{NH}_4\text{F}, \text{CuF} + 2\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  (Helmholtz, Z anorg **3** 115)

Nearly insol in  $\text{H}_2\text{O}$  but decomp thereby (Haas, Ch Z 1908, **32** 8)

**Ammonium glucinum fluoride,  $2\text{NH}_4\text{F}, \text{GlF}$** 

Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (4) **30** 51)

Vgry sol in  $\text{H}_2\text{O}$  (Helmholtz, Z anorg **3** 130)

**Ammonium iron (ferrous) fluoride,  $2\text{NH}_4\text{F}, \text{FeF}$** 

(Wagner, B **19** 896)

$\text{NH}_4\text{F}, \text{FeF} + 2\text{H}_2\text{O}$  (W)

**Ammonium iron (ferric) fluoride,  $2\text{NH}_4\text{F}, \text{FeF}_3$** 

More sol in  $\text{H}_2\text{O}$  than the corresponding K compound Decomp by boiling (Nickles, J Pharm (4) **7** 15)

$3\text{NH}_4\text{F}, \text{FeF}_3$  Sl sol in  $\text{H}_2\text{O}$  (Marignac, A ch (3) **60** 306)

Easily sol in acids (Helmholtz, Z anorg **3** 124)

**Ammonium manganic fluoride,  $2\text{NH}_4\text{F}, \text{MnF}_4$** 

More sol than the K salt (Nickles, C R **65** 107)

True composition is  $4\text{NH}_4\text{F}$ ,  $\text{Mn}_2\text{F}_6$  (Christensen, J pr (2) 34 41)

See also Fluomanganate, ammonium

**Ammonium manganyl fluoride**

See Fluoxymanganate, ammonium

**Ammonium molybdenum fluoride**

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Berzelius)

See also Fluomolybdate, ammonium

**Ammonium molybdenyl fluoride**

See Fluoxymolybdate, ammonium

**Ammonium nickel fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{NiF}_2 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wagner, B 19 896)

Easily sol in  $\text{H}_2\text{O}$  (Helmholtz, Z anorg 3 143)

**Ammonium scandium fluoride**,  $(\text{NH}_4)_3\text{ScF}_6$

Easily sol in  $\text{H}_2\text{O}$  Aqueous solution is not decomp by boiling Decomp by acids (R I Meyer, Z anorg 1914, 86 275)

**Ammonium silicon fluoride**

See Fluosilicate, ammonium

**Ammonium silver fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{AgF} +$

scopie Sol in  $\text{H}_2\text{O}$ , sol in conc

Sol in alcohol (Grützner, in 1900, 238 3)

$\text{F}$ ,  $\text{AgF} + 4\text{H}_2\text{O}$  More deliquescent  $\text{H}_4\text{F}$  (Bohm, Dissert 1906)

**Ammonium tantalum fluoride**

See Fluotantalate, ammonium

**Ammonium tantaly fluoride**

See Fluoxytantalate, ammonium

**Ammonium tellurium fluoride**,  $\text{NH}_4\text{F}$ ,  $\text{TeF}_4$

Decomp by  $\text{H}_2\text{O}$  (Hogbom, Bull Soc (2) 35 60)

**Ammonium tin (stannous) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_2 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wagner, B 19 896)

**Ammonium tin (stannic) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_4$

See Fluostannate, ammonium

**Ammonium titanium sesquifluoride**

See Fluotitanate, ammonium

**Ammonium titanyl fluoride**

See Fluoxypertitanate, ammonium

**Ammonium tungstyl fluoride**

See Fluoxytungstate, ammonium

**Ammonium uranyl fluoride**

See Fluoxyuranate, ammonium

**Ammonium vanadium sesquifluoride**

See Fluovanadate, ammonium

**Ammonium vanadyl fluoride**

See Fluoxylvanadate, ammonium

**Ammonium zinc fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{ZnF}_2$

Sol in  $\text{H}_2\text{O}$  (R Wagner)

+  $2\text{H}_2\text{O}$  Very sl sol in  $\text{H}_2\text{O}$  Easily s in dil acids (Helmholtz)

**Ammonium zirconium fluoride**

See Fluozirconate, ammonium

**Ammonium fluoride manganic oxyfluorid**

$2\text{NH}_4\text{F}$ ,  $\text{MnOF}_2$

Precipitate (Nicklès)

See also Fluoxymanganate, ammonium

**Ammonium fluoride molybdenum trioxid**

$2\text{NH}_4\text{F}$ ,  $\text{MoO}_3$

Decomp by  $\text{H}_2\text{O}$  (Mauro, Gazz ch 18 120)

**Ammonium fluoride tungsten oxyfluoride**

See Fluoxytungstate, ammonium

**Ammonium fluoride tungsten oxyfluorid**

ammonium tungstate,  $4\text{NH}_4\text{F}$ ,  $\text{WO}_2\text{F}_2$ ,  $(\text{NH}_4)_2\text{WO}_4$

See Fluoxytungstate tungstate, ammonium

**Ammonium fluoride vanadium oxyfluoride**

See Fluoxylvanadate, and fluoxyhypovanadate, ammonium

**Ammonium hydroselenide**,  $\text{NH}_4\text{HSe}$

Sol in  $\text{H}_2\text{O}$  with decomp (Bineau, A c (2) 67 229)

**Ammonium hydrosulphide**,  $\text{NH}_4\text{SH}$

Sol in  $\text{H}_2\text{O}$  and alcohol Solutions decomp on air

**Ammonium hydroxide**,  $\text{NH}_4\text{OH}$

See Ammonia,

**Ammonium imidosulphamide**,

$(\text{S O}_4\text{N}_3\text{H}_4)\text{NH}_4$

(Hantzsch, B 1905, 38 1033)

**Ammonium iodide**,  $\text{NH}_4\text{I}$

Very deliquescent Sol in 0.60 pt  $\text{H}_2\text{O}$  (Eder, Dingl 221 89)

Sp gr of aqueous solution of  $\text{NH}_4\text{I}$  at 1 containing—

10	20	30	40	50% $\text{NH}_4\text{I}$
1.0652	1.1397	1.2260	1.3260	1.4415

(Kohlrausch, W Ann 1879 1)

$\text{NH}_4\text{I} + \text{Aq}$  containing 12.51%  $\text{NH}_4\text{I}$  h sp gr  $20^\circ/20^\circ = 1.0846$

$\text{NH}_4\text{I} + \text{Aq}$  containing 19.19%  $\text{NH}_4\text{I}$  h sp gr  $20^\circ/20^\circ = 1.1359$

(Le Blanc and Rohland, Z phys Ch 189 19 279)

Very easily sol in liq  $\text{NH}_3$  (Frankl Am Ch J 1898, 20 826)

Very sol in liq  $\text{NH}_3$  at  $-50^\circ$  (Moissan C R 1901, 133 713)

Sol in  $\text{SOCl}_2$  (Walden, Z anorg 1900, 25 216)

Sol in liquid  $\text{SO}_2$  (Walden, Z anorg 1902, 30 160)

Sol in 40 pts abs alcohol (Eder, lc)

" 210 " ether (Eder, lc)

" 20 " alcohol-ether (1 1) (Eder, lc)

Sol in acetone (Eidmann, C C 1899, II 1014), (Naumann, B 1904, 37 4328)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Sl sol in benzonitrile (Naumann, B 1914, 47 1369)

#### Ammonium diiodide, $\text{NH}_4\text{I}_2$

Sol in alcohol, ether,  $\text{CS}_2$ , and  $\text{KI} + \text{Aq}$ , less sol in chloroform (Guthrie, Chem Soc (2) 1 239)

#### Ammonium triiodide, $\text{NH}_4\text{I}_3$

Sl deliquescent Sol in little  $\text{H}_2\text{O}$ , but decomp by much  $\text{H}_2\text{O}$  (Johnson, Chem Soc 33 397)

#### Ammonium antimony iodide, $\text{NH}_4\text{I}$ , $\text{SbI}_3 + 2\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Nickles, C R 51 1097)

$3\text{NH}_4\text{I}$ ,  $4\text{SbI}_3 + 9\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ , with separation of  $\text{SbOI}$  Sol in  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{HCl}$ , and  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$  Decomp by  $\text{CS}_2$  (Schaffer, Pogg 109 611)

$3\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$  As above

$4\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$  As above

#### Ammonium bismuth iodide, $\text{NH}_4\text{I}$ , $\text{BiI}_3 + \text{H}_2\text{O}$

Deliquescent, decomp by  $\text{H}_2\text{O}$  (Nicklès, C R 51 1097)

$4\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 3\text{H}_2\text{O}$  As above (Linau, Pogg 111 240)

$2\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 2\frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ , or  $\text{MCl}$ ,  $\text{MBr}$ , or  $\text{MI} + \text{Aq}$  (Nicklès, J pr (2) 39 116)

#### Ammonium cadmium iodide, $2\text{NH}_4\text{I}$ , $\text{CdI}_2 + 2\text{H}_2\text{O}$

Deliquescent (Croft)

Sol at  $15^\circ$  in 55 pt  $\text{H}_2\text{O}$ , 0.70 pt abs alcohol, 8.9 pts ether (sp gr 0.729), and 18 pts alcohol-ether (1 1) (Eder, Dingt 221 89)

100 pts of the solution in  $\text{H}_2\text{O}$  contain 85.97 pts of the salt at  $14.5^\circ$  (Rimbach, B 1905, 38 1563)

$\text{NH}_4\text{I}$ ,  $\text{CdI}_2 + \frac{1}{2}\text{H}_2\text{O}$  Sol at  $15^\circ$  in 0.90 pt  $\text{H}_2\text{O}$ , 0.88 pt abs alcohol, and 2.4 pts ether (sp gr 0.729) (Eder, lc)

$+ \text{H}_2\text{O}$  (Grossmann, Z anorg 1902, 33 154)

#### Ammonium chloromolybdenum iodide, $2\text{NH}_4\text{I}$ , $\text{Cl}_4\text{Mo}_3\text{I} + 2\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  Cryst from  $\text{HI} + \text{Aq}$  (Blomstrand)

#### Ammonium cuprous iodide, $2\text{NH}_4\text{I}$ , $\text{Cu}_2\text{I}_2 + \text{H}_2\text{O}$

Decomp on the air, or by  $\text{H}_2\text{O}$ , or alcohol (Saglier, C R 104 1440)

$+ \frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2\text{I}_2$  (Gossner, Zeit Kryst 1903, 38 501)

#### Ammonium cupric iodide ammonia, $2\text{NH}_4\text{I}$ , $\text{CuI}_2$ , $2\text{NH}_3 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  or alcohol, sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$

$+ 6\text{H}_2\text{O}$  Unstable (Saglier, C R 104 1440)

$\text{NH}_4\text{I}$ ,  $2\text{CuI}$ ,  $3\text{NH}_3$  (Fleurent, C R 1891, 113 1047)

#### Ammonium iridium diiodide, $2\text{NH}_4\text{I}$ , $\text{IrI}_2$

Insol in cold or hot  $\text{H}_2\text{O}$ , and in alcohol Sol in warm dil acids (Oppler)

#### Ammonium iridium sesquiodide

See Iodiridite, ammonium

#### Ammonium iridium tetraiodide

See Iodiridate, ammonium

#### Ammonium lead iodide, $\text{NH}_4\text{I}$ , $\text{PbI}_2 + 2\text{H}_2\text{O}$

Decomp by much  $\text{H}_2\text{O}$  (Wells, Sil Am J 146 25)

$4\text{NH}_4\text{I}$ ,  $3\text{PbI}_2 + 6\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Mosnier, C R 1895, 120 444)

Sol in  $\text{H}_2\text{O}$  with decomp Sol in strong  $\text{KOH} + \text{Aq}$  and in strong acids (Fonze-Diacon, Bull Soc 1897, (3) 17 347)

#### Ammonium magnesium iodide, $\text{NH}_4\text{I}$ , $\text{MgI}_2 + 6\text{H}_2\text{O}$

Very deliquescent (Ierch, J pr (2) 28 338)

#### Ammonium mercuric iodide, $\text{NH}_4\text{I}$ , $\text{HgI}_2 + \text{H}_2\text{O}$

Decomp into its constituents by  $\text{H}_2\text{O}$  (Boullay, A ch (2) 34 345)

Sol without decomp in alcohol and ether  $\text{NH}_4\text{I}$ ,  $2\text{HgI}_2$  Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{KI} + \text{Aq}$  Very sol in alcohol, ether and nitrobenzol (Low, Zeit Kryst, 51 138)

#### Ammonium silver iodide, $2\text{NH}_4\text{I}$ , $\text{AgI}$

Deliquescent Decomp by  $\text{H}_2\text{O}$  (Poggiale)

#### Ammonium thallic iodide, $\text{NH}_4\text{I}$ , $\text{ThI}_3$

Sol in  $\text{H}_2\text{O}$  (Nickles, J Pharm (4) 1 32)

#### Ammonium tin (stannous) iodide, $\text{NH}_4\text{I}$ , $\text{SnI}_2$

Decomp by small amt  $\text{H}_2\text{O}$  but completely sol in a large amt (Boullay, A ch (2) 34 376)

$+ 1\frac{1}{2}\text{H}_2\text{O}$  (Personne)

#### Ammonium zinc iodide, $2\text{NH}_4\text{I}$ , $\text{ZnI}_2$

Extremely deliquescent, and sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 43 665)

$\text{NH}_4\text{I}$ ,  $\text{ZnI}_2 + 4\frac{1}{2}\text{H}_2\text{O}$  Hygroscopic  
(Ephraim, Z anorg 1910, 67 384)

**Ammonium iodide arsenic trioxide**  
See Arsenite iodide, ammonium

**Ammonium cobalt nitride**  
See Ammonium cobalt azonide

**Ammonium ruthenium dihydronitrosobromide**,  $\text{NO Ru}_2\text{H}_2(\text{NH}_3)_6\text{Br}_3 \cdot 2\text{HBr}$   
Ppt (Brizard, A ch 1900, (7) 21 363)

**Ammonium ruthenium nitroschloride**,  
 $3\text{NH}_4\text{Cl} \cdot 2\text{HCl} \cdot \text{NO Ru}_2\text{H}_2\text{Cl}_3$   
Ppt (Brizard, A ch 1900, (7) 21 354)

**Ammonium ruthenium dihydronitroschloride**,  $\text{NO Ru}_2\text{H}_2(\text{NH}_3)_6\text{Cl}_3 \cdot 2\text{HCl}$   
Ppt (Brizard, A ch 1900, (7) 21 358)

**Ammonium peroxide**,  $(\text{NH}_4)_2\text{O}_2$   
M-pt  $-2^\circ$  Sl sol in ether without  
decomp (D'Ans, B 1913, 46 3076)  
Sol in alcohol, insol in ether, decomp  
slowly in aq solution (Melikoff, B 1897, 30  
3145)

**Ammonium hydrogen peroxide**,  $(\text{NH}_4)_2\text{O}_2$ ,  
H O  
ordinary temp (Melikoff, B  
table, deliquesces at ordinary  
cohol, insol in light petroleum  
898, 31 152)

**Ammonium selenide**,  $(\text{NH}_4)_2\text{Se}$   
Sol in  $\text{H}_2\text{O}$  with decomp (Bineau, A ch  
(2) 67 229)  
Stable in the air Sol in  $\text{H}_2\text{O}$ , aq solution  
decomp slowly (Lenher and Smith, J Am  
Chem Soc 1898, 20 277)

**Ammonium hydrogen selenide**,  $\text{NH}_4\text{HSe}$   
Sol in H O (Fabre, C R 103 269)

**Ammonium monosulphide**,  $(\text{NH}_4)_2\text{S}$   
Decomp on air Sol in  $\text{H}_2\text{O}$ , but solution  
decomposes rapidly  
Very sol in liquid  $\text{NH}_3$  (Franklin, Am Ch  
J 1898, 20 826)

**Ammonium disulphide**,  $(\text{NH}_4)_2\text{S}_2$   
Sol in  $\text{H}_2\text{O}$  with decomp  
Does not exist (Bloxam, Chem Soc  
1895, 67 293)

**Ammonium tetrasulphide**,  $(\text{NH}_4)_2\text{S}_4$   
Easily sol in  $\text{H}_2\text{O}$  Conc solution is stable,  
dil solution decomp on air Easily sol in  
alcohol without decomp, but solution decomp  
on the air more rapidly than the  
aqueous solution (Fritzsch, J pr 32 313)  
 $+ \frac{1}{2}\text{H}_2\text{O}$  When dissolved in  $\text{H}_2\text{O}$ , it is at  
once dissociated with deposition of S (Blox-  
am, Chem Soc 1895, 67 303)

**Ammonium pentasulphide**,  $(\text{NH}_4)_2\text{S}_5$

Decomp on air Sol in  $\text{H}_2\text{O}$  with separa-  
tion of S Sol in alcohol without decomp,  
but solution decomposes quickly on standing  
(Fritzsch, J pr 32 313)

Rapidly decomp by  $\text{H}_2\text{O}$  with separation  
of S (Bloxam, Chem Soc 1895, 67 298)  
 $+ \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  with separation  
of S (Bloxam, Chem Soc 1895, 67 298)

**Ammonium heptasulphide**,  $(\text{NH}_4)_2\text{S}_7$

More stable on air, and less easily decomp-  
posed by  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_2\text{S}_5$   
 $+ 1\frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  with separa-  
tion of S Slowly attacked by dil  $\text{HCl} + \text{Aq}$   
(Bloxam, Chem Soc 1895, 67 307)

**Tetrammonium heptasulphide**,  $(\text{NH}_4)_2\text{S}_7 + 4\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  Solution can be kept for a  
long time without depositing S (Bloxam,  
Chem Soc 1895, 67 298)

**Diammonium enneasulphide**,  $(\text{NH}_4)_2\text{S}_9 + \frac{1}{2}\text{H}_2\text{O}$

Decomposed by  $\text{H}_2\text{O}$  with separation of S  
Not attacked by boiling dil  $\text{HCl} + \text{Aq}$  on  
account of formation of a hard crust of S  
on the crystals (Bloxam, Chem Soc 1895,  
67 306)

**Tetrammonium enneasulphide**,  $(\text{NH}_4)_4\text{S}_9$

Solution in  $\text{H}_2\text{O}$  deposits crystals of  
 $(\text{NH}_4)_2\text{S}_5$  on standing (Bloxam, Chem Soc  
1895, 67 302)

$+ 3\frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  with separa-  
tion of S (Bloxam, Chem Soc 1895, 67  
299)

**Ammonium polysulphides**

Conc  $\text{NH}_3 + \text{Aq}$  dissolves  $\text{H}_2\text{S}$  to form  
 $(\text{NH}_4)_2\text{S}_2 \cdot 2\text{NH}_4\text{SH}$  On dilution more  $\text{H}_2\text{S}$  is  
absorbed to form  $(\text{NH}_4)_4\text{S}_4 \cdot \text{NH}_4\text{SH}$ , then  
 $(\text{NH}_4)_2\text{S}_8 \cdot 8\text{NH}_4\text{SH}$ , then  $(\text{NH}_4)_2\text{S}_{18} \cdot 18\text{NH}_4\text{SH}$   
and finally  $\text{NH}_4\text{SH}$  (Bloxam, Chem Soc  
1895, 67 234)

**Ammonium copper sulphide**,  $(\text{NH}_4)_2\text{S}_2$ ,  
 $2\text{CuS}_3 (?)$

Sol in warm H O, but decomp on standing  
Warm  $\text{KOH} + \text{Aq}$  acts similarly, sl sol in  
 $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{Na CO}_3 + \text{Aq}$ , or absolute al-  
cohol Insol in ether Decomp by dil acids  
(Priwoznik, B 6 1291)

Correct formula is  $\text{NH}_4\text{CuS}_4$  Sl sol in  
H O Decomp by conc and dil acids  
Easily sol in  $\text{NaOH}$  Sl sol in alcohol  
(Biltz, B 1907, 40 976)

**Ammonium gold polysulphide**,  $\text{AuS}_3\text{NH}_4$

Ppt (Hofmann, B 1903, 36 3092, B  
1904, 37 245)

**Ammonium iridium pentadecasulphide**,

$\text{IrS}_{15}(\text{NH}_4)_3$

Ppt (Hofmann, B 1904, 37 247)

**Ammonium palladium undecasulphide,**

Ppt (Hofmann, B 1904, 37 248)

**Ammonium platinum pentadecasulphide,**

Can be washed with  $\text{CS}_2$  without decomp  
Sol in alcohol Insol in ether (Hofmann,  
B 1903, 36 3091)

**Ammonium stannic sulphide**

See Sulphostannate, ammonium

**Ammonium telluride,  $\text{NH}_4\text{HTe}$** 

Easily sol in  $\text{H}_2\text{O}$  (Bineau, A ch (2) 67  
229)

**Ammonium sulphide ammonia,  $(\text{NH}_4)_2\text{S}$ ,  
 $2\text{NH}_3$** 

Very unstable (Bloxam, Chem Soc 1895,  
67 294)

**Ammonium acisulphomelid,  $(\text{NSO ONH}_4)_2$   
(?)**

(Hantzsch and Stuer, B 1905, 38 1039)

**Ammonplatindramine comps**

See Platintriamine comps

**Ammondisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_2$** 

Known only in its salts (Claus, A 158  
52 and 194)

Contains 2 at H less, and is identical with  
midosulphonic acid  $\text{NH}(\text{SO}_3\text{H})_2$ , which see  
(Raschig, A 241 161)

**Ammontrisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_3$** 

Known only in its salts (Claus, A 158  
52 and 194)

Contains 2 at H less, and is nitrosulphonic  
acid  $\text{N}(\text{SO}_3\text{H})_3$ , which see (Raschig, A 241  
161)

**Ammontetrasulphonic acid,  $\text{NH}(\text{SO}_3\text{H})_4$** 

Known only in its salts (Claus, A 158  
52 and 194)

Does not exist, but was impure nitrosul-  
phonic acid, which see (Raschig, A 241  
161)

**Anhydroarseniotungstic acid,  $\text{H}_3\text{AsW}_8\text{O}_{28}$** 

See under Arseniotungstic acid

**Anhydrooxycobaltamine chloride,**

Easily sol in  $\text{H}_2\text{O}$ , but decomposes after a  
few minutes, can be recrystallized from dil  
 $\text{HCl} + \text{Aq}$  Precipitated from sat  $\text{H}_2\text{O}$  solu-  
tion by conc  $\text{HCl} + \text{Aq}$ , or alcohol (Vort-  
mann, M Ch 6 404)

$\text{Co}_2(\text{NH}_3)_{10} \left( \begin{array}{c} \text{Cl} \\ \text{OH} \end{array} \right) \text{Cl}_4$  Sol in  $\text{H}_2\text{O}$  (Vort-  
mann)

**Anhydrooxycobaltamine chloride mercuric  
chloride,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4, 3\text{HgCl}_2$** 

Can be recryst from very dil hot  $\text{HCl} + \text{Aq}$

**— chloroplatinate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4$ ,  
 $2\text{PtCl}_4$** 

Can be recrystallized from  $\text{H}_2\text{O}$  containing  
 $\text{HCl}$

**— chloronitrate,  
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O OH})(\text{NO}_3)_4 + \text{H}_2\text{O}$** 

Can be recrystallized from dil  $\text{HCl} + \text{Aq}$

More easily sol in  $\text{H}_2\text{O}$  than the preceding  
comp

**— chlorosulphate,  
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O OH})(\text{SO}_4)_2$** **— dichromate,  $[\text{Co}_2(\text{NH}_3)_{10}\text{O OH}]_2(\text{Cr}_2\text{O}_7)_5$   
 $+ 8\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$

**— nitrate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{NO}_3)(\text{O OH})(\text{NO}_3)_4$   
 $+ \text{H}_2\text{O}$** 

Sl sol in pure  $\text{H}_2\text{O}$  with immediate decomp  
Can be recrystallized from  $\text{H}_2\text{O}$  containing  
 $\text{HNO}_3$

**— sulphate,  $[\text{Co}_2(\text{NH}_3)_{10}\text{O OH}]_2(\text{SO}_4)_5$ ,  
 $2\text{H}_2\text{SO}_4 + 2\text{H}_2\text{O}$** 

Sl sol in cold  $\text{H}_2\text{O}$  When crystallized  
from dil  $\text{H}_2\text{SO}_4 + \text{Aq}$ , is converted into—

which by further recrystallization from very  
dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  becomes—

Sl sol in cold  $\text{H}_2\text{O}$  (Vortmann)

**Anhydrophospholutedungstic acid,**

See under Phosphotungstic acid

**Antimonic Acid****Metantimonic acid,  $\text{HSbO}_3$** 

Very sl sol in  $\text{H}_2\text{O}$ , sol in conc  $\text{HCl} + \text{Aq}$ ,  
sl sol in dil  $\text{HNO}_3 + \text{Aq}$ , easily sol in tar-  
taric acid +  $\text{Aq}$ , easily sol in hot  $\text{KOH}$ , or  
 $\text{NaOH} + \text{Aq}$ , completely insol in  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$  (Ficmy, A ch (3) 23 407)

Sl sol in  $\text{H}_2\text{O}$  Very sl sol in  $\text{KOH}$  and  
 $\text{K}_2\text{CO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol  
in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$  Slowly sol in cold, quickly  
in hot  $\text{HCl} + \text{Aq}$  Sl sol in tartaric and  
oxalic acid and in  $\text{KHC O}_4 + \text{Aq}$  (Senderens,  
Bull Soc 1899, (3) 21 48)

Insol in acetone (Nunemann, B 1904, 37  
4329)

**Pyroantimonic acid,  $\text{H}_4\text{Sb}_2\text{O}_7$** 

More sol in  $\text{H}_2\text{O}$  and acids than  $\text{H}_3\text{SbO}_4$   
Sol in cold  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$  (Ficmy)

Slowly sol in cold  $\text{H}_2\text{O}$

5.88 g  $\text{Sb}_2\text{O}_5$  in 1 l  $\text{H}_2\text{O}$  at 15°

8.55 " " " 1 l " " 25°

21.30 " " " 1 l " " 60°

(Delacroix, J Pharm 1897, 6 337-41)

Sl sol in  $\text{H}_2\text{O}$  Very sl sol in  $\text{KOH}$  and  $\text{K}_2\text{CO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ , and in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$  Slowly sol in cold, quickly in hot  $\text{HCl} + \text{Aq}$  Sl sol in tartaric acid, oxalic acid and  $\text{KHC}_2\text{O}_4 + \text{Aq}$  (Senderens, Bull Soc 1899, (3) 21 48)

#### Orthoantimonic acid, $\text{H}_3\text{SbO}_4$

Sl sol in  $\text{H}_2\text{O}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Easily sol in  $\text{KOH} + \text{Aq}$  (Fremy)

Does not exist (Raschig, B 18 2745)

Has, however, been prepared by Daubrawa (A 186 110), Conrad (C N 40 198), and Beilstein and Blaese (Bull Ac St Petersburg 33 97)

Very sol in  $\text{H}_2\text{O}$  (Delacroix, Bull Soc 1899 (3) 21 1049)

Very sl sol in  $\text{H}_2\text{O}$ , in  $\text{KOH}$  and  $\text{K}_2\text{CO}_3 + \text{Aq}$  Slowly sol in cold, quickly in hot  $\text{HCl} + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ , and in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$  Sl sol in tartaric acid, oxalic acid and  $\text{KHC}_2\text{O}_4 + \text{Aq}$  (Senderens, Bull Soc 1899, (3) 21 52)

$+ \frac{1}{2}\text{H}_2\text{O}$  (Beilstein and Blaese)

According to Beilstein and Blaese only one antimonic acid,  $\text{H}_3\text{SbO}_4$ , exists

#### Tetraantimonic acid, $\text{Sb}_2\text{O}_5 + 4\text{H}_2\text{O} = \text{H}_4\text{Sb}_2\text{O}_9$

Slowly sol in cold  $\text{H}_2\text{O}$

Solution sat at  $t^\circ$  contains g  $\text{Sb}_2\text{O}_5$  per litre—

$t^\circ$	15°	25°	60°	70°
	5.88	8.3-8.75	21.30	53.89

in solution by heating to  $100^\circ$  or long in the cold to  $\text{Sb}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$  (Senderens, Bull Soc 1899, (3) 21 1049)

Insol in  $\text{H}_2\text{O}$  Very sl sol in  $\text{KOH}$  and  $\text{K}_2\text{CO}_3 + \text{Aq}$  Slowly sol in cold, quickly in hot  $\text{HCl} + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$  Sl sol in tartaric acid, oxalic acid and in  $\text{KHC}_2\text{O}_4 + \text{Aq}$  (Senderens, Bull Soc 1899, (3) 21 51)

#### Hexantimonic acid, $\text{Sb}_2\text{O}_5 + 6\text{H}_2\text{O} = \text{H}_{12}\text{Sb}_2\text{O}_{11}$

Sol in  $\text{H}_2\text{O}$  to the extent of 22 g  $\text{Sb}_2\text{O}_5$  per l but on standing becomes turbid and a white powder is pptd until finally only 3 g  $\text{Sb}_2\text{O}_5$  are dissolved per l (Senderens, Bull Soc 1899, (3) 21 48-49)

#### Antimonates

$\alpha$  Antimonates From  $\text{HSbO}_3$  Some of the K and  $\text{NH}_4$  salts are sol in  $\text{H}_2\text{O}$ , the others are slightly sol or insol

$\beta$  Pyroantimonates From  $\text{H}_2\text{Sb}_2\text{O}_7$  As a class, insol in  $\text{H}_2\text{O}$ , but decomp thereby except in presence of large excess of alkali (Fremy, A ch (3) 12 499)

Probably do not exist (Beilstein and Blaese)

#### Aluminum antimonate, $\text{Al}_2\text{O}_3 \cdot 3\text{Sb}_2\text{O}_5$ (?)

Ppt Somewhat sol in excess of Al salts + Aq Insol in  $\text{K}_2\text{Sb}_2\text{O}_7 + \text{Aq}$

$\text{Al}(\text{SbO}_3)_3 + 15\text{H}_2\text{O} = \text{AlH}_6(\text{SbO}_4)_3 + 12\text{H}_2\text{O}$

Ppt (Beilstein and Blaese, Bull Ac St Petersburg 33 101)

$\text{Al}(\text{SbO}_3)_3 + 7\text{H}_2\text{O} = \text{AlH}_6(\text{SbO}_4)_3 + 4\text{H}_2$

Ppt (B and B)

$\text{Al}_2\text{O}_3 \cdot \text{Sb}_2\text{O}_5 + 9\text{H}_2\text{O}$  Ppt (Ebel, B 2 3043)

#### Ammonium antimonate, $\text{NH}_4\text{SbO}_3 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$

$+ 2\frac{1}{2}\text{H}_2\text{C}$  Insol in  $\text{H}_2\text{O}$  (Senderens, Bull Soc 1899, (3) 21 56)

$+ 6\text{H}_2\text{O}$  See  $(\text{NH}_4)_2\text{H}_2\text{Sb}_2\text{O}_7 + 5\text{H}_2\text{O}$

#### Ammonium pyroantimonate, $(\text{NH}_4)_4\text{Sb}_2\text{O}_7$

Known only in solution

$(\text{NH}_4)_2\text{H}_2\text{Sb}_2\text{O}_7 + 5\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , but decomp by standing, boiling into insol salt Insol in alcohol (Fremy, J pr 45 215) Composition  $\text{NH}_4\text{SbO}_3 + 6\text{H}_2\text{O}$ , according to Raschig (J 18 2743)

#### Barium antimonate, $\text{Ba}(\text{SbO}_3)_2$

Ppt Scarcely sol in  $\text{H}_2\text{O}$  Slowly sol in  $\text{BaCl}_2 + \text{Aq}$

$+ 2\text{H}_2\text{O}$  Somewhat sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HCl} + \text{Aq}$  (Delacroix, Bull Soc 1899, (3) 21 1051)

$+ 5$ , or  $6\text{H}_2\text{O}$  Ppt

$\text{BaSb}_2\text{O}_7 + 5\text{H}_2\text{O}$  Sol in conc  $\text{HCl}$  (Delacroix, Bull Soc 1899, (3) 21 1051)

$\text{BaO} \cdot 3\text{Sb}_2\text{O}_5 + 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Insol completely sol in  $\text{HCl}$  (Delacroix, l c)

$\text{BaO} \cdot 4\text{Sb}_2\text{O}_5 + 15\text{H}_2\text{O}$  (Delacroix, l c)

$9\text{BaO} \cdot 10\text{Sb}_2\text{O}_5 + 18\text{H}_2\text{O}$  Insol in  $\text{HCl}$  Aq (Delacroix, l c)

#### Bismuth antimonate, $\text{BiSbO}_4 + \text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Ac}$  (Cavazzi, Gazz ch it 15 37)

$3\text{Bi}_2\text{O}_3 \cdot \text{Sb}_2\text{O}_5 + \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Cavazzi)

$2\text{Bi}_2\text{O}_3 \cdot \text{Sb}_2\text{O}_5$  As above (Cavazzi)

#### Cadmium antimonate, $\text{Cd}(\text{SbO}_3)_2 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Senderens, Bull Soc 1899 (3) 21 56)

$+ 3\frac{1}{2}\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Ebel, Dissert 1890)

$+ 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Senderens, l c)

$+ 6\text{H}_2\text{O}$  Ppt Insol in  $\text{H}_2\text{O}$  (Ebel, B 22 3043)

#### Calcium antimonate, $\text{Ca}(\text{SbO}_3)_2$

Ppt

$+ 5\text{H}_2\text{O}$  Ppt (Heffter, Pogg 86 418)

$+ 6\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Senderens, Bull Soc 1899, (3) 21 56)

$3\text{CaO} \cdot 2\text{Sb}_2\text{O}_5 + 6\text{H}_2\text{O}$  Min Ullmannite

#### Chromic antimonate, $\text{Cr}(\text{SbO}_3)_3 + 14\text{H}_2\text{O}$

Ppt (Beilstein and Blaese)

#### Cobaltous antimonate, $\text{Co}(\text{SbO}_3)_2 + 5\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Loses  $3\text{H}_2\text{O}$  in the presence of  $\text{H}_2\text{SO}_4$  and passes into  $\text{Co}(\text{SbO}_3)_2 + 2\text{H}_2\text{O}$

also insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 55)

+ $6H_2O$  Ppt (Ebel, B 22 3043)

+ $7H_2O$  Sl sol in  $H_2O$  Sl sol in boiling solutions of cobalt salts

+ $12H_2O$  Ppt (Heffter, Pogg 86 448)

**Cobaltous hydrogen antimonate**,  $CoH_4(SbO_4)_2 + H_2O$

(Gorgeul, Ann Phys Beibl 1897, 21 198)

**Cupric antimonate**,  $3CuO, 2Sb_2O_3$

Ppt (Beilstein and Blaesé)

$Cu(SbO_3)_2$  Insol in  $H_2O$ , acids, or alkalis (Berzelius)

+ $2H_2O$  Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 55)

+ $5H_2O$  Ppt (Ebel, B 22 3043)

Insol in  $H_2O$  (Senderens, l c)

$CuO, 2Sb_2O_3 + 9H_2O$  Insol in  $H_2O$  Sol in  $Sb_2O_3, 4H_2O + Aq$  (Delacroix, Bull Soc 1899, (3) 21 1054)

$2CuO, 3Sb_2O_3 + 10H_2O$  Insol in  $H_2O$  Sol in  $NH_4OH$  and in triantimonic acid +  $Aq$  (Delacroix, l c)

$CuO, 6Sb_2O_3 + 16H_2O$  (Delacroix, l c)

**Cupric antimonate ammonia**,  $Cu(SbO_3)_2, 4NH_3 + 4H_2O$

Insol in  $H_2O$  and  $NH_4OH + Aq$  (Schiff, A 123 39)

$CuSb_2N_3H_{21}O_{12} = Cu(OH_4)OH,$

$2(NH_4SbO_3 + 2H_2O)$  (Raschig, B 18 2743)

$Cu(SbO_3)_2, 3NH_3 + 9H_2O$  (Delacroix, Bull Soc 1901, (3) 25 289)

**Glucinum antimonate**,  $Gl(SbO_3)_2 + 6H_2O$

Somewhat sol in hot  $H_2O$  Easily sol in warm  $HCl$  (Ebel, Dissert 1890)

**Iron (ferrous) antimonate**

Sl sol in  $H_2O$  (Berzelius)

**Iron (ferric) antimonate**

Insol in  $H_2O$  (B)

$Fe_2O_3, Sb_2O_3 + 7H_2O$  Ppt (Ebel, B 22 3043)

$Fe_2O_3, 2Sb_2O_3 + 11H_2O$  Ppt (Beilstein and Blaesé)

$Fe(SbO_3)_3 + 6H_2O$  Ppt (B and B)

**Lead antimonate, basic**,  $Pb_3(SbO_3)_4(OH)_4 + 2H_2O = Pb_3(SbO_4)_4 + 4H_2O$

Min *Bleinerite, Brindheimite*

$2Pb(SbO_3)_2, PbO + 11H_2O$  Ppt (B and B)

**Lead antimonate**,  $Pb(SbO_3)_2$

Insol in  $H_2O$  Incompletely decomp by acids (Berzelius)

*Naples Yellow* Insol in  $H_2O$

+ $2H_2O$  Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 57)

+ $5H_2O$  Ppt (Ebel, B 22 3043)

+ $6H_2O$  Ppt (Beilstein and Blaesé)

+ $9H_2O$  Insol in  $H_2O$  (Senderens, l c)

**Lead antimonate chloride**,  $Pb(SbO_3)_2, PbCl_2$

Min *Nadorite* Sol in  $HCl, HNO_3$ , and tartaric acid +  $Aq$

**Lithium antimonate**,  $LiSbO_3$

Sl sol in cold, sol in hot  $H_2O$ , and crystallizes on cooling Much more sol than  $NaSbO_3$

+ $3H_2O$  Ppt Sl sol in  $H_2O$  (Beilstein and Blaesé)

**Magnesium antimonate**,  $Mg(SbO_3)_2 + 12H_2O$

Sol in hot, less sol in cold  $H_2O$  (Heffter)

Sol in  $MgSO_4 + Aq$ , insol in  $KSbO_3 + Aq$  (Berzelius)

**Manganous antimonate**,  $Mn(SbO_3)_2$

Difficultly sol in  $H_2O$

When heated, is sol only in strong acids

+ $2H_2O$  Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 56)

+ $5H_2O$  Ppt (Ebel, B 22 3043)

+ $6H_2O$  Insol in  $H_2O$  (Senderens, l c)

+ $7H_2O$  Ppt (Beilstein and Blaesé)

**Mercurous antimonate**

Insol in  $H_2O$  (Berzelius)

**Mercuric antimonate**,  $Hg(SbO_3)_2$

Insol in  $H_2O$ , alkalis, and most acids

Sl attacked by boiling  $H_2SO_4$ , and  $HCl + Aq$

+ $2H_2O$  Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 55)

+ $5H_2O$  Insol in  $H_2O$  (Senderens)

+ $6H_2O$  Ppt (Beilstein and Blaesé)

**Nickel antimonate**,  $Ni(SbO_3)_2 + 2H_2O$

Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 54)

+ $5H_2O$  Insol in  $H_2O$  (Senderens)

+ $6H_2O$  Ppt Insol in  $H_2O$  (Heffter, Pogg 86 446)

+ $12H_2O$  Sl sol in  $H_2O$  (Heffter)

**Potassium antimonate**,  $KSbO_3$

Insol in  $H_2O$  Sol in warm  $KOH + Aq$ , but separates nearly completely on cooling By boiling with  $H_2O$ , or by standing for a long time with cold  $H_2O$ , it gradually dissolves as  $2KSbO_3 + 5H_2O$ , or  $K_2H_5SbO_7 + 4H_2O$  or  $2KH_2SbO_4 + 3H_2O$

Insol in  $CS_2$  (Arcowski, Z anorg 1894, 6 257)

+ $H_2O$  Insol in  $H_2O$  (Senderens, Bull Soc 1899, (3) 21 57)

+ $1\frac{1}{2}H_2O$  ( $= 2KSbO_4 + 5H_2O$  of Trömy)

Easily sol in  $H_2O$ , especially if warm Solution is pptd by  $NH_4Cl + Aq$  (Trömy, A ch (3) 12 499)

+ $2\frac{1}{2}H_2O$  100 pts  $H_2O$  at  $20^\circ$  dissolve 281 pts anhydrous salt, sp gr of solution sat at  $18^\circ = 1.0263$  Composition is given as  $K_2H_5Sb_2O_7 + 4H_2O$  (König and Olschewsky, B 20 3043)

+ $3\frac{1}{2}H_2O$  Insol in  $H_2O$  (Senderens, l c)

+4½H<sub>2</sub>O Sol in H<sub>2</sub>O (Delacroix, J Pharm 1897, (6) 6 533)  
 2K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>5</sub>+10H<sub>2</sub>O Sl sol in H<sub>2</sub>O (Delacroix, J Pharm 1897, 6 337)  
 +10H<sub>2</sub>O (Delacroix, *l c*)

**Potassium pyroantimonate, K<sub>4</sub>Sb<sub>2</sub>O<sub>7</sub>**

Deliquescent, decomp by boiling with H<sub>2</sub>O into K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O, by cold H<sub>2</sub>O into K<sub>2</sub>H<sub>3</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O (Fremy)

Does not exist (Knorre and Olschewsky)  
 Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 829)

Insol in acetone (Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in ethyl acetate (Naumann, B 1904, 37 3601)

**Potassium hydrogen pyroantimonate, K<sub>2</sub>H<sub>3</sub>Sb<sub>2</sub>O<sub>7</sub>**

Insol in acetone (Eidmann, C C 1899, II 1014)

+2½H<sub>2</sub>O (Senderens, Bull Soc 1899, (3) 21 57)

+3½H<sub>2</sub>O Very difficultly sol in hot or cold H<sub>2</sub>O (Knorre and Olschewsky, B 18 2358)

+6H<sub>2</sub>O Quite difficultly sol in cold H<sub>2</sub>O  
 Not precipitated by NH<sub>4</sub>Cl+Ag<sub>2</sub> Aqueous solution gradually decomposes (Fremy)  
 +4H<sub>2</sub>O See 2K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O

**Potassium antimonate sulphantimonate, K<sub>2</sub>SbO<sub>3</sub>, K<sub>2</sub>SbS<sub>4</sub>+5H<sub>2</sub>O**

Decomp on air, and with cold H<sub>2</sub>O Sol in hot H<sub>2</sub>O (Rammelsberg)

**Silver antimonate**

Insol in H<sub>2</sub>O (Berzelius)  
 AgSbO<sub>3</sub>+3H<sub>2</sub>O=AgH SbO<sub>4</sub>+2H<sub>2</sub>O 1 vol sol in NH<sub>4</sub>OH+Ag, when freshly pptd (Beilstein and Blaise)  
 +1½H<sub>2</sub>O Ppt (Ebel, B 22 3045)

**Silver antimonate ammonia, AgH SbO<sub>4</sub>, 2NH<sub>3</sub>+H<sub>2</sub>O**  
 (Beilstein and Blaise)

**Sodium antimonate, NaSbO<sub>3</sub>**

Sol in much H<sub>2</sub>O but soon becomes decomposed into Na<sub>2</sub>H SbO

+3½H<sub>2</sub>O composition of Na<sub>2</sub>H SbO +6H<sub>2</sub>O, according to Beilstein and Blaise  
 1000 pts H<sub>2</sub>O dissolve 0.31 pt NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12°

1000 pts alcohol of 15% dissolve 0.13 pt NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12°

1000 pts alcohol of 20% dissolve 0.07 pt NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12°

Somewhat more sol when freshly precipitated

Absolutely insol in glacial HC<sub>2</sub>H<sub>3</sub>O

Presence of NaOH or Na<sub>2</sub>S dissolves solubility while NH<sub>4</sub>OH or K salts increase it

slightly (Beilstein and Blaise, Bull Ac St Petersb 33 201)

+4½H<sub>2</sub>O Sol in H<sub>2</sub>O (Delacroix, Bull Soc 1899, (3) 21 1051)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>5</sub>+10H<sub>2</sub>O (Delacroix, *l c*)  
 Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>5</sub>+11H<sub>2</sub>O (Delacroix, *l c*)

**Sodium pyroantimonate, Na<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O**

Boiling H<sub>2</sub>O dissolves 1 pt of this salt (Fremy) 1000 pts H<sub>2</sub>O dissolve 2.5 pts salt (Ebel, B 22 3044) See also NaSbO<sub>3</sub>+3½H<sub>2</sub>O

+5H<sub>2</sub>O (Knorre and Olschewsky)

**Strontium antimonate, Sr(SbO<sub>3</sub>)<sub>2</sub>+6H<sub>2</sub>O**

Ppt Less sol in H<sub>2</sub>O than SrSO<sub>4</sub> (Heffter, Pogg 86 418)

**Thallous antimonate, TlSbO<sub>3</sub>+2H<sub>2</sub>O=TlH<sub>3</sub>SbO<sub>4</sub>+H<sub>2</sub>O**

Somewhat sol in H<sub>2</sub>O, when freshly precipitated, insol when dried (Beilstein and Blaise)

**Tin (stannous) antimonate, 2SnO, Sb<sub>2</sub>O<sub>5</sub>**

Ppt (Lenssen, A 114 113)  
 Sn(SbO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O Attacked with difficulty by acids or alkalis, most easily by hot conc H<sub>2</sub>SO<sub>4</sub> (Schiff, A 120 55)

2SnO, 3Sb<sub>2</sub>O<sub>5</sub>+4H<sub>2</sub>O  
 SnO, 2Sb<sub>2</sub>O<sub>5</sub>

**Tin (stannic) antimonate**

Insol in H<sub>2</sub>O (Levol, A ch (3) 1 504)

**Uranium antimonate, 5UO<sub>2</sub>, 3Sb<sub>2</sub>O<sub>5</sub>+15H<sub>2</sub>O**

Ppt Sol in hot conc HCl+Ag, and in UCl<sub>3</sub>+Ag (Rammelsberg)

**Zinc antimonate, Zn(SbO<sub>3</sub>)<sub>2</sub>**

Verv slightly sol in H<sub>2</sub>O (Berzelius) sol in solutions of Zn salts

+2H<sub>2</sub>O (Ebel, Dissert 1890)  
 Insol in H<sub>2</sub>O (Senderens, Bull Soc 1899 (3) 21 57)

+3H<sub>2</sub>O Not wholly insol in cold, moderately sol in hot H<sub>2</sub>O (Ebel, Dissert 1890)  
 +6H<sub>2</sub>O Insol in H<sub>2</sub>O (Senderens)

**Antimoniomolybdic acid**

**Ammonium antimoniomolybdate, 5(NH<sub>4</sub>)O 4SbO 7MoO<sub>4</sub>+12H<sub>2</sub>O**

Readily sol in hot H<sub>2</sub>O (Gibbs, Am Ch J 7 392)

**Antimoniotungstic acid, 3Sb<sub>2</sub>O<sub>5</sub>, 4WO<sub>3</sub>+11H<sub>2</sub>O**

Sol in H<sub>2</sub>O (Hallopeau, C R 1896, 123 1068)

**Potassium antimoniotungstate, 3K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>5</sub>, 4WO<sub>3</sub>+4H<sub>2</sub>O**

Much more sol in hot than in cold H<sub>2</sub>O  
 Decomp by HCl, H<sub>2</sub>SO<sub>4</sub> and HNO<sub>3</sub> (Hallopeau, C R 1896, 123 1066)

+16H<sub>2</sub>O Much more easily sol in hot than cold H<sub>2</sub>O Decomp by HCl, H<sub>2</sub>SO<sub>4</sub>, and HNO<sub>3</sub> (Hallepeau, *l c*)  
 6K<sub>2</sub>O, 4Sb<sub>2</sub>O<sub>3</sub>, 12WO<sub>3</sub>+25H<sub>2</sub>O  
 Sl sol in H<sub>2</sub>O (Gibbs, Am Ch J 7 392)

### Antimoniuretted hydrogen

See Antimony hydride

### Antimonosomolybdic acid

Ammonium antimonosomolybdate, 6(NH<sub>4</sub>)<sub>2</sub>O,  
 3Sb<sub>2</sub>O<sub>3</sub>, 17MoC<sub>3</sub>+21H<sub>2</sub>O

Insol in cold H<sub>2</sub>O (Gibbs, Am Ch J 7 313)

### Antimonosophosphotungstic acid

Potassium antimonosophosphotungstate,  
 12K<sub>2</sub>O, 5Sb<sub>2</sub>O<sub>3</sub>, 6P<sub>2</sub>O<sub>5</sub>, 22WO<sub>3</sub>+48H<sub>2</sub>O,

Nearly insol in cold or warm H<sub>2</sub>O (Gibbs, Am Ch J 7 392)

### Antimonosotungstic acid

Ammonium antimonosotungstate

Sol in H<sub>2</sub>O

Barium antimonosotungstate, 4BaO, 6Sb<sub>2</sub>O<sub>3</sub>,  
 22WO<sub>3</sub>+36H<sub>2</sub>O

Precipitate, very sl sol in hot H<sub>2</sub>O (Gibbs, Am Ch J 7 313)

### Antimonous acid, HSbO<sub>3</sub>

(Long, J Am Chem Soc 1895, 17 87)  
 +1½H<sub>2</sub>O Ppt (Schaffner, A 51 182)  
 H<sub>3</sub>SbO<sub>3</sub> Ppt (Clarke and Stallo, B 13 1793)

Does not exist (Guntz, C R 102 1472)

H<sub>4</sub>Sb<sub>2</sub>O<sub>5</sub> When freshly pptd, is sol in dil KOH, and NaOH+Aq Scarcely sol in NH<sub>4</sub>OH+Aq, or in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>, or KHCO<sub>3</sub>+Aq

Completely sol in K<sub>2</sub>CO<sub>3</sub>, and Na<sub>2</sub>CO<sub>3</sub>+Aq, especially if warm When recently pptd is sl sol in succinic acid+Aq

Calcium antimonite, (CaSb<sub>2</sub>O<sub>4</sub>) (?)

Min *Romelia* Insol in acids

Cobaltous antimonite (?)

Sl sol in H<sub>2</sub>O (Berzelius)

Cuprous antimonite, (Cu<sub>3</sub>(SbO<sub>2</sub>)<sub>2</sub>)

Insol in H<sub>2</sub>O Sol in acids, most easily in conc HCl+Aq (Husmann and Stromeyer, Schw J 19 241)

Cupric antimonite (?)

Insol in H<sub>2</sub>O (Berzelius)

CuSb<sub>2</sub>O<sub>5</sub> Min *Ammolite*

CuSb<sub>2</sub>O<sub>4</sub> Sol in HCl+Aq tutuic and citric acids (Harding, Z anorg 1899, 20 238)

Iron (ferrous) antimonite (?)

More sol in H<sub>2</sub>O than the antimonate (Dumas)

Potassium antimonite, K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>

Easily decomp by cold H<sub>2</sub>O Not decomp by KOH+Aq containing over 20.9% K<sub>2</sub>O (Corimmbœuf, C R 115 1305)  
 +3H<sub>2</sub>O As above (C)

Potassium antimonite iodide, K<sub>2</sub>O, 8Sb<sub>2</sub>O<sub>3</sub>,  
 2KI

Insol and not decomp by cold or hot H<sub>2</sub>O Not decomp by acids or alkalies Aqua regia decomp slowly Tartaric acid dissolves gradually (Gruhl, Dissert 1897)

Sodium antimonite, NaSbO<sub>2</sub>+3H<sub>2</sub>O

Difficultly sol in H<sub>2</sub>O (Terreil, A ch (4) 7 380)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+H<sub>2</sub>O Decomp by H<sub>2</sub>O, but not by NaOH+Aq containing 94.3 g NaOH per l (Corimmbœuf)

Na<sub>2</sub>O, 2Sb<sub>2</sub>O<sub>3</sub> Decomp by H<sub>2</sub>O but not by NaOH+Aq containing 188.6 g NaOH per l (C)

Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub> Decomp by H<sub>2</sub>O, but not by NaOH+Aq containing 113.2 g NaOH per l (C)

+2H<sub>2</sub>O=NaH<sub>2</sub>(SbO)<sub>3</sub> (Terreil)

### Antimony, Sb

Does not decomp H<sub>2</sub>O Not attacked by HCl+Aq (Berzelius), slowly sol in conc HCl+Aq (Debray), slowly sol in conc warm HCl+Aq (Troost) Attacked by very conc HCl+Aq only when finely divided (Schutzenberger, Willm), very sl attacked by dil or conc acid (Guntz) Not attacked by boiling HCl+Aq (Gmelin) By careful experiments, pure Sb is absolutely insol in dil or conc, hot or cold HCl+Aq, except when in contact with oxygen (Ditte and Metzner, A ch (6) 29 889)

Insol in dil or cold conc, but sol in hot conc H<sub>2</sub>SO<sub>4</sub> Oxidized but not dissolved by HNO<sub>3</sub>+Aq Easily and completely sol in aqua regia

Very slowly attacked by pure HNO<sub>3</sub>+Aq of 1.51-1.42 sp gr weaker acid has no marked action whether it contains NO<sub>2</sub> or not HCl+HNO<sub>3</sub> has no action if dil or at low temp, but when even very dil and KNO<sub>3</sub> is added, the action will begin (Millon, A ch (3) 6 101)

Not attacked in 10 months by 2% HNO<sub>3</sub>+Aq Sb is not dissolved by HNO<sub>3</sub>+Aq of any concentration a white powder being always left, which is insol in HNO<sub>3</sub>+Aq or H<sub>2</sub>O (Montemurri Gazz ch it 22 384)

Insol in alkalis+Aq

Somewhat sol in distilled H<sub>2</sub>O More or less sol in solutions of acids, alkalis and salts and in alcohol and ether Only sl sol in a mixture of alcohol and ether (Ruff and Albert, B 1905 38 54)

Alkaline H<sub>2</sub>O<sub>2</sub> converts Sb into antimonite acid, but neutral H<sub>2</sub>O is without action (Clark, Chm Soc 1893, 63 886)

Insol in liquid NH<sub>3</sub> (Gore, Am Ch J 1898, 20 826)

# ANTIMONY ARSENIDE

Easily attacked by pyrosulphurvl chloride (Feumann and Kochlin, B 16 479)  
Sb is sol in a mixture of HNO<sub>3</sub> and tartaric acid or other polybasic acids (Czerwek, Z anal 1906, 45 507)

Not attacked by a mixture of alcohol and ether (Cohen, Z phys Ch 1904, 47 12)  
½ cc oleic acid dissolves 0.0007 g Sb in 10 days (Gates, J phys Ch 1911, 15 143)

There are three modifications  
1 Ordinary gray metallic  
2 Black amorphous Unstable at ord temp By boiling with H<sub>2</sub>O is changed to metallic Sb

3 Yellow Very unstable At -50° goes over rapidly into the ordinary black modification Sol in CS<sub>2</sub> at a little above -90° (Stock, B 1903, 37 898)

Unstable above -90° (Stock, B 1905, 38 337)

**Antimony arsenide, Sb<sub>2</sub>As**  
(Descamps, C R 86 1065)

**Antimony tribromide, SbBr<sub>3</sub>**

Deliquescent, decomps by H<sub>2</sub>O  
Very sol in liquid NH<sub>3</sub> (Gore, Am Ch 1898, 20 826)  
Very sol in warm liquid AsBr<sub>3</sub>, forming a solution with sp gr = 3.685 at 47° (Retgers, Z anorg Ch 1903, 11 339)

Walden, Z anorg 1900, 25

1B1<sub>3</sub> (Isbekow, Z anorg 1913,

very sol in PCl<sub>3</sub> and PBr<sub>3</sub> (Walden, Z 1900, 25 211)

Sol in alcohol and CS

Sol in ether forming two liquids (Hynes, J chem Soc 1902, 24 360)

Sol in acetone (Nannum, B 1904, 37 328)

(Menschutkin, Ann Inst Pol P le Ch 13)

**Antimony bromide with MBr**

See Bromantimonate, M

Also below

**Antimony hydrogen bromide, SbH<sub>3</sub>, HBr + 3H<sub>2</sub>O**

Very hygroscopic Decomps by H<sub>2</sub>  
(Weinland and Feige, B 1903, 36 256)

See Metabromantimonic acid

**Antimony caesium bromide**,  $2\text{SbBr}_3, 3\text{CsBr} + 2\text{H}_2\text{O}$   
Loses  $\text{Br}_2$  in the air (Weinland, B 1903, 16 257)

**Antimony calcium bromide**,  $\text{SbBr}_3, \text{CaBr}_2 + 8\text{H}_2\text{O}$

Easily decomp (Benedict, Proc Am Acad 1895, 30 9)

**Antimony glucinum bromide**,  $3\text{SbBr}_3, 2\text{GlBr}_2 + 18\text{H}_2\text{O}$

Hydroscopic Easily decomp (Weinland, 3 1903, 36 258)

**Antimony magnesium bromide**,  $\text{SbBr}_3, \text{MgBr}_2 + 8\text{H}_2\text{O}$

As Ca salt (Benedict, Proc Am Acad 1895, 30 9)

**Antimony potassium bromide**,  $10\text{SbBr}_3, 23\text{KBr} + 27\text{H}_2\text{O}$

(Herty, Am Ch J 1894, 16 496)

**Antimony rubidium bromide**,  $2\text{SbBr}_3, 3\text{RbBr}$

Decomp by  $\text{H}_2\text{O}$ , can be recryst from dil  $\text{HBr} + \text{Aq}$  (Wheeler, Z anorg 5 258)

$\text{SbRb}_2\text{Br}_6$  Slowly loses  $\text{Br}_2$  in the air  
Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1903, 36 259)

$10\text{SbBr}_3, 23\text{RbBr}$  (?) Cryst from conc  $\text{HBr} + \text{Aq}$  (Wheeler)

The composition assigned to this salt by Wheeler (Z anorg 5 253) is incorrect  
Ephraim, B 1903, 36 1817)

**Antimony vanadium bromide**,  $\text{SbBr}_3, \text{VBr}_4 + 7\text{H}_2\text{O}$

Hydroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dil  $\text{HCl}$  and in tartaric acid (Weinland, B 1903, 36 260)

**Antimony bromide potassium chloride**,  $\text{SbBr}_3, 3\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$

Slowly deliquescent Very sol in  $\text{H}_2\text{O}$   
Sat solution contains 120.5 g to 100 cc  $\text{H}_2\text{O}$ , and has sp gr = 1.9

Decomp by much  $\text{H}_2\text{O}$  (Atkinson, Chem Soc 43 290)

Does not exist (Herty, Am Ch J 1894, 16 497)

See also Antimony chloride potassium bromide

**Antimony bromofluoride**,  $\text{SbF}_3\text{Br}$

Decomp by  $\text{H}_2\text{O}$  (Ruff, B 1906, 39 4319)

**Antimony trichloride**,  $\text{SbCl}_3$

Deliquescent Decomp by  $\text{H}_2\text{O}$  with precipitation of  $\text{SbOCl}$  This precipitation is prevented by tartaric, citric, or hydrochloric acid, or by conc solutions of chlorides of alkalis and alkaline earths

Solubility in  $\text{H}_2\text{O}$   
100 pts  $\text{SbCl}_3$  sol in pts  $\text{H}_2\text{O}$  at  $t^\circ$

1 & 2 (Meerburg, Z anorg 1903, 33 302)  
3 & 4 (Noodt, Z anorg 1903, 33 302)

Somewhat sol in liquid  $(\text{CN})$  (Centnerszwer, Bull Soc 1901, (3) 28 405)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 826)

Easily sol in  $\text{PCl}_3$  and  $\text{PBr}_3$  (Walden, Z anorg 1900, 25 211)

Sol in  $\text{S Cl}_2$  (Walden, Z anorg 1900, 25 217)

Easily sol in  $\text{AsBr}_3$  (Walden, Z anorg 1902, 29 374)

Sol in alcohol without decomp Very sol in hot  $\text{CS}_2$ , but solubility diminishes rapidly on cooling (Cooke, Proc Am Acad 13 72)

1 g  $\text{SbCl}_3$  is sol in 0.186 g acetone at  $18^\circ$  Sp gr of sat solution  $18^\circ/4^\circ = 2.216$  (Naumann, B 1904, 37 4332)

Sol in ethyl acetate (Naumann B 1904, 37 3601)

1 pt sol in 16.97 pts of ethyl acetate at  $18^\circ$  Sp gr of sat solution  $18^\circ/4^\circ = 1.7968$  (Naumann, B 1910, 43 320)

Sol in benzonitrile (Naumann, B 1914, 47 1369)

Sol in methylal (Eidmann, C C 1899, II 1014)

Solubility of  $\text{SbCl}_3$  in organic liquids

(Menschutkin, Ann Inst Pol P-le Gr 13 1)

### Antimony hydrogen trichloride, $2\text{SbCl}_3 + 2\text{HCl}$

Deliquescent Decomps by  $\text{H}_2\text{O}$

Melts in crystal  $\text{H}_2\text{O}$  at  $16^\circ$  (Engel C R 106 1797)

### Antimony pentachloride, $\text{SbCl}_5$

Deliquesces to  $\text{SbCl}_3 + \text{HCl}$  which can be crystallized out of a little  $\text{H}_2\text{O}$ . Decomps by more  $\text{H}_2\text{O}$  into  $\text{SbOCl}$ . Sol in a large amount of  $\text{H}_2\text{O}$ , if it is added all at one time. Capitation by  $\text{H}_2\text{O}$  is also hindered by presence of tartaric, or hydrochloric acid.

+  $\text{HCl}$  Deliquescent Sol in chloroform (Anschutz and Evans, A 239 285)

+  $\text{H}_2\text{O}$  Insol in chloroform (Anschutz and Evans)

### Antimony pentachloride with $\text{MCl}$

See Chlorantimonate, M

See also below

**Antimony hydrogen pentachloride**,  $\text{SbCl}_5$ ,  $\text{HCl} + 4\frac{1}{2}\text{H}_2\text{O}$

"Metachlorantimonic acid" according to Weinland and Schmid, (Z anorg 1905, 44 43)

Very easily sol in  $\text{H}_2\text{O}$ , alcohol, acetone and glacial acetic acid. Aqueous solution decomposes on standing with separation of  $\text{Sb}_2\text{O}_3$  but remains clear in presence of 10%  $\text{HCl}$  (Weinland and Schmid, Z anorg 1905, 44 43)

$\text{SbCl}_5$ ,  $5\text{HCl} + 10\text{H}_2\text{O}$  Not deliquescent. Decomposes by  $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at about  $55^\circ$  (Engel, C R 106 1797)

**Antimony antimonyl chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$

More easily attacked by  $\text{H}_2\text{O}$  than  $\text{SbOCl}$  (Bemmelen, Z anorg 1903, 33 293)

**Antimony antimonyl potassium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{KCl}$

Not deliquescent. Immediately decomposes by hot or cold  $\text{H}_2\text{O}$ , sol in hot glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , or in  $\text{HCl}$ , or tartaric acid +  $\text{Aq}$ . Insol in  $\text{KCl} + \text{Aq}$ , hot or cold alcohol,  $\text{CS}_2$ , or ligroine (Benedikt, Proc Am Acad 29 217)

**Antimony antimonyl rubidium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{RbCl}$

Sol in very dil  $\text{HCl} + \text{Aq}$  (Wells, Am J Sci 1897, (4) 3 463)

**Antimony barium chloride**,  $\text{SbCl}_3$ ,  $\text{BaCl}_2 + \frac{3}{2}\text{H}_2\text{O}$

Decomposes by  $\text{H}_2\text{O}$

**Antimony caesium chloride**,  $\text{SbCl}_3$ ,  $6\text{CsCl}$

Decomposes by  $\text{H}_2\text{O}$ . Cryst from dil  $\text{HCl} + \text{Aq}$  (Godefroy, Arch Pharm (3) 12 47)

$2\text{SbCl}_3$ ,  $3\text{CsCl}$  Decomposes by  $\text{H}_2\text{O}$ , sl sol in cold, easily in hot dil  $\text{HCl} + \text{Aq}$ . This is identical with the above salt (Saunders, Am Ch J 14 152)

$\text{SbCl}_3$ ,  $2\text{CsCl}$  Sol in boiling conc  $\text{HCl} + \text{Aq}$  without decomposition (Setterberg, Oef Vet Akad 1882, 6 23)

$\text{SbCl}_3$ ,  $\text{CsCl}$  Cryst from  $\text{HCl} + \text{Aq}$  without decomposition. Decomposes by  $\text{H}_2\text{O}$  (Setterberg, Oef Vet Akad 1882, 6 27)

**Antimony calcium chloride**,  $\text{SbCl}_3$ ,  $\text{CaCl}_2 + 8\text{H}_2\text{O}$

Easily decomposes (Benedikt, Proc Am Acad 1895, 30 9)

$\text{SbCl}_3$ ,  $\text{CaSbCl}_6$ ,  $\text{OH} + 9\text{H}_2\text{O}$  Deliquescent, sl sol in  $\text{H}_2\text{O}$  (Weinland, B 1901, 34 2635)

**Antimony chromium chloride**,

$\text{CrCl}_3$ ,  $3\text{SbCl}_3 + 13\text{H}_2\text{O}$  (Weinland) should be

$[\text{SbCl}_2]_3[\text{Cr}(\text{OH})_2]_3 + 7\text{H}_2\text{O}$ , and  $\text{CrCl}_3$ ,  $\text{SbCl}_3 + 10\text{H}_2\text{O}$  should be

$[\text{SbCl}_2]_3[\text{Cr}(\text{OH})_2]_3 + 6\text{H}_2\text{O}$  (Pfeiffer, Z anorg 1903, 36 349)

**Antimony glucinum chloride**,  $\text{SbCl}_3$ ,  $\text{GlCl}_2 + 3\text{H}_2\text{O}$

Very hygroscopic. Decomposes by  $\text{H}_2\text{O}$ . Very easily sol in  $\text{HCl}$  (Ephraim, B 1903, 36 1822)

$+4\text{H}_2\text{O}$  Ppt. Decomposes by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$  (Ephraim, B 1903, 36 1822)

**Antimony hydrazine chloride**,  $\text{SbCl}_3$ ,  $3\text{N}_2\text{H}_4\text{Cl}$

Sol in conc  $\text{HCl} + \text{Aq}$ , decomposes by  $\text{H}_2\text{O}$  (Ferrattini, C A 1912, 1613)

**Antimony lithium chloride**,  $\text{SbCl}_3$ ,  $2\text{LiCl} + 5\text{H}_2\text{O}$

Hygroscopic. Decomposes by  $\text{H}_2\text{O}$ . Very easily sol in  $\text{HCl}$  (Ephraim, B 1903, 36 1821)

$+6\text{H}_2\text{O}$  Decomposes by  $\text{H}_2\text{O}$ , easily sol in  $\text{HCl}$  (Ephraim, B 1903, 36 1822)

**Antimony magnesium chloride**,  $\text{SbCl}_3$ ,  $\text{MgCl}_2 + 5\text{H}_2\text{O}$

Hygroscopic. Decomposes by  $\text{H}_2\text{O}$ . Can be cryst from  $\text{HCl}$  without decomposition (Ephraim, B 1903, 36 1823)

$2\text{SbCl}_3$ ,  $\text{MgCl}_2$  Hygroscopic. Decomposes by  $\text{H}_2\text{O}$ . Very sol in  $\text{HCl}$  (Ephraim)

$\text{SbCl}_3$ ,  $\text{MgSbCl}_6$ ,  $\text{MgOH} + 17\text{H}_2\text{O}$  Hygroscopic. Sol in  $\text{H}_2\text{O}$  with decomposition (Weinland, B 1901, 34 2635)

**Antimony nitrosyl chloride**,  $\text{SbCl}_3$ ,  $\text{NOCl}$

Very deliquescent, decomposes by pure  $\text{H}_2\text{O}$  sol in  $\text{H}_2\text{O}$  containing tartaric acid (Weber, Pogg 123 347)

$2\text{SbCl}_3$ ,  $5\text{NOCl}$  Decomposes by  $\text{H}_2\text{O}$  (Sudborough, Chem Soc 59 661)

**Antimony phosphorus chloride**,  $\text{SbCl}_3$ ,  $\text{PCl}_3$

Deliquescent (Weber, Pogg 125 78)

**Antimony phosphoryl chloride**,  $\text{SbCl}_3$ ,  $\text{POCl}_3$

Deliquescent (Weber)

**Antimony platinum potassium chloride**,

$(\text{Sb}, \text{Pt})\text{Cl}_6\text{K}$

Ppt (Weinland, B 1903, 38 1056)

**Antimony potassium chloride**,  $\text{SbCl}_3$ ,  $2\text{KCl}$

Sol in  $\text{H}_2\text{O}$  without decomposition (Jacquelin, A ch (2) 66 125)

Not deliquescent. Immediately decomposes by hot or cold  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ , or tartaric acid +  $\text{Aq}$  (Benedikt, Proc Am Acad 29 219)

$+2\text{H}_2\text{O}$  Very efflorescent

$\text{SbCl}_3$ ,  $3\text{KCl}$  Deliquescent. Decomposes by hot  $\text{H}_2\text{O}$  (Poggiale)

$+2\text{H}_2\text{O}$  (Romanis, C N 49 273)

Not obtained by Benedikt (l c)

$10\text{SbCl}_3$ ,  $23\text{KCl}$  True composition of above salts. Sol in  $\text{H}_2\text{O}$  (Herty Am Ch J 1894, 16 495)

$\text{SbCl}_3$ ,  $2\text{KCl}$  is the only true compound, all

others being isomorphous mixtures (Jordis, B 1903, **36** 2539)

$2\text{SbCl}_3, 3\text{KCl}$  Deliquescent Decomp by  $\text{H}_2\text{O}$  (Bosek, Chem Soc 1895, **67** 516)

$\text{SbCl}_3\text{KSbCl}_3\text{KOH}$  Hygroscopic Sol in  $\text{H}_2\text{O}$  with decomp (Weinland, B 1901, **34** 2635)

See also Antimony antimonyl potassium chloride

**Antimony rubidium chloride**,  $\text{SbCl}_3, \text{RbCl}$

Decomp on air or with  $\text{H}_2\text{O}$  (Saunders, Am Ch J **14** 162)

$2\text{SbCl}_3, \text{RbCl} + \text{H}_2\text{O}$  Decomp on air (Wheeler, Z anorg **5** 253)

$\text{SbCl}_3, 6\text{RbCl}$  Decomp by  $\text{H}_2\text{O}$  (Godefroy, Arch Pharm (3) **9** 343)

Formula is  $10\text{SbCl}_3, 23\text{RbCl}$  (?) (Saunders Am Ch J **14** 159)

$10\text{SbCl}_3, 23\text{RbCl}$  (?) Decomp by  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Saunders)

Formula is  $3\text{SbCl}_3, 7\text{RbCl}$  (Wells and Foote, Am J Sci 1897, (4) **3** 461)

Composition assigned to this salt by Saunders (Am Ch J **14** 155) is incorrect (Ephraim, B 1903, **36** 1817)

$3\text{SbCl}_3, 5\text{RbCl}$  As above (Saunders)

Formula is  $2\text{SbCl}_3, 3\text{RbCl}$  (Wheeler)

$\text{Rb}_2\text{SbCl}_6$  Ppt Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1905, **38** 1083)

$\text{Rb}_2\text{SbCl}_6, 2\text{Rb}_2\text{SbCl}_6$  Ppt Decomp by  $\text{H}_2\text{O}$  (Weinland, B, 1901, **34** 2635)

**Antimony selenium chloride**,  $\text{SbCl}_3, \text{SeCl}_4$

Deliquescent (Weber)

**Antimony selenyl chloride**,  $\text{SbCl}_3, \text{SeOCl}_2$

Very deliquescent (Weber, Pogg **125** 325)

**Antimony sodium chloride**,  $\text{SbCl}_3, 3\text{NaCl}$  (?)

Decomp by much  $\text{H}_2\text{O}$  (Poggiale)

**Antimony sulphur chloride**,  $2\text{SbCl}_3, 3\text{SbCl}_2$

Decomp by  $\text{H}_2\text{O}$

$\text{SbCl}_3, \text{SbCl}_4$  Sol in dil  $\text{HNO}_3 + \text{Aq}$   
Mpt  $125-126^\circ$  in an atmos of chlorine  
Violently decomp by  $\text{H}_2\text{O}$  (Ruff, B 1904, **37** 4515)

**Antimony thallium chloride**,  $\text{SbCl}_3, 3\text{TlCl}$

Ppt (Ephraim, Z anorg 1909, **61** 249)

$\text{SbCl}_4, \text{TlCl}$  (Ephraim and Barteczko, Z anorg 1909, **61** 251)

$2\text{SbCl}_4, 2\text{TlCl}, \text{TlCl}_3$  Slowly decomp by cold  $\text{H}_2\text{O}$  (Ephraim and Barteczko, Z anorg 1909, **61** 253)

**Antimony trichloride ammonia**,  $\text{SbCl}_3, \text{NH}_3$

Not very deliquescent Decomp by  $\text{H}_2\text{O}$

**Antimony pentachloride ammonia**,  $\text{SbCl}_5, 6\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  (Persoz)

**Antimony pentachloride cyanhydric acid**,  $\text{SbCl}_5, 3\text{HCN}$

Deliquescent, decomp by  $\text{H}_2\text{O}$  (K n, A **74** 85)

**Antimony pentachloride nitric oxide**,  $\text{SbCl}_5, \text{NO}$

Decomp by  $\text{H}_2\text{O}$  (Besson, C F **108** 1012)

**Antimony pentachloride nitrogen peroxide**,  $3\text{SbCl}_5, 2\text{NO}_2$

Decomp by  $\text{H}_2\text{O}$  (Besson)

**Antimony pentachloride nitrogen sulphide**,  $\text{SbCl}_5, \text{N}_4\text{S}_4$

Easily decomp (Davis, Chem Soc 1906, **89** 1577)

Decomp by cold  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and warm alcohol, also by boiling with  $\text{KOH} + \text{Aq}$   
Almost insol in organic solvents (Wells, Z anorg 1908, **57** 283)

**Antimony chloride potassium bromide**,  $\text{SbCl}_3, 3\text{KBr} + 1\frac{1}{2}\text{H}_2\text{O}$

Very deliquescent Decomp by much  $\text{H}_2\text{O}$  (Atkinson, Chem Soc **43** 289)

$2\text{SbCl}_3, 3\text{KBr} + 2\text{H}_2\text{O}$  (Atkinson)

$\text{SbCl}_3, \text{KBr} + \text{H}_2\text{O}$  (Atkinson)

Above are mixtures (Herty, Am Ch J **1894**, **16** 497)

See Antimony bromide potassium chloride

**Antimony chlorofluoride**,  $\text{SbCl}_3\text{F}_2$

(Swarts, Z anorg 1896, **12** 71)

**Antimony fluoriodide**,  $\text{SbF}_3\text{I}$

Slowly decomp by  $\text{H}_2\text{O}$  (Ruff, B 1906, **39** 4321)

$(\text{SbF}_3)_2\text{I}$  Sol in  $\text{H}_2\text{O}$  with pptn of  $\text{I}_2$  (Ruff, B 1906, **39** 4321)

**Antimony trifluoride**,  $\text{SbF}_3$

Deliquescent Sol in  $\text{H}_2\text{O}$

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	100 g of the solution contain g $\text{SbF}_3$	100 g $\text{H}_2\text{O}$ contain g $\text{SbF}_3$

(Rosenheim, Z anorg 1909, 61 192)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 826)

**Antimony pentafluoride,  $\text{SbF}_5$** 

Sol in  $\text{H}_2\text{O}$  (Maignac, A 145 239)  
 Very hygroscopic, bpt  $155^\circ$  Sol in  $\text{H}_2\text{O}$  with hissing (Ruff, B 1904, 37 678)  
 $+2\text{H}_2\text{O}$  (Ruff, B 1904, 37 679)

**Antimony pentafluoride diantimony trifluoride,  $\text{Sb}_3\text{F}_{11} = 2\text{SbF}_3 \cdot \text{SbF}_5$** 

Hygroscopic, bpt  $390^\circ$  Easily sol in  $\text{H}_2\text{O}$  (Ruff, B 1904, 37 680)

**Antimony pentafluoride pentantimony trifluoride,  $\text{SbF}_5 \cdot 5\text{SbF}_3$** 

Bpt  $384^\circ$  (corr) (Ruff, B 1904, 37 681)

**Antimony caesium fluoride,**

$\text{CsF} \cdot 2\text{SbF}_3$   
 $\text{CsF} \cdot 3\text{SbF}_3$   
 $4\text{CsF} \cdot 7\text{SbF}_3$   
 $\text{CsF} \cdot \text{SbF}_3$   
 $2\text{CsF} \cdot \text{SbF}_3$   
 (Wells, Am J Sci 1901, (4) 11 451)

**Antimony lithium fluoride,  $\text{SbF}_3 \cdot 2\text{LiF}$** 

Sol in more than 20 pts  $\text{H}_2\text{O}$  (Flückinger, Pogg 87 245)

$\text{SbF}_3 \cdot \text{LiF}$  Easily sol in  $\text{H}_2\text{O}$  (Stein, Chem Z 13 357)

**Antimony potassium fluoride,  $\text{SbF}_3 \cdot 2\text{KF}$** 

Sol in less than 2 pts boiling, and in 9 pts cold  $\text{H}_2\text{O}$  Insol in alcohol or ether

$\text{SbF}_3 \cdot \text{KF}$  More sol than  $\text{SbF}_3 \cdot 2\text{KF}$  Sol in 2.8 pts  $\text{H}_2\text{O}$  (Flückinger, Pogg 87 245)

$\text{SbF}_3 \cdot \text{KF}$  Easily sol in  $\text{H}_2\text{O}$

$\text{SbF}_3 \cdot 2\text{KF} + 2\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Maignac, A 145 239)

**Antimony sodium fluoride,  $\text{SbF}_3 \cdot 3\text{NaF}$** 

Sol in 14 pts cold, and 4 pts boiling  $\text{H}_2\text{O}$  Sol in  $\text{HF}$  (Flückinger, Pogg 87 245)

$\text{SbF}_3 \cdot \text{NaF}$  100 pts cold  $\text{H}_2\text{O}$  dissolve 93 pts 100 pts hot  $\text{H}_2\text{O}$  dissolve 166 pts (Stein, Wagners' J B 1887 1160)

$4\text{SbF}_3 \cdot \text{NaF}$  As  $\text{NH}_4$  salt (Raad and Hauser, B 1890, 23 R 125)

$\text{SbF}_3 \cdot 2\text{NaF}$  Easily sol in  $\text{H}_2\text{O}$  (Maignac, A 145 329)

**Antimony thallium fluoride,  $\text{TlF} \cdot \text{SbF}_3$** 

Sol in  $\text{H}_2\text{O}$  without decomp (Ephraim, B 1909, 42 4458)

$\text{TlF} \cdot 2\text{SbF}_3$  Sol in  $\text{H}_2\text{O}$  without decomp (Ephraim)

$\text{TlF} \cdot 3\text{SbF}_3$  Sol in  $\text{H}_2\text{O}$  without decomp

**Antimony trifluoride ammonia,  $\text{SbF}_3$** 

Sl sol in liquid  $\text{NH}_3$  (Ruff, B 1904, 4326)

**Antimony trifluoride ammonium chloride  $\text{SbF}_3 \cdot \text{NH}_4\text{Cl}$** 

Easily sol in  $\text{H}_2\text{O}$  (de Haen, B 21 901 R)

**Antimony trifluoride ammonium sulphate,  $\text{SbF}_3 \cdot (\text{NH}_4)_2\text{SO}_4$** 

More sol than K or Na salt 1 pt  $\text{H}_2\text{O}$  dissolves 1.4 pts at  $24^\circ$  and 15 pts at  $100^\circ$  (de Haen, B 21 902 R)

**Antimony fluoride lithium chloride,  $\text{SbF}_3 \cdot \text{LiCl}$** 

Sol in  $\text{H}_2\text{O}$  (Stein, Chem Z 13 357)

**Antimony pentafluoride nitrosyl fluoride,  $\text{SbF}_5 \cdot \text{NOF}$** 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in liquid  $\text{NH}_3$  with decomp Sl sol in  $\text{NOCl}$ ,  $\text{SiCl}_4$ ,  $\text{PCl}_3$ ,  $\text{AsCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{SOCl}_2$  (Ruff, Z anorg 1908, 58 434)

**Antimony trifluoride potassium chloride,  $\text{SbF}_3 \cdot \text{KCl}$** 

100 pts  $\text{H}_2\text{O}$  dissolve 51 pts at  $24^\circ$ , and 300 pts at  $100^\circ$  (de Haen, B 21 901 R)

- Antimony trifluoride potassium sulphate**,  $\text{SbF}_3, \text{K}_2\text{SO}_4$   
Sol in  $\text{H}_2\text{O}$  (de Haen)  
2SbF<sub>3</sub>, K<sub>2</sub>SO<sub>4</sub> Very sol in  $\text{H}_2\text{O}$  (Mayer, B 1894, 27 R 922)
- Antimony trifluoride sodium chloride**,  $\text{SbF}_3, \text{NaCl}$   
Easily sol in  $\text{H}_2\text{O}$  (de Haen, B 21 901 R)
- Antimony trifluoride sodium sulphate**,  $\text{SbF}_3, \text{Na}_2\text{SO}_4$   
Sol in  $\text{H}_2\text{O}$  (de Haen)
- Antimony fluoiodide**,  $\text{SbF}_2\text{I}$   
Mpt 80°, slowly decomp by  $\text{H}_2\text{O}$  (Ruff, B 1906, 39 4321)  
(SbF<sub>2</sub>)<sub>2</sub>I Mpt 110–115°, decomp by  $\text{H}_2\text{O}$  (Ruff)
- Antimony fluosulphide**,  $\text{SbF}_2\text{S}$   
Very hygroscopic. Decomp by  $\text{H}_2\text{O}$ . Sol with decomp in alcohol. Sol in  $\text{CCl}_4$  (Ruff, B 1906, 39 4322)
- Antimony gold**,  $\text{AuSb}$   
Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 72)
- Antimony hydride**,  $\text{SbH}_3$   
Scarcely sol in  $\text{H}_2\text{O}$ . 1000 ccm  $\text{H}_2\text{O}$  absorb 4.12 cc  $\text{SbH}_3$  at 10.5°. Decomp by long contact with  $\text{H}_2\text{O}$ , also by conc  $\text{H}_2\text{SO}_4$  or  $\text{KOH} + \text{Aq}$  (Jones, Chem Soc 29 641)
- Antimony trihydroxide**,  $\text{Sb}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Sb}_2\text{O}_3(\text{OH})_4$   
(Schaffner, A 51 182)  
 $\text{Sb}(\text{OH})_3$  Ppt (Clarke and Stolla, B 13 1787)  
Does not exist (Guntz, C R 102 1472)  
See Antimonous acid and antimony trioxide
- Antimony triiodide**,  $\text{SbI}_3$   
Decomp by  $\text{H}_2\text{O}$  or 50% alcohol. Sol in  $\text{HI} + \text{Aq}$ , sol in boiling  $\text{CS}_2$  and in boiling benzene, but separates out on cooling. Almost insol in  $\text{CHCl}_3$  (Cooke, Proc Am Acad (2) 5 72)  
Easily sol in  $\text{AsI}_3$  (Walden, Z anorg 1902, 29 574)  
Sol in warm  $\text{AsI}_3$ . Sp gr of a solution sat. at 40° which solidifies at 37°, = 3.720. This dissolves further  $\text{AsI}_3$ , whereby the mpt sinks to 31° and sp gr rises to 3.801. By mixing the latter solution with a solution of  $\text{AsI}_3$  in  $\text{CH}_2\text{I}_2$ , a liquid can be obtained with a sp gr of 3.702 at 20° (Retgers, Z phys Ch 1893, 11 340)  
Sol in  $\text{PCl}_3$  (Buckmann, Z anorg 1906, 51 110)  
Sol in  $\text{SOCl}_2$  (Walden, Z anorg 1900, 25 215)
- Sol in  $\text{SOCl}_2$  and  $\text{S}_2\text{Cl}_2$  (Walden, Z anorg 1900, 25 216)  
Sol in  $\text{AsCl}_3$  (Walden, Z anorg 1901, 25 214)  
Sol in  $\text{SnCl}_4$  (Walden, Z anorg 1901, 25 218)  
Sol in  $\text{POCl}_3$  (Walden, Z anorg 1901, 25 212)  
Easily sol in  $\text{PCl}_3$  and  $\text{PBr}_3$  (Walden, Z anorg 1900, 25 211)  
Partly sol in, and partly decomp by alcohol or ether (M'Ivor, Chem Soc (2) 4 328)  
Insol in oil of turpentine and  $\text{CCl}_4$   
100 pts methylene iodide dissolve 11.3 ts  $\text{SbI}_3$  at 12°, sp gr of solution = 3.453 (Retgers, Z anorg 3 343)  
Sol in  $\text{C}_6\text{H}_6$  (Retgers, Z phys Ch 1 18, 11 334)  
Sol in acetone (Naumann, B 1904 17 4328)
- Antimony pentaoxide**,  $\text{SbI}_5$   
Very unstable (Pendleton, C N 48 7)
- Antimony barium iodide**,  $\text{SbI}_3, \text{BaI}_2 + 9\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{I}_3$  (Schaffer, Pogg 109 611)
- Antimony caesium iodide**,  $2\text{SbI}_3, 3\text{CsI}$   
Sl sol in  $\text{HI} + \text{Aq}$ . Exists in two distinct forms (Wells, Am J Sci 1901, (4) 11 5)
- Antimony potassium iodide**,  $2\text{SbI}_3, 3\text{KI} + 3\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{I}_3$  (Schaffer, Pogg 109 611)  
 $\text{SbI}_3, 2\text{KI} + 2\frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Nickles, J Pharm (3) 39 116)
- Antimony rubidium iodide**,  $2\text{SbI}_3, 3\text{RbI}$   
Decomp by  $\text{H}_2\text{O}$  (Wheeler, Z anorg 5 259)
- Antimony sodium iodide**,  $2\text{SbI}_3, 3\text{NaI} + 12\text{H}_2\text{O}$   
 $\text{As}_2\text{SbI}_3, 3\text{KI}$  (Schaffer, Pogg 109 1)
- Antimony thallos iodide**,  $2\text{SbI}_3, 3\text{HI}$   
Decomp by  $\text{H}_2\text{O}$  and by  $\text{HCl} + \text{Aq}$ , al by alcohol (F phram, Z anorg 1908, 58 14)
- Antimony nitride**,  $\text{SbN}$   
Decomp by heat (Frimmischer, B 10, 43 1471)
- Antimony trioxide**,  $\text{Sb}_2\text{O}_3$   
Very sl sol in  $\text{H}_2\text{O}$ . Sol in 8900–10000 pts  $\text{H}_2\text{O}$  at 100°, 55,000–61,100 pts at 15° (Schulze, J pr (2) 27 320)  
Sol in  $\text{HCl} + \text{Aq}$ . Insol in  $\text{HNO}_3 + \text{Aq}$  but not as insol as metastannic acid. Sol in old fuming  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Insol in dil but sol in conc alkalis, or alkali carbon s+

Aq Sol in cold  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3$  + Aq  
Sol in 15 pts boiling  $\text{SbCl}_3$  (Schneider, Pogg 108 407)

Sol in  $\text{HC}_2\text{H}_3\text{O}_2$  or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  + Aq, and not pptd from these solutions by  $\text{H}_2\text{O}$ . Easily sol in benzoic acid. Insol in pyrotartaric acid. Very sol in  $\text{KHC}_4\text{H}_4\text{O}_6$  + Aq. Sol in glycerine.

Somewhat sol in  $\text{H}_3\text{PO}_4$  + Aq (Köhler, Dingl 1885, 258 520)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 826)

Sol in lactic acid (Kretzschmar, Ch Z 1888, 12 943)

Sol in grape sugar solution to which  $\text{Ca}(\text{OH})_2$  has been added (Vogel, B 1885, 18, R 38)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

Sol in glycerine in presence of alkalis (Köhler, Dingl 1885, 258 520)

Exists in a sol colloidal modification (Spring, B 16 1142)

Min *Valentinite*, *Senarmontite* +  $\text{H}_2\text{O}$  See Antimonous acid

#### Antimony tetroxide, $\text{Sb}_2\text{O}_4$

Insol in  $\text{H}_2\text{O}$ . Slightly attacked by acids, hot conc  $\text{HCl}$  + Aq acts only slightly (Fresenius)

Min *Cervantite*. Sl sol in  $\text{HCl}$  + Aq

#### Antimony pentoxide, $\text{Sb}_2\text{O}_5$

Insol in  $\text{H}_2\text{O}$ . Easily sol in  $\text{HCl}$  + Aq. Sl sol in conc  $\text{KOH}$  + Aq.

"Antimonoxvd" is sol in glycerine in presence of alkalis.

100 g glycerine, to which have been added 10 g  $\text{NaOH}$  + Aq (1 l), dissolve 20.6 g at b-pt, 20 g  $\text{NaOH}$  + Aq (1 l), dissolve 36.0 g at b-pt, 40 g  $\text{NaOH}$  + Aq (1 l), dissolve 68.5 g at b-pt, 80 g  $\text{NaOH}$  + Aq (1 l), dissolve 93.0 g at b-pt, 120 g  $\text{NaOH}$  + Aq (1 l), dissolve 119.2 g at b-pt (Köhler, Dingl 258 520)

See also Antimonic acid

#### Antimony nitrogen pentoxide, $2\text{Sb}_2\text{O}_5 \cdot \text{N}_2\text{O}_5$

Not decomp by  $\text{H}_2\text{O}$  (Thomas, C R 1895, 120 1116)

#### Antimony oxybromide

See Antimonyl bromide

#### Antimony oxychloride

See Antimonyl chloride

#### Antimony oxyfluoride

See Antimonyl fluoride

#### Antimony oxysulphide, $\text{Sb}_2\text{O}_3\text{S}$

Min *Antimony blends* (*kermesite*)

Insol in  $\text{H}_2\text{O}$  or dil acids, except  $\text{HCl}$  + Aq (Schneider, Pogg 110 147)

#### Antimony palladium, $\text{Sb}_2\text{Pd}$

Sl sol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 69)

#### Antimony platinum, $\text{Sb Pt}$

Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 67)

#### Antimony phosphide, $\text{SbP}$

Insol in benzene, ether, or  $\text{CS}_2$  (M'Ivor, B 6 1362)

#### Antimony selenide, $\text{SbSe}$

(Chrétien, C R 1906, 142 1341)

$\text{Sb}_2\text{Se}_4$  (Chrétien, l c)

$\text{Sb}_2\text{Se}_3$  (Chrétien, l c)

$\text{Sb}_2\text{Se}_3$  Sol in  $\text{KOH}$  + Aq (Hofacker, A 107 6)

$\text{Sb}_2\text{Se}_3$  (Hofacker)

#### Antimony selenide, with M selenide

See Selenoantimonates, M

#### Antimony trisulphide, $\text{Sb}_2\text{S}_3$ (*Kermes*)

Insol in  $\text{H}_2\text{O}$  and dil acids

1 l  $\text{H}_2\text{O}$  dissolves  $5.2 \times 10^{-6}$  mols pptd  $\text{Sb}_2\text{S}_3$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58 294)

Decomp by conc  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Sol in conc  $\text{HCl}$  + Aq. Easily sol in dil  $\text{KOH}$ ,  $\text{NaOH}$ ,  $(\text{NH}_4)_2\text{S}$ , and  $\text{K}_2\text{S}$  + Aq. Sl sol in  $\text{NH}_4\text{OH}$  + Aq, very sl sol in  $(\text{NH}_4)_2\text{CO}_3$  + Aq, insol in  $\text{KSH}$  + Aq (Fresenius)

Sol in a mixture of 50 pts  $\text{H}_2\text{O}$  and 18 pts  $\text{HCl}$  (sp gr 1.16) even when completely sat with  $\text{H}_2\text{S}$  (Lung and Carson, J Soc Chem Ind 1902, 21 1018)

Sl sol in  $\text{H}_2\text{SO}_4$  + Aq (Guierout, C R 1872, 75 1276)

Cryst  $\text{Sb}_2\text{S}_3$  is only sl sol in  $\text{NH}_4\text{OH}$  + Aq (1 pt in about 2000 pts  $\text{NH}_4\text{OH}$ )

Pptd amorphous  $\text{Sb}_2\text{S}_3$  is appreciably more sol (1 pt in 600 pts  $\text{NH}_4\text{OH}$ ) (Guot, J pr 1843, 29 83)

Sl sol in hot  $2^\circ\text{Na}_2\text{B}_2\text{O}_7$  + Aq still less sol in cold (Matrone, C C 1906, II 557)

Insol in  $\text{NH}_4\text{Cl}$  + Aq

Sol in 14-15 pts pure  $\text{SbCl}_3$  (Schneider, Pogg 108 407)

Slowly sol in  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  + Aq

Sol in boiling  $\text{Na}_2\text{SbS}_4$  + Aq

Sol in hot citric, tartaric and oxalic acids. Sl sol in milder, benzoic, picric and pyrogallic acids. Insol in formic and acetic acids. Especially easily sol in citric and oxalic acids with addition of  $\text{KNO}_3$ ,  $\text{KNO}$  or  $\text{KClO}_3$  (Bolton, C N 1878, 37 Sb and 99)

Sol in ethylamine sulphhydrate + Aq

Min *Stibnite*. Sol in cold citric acid + Aq (Bolton, C N 37 11)

*Soluble modification*.  $\text{Sb}_2\text{S}_3$  may be obtained in a colloidal state in aqueous solution containing 1 pt  $\text{Sb}_2\text{S}_3$  to 200 pts  $\text{H}_2\text{O}$ . This can be boiled without decomp but  $\text{Sb}_2\text{S}_3$  is pptd by acids and salts.

- Antimony trifluoride potassium sulphate**,  $\text{SbF}_3, \text{K}_2\text{SO}_4$   
Sol in  $\text{H}_2\text{O}$  (de Haen)  
 $2\text{SbF}_3, \text{K}_2\text{SO}_4$  Very sol in  $\text{H}_2\text{O}$  (Mayer, B 1894, 27 R 922)
- Antimony trifluoride sodium chloride**,  $\text{SbF}_3, \text{NaCl}$   
Easily sol in  $\text{H}_2\text{O}$  (de Haen, B 21 901 R)
- Antimony trifluoride sodium sulphate**,  $\text{SbF}_3, \text{Na}_2\text{SO}_4$   
Sol in  $\text{H}_2\text{O}$  (de Haen)
- Antimony fluoiodide**,  $\text{SbF}_2\text{I}$   
Mpt  $80^\circ$ , slowly decomp by  $\text{H}_2\text{O}$  (Ruff, B 1906, 39 4321)  
 $(\text{SbF}_2)_2\text{I}$  Mpt  $110-115^\circ$ , decomp by  $\text{H}_2\text{O}$  (Ruff)
- Antimony fluosulphide**,  $\text{SbF}_2\text{S}$   
Very hygroscopic. Decomp by  $\text{H}_2\text{O}$ . Sol with decomp in alcohol. Sol in  $\text{CCl}_4$  (Ruff, B 1906, 39 4372)
- Antimony gold**,  $\text{Au}_3\text{Sb}$   
Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 72)
- Antimony hydride**,  $\text{SbH}_3$   
Scarcely sol in  $\text{H}_2\text{O}$ . 1000 ccm  $\text{H}_2\text{O}$  absorb 4.12 cc  $\text{SbH}_3$  at  $10.5^\circ$ . Decomp by long contact with  $\text{H}_2\text{O}$ , also by conc  $\text{H}_2\text{SO}_4$  or  $\text{KOH} + \text{Aq}$  (Jones, Chem Soc 29 641)
- Antimony trihydroxide**,  $\text{Sb(OH)}_3$   
 $\text{Sb(OH)}_3$  (Schaffner, A 51 182)  
 $\text{Sb(OH)}_3$  Ppt (Clarke and Stolla, B 13 1787)  
Does not exist (Gauntz, C R 102 1472)  
*See Antimonious acid and antimony trioxide*
- Antimony triiodide**,  $\text{SbI}_3$   
Decomp by  $\text{H}_2\text{O}$  or  $\text{SO}_2$ ; alcohol. Sol in  $\text{HI} + \text{Aq}$  sol in boiling  $\text{CS}_2$  and in boiling benzene but separates out on cooling. Almost insol in  $\text{CHCl}_3$  (Coolidge, Proc Am Acad (2) 5 72)  
Easily sol in  $\text{AsI}_3$  (Walden, Z anorg 1902 29 574)  
Sol in warm  $\text{AsI}_3$ . Sp gr of a solution sat at  $40^\circ$  which solidifies at  $37-37.20^\circ$ . This dissolves further  $\text{AsI}_3$  whereby the mpt sinks to  $34^\circ$  and sp gr rises to 3.801. By mixing the latter solution with a solution of  $\text{AsI}_3$  in  $\text{CHCl}_3$  a liquid can be obtained with a sp gr of 3.702 at  $20^\circ$  (Retgers, Z phys Ch 189, 11 40)  
Sol in  $\text{PCl}_5$  (Pechmann, Z anorg 1906 51 110)  
Sol in  $\text{SOCl}_2$  (Walden, Z anorg 1900
- Sol in  $\text{SOCl}_2$  and  $\text{S}_2\text{Cl}_2$  (Walden, Z anorg 1900, 25 216)  
Sol in  $\text{AsCl}_3$  (Walden, Z anorg 900, 25 214)  
Sol in  $\text{SnCl}_4$  (Walden, Z anorg 1900, 25 218)  
Sol in  $\text{POCl}_3$  (Walden, Z anorg 1900, 25 212)  
Easily sol in  $\text{PCl}_5$  and  $\text{PBr}_5$  (Walden, Z anorg 1900, 25 211)  
Partly sol in, and partly decomp by alcohol or ether (M'IVOR, Chem Soc 1911 14 328)  
Insol in oil of turpentine and  $\text{CCl}_4$ . 100 pts methylene iodide dissolve 1 pt  $\text{SbI}_3$  at  $12^\circ$ , sp gr of solution = 3.453 (Retgers, Z anorg 3 343)  
Sol in  $\text{C}_6\text{H}_6$  (Retgers, Z phys Ch 1893, 11 334)  
Sol in acetone (Naumann, B 1904, 37 4328)
- Antimony pentaoxide**,  $\text{Sb}_2\text{O}_5$   
Very unstable (Pendleton, C N 1917 97)
- Antimony barium iodide**,  $\text{SbI}_3, \text{BaI}_2 + \text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves only  $\text{SbI}_3$  (Schaffer, Pogg 109 611)
- Antimony caesium iodide**,  $2\text{SbI}_3, 3\text{CsI}$   
Sl sol in  $\text{HI} + \text{Aq}$ . Exists in two distinct forms (Wells, Am J Sci 1901, (4) 455)
- Antimony potassium iodide**,  $2\text{SbI}_3, 3\text{KI} + 3\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves only  $\text{SbI}_3$  (Schaffer, Pogg 109 611)  
 $\text{SbI}_3, 2\text{KI} + 2\frac{1}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Nickles, J Pharm (3) 39 116)
- Antimony rubidium iodide**,  $2\text{SbI}_3, 3\text{RbI}$   
Decomp by  $\text{H}_2\text{O}$  (Whacker, Z anorg 5 259)
- Antimony sodium iodide**,  $2\text{SbI}_3, 3\text{NaI} + 12\text{H}_2\text{O}$   
 $\text{As}_2\text{SbI}_6, 3\text{KI}$  (Schaffer, Pogg 109 611)
- Antimony thallos iodide**,  $2\text{SbI}_3, 3\text{I}$   
Decomp by  $\text{H}_2\text{O}$  and by  $\text{HCl} + \text{Ac}$  also by alcohol (Lippman, Z anorg 1908, 8 354)
- Antimony nitride**,  $\text{SbN}$   
Decomp by heat (Franz Fischer, B 1910, 43 1471)
- Antimony trioxide**,  $\text{Sb}_2\text{O}_3$   
Very sl sol in  $\text{H}_2\text{O}$ . Sol in 89-10,000 pts  $\text{H}_2\text{O}$  at  $100^\circ$ , 55,000-61,100 p at  $15^\circ$  (Schulze, J pr (2) 27 320)  
Sol in  $\text{HCl} + \text{Aq}$ . Insol in  $\text{HNO}_3$ . Aq, but not as insol as metastannic acid. Sl in cold fuming  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Insol in dil, but sol in conc alkalis, or alkali carbonates +

Aq Sol in cold  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$   
Sol in 15 pts boiling  $\text{SbCl}_3$  (Schneider, Pogg 108 407)

Sol in  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ , and not pptd from these solutions by  $\text{H}_2\text{O}$  Easily sol in benzoic acid Insol in pyrotartaric acid Very sol in  $\text{KHC}_4\text{H}_4\text{O}_6 + \text{Aq}$  Sol in glycerine

Somewhat sol in  $\text{H}_3\text{PO}_4 + \text{Aq}$  (Kohler, Dngl 1885, 258 520)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 826)

Sol in lactic acid (Kretschmar, Ch Z 1888, 12 943)

Sol in grape sugar solution to which  $\text{Ca}(\text{OH})_2$  has been added (Vogel, B 1885, 18, R 38)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

Sol in glycerine in presence of alkalis (Kohler, Dngl 1885, 258 520)

Exists in a sol colloidal modification (Spring, B 16 1142)

Min *Valentinite*, *Senarmontite*  
+  $\text{H}_2\text{O}$  See *Antimonous acid*

#### Antimony tetroxide, $\text{Sb}_2\text{O}_4$

Insol in  $\text{H}_2\text{O}$  Slightly attacked by acids, hot conc  $\text{HCl} + \text{Aq}$  acts only slightly (Fresenius)

Min *Cervantite* Sl sol in  $\text{HCl} + \text{Aq}$

#### Antimony pentoxide, $\text{Sb}_2\text{O}_5$

Insol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HCl} + \text{Aq}$  Sl sol in conc  $\text{KOH} + \text{Aq}$

"Antimonoxyd" is sol in glycerine in presence of alkalis

100 g glycerine, to which have been added 10 g  $\text{NaOH} + \text{Aq}$  (1 1), dissolve 20.6 g at b-pt, 20 g  $\text{NaOH} + \text{Aq}$  (1 1), dissolve 36.0 g at b-pt, 40 g  $\text{NaOH} + \text{Aq}$  (1 1), dissolve 68.5 g at b-pt 80 g  $\text{NaOH} + \text{Aq}$  (1 1), dissolve 93.0 g at b-pt, 120 g  $\text{NaOH} + \text{Aq}$  (1 1), dissolve 119.2 g at b-pt (Kohler, Dngl 258 520)

See also *Antimonic acid*

#### Antimony nitrogen pentoxide, $2\text{Sb}_2\text{O}_5, \text{N}_2\text{O}_5$

Not decomp by  $\text{H}_2\text{O}$  (Thomas, C R 1895, 120 1116)

#### Antimony oxybromide

See *Antimonyl bromide*

#### Antimony oxychloride

See *Antimonyl chloride*

#### Antimony oxyfluoride

See *Antimonyl fluoride*

#### Antimony oxysulphide, $\text{Sb}_2\text{OS}_2$

Min *Antimony blende* (*kermesite*)

Insol in  $\text{H}_2\text{O}$  or dil acids, except  $\text{HCl} + \text{Aq}$  (Schneider, Pogg 110 147)

#### Antimony palladium, $\text{Sb}_2\text{Pd}$

Sl sol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 69)

#### Antimony platinum, $\text{Sb}_2\text{Pt}$

Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 67)

#### Antimony phosphide, $\text{SbP}$

Insol in benzene, ether, or  $\text{CS}_2$  (M'Ivor, B 6 1362)

#### Antimony selenide, $\text{SbSe}$

(Chrétien, C R 1906, 142 1341)

$\text{Sb}_3\text{Se}_4$  (Chrétien, l c)

$\text{Sb}_4\text{Se}_5$  (Chrétien, l c)

$\text{Sb}_2\text{Se}_3$  Sol in  $\text{KOH} + \text{Aq}$  (Hofacker, A 107 6)

$\text{Sb}_2\text{Se}_3$  (Hofacker)

#### Antimony selenide, with M selenide

See *Selenoantimonates*, M

#### Antimony trisulphide, $\text{Sb}_2\text{S}_3$ (*Kermes*)

Insol in  $\text{H}_2\text{O}$  and dil acids

1 l  $\text{H}_2\text{O}$  dissolves  $5.2 \times 10^{-6}$  mols pptd  $\text{Sb}_2\text{S}_3$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58 294)

Decomp by conc  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  Sol in conc  $\text{HCl} + \text{Aq}$  Easily sol in dil  $\text{KOH}$ ,  $\text{NaOH}$ ,  $(\text{NH}_4)_2\text{S}$ , and  $\text{K}_2\text{S} + \text{Aq}$  Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  very sl sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , insol in  $\text{KSH} + \text{Aq}$  (Fresenius)

Sol in a mixture of 50 pts  $\text{H}_2\text{O}$  and 18 pts  $\text{HCl}$  (sp gr 1.16) even when completely sat with  $\text{H}_2\text{S}$  (Lang and Carson, J Soc Chem Ind 1902, 21 1013)

Sl sol in  $\text{H}_2\text{SO}_3 + \text{Aq}$  (Guerout, C R 1872, 75 1276)

Cryst  $\text{Sb}_2\text{S}_3$  is only sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt in about 2000 pts  $\text{NH}_3$ )

Pptd amorphous  $\text{Sb}_2\text{S}_3$  is appreciably more sol (1 pt in 600 pts  $\text{NH}_3$ ) (Garot, J pr 1843, 29 83)

Sl sol in hot 2%  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  still less sol in cold (Materne, C C 1906, II 557)

Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$

Sol in 14-15 pts pure  $\text{SbCl}_3$  (Schneider, Pogg 108 407)

Slowly sol in  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$

Sol in boiling  $\text{Na}_2\text{SbS}_4 + \text{Aq}$

Sol in hot citric, tartaric and oxalic acids Sl sol in malic, benzoic, picric and pyrogallic acids Insol in formic and acetic acids Especially easily sol in citric and oxalic acids with addition of  $\text{KNO}_3$ ,  $\text{KNO}$  or  $\text{KClO}_3$  (Bolton, C N 1878, 37 86 and 99)

Sol in ethylamine sulphhydrate +  $\text{Aq}$

Min *Stibnite* Sol in cold citric acid +  $\text{Aq}$  (Bolton, C N 37 14)

*Soluble modification*  $\text{Sb}_2\text{S}_3$  may be obtained in a colloidal state in aqueous solution containing 1 pt  $\text{Sb}_2\text{S}_3$  to 200 pts  $\text{H}_2\text{O}$  This can be boiled without decomp, but  $\text{Sb}_2\text{S}_3$  is pptd by acids and salts

Table of maximum dilution of solutions of acids and salts which cause pptn of  $\text{Sb}_2\text{S}_3$

HCl	1	270
$\text{H}_2\text{SO}_4$	1	140
$\text{H}_2\text{C}_2\text{O}_4$	1	45
$\text{K}_2\text{SO}_4$	1	65
$(\text{NH}_4)_2\text{SO}_4$	1	130
$\text{MgSO}_4$	1	1720
$\text{MnSO}_4$	1	2060
NaCl	1	135
$\text{BaCl}_2$	1	2050
$\text{MgCl}_2$	1	5800
$\text{CoCl}_2$	1	2500
$\text{KNO}_3$	1	75
$\text{Fe}_2\text{Cl}_6$	1	2500
$\text{Ba}(\text{NO}_3)_2$	1	1250
$\text{K}_2\text{Al}(\text{SO}_4)_4$	1	35,000
$(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4$	1	800
$\text{K}_2\text{Cr}_2(\text{SO}_4)_4$	1	40,000
$\text{KSB}(\text{OC}_2\text{H}_4)_6$	1	18

(Schulze, J pr (2) 27 320)

### Antimony trisulphide with M.S

See Sulphantimonites, M

### Antimony pentasulphide, $\text{Sb}_2\text{S}_5$

Insol in  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{S}$  Sol in conc  $\text{HCl} + \text{Aq}$  Completely sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , traces dissolve in  $(\text{NH}_4)_2\text{CO}_3 + \text{dil sol in KOH}$ , or  $\text{NaOH} + \text{Aq}$ , or sulphides +  $\text{Aq}$  Sol in 50 pts cold  $\text{OH} + \text{Aq}$  (Geiger) in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  in cold, but sol in hot alkali carbonates +  $\text{Aq}$  (Berzelius)

Insol in  $\text{Na}_2\text{SbS}_4 + \text{Aq}$  When boiled with alcohol, ether,  $\text{CS}_2$ , oil of turpentine, etc, portion of the S is dissolved out (Berzelius)

$\text{CS}_2$  dissolves about 5% of the sulphur (Rammelsberg)

### Antimony pentasulphide with M S

See Sulphantimonates, M

### Antimony sulphochloride, $\text{SbSCl}_3$

Decomp by moist air in  $\text{H}_2\text{O}$  (Clotz, A ch (3) 30 374)

$\text{SbSCl}_3$  Easily attacked by acids insol in  $\text{CS}_2$  (Ouvrard, C R 116 1516)

$\text{SbSCl}_3$  (Ouvrard)  $2\text{SbSCl}_3, 3\text{SbSCl}_3$  Decomp by dil  $\text{HCl} + \text{Aq}$  (Schneider)

$\text{SbSCl}_3$   $7\text{SbSCl}_3$  Deliquescent decomp by  $\text{H}_2\text{O}$  (Schneider Pogg 108 407)

### Antimony sulphofluoride, $\text{SbSI}_3$

See Antimony fluosulphide

### Antimony sulphiodide, $\text{SbSI}$

Not attacked by  $\text{H}_2\text{O}$  and decomp only by conc acids Insol in  $\text{CS}_2$  (Schneider, Pogg 110 147)

$\text{SbSI}_3$  (Henry and Garot)  $\text{SbSI}_3$  Sol in dry  $\text{CS}_2$  Very easily decomp (Ouvrard, C R 117 108)

### Antimony sulphur dioxide, $\text{SbSO}_2$

Ppt (Faktor, C C 1900, I 1211)

### Antimony telluride, $\text{SbTe}$

Insol in  $\text{H}_2\text{O}$

$\text{Sb}_2\text{Te}_3$  Insol in  $\text{H}_2\text{O}$  (Oppenheim, J pr 71 277)

### Antimony bromide, $\text{SbOBr}$

Insol in  $\text{CS}_2$  (Cooke, Proc Am Acad 1 104)

Sl sol in liquid  $\text{NH}_3$  (Gore, Am Ch 1898, 20 826)

$\text{Sb}_4\text{O}_5\text{Br}_2$  (M'Ivor, C N 29 179)  $10\text{Sb}_4\text{O}_5\text{Br}_2, \text{SbBr}_3$

### Antimonyl chloride

From  $\text{SbCl}_3$   $\text{SbOCl}$  Insol in  $\text{H}_2\text{O}$  D comp by boiling with  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{A}$  or  $\text{C}_6\text{H}_6$  (Sabanajew, Zeit Ch 1871 204)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch 1898, 20 826)

Insol in acetone (Naumann B 1904, 3 4329)

$\text{Sb}_4\text{O}_5\text{Cl}_2$  *Algaroth powder* Decomp in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Cooke, Proc Am Acad 13 1), tartaric acid +  $\text{Aq}$  (Schaff A 152 135)

$\text{Sb}_5\text{O}_{11}\text{Cl}_2$  (Cooke)

$\text{Sb}_5\text{OCl}_{12}$

$\text{Sb}_{41}\text{O}_{60}\text{Cl}_{23}$

From  $\text{SbCl}_5$   $\text{SbOCl}_3$  Deliquescent I composed by  $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Daubray A 184 118)

Does not exist (Anschutz and Evans, 239 285)

$\text{Sb}_3\text{OCl}_{13}$  Deliquescent Insol in  $\text{C}_6\text{H}_6$ , easily sol in tartaric acid +  $\text{Aq}$  (Willhar, C N 24 224)

$\text{Sb}_3\text{O}_4\text{Cl}_7$  (Williams)

$\text{Sb}_2\text{OCl}_2$  Decomp by hot  $\text{H}_2\text{O}$  into  $\text{HSbOCl}_2$

### Antimonyl fluoride

From  $\text{SbF}_3$   $\text{Sb}_4\text{O}_5\text{F}_6$  Not deliquescent (Fluckiger, Pogg 87 249)

### Antimonyl caesium fluoride, $\text{SbF}_4\text{OH}$ , $\text{CsF}$

(Wells, Am J Sci 1901, (4) 11 456)

### Antimonyl sodium fluoride, $\text{SbOF}_3$ , $\text{NaF}$

$\text{H}_2\text{O}$  Deliquescent Easily sol in  $\text{H}_2\text{O}$  (Mann, A 145 239)

### Antimonyl iodide, $\text{Sb}_4\text{O}_5\text{I}_2$

Difficultly sol in solution of tartaric acid or tartarates Decomp by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  Easily sol in alkalis, or  $(\text{NH}_4)_2\text{S} + \text{Aq}$

$\text{SbOI}$  Insol in  $\text{CS}_2$  (Cooke, Proc Am Acad (2) 5 72)

### Antimonyl sulphide

See Antimony oxysulphide

**Argon, A**

100 cc H<sub>2</sub>O dissolve 4.05 cc argon at 13.9°  
 Critical t — 121.6° under 50.6 atmos Bpt —  
 186.9° Sp gr 19.9 (Rayleigh, C N 1895,  
 71 51-62, 299-302, C C 1895 467)

Coefficient of absorption in H<sub>2</sub>O at 12° =  
 0.0394, at 13.9° = 0.0405 (Ramsay, Phil  
 Trans 1895, 186 A 225)

## Absorption by H O at t°

t°	Coefficient of absorption
0°	0.0561
10	0.0438
20	0.0379
30	0.0348
40	0.0338
50	0.0343

(Antropoff, Roy Soc Proc 1910, 83 A 480)

Absorption of argon by H<sub>2</sub>O at t° and 760 mm pressure

t°	Coefficient of absorption
0°	0.05780
1	0.05612
5	0.05080
10	0.04525
15	0.04099
20	0.03790
25	0.03470
30	0.03256
35	0.03053
40	0.02865
45	0.02731
50	0.02567

(Estreicher, Z phys Ch 1899, 31 184)

1 l H<sub>2</sub>O at 35° absorbs 25.7 cc A  
 1 l blood absorbs 25.3 cc A (Regnard  
 and Schloesing, C R 1897, 124 303)

Not absorbed by members of the fatty  
 series of organic compounds, with members  
 of the aromatic series absorption was ob-  
 served varying from 8% of the volume em-  
 ployed for benzene to 1% for aniline (Berthelot,  
 C R 1899, 129 71)

**Arsenamides, As(NH<sub>2</sub>)<sub>3</sub>**

Insol in liquid NH<sub>3</sub> Decomp by H<sub>2</sub>O  
 (Hugot, C R 1904, 139 55)

**Arsenic, As**

Unaltered by pure H<sub>2</sub>O Insol in HCl +  
 Aq if air is excluded, but sl sol in presence of  
 air Not attacked by dil H<sub>2</sub>SO<sub>4</sub> + Aq Oxidized  
 by conc H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, or aqua regia  
 Not attacked at 20° by HNO<sub>3</sub>, conc or dil,  
 or containing NO<sub>2</sub>, nor by HNO<sub>3</sub> + HCl, as  
 long as they do not act on each other, but if  
 treated with the above mixture in extremely  
 dilute state, and a few drops of KNO<sub>2</sub> + Aq

are added, the As is attacked at once (Milton,  
 A ch (3) 6 101)

Sol in sea water, 0.009 mg per liter off  
 Brittany, 0.01 to 0.09 mg per liter near  
 Azores (Gautier, C R 1903, 137 232)

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch  
 J 1898, 20 827)

Insol in liquid NH<sub>3</sub> (Hugot, A ch 1900,  
 (7) 21 31)

Insol in NaOH, KOH, or NH<sub>4</sub>OH + Aq  
 Sol in S<sub>2</sub>Br<sub>2</sub> (Hannay, Chem Soc (2) 11  
 823)

Insol in alcohol and ether

Sol in certain fatty oils

Insol in methylene iodide (Retgers, Z  
 anorg 3 343)

½ ccm oleic acid dissolves 0.0032 g As in  
 6 days (Gates, J phys Ch 1911, 15 143)

Yellow modification Very unstable (Mc-  
 Leod, C N 1894, 70 139)

Fairly stable in liquid air (Thomson,  
 Chem Soc 1906, 90 (2) 745)

100 ccm CS<sub>2</sub> dissolve at

46° 20° 12° 0° -15° -60°  
 11 8 6 4 2 0-2 5 1 0 g As

Less sol in benzene and ethyl acetate  
 (Erdmann, Z anorg 1902, 32 448)

**Arsenic acid** See page 59

**Arsenic bromide AsBr<sub>3</sub>**

Decomp by

about 3 pts boil

presence of HBr

17 261)

Sol in CS

Sol in AlBr<sub>3</sub> (Isbekow, Z anorg 1913,  
 84 26)

Easily sol in PCl<sub>3</sub> and PB<sub>3</sub> (Walden,  
 Z anorg 1900, 25 211)

Sol in S<sub>2</sub>Cl<sub>2</sub> (Walden, Z anorg 1900,  
 25 217)

**Arsenic caesium bromide, 2AsBr<sub>3</sub>, 3CsBr**

Decomp by H<sub>2</sub>O, can be recryst from  
 conc HBr + Aq (Wheeler, Z anorg 4 451)

**Arsenic rubidium bromide, 2AsBr<sub>3</sub>, 3RbCl**

As the corresponding Cs comp

**Arsenic bromide ammonia, AsBr<sub>3</sub>, 3NH<sub>3</sub>**

Decomp by H<sub>2</sub>O (Besson, C R 110  
 1258)

**Arsenic bromide copper, 2AsBr<sub>3</sub>, 7Cu**

Stable toward hot H<sub>2</sub>O Decomp by KOH  
 (Hilpert and Herrman, B 1913, 46 2224)

**Arsenic bromide silver, AsBr<sub>3</sub>, 3Ag**

Scarcely decomp by cold H<sub>2</sub>O (Hilpert  
 and Herrmann)

**Arsenic chloride, AsCl<sub>3</sub>**

Miscible with little H<sub>2</sub>O, and with alcohol,  
 ether, and volatile oils Decomp by much  
 H<sub>2</sub>O, or by boiling (Gmelin)

Miscible with oil of turpentine, and with olive oil. Somewhat sol in  $\text{HCl} + \text{Aq}$ .

Easily sol in  $\text{PCl}_5$  and  $\text{PBr}_5$  (Walden, Z anorg 1900, 25 211).

Sol in liquid  $\text{CN}$  (Centnerszwer, J russ phys Ges 1901, 33 545).

Sol in  $\text{S}_2\text{Cl}_2$  (Walden, Z anorg 1900, 25 217).

#### Arsenic pentachloride, $\text{AsCl}_5$

Fumes in the air with evolution of hydrogen chloride. Readily sol in  $\text{CS}_2$ , and absolute ether cooled to  $-30^\circ$  (Baskerville, J Am Chem Soc 1902, 24 1070).

#### Arsenic caesium chloride, $2\text{AsCl}_3, 3\text{CsCl}$

Decomp by  $\text{H}_2\text{O}$ . 100 pts  $\text{HCl} + \text{Aq}$  (12 sp gr) dissolve 0.429 pt salt (Wheeler, Z anorg 4 451).

#### Arsenic iridium phosphorus chloride

See Iridium phosphorus chloride arsenic chloride.

#### Arsenic rubidium chloride, $2\text{AsCl}_3, 3\text{RbCl}$

Decomp by  $\text{H}_2\text{O}$ . 100 pts  $\text{HCl} + \text{Aq}$  (sp gr 1.2) dissolve 2.935 pts salt (Wheeler, Z anorg 4 451).

#### Arsenic chloride, $2\text{AsCl}_3, 3\text{SCl}_2$

by  $\text{H}_2\text{O}$  (Rose).  
Compound is a mixture (Nilson, 1).

#### Arsenic chloride ammonia, $2\text{AsCl}_3, 7\text{NH}_3$

Decomp by cold  $\text{H}_2\text{O}$ , with evolution of  $\text{NH}_3$ . From the solution crystallizes  $\text{As}_4\text{Cl}_6 \cdot \text{N}_2\text{H}_{10}\text{O}_8$ .

Sol in alcohol without decomp (Rose, Pogg 52 62).

Composition is  $\text{AsCl}_3, 4\text{NH}_3$  (Besson, C R 110 1258).

#### Arsenic chloride copper, $2\text{AsCl}_3, 7\text{Cu}$

Somewhat decomp by  $\text{H}_2\text{O}$ . Decomp by  $\text{KOH}$ , or hot  $\text{HCl}$  (Hilpert and Herrmann, B 1913, 46 2224).

#### Arsenic chloride silver, $2\text{AsCl}_3, 7\text{Ag}$

$\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$  and  $\text{KOH}$  split off  $\text{Ag}$  (Hilpert and Herrmann).

#### Arsenic trifluoride, $\text{AsF}_3$

Sol in  $\text{H}_2\text{O}$  with evolution of heat and decomposition (Berzelius).

Easily sol in benzene (Moissan, C R 99 574).

Miscible with alcohol and ether (Meyer, C N 30 169).

#### Arsenic pentafluoride, $\text{AsF}_5$

Sol in  $\text{H}_2\text{O}$ , alkalis +  $\text{Aq}$  and liquid  $\text{AsF}_5$  with evolution of heat. Absorbed by ether, alcohol and benzene with evolution of heat (Ruff, B 1906, 39 67).

#### Arsenic potassium fluoride, $\text{AsF}_5, \text{KF}$ $\frac{1}{2}\text{H}_2\text{O}$

$\text{AsF}_5, 2\text{KF} + \text{H}_2\text{O}$

$\text{AsF}_5, \text{AsOF}_3, 4\text{KF} + 3\text{H}_2\text{O}$  (Maignac, 145 237).

#### Arsenic fluoride ammonia, $2\text{AsF}_3, 5\text{NH}_3$

Easily decomp by  $\text{H}_2\text{O}$  (Besson, C R 110 1258).

#### Arsenic pentafluoride nitrosyl fluoride, $\text{AsF}_5, \text{NOF}$

Decomp by  $\text{H}_2\text{O}$ , fuming  $\text{HCl}$ ,  $\text{NaOH} + \text{A}$ , dry ether and dry alcohol with evolution. NO. Sol in conc  $\text{HNO}_3$ , hot conc  $\text{H}_2\text{SC}$ , boiling  $\text{NOCl}$  and  $\text{AsF}_3$ . Insol in  $\text{CCl}_4$  and  $\text{CS}_2$  (Ruff, Z anorg 1908, 58 327).

#### Arsenic trifluoride sulphur tetrachloride, $2\text{AsF}_3, \text{SCl}_4$

Very hygroscopic. Decomp by  $\text{H}_2\text{O}$  and  $\text{NaOH}$ . Decomp by thionyl chloride,  $\text{CCl}_4$ ,  $\text{CS}_2$ , abs alcohol and ether. Decomp by ligron, benzene and toluene (Ruff, B 1907, 37 4520).

#### Arsenic hydride, $\text{AsH}_3$

Sl sol in  $\text{H}_2\text{O}$  and alkali hydrates +  $\text{A}$ , with subsequent decomposition.  $\text{H}_2\text{O}$  absorbs  $\frac{1}{5}$  vol  $\text{AsH}_3$ . Decomp by conc acid. Absorbed rapidly by oil of turpentine, slightly by fixed oils, and not at all by alcohol, ether or  $\text{KOH} + \text{Aq}$  (Gmelin).

Insol in  $\text{KOH} + \text{Alcohol}$  (Meissner). Not more sol in alkaline solutions than pure  $\text{H}_2\text{O}$  (Berzelius).

$\text{AsH}_3$  Solid. Insol in  $\text{H}_2\text{O}$ , alcohol, ether, and  $\text{CS}_2$  (Wiederhold, Pogg 118 615).

Insol in  $\text{H}_2\text{O}$ , sol in methylene iodide, xylene, or in conc  $\text{KOH} + \text{Aq}$  (Retgers, Z anorg 4 403).

#### Arsenic hydride boron bromide, $\text{AsH}_3, \text{BI}_3$

Easily decomp. Decomp by  $\text{H}_2\text{O}$  and probably sol in  $\text{AsH}_3$  or  $\text{BBr}_3$ . Insol in  $\text{C}$  (Stock, B 1901, 34 949).

#### Arsenic diiodide, $\text{AsI}_3$

Decomp by  $\text{H}_2\text{O}$  or alkalis, easily sol in alcohol, ether, chloroform or carbon disulphide (Bunbriger and Phillip, B 14 261).

Not attacked by cold conc  $\text{H}_2\text{SO}_4$  or by cold fuming  $\text{HNO}_3$ . The latter oxidizes on warming. Decomp by pyridine. Sol in boiling acetic anhydride (Hewitt and Warrall, Chem Soc 1907, 91 962).

#### Arsenic triiodide, $\text{AsI}_3$

Sol in 5-2 pts boiling  $\text{H}_2\text{O}$ , and solution if boiled down deposits pure  $\text{AsI}_3$ , but if left to cool slowly, deposits crystals of  $\text{As}_2\text{O}_3$  and  $\text{AsOI}$ .

Sl sol in  $\text{HCl} + \text{Aq}$ .

Sol in  $\text{POCl}_3$ ,  $\text{PCl}_5$  and  $\text{PBr}_3$  (Walden, Z anorg 1900, 25 212).

Sol in  $\text{PCl}_3$  (Beckmann, Z anorg 1906, 51 110)

Sol in  $\text{SOCl}_2$ ,  $\text{S}_2\text{Cl}_2$  and  $\text{SO}_2\text{Cl}_2$  (Walden, Z anorg 1900, 25 216)

Sol in  $\text{SnCl}_4$  (Walden, l c)

Easily sol in  $\text{AsBr}_3$  (Walden, Z anorg 1902, 29 374)

Sol in  $\text{AsCl}_3$  (Walden, Z anorg 1900, 25 214)

Sol in alcohol without decomp

Sol in ether, benzene, chloroform, and  $\text{CS}_2$   
100 pts methylene iodide dissolve 17 4 pts  $\text{AsI}_3$  at  $12^\circ$  (Retgers, Z anorg 3 343)

#### Arsenic pentaoxide, $\text{As}_2\text{O}_5$

More or less sol in  $\text{H}_2\text{O}$ , alcohol,  $\text{CHCl}_3$ , ether and  $\text{CS}_2$  (Sloan, C N 1882, 46 194)

#### Arsenic caesium iodide, $2\text{AsI}_3$ , $3\text{CsI}$

Decomp by  $\text{H}_2\text{O}$ , sol in conc  $\text{HI} + \text{Aq}$  (Wheeler, Z anorg 4 451)

#### Arsenic rubidium iodide, $2\text{AsI}_3$ , $3\text{RbI}$

As the corresponding Cs comp

#### Arsenic sulphur iodide

See Arsenic sulphohydride

#### Arsenic trioxide ammonia, $2\text{AsI}_3$ , $9\text{NH}_3$

Insol in benzene (Bamberger and Phillip, B 14 2643)

$\text{AsI}_3$ ,  $4\text{NH}_3$  (Besson, C R 110 1258)

#### Arsenic nitride, $\text{AsN}$

Easily decomp into As and N (Hugot, C R 1904, 139 56)

Decomp by heat (Franz Fischer, B 1910, 43 1471)

#### Arsenic suboxide, $\text{As}_2\text{O}$ (?)

Insol in  $\text{H}_2\text{O}$ , decomp by dil acids or  $\text{NH}_4\text{OH} + \text{Aq}$

Does not exist (Geuther, A 240 208)

#### Arsenic trioxide, $\text{As}_2\text{O}_3$

"White arsenic" exists in two modifications  $\alpha\text{As}_2\text{O}_3$ —crystalline, octahedral, opaque, porcelainous, etc.,  $\beta\text{As}_2\text{O}_3$ —amorphous, vitreous, "arsenic glass"

The difference in the solubility of  $\text{As}_2\text{O}_3$  are very small, the reasons being that (1) the solubility of the two modifications is different, (2) that the length of time necessary to effect solution differs in the two modifications, and (3) that there is a tendency of the amorphous  $\text{As}_2\text{O}_3$  to go over into the crystalline state during the process of solution  $\alpha\text{As}_2\text{O}_3$  is also not easily moistened, especially when in a pulverulent condition, which is not the case with the  $\beta$  modification (Winkler, J pr (2) 31 247)

The older data are very unreliable, but possess a certain historical interest

1 pt  $\text{As}_2\text{O}_3$  is sol in 10.5 pts (Wenzel) 11.34 pts (Fischer) 11.86 pts in  $\frac{1}{2}$  hour (Klaproth) 12.2 pts (Bucholz) 15.0 pts (Brandt Bergman) 16.0 pts (Vogel) 24 pts (Lametherie) 40 pts (Porner) 64 pts

(Baumé) 80 pts (Navier) 200 pts (Aschof and Nasse 1812) 640 pts (Hagen 1796) boiling  $\text{H}_2\text{O}$

1 pt  $\text{As}_2\text{O}_3$  is sol in 7.72 pts  $\text{H}_2\text{O}$  if  $\alpha$  or 9.33 pts if  $\beta$  (Gumbort) in 24 pts  $\text{H}_2\text{O}$  if  $\alpha$  or 21 pts if  $\beta$  (Taylor)

Sol in 53.3 pts  $\text{H}_2\text{O}$  at  $18.75^\circ$  (Abl)

Sol in 30 pts  $\text{H}_2\text{O}$  (Nussebrook)

After the solution in  $\text{H}_2\text{O}$  at  $100^\circ$  has been left standing at ordinary temperatures—

1 pt  $\text{As}_2\text{O}_3$  remains dissolved in 16 pts  $\text{H}_2\text{O}$  at  $16^\circ$  and 20 pts  $\text{H}_2\text{O}$  at  $7^\circ$  (Bucholz) in 33 pts  $\text{H}_2\text{O}$  at  $7^\circ$  (Klaproth) in 38 45 pts  $\text{H}_2\text{O}$  after 3 days 55 pts  $\text{H}_2\text{O}$  after 8 days 64 50 pts  $\text{H}_2\text{O}$  after 2 3 weeks at  $10^\circ$  (Fischer) in 33 52 pts if  $\alpha\text{As}_2\text{O}_3$  was used 55 06 pts if  $\beta\text{As}_2\text{O}_3$  was used (Gumbort) in 38 pts if  $\alpha\text{As}_2\text{O}_3$  after 6 months 53 71 pts if  $\beta\text{As}_2\text{O}_3$  after 48 hours (Taylor)

When an excess of pulverized  $\text{As}_2\text{O}_3$  is left to digest for several days with cold  $\text{H}_2\text{O}$ —

1 pt dissolves in 50 pts (Bucholz) in 66 pts (Fischer) in 80 pts at  $15^\circ$  (Bergman) in 80 pts if  $\alpha$ , and 103 pts if  $\beta$  (Gumbort) 96 pts at  $10^\circ$  (Speiman) 96 pts at  $35.5^\circ$  (Hahemann) 320 pts  $\text{H}_2\text{O}$  at  $20^\circ$  (Aschof and Nasse 1812)

$\text{H}_2\text{O}$  at  $15.6^\circ$  or below dissolves less than  $\frac{1}{4}\%$   $\text{As}_2\text{O}_3$  (Dalton)

To dissolve 1 pt  $\text{As}_2\text{O}_3$  in 12 pts  $\text{H}_2\text{O}$  it is necessary to boil an excess of  $\text{As}_2\text{O}_3$  with  $\text{H}_2\text{O}$  if 1 pt  $\text{As}_2\text{O}_3$  is boiled with 12 pts  $\text{H}_2\text{O}$  considerable remains undissolved and even with 1 pt  $\text{As}_2\text{O}_3$  to 50–60 pts  $\text{H}_2\text{O}$  long continued boiling is necessary to effect solution If a clear solution saturated by long boiling with an excess of  $\text{As}_2\text{O}_3$  is poured off and evaporated continuously to  $\frac{1}{2}$  its original bulk no  $\text{As}_2\text{O}_3$  separates out and the solution contains 1 pt  $\text{As}_2\text{O}_3$  to 6 pts  $\text{H}_2\text{O}$  (Fischer)

100 pts aqueous solution of  $\beta\text{As}_2\text{O}_3$  sat at  $15^\circ$  contain 0.96 pt  $\text{As}_2\text{O}_3$  and 9.68 pts when sat at  $100^\circ$  (Gumbort)

If 1 pt pulverized  $\text{As}_2\text{O}_3$  be digested 10 days at  $19$ – $25^\circ$  in 5–10 pts  $\text{H}_2\text{O}$  the solution contains 1 pt  $\text{As}_2\text{O}_3$  to 50 pts  $\text{H}_2\text{O}$  A solution of same strength is obtained in 25 days by digesting 1 pt  $\text{As}_2\text{O}_3$  in 40 pts  $\text{H}_2\text{O}$  If 1 pt  $\text{As}_2\text{O}_3$  be immersed in 80 pts  $\text{H}_2\text{O}$  the resulting solution contains 1 pt  $\text{As}_2\text{O}_3$  to 90 pts  $\text{H}_2\text{O}$

160 pts  $\text{H}_2\text{O}$  1 pt  $\text{As}_2\text{O}_3$  to 180 pts  $\text{H}_2\text{O}$  180 pts  $\text{H}_2\text{O}$  1 pt  $\text{As}_2\text{O}_3$  to 280 pts  $\text{H}_2\text{O}$  if  $\text{H}_2\text{O}$  1 pt  $\text{As}_2\text{O}_3$  to 1200 pts  $\text{H}_2\text{O}$  and ev pt  $\text{As}_2\text{O}_3$  is digested at ordinary temperature several days with 16 000–100 000 pts  $\text{H}_2\text{O}$  a portion remains undissolved Pulverized  $\alpha\text{As}_2\text{O}_3$  was set aside with  $\text{H}_2\text{O}$  in closed bottles for 18 years when 1 pt  $\text{As}_2\text{O}_3$  was present in 1000 pts  $\text{H}_2\text{O}$  a perfect solution was obtained when 1 pt  $\text{As}_2\text{O}_3$  in 100 pts  $\text{H}_2\text{O}$   $\alpha\text{As}_2\text{O}_3$  was undissolved when 1 pt  $\text{As}_2\text{O}_3$  in 55 pts  $\text{H}_2\text{O}$  0.35%  $\alpha\text{As}_2\text{O}_3$  was undissolved so that the solution contained 1 pt  $\text{As}_2\text{O}_3$  to 54 pts  $\text{H}_2\text{O}$  (Gmelin)

Porcelainous modification ( $\alpha\text{As}_2\text{O}_3$ ) is much more sol in  $\text{H}_2\text{O}$  than the vitreous ( $\beta\text{As}_2\text{O}_3$ ) 100 pts  $\text{H}_2\text{O}$  at ordinary temperature dissolve 0.96 pt  $\beta\text{As}_2\text{O}_3$  and 1.25 pts  $\alpha\text{As}_2\text{O}_3$  100 pts boiling  $\text{H}_2\text{O}$  dissolve 9.68 pts  $\beta\text{As}_2\text{O}_3$  and 11.47 pts  $\alpha\text{As}_2\text{O}_3$  and when the temperature of this solution has fallen to  $15^\circ$  the solution from  $\beta\text{As}_2\text{O}_3$  retains 1.78 pts and that from  $\alpha\text{As}_2\text{O}_3$  retains 2.9 pts (Berzelius [citing Gumbort])

$\beta\text{As}_2\text{O}_3$  dissolves more quickly and abundantly than  $\alpha\text{As}_2\text{O}_3$  The same amount  $\text{H}_2\text{O}$  which will take up 36–38 pts  $\beta\text{As}_2\text{O}_3$  at  $12$ – $13^\circ$  will dissolve only 12–14 pts  $\alpha\text{As}_2\text{O}_3$ , or 100 pts  $\text{H}_2\text{O}$  dissolve 4 pts  $\beta\text{As}_2\text{O}_3$  and 12–13 pts  $\alpha\text{As}_2\text{O}_3$  By long boiling with  $\text{H}_2\text{O}$ ,  $\alpha\text{As}_2\text{O}_3$  is converted into  $\beta\text{As}_2\text{O}_3$ , and thus requires the solubility of the latter, so that 100 pts boiling  $\text{H}_2\text{O}$  can take up 11 pts  $\alpha\text{As}_2\text{O}_3$  But at low temperature  $\beta\text{As}_2\text{O}_3$  is converted into  $\alpha\text{As}_2\text{O}_3$  when in contact with  $\text{H}_2\text{O}$ , so that the solution becomes weaker after a while, and retains only the proportion of  $\text{As}_2\text{O}_3$  corresponding to the solubility of  $\alpha\text{As}_2\text{O}_3$  Communion which hastens the rate of solubility of  $\alpha\text{As}_2\text{O}_3$ , without increasing the amount dissolved diminishes the solubility of  $\beta\text{As}_2\text{O}_3$ , as this is converted into  $\alpha\text{As}_2\text{O}_3$

by the friction or contact with  $\text{H}_2\text{O}$   $\beta\text{As}_2\text{O}_3$ , which has been rendered opaque by  $\text{NH}_4\text{OH}$ , and that which has been crystallized from an aqueous solution, are equally sol in  $\text{H}_2\text{O}$  (Bussy, C R **24** 774, A **64** 286)

100 pts  $\text{H}_2\text{O}$  dissolve 1 707 pts  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{2}$  years, 100 pts boiling  $\text{H}_2\text{O}$  dissolve 11 46 pts  $\beta\text{As}_2\text{O}_3$  in 3 hours, and 11 86 pts in 12 hours, 10 14 pts  $\alpha\text{As}_2\text{O}_3$  in 3 hours, and 10 18 pts in 12 hours (Rose, Ann Phys (1) **36** 494)

A cold sat solution which stood over excess of  $\text{As}_2\text{O}_3$  for 10 months at  $10-20^\circ$  contains 1 2%  $\text{As}_2\text{O}_3$ , hot sat solution a few days after saturation contains 2 25-2 50%  $\text{As}_2\text{O}_3$ . If trace of  $\text{HCl}$  is present, the solution contains 3 8%  $\text{As}_2\text{O}_3$ . Hot sat solution of porcelain mod of  $\text{As}_2\text{O}_3$  contains 4 days after saturation 2 4%  $\text{As}_2\text{O}_3$  at  $24^\circ$ , after 82 days at  $14^\circ$ , 1 5%, after 4 months at  $12^\circ$ , 1 3%  $\text{As}_2\text{O}_3$  (Bacaloglo, J pr **83** 111)

According to later experiments, 1 pt  $\alpha\text{As}_2\text{O}_3$  dissolves in 355 pts  $\text{H}_2\text{O}$  in 1 day at  $15^\circ$ , while 1 pt  $\beta\text{As}_2\text{O}_3$  dissolves in 108 pts  $\text{H}_2\text{O}$  under the same conditions. 1 pt  $\alpha\text{As}_2\text{O}_3$  dissolves in 46 pts  $\text{H}_2\text{O}$ , if solution is prepared at  $100^\circ$ , and allowed to stand 24 hours at  $15^\circ$ , while 1 pt  $\beta\text{As}_2\text{O}_3$  dissolves in 30 pts  $\text{H}_2\text{O}$  under the same conditions (Buchner, N Rep Pharm **22** 265)

100 pts  $\text{H}_2\text{O}$  dissolve pts  $\alpha\text{As}_2\text{O}_3$  and  $\beta\text{As}_2\text{O}_3$  at ordinary temperature

Time	$\alpha\text{As}_2\text{O}_3$	$\beta\text{As}_2\text{O}_3$
1 hour	0 023	1 589
3 hours	0 088	2 356
6 hours	0 353	3 666
12 hours	0 364	3 361
24 hours	0 956	5 306
2 days	1 627	2 629
4 days	1 814	2 429
1 week	1 673	1 763
3 weeks	1 776	1 713
$2\frac{1}{4}$ years	1 712	1 707

In the solution of  $\beta\text{As}_2\text{O}_3$ , octahedral crystals were deposited on the sides of the vessel after 12 hours, which continued to increase. There was no such deposit in the case of  $\alpha\text{As}_2\text{O}_3$ .

From the maxima in the above table, 100 pts  $\text{H}_2\text{O}$  can dissolve 3 7 pts  $\beta\text{As}_2\text{O}_3$  and 1 7 pts  $\alpha\text{As}_2\text{O}_3$  at ordinary temperature

100 pts boiling  $\text{H}_2\text{O}$  dissolve 11 46 pts  $\beta\text{As}_2\text{O}_3$  and 10 140 pts  $\alpha\text{As}_2\text{O}_3$  in 3 hours, 11 86 pts  $\beta\text{As}_2\text{O}_3$  and 10 176 pts  $\alpha\text{As}_2\text{O}_3$  in 12 hours (Cl Winkler, J pr (2) **31** 247)

100 pts  $\text{H}_2\text{O}$  dissolve 1 75 pts of a third modification (hexagonal crystalline) at ordinary temperature, and 2 75 pts at  $100^\circ$  (Claudet, Chem Soc (2) **6** 179)

$\beta\text{As}_2\text{O}_3$  dissolves more rapidly in  $\text{HCl} + \text{Aq}$  than  $\alpha\text{As}_2\text{O}_3$  (Schultz-Sellac, B **4** 109)

While 100 ccm  $\text{H}_2\text{O}$  dissolve 0 8507  $\beta\text{As}_2\text{O}_3$  at  $18 5^\circ$ , 100 ccm  $\text{H}_2\text{O}$  contain 1 3195 g  $\text{HCl}$  dissolve 1 1513 g  $\beta\text{As}_2\text{O}_3$ , containing 6 09 g  $\text{HCl}$ , 1 2724 g  $\beta\text{As}_2\text{O}_3$  (Chodounsky, Listy Chemické, **13** 114)

100 ccm  $\text{H}_2\text{O}$  dissolve 1 495 g  $\text{As}_2\text{O}_3$  at  $15^\circ$  (Wood, Chem Soc 1908, **93** 412)

Solubility of crystalline  $\text{As}_2\text{O}_3$  in  $\text{H}_2\text{O}$

1 l of the sat solution contains at  
 $2^\circ$      $15^\circ$      $25^\circ$      $39 8^\circ$     bpt  
 12 006 16 566 20 384 29 302 60 + g  $\text{As}_2\text{O}_3$  (Bruner, Z anorg 1903, **37** 456)

Much more easily sol in many acids than in  $\text{H}_2\text{O}$ . Easily sol in fuming  $\text{H}_2\text{SO}_4$  (Schultz-Sellac)

100 pts dilute  $\text{H}_2\text{SO}_4 + \text{Aq}$  of various strengths dissolve at  $t^\circ$

$t^\circ$	Pts $\beta\text{As}_2\text{O}_3$	$t^\circ$	Pts $\beta\text{As}_2\text{O}_3$	Ratios amts dissolved $80^\circ$ is
$80^\circ$	1 0195	$18 5^\circ$	0 5422	1 88
	1 3664		0 7203	1 89
	1 1933		0 6522	1 84

(Chodounsky, l c)

Decomp by  $\text{HNO}_3$  or aqua regia into  $\text{As}$  Sol in  $\text{H}_3\text{PO}_4 + \text{Aq}$  (Bergman)

More sol in  $\text{HCl} + \text{Aq}$  than in  $\text{H}_2\text{SO}_4 + \text{HNO}_3 + \text{Aq}$ , and still less in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$

Solubility in  $\text{HCl} + \text{Aq}$

Conc of $\text{HCl} + \text{Aq}$	Grams of $\text{As}_2\text{O}_3$ per 100 of solution
0 46N	1 52
0 98N	1 41
2 03N	1 17
3 13N	1 11
3 81N	1 15
5 32N	2 20
6 50N	5 11
7 85N	12 28
9 17N	18 16

As the concentration of the acid increases, the solubility of the oxide decreases, a minimum being reached when the concentration of the solvent is about 3 2N. Beyond this point, an increase in the concentration of the solvent leads to a corresponding increase in the solubility (Wood, Chem Soc 1908, **93** 415)

Insol in liquid  $\text{CO}$  (Buchner, Z ph **5** Ch 1906, **54** 674)

Easily sol in cold  $\text{HClO}_4 + \text{Aq}$  (Bergman)

When pulverized, it dissolves in hot  $\text{HCl} + \text{Aq}$ , but separates out on cooling

Easily sol in hot benzoic acid +  $\text{Aq}$

Sol in tartaric acid +  $\text{Aq}$

Easily sol in alkali hydrates, or carbonates +  $\text{Aq}$

Easily sol in  $\text{NH}_4$  arsenite + Aq at  $70-80^\circ$ , crystallizing out on cooling (Berzelius)

Sol in hot  $\text{K}_2\text{C}_2\text{O}_4$  + Aq

Sol in  $\text{AsCl}_3$  (Penney and Wallace)

More sol in  $\text{Na}_2\text{B}_4\text{O}_7$  + Aq than in  $\text{H}_2\text{O}$

Very sl sol in absolute alcohol (Vogel)

Sol in 80 pts highly rectified spirit (Wenzel)

When 1 pt powdered  $\text{As}_2\text{O}_3$  is digested 30 days in 10-40 pts alcohol a solution is formed containing 1 pt  $\text{As}_2\text{O}_3$  to 60 pts alcohol when 1 pt  $\text{As}_2\text{O}_3$  is digested with 60-150 pts alcohol a solution is formed containing 1 pt  $\text{As}_2\text{O}_3$  to 124-140 pts alcohol (Fischer)

Sol in 70-80 pts alcohol (Thompson.)

Alcohol dissolves 0.446 pt  $\beta\text{As}_2\text{O}_3$  (Rose, A. Phys. (1) 52 455)

100 pts alcohol dissolve pts,  $\text{As}_2\text{O}_3$

Vol % of alcohol	$\alpha\text{As}_2\text{O}_3$ at $15^\circ$	$\alpha\text{As}_2\text{O}_3$ at b pt of alcohol	$\beta\text{As}_2\text{O}_3$ at $15^\circ$
56	1 680	4 895	0 504
79	1 430	4 551	0 540
84			0 565
86	0 715	3 197	
88			0 717
100	0 025	3 402	1 060

(Girardin, J. Pharm. (3) 46 269)

100 pts absolute alcohol dissolve 0.446 pt  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{4}$  years (Winkler, J. pr. (2) 31 347)

Nearly insol in ether

100 pts ether dissolve 0.454 pt  $\beta\text{As}_2\text{O}_3$  (Winkler)

Ether extracts 1 mg  $\text{As}_2\text{O}_3$  from sat  $\text{As}_2\text{O}_3$  + Aq for every 15 cc ether used, less is extracted when the solution is acidified with  $\text{HCl}$ , and almost none if acidified with  $\text{H}_2\text{SO}_4$  or  $\text{H}_2\text{C}_2\text{O}_4$  (Selmi, B. 13 206)

$\alpha\text{As}_2\text{O}_3$  is sol in 50 pts boiling nitrobenzol  $\beta\text{As}_2\text{O}_3$  is insol in boiling nitrobenzol (Auerbach, Z. 1903, 37 353)

$\beta\text{As}_2\text{O}_3$  is insol in oil of turpentine, but  $\alpha\text{As}_2\text{O}_3$  is insol therein  $\alpha\text{As}_2\text{O}_3$  is very sl sol in benzene or petroleum ether, but more sol in methyl alcohol, (thyl alcohol, ether, or chloroform (Selmi))

100 pts  $\text{C}_2\text{H}_5$  dissolve 0.001 pt  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{4}$  years (Winkler)

Sl sol in the fatty oils

1000 pts castor-oil dissolve 1.33 pts  $\text{As}_2\text{O}_3$  at ordinary temperature, and 9 pts at boiling temperature 1000 pts other oils dissolve 0.6-0.8 pt  $\text{As}_2\text{O}_3$  in the cold, and about 1.7 pts on boiling (Berzelius)

Insol in chinoline or milme (Hoffmann, A. ch. (3) 9 113, 169)

Modestly sol in chinolin (Beckmann and Gubel, Z. anorg. 1906, 51 236)

Insol in acetone (Naumann, B. 1904, 37 4329), (Edimann, C. C. 1899, II 1014)

Sol in amyl alcohol and is divided between it and  $\text{H}_2\text{O}$  in the constant ratio of 1 : 5.47 at  $25^\circ$  (Auerbach, Z. anorg. 1903, 37 376)

Min. *Arsenolite*

**Arsenic trioxide pentoxide**,  $3\text{As}_2\text{O}_3$ ,  $2\text{As}_2\text{O}_5$  +  $3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Joly, C. R. 100 1221)  $2\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Joly)

$\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$  (Joly)

**Arsenic tetroxide**,  $\text{As}_2\text{O}_4$

Sl sol in  $\text{H}_2\text{O}$  from which it is partially pptd by alcohol. More easily sol in alkali carbonates or  $\text{HCl}$  + Aq. Most easily sol in  $\text{NaOH}$  or  $\text{KOH}$  + Aq (Heibst, Dissert 1894)

**Arsenic pentoxide**,  $\text{As}_2\text{O}_5$

Deliquescent in moist air, slowly sol in  $\text{H}_2\text{O}$ , forming  $\text{H}_3\text{AsO}_4$ , which see. Easily sol in alcohol, much more sol in alcohol than  $\text{As}_2\text{O}_3$ . Very sl sol in the fatty oils, 100 pts of oil dissolving 0.2 pt  $\text{As}_2\text{O}_5$  in the cold, and 1 pt with partial decomp on boiling (Berzelius)

1000 pts boiling poppy-oil dissolve 27 pts  $\text{As}_2\text{O}_5$ , 1000 pts boiling castor-oil dissolve 34 pts  $\text{As}_2\text{O}_5$  (Hempel and Grundner)

+  $4\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts $\text{H}_2\text{AsO}_4$ in 100 pts solution	$t^\circ$	Pts $\text{H}_2\text{AsO}_4$ in 100 pts solution
$-55^\circ$	69 9	$-5^\circ$	80 0
$-50$	70 9	0	81 0

(Menzies and Potter, J. Am. Chem. Soc. 1912, 34 1464)

$\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$  and  $3\text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$  are the only hydrates that can be isolated (Menzies and Potter)

See also Arsenic Acid

**Arsenic trioxide, with alkali haloid**

See Arsenite, alkali haloid

**Arsenic sulphur trioxide,  $\text{As}_2\text{O}_3, \text{SO}_3$**

Deliquescent, decomp by  $\text{H}_2\text{O}$  (Adie, Chem Soc 55 157)

$\text{As}_2\text{O}_3, 2\text{SO}_3$  As above (Adie)  
 $\text{As}_2\text{O}_3, 3\text{SO}_3$  (Weber, B 19 3186)  
 $\text{As}_2\text{O}_3, 4\text{SO}_3$  As above (Adie)  
 $\text{As}_2\text{O}_3, 6\text{SO}_3$  (Weber)  
 $\text{As}_2\text{O}_3, 8\text{SO}_3$  As above (Adie)

**Arsenic oxychloride, etc**

See Arsenyl chloride, etc

**Arsenic phosphide,  $\text{AsP}$**

Decomp by  $\text{H}_2\text{O}$  Not attacked by cold  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ , and only sl sol therein on warming Easily decomp by  $\text{HNO}_3, \text{KOH}, \text{NaOH}, \text{BaO}_2\text{H}_2 + \text{Aq}$  Insol in alcohol, ether, chloroform, sl sol in  $\text{CS}_2$

$\text{PAs}_2\text{O}_2$  Product of action of  $\text{H}_2\text{O}$  on above compound, which it resembles (Janowsky, B 6 216)

**Arsenic monoselenide,  $\text{As}_2\text{Se}$**

Insol in most organic and inorganic solvents Sol very slowly in conc  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$  Sol in boiling alkali hydroxides +  $\text{Aq}$  (Szarvasy, B 1897, 30 1245)

**Arsenic triselenide,  $\text{As}_2\text{S}_3$**

Partially sol in  $\text{KOH} + \text{Aq}$  if boiled with it for a long time (Uelsmann, A 116 123)

**Arsenic pentaselenide,  $\text{As}_2\text{Se}_5$**

Insol in most solvents, as conc  $\text{HCl}$  Sol in alkali hydrates and sulpho-hydrates +  $\text{Aq}$  (Szarvasy, B 1895, 28 2655-2656)

Insol in  $\text{H}_2\text{O}$ , in dil acids and in conc  $\text{HCl}$  Sl sol in warm  $\text{HNO}_3 + \text{Aq}$  Oxidized by cold fuming  $\text{HNO}_3$  Sol in alkalis and in hot alkali carbonates +  $\text{Aq}$  Insol in alcohol, ether,  $\text{CS}_2$ , etc (Claver Z inorg 1895, 10 129)

**Arsenic selenosulphide**

See Arsenic sulphoselenide

**Arsenic sulphide,  $\text{As}_2\text{S}_3$**

Ppt Insol in  $\text{NH}_4\text{OH}$  or in colorless  $(\text{NH}_4)_2\text{S} + \text{Aq}$  Sol in yellow  $\text{NH}_4\text{SH} + \text{Aq}$  (Scott, Chem Soc 1900, 77 652)

**Arsenic disulphide,  $\text{As}_2\text{S}_2$**

Min *Realgar* Difficultly sol in alkali sulphides +  $\text{Aq}$  Partly dissolved by  $\text{KOH} + \text{Aq}$  with decomposition Sol at  $150^\circ$  in a sealed tube in  $\text{NaHCO}_3 + \text{Aq}$ , and crystallizes out on cooling (Scharmont A ch (3) 32 158)

**Arsenic trisulphide,  $\text{As}_2\text{S}_3$**

Insol in  $\text{H}_2\text{O}$  when prepared in the dry wa but when prepared moist is very liable to into the colloidal modification mention below Insol in  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{S}, \text{HNO}_3, \text{HCl}, \text{H}_2\text{C}_2\text{O}_4, \text{HC}_2\text{H}_3\text{O}_3, \text{H}_2\text{C}_4\text{H}_4(\text{CO}_2), \text{NH}_4\text{Cl}, \text{KNO}_3, (\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4$  (Bontigny)

Insol in  $\text{H}_2\text{O}$  Traces are dissolved in  $\text{H}_2\text{S} + \text{Aq}$  Sl decomp by boiling with  $\text{H}_2\text{S}$  or long contact with cold  $\text{H}_2\text{O}$  (Fresenius 1 l  $\text{H}_2\text{O}$  dissolves  $2.1 \times 10^{-6}$  mols ppt  $\text{As}_2\text{S}_3$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 8 294)

Insol in dil acids Insol in cold, at scarcely attacked by hot conc  $\text{HCl} + \text{Aq}$

Easily decomp by  $\text{HNO}_3$  or aqua regia Easily sol in cold  $\text{KOH}, \text{NaOH},$  or  $\text{NH}_4\text{O} + \text{Aq}$ , also in alkali carbonates, or sulphates

$\text{Aq}$

Sol in hot  $\text{KHSO}_3 + \text{Aq}$

Sol in citric acid, and alkali citrates +  $\text{A}$  (Spiller)

Slowly sol in cold 2%  $\text{Na}_2\text{B}_4\text{O}_7 + \text{A}$  Easily sol on heating (Materne, C C 190 II 557)

Insol in  $\text{CS}_2$

Min *Orpiment*

$\text{As}_2\text{S}_3$  may also be obtained in a colloid form, sol in  $\text{H}_2\text{O}$  Sat solution contains 34.46%  $\text{As}_2\text{S}_3$ , it is decomp by standing, but may be boiled without decomposition position, most acids and many salts ppt  $\text{As}_2\text{S}_3$  (Schulze, J pr (2) 25 431)

The following solutions cause pptn  $\text{As}_2\text{S}_3$  in a solution of the colloidal modification, when added in the given state of dilution —

$\text{HCl} + \text{Aq}$	1	555
$\text{HNO}_3 + \text{Aq}$	1	276

Cold conc solutions of boric, arsenious, tartaric, benzoic, and salicylic acids, also cane sugar, or chloral hydrate cause no pptn. Absolute alcohol and glycerine may also be mixed with the solutions without causing pptn (Schulze, J pr (2) 25 442)

+6H<sub>2</sub>O, decomp completely into As<sub>2</sub>S<sub>3</sub> under a pressure of 6000 to 7000 atmos (Spring, Z anorg 1895, 10 186)

#### Arsenic pentasulphide, As<sub>2</sub>S<sub>5</sub>

Insol in H<sub>2</sub>O. Sol in NH<sub>4</sub>OH, KOH, NaOH+Aq, and solutions of alkali sulphides and carbonates. Sol in BaO H<sub>2</sub> and CaO<sub>2</sub>H<sub>2</sub>+Aq

Sol in citric acid, and alkali citrates+Aq (Spiller)

Alcohol dissolves out S on boiling (Berzelius)

Sol in alkali arsenates+Aq (Nilson, J pr (2) 14 155)

+H<sub>2</sub>O (Nilson, l c)

#### Arsenic trisulphide, with M S

See Sulpharsenites, M

#### Arsenic pentasulphide, with M S

See Sulpharsenates, M

#### Arsenic sulphobromide, AsS Br<sub>3</sub> = AsSBr + SBr<sub>3</sub>

Decomp by H<sub>2</sub>O (Hummel, Chem Soc 33 254)

#### Arsenic sulphochloride, As S Cl

Slowly decomp by boiling H<sub>2</sub>O. Sol in hot AsCl<sub>3</sub> without decomp (Ouvrard, C R 116 1516)

AsS Cl. Decomp by H<sub>2</sub>O. Sol in NH<sub>4</sub>OH, and alkali carbonates+Aq (Ouvrard)

AsS Cl. Slowly decomp by boiling H<sub>2</sub>O. Sol in alkali carbonates and in NH<sub>4</sub>OH+Aq (Ouvrard, C R 1893, 116 1517)

#### Arsenic sulphoiodide, AsSI

Insol in alcohol, chloroform or carbon disulphide (Schneider, J pr (2) 23 456)

Formula is probably As<sub>2</sub>S<sub>3</sub>, AsI<sub>3</sub>

Slowly attacked by HCl+Aq, somewhat more easily by HNO<sub>3</sub>+Aq. Easily sol in KOH, or NH<sub>4</sub>OH+Aq (Schneider, J pr (2) 34 505)

2AsI<sub>3</sub>, SI<sub>6</sub>. Decomp on air (Schneider, J pr (2) 36 509)

As<sub>2</sub>S<sub>5</sub>I<sub>3</sub>. Less sol in CS<sub>2</sub> than AsI<sub>3</sub> (Ouvrard, C R 117 107)

As-SI<sub>4</sub> (Ouvrard)

See also Arsenyl sulphoiodide

#### Arsenic sulphoselenide, As<sub>2</sub>SeS<sub>2</sub>

Easily sol in cold NH<sub>4</sub>SH+Aq. Nearly completely sol in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq (v Gerichten, B 7 29)

As<sub>2</sub>SSe<sub>2</sub>. More difficultly sol than the preceding comp in NH<sub>4</sub>SH+Aq (v Gerichten)

As<sub>2</sub>Se<sub>2</sub>S<sub>3</sub>. Sp gr = 6.402 at ca 750°

Insol in most solvents. Easily sol in alkali hydroxides and sulphides+Aq (Szarvasky, B 1895, 28 2661)

As Se<sub>2</sub>S<sub>2</sub>. Sp gr = 11.35 at 550-600°

Insol in most solvents. Easily sol in alkali hydroxides and sulphides+Aq (Szarvasky, B 1895, 28 2659)

#### Arsenic telluride, As<sub>2</sub>Te<sub>2</sub>

Sol in HNO<sub>3</sub> and HNO<sub>3</sub>+HCl+Aq (Oppenheim, J pr 71 266)

As<sub>2</sub>Te<sub>2</sub>. As above (Oppenheim)

#### Arsenic acid, anhydrous, As<sub>2</sub>O<sub>5</sub>

See Arsenic pentoxide

#### Metaarsenic acid, HAsO<sub>3</sub>

Slowly sol in cold, quite easily sol in hot H<sub>2</sub>O, with considerable evolution of I and conversion into H<sub>3</sub>AsO<sub>4</sub> (Kopp, A (3) 48 196)

#### Orthoarsenic acid, H<sub>3</sub>AsO<sub>4</sub>

Sol in H<sub>2</sub>O, with absorption of heat

1 pt As<sub>2</sub>O<sub>5</sub> dissolves in 0.405 pt H<sub>2</sub>O at 12.5°, or 100 pts H<sub>2</sub>O dissolve 244.81 pts As<sub>2</sub>O<sub>5</sub> at 12.5° (Vogel)

Sol in 0.5 pt H<sub>2</sub>O (Lhéard)

Sol in 6 pts cold H<sub>2</sub>O, and more quickly in 2 pts hot H<sub>2</sub>O (Bucholz)

100 pts H<sub>2</sub>O at 15.56° dissolve 150 pts As<sub>2</sub>O<sub>5</sub> (Ure's Dict)

H<sub>3</sub>AsO<sub>4</sub>+Aq sat at 15° contains 15% As<sub>2</sub>O<sub>5</sub>

Sp gr of H<sub>3</sub>AsO<sub>4</sub>+Aq at 15° a = sp gr of 1% is As<sub>2</sub>O<sub>5</sub> b = sp gr if % is H<sub>3</sub>AsO<sub>4</sub>

c	a	b	%	a	b

(Kopp, calculated by Gerlach, *Z* and 27  
316.)

See also Arsenic pentoxide

### Euroarsenic acid, $\text{H}_4\text{AsO}_7$

Very deliquescent; easily sol in  $\text{H}_2\text{O}$  with evolution of much heat and conversion into  $\text{H}_3\text{AsO}_4$ .

### Arsenates

Arsenates of the alkali metals and acid arsenates of the alkaline-earth metals are sol in  $\text{H}_2\text{O}$ . Neutral and basic arsenates are easily sol in mineral acids including  $\text{H}_3\text{AsO}_4$ .

less sol in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . The neutral alkaline-earth arsenates are less sol in  $\text{H}_2\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ , but more sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Field). The alkali arsenates are sol in hot glycerine (Lefèvre, *C R* 108 158).

### Aluminum arsenate, $\text{Al}_2(\text{AsO}_4)_3$

Ppt Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Coloniano, *C R* 103 273)

Insol in acetone (Naumann, *B 1* 4, 37 4328)

$2\text{Al}_2\text{O}_3, 3\text{As}_2\text{O}_5$  Nearly unattacked by boiling  $\text{H}_2\text{O}$ , sol in dil acids (Lefèvre, *A ch* (6) 27 5)

### Aluminum potassium arsenate, $2\text{Al}_2\text{O}_3 \cdot 3\text{As}_2\text{O}_5 \cdot 3\text{K}_2\text{O}$

(Lefèvre)

### Aluminum sodium arsenate, $2\text{Al}_2\text{O}_3 \cdot 3\text{As}_2\text{O}_5 \cdot \text{Na}_2\text{O}$

(Lefèvre)

### Ammonium arsenate, $(\text{NH}_4)_3\text{AsO}_4 \cdot 2\text{H}_2\text{O}$

Difficultly sol in  $\text{H}_2\text{O}$ . Less sol than  $(\text{NH}_4)_2\text{HAsO}_4$  (Mitscherlich)

Insol in liquid  $\text{NH}_3$  (Franklin, *A ch* 1898, 20 826)

### Ammonium hydrogen arsenate,

$(\text{NH}_4)\text{HAsO}_4$

Effloresces, giving off  $\text{NH}_3$ , more sol in  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_3\text{AsO}_4$  (Sulkowsky, *J pr* 104 129)

Insol in acetone (Fidmum, *C C* 1899, II 1014)

### Ammonium dihydrogen arsenate,

$\text{NH}_4\text{H}_2\text{AsO}_4$

Not efflorescent. Very sol in  $\text{H}_2\text{O}$

### Ammonium barium arsenate, $\text{NH}_4\text{Ba}(\text{AsO}_4)_2 \cdot 2\text{H}_2\text{O}$

Sol by 10 days contact in 1.91 pt  $\text{H}_2\text{O}$ , in 18.82 pts of a mixture of 1 pt  $\text{NH}_4\text{OH} + \text{Aq}$  and 3 pts  $\text{H}_2\text{O}$  in 227 pts of a solution of 1 pt  $\text{NH}_4\text{Cl}$  in 10 pts  $\text{H}_2\text{O}$  and 2169 pts of a solution of 1 pt  $\text{NH}_4\text{Cl}$  in 0 pts  $\text{NH}_4\text{OH} + \text{Aq}$  and 60 pts  $\text{H}_2\text{O}$  (Lefèvre, *A ch* 1892, (6) 27 13)

$(\text{NH}_4)\text{BaH}(\text{AsO}_4)_2$  Efflorescent. Insol in  $\text{H}_2\text{O}$ ; easily sol in dil  $\text{HNO}_3 + \text{Aq}$  (Baumann, *Arch Pharm* 36 36)

### Ammonium calcium arsenate, $\text{NH}_4\text{Ca}(\text{AsO}_4)_2 \cdot 2\text{H}_2\text{O}$

1000 pts pure  $\text{H}_2\text{O}$  dissolve 0.20 this salt, 1000 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (containing 50 pts  $\text{NH}_4\text{Cl}$ ) dissolve 1.15 pts this salt (0 pts  $\text{H}_2\text{O} + 100$  pts  $\text{NH}_4\text{OH}$  (sp gr = 0.8)) dissolve 0.01 pt this salt (Field, *Chem* 11 6)

Soluble by 10 days' contact in 2167 pt  $\text{H}_2\text{O}$  at  $15^\circ$ , in 381 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (17), in

43478 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (1 3), in 10570 pts  $\text{NH}_4\text{Cl} + \text{NH}_4\text{OH} + \text{Aq}$  (1 10 60) (Lefèvre, A ch 1892, (6) 27 13)

+6 $\text{H}_2\text{O}$  Sol in hot, very sl sol in cold  $\text{H}_2\text{O}$ , sl sol in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$  (Wach, Schw J 12 285)

+7 $\text{H}_2\text{O}$  (Bloxam, C N 54 163)

$(\text{NH}_4)_2\text{CaH}_2(\text{AsO}_4)_3$  Efflorescent Insol in  $\text{H}_2\text{O}$ , easily sol in dil  $\text{HNO}_3 + \text{Aq}$  (Bauermann, Arch Pharm 36 36)

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$  (Bloxam, C N 54 163)

**Ammonium glucinum arsenate,  $\text{NH}_4\text{GlAsO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$**

More stable than the corresponding potassium salt (Bleyer, Z anorg 1912, 75 291)

**Ammonium iron (ferric) dihydrogen arsenate,  $\text{NH}_4\text{H}_2\text{AsO}_4, \text{FeAsO}_4$**

Hydrolyzed by  $\text{H}_2\text{O}$

Sol in cold conc  $\text{HCl}$ , hot  $\text{HNO}_3$ , hot dil  $\text{H}_2\text{SO}_4$ , and in hot arsenic acid +  $\text{Aq}$  containing 75% arsenic pentoxide

Sol in hot conc  $\text{NH}_4\text{OH} + \text{Aq}$  Completely hydrolyzed by caustic alkalis

Insol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$  and in 50% acetic acid (Curtman, J Am Chem Soc 1910, 32 628)

**Ammonium magnesium arsenate,**

$\text{NH}_4\text{MgAsO}_4$

Sl sol in  $\text{H}_2\text{O}$  Sol in acids

Anhydrous salt is sol in 2784 pts  $\text{H}_2\text{O}$  at 15°, in 15,904 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (1 3) (0 96 sp gr), in 1386 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 70), in 886 7 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 7), in 3014 pts  $\text{NH}_4\text{Cl}$  (1 pt) +  $\text{NH}_4\text{OH}$  (0 96 sp gr) (10 pts) +  $\text{Aq}$  (60 pts), in 32,827 pts magnesia mixture (Fresenius, Z anal 3 206)

Anhydrous salt is sol in 4389 pts  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (1 50), in 2561 5 pts  $\text{KCl} + \text{Aq}$  (1 165), in 1422 pts ammoniacal solution of 3 5 g tartaric acid in 250 cc  $\text{H}_2\text{O}$ , in 933 5 pts ammoniacal solution of 2 5 g citric acid in 250 cc  $\text{H}_2\text{O}$  (Puller, Z anal 10 62)

+ $\frac{1}{2}\text{H}_2\text{O}$

Sol in 2656 pts  $\text{H}_2\text{O}$  at 15°, in 15,038 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (1 3) (0 96 sp gr), in 844 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 7), in 1315 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 70), in 2871 pts  $\text{NH}_4\text{Cl}$  (1 pt) +  $\text{NH}_4\text{OH}$  (0 96 sp gr) (10 pts) +  $\text{Aq}$  (60 pts) (Fresenius)

1000 pts pure  $\text{H}_2\text{O}$  dissolve 0 14 pt salt, 1000 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (containing 100 pts  $\text{NH}_4\text{Cl}$ ) dissolve 0 95 pt salt, 900 pts  $\text{H}_2\text{O} + 100$  pts  $\text{NH}_4\text{OH}$  (sp gr 0 880) dissolve 0 07 pt salt (Field, Chem Soc 11 6)

+6 $\text{H}_2\text{O}$  Sl efflorescent Sl sol in  $\text{H}_2\text{O}$

Very sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$

Solubility of  $\text{NH}_4\text{MgAsO}_4 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  and  $\text{NH}_4$  salts +  $\text{Aq}$   
Grams salt dissolved in 100 g solvent

(Wenger, Dissert 1911)

**Ammonium manganous arsenate,**

$\text{NH}_4\text{MnAsO}_4 + 6\text{H}_2\text{O}$

Nearly insol in cold  $\text{H}_2\text{O}$ , easily sol in dil acids, insol in alcohol (Otto, J pr 2 414)

**Ammonium sodium arsenate,  $\text{NH}_4\text{NAsO}_4 + 4\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$  (Ullsman, Zeit f ges Nut 23 347)

**Ammonium sodium hydrogen arsenate,**

$(\text{NH}_4)_3\text{NAsH}_2(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Fulhol and Sanderens, C R 94 649)

**Ammonium strontium arsenate,  $\text{NH}_4\text{SrAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$**

Sol by 10 days' contact in 3229 pts  $\text{H}_2\text{O}$ , in 11,586 pts dil  $\text{NH}_4\text{OH} + \text{Aq}$ , in 199 pts

of a mixture of 1 pt  $\text{NH}_4\text{Cl}$  in 7 pts  $\text{H}_2\text{O}$ , and in 1519 pts of a solution of 1 pt  $\text{NH}_4\text{Cl}$  in 10 pts  $\text{NH}_4\text{OH} + \text{Aq}$  and 60 pts  $\text{H}_2\text{O}$  (Lefèvre, A ch 1892, (6) 27 13)

**Ammonium uranyl arsenate,  $\text{NH}_4(\text{UO}_2)_2\text{AsO}_4 + x\text{H}_2\text{O}$**

Insol in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_3\text{PO}_4$ , and saline solutions as  $\text{NH}_4\text{Cl} + \text{Aq}$  sol in mineral acids (Puller, Z anal 10 72)

**Ammonium vanadium arsenate,**

$\text{NH}_4(\text{VO})_2\text{AsO}_4$ , and  $(\text{NH}_4)_2\text{HAsO}_4 + 2(\text{VO})_2\text{HAsO}_4$

See Arsenovanadate, ammonium

**Ammonium arsenate tellurate**

See Arsenotellurate, ammonium

**Antimony arsenate (?)**

Insol in  $H_2O$ , insol in acids after ignition, but when fresh is sol in conc boiling  $HCl$  + Aq, and sl sol in  $HNO_3$  + Aq (Dumas)

**Barium arsenate,  $Ba_3(AsO_4)_2$** 

1000 pts pure  $H_2O$  dissolve 0.55 pt  $Ba_3(AsO_4)_2$ , 1000 pts  $NH_4Cl$  + Aq (containing 50 pts  $NH_4Cl$ ) dissolve 1.95 pts  $Ba_3(AsO_4)_2$ , 900 pts  $H_2O$  + 100 pts  $NH_4OH$  + Aq (sp gr = 0.88) dissolve 0.03 pt  $Ba_3(AsO_4)_2$  (Field, Chem Soc 11 6)

Sol in cold  $HNO_3$ , and  $HCl$  + Aq (Berzelius),  $H_2C_2H_4O_6$ , and  $HC_2H_3O_2$  + Aq (Anthon)

Solubility in  $H_2O$  is not increased by presence of  $NH_4$ , Na, or K salts (Laugier)

Not pptd in presence of Na citrate (Spiller)  
+  $1\frac{1}{2}H_2O$  (Salkowsky, J pr 104 129)

**Barium hydrogen arsenate,  $BaHAsO_4 + 1\frac{1}{2}H_2O$** 

Very sl sol in  $H_2O$ , but decomp thereby into  $Ba_3(AsO_4)_2$  and  $BaH_4(AsO_4)$  (Berzelius)

Sl sol in cold acids  
+  $H_2O$  Sl sol in either  $BaCl_2$  + Aq or  $NaHAsO_4$  + Aq (Maumené, J B 1864 237)

**Barium tetrahydrogen arsenate,  $BaH_4(AsO_4)_2 + 2H_2O$** 

Easily sol in  $H_2O$  (Settemberg, Berz J B 26 206)

Difficultly sol in little, but decomp by much  $H_2O$ . Easily sol in  $HCl$  + Aq less easily in  $HCl$  +  $H_2O$  + Aq (Hormann, Dissert, 1879)

**Barium arsenate, acid,  $Ba(O_2)As_2O_5 + 4H_2O$** 

Very sl sol in  $H_2O$  (Mitscherlich)

**Barium pyroarsenate,  $Ba_2As_2O_7$** 

Insol in  $H_2O$  but decomp thereby into  $BaHAsO_4$  +  $H_2O$  (Lefèvre C R 108 1038)

**Barium potassium arsenate,  $KBaAsO_4$** 

Sl decomp by cold  $H_2O$ . Rapidly sol in dil acids (Lefèvre Arch (6) 27 1)

**Barium sodium arsenate,  $NaBaAsO_4 + 9H_2O$** 

(Joly, C R 1887 104 1702)

**Barium arsenate chloride,  $Ba_2(AsO_4)_2 \cdot PbCl_2$** 

Insol in  $H_2O$  sol in dil  $HNO_3$  + Aq (Schubert C R 65 172)

**Bismuth arsenate, basic,  $BiAsO_4 \cdot 3Bi_2O_3$** 

Insol in  $H_2O$ . Sol in mineral acids (Cavazzi Gazz chim 14 289)

$Bi_2O_3 \cdot 2As_2O_5 + 5H_2O$  Min *Rhauit*  
Easily sol in  $HCl$  + Aq sl sol in  $HNO_3$  + Aq

**Bismuth arsenate,  $BiAsO_4 + \frac{1}{2}H_2O$** 

Insol in  $H_2O$  Insol in  $HNO_3$  - Aq in presence of  $H_2AsO_4$ , or alkali arsenates + Aq, sol in  $HCl$  + Aq (Salkowsky, J pr 104 129)

Not wholly insol in  $HNO_3$  + Aq (Schneider, J pr (2) 20 418)

Very sol in  $H_2AsO_4$  + Aq (Dumas)

Insol in  $Bi(NO_3)_3$  + Aq (Dumas)

Sol in  $Bi(NO_3)_3$  + Aq (Salkowsky)

Insol in conc  $Bi(NO_3)_3$  + Aq containing a small quantity of  $HNO_3$  (Schneider)

**Bismuth copper arsenate,  $BiCu_{20}As_{10}H_{44}O_{76}$** 

$= Bi_2O_3, 20CuO, 5As_2O_5 + 22H_2O$   
Min *Mixite* Decomp by dil  $H_2O$  into insol  $BiAsO_4$ , and  $Cu_3(AsO_4)_2$ , which goes into solution (Dana)

**Bismuth uranyl arsenate,  $Bi_2(AsO_4)_3 \cdot 8Bi_2O_3 \cdot H_2O$** 

Min *Walpurgite*

**Cadmium arsenate,  $Cd_3(AsO_4)_2$** 

Ppt (Salkowsky, J pr 104 129)  
 $2CdO, As_2O_5$  (Lefèvre, C R 11 405)  
 $5CdO, 2As_2O_5 + 5H_2O$  Ppt (Salkowsky)

**Cadmium pyroarsenate,  $CdAs_2O_7$** 

(de Schulten)

**Cadmium hydrogen arsenate,  $CdHAsO_4 + H_2O$** 

Decomp by  $H_2O$  (Demel, B 12 1279)  
 $CdH_4(AsO_4)_2 + 2H_2O$  Decomp by excess of  $H_2O$  (de Schulten, Bull Soc (1) 473)

**Cadmium potassium arsenate,  $2CdO, K_2O, As_2O_5$** 

(Lefèvre C R 110 405)

**Cadmium sodium arsenate,  $(CdO)_2Na_2O, As_2O_5$** 

Slowly sol in dil acids (Lefèvre C R 110 405)

$2CdO, 4Na_2O, 3As_2O_5$  (Lefèvre)

**Cadmium arsenate bromide,  $(CdO)_2(AsO_4)_2 \cdot 2H_2O$** 

Sol in very dil  $HNO_3$  + Aq (de Schulten Bull Soc (5) 1 472)

**Cadmium arsenate chloride,  $(CdO)_2(AsO_4)_2 \cdot 2H_2O$** 

Sol in very dil  $HNO_3$  + Aq (de Schulten)

**Cæsium arsenate,  $Cs_2O \cdot 2As_2O_5 + 10H_2O$** 

Ppt (Lippmann Z anorg 1910 55 246)

**Calcium arsenate,  $Ca_3(AsO_4)_2 + 3H_2O$** 

Ppt Insol in  $H_2O$  sol in  $H_2SO_4$  + Aq (Kotschoubey, J pr 49 182)

**Calcium pyroarsenate,  $CaAs_2O_7$** 

Slowly decomp by cold  $H_2O$  into  $HAsO_4$  +  $1\frac{1}{2}H_2O$  (Lefèvre)

**Calcium hydrogen arsenate**,  $\text{CaHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Debray, A ch (3) 61 419)  
 +  $\text{H}_2\text{O}$  Min *Hardingerite* Easily sol in acids  
 +  $2\frac{1}{2}\text{H}_2\text{O}$  Min *Pharmacohite* Easily sol in acids  
 +  $3\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{AsO}_4 + \text{Aq}$ , also in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$  (Pfaff)

**Calcium tetrahydrogen arsenate**,

$\text{CaH}_4(\text{AsO}_4)_2$   
 Sol in  $\text{H}_2\text{O}$  (Graham)  
 +  $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  Decomp by much hot  $\text{H}_2\text{O}$  into  $\text{H}_2\text{AsO}_4$  and  $\text{Ca}_3(\text{AsO}_4)_2$  (Hormann, Dissert 1879)

**Calcium iron (ferric) arsenate**,  $6\text{CaO}$ ,  $4\text{Fe}_2\text{O}_3$ ,  $5\text{As}_2\text{O}_5 + 15\text{H}_2\text{O}$  (?)

Min *Arsenosiderite* Sol in acids

**Calcium magnesium arsenate**,  $\text{Ca}_5\text{H}_2(\text{AsO}_4)_4$ ,  $\text{Mg}_5\text{H}_2(\text{AsO}_4)_4 + 10\text{H}_2\text{O}$

Min *Picropharmacohite* Easily sol in acids  
 $\text{Ca}_5(\text{AsO}_4)_2$ ,  $\text{Mg}_5(\text{AsO}_4)_2$  Sol in  $\text{HNO}_3 + \text{Aq}$  (Kuhn)

Min *Berzelzite* Sol in  $\text{HNO}_3 + \text{Aq}$   
 $\text{Ca}_5\text{Mg}_5\text{H}_{14}(\text{AsO}_4)_{14} + 49\text{H}_2\text{O}$  Min *Waplerite*

**Calcium potassium arsenate**,  $\text{CaKAsO}_4$

(Lefèvre, A ch (6) 27 5)

**Calcium sodium arsenate**,  $\text{CaNaAsO}_4$

(Lefèvre, A ch (6) 27 1)  
 $4\text{CaO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$  Not attacked by boiling  $\text{H}_2\text{O}$ , easily sol in dil acids (Lefèvre)

**Calcium uranyl arsenate**,  $\text{Ca}(\text{UO})_2(\text{AsO}_4)_2 + \text{SH}_2\text{O}$

Min *Uranospinite*

**Calcium vanadium arsenate**,  $\text{CaHAsO}_4$ ,  $2(\text{VO})\text{HAsO}_4 + 8\text{H}_2\text{O}$

See *Arsenovanadate*, calcium

**Calcium arsenate chloride**,  $\text{Ca}_4(\text{AsO}_4)_3$ ,  $\text{CaCl}_2$

Insol in  $\text{H}_2\text{O}$ , sol in dil  $\text{HNO}_3 + \text{Aq}$  (Lechutier C R 65 172)  
 $3\text{Ca}(\text{AsO}_4)_2$ ,  $\text{CaCl}_2$  As above (Lechutier)

**Cerous arsenate**,  $\text{CeHAsO}_4$

Insol in  $\text{H}_2\text{O}$  Sol in arsenic acid +  $\text{Aq}$  (Berzelius)

**Ceric hydrogen arsenate**,  $\text{Ce}(\text{HAsO}_4)_4 + 6\text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$  and dil acids (Bucher, B 1910, 43 2216)

**Ceric dihydrogen arsenate**,  $\text{Ce}(\text{HAsO}_4)_4 + 4\text{H}_2\text{O}$

Sol in conc  $\text{HNO}_3$  (Barbieri l c)

**Chromic arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{As}_2\text{O}_5$

Insol in  $\text{H}_2\text{O}$  and conc boiling acids (Lefèvre, A ch (6) 27 5)

**Chromic potassium arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{K}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$

(Lefèvre)

**Chromic sodium arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$

(Lefèvre)

**Cobaltous arsenate, basic**,  $4\text{CoO}$ ,  $\text{As}_2\text{O}_5$

Easily sol in acids (Gentile, J B 1851 359)

$\text{Co}(\text{CoOH})\text{AsO}_4$  Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Coloriano)

**Cobaltous arsenate**,  $\text{Co}_3(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$

Ppt Insol even in boiling  $\text{H}_2\text{O}$ , easily sol in  $\text{HNO}_3$ ,  $\text{HCl}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$ , sol in  $\text{H}_2\text{AsO}_4 + \text{Aq}$  (Proust), sol in dil  $\text{FeSO}_4 + \text{Aq}$  (Karsten, Pogg 60 266)

Min *Cobalt bloom*, *Erythrite* Easily sol in acids

$5\text{CoO}$ ,  $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Coloriano, C R 103 273)

$2\text{CoO}$ ,  $\text{As}_2\text{O}_5$  Sl attacked by boiling  $\text{H}_2\text{O}$ , easily sol in dil acids (Lefèvre)

**Cobaltous hydrogen arsenate**  $\text{CoH}(\text{AsO}_4)$

Sol in

**Cobaltous potassium arsenate**,  $\text{CoKAs}$

(Lefèvre)

**Cobaltous sodium arsenate**,  $\text{CoNaAsO}_4$

(Lefèvre)

$4\text{CoO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$  (Lefèvre)

**Cobaltous vanadium arsenate**,

$\text{Co}(\text{VO})_2\text{H}(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$

See *Arsenovanadate*, cobaltous

**Cobaltous arsenate ammonia**,  $\text{Co}_3(\text{AsO}_4)_2$ ,  $\text{NH}_3 + 7\text{H}_2\text{O}$

(Ducru, A ch 1901, (7) 22 185)

$\text{Co}_3(\text{AsO}_4)_2$ ,  $2\text{NH}_3 + 6\text{H}_2\text{O}$  (Ducru, l c)

$\text{Co}_3(\text{AsO}_4)_2$ ,  $3\text{NH}_3 + 5\text{H}_2\text{O}$  (Ducru, l c)

**Cuprous arsenate**,  $2\text{CuO}$ ,  $\text{As}_2\text{O}_5$

(Hampe, Dissert 1874)

$4\text{CuO}$ ,  $\text{As}_2\text{O}_5$  (Hampe, l c)

**Cuprous pyroarsenate**,  $\text{Cu}_4\text{As}_2\text{O}_7$

Ppt Sol in  $\text{NH}_4\text{OH}$  or  $\text{KOH} + \text{Aq}$  (Reichard, B 1898, 31 2166)

**Cupric arsenate, basic**,  $\text{SCuO}$ ,  $\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$

Min *Chalcophyllite* Easily sol in acids and  $\text{NH}_4\text{OH} + \text{Aq}$

$6\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  Min *Aphanesite*,

*Choclosite* Sol in acids and ammonia

$5\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$  Min *Erimite* Sol in  $\text{HNO}_3 + \text{Aq}$

+5H<sub>2</sub>O Min *Cornwallite* Sol in acids, and NH<sub>4</sub>OH+Aq  
 +9H<sub>2</sub>O Min *Tyrolite*  
 4CuO, As<sub>2</sub>O<sub>5</sub>+H<sub>2</sub>O Insol in H<sub>2</sub>O (Debray, A ch (3) 61 423)  
 Min *Olivenite* Sol in acids, and NH<sub>4</sub>OH+Aq, decomp by hot KOH+Aq  
 +7H<sub>2</sub>O Min *Euchronite* Sol in HNO<sub>3</sub>+Aq  
 +4½H<sub>2</sub>O (Hirsch, C C 1891, I 15)

#### Cupric arsenate, Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>

Insol in H<sub>2</sub>O Easily sol in HCl+Aq, sl sol in other acids, sol in NH<sub>4</sub>OH+Aq (Coloriano, C R 103 273)  
 Insol in methyl acetate (Naumann, B 1909, 42 3790)  
 Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 827)  
 +4H<sub>2</sub>O Decomp by hot H<sub>2</sub>O (Debray)  
 +5H<sub>2</sub>O Min *Trichalcite* Easily sol in cold HCl+Aq

#### Cupric arsenate, acid, 5CuO, 2As<sub>2</sub>O<sub>5</sub>

Sol in H<sub>2</sub>SO<sub>4</sub>+Aq (Vogel)  
 +3H<sub>2</sub>O (Salkowsky)  
 +8, 9½, and 12½H<sub>2</sub>O (Hirsch)  
 CuHAsO<sub>4</sub>+H<sub>2</sub>O Insol in H<sub>2</sub>O (Coloriano)  
 +1½H<sub>2</sub>O Insol in H<sub>2</sub>O (Debray, A ch (3) 61 419)  
 8CuO, 3As<sub>2</sub>O<sub>5</sub>+12H<sub>2</sub>O (Hirsch)

#### Cupric lead arsenate, 3CuO, PbO, As<sub>2</sub>O<sub>5</sub>+2H<sub>2</sub>O

Min *Bayldonite* Nearly insol in HNO<sub>3</sub>+Aq

#### Cupric potassium arsenate, CuKAsO<sub>4</sub>

Slowly sol in NH<sub>4</sub>OH+Aq, easily sol in acids (Lefevre, A ch (6) 27 5)  
 8CuO, K<sub>2</sub>O, As<sub>2</sub>O<sub>5</sub> Easily sol in dil acids (Lefevre)

#### Cupric sodium arsenate, CuNaAsO<sub>4</sub>

(Lefevre)  
 3CuO, Na<sub>2</sub>O, 2As<sub>2</sub>O<sub>5</sub> Very sol in dil acids (Lefevre)  
 2Cu(AsO<sub>4</sub>), NaHAsO<sub>4</sub>+5H<sub>2</sub>O Ppt (Hirsch, C C 1891, I 15)  
 6Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaH<sub>2</sub>AsO<sub>4</sub>, Na<sub>2</sub>HAsO<sub>4</sub>+13½H<sub>2</sub>O, or 16H<sub>2</sub>O Ppt (Hirsch)  
 3Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, Na<sub>2</sub>HAsO<sub>4</sub>+9½H<sub>2</sub>O Ppt (Hirsch)  
 4Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaHAsO<sub>4</sub>+11H<sub>2</sub>O Ppt (Hirsch)

#### Cupric uranyl arsenate, Cu(UO<sub>2</sub>)(AsO<sub>4</sub>)<sub>2</sub>+8H<sub>2</sub>O

(Werthier, A 68 312)  
 Min *Zeunerite*

#### Cupric vanadium arsenate,

Cu(VO)<sub>2</sub>H(AsO<sub>4</sub>)<sub>2</sub>+3H<sub>2</sub>O

See Arseniovanadate, cupric

#### Cupric arsenate ammonia, (3NH<sub>3</sub>+4H<sub>2</sub>O

Insol in cold or hot H<sub>2</sub>O (Daour, J pr 37 485)  
 2CuO, As<sub>2</sub>O<sub>5</sub>, 4NH<sub>3</sub>+3H<sub>2</sub>O I comp by H<sub>2</sub>O (Schiff, A 123 42)

#### Cupric arsenate calcium carbonate, 5CuO, As<sub>2</sub>O<sub>5</sub>, CaCO<sub>3</sub>+4H<sub>2</sub>O, or 9H<sub>2</sub>O

Min *Tyrolite* Easily sol in acids, and NH<sub>4</sub>OH+Aq

#### Cupric arsenate sodium chloride, 2Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaCl+7½H<sub>2</sub>O

Decomp by hot H<sub>2</sub>O (Hirsch, Dissert 1891)  
 3Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaCl+13½H<sub>2</sub>O  
 +17½H<sub>2</sub>O (Hirsch, l c)  
 5Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, 3NaCl+23H<sub>2</sub>O (Hirsch)

#### Didymium arsenate, D<sub>12</sub>H<sub>5</sub>(AsO<sub>4</sub>)<sub>4</sub>

Ppt Insol in H<sub>2</sub>O, sl sol in weak acids (Marignac, A ch (3) 38 164)  
 5D<sub>12</sub>(AsO<sub>4</sub>)<sub>2</sub>, As<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O P

#### Glucinum arsenate, Gl<sub>3</sub>(AsO<sub>4</sub>)<sub>3</sub>

Insol in H<sub>2</sub>O, sol in H<sub>3</sub>AsO<sub>4</sub>+Aq (Berzelius)

#### Glucinum hydrogen arsenate, GlHAsO<sub>4</sub>

Obtained in impure state by heating As<sub>2</sub>O<sub>5</sub> with Gl(OH)<sub>3</sub> in a sealed tube at 220° (Bleyer, Z anorg 1912, 75 287)

#### Glucinum tetrahydrogen arsenate, GlH<sub>4</sub>(AsO<sub>4</sub>)<sub>2</sub>

Very hygroscopic (Bleyer, Z anorg 1912, 75 287)

#### Glucinum potassium arsenate, KGlAsO<sub>4</sub>, ½GlO+5H<sub>2</sub>O

Unstable Amorphous Easily hydrolyzed, giving more basic salts (Bleyer, Z anorg 1912, 75 289)

#### Glucinum sodium arsenate, NaGlAsO<sub>4</sub>, ½GlO+6H<sub>2</sub>O

Unstable Easily hydrolyzed (Bleyer, Z anorg 1912, 75 290)

#### Iron (ferrous) arsenate, Fe<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>+6H<sub>2</sub>O (?)

Ppt Sl sol in NH<sub>4</sub>OH+Aq Insol in (NH<sub>4</sub>)<sub>3</sub>AsO<sub>4</sub>+Aq or other NH salts+Aq (Wittstein)  
 +8H<sub>2</sub>O Min *Symplectite* Sl in HCl+Aq

#### Iron (ferric) arsenate, basic, 16FeO<sub>3</sub>, As<sub>2</sub>O<sub>5</sub>+24H<sub>2</sub>O

Insol in NH<sub>4</sub>OH+Aq (Berzelius)  
 2Fe<sub>2</sub>O<sub>3</sub>, As<sub>2</sub>O<sub>5</sub>+12H<sub>2</sub>O Insol in NH<sub>4</sub>OH+Aq  
 3Fe<sub>2</sub>O<sub>3</sub>, 2As<sub>2</sub>O<sub>5</sub>  
 3Fe<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Fe<sub>2</sub>O<sub>6</sub>H<sub>6</sub>+12H<sub>2</sub>O Min *Pharmacosiderite* Easily sol in acids, decomp by KOH+Aq

**Iron (ferric) arsenate,  $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_5$** 

Ppt Insol in  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$   
Sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3$  (Metzke,  
Z anorg 1898, 19 473)

+4 $\text{H}_2\text{O}$  Min *Scorodite* Easily sol in  
 $\text{HCl} + \text{Aq}$ , insol in  $\text{HNO}_3 + \text{Aq}$   
+8 $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  When freshly  
pptd, sol in  $\text{NH}_4\text{OH} + \text{Aq}$  Sol in  $\text{HCl}$ , or  
 $\text{HNO}_3 + \text{Aq}$  Insol in  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4$   
salts +  $\text{Aq}$  (Wittstein)

Sol in warm  $\text{H}_2\text{SO}_3 + \text{Aq}$  or  $(\text{NH}_4)_2\text{SO}_3 +$   
 $\text{Aq}$  (Berthier, A ch (3) 7 79)

**Iron (ferric) arsenate, acid,  $\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$** 

+16  $7\text{H}_2\text{O}$   
Ppt, sl sol in acids with a yellow color, and  
in  $\text{NH}_4\text{OH} + \text{Aq}$  with a red color (Metzke,  
Z anorg 1898, 19 476)

2 $\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  or  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

Sol in mineral acids

Sol only in conc  $\text{H}_2\text{AsO}_4 + \text{Aq}$

Sol in  $(\text{NH}_4)_3\text{AsO}_4$ , and other  $\text{NH}_4$  salts  
+  $\text{Aq}$  (Wittstein)

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
+22 $\frac{1}{2}\text{H}_2\text{O}$  Ppt Sl sol in acids with  
a yellow color, and in  $\text{NH}_4\text{OH} + \text{Aq}$  with a red  
color (Metzke, Z anorg 1898, 19 475)

**Iron (ferroferric) arsenate, 6 $\text{FeO}$ , 3 $\text{Fe}_2\text{O}_3$ , 4 $\text{As}_2\text{O}_5 + 32\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  Decomp  
by  $\text{KOH} + \text{Aq}$  (Wittstein, J B 1866 243)

**Iron (ferric) lead arsenate, 5 $\text{Fe}_2(\text{AsO}_4)_2$ ,  $\text{Pb}_3(\text{AsO}_4)_2$** 

Min *Carmine Spar Carminite* Sol in  
acids,  $\text{KOH} + \text{Aq}$  dissolves out  $\text{As}_2\text{O}_5$  (Sand-  
berger)

**Iron (ferric) potassium arsenate, 2 $\text{Fe}_2\text{O}_3$ , 3 $\text{K}_2\text{O}$ , 3 $\text{As}_2\text{O}_5$** 

Not attacked by boiling  $\text{H}_2\text{O}$ , easily sol in  
dil acids (Lefèvre)

$\text{Fe}_2\text{O}_3, \text{K}_2\text{O}, 2\text{As}_2\text{O}_5$  (Lefèvre)

**Iron (ferric) sodium arsenate,  $\text{Fe}_2\text{O}_3, \text{Na}_2\text{O}$ , 2 $\text{As}_2\text{O}_5$** 

(Lefèvre)

2 $\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$  (Lefèvre)

**Lanthanum arsenate,  $\text{La}_2\text{H}_3(\text{AsO}_4)_3$** 

(Fierichs and Smith)

Doubtful (Cleve, B 11 910)

**Lead arsenate, basic, 15 $\text{PbO}, 2\text{As}_2\text{O}_5$  (?)**

Ppt (Strömholm Z anorg 1904, 38 446)

**Lead arsenate,  $\text{Pb}_3(\text{AsO}_4)_2$** 

Insol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts +  $\text{Aq}$   
(Wittstein)

Sol in 2703 5 pts  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  contain-  
ing 38 94%  $\text{HC}_2\text{H}_3\text{O}_2$  (Bertrand, Monit  
Scient (3) 10 477)

Sol in sat  $\text{NaCl} + \text{Aq}$  (Becquerel, C R  
20 1523)

Not pptd in presence of  $\text{Na}$  citrate  
(Spiller)

**Lead pyroarsenate,  $\text{Pb}_2\text{As}_2\text{O}_7$** 

Insol in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  Sol in  
 $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  (Rose)

Decomp by cold  $\text{H}_2\text{O}$  (Lefèvre)

+ $\text{H}_2\text{O} = \text{PbHAsO}_4$  Ppt (Salkowsky, J  
pr 104 109)

**Lead potassium arsenate,  $\text{PbKAsO}_4$** 

(Lefèvre, A ch (6) 27 5)

**Lead sodium arsenate,  $\text{PbNaAsO}_4$** 

(Lefèvre)

4 $\text{PbO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$  Superficially de-  
comp by cold  $\text{H}_2\text{O}$  (Lefèvre)

**Lead arsenate chloride, 3 $\text{Pb}_3(\text{AsO}_4)_2, \text{PbCl}_2$** 

Sol in dil  $\text{HNO}_3 + \text{Aq}$  (Lechartier)

Min *Mimetite* Sol in  $\text{HNO}_3$ , and  $\text{KOH} +$   
 $\text{Aq}$

**Lithium arsenate,  $\text{Li}_3\text{AsO}_4$** 

Ppt Sol in dil acids and in  $\text{HC}_2\text{H}_3\text{O}_2 +$   
 $\text{Aq}$  (de Schulten, Bull Soc (3) 1 479)

$\text{LiH}_2\text{AsO}_4 + \frac{3}{2}\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  into  
 $\text{H}_2\text{AsO}_4$  and  $\text{Li}_3\text{AsO}_4$  (Rammelsberg, Pogg  
128 311)

**Magnesium arsenate,  $\text{Mg}_3(\text{AsO}_4)_2$** 

Ppt

Insol in methyl acetate (Naumann, B  
1909, 42 3790)

+7 $\text{H}_2\text{O}$ , +8 $\text{H}_2\text{O}$ , +10 $\text{H}_2\text{O}$ , and +22 $\text{H}_2\text{O}$   
(Grühl, Dissert 1897)

+8 $\text{H}_2\text{O}$  Min *Hörnseite* Insol in  $\text{H}_2\text{O}$ ,  
easily sol in acids

**Magnesium hydrogen arsenate,  $\text{MgHAsO}_4$** 

+ $\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (de Schulten, C  
R 100 263)

+5 $\text{H}_2\text{O}$  (Schiefer)

+6 $\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  1000 pts boiling  
 $\text{H}_2\text{O}$  dissolve 1 5 pts (Thompson)

Sol in  $\text{HNO}_3 + \text{Aq}$  before ignition, but  
insol in acids after ignition (Graham, A 29  
29)

+7 $\text{H}_2\text{O}$  Min *Roesslerite* Sol in  $\text{HCl} +$   
 $\text{Aq}$

**Magnesium tetrahydrogen arsenate,  $\text{MgH}_4(\text{AsO}_4)_2$** 

Very deliquescent, sol in  $\text{H}_2\text{O}$  (Schiefer)

**Magnesium potassium arsenate,  $\text{MgKAsO}_4$** 

Insol in, but decomp by cold  $\text{H}_2\text{O}$  (Rose)

Easily sol in dil acids (Lefèvre)

+7 $\text{H}_2\text{O}$  (Kinkeln, Dissert, 1893)

4 $\text{MgO}, 2\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$  Not attacked by  
boiling  $\text{H}_2\text{O}$ , slowly sol in dil acids (Le-  
fèvre)

**Magnesium potassium hydrogen arsenate,  $\text{KMgH}(\text{AsO}_4)_2 + x\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  (Kinkeln, D essert  
1893)

$\text{Mg}_3\text{KH}_2(\text{AsO}_4)_3 + 5\text{H}_2\text{O}$  (Chevron and Drouhe, J B 1888, 523)

**Magnesium potassium sodium arsenate,**  
 $\text{Mg}_2\text{KNa}(\text{AsO}_4)_2 + 10\text{H}_2\text{O}$   
 (Kinkelin, Dissert 1883)

**Magnesium sodium arsenate,**  $\text{Mg}_2\text{NaAsO}_4$   
 Insol in  $\text{H}_2\text{O}$  Very sl sol in dil acids (Lefèvre)  
 $4\text{MgO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$  (Lefèvre)

**Magnesium vanadium arsenate,**  
 $\text{MgH}_2(\text{VO}_2)_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$  and  
 $\text{MgHAsO}_4, 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$   
*See Arseniovanadate, magnesium*

**Magnesium arsenate chloride,**  $\text{Mg}_3(\text{AsO}_4)_2$ ,  
 $\text{MgCl}_2$   
 Insol in  $\text{H}_2\text{O}$ , sol in dil  $\text{HNO}_3 + \text{Aq}$   
 (Lechartier, C R 65 172)

**Magnesium arsenate fluoride,**  $\text{Mg}_3(\text{AsO}_4)_2$ ,  
 $\text{MgF}_2$   
 Insol in  $\text{H}_2\text{O}$ , sol in dil  $\text{HNO}_3 + \text{Aq}$   
 (Lechartier)

**Manganous arsenate, basic,**  $6\text{MnO}, \text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  (?)

Min *Chondroarsenate* Easily and completely sol in dil  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$

**Manganous arsenate,**  $\text{Mn}_3(\text{AsO}_4)_2 + \text{H}_2\text{O}$   
 Insol in  $\text{H}_2\text{O}$ , sl sol in acids (Coloriano, C R 103 273)  
 $5\text{MnO}, 2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Coloriano)

$2\text{MnO}, \text{As}_2\text{O}_5$  Sl decomp by cold  $\text{H}_2\text{O}$ , but rapidly on heating (Lefèvre)  
 $\text{MnHAsO}_4 + \text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$  into  $5\text{MnO}, 2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$  Sol in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{H}_3\text{AsO}_4 + \text{Aq}$

**Manganous tetrahydrogen arsenate,**  
 $\text{MnH}_4(\text{AsO}_4)$   
 Deliquescent Easily sol in  $\text{H}_2\text{O}$  (Schiefer)

**Manganous potassium arsenate,**  $\text{MnKAsO}_4$   
 (Lefèvre, A ch (6) 27 5)

**Manganous sodium arsenate,**  $\text{MnNaAsO}_4$   
 Very sol in dil acids (Lefèvre)  
 $2\text{MnO}, 4\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$  Not attacked by boiling  $\text{H}_2\text{O}$ , very sol in dil acids (Lefèvre)

**Manganous arsenate chloride,**  $\text{Mn}_3(\text{AsO}_4)_2$ ,  
 $\text{MnCl}$   
 Insol in  $\text{H}_2\text{O}$ , sol in dil  $\text{HNO}_3 + \text{Aq}$   
 (Lechartier, A 58 259)

**Manganic arsenate,**  $\text{Mn}_2(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$   
 Insol in  $\text{H}_2\text{O}$ , sol in acids

**Mercurous arsenate,**  $(\text{Hg}_2)_3(\text{AsO}_4)_2$   
 Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Coloriano, C R 103 273) Ppt (Haack, C C 1890, II 736)

$\text{Hg}(\text{AsO}_3)_2$  Insol in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , alcohol Decomp by cold  $\text{HCl} + \text{Aq}$  Sl sol in cold  $\text{HNO}_3 + \text{Aq}$ , from which it is precipitated by  $\text{NH}_4\text{OH}$  as  $\text{Hg}_2\text{HASO}_4$  (Simon Pogg 41 424)

**Mercurous hydrogen arsenate,**  $\text{Hg}_2\text{HASO}_4$

Insol in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by cold  $\text{HCl} + \text{Aq}$ , sol in cold  $\text{HNO}_3 + \text{Aq}$  without decomp, very sl sol with decomp in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Simon, Pogg 424)

**Mercuric arsenate,**  $\text{Hg}_3(\text{AsO}_4)_2$

Ppt Sol in  $\text{H}_3\text{AsO}_4$  or  $\text{HNO}_3 + \text{Aq}$  (Bergemann) Very sl sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HCl} + \text{Aq}$  Sl sol in  $\text{HNO}_3 + \text{Aq}$  Insol in  $\text{H}_3\text{AsO}_4 + \text{Aq}$  (Haack, C C 1890, II 73)

**Mercurous silver arsenate,**  $\text{Hg}_2\text{AgAsO}_4$

Sol in hot conc  $\text{HNO}_3$  (Jacobsen, B Soc 1909, (4) 5 948)

**Mercurous arsenate nitrate,**  $\text{Hg}_3\text{AsO}_4, \text{HgNO}_3 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ , sol in  $\text{HNO}_3 + \text{Aq}$  (Simon, Pogg 41 424)  
 $3\text{Hg}_3\text{AsO}_4, 2\text{HgNO}_3, 2\text{Hg}_2\text{O}$  Ppt (Haack)

**Molybdenum arsenate**

Ppt

**Nickel arsenate, basic,**  $5\text{NiO}, \text{As}_2\text{O}_5$

Min — (Bergemann)  
 $\text{Ni}(\text{NiOH})\text{AsO}_4$  Difficultly attacked by acids or alkalis (Coloriano, Bull Soc 2) 45 241)  
 $5\text{NiO}, 2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  As above

**Nickel arsenate,**  $\text{Ni}_3(\text{AsO}_4)_2$

Min — (Bergemann)  
 $+x\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol in  $\text{H}_3\text{AsO}_4$ , and conc mineral acids Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$

$+2\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Coloriano, Bull Soc 45 241)

$+8\text{H}_2\text{O}$  Min *Nickel-bloom, Annabergite*  
 Easily sol in acids  
 $\text{NiHAsO}_4 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Difficultly attacked by acids (Coloriano, C R 103 274)

**Nickel potassium arsenate,**  $12\text{NiO}, 3\text{K}_2\text{O}, 5\text{As}_2\text{O}_5$

(Lefèvre)  
 $2\text{NiO}, \text{K}_2\text{O}, \text{As}_2\text{O}_5$  Rapidly sol in dil acids (Lefèvre)

**Nickel sodium arsenate,**  $\text{NiNaAsO}_4$

Very slowly sol in dil acids (Lefèvre)  
 $4\text{NiO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$  (Lefèvre)

**Nickel arsenate ammonia,**

$\text{Ni}_3(\text{AsO}_4)_2, \text{NH}_3 + 7\text{H}_2\text{O}$   
 $\text{Ni}_3(\text{AsO}_4)_2, 2\text{NH}_3 + 6\text{H}_2\text{O}$   
 $\text{Ni}_3(\text{AsO}_4)_2, 3\text{NH}_3 + 5\text{H}_2\text{O}$  (Ducru, I 1900, 131 703)

**Palladium arsenate (?)**

Ppt

**Platinum arsenate (?)**Ppt Sol in  $\text{HNO}_3 + \text{Aq}$ **Potassium arsenate,  $\text{K}_3\text{AsO}_4$** Deliquescent Very sol in  $\text{H}_2\text{O}$  (Graham, Pogg 32 47)

Insol in ethyl acetate (Naumann, B 1904, 37 3601)

**Potassium hydrogen arsenate,  $\text{K}_2\text{HAsO}_4$** Sol in  $\text{H}_2\text{O}$ **Potassium dihydrogen arsenate,  $\text{KH}_2\text{AsO}_4$** Sol in 53 pts  $\text{H}_2\text{O}$  at  $6^\circ$ , forming a solution of sp gr 1.1134 Much more sol in hot  $\text{H}_2\text{O}$  Insol in alcohol

Sol in 26 666 pts boiling conc alcohol (Wenzel)

**Potassium sodium hydrogen arsenate,**Sol in  $\text{H}_2\text{O}$  $\text{K}_2\text{Na}_2\text{H}_6(\text{AsO}_4)_4 + 9\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , and not easily decomp thereby into its constituents (Filhol and Senderens, C R 95 343)**Potassium strontium arsenate,  $\text{K}_2\text{SrAsO}_4$** 

(Lefevre, C R 108 1058)

**Potassium vanadium arsenate,  $\text{K}(\text{VO})_2\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$** 

See Arseniovanadate, potassium

**Potassium zinc arsenate,  $\text{KZnAsO}_4$** 

(Lefevre)

**Potassium arsenate sulphate**

See Arseniosulphate, potassium

**Rhodium arsenate (?)**

Ppt

**Rubidium metaarsenate,  $\text{RbAsO}_3$** Sol in  $\text{H}_2\text{O}$  (Bouchonnet, C R 1907 144 642)**Rubidium arsenate,  $\text{Rb}_3\text{AsO}_4 + 2\text{H}_2\text{O}$** Very hygroscopic, sol in  $\text{H}_2\text{O}$  to give an alkaline solution Absorbs  $\text{CO}$  from the air (Bouchonnet, l c)**Rubidium pyroarsenate,  $\text{Rb}_4\text{AsO}_6$** 

(Bouchonnet, l c)

**Rubidium hydrogen arsenate,  $\text{RbHAsO}_4 + \text{H}_2\text{O}$** Absorbs  $\text{CO}$  from the air Very hygroscopic, sol in  $\text{H}_2\text{O}$  Insol in alcohol (Bouchonnet, l c)**Rubidium dihydrogen arsenate,  $\text{RbH}_2\text{AsO}_4$** Not hygroscopic Very sol in  $\text{H}_2\text{O}$ , aq solution is acid to litmus (Bouchonnet, l c)**Silver arsenate,  $\text{Ag}_3\text{AsO}_4$** Insol in  $\text{H}_2\text{O}$  Sol in acids, easily sol in  $\text{H}_3\text{AsO}_4 + \text{Aq}$  (Joly, C R 103 1071)11  $\text{H}_2\text{O}$  dissolves 0.0085 g  $\text{Ag}_3\text{AsO}_4$  at  $20^\circ$  (Whitby, Z anorg 1910, 67 108)Much less sol in  $\text{H}_3\text{AsO}_4$  than  $\text{Ag}_3\text{PO}_4$  (Graham)Sol in  $\text{H}_2\text{OH} + \text{Aq}$  (Scheele)Sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Insol in  $\text{NH}_4$  sulphate nitrate, or succinate +  $\text{Aq}$  (Wittstein)Very sl sol in  $\text{H}_4\text{NO}_3 + \text{Aq}$ , more easily in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Graham)Sol in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ , but not so easily as  $\text{Ag}_3\text{PO}_4$ Not pptd in presence of  $\text{Na}$  citrate (Spiller)Insol in liquid  $\text{NH}_3$  (Gore Am Ch J 1898, 20 829)**Silver hydrogen arsenate,  $\text{Ag}_2\text{HAsO}_4$** Decomp by  $\text{H}_2\text{O}$ , with formation of  $\text{Ag}_3\text{AsO}_4$  (Setterberg, Berz J B 26 208) $\text{AgHAsO}_4$  Decomp by  $\text{H}_2\text{O}$  (Joly, C R 103 1071) $\text{Ag}_2\text{O}, 2\text{As}_2\text{O}_3$  Decomp by  $\text{H}_2\text{O}$  Rather sl sol in  $\text{HNO}_3 + \text{Aq}$  Very easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Hurtzig and Geuther, A 111 168)**Silver arsenate ammonia,  $\text{Ag}_3\text{AsO}_4 \cdot 4\text{NH}_3$** Easily sol in  $\text{H}_2\text{O}$  (Widmann, Bull Soc (2) 20 64)**Silver arsenate sulphate,  $3\text{AgO} \cdot \text{AsO}_3 \cdot \text{SO}_3$** Decomp by  $\text{H}_2\text{O}$  with separation of  $\text{Ag}_3\text{AsO}_4$  decomp by dil  $\text{HNO}_3 + \text{Aq}$  (Setterberg, Berz J B 26 209)**Sodium arsenate,  $\text{Na}_2\text{AsO}_4 + 12\text{H}_2\text{O}$** Permanent in dry air Sol in 3.57 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Graham) 100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 28 pts  $\text{NaAsO}_4 - 12\text{H}_2\text{O}$  (Berzelius) Sol in 3.75 pts  $\text{H}_2\text{O}$  at  $17^\circ$  or 100 pts  $\text{H}_2\text{O}$  at  $17^\circ$  dissolve 26.7 pts or sat  $\text{Na}_2\text{AsO}_4 + \text{Aq}$  at  $17^\circ$  contains 21.1%  $\text{NaAsO}_4 + 12\text{H}_2\text{O}$  or 10.4%  $\text{NaAsO}_4$  and has sp gr 1.1186 (Schiff, A 113 550)Melts in crystal  $\text{H}_2\text{O}$  at  $55^\circ$ Sp gr of  $\text{NaAsO}_4 - \text{Aq}$  at  $17^\circ$   
 $c_c = c_{\text{NaAsO}_4 - 12\text{H}_2\text{O}}$

(Schiff, calculated by Gerlach Z anal 8 289)

Arsenate of soda dissolves in 1 pt boiling alcohol (Wenzel)

 $+41\text{H}_2\text{O}$  (Hall Chem Soc 51 93) $+10\text{H}_2\text{O}$  (Hall Chem Soc 51 93)

**Arsenioarsenic acid**,  $3\text{As}_2\text{O}_3$ ,  $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Joly, C R 100 1221)

$3\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5 + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Joly)

$\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5 + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Joly)

See also *Arsenic trioxide pentoxide*

### Arseniochromic acid

**Ammonium arseniochromate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $4\text{CrO}_3 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Friedheim and Mozkin, Z anorg 1894, 6 280)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $8\text{CrO}_3$  Decomp by recryst from  $\text{H}_2\text{O}$  (Friedheim and Mozkin, Z anorg 1894, 6 281)

**Potassium arseniochromate**,  $2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $4\text{CrO}_3$

Decomp by recryst from  $\text{H}_2\text{O}$  (Friedheim and Mozkin, Z anorg 1894, 6 275)

$2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $4\text{CrO}_3 + \text{H}_2\text{O}$  Decomp by recryst from  $\text{H}_2\text{O}$  (Friedheim and Mozkin, l c)

**Arseniomolybdic acid**,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 10\text{H}_2\text{O}$

By recryst from  $\text{H}_2\text{O}$  the comp with  $18\text{H}_2\text{O}$  is formed (Pufahl, Dissert 1888)

+  $16\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Debray)  
+  $18\text{H}_2\text{O}$  Completely sol in  $\text{H}_2\text{O}$  Sp gr of sat solution at  $18^\circ = 2.21$  Easily sol in abs alcohol Insol in  $\text{CS}_2$ , liq hydrocarbons and  $\text{CHCl}_3$  (Pufahl, l c)

$\text{As}_2\text{O}_5$ ,  $7\text{MoO}_3 + 14\text{H}_2\text{O}$  (Seyberth, B 7 391)

$\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 28\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  Sp gr of sat solution at  $18^\circ = 2.45$  and 1 cc contains 2.16 g acid Easily sol in absolute alcohol insol in  $\text{CS}_2$  liquid hydrocarbons and  $\text{CHCl}_3$  (Pufahl, l c)

Sol in ether with subsequent separation into two layers See Phosphotungstic acid (Diedrichs B 20 1122)

+  $5\text{H}_2\text{O}$  Fluorescent When recryst comp with  $28\text{H}_2\text{O}$  is formed (Pufahl, l c)

$\text{As}_2\text{O}_5$ ,  $20\text{MoO}_3 + 27\text{H}_2\text{O}$  Sl sol in  $\text{HNO}_3$  + Aq (Debray, C R 78 1408)

**Ammonium arseniomolybdate**,  $(\text{NH}_4)_3\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + \text{H}_2\text{O}$

(Friedheim, Z anorg 1894, 6 28)

+  $4\text{H}_2\text{O}$  (Friedheim, l c)

$(\text{NH}_4)_3\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 2\text{H}_2\text{O}$  Sl sol in cold  $\text{H}_2\text{O}$  sol in acids (Debray)

+  $4\text{H}_2\text{O}$  Sl sol in cold very easily sol in hot  $\text{H}_2\text{O}$  (Pufahl, l c)

$2(\text{NH}_4)_3\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 6\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  Cannot be recryst therefrom (Pufahl)

+  $12\text{H}_2\text{O}$  (Friedheim, Z anorg 1894, 6 31)

$3(\text{NH}_4)_3\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 4\text{H}_2\text{O}$  (Friedheim, l c)

+  $8\text{H}_2\text{O}$  (Friedheim, l c)

$(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $7\text{MoO}_3$ ,  $\text{As}_2\text{O}_5 + 4\text{H}_2\text{O}$

Sol in hot  $\text{H}_2\text{O}$  (Seyberth, B 7 391)

Not obtained (Pufahl)

$7(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $14\text{MoO}_3 + 28\text{H}_2\text{O}$  (Friedheim, l c)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{MoO}_3 + 5\text{H}_2\text{O}$  (Friedheim, Z anorg 1894, 6 31)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{MoO}_3 + 9\text{H}_2\text{O}$  Neely insol in cold, sol in boiling  $\text{H}_2\text{O}$  Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Gibbs, Am Ch J 3 4)

+  $12\text{H}_2\text{O}$  (Pufahl, l c)

$2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 17\text{H}_2\text{O}$  (Pufahl, l c)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 14\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  and alcohol (Kehrmann, Z anorg 1894, 7 421)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $20\text{MoO}_3$  Easily sol in  $\text{H}_2\text{O}$  (Debray, C R 78 1408)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $24\text{MoO}_3 + 12\text{H}_2\text{O}$  composed by  $\text{H}_2\text{O}$ , especially when boiled

Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , less easily sol in warm  $\text{H}_2\text{SO}_4$  and boiling  $\text{H}_3\text{AsO}_4 + \text{Aq}$

Sl sol in molybdic acid + Aq,  $\text{HNO}_3$ , and conc  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Pufahl, l c)

**Barium arseniomolybdate**,  $\text{BaO}$ ,  $\text{As}_2\text{O}_5$

$6\text{MoO}_3 + 10\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  Partially decomp by boiling (Pufahl, l c)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$  Sl sol in  $\text{H}_2\text{O}$  (Pufahl, l c)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_5$ ,  $7\text{MoO}_3$  Ppt (Seyberth)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3$  Decomp by  $\text{H}_2\text{O}$  (Pufahl, l c)

**Cadmium arseniomolybdate**,  $\text{CdO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{CdO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 33\text{H}_2\text{O}$  (Pufahl)

**Cæsium arseniomolybdate**,  $\text{CsO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$

Sl sol in  $\text{H}_2\text{O}$  (Pufahl, l c)

$4\text{CsO}$ ,  $\text{As}_2\text{O}_5$ ,  $26\text{MoO}_3 + 15\text{H}_2\text{O}$  ppt (Lippmann, Z anorg 1910, 65 216)

**Calcium arseniomolybdate**,  $\text{CaO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 10\text{H}_2\text{O}$

Rather difficultly sol in cold  $\text{H}_2\text{O}$  (Pufahl, l c)

$3\text{CaO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$  As Ppt salt (Pufahl, l c)

$3\text{CaO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 32\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  Solution sat at  $18^\circ$  has sp gr = 2.163 (Pufahl, l c)

**Cobalt arseniomolybdate**,  $\text{CoO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{CoO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 33\text{H}_2\text{O}$  (Pufahl)

**Cupric arseniomolybdate**,  $\text{CuO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$  (Pufahl)

$3\text{CuO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$  (Pufahl)

**Lithium arseniomolybdate**,  $\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 14\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$3\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$  Solution sat at  $15^\circ$  has sp gr of 2.481 (Pufahl, *l c*)

**Magnesium arseniomolybdate**,  $\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 13\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$3\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 36\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

**Manganese arseniomolybdate**,  $\text{MnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{MnO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 33\text{H}_2\text{O}$  (Pufahl)

**Nickel arseniomolybdate**,  $\text{NiO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{NiO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$  (Pufahl)

**Potassium arseniomolybdate**,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 5\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim, Z anorg 2 314)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 5\text{H}_2\text{O}$  Sol in hot  $\text{H}_2\text{O}$  without decomp (Friedheim, Z anorg 1892, 2 330)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 25\text{H}_2\text{O}$  Easily sol in cold  $\text{H}_2\text{O}$  Decomp on dilution (Pufahl, *l c*)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 26\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $20\text{MoO}_3$  Insol in  $\text{H}_2\text{O}$  (Debray, C R 78 1408)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $24\text{MoO}_3 + 12\text{H}_2\text{O}$  Somewhat sol in  $\text{H}_2\text{O}$  acidified with  $\text{HNO}_3$  (Pufahl, *l c*)

**Rubidium arseniomolybdate**,  $3\text{RbO}$ ,  $3\text{AsO}_3$ ,  $5\text{MoO}_3 + 9\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Ephraim, Z anorg 1910, 65 241)

$\text{Rb}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$  Sl sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$4\text{RbO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 40\text{H}_2\text{O}$  Pptd (Ephraim, Z anorg 1910, 65 241-4)

**Silver arseniomolybdate**,  $3\text{AgO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl, Leipzig 1888)

$6\text{AgO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 22\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  Very sol in  $\text{NH}_4\text{OH}$  and in dil  $\text{HNO}_3$  (Pufahl, *l c*)

$7\text{AgO}$ ,  $2\text{As}_2\text{O}_5$ ,  $36\text{MoO}_3 + 30\text{H}_2\text{O}$  Sl sol in cold, easily sol in hot  $\text{H}_2\text{O}$  strongly acidified with  $\text{HNO}_3$  (Pufahl, *l c*)

**Sodium arseniomolybdate**,  $\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 5\text{H}_2\text{O}$

(Friedheim, Z anorg 1892, 2 357)

$\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 12\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  Solution sat at  $19.8^\circ$  has sp gr = 1.678 (Friedheim, *l c*)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O} + 12\text{H}_2\text{O}$ , and  $+13\text{H}_2\text{O}$  Sl sol in cold  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 24\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

$+30\text{H}_2\text{O}$  Sl sol in cold  $\text{H}_2\text{O}$  (Pufahl, *l c*)

**Strontium arseniomolybdate**,  $\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 10\text{H}_2\text{O}$

As Ba salt (Pufahl, *l c*)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$  As Ba salt (Pufahl, *l c*)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 32\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Pufahl, *l c*)

**Thallium arseniomolybdate**,  $6\text{Tl}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 2\text{H}_2\text{O}$

Ppt (Pufahl)

$3\text{Tl}_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 3\text{H}_2\text{O}$  Ppt (Pufahl)

**Zinc arseniomolybdate**,  $\text{ZnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 37\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Pufahl)

### Arseniophosphovanadicotungstic acid

**Ammonium arseniophosphovanadicotungstate**  
69V

Sol in  
(Rogers, J Am Chem Soc 1903, 25 314)

### Arseniophosphovanadocovanadotungstic acid

**Ammonium arseniophosphovanadocovanadotungstate**,  $99(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $66\text{V}_2\text{O}_5$ ,  $191\text{WO}_3 + 522\text{H}_2\text{O}$

Sl sol in cold  $\text{H}_2\text{O}$  (Rogers, J Am Chem Soc 1903, 25 314)

### Arseniophosphovanadotungstic acid

**Ammonium arseniophosphovanadotungstate**,  $82(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $52\text{V}_2\text{O}_5$ ,  $201\text{WO}_3 + 567\text{H}_2\text{O}$

Very sol in warm  $\text{H}_2\text{O}$  Insol in organic solvents (Rogers, J Am Chem Soc 1903, 25 312)

### Arseniosulphuric acid

**Ammonium arseniosulphate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$

Cubic cryst from  $\text{H}_2\text{O}$  (Friedheim and Mozkin, Z anorg 1894, 6 290)

**Potassium arseniosulphate**,  $2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$

(Friedheim and Mozkin, Z anorg 1894, 6 289)

$5\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{SSO}_3 + 6\text{H}_2\text{O}$  (Friedheim and Mozkin, Z anorg 1894 6 291)

**Sodium arseniosulphate**,  $2\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3+3\text{H}_2\text{O}$   
(Friedheim and Mozkun, Z anorg 1894, 6 290)

### Arseniotelluric acid

**Ammonium arseniotellurate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{TeO}_3+4\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Weinland, Z anorg 1901, 28 65)  
 $4(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{TeO}_3+11\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Weinland)

**Sodium arseniotellurate**,  $2\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{TeO}_3+9\text{H}_2\text{O}$   
Ppt (Weinland l c)

**Arseniotungstic acid**,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{WO}_3+32\text{H}_2\text{O}=\text{H}_3\text{AsW}_8\text{O}_{28}+16\text{H}_2\text{O}$  ( $\alpha$ -anhydroarsenolutedtungstic acid)  
Sol in  $\text{H}_2\text{O}$  (Kehrmann, A 245 45)  
 $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $19\text{WO}_3$  (?) Sp gr of sat solution in  $\text{H}_2\text{O}$  is 3 279 (Fremery, B 17 296)

Is a mixture containing principally  $\text{H}_3\text{AsW}_8\text{O}_{28}+16\text{H}_2\text{O}$  (Kehrmann)  
 $\text{As}_2\text{O}_5$ ,  $18\text{WO}_3+x\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Kehrmann, Z anorg 1899, 22 292)

### Aluminum ammonium arsenotungstate

See **Aluminicoarsenotungstate**, ammonium

**Ammonium arsenotungstate**,  $4(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{WO}_3+3\text{H}_2\text{O}$

Sl sol in cold  $\text{H}_2\text{O}$  or  $\text{HNO}_3+\text{Aq}$ , easily sol in boiling  $\text{H}_2\text{O}$  (Gibbs, Proc Am Acad 16 135)

$7(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $14\text{WO}_3+17\text{H}_2\text{O}$  Very sl sol even in boiling  $\text{H}_2\text{O}$  (Fremery, l c)  
 $3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{WO}_3+16\text{H}_2\text{O}=(\text{NH}_4)_3\text{AsW}_8\text{O}_{28}+8\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Kehrmann)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $17\text{WO}_3+8\text{H}_2\text{O}$  Can be recryst from  $\text{H}_2\text{O}$  without decomp Decomp by long boiling with  $\text{H}_2\text{O}$  (Kehrmann, Z anorg 1899, 22 294)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{WO}_3+14$ , or  $18\text{H}_2\text{O}$  Very sol in cold  $\text{H}_2\text{O}$  Can be recryst from  $\text{H}_2\text{O}$  (Kehrmann, l c)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $21\text{WO}_3+x\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  Easily decomp on recryst (Kehrmann, l c)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $24\text{WO}_3+12\text{H}_2\text{O}$  More sol in  $\text{H}_2\text{O}$  than corresponding phosphotungstate (Kehrmann, l c)

**Barium arsenotungstate**,  $2\text{BaO}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{WO}_3+x\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Pechard, A ch (6) 22 262)  
 $7\text{BaO}$ ,  $\text{As}_2\text{O}_5$ ,  $22\text{WO}_3+54\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Can be recryst therefrom (Kehrmann, l c)

**Potassium arsenotungstate**,  $3\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{WO}_3$

Insol in  $\text{H}_2\text{O}$  Readily sol in alk hydroxides + Aq (Gibbs)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{WO}_3+16\text{H}_2\text{O}=\text{K}_3\text{AsW}_8\text{O}_{28}+8\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Kehrmann)

$5\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $17\text{WO}_3+22\text{H}_2\text{O}$  Scarcely sol in cold  $\text{H}_2\text{O}$  (Kehrmann, Z anorg 899, 22 295)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{WO}_3+14\text{H}_2\text{O}$  Efflorescent (Kehrmann, l c)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $19\text{WO}_3+16\text{H}_2\text{O}$  (?) Sol in  $\text{H}_2\text{O}$  (Fremery)

**Silver arsenotungstate**,  $\text{Ag}_3\text{AsW}_8\text{O}_{28}$

Insol in  $\text{H}_2\text{O}$  (Kehrmann, A 245 55) perhaps identical with—

$6\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $16\text{WO}_3+11\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Gibbs)

**Sodium arsenotungstate**,  $3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $3\text{WO}_3+20\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Lefort, C R 92 61)

### Arsenous acid, $\text{HAsO}_2$

Solubility of  $\text{HAsO}_2$  in amyl alcohol + 1 at  $25^\circ$

$a_w$  = mol of  $\text{HAsO}_2$  in 1 l of  $\text{H}_2\text{O}$

$a_a$  = mol of  $\text{HAsO}_2$  in 1 l of amyl alcohol

$h$  = partition coefficient

$a_w$	$a_a$	$h$
0 0449	0 0082	5 48
0 0446	0 0083	5 38
0 0887	0 0164	5 41
0 0892	0 0161	5 53
0 1800	0 0324	5 55

(Auerbach, Z anorg 1903, 37 356)

Solubility of  $\text{HAsO}_2$  in sat  $\text{H}_2\text{BO}_3$  + 1 and amyl alcohol

$a_w$  = mol of  $\text{HAsO}_2$  in 1 l of  $\text{H}_2\text{O}$

$a_a$  = mol of  $\text{HAsO}_2$  in 1 l of amyl alcohol

$h$  = partition coefficient

$a_w$	$a_a$	$h$
0 0859	0 0161	5 33
0 1720	0 0321	5 35

(Auerbach, l c)

Insol in ethyl acetate (Nannum B 1904, 37 3601)

See **Arsenic trioxide**

### Arsenites

All arsenites, except those of the alkali metals, are partially or wholly insol in  $\text{H}_2\text{O}$ , but easily sol in acids, several also in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl}+\text{Aq}$

All basic arsenites are sol in acids except those that give an insol salt with the bases. Many are sol in excess of  $\text{As}_2\text{O}_3+\text{Aq}$

**Aluminum arsenite,  $\text{Al}_2\text{O}_3, \text{As}_2\text{O}_3$** 

Sl sol in boiling  $\text{H}_2\text{O}$  Easily sol in  $\text{NaOH} + \text{Aq}$  and in acids (Reichard, B 1894, 27 1029)

**Aluminum arsenite iodide,  $\text{AlI}_3, 6\text{As}_2\text{O}_3 + 16\text{H}_2\text{O}$** 

(Grühl, Dissert 1897)

**Ammonium arsenite,  $\text{NH}_4\text{AsO}_2$** 

Very sol in  $\text{H}_2\text{O}$  (Luynes, J pr 72 180)  
 Insol in acetone (Eidmann, C C 1899, II 1014), (Naumann, B 1904, 37 4328)  
 $(\text{NH}_4)_3\text{AsO}_3$  (?) Sol in  $\text{H}_2\text{O}$  (Stavenhagen, J pr 1895, (2) 51 11)  
 $(\text{NH}_4)_4\text{As}_2\text{O}_5$  Very sol in  $\text{H}_2\text{O}$  Insol in alcohol or ether (Stein, A 74 218)  
 Could not be obtained (Stavenhagen)

**Ammonium arsenite bromide,  $2\text{As}_2\text{O}_3, \text{NH}_4\text{Br}$** 

Sl sol in  $\text{H}_2\text{O}$  (Rudorff, B 19 2679)

**Ammonium arsenite chloride,  $\text{As}_2\text{O}_3, \text{NH}_4\text{Cl}$** 

Sl sol in  $\text{H}_2\text{O}$  Sol in warm dil  $\text{NH}_4\text{OH} + \text{Aq}$  (Rüdorff)

**Ammonium arsenite iodide,  $2\text{As}_2\text{O}_3, \text{NH}_4\text{I}$** 

Sl sol in boiling  $\text{H}_2\text{O}$  Sol in warm dil  $\text{NH}_4\text{OH} + \text{Aq}$  (Rudorff)

**Antimony arsenite (?)**

Ppt Sol in a small amount  $\text{H}_2\text{O}$ , but insol in a large quantity (Berzelius)  
 Completely sol in  $\text{KOH} + \text{Aq}$  (Reynolds)

**Barium arsenite,  $\text{Ba}(\text{AsO}_2)_2$** 

Easily sol in  $\text{H}_2\text{O}$  when recently pptd, but insol after being dried Pptd from aqueous solution by boiling (Filhol, A 68 308)

Only sl sol in  $\text{H}_2\text{O}$  (Stavenhagen, J pr 1895, (2) 51 18)

$\text{Ba}_3(\text{AsO}_4)_2$  Sl sol in cold  $\text{H}_2\text{O}$ , sol in hot  $\text{H}_2\text{O}$  and dil acids (Stavenhagen, J pr 1895, (2) 51 17)

$\text{BaH}_4(\text{AsO}_4)_3$  Ppt (Bloxum, Chem Soc 15 281)

+  $3\text{H}_2\text{O}$  Moderately sol in cold, more easily sol in hot  $\text{H}_2\text{O}$  Insol in alcohol (Perper, Dissert 1894)

$\text{Ba}_4\text{As}_2\text{O}_{11} + 2\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Stavenhagen, J pr 1895, (2) 51 18)

+  $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  also somewhat sol in alcohol (Stein, A 74 218)

Sl sol in  $\text{H}_4\text{AsO}_4 + \text{Aq}$  und  $\text{BaO} + \text{H}_2 + \text{Aq}$  (Dumais)

Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Wickemeyer, A 41 516)

Not pptd from solutions containing  $\text{Na}$  citrate (Spiller)

$\text{BaAs}_2\text{O}_7$  Sol in  $\text{H}_2\text{O}$  Less sol in alcohol (Reichard, B 1894, 27 1033)

**Bismuth arsenite,  $\text{BiAsO}_3 + 5\text{H}_2\text{O}$  (?)**

Easily sol in  $\text{HNO}_3 + \text{Aq}$  (Schneider, J p (2) 20 419)

Sl sol in  $\text{H}_2\text{O}$  (Stavenhagen, J pr 1895, (2) 51 35)

**Cadmium arsenite,  $\text{Cd}_3(\text{AsO}_3)_2$** 

Sl sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  and dil acids (Stavenhagen, l c)

$\text{Cd}_2\text{As}_2\text{O}_5$  Ppt (Reichard, B 1898, 31 2168)

Sol in acids without decomp, insol in alkalis (Reichard, B 1894, 27 1033)

$5\text{CdO}, \text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$  Not attacked by  $\text{KOH}$ ,  $\text{Ba}(\text{OH})_2$  or alkali carbonates +  $\text{Aq}$  Insol in  $\text{KCN} + \text{Aq}$  (Reichard, Ch Z 1902, 26 1145)

**Cæsium arsenite bromide,  $\text{As}_2\text{O}_3, \text{CsBr}$** 

Sol in  $\text{H}_2\text{O}$  (Wheeler, Z anorg 4 451)

**Cæsium arsenite chloride,  $\text{As}_2\text{O}_3, \text{CsCl}$** 

As above

**Cæsium arsenite iodide,  $\text{As}_2\text{O}_3, \text{CsI}$** 

As above

**Calcium arsenite,  $\text{Ca}(\text{AsO}_2)_2$** 

Somewhat sol in  $\text{H}_2\text{O}$ , sol in  $\text{Ca}(\text{OH})_2 + \text{Aq}$  or  $\text{As}_2\text{O}_3 + \text{Aq}$  (Simon, Pogg 47 417)

$\text{Ca}_3(\text{AsO}_3)_2$  Ppt (Kuhn, J B 1852 379)

Only sl sol  $\text{H}_2\text{O}$ , readily sol in dil acids (Stavenhagen, l c)

Sol in  $\text{H}_2\text{O}$ , insol in alcohol (Reichard, B 1894, 27 1036)

$3\text{CaO}, 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{NH}_4\text{Cl} + \text{Aq}$ , sol in  $\text{As}_2\text{O}_3 + \text{Aq}$  (Stein)

$\text{CaH}_4(\text{AsO}_3)_2 + x\text{H}_2\text{O}$  Moderately sol in  $\text{H}_2\text{O}$  Insol in abs alcohol (Perper, Dissert 1894)

$\text{Ca}_2\text{As}_2\text{O}_6$  Sl sol in  $\text{H}_2\text{O}$ , 1 pt in 3000-4000 pts  $\text{H}_2\text{O}$  Alkali chlorides increase solubility slightly (Stavenhagen, l c)

Sl sol in  $\text{H}_2\text{O}$  insol in  $\text{H}_2\text{O}$  containing  $\text{CaO}$  H (Berzelius)

Not pptd in presence of 4000-5000 pts  $\text{H}_2\text{O}$  (Harting, Lassaigne)

Not pptd from ac  $\text{H}_2\text{O}$  salts and  $\text{NH}_4\text{H}_2\text{O}$

Sl in  $\text{NH}_4\text{AsO}_2 + \text{Aq}$  (Schwigger)

Sol in  $\text{CaCl}_2 + \text{Aq}$  (Ordway)

Easily sol in dil acids Not pptd from solutions containing sodium citrate (Spiller)

**Calcium arsenite iodide,  $\text{CaI}_2, 3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  Decomp on heating (Grühl, Dissert 1897)

**Chromic arsenite,  $\text{CrAsO}_3$** 

Sol in  $\text{H}_2\text{O}$ , but slowly decomp by boiling (Neville, C N 34 220)

Sol in  $\text{HCl}$ , pptd by  $\text{NH}_4\text{OH} + \text{Aq}$  sol in  $\text{KOH} + \text{Aq}$  (Reichard, B 1894, 27 1028)

**Cobaltous arsenite basic,  $7\text{CoO}, \text{As}_2\text{O}_3$** 

Very sol in dil, difficultly sol in conc  $\text{H}_2\text{SO}_4$  Sol in conc  $\text{NaOH}$  und in conc  $\text{NaOH} + \text{Aq}$  (Reichard, Z anal 1903, 42 10)

**Cobaltous arsenite,  $3\text{CoO}, \text{As}_2\text{O}_3$** 

Sol KOH+Aq with decomp (Identical with salt of Girard) (Reichard, B 1894, **27** 1031)

+ $4\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$ , easily sol in acids (Stavenhagen, J pr 1895, (2) **51** 39)

$3\text{CoO}, 2\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$  Sol in  $\text{HNO}_3$  (Girard, C R 1852, **34** 918)

$\text{Co}_3\text{H}_6(\text{AsO}_3)_4$  Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  (Proust)

Only sol in KOH, or NaOH+Aq when formed in a solution containing an excess of those reagents (Reynoso, C R **31** 68)

$\text{Co}_2\text{As}_2\text{O}_5$  Ppt (Reichard, B 1898, **31** 2165)

Sol in  $\text{HNO}_3$  and  $\text{HCl} + \text{Aq}$  (Proust)

**Cupric arsenite,  $\text{Cu}(\text{AsO}_2)_2$** 

(Avery, J Am Chem Soc 1906, **28** 1161)  
Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, **20** 827)

+ $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Stavenhagen, *lc*)

+ $2\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol (Stavenhagen, *lc*)

$3\text{CuO}, \text{As}_2\text{O}_3$  Ppt (Stavenhagen, *lc*)

$2\text{CuO}, \text{As}_2\text{O}_3$  (Scheele's green) Insol in  $\text{H}_2\text{O}$ , sol in KOH+Aq,  $\text{NH}_4\text{OH} + \text{Aq}$ , and in most acids Formula is  $\text{Cu}_3(\text{AsO}_2)_2 + 2\text{H}_2\text{O}$  (Sharples, C N **35** 89)

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp Sol in KOH+Aq with decomp (Reichard, B 1894, **27** 1026)

Insol in pyridine (Schroeder, Dissert **1901**)

$5\text{CuO}, \text{As}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ , sol in acids,  $\text{NH}_4\text{OH} + \text{Aq}$  and conc  $\text{MOH} + \text{Aq}$  (Reichard, Ch Z 1902, **26** 1142)

$x\text{CuO}, y\text{As}_2\text{O}_3$  Min *Trippkeite* Easily sol in  $\text{HNO}_3$  and in  $\text{HCl} + \text{Aq}$

**Didymium arsenite,  $\text{Dy}_2\text{H}_3(\text{AsO}_3)_3$** 

Ppt (Frerichs and Smith, A **191** 355)

Does not exist (Cleve, B **11** 910)

**Glucinum arsenite iodide,  $\text{GII}_2, 3\text{As}_2\text{O}_3 + 8\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  (Gruhl, Dissert **1897**)

**Gold (aurous) arsenite,  $3\text{Au}_2\text{O}, \text{As}_2\text{O}_3$** 

Decomp by light (Reichard B 1894, **27** 1027)

**Gold (auric) arsenite,  $\text{AuAsO}_3 + \text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and dil acids (Stavenhagen, J pr 1895, (2) **51** 28)

**Iron (ferrous) arsenite,  $\text{FeO}, \text{As}_2\text{O}_3$** 

Decomp in the air when moist sol in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd (Reichard, B 1894, **27** 1029-30)

$\text{FeAsO}_3$  Ppt Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in  $\text{NH}_4$  arsenite, or other  $\text{NH}_4$  salts+Aq (Wittstein)

**Iron (ferric) arsenite, basic,  $4\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$** 

Ppt  $\text{H}_2\text{O}$  extracts  $\text{As}_2\text{O}_3$  Sol in one acid with separation of  $\text{As}_2\text{O}_3$  Acetic acid is without action (Bunsen and Berzold, **1834**)

Sol in KOH, or NaOH+Aq

**Iron (ferric) arsenite,  $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_3$** 

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd (Reichard, B 1894, **27** 1030)

$\text{Fe}_4\text{As}_2\text{O}_9$  Ppt (Reichard, B 1895, **31** 2170)

+ $7\text{H}_2\text{O}$  Sol in NaOH, and KOH+Aq "Ferric arsenite" is sl sol in  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$  (Kynaston, Dingl **235** 326)

**Lanthanum arsenite,  $\text{La}_2\text{H}_3(\text{AsO}_3)_3$** 

Ppt (Frerichs and Smith, A **191** 355)

Does not exist (Cleve, B **11** 910)

**Lead arsenite,  $\text{Pb}(\text{AsO}_2)_2 + x\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  Insol in KOH, but sl in NaOH+Aq (Berzelius)

$\text{Pb}_2\text{As}_2\text{O}_5$  Insol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$   $\text{NH}_4$  arsenite, or other  $\text{NH}_4$  salts+Aq (Wittstein)

$\text{Pb}_3(\text{AsO}_3)_2$  Scarcely sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O} + \text{Aq}$  Insol in  $\text{H}_2\text{O}$  dissolves some  $\text{As}_2\text{O}_3$  Not completely insol in KOH+Aq (Streng, A **129** 23)

Sol in acetic acid, insol in  $\text{H}_2\text{O}$  the presence of ammonium salts, sol in NaOH+Aq, sl sol in KOH+Aq (Reichard, B 1894, **27** 1024)

+ $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$ , easily sol in dil acids (Stavenhagen, J pr 1895, (2) **33**)

**Lead arsenite chloride,  $\text{Pb}_3\text{As}_2\text{O}_8, 2\text{PbCl}_2$** 

Min *Ekdemite* Easily sol in  $\text{HNO}_3 + \text{Aq}$ , and warm  $\text{HCl} + \text{Aq}$

**Magnesium arsenite,  $\text{Mg}_3(\text{AsO}_3)_3$** 

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ , but sol in large excess of  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rosen)

Very sol in boiling  $\text{H}_2\text{O}$  and in dil acids Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Reichard, B 1894, **27** 1032)

Very sol in  $\text{H}_2\text{O}$  and dil acids (Stavenhagen, *lc*)

$\text{Mg}_2\text{As}_2\text{O}_7 + 4\text{H}_2\text{O}$  Hygroscopic Very sol in  $\text{H}_2\text{O}$  and acids (Stavenhagen, *lc*)

$3\text{MgO}, 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O} + 15\text{H}_2\text{O}$ , and + $18\text{H}_2\text{O}$  (Perper Dissert **1894**)

**Magnesium arsenite iodide,  $\text{Mg}_3\text{I}_3(\text{AsO}_3)_3 + 12\text{H}_2\text{O}$** 

Moderately sol in  $\text{H}_2\text{O}$  (Gruhl, Dissert **1897**)

**Manganous arsenite,  $\text{Mn}_3(\text{AsO}_3)_3 + 3\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$ , insol in alcohol, easily oxidized by moist air (Stavenhagen, *lc*)

$3\text{MnO}, 2\text{As}_2\text{O}_3$  (Reichard B 1895, **27** 1032)

$Mn_3H_2As_4O_{10} + 4H_2O$  Sl sol in  $H_2O$   
Very sol in acids and alkali (Stavenhagen, *lc*)  
 $Mn_3As_2O_8$  Ppt (Reichard, B 1898, 31 2165)

**Mercurous arsenite,  $Hg_2O, As_2O_3$**

Decomp by light Decomp by  $H_2O$   
(Reichard, B 1894, 27 1022)

$Hg_3AsO_3$  Only sl sol in  $H_2O$ , sol in dil acids (Stavenhagen, J pr 1895, (2) 51 24)

Gradually and completely decomposed by  $H_2O$  (Reichard, Ch Z 1902, 26 1143)

**Mercuric arsenite,  $Hg_3(AsO_3)_2$**

Sl sol in  $H_2O$  (Stavenhagen, *lc*)

Decomp more easily by  $H_2O$  than is the mercurous comp (Reichard, Ch Z 1902, 26 1143)

$2HgO, As_2O_3$  Not decomp by boiling with  $H_2O$  Undecomp by boiling acids  
Decomp by  $KOH + Aq$ ,  $K_2CO_3 + Aq$  and  $NH_4OH + Aq$  (Reichard, B 1894, 27 1021)

$Hg_3As_2O_8$  Ppt Decomp by boiling  $H_2O$   
Very sl sol in  $H_2SO_4 + HCl$  (Reichard, B 1898, 31 2170)

**Nickel arsenite,  $Ni_3(AsO_3)_2$**

Insol in  $H_2O$ , easily sol in  $NH_4OH + Aq$  (Proust)

Ppt (Reichard, B 1898, 31 2165)

$3NiO, 2As_2O_3$  Sol in  $NH_4OH + Aq$  (identical with salt of Girard) (Reichard, B 1894, 27 1031)

$+ 4H_2O$  Insol in  $H_2O$ , sol in  $NH_4OH + Aq$  (Proust)

Sol in  $KOH + Aq$  (Girard, C R 34 918)

$2NiO, As_2O_3$  Insol in  $H_2O$ , sol in  $NH_4OH + Aq$ , sol in  $KOH + Aq$  (Reynoso, C R 31 68)

**Platinum arsenite,  $Pt_3(AsO_3)_4$**

Sol in  $H_2O$  and alcohol, very unstable (Stavenhagen, *lc*)

**Potassium arsenite,  $K_3AsO_3$**

Sol in  $H_2O$  sl sol in alcohol (Proust, A 68 309)

Insol in ethyl acetate (Nannum, B 1904, 37 5601)

Does not exist (Stavenhagen, *lc*)

$K_3AsO_3$  Very sol in  $H_2O$ , sol in alcohol (Stavenhagen, *lc*)

$K_4AsO_7 + 6H_2O$  Very sol in  $H_2O$ , sol in alcohol (Stavenhagen, *lc*)

$K_4As_4O_{17} + 2H_2O$  Sol in  $H_2O$ , sl sol in alcohol (Proust, A 68 309)

**Potassium arsenite bromide,  $4AsO_3, 2KBr$**

More sol in  $H_2O$  than iodide (Schiff and Sestini, A 228 72)

$2AsO_3, KBr$  (Rudorff, B 19 2675)

**Potassium arsenite chloride,  $2As_2O_3, KCl$**

Much more quickly sol in hot  $H_2O$  than bromide or iodide (Rudorff, B 19 2675)

$As_2O_3, KCl$  Decomp by  $H_2O$

**Potassium arsenite iodide,  $3As_2O_3, 2KI + H_2O$**

Sl sol in cold  $H_2O$ , sol in 20 pts boiling, and 40 pts cold  $H_2O$  (Emmet, Sill Am J (2) 18 583)

$6KAsO_3, 2KI + 3H_2O$  Sol in  $H_2O$  and alcohol Decomp by acids (Harms)

$2KH(AsO_3)_2, As_2O_3, 2KI$  Sl sol in  $H_2O$  (Harms, A 91 371)

$2As_2O_3, KI$  Very difficultly sol even in boiling  $H_2O$  Very easily sol in  $KOH + Aq$ , but much less so in  $K_2CO_3 + Aq$  (Rudorff, B 19 2670)

Sol in 40 pts cold, 20 pts hot  $H_2O$ , sol in alkalies (Schiff and Sestini, A 228 72)

**Potassium arsenite sulphate,  $K_3AsO_3, 10K_2SO_4$**

(Stavenhagen, Zeit angew ch 1894, 8 166)

**Rubidium arsenite,  $RbAsO_3$**

Sol in  $H_2O$ , aq solution is alkaline to litmus Insol in alcohol (Bouchonnet, C R 1907, 144 641)

**Rubidium arsenite bromide,  $As_2O_3, RbBr$**

Decomp by  $H_2O$  (Wheeler, Z anorg 4 451)

**Rubidium arsenite chloride,  $As_2O_3, RbCl$**

As above

**Rubidium arsenite iodide,  $As_2O_3, RbI$**

As above

**Silver arsenite,  $Ag_3AsO_3$**

Insol in  $H_2O$  Not pptd in presence of 20,000 pts  $H_2O$  (Harting)

11  $H_2O$  dissolves 0.0115 g  $Ag_3AsO_3$  at  $20^\circ$  (Whitby, Z anorg 1910, 67 108)

Only sl sol in  $H_2O$  and in dil acids, readily sol in  $NH_4OH + Aq$  and conc acids (Stavenhagen, *lc*)

Decomp by light, by  $KOH + Aq$  and by  $NH_4OH + Aq$  (Reichard, B 1894, 27 1022-23)

Easily sol in  $HNO_3 + Aq$  and other acids (Maret)

More easily sol in  $HClH_3O + Aq$  than  $Ag_3PO_4$  sl sol in  $HClH_3O + Aq$  (Santos, C N 38 94)

Insol in  $KOH + Aq$  (Kuhn, Arch Pharm (2) 69 267)

Easily sol in  $NH_4OH + Aq$  (Maret)

Insol in  $NH_4OH + Aq$ , but sol therein in presence of alkali nitrates (Santos *lc*)

Incompletely sol in  $(NH_4)CO_3$ ,  $(NH_4)SO_4$ , or  $NH_4NO_3 + Aq$  (Wittstein, Report 51 41)

Decomp by  $\text{NH}_4\text{Cl} + \text{Aq}$  Sol in  $\text{KAsO}_4 + \text{Aq}$  (Kuhn, *l c*)  
 Not pptd in solutions containing sol citrates (Spiller)  
 Sol in methyl acetate (Naumann, B 1909, **42** 3790)  
 Sl sol in methyl acetate (Bezold, Dissert 1908)

Insol in ethyl acetate (Hamers, Dissert 1906), (Naumann, B 1910, **43** 314)  
 $+ \text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and in dil acids (Stavenhagen, J pr 1895, (2) **51** 29)

$2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$  Ppt (Pasteur, J Pharm (3) **13** 395)

Could not be obtained (Stavenhagen, *l c*)  
 $3\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_3$  Sol in cold  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Santos)

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  and in potassium arsenite +  $\text{Aq}$  (Girard, C R **34** 918)

Ppt (Reichard, B 1898, **31** 2167)  
 Could not be obtained (Stavenhagen, *l c*)

**Silver arsenite ammonia**,  $2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{NH}_3$

Insol in  $\text{H}_2\text{O}$  or alcohol (Girard)

### Sodium arsenites

Correspond to potassium arsenites, but have not been obtained in crystalline form. All are very sol in  $\text{H}_2\text{O}$  (Pasteur, A **68** 308)  
 $\text{Na}_3\text{AsO}_3$  Very sol in  $\text{H}_2\text{O}$  (Stavenhagen, *l c*)

Insol in ethyl acetate (Naumann, B 1904, **37** 3602)

**Sodium arsenite bromide**,  $2\text{AsO}_3$ ,  $\text{NaBr}$

Decomp by warm  $\text{H}_2\text{O}$  (Rudorff, B **21** 3052)

**Sodium arsenite iodide**,  $2\text{AsO}_3$ ,  $\text{NaI}$

Decomp by hot  $\text{H}_2\text{O}$  (Rudorff)

**Strontium arsenite**,  $\text{Sr}_3(\text{AsO}_3)_4$

Sol in  $\text{H}_2\text{O}$  (Stavenhagen, *l c*)  
 Sol in  $\text{H}_2\text{O}$ , insol in alcohol (identical with Stein)

(Reichard, B 1894, **27** 1036)  
 $\text{Sr}_2\text{AsO}_5 + 2\text{H}_2\text{O}$  Quite easily sol in  $\text{H}_2\text{O}$  (Stein)

Sl sol in  $\text{H}_2\text{C}$ ,  $\text{SrO}_2\text{H} + \text{Aq}$ , or  $\text{H}_3\text{AsO}_4 + \text{Aq}$  (Dumas)

Very sl sol in alcohol (Stein)  
 Easily sol in  $\text{H}_2\text{O}$  and in acids (Stavenhagen, J pr 1895, (2) **51** 17)

$\text{Sr}_3\text{As}_4\text{O}_{13}$  Moderately sol in  $\text{H}_2\text{O}$  (Reichard, B 1894, **27** 1036)

**Strontium arsenite iodide**,  $\text{SrI}_2$ ,  $3\text{AsO}_3 + 12\text{H}_2\text{O}$

As Ba comp (Grühl, Dissert 1897)

**Thallium arsenite**,  $\text{Tl}_3\text{AsO}_3$

Sl sol in  $\text{H}_2\text{O}$  and alcohol, easily sol in acids, especially in dil  $\text{H}_2\text{SO}_4$  (Stavenhagen, *l c*)

**Tin (stannous) arsenite**,  $\text{Sn}_3(\text{AsO}_3)_2$

Ppt, decomp by acids and alkali (Reichard, B 1898, **31** 2169)

$+ 2\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  Easily so in dil acids and alkalies (Stavenhagen, *l c*)

**Tin (stannic) arsenite**,  $\text{Sn}_3(\text{AsO}_3)_4 + 5\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Stavenhagen, *l c*)  
 $5\text{SnO}_2$ ,  $2\text{As}_2\text{O}_3$  Ppt Sol in acids (Reichard, B 1894, **27** 102)

decomp (Reichard, B 1894, **27** 102)  
 $\text{Sn}_7\text{As}_2\text{O}_{17}$  Ppt (Reichard, B 1 2169)

**Uranium arsenite**,  $\text{UO}_2$ ,  $\text{As}_2\text{O}_3$

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ , only sl sol in  $\text{H}_2\text{O}$  (Reichard, B 1 1029)

**Zinc arsenite**,  $\text{ZnO}$ ,  $\text{As}_2\text{O}_3$

Ppt (Avery, J Am Chem Soc 1 **16**, **28** 1163)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_3$  Sol in acids without comp Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Reichard, B 1894, **27** 1033)

**Arsenovanadic acid**,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$ , but solution easily decomposes, crystallizes from  $\text{H}_2\text{O}$  with  $3\text{H}_2\text{O}$

Composition is vanadium dihydrogen arsenate  $(\text{VO}_2)_2\text{H}_2\text{AsO}_4$  (Friedheim, B **23** 2600)

$+ 14$ , and  $+ 18\text{H}_2\text{O}$  (Ditte, C **102** 757) Could not be obtained (Friedheim)

$3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5$  (Berzelius) Correlation formula is as above (Friedheim)

$3\text{H}_2\text{O}$ ,  $7\text{As}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$  (Gibbs, Am Ch J **7** 209) Could not be obtained (Friedheim)

$3\text{H}_2\text{O}$ ,  $5\text{As}_2\text{O}_5$ ,  $8\text{V}_2\text{O}_5 + 24\text{H}_2\text{O}$  (Gibbs) Could not be obtained (Friedheim)

### Arsenovanadates

According to Friedheim (Z anorg 1892, **2** 319) the arsenovanadates include arsenates of  $\text{VO}_2$  and  $\text{NH}_4$

**Ammonium arsenovanadate**,  $(\text{NH}_4)_3\text{AsO}_4$ ,  $2\text{V}_2\text{O}_5$ ,  $+ 5\text{H}_2\text{O}$

Efflorescent in dry air, sl sol in cold, decomp by hot  $\text{H}_2\text{O}$  Composition is ammonium divanadium arsenate  $(\text{VO}_2)_2(\text{NH}_4)\text{AsO}_4 + 2\text{H}_2\text{O}$  (Friedheim, B **23** 2600)

Sl sol in cold  $\text{H}_2\text{O}$  Somewhat more easily sol in hot  $\text{H}_2\text{O}$  with separation of  $\text{V}_2\text{O}_5$

(Schmitz-Dumont, Dissert 1891)

$2(\text{NH}_4)_2\text{O}$ ,  $3\text{AsO}_3$ ,  $2\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$  Cannot be crystallized from  $\text{H}_2\text{O}$  Composition is  $(\text{NH}_4)_3\text{HAsO}_4 + 2(\text{VO}_2)_2\text{HAsO}_4$  (Friedheim)

Decomp under  $\text{H}_2\text{O}$  to  $(\text{NH}_4)_3\text{AsO}_4$  and  $\text{V}_2\text{O}_5$

$\text{AsO}_3 + 5\text{H}_2\text{O}$  (Schmitz-Dumont, *l c*)  
 $5(\text{NH}_4)_2\text{O}$ ,  $4\text{AsO}_3$ ,  $2\text{V}_2\text{O}_5 + 18\text{H}_2\text{O}$  sol in  $\text{H}_2\text{O}$  (Ditte, C R **102** 1019) Does not exist (Friedheim, B **23** 2605)

**Calcium arseniovanadate**,  $2\text{CaO}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 21\text{H}_2\text{O} = \text{CaHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$

Can be crystallized in presence of vanadic acid without decomp (Friedheim)

Efflorescent Sol in  $\text{H}_2\text{O}$  (Schmitz-Dumont, *lc*)

**Cobalt arseniovanadate**,  $\text{CoO}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 9\text{H}_2\text{O} = \text{Co}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

**Copper arseniovanadate**,  $\text{CuO}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 4\text{H}_2\text{O} = \text{Cu}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

**Magnesium arseniovanadate**,  $\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 10\text{H}_2\text{O} = (\text{VO}_2)_2\text{MgH}_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

Moderately sol in  $\text{H}_2\text{O}$  Solution decomps on standing (Schmitz-Dumont, *lc*)

$2\text{MgO}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 23\text{H}_2\text{O} = \text{MgHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Friedheim)

Sol in  $\text{H}_2\text{O}$  but solution decomps on evaporation (Schmitz-Dumont, *lc*)

**Potassium arseniovanadate**,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O} = (\text{VO}_2)_2\text{KAsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

Sl sol in cold  $\text{H}_2\text{O}$  Partially decomps on heating (Schmitz-Dumont)

**Strontium arseniovanadate**,  $2\text{SrO}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 20\text{H}_2\text{O} = \text{SrHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

+  $21\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Schmitz-Dumont)

**Zinc arseniovanadate**,  $\text{ZnO}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 6\frac{1}{2}\text{H}_2\text{O} = \text{Zn}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Friedheim)

$2\text{ZnO}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 51\text{H}_2\text{O}$ , and +  $18\text{H}_2\text{O} = \text{ZnHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$ , and +  $6\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Friedheim)

### Arseniovanadicotungstic acid

**Ammonium arseniovanadicotungstate**,

$17(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $14\frac{1}{2}\text{V}_2\text{O}_5$ ,  $29\text{WO}_3 + 98\text{H}_2\text{O}$

Sl sol in cold  $\text{H}_2\text{O}$  Readily sol in boiling  $\text{H}_2\text{O}$  Insol in alcohol, ether, benzene,  $\text{CS}_2$ ,  $\text{CHCl}_3$ , acetone, nitrobenzene, aniline and acetic acid (Rogers, J Am Chem Soc 25 17)

### Arseniovanadicovanadic acid

**Ammonium arseniovanadicovanadate**,

$5(\text{NH}_4)_2\text{O}$ ,  $12\text{As}_2\text{O}_5$ ,  $12\text{VO}$ ,  $6\text{V}_2\text{O}_5 + 7\text{H}_2\text{O}$

Sl sol in cold, sol in hot  $\text{H}_2\text{O}$ , from which crystallizes—

$4(\text{NH}_4)_2\text{O}$ ,  $9\text{As}_2\text{O}_5$ ,  $9\text{VO}_2$ ,  $8\text{V}_2\text{O}_5 + 11\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Gibbs, Am Ch J 7 209)

### Arseniovanadicovanadotungstic acid

**Ammonium arseniovanadicovanadotungstate**,

$17(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_3$ ,  $32\text{WO}_3 + 73\text{H}_2\text{O}$

Sl sol in cold, readily sol in boiling  $\text{H}_2\text{O}$  (Rogers, J Am Chem Soc 1903, 25 310)

### Arseniovanadotungstic acid

**Ammonium arseniovanadotungstate**,

$18(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $13\text{V}_2\text{O}_5$ ,  $39\text{WO}_3 + 88\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  Insol in organic solvents (Rogers, J Am Chem Soc 1903, 25 306)

### Arseniuretted hydrogen, $\text{AsH}_3$

See Arsenic hydride

### Arsenochromic acid

**Potassium arsenochromate**,  $\text{K}_4\text{Cr}_2\text{As}_2\text{O}_{18} + 12\text{H}_2\text{O}$

Sol in moderately conc mineral acids (Tarugi, C C 1897, II 724)

$\text{K}_7\text{Cr}_2\text{As}_2\text{O}_{22} + 24\text{H}_2\text{O}$  Ppt Sol in dil warm acids (Tarugi)

**Potassium hydrogen arsenochromate**,

$\text{K}_4\text{H}_5\text{Cr}_2\text{As}_2\text{O}_{18}$

(Tarugi, C C 1897, II 724)

### Arsenosarsenotungstic acid

**Potassium arsenosarsenotungstate**,  $10\text{K}_2\text{O}$ ,  $4\text{As}_2\text{O}_5$ ,  $\text{As}_2\text{O}_3$ ,  $21\text{WO}_3 + 26\text{H}_2\text{O}$

Precipitate Sol in a large amount of hot  $\text{H}_2\text{O}$  (Gibbs, Am Ch J 7 313)

### Arsenosomolybdic acid

**Ammonium arsenosomolybdate**,  $3(\text{NH}_4)_2\text{O}$ ,  $5\text{As}_2\text{O}_5$ ,  $12\text{MoO}_3 + 24\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Gibbs, Am Ch J 7 313)

**Ammonium barium arsenosomolybdate**,

$3(\text{NH}_4)_2\text{O}$ ,  $2\text{BaO}$ ,  $5\text{As}_2\text{O}_5$ ,  $10\text{MoO}_3 + 50\text{H}_2\text{O}$

Ppt (Ephraim, Z anorg 1910, 66 57)

**Ammonium cupric arsenosomolybdate**,

$(\text{NH}_4)_2\text{O}$ ,  $\text{CuO}$ ,  $2\text{As}_2\text{O}_5$ ,  $4\text{MoO}_3 + 2\text{H}_2\text{O}$ , and  $2(\text{NH}_4)_2\text{O}$ ,  $\text{CuO}$ ,  $3\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 13\text{H}_2\text{O}$

Ppts (Ephraim, Z anorg 1910, 66 58)

**Barium arsenosomolybdate**,  $3\text{BaO}$ ,  $2\text{As}_2\text{O}_5$ ,  $8\text{MoO}_3 + 13\text{H}_2\text{O}$

Very sl sol in  $\text{H}_2\text{O}$  (Gibbs)

**Copper arsenosomolybdate**,  $2\text{CuO}$ ,  $3\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$

Sol in  $\text{H}_2\text{O}$  (Gibbs)

**Manganese arsenosomolybdate**,  $2\text{MnO}$ ,  $3\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 6\text{H}_2\text{O}$ , and +  $15\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Gibbs)

**Potassium arsenosomolybdate**,  $3K_2O, As_2O_3, 5MoO_3 + 3H_2O$

Easily sol in  $H_2O$  (Ephraim, Z anorg 1910, 66 54)

$3K_2O, As_2O_3, 8MoO_3 + 18H_2O$  Easily sol in  $H_2O$  (Ephraim)

**Sodium arsenosomolybdate**,  $Na_2O, As_2O_3, 2MoO_3 + 6H_2O$

Easily sol in  $H_2O$  (Ephraim, Z anorg 1910, 66 56)

$2Na_2O, As_2O_3, 4MoO_3 + 13H_2O$  Ppt (Ephraim)

**Zinc arsenosomolybdate**,  $2ZnO, 3As_2O_3, 6MoO_3 + 6H_2O$

Sol in  $H_2O$  (Gibbs)

### Arsenosophosphotungstic acid

**Potassium arsenosophosphotungstate**,  $10K_2O, 14As_2O_3, 3P_2O_5, 32WO_3 + 28H_2O$

Moderately sol in cold, very easily in hot  $H_2O$  (Gibbs)

$7K_2O, 2As_2O_3, 4P_2O_5, 60WO_3 + 55H_2O$  Sol in hot  $H_2O$  with decomp (Gibbs)

**Potassium sodium arsenosophosphotungstate**,  $5K_2O, Na_2O, 2As_2O_3, 2P_2O_5, 12WO_3 + 15H_2O$

(Gibbs, Am Ch J 7 313)

### Arsenosotungstic acid

**Ammonium arsenosotungstate**,  $7(NH_4)_2O, 2As_2O_3, 18WO_3 + 18H_2O$

Sol in  $H_2O$  (Gibbs)

**Barium arsenosotungstate**,  $4BaO, As_2O_3, 9WO_3 + 21H_2O$

Precipitate Nearly insol in  $H_2O$  (Gibbs)

**Sodium arsenosotungstate**,  $9Na_2O, 8As_2O_3, 18WO_3 + 55H_2O$

Very sol in  $H_2O$  (Gibbs, Am Ch J 7 313)

**Arsenyl bromide**,  $AsOBr$

$H_2O$  dissolves out  $As_2O_3$ , insol in alcohol (Serullas)

$+H_2O$  (Wallace, Phil Mag (4) 17 122)  
 $As_2O_3Br_2 = 2AsBr_3, 3As_2O_3 + 12H_2O$

**Arsenyl bromide with MBr**

See Arsenite bromide, M

**Arsenyl chloride**,  $AsOCl$

Sol in  $H_2O$  with decomp

$+H_2O$  (Wallace, Phil Mag (4) 16 358)  
 $As_2O_4Cl$  (Wallace)

**Arsenyl chloride with MCl**

See Arsenite chloride, M

**Arsenyl potassium fluoride**,  $AsOF_3, KF + H_2O$

(Margnac, A 145 237)

**Arsenyl iodide**,  $As_2I_2O_{11} = 2AsO 3As_2O_3 + 12H_2O$

Decomp by  $H_2O$  (Wallace, Phil Mag (4) 17 122)

Sl sol in cold  $H_2O$ , less sol in alcohol (Phisson, J Pharm 14 46)

**Arsenyl iodide with MI**

See Arsenite iodide, M

**Arsenyl sulphoiodide**,  $As_2I_2S_2O_8$

Scarcely attacked by cold  $H_2O$  Boiling  $H_2O$  extracts  $AsI_3$  Decomp by  $HNO_3$  or  $H_2SO_4$  Easily sol in  $KOH$ , or  $NH_4OH + Aq$  (Schneider, J pr (2) 36 513)

### Arsine

See Arsenic hydride

### Atmospheric air

See Air, atmospheric

**Auriamine**,  $Au(OH)_2NH_2$

(Jacobsen, C R 1908, 146 12)

**Dauriamine**,  $Au_2(OH)_4NH_2$

(Jacobsen, C R 1908, 146 12)

**Sesquauriamine**,  $NAu_3, NH_3$

Decomp by  $H_2O$  into  $NAu_3$  taschig, A 235 341)

**Auric acid**,  $HAu_2O_4$

Sol in  $HBr$ , or  $HCl + Aq$  (Fuss, B 19 2546)

**Ammonium aurate**

See Auroamidoimide

**Barium aurate**,  $BaAuO_4 + 5H_2O$

Sl sol in  $H_2O$  (Weigand, Zeit angew Ch 1905, 19 139)

$+6H_2O$  Sl sol in  $H_2O$  Sol in dil  $H_2SO_4$  and in dil  $HNO_3$  Sol in  $HCl$  Decomp by alcohol (Meyer, C R 1907, 14 806)

**Calcium aurate (?)**

Insol in  $H_2O$ , sol in  $CaCl_2 + Aq$  (Fremy, A ch (3) 31 485)

$CaAu_2O_4 + 6H_2O$  As But sa (Meyer, C R 1907, 145 806)

**Magnesium aurate (?)**

Ppt Insol in  $H_2O$ , sol in  $IgCl + Aq$  (Pellat)

**Potassium aurate**,  $KAuO_2 + 3H_2O$

Very sol in  $H_2O$ , and easily decomp (Fremy, A ch (3) 31 183)

Sol in alcohol, the solution in alcohol does not decomp below  $50^\circ$  (Lugnet, A ch (3) 11 364)

**Potassium aurate sulphite**,  $KAuO_2, 2K_2SO_3 + 5H_2O$

Sol in  $H_2O$  with decomp early insol in alkaline solutions (Fremy, A ch (3) 31 485)

**Sodium aurate**,  $\text{Na}_2\text{Au}_2\text{O}_4 + 2\text{H}_2\text{O}$ 

Sol in  $\text{H}_2\text{O}$  Sol in dil  $\text{H}_2\text{SO}_4$ , dil  $\text{HNO}_3$ , and  $\text{HCl}$  with decomp Decomp by alcohol (Meyer, C R 1907, **145** 806)

**Strontium aurate**,  $\text{SrAu}_2\text{O}_4 + 6\text{H}_2\text{O}$ 

As Ba salt (Meyer)

**Aurumide chloride**,  $\text{Au}(\text{NH})\text{Cl}$ 

(Raschig)

**Aurumide nitrate**,  $\text{Au}_2\text{N}_2\text{H}_2\text{O}$ ,  $2\text{HNO}_3$ , or  $\text{AuN}$ ,  $\text{HNO}_3 + \frac{1}{2}\text{H}_2\text{O}$ , or  $\text{Au}_2\text{O}(\text{NH})_2$ ,  $2\text{HNO}_3$ 

Not deliquescent Decomp by hot  $\text{H}_2\text{O}$  into  $\text{Au}_2\text{O}(\text{NH})_2$  (Schottlander, J B 1884 453)

**Auroamidoumide**,  $\text{Au}(\text{HN})\text{NH}_2 + 3\text{H}_2\text{O}$ 

(Fulminating gold) Insol in  $\text{H}_2\text{O}$ , not attacked by dil acids, sol in conc acids, and in moderately dil acids, when freshly precipitated Insol in alkalis or alcohol Sol in  $\text{KCN} + \text{Aq}$

**Triauroamine**,  $\text{Au}_3\text{N} + 5\text{H}_2\text{O}$ 

Not decomp by boiling dil acetic acid,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$  (Raschig, A 1886, **235** 349)

**Auricyanhydric acid**,  $\text{HAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$ 

Easily sol in  $\text{H}_2\text{O}$ , alcohol, or ether

See also Bromauricyanides

Chlorauricyanides

Iodauricyanides

**Ammonium auricyanide**,  $\text{NH}_4\text{Au}(\text{CN})_4$ 

Easily sol in  $\text{H}_2\text{O}$  or alcohol Insol in ether

**Cobaltous auricyanide**,  $\text{Co}[\text{Au}(\text{CN})_4]_2 + 9\text{H}_2\text{O}$ 

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  Sl sol in alcohol (Lindbom)

**Potassium auricyanide**,  $\text{KAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$ 

Efflorescent Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  Easily sol in alcohol

**Silver auricyanide**,  $\text{AgAuCN}_4$ 

Insol in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$

**Diaurodiamine nitrate**

See Aurumide nitrate

**Aurobromhydric acid**

See Bromauric acid

**Aurobromic acid**

See Bromauric acid

**Aurochlorhydric acid**

See Chlorauric acid

**Aurochloric acid**

See Chlorauric acid

**Aurocyanhydric acid****Aurocyanides with MCN**

See Cyanide, aurous with MCN

**Azinosulphonic acid****Ammonium azinosulphonate**,  $\text{N}_3\text{SO}_3\text{NH}_4$ 

(Traube, B 1914, **47** 944)

**Barium azinosulphonate**,  $(\text{N}_3\text{SO}_3)_2\text{Ba}$ 

(Traube, B 1914, **47** 944)

**Potassium azinosulphonate**,  $\text{N}_3\text{SO}_3\text{K}$ 

Easily sol in  $\text{H}_2\text{O}$  Can be cryst from boiling abs alcohol (Traube, B 1914, **47** 943)

**Sodium azinosulphonate**,  $\text{N}_3\text{SO}_3\text{Na}$ 

(Traube, B 1914, **47** 944)

**Azoumide**,  $\text{HN}_3$ 

Miscible with  $\text{H}_2\text{O}$  and alcohol (Curtius and Radershausen, J pr (2) **43** 207)

Stable in aq solution, decomp slowly by dil boiling  $\text{HCl}$  (Curtius, J pr 1898, (2) **58** 265)

For salts of  $\text{HN}_3$ , see azoumide of metal under metal

**Azoumide, hydroxylamine**,  $\text{N}_3\text{H} \cdot 2\text{NH}_2\text{OH}$ 

Sol in  $\text{H}_2\text{O}$  Gradually volatilizes at ord temp (Dennis, J Am Chem Soc 1907, **29** 22)

**Azophosphoric acid**

See Pyrophosphamic acid

**Deutazophosphoric acid**

See Pyrophosphodiamic acid

**Barium, Ba**

Decomp by  $\text{H}_2\text{O}$  and abs alcohol (Guntz, C R 1901, **133** 874)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, **20** 827)

**Barium amalgam**,  $\text{BaHg}_{13}$ 

Stable in contact with liquid amalgam up to  $30^\circ$  Can be cryst from  $\text{Hg}$  without decomp if temp does not exceed  $30^\circ$  (Kerp, Z anorg 1900, **25** 68)

$\text{BaHg}_{12}$  Stable in contact with liquid amalgam from  $30^\circ$ – $100^\circ$  Can be cryst from  $\text{Hg}$  without decomp at any temp within these limits (Kerp)

**Barium amide**,  $\text{Ba}(\text{NH})_2$ 

B-pt  $280^\circ$  (Mentrel, C C 1903, I 276) Decomp by  $\text{H}_2\text{O}$  (Guntz and Mentrel, Bull Soc 1903, (3) **29** 578)

**Barium potassium amide**

See Potassium ammonobarate

**Barium ammonia**,  $\text{Ba}(\text{NH}_3)_6$ 

Takes fire in the air Only sl sol in liquid  $\text{NH}_3$  Violently decomp by  $\text{H}_2\text{O}$  (Mentrel, C R 1902, **135** 740)

**Barium arsenide, Ba<sub>3</sub>As<sub>2</sub>**

Decomp by H<sub>2</sub>O (Lebeau, C R 1899, 129 48)

**Barium azonide, Ba(N<sub>3</sub>)<sub>2</sub>**

Very sl hygroscopic, explosive

12 5 pts are sol in 100 pts H<sub>2</sub>O at 0°

(Rohland, Z anorg 1897, 15 413)

Nearly insol in boiling amyl alcohol, 10 cc dissolving only an amt equal to 3 mg BaO (Browning, Sill Am J 144 45)

Sol in acetone (Naumann, B 19 1, 37 4328, Eidmann, C C 1899, II 1014)

Insol in benzonitrile (Naumann, E 1914, 47 1370)

Difficultly sol in methyl acetate (Naumann, B 1909, 42 3789)

Insol in ethylacetate (Naumann, E 1910, 43 314)

**Barium cadmium bromide, BaBr, CdBr<sub>2</sub>+4H<sub>2</sub>O**

Sol in H<sub>2</sub>O (v Hauer, W A B 20 40)

**Barium rhodium bromide**

See Bromorhodite, barium

**Barium bromide ammonia, BaBr<sub>2</sub>·8NH<sub>3</sub>**

Decomp by H<sub>2</sub>O (Joannis, C R 1905, 140 1244)

**Barium bromide hydrazine, BaBr<sub>2</sub>·2N<sub>2</sub>H<sub>4</sub>**

Hygroscopic Very sol in H<sub>2</sub>O Insol in alcohol (Fruizen, Z anorg 1908, 60 91)

**Barium bromofluoride, BaBr<sub>2</sub>·BaF<sub>2</sub>**

Insol in and undecomp by boiling alcohol Sol in HBr and in HNO<sub>3</sub> Decomp by H<sub>2</sub>O, hot H<sub>2</sub>SO<sub>4</sub>, dil HCl, dil HNO<sub>3</sub>, or dil acetic acid (Deffoe, C R 1904, 138 199)

**Barium carbide, BaC<sub>2</sub>**

Decomp by H<sub>2</sub>O (Maquenne, C I 144 360)

Sp gr 3 75 Easily decomp by H<sub>2</sub> and dil acids (Moissan, Bull Soc 1894, (1) 11 1008)

**Barium carbonyl, Ba(CO)<sub>2</sub>**

Sol in H<sub>2</sub>O (Guntz and Mentrel, Bull Soc 1903, (3) 29 586)

**Barium subchloride, BaCl**

Decomp by H<sub>2</sub>O (Guntz, C R 1903, 136 751)

**Barium subchloride sodium chloride, BaCl, NaCl**

Decomp by H<sub>2</sub>O (Guntz, C R 1903, 136 750)

**Barium chloride, BaCl<sub>2</sub>, and +2H<sub>2</sub>O**

Permanent in dry air

100 pts H<sub>2</sub>O at t° dissolve (a) pts BaCl<sub>2</sub> and (b) pts BaCl<sub>2</sub>+2H<sub>2</sub>O

**mercuric chloride, basic,  $BaCl_2 \cdot HgO$** Decomp by  $H_2O$  (André, C R 104 431)**Barium mercuric chloride,  $BaCl_2 \cdot 2HgCl_2 + 2H_2O$** Efflorescent in dry air, sol in  $H_2O$  (v Bonsdorff, Pogg 17 130)The salt  $BaCl_2 \cdot 2HgCl_2 + 2H_2O$  described by Bonsdorff does not form under the conditions which he gives (Foote, Am Ch J 1904, 32 251) $BaCl_2 \cdot 3HgCl_2 + 6H_2O$  Solubility determinations with mixtures of  $BaCl_2$  and  $HgCl_2$  show that these chlorides do not form a double salt at  $25^\circ$ , but that a transition temp exists at about  $17.2^\circ$  below which the salt  $BaCl_2 \cdot 3HgCl_2 + 6H_2O$  forms (Foote, Am Ch J 1904, 32 251) $+8H_2O$  Less sol in  $H_2O$  than the Sr and Mg double salts (Swan, Am Ch J 1898, 20 633)**Barium rhodium chloride,  $3BaCl_2 \cdot RhCl_3$** 

See Chlororhodite, barium

**Barium stannous chloride,  $BaCl_2 \cdot SnCl_2 + 4H_2O$** Sol in  $H_2O$  (Poggialk, C R 20 1183)**Barium stannic chloride**

See Chlorostannate, barium

**Barium uranium chloride,  $BaCl_2 \cdot UCl_4$** Decomp by  $H_2O$  (Aloy, Bull Soc 1899, (3) 21 265)**Barium zinc chloride,  $BaCl_2 \cdot ZnCl_2 + 4H_2O$**   
Deliquescent, and sol in  $H_2O$  (Werner, C N 27 271)Pptd from warm solution only (Epbaum, Z anorg 1910, 67 381)  
 $+2\frac{1}{2}H_2O$  Pptd from cold solution (Ephraim)**Barium chloride hydrazine,  $BaCl_2 \cdot 2NH_4$**   
Hydrosopic (Franzen, Z anorg 1908, 60 290)**Barium chloride hydroxylamine,  $BaCl_2 \cdot 2NH_2OH$** Very sol in  $H_2O$  (Crismer, Bull S 3 118)**Barium chloride sulphuric anhydride,  $BaCl_2 \cdot 2SO_3$** Decomp by  $H_2O$  (Schultz-Schlick B 4 113)**Barium chlorofluoride,  $BaClF$** Difficultly sol in  $H_2O$ , but much more sol than  $BaF_2$ . Decomp by  $H_2O$ , so that when washed on filter, the filtrate contains more  $BaCl_2$  than  $BaF_2$  (Berzelius, Pogg 1 9)Insol in and undecomp by boiling alcohol, sol in conc  $HCl$  and  $HNO_3$ . Decomposed by hot  $H_2SO_4$ , dil acetic acid, dil  $HCl$  or dil  $HNO_3$  (Defacqz, C R 190 138 198)**Barium cyanamide,  $BaCN_2$** Decomp by  $H_2O$  (Frank, C C 16 2, II 774)

**Barium subfluoride sodium fluoride, BaF, NaF**

Decomp by H<sub>2</sub>O (Guntz, C R 1903, 136 750)

**Barium fluoride, BaF<sub>2</sub>**

Scarcely sol in H<sub>2</sub>O (Berzelius), less sol in H<sub>2</sub>O than CaF<sub>2</sub>

1 liter H<sub>2</sub>O dissolves 1630 mg BaF<sub>2</sub> at 18° (Kohlrausch, Z phys Ch 1904, 50 356)

1605 mg are contained in 1 l of sat solution at 18° (Kohlrausch, Z phys Ch 1908, 64 168)

Insol in molten MnCl<sub>2</sub>, MnBr<sub>2</sub>, MnI<sub>2</sub>, MnCl<sub>2</sub>+BaCl<sub>2</sub>, MnBr<sub>2</sub>+BaBr<sub>2</sub> and MnI<sub>2</sub>+BaI<sub>2</sub> (Defacqz, A ch 1904, (8) 1 350)

Easily sol in HCl, HNO<sub>3</sub>, or HF+Aq (Gay-Lussac and Thénard)

Sl sol in liquid HF (Franklin, Z anorg 1905, 46 2)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Sol in an aqueous solution of sodium citrate (Spiller)

**Barium tin (stannic) fluoride**

See Fluostannate, barium

**Barium tellurium fluoride, BaF<sub>2</sub>, 2TeF<sub>4</sub>**

Decomp by H<sub>2</sub>O (Hogbom, Bull Soc (2) 35 60)

**Barium titanium fluoride**

See Fluotitanate, barium

**Barium titanyl fluoride, TiO<sub>2</sub>F<sub>2</sub>, BaF<sub>2</sub>**

See Fluoxypertitanate and fluoxytitanate, barium

**Barium uranyl fluoride**

See Fluoxyuranate, barium

**Barium vanadyl fluoride**

See Fluoxyvanadate, barium

**Barium zirconium fluoride, 3BaF<sub>2</sub>, 2ZrF<sub>4</sub>+2H<sub>2</sub>O**

Insoluble precipitate (Marignac)

See also Fluozirconate, barium

**Barium fluoiodide, BaF<sub>2</sub>, BaI<sub>2</sub>**

Decomp by H<sub>2</sub>O, dil HCl, dil HNO<sub>3</sub> or hot H<sub>2</sub>SO<sub>4</sub>. Sol in HI and HNO<sub>3</sub>. Insol in and undecomp by boiling alcohol. Decomp by dil acetic acid (Defacqz, C R 1904, 138 199)

**Barium hydride, BaH<sub>2</sub>**

Decomp by H<sub>2</sub>O or HCl+Aq (Winkler, B 24 1979)

Decomp by H<sub>2</sub>O (Guntz, C R 1901, 132 964)

**Barium hydrosulphide, BaS<sub>2</sub>H<sub>2</sub>**

Easily sol in H<sub>2</sub>O. Insol in alcohol +4H<sub>2</sub>O. Sol in H<sub>2</sub>O, and the solution dissolves S (Veley, Chem Soc 49 369)

**Barium hydroxide, BaO<sub>2</sub>H<sub>2</sub>**

100 pts cold H<sub>2</sub>O dissolve 5 pts BaO<sub>2</sub>H<sub>2</sub> boiling 50

(Kremers, Pogg 111 63, calculated by Grulich, Z anal 8 279)

Easily sol in alcohol (Henry)

Sl sol in benzotritile (Naumann, B 1914, 47 1369)

Sol in acetone (Naumann, B 1904, 37 4328; Ludm un, C C 1899, II 1014)

Sol in methyl acetate (Naumann, B 1909, 42 3789)

+2H<sub>2</sub>O At 15°C, 1 pt by weight in sol in

22 pts	methyl alcohol	sp gr	0.790
93 "	"	"	0.5035
307 "	"	"	0.8085

(Rohland, Z anorg 1897, 15 413)

+7H<sub>2</sub>O (Thomson, B 10 1343)

The composition of the hydrates formed by BaI<sub>2</sub> at different dilutions is calculated from determinations of the lowering of the fr-pt produced by BaI<sub>2</sub> and of the conductivity and sp gr of BaI<sub>2</sub> + Aq (Jones, Am Ch J 1905, 34 306)

**Barium iodide, basic**, Ba(OH)I + 9H<sub>2</sub>O

See Barium oxyiodide

**Barium bismuth iodide**, BaI<sub>2</sub>, 2BiI<sub>3</sub> + 18H<sub>2</sub>O  
Deliquescent, decomp by H<sub>2</sub>O (Linna, Pogg 111 240)

**Barium cadmium iodide**, BaI<sub>2</sub>, CdI<sub>2</sub> + 5H<sub>2</sub>O  
Deliquescent (Croft)

**Barium mercuric iodide**, BaI<sub>2</sub>, 2HgI<sub>2</sub>  
Decomp by much H<sub>2</sub>O (Boullay)  
BaI<sub>2</sub>, HgI<sub>2</sub> Sol in H<sub>2</sub>O (Boullay)  
Sp gr of sat solution = 3.575–3.588 (Rohrbach, W Ann 20 169)  
+5H<sub>2</sub>O (Duboin, C R 1906, 143 314)  
2BaI<sub>2</sub>, 3HgI<sub>2</sub> + 16H<sub>2</sub>O (Duboin, C R 1906, 142 888)  
BaI<sub>2</sub>, 5HgI<sub>2</sub> + 8H<sub>2</sub>O As the corresponding Ca salt (Duboin, C R 1906, 142 888)  
3BaI<sub>2</sub>, 5HgI<sub>2</sub> + 21H<sub>2</sub>O Very deliquescent (Duboin, C R 1906, 142 889)

**Barium stannous iodide**

Very sol in H<sub>2</sub>O (Boullay)

**Barium zinc iodide**, BaI<sub>2</sub>, 2ZnI<sub>2</sub>  
Deliquescent, and sol in H<sub>2</sub>O (Rammelsberg)  
+4H<sub>2</sub>O Very hygroscopic (Ephraim, Z anorg 1910, 67 385)

**Barium nitride**, Ba<sub>3</sub>N

Decomp H<sub>2</sub>O violently, not alcohol  
quenne, A ch (6) 29 219)  
BaN<sub>8</sub>

See Barium azonide

**Barium oxide**, BaO

Sol in H<sub>2</sub>O with evolution of heat  
Easily sol in dil HNO<sub>3</sub>, or HCl + Aq  
Solubility in NaOH + Aq See Barium hydroxide

Solubility in Na<sub>2</sub>O, HCl, +H<sub>2</sub>O at 30° (Schreinemakers, Z phys Ch 1909, 68 98)  
Solubility in Na<sub>2</sub>O, NaCl, BaCl + Aq at 30° (Schreinemakers)  
Insol in liquid NH<sub>3</sub> (Gore, Am Ch J 1898, 20 827)

Sol with combination in absolute alcohol and anhydrous wood-spirit Insol in ether  
Easily sol in absolute methyl alcohol  
1 l absolute ethyl alcohol sat with BaO at 0° contains 213 g BaO (Berthelot, Bull Soc 8 389)

Sol in methyl alcohol (Neuberg and Neumann, Biochem Z 1906, 1 173)

Insol in acetone (Fiedmann, C C 1899, II 1014; Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

See also Barium hydroxide

**Barium peroxide**, BaO<sub>2</sub>

Insol in H<sub>2</sub>O, decomp by boiling H<sub>2</sub>O

Sol in acids with formation of hydrogen dioxide

Forms hydrate with  $8\text{H}_2\text{O}$ , also  $10\text{H}_2\text{O}$  (Berthelot, A ch (5) 21 157), also a compound  $\text{BaO}_2 \cdot \text{H}_2\text{O}_2$ , which is very unstable, sl sol in cold  $\text{H}_2\text{O}$ , and insol in alcohol or ether (Schone, A 192 257)

+ $8\text{H}_2\text{O}$  100 cc pure  $\text{H}_2\text{O}$  dissolve 0.168 g  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$ , if  $\text{H}_2\text{O}$  contains 0.3 g  $\text{Ba}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$ , only 0.102 g  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$  are dissolved, if 0.6 g  $\text{Ba}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$  only 0.019 g  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$  are dissolved (Schone, A 1878, 192 266)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)

**Barium oxybromide**,  $\text{Ba}(\text{OH})\text{Br} \cdot 2\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Beckmann, J pr (2) 27 132)

$\text{BaBr}_2 \cdot \text{BaO} + 5\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Tassilly, C R 1895, 120 1340)

**Barium oxychloride**,  $\text{Ba}(\text{OH})\text{Cl} \cdot 2\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Beckmann, J pr (2) 26 388, 474)

**Barium mercury oxychloride**,  $\text{BaCl}_2 \cdot \text{HgO} + 6\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (André, C R 104 431)

**Barium oxyiodide**,  $\text{Ba}(\text{OH})\text{I} \cdot 9\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  and alcohol (Beckmann, B 14 2154)

$\text{BaI}_2 \cdot \text{BaO} + 9\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Tassilly, C R 1895, 120 1340)

**Barium oxysulphides**,  $\text{Ba}_2\text{O}_4\text{S}_8 + 58\text{H}_2\text{O}$ ,

$\text{Ba}_2\text{OS} + 10\text{H}_2\text{O}$ ,  $\text{Ba}_2\text{OS}_2 + 28\text{H}_2\text{O}$

Very unstable, decomp by recrystallization into  $\text{BaS}_2\text{H}_2$  and  $\text{BaO}_2\text{H}$

**Barium phosphide**,  $\text{Ba}_3\text{P}_2$

Decomp by  $\text{H}_2\text{O}$  (Dumas, A ch 32 364)

$\text{Ba}_3\text{P}_2$  Crystallized Sol in dil acids, insol in conc acids, decomp by  $\text{H}_2\text{O}$  Insol in organic solvents at ord temp (Jaboin, C R 1899, 129 765)

**Barium selenide**,  $\text{BaSe}$

Sol in  $\text{H}_2\text{O}$  with decomp

Sl sol in  $\text{H}_2\text{O}$  (Favre, C R 102 1469)

**Barium silicide**,  $\text{BaSi}$

(Jungst, C C 1905, I 195)

$\text{BaSi}$  Slowly decomp by  $\text{H}_2\text{O}$ , not by  $\text{NH}_4\text{OH} + \text{Aq}$  Rapidly decomp by conc  $\text{NaOH}$  Sol in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and  $\text{H}_3\text{PO}_4$  with evolution of spontaneously inflammable gas Sol in  $\text{HCl}$  and  $\text{HCl}$  Sol in acetic acid without evolution of gas (Moissan, Compt Rend 1904, III 680)

Decomp rapidly in both hot and cold  $\text{H}_2\text{O}$  (Bradley, C N 1900, 82 150)

**Barium sulphide**,  $\text{BaS}$

Sol in  $\text{H}_2\text{O}$  with decomp

Crystallized Decomp by  $\text{H}_2\text{O}$

Attacked by cold conc  $\text{HNO}_3$  (Mourlot, A ch. 1899, (7) 17 521)

Cryst modification is less readily attacked on by air and other reagents than the amorphous modification, sol in fuse oxidizing agents (Mourlot, C R 1898, 126 645)

+ $\text{H}_2\text{O}$  (Neuberg and Neumann, J chem Z 1906, 1 174)

+ $6\text{H}_2\text{O}$  Slowly sol in boiling  $\text{F}_2$ , with decomp, insol in, but decomp by boiling alcohol (Schone)

**Barium sulphide**,  $\text{Ba}_4\text{S}_7 + 25\text{H}_2\text{O}$  (?)

Sol in  $\text{H}_2\text{O}$  (Schone, Pogg 112 215)

**Barium trisulphide**,  $\text{BaS}_3$

Sol in large amount of boiling  $\text{H}_2\text{O}$  (Schone, Pogg 112 215)

**Barium tetrasulphide**,  $\text{BaS}_4 + \text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$ , especially if heated, sol in 2.42 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , insol in  $\text{CS}_2$  or alcohol (Schone, Pogg 112 224)

+ $2\text{H}_2\text{O}$  (Velej, Chem Soc 49 69)

**Barium pentasulphide**,  $\text{BaS}_5$

Known only in solution

**Barium mercuric sulphide**,  $\text{BaS} \cdot \text{HgS} - 5\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wagner, J pr 98)

**Barium nickel sulphide**,  $\text{BaS} \cdot 4\text{NiS}$

Sol in warm conc  $\text{HCl}$  (Bellucci, C A 1909, 293)

**Barium stannic sulphide**

See Sulphostannate, barium

**Barium uranyl sulphide**,  $6\text{BaS} \cdot 10\text{UO}_2\text{S} + x\text{H}_2\text{O}$  (?)

Decomp by  $\text{HCl} + \text{Aq}$  (Rumcliff, Pogg 124 159)

**Baryta**

See Barium oxide,  $\text{BaO}$

**Beryllium**,  $\text{Be}$

For beryllium and its salts, see Cerium and the corresponding salts

**Bismuth**,  $\text{Bi}$

Not attacked by  $\text{H}_2\text{O}$  Very slowly attacked by  $\text{HCl} + \text{Aq}$  (Groost) Very sl sol in conc  $\text{HCl} + \text{Aq}$  (Schutzenberger, Willm) Not attacked by dil  $\text{HCl} + \text{Aq}$  (Niet and Humot) Very slowly attacked by cold  $\text{HCl} + \text{Aq}$  (Godffroy) According to very careful experiments pure  $\text{Bi}$  is absolutely unattacked by hot or cold, dil or conc  $\text{HCl} + \text{Aq}$  in presence of oxygen (Ditte and Metzner, A ch (6) 29 397)

Not attacked by dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  decomp

by hot conc  $\text{H}_2\text{SO}_4$ . Easily sol in dil or conc  $\text{HNO}_3$ +Aq, or aqua regia.

Not attacked by pure  $\text{HNO}_3$ +Aq of 1.52 to 1.42 sp gr at  $20^\circ$ ; violently attacked by a more dil acid, but the acid becomes concentrated thereby. Conc  $\text{HNO}_3$ +Aq attacks only by heating or adding  $\text{NO}_2$  (Millon, A ch (3) 6 95).

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827).

$\frac{1}{2}$  ccm oleic acid dissolves 0.0091 g Bi in 6 days (Gates, J phys Chem 1911, 15 143).

#### Bismuth arsenide, $\text{Bi}_2\text{As}_3$

(Descamp, C R 86 1065)

#### Bismuth dibromide, $\text{Bi}_2\text{Br}_4$

Not known in a pure state (Weber, Pogg 107 599).

#### Bismuth tribromide, $\text{Bi}_2\text{Br}_3$

Very deliquescent. Decomp by  $\text{H}_2\text{O}$ . Sol in alcohol or ether.

Sol in  $\text{AlBr}_3$  (Isbekow, Z anorg 1913, 84 27).

#### Bismuth hydrogen bromide, $\text{BiBr}_3$ , $2\text{HBr} + 4\text{H}_2\text{O}$

Deliquescent.

Decomp in the air (Aloy, Bull Soc 1906, (3) 35 398).

#### Bismuth caesium bromide, $2\text{BiBr}_3$ , $3\text{CsBr}$

Ppt. Insol in  $\text{HBr}$ .

Sol in  $\text{HCl}$  and in  $\text{HNO}_3$  (Hutchins, J Am Chem Soc 1907, 29 33).

#### Bismuth potassium bromide, $\text{BiBr}_3 \cdot 2\text{KBr}$

Decomp by  $\text{H}_2\text{O}$  (Aloy, Bull Soc 1906, (3) 35 398).

#### Bismuth bromide ammonia, $\text{BiBr}_3 \cdot 3\text{NH}_3$

Sol in  $\text{HCl} + \text{Aq}$ .

$\text{BiBr}_3 \cdot 2\text{NH}_3$  (?)

$2\text{BiBr}_3 \cdot 5\text{NH}_3$ . Not deliquescent, not decomp by  $\text{H}_2\text{O}$ , easily sol in dil acids (Mun, Chem Soc 29 144).

#### Bismuth bromide potassium chloride,

$\text{K BiCl}_2\text{Br} + 1\frac{1}{2}\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Atkinson, Chem Soc 43 289).

#### Bismuth dichloride, $\text{BiCl}_2$

Very deliquescent. Decomp by  $\text{H}_2\text{O}$  dil acids, or conc  $\text{NH}_4\text{Cl} + \text{Aq}$  (Weber, Pogg 107 596).

#### Bismuth trichloride, $\text{BiCl}_3$

Deliquescent. Decomp by  $\text{H}_2\text{O}$ . Sol in dil  $\text{HCl} + \text{Aq}$ , and alcohol. Not decomp by  $\text{H}_2\text{O}$  in presence of citrates (Spiller).

0.08 g sol in 100 ccm liquid  $\text{H}_2\text{S}$  (Antony, C C 1905, I 1692).

Moderately sol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827).

1 g  $\text{BiCl}_3$  is sol in 5.59 g acetone at  $18^\circ$ . Sp gr of sat solution  $18^\circ/4^\circ = 0.9194$  (Naumann, B 1904, 37 4331).

Sol in acetone and in methylal (Erdmann, C C 1899, II 1014).

Sol in benzonitrile (Naumann, B 1914, 47 1369).

Sol in ethyl acetate (Naumann, B 1910, 43 314).

1 pt is sol in 60.36 pts ethyl acetate at  $18^\circ$ . Sp gr at  $18^\circ/40^\circ = 0.9106$  (Naumann, B 1910, 43 320).

Sol in methyl acetate (Naumann, B 1909, 42 3790).

#### Bismuth chloride, $\text{Bi}_2\text{Cl}_3$ (?)

Decomp by  $\text{H}_2\text{O}$  (Dehérain, C R 54 724).

#### Bismuth hydrogen chloride, $2\text{BiCl}_3$ , $\text{HCl} + 3\text{H}_2\text{O}$

Not deliquescent. Decomp by  $\text{H}_2\text{O}$  (Engel, C R 106 1797).

$\text{BiCl}_3$ ,  $2\text{HCl}$  (Jacquelin, A ch (2) 62 363).

#### Bismuth caesium chloride, $\text{BiCl}_3$ , $3\text{CsCl}$

Decomp by  $\text{H}_2\text{O}$ . Sl sol in cold dil  $\text{HCl} + \text{Aq}$ , but easily sol on warming (Brigham, Am Ch J 14 181).

$2\text{BiCl}_3$ ,  $3\text{CsCl}$ . As above (Brigham).  $\text{BiCl}_3$ ,  $6\text{CsCl}$ . Easily sol in  $\text{H}_2\text{O}$  and in  $\text{HCl} + \text{Aq}$  (Godfrey, B 8 9).

Does not exist (Brigham).

#### Bismuth hydrazine chloride, $\text{BiCl}_3$ , $3\text{N H}_4\text{HCl}$

Sol in acids, from which it is pptd by  $\text{H}_2\text{O}$  (Ferratin, C A 1912 1613).

#### Bismuth nitrosyl chloride, $\text{BiCl}_3$ , $\text{NOCl}$

Very deliquescent. Decomp by  $\text{H}_2\text{O}$  (Sudborough, Chem Soc 59 662).

#### Bismuth potassium chloride, $\text{BiCl}_3$ , $\text{KCl} + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ . Cannot be recryst except from conc  $\text{BiCl}_3 + \text{HCl}$ . Decomp by  $\text{HCl} + \text{Aq}$  into  $\text{BiCl}_3$ ,  $2\text{KCl} + 2\text{H}_2\text{O}$  (Brigham, Am Ch J 14 167).

$\text{BiCl}_3$ ,  $2\text{KCl}$ . Decomp by  $\text{H}_2\text{O}$  (Aippe, Pogg 64 37).

Deliquescent.

Sol in  $\text{H}_2\text{O}$  with decomp into the oxychloride when excess  $\text{H}_2\text{O}$  is used (Aloy, Bull Soc 1906, (3) 35 397).

+  $2\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$  (Jacquelin, J pr 14 1).

Sol in moderately conc  $\text{HCl} + \text{Aq}$ .

$\text{BiCl}_3$ ,  $3\text{KCl}$ . Decomp by  $\text{H}_2\text{O}$  (Aippe). Does not exist (Brigham).

**Bismuth rubidium chloride**,  $\text{BiCl}_3$ ,  $\text{RbCl} + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ , sol in dil  $\text{HCl} + \text{Aq}$ , from which  $\text{BiCl}_3$ ,  $3\text{RbCl}$  crystallizes (Brigham, Am Ch J 14 174)

$\text{BiCl}_3$ ,  $3\text{RbCl}$  Decomp by  $\text{H}_2\text{O}$ , sol in dil  $\text{HCl} + \text{Aq}$  without decomp (Brigham)

$\text{BiCl}_3$ ,  $6\text{RbCl}$  Decomp by  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Godeffroy, B 8 9), does not exist (Brigham)

$10\text{BiCl}_3$ ,  $23\text{RbCl}$  (?) As above (Brigham)

**Bismuth sodium chloride**,  $\text{BiCl}_3$ ,  $2\text{NaCl} + \text{H}_2\text{O}$

+  $3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Arppe, Pogg 64 237)

$\text{BiCl}_3$ ,  $3\text{NaCl}$

**Bismuth thallous chloride**,  $\text{BiCl}_3$ ,  $3\text{TlCl}$

Ppt (Ephraim, Z anorg 1909, 61 254)

$\text{BiCl}_3$ ,  $6\text{TlCl}$  Ppt (Ephraim)

**Bismuth chloride ammonia**,  $2\text{BiCl}_3$ ,  $\text{NH}_3$

Stable (Dehéram, C R 54 724)

$\text{BiCl}_3$ ,  $2\text{NH}_3$  (D)

$\text{BiCl}_3$ ,  $3\text{NH}_3$  (D)

**Bismuth chloride nitric oxide**,  $\text{BiCl}_3$ ,  $\text{NO}$

Very hygroscopic (Thomas, C R 1895, 121 129)

**Bismuth chloride nitrogen peroxide**,  $\text{BiCl}_3$ ,  $\text{NO}_2$

Decomp by moist air, but stable in dry air (Thomas, C R 1896, 122 612)

**Bismuth chloride selenide**

See Bismuth selenochloride

**Bismuth trifluoride**,  $\text{BiF}_3$

Insol in  $\text{H}_2\text{O}$  or alcohol (Gott and Muir, Chem Soc 53 138)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

**Bismuth hydrogen fluoride**,  $\text{BiF}_3$ ,  $3\text{HF}$

Deliquescent. Decomp by boiling  $\text{H}_2\text{O}$  (Muir, Chem Soc 39 21)

**Bismuth gold**,  $\text{Au}_3\text{Bi}$

Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z anorg 1895, 9 71)

**Bismuthous hydroxide**,  $\text{Bi}(\text{OH})_3$

Sol in strong acids. Insol in solutions of alkalis, alkali carbonates,  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4\text{NO}_3$ , or of amyl amine (Wurtz). When recently pptd is sol in  $\text{NH}_4\text{Cl} + \text{Aq}$ , but insol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett, 1837). Not pptd in presence of Na citrates (Spiller)

Solubility of freshly pptd  $\text{Bi}(\text{OH})_3$  in  $\text{NaOH} + \text{Aq}$

g NaOH per l	g Bi dissolved per l at 20°	g Bi dissolved per l at 100°

(Moser, Z anorg 1909, 61 386)

$\text{Bi}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$

$\text{Bi}_2\text{O}_3$ ,  $\text{H}_2\text{O}$  (Muir, Chem Soc 32 31)

See also Bismuth trioxide

**Bismuth tetrahydroxide**,  $\text{Bi}_2\text{O}_4$ ,  $\text{H}_2\text{O}$

$\text{Bi}_2\text{O}_4$ ,  $2\text{H}_2\text{O}$  (Wernicke, Pogg 141 109)

**Bismuthic hydroxide (Bismuthic acid)**,  $\text{Bi}_2\text{O}_5$ ,  $\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , easily decomp by acids (Fremy, A ch (3) 12 495). Decomp by  $\text{H}_2\text{SO}_4$ , not attacked by  $\text{SO} + \text{Aq}$ , neither dissolved nor decomp by dil  $\text{HNO}_3 + \text{Aq}$ , but slowly converted into an allotropic modification (?) Partially decomp by conc  $\text{HNO}_3$ . Slowly but wholly dissolved by hot conc  $\text{HNO}_3$ . Sol in conc  $\text{KOH} + \text{Aq}$  (Arppe). Sol in about 100 pts boiling  $\text{KOH} + \text{Aq}$ , so conc that it solidifies on removing the unp (Muir, Chem Soc 51 77)

$\text{Bi}_2\text{O}_5$ ,  $2\text{H}_2\text{O}$  (Bodcker, A 123 61)

Does not exist (Hoffmann und Gmelin)

**Bismuth iodide**,  $\text{BiI}_3$

Not attacked by cold  $\text{H}_2\text{O}$ , but by boiling.  $\text{BiOI}$  is formed. 100 pts absolute alcohol dissolve  $3\frac{1}{2}$  pts salt at 20° (Gott and Muir, Chem Soc 57 138)

Sol in  $\text{HNO}_3$ , and  $\text{HI} + \text{Aq}$ , from which it is reprecipitated by  $\text{H}_2\text{O}$  or alcohol. Sol in  $\text{K} + \text{Aq}$  or  $\text{KOH} + \text{Aq}$  (Rammelsberg)

Sl sol in liqnd  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

100 g absolute alcohol dissolve 3.5 g  $\text{BiI}_3$  at  $20^\circ$  (Gott and Muir, Chem Soc 57 138)

Sol in acetone (Naumann, B 1904, 37 4328)

100 pts methylene iodide dissolve 0.15 pt  $\text{BiI}_3$  at  $12^\circ$ , and very little more at higher temperatures (Retgers, Z anorg 3 343)

Sol in methyl acetate (Naumann, B 1909, 42 3790)

**Bismuth hydrogen iodide,  $\text{BiI}_3$ ,  $\text{HI}+4\text{H}_2\text{O}$**   
(Arppe, Pogg 44 248)

**Bismuth caesium iodide,  $3\text{CsI} \cdot 2\text{BiI}_3$**

Very sl sol in  $\text{H}_2\text{O}$  (Wells, Am J Sci 1897, (4) 3 464)

**Bismuth calcium iodide,  $2\text{BiI}_3$ ,  $\text{CaI}_2+18\text{H}_2\text{O}$**   
Deliquescent, decomp by  $\text{H}_2\text{O}$  (Linna, Pogg 111 240)

**Bismuth magnesium iodide,  $2\text{BiI}_3$ ,  $\text{MgI}_2+12\text{H}_2\text{O}$**

Deliquescent, decomp by  $\text{H}_2\text{O}$  (Linna, Pogg 111 240)

**Bismuth potassium iodide,  $\text{BiI}_3$ ,  $4\text{KI}$**

Ppt (Arppe, Pogg 44 237)

$\text{BiI}_3$ ,  $3\text{KI}$  (Astre, C R 110 1137)

$\text{BiI}_3$ ,  $2\text{KI}$  Sol in acetic ether (Astre)

$+4\text{H}_2\text{O}$  Sol in small amt  $\text{H}_2\text{O}$  without pptn, but decomp by much  $\text{H}_2\text{O}$

$\text{BiI}_3$ ,  $2\text{KI}$ ,  $\text{HI}$  (Arppe)

$2\text{BiI}_3$ ,  $3\text{KI}+2\text{H}_2\text{O}$  (Astre)

$\text{BiI}_3$ ,  $\text{KI}+\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Nickles, C R 51 1097)

$2\text{BiI}_3$ ,  $\text{KI}$  Sol in acetic ether (Astre)

**Bismuth sodium iodide,  $\text{BiI}_3$ ,  $\text{NaI}+\text{H}_2\text{O}$**

Deliquescent, decomp by  $\text{H}_2\text{O}$  (Nickles, C R 51 1097)

$2\text{BiI}_3$ ,  $3\text{NaI}+12\text{H}_2\text{O}$  As above (Linna, Pogg 111 240)

**Bismuth zinc iodide,  $2\text{BiI}_3$ ,  $\text{ZnI}_2+12\text{H}_2\text{O}$**

Very deliquescent (Linna, Pogg 111 240)

**Bismuth iodide ammonia,  $\text{BiI}_3$ ,  $3\text{NH}_3$**

Decomp by  $\text{H}_2\text{O}$  (Rammelsberg)

**Bismuth iodide zinc bromide**

Sol in  $\text{H}_2\text{O}$  (Linna, Pogg 111 240)

**Bismuth nitride**

Explosive (Fischer, B 1910, 43 1471)

$\text{BiN}$  Ppt Decomp by  $\text{H}_2\text{O}$  or dil acids (Franklin, J Am Chem Soc 1905, 27 847)

**Bismuth dioxide,  $\text{Bi}_2\text{O}_3$**

Sol in conc  $\text{HNO}_3+\text{Aq}$  Decomp by strong acids, and boiling  $\text{KOH}+\text{Aq}$

Decomp by  $\text{H}_2\text{O}$  (Linna, Z anorg 1901, 27 438)

**Bismuth trioxide,  $\text{Bi}_2\text{O}_3$**

Insol in  $\text{H}_2\text{O}$  Sol in conc acids

Solubility of  $\text{Bi}_2\text{O}_3$  in  $\text{HNO}_3+\text{Aq}$  at  $20^\circ$

Solubility in  $\text{NaOH} + \text{Aq}$  at  $25^\circ$ 

Conc of $\text{NaOH}$ Mol/l	g $\text{Bi}_2\text{O}_3$ in 100 cc of solution Mean result
1 0	0 0013 $\pm$ 0 0002
2 0	0 0026 $\pm$ 0 0002
3 0	0 0049 $\pm$ 0 0005

(Knox, Chem Soc 1909, 95 1767)

Insol in acetone (Fidmunn, C C 1899, II 1011)

Min *Bismate* Easily sol in  $\text{HNO}_3 + \text{Aq}$

See also **Bismuthous hydroxide**

**Bismuth tetroxide,  $\text{Bi}_2\text{O}_4$** 

Sol in conc  $\text{HCl} + \text{Aq}$ , with evolution of  $\text{Cl}_2$  in oxygen acids with evolution of  $\text{O}_2$ . Easily sol in conc  $\text{H}_2\text{SO}_4$  than in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$

**Bismuth oxide,  $\text{Bi}_2\text{O}_3$  (?)**

(Hoffmann and Cuthbert)

**Bismuth pentoxide,  $\text{Bi}_2\text{O}_5$** 

Sol in dil acids. Combines with  $\text{H}_2\text{O}$  to form bismuthic hydroxide which see (Husebroek B 20 213)

**Bismuth oxybromide, etc**

See **Bismuthyl bromide, etc**

**Bismuth palladium,  $\text{PdBi}$** 

Insol in equal pts  $\text{HNO}_3$  and tartaric acids (Roessler Z anorg 1899, 9 70)

**Bismuth platinum,  $\text{PtBi}$** 

Insol in equal pts  $\text{HNO}_3$  and tartaric acids (Roessler Z anorg 1899, 9 69)

**Bismuth phosphide,  $\text{BiP}$** 

(Cavazzi)

**Bismuth triselenide,  $\text{Bi}_2\text{Se}_3$** 

Insol in  $\text{H}_2\text{O}$ , alkalies, or alkali sulphides +  $\text{Aq}$ , sl attacked by  $\text{HCl} + \text{Aq}$ , oxidised by  $\text{HNO}_3 + \text{Aq}$  (Schneider, Pogg 94 6)

Min Frenzelte

**Bismuth potassium selenide**See **Selenobismuthite, potassium****Bismuth selenochloride,  $\text{BiSeCl}$** 

Not attacked by  $\text{H}_2\text{O}$ , very sl sol in  $\text{HCl} + \text{Aq}$ , easily and completely sol with comp in  $\text{HNO}_3 + \text{Aq}$  (Schneider)

**Bismuth disulphide,  $\text{Bi}_2\text{S}_2 + 2\text{H}_2\text{O}$  (?)**Insol in  $\text{H}_2\text{O}$  Decomp by  $\text{HCl} + \text{Aq}$ **Bismuth trisulphide,  $\text{Bi}_2\text{S}_3$** Insol in  $\text{H}_2\text{O}$ 

1 l  $\text{H}_2\text{O}$  dissolves  $0.35 \times 10^{-6}$  mo of  $\text{Bi}_2\text{S}_3$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 1 294)

Easily sol in moderately dil  $\text{HNO}_3 + \text{Aq}$ , and conc  $\text{HCl} + \text{Aq}$ , with separation of  $\text{S}$  as  $\text{a}_2\text{S}_2\text{O}_3$ , or  $\text{KCN} + \text{Aq}$ , insol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett). Insol in potassium carbonate +  $\text{Aq}$  (Rosenblatt, Z anal 26 5). Insol in alkali hydroxides or alkali hydro-sulphides

Insol in  $2\text{N}-(\text{NH}_4)_2\text{S} + \text{Aq}$ 

0 0090 g  $\text{Bi}_2\text{S}_3$  is sol in 100 cc  $\text{N} \text{Na}_2\text{S}_2 + \text{Aq}$  at  $25^\circ$  (Knox, Chem Soc 09, 95 1764)

Somewhat sol in  $\text{Na}_2\text{S} + \text{Aq}$ , 1 cc of  $\text{N} \text{Na}_2\text{S} + \text{Aq}$  (sp gr 1 06) dissolve amt of  $\text{Bi}_2\text{S}_3$  corresponding to 0 031 g  $\text{Bi}_2\text{O}_3$  (Stillman, J Am Chem Soc 1896, 18 6)

Solubility in  $\text{Na}_2\text{S} + \text{N KOH} + \text{Aq}$  $25^\circ$ 

Conc of $\text{Na}_2\text{S}$ Mol/l	Conc of $\text{N KOH}$ Mol/l	g $\text{Bi}_2\text{S}_3$ in 100 cc solution
0 5	1 0	0 185
1 0	1 0	0 535

(Knox, Chem Soc 1909, 95 1 3)

Bismuth sulphide pptd from acid solution is not dissolved by subsequent treatment with  $\text{K}_2\text{S} + \text{Aq}$  (Stone, J Am Chem Soc 1896, 18 1091)

Sol in  $\text{K}_2\text{S} + \text{Aq}$  (Dittc, C R 95, 120 157)

Solubility in  $\text{K}_2\text{S} + \text{KOH} + \text{Aq}$  at  $5^\circ$ 

Conc of $\text{K}_2\text{S}$ Mol/l	Conc of $\text{KOH}$ Mol/l	g $\text{Bi}_2\text{S}_3$ in 100 cc solution

Insol in hot glacial acetic acid (Holt, Chem Soc 1911, 100 (2) 720)

**Borates**

No borate is quite insol in H<sub>2</sub>O, the alkali borates are very sol. The less sol borates are easily decomp by H<sub>2</sub>O, the easily sol salts are also decomp, but less quickly. The less sol borates are easily sol in H<sub>3</sub>BO<sub>3</sub>, HNO<sub>3</sub>, etc. They are more sol in H<sub>2</sub>O containing tartaric acid or potassium tartrate than in pure H<sub>2</sub>O (Souberain). The normal borates of the alkaline earths are sol to no inconsiderable extent in H<sub>2</sub>O and more readily in hot, than in cold H<sub>2</sub>O (Berzelius, Pogg 34 568).

All borates are insol, or sl sol in alcohol

**Aluminum borate, 2Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub>**Min *Jeremicumite*+ 3H<sub>2</sub>O Ppt (Rose, Pogg 91 452)3Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub> *Crystallized* Insol in HNO<sub>3</sub> + Aq (Ebelmen, A ch (3) 33 62)3Al<sub>2</sub>O<sub>3</sub>, 2B<sub>2</sub>O<sub>3</sub> + 7H<sub>2</sub>O Ppt (Rose, l c)**Ammonium borate**The system (NH<sub>4</sub>)<sub>2</sub>B<sub>4</sub>O<sub>7</sub>, H<sub>2</sub>O at 60° has

been studied by Sborgi (Real Ac Linc 1915 (5) 24 I, 1225)

### Ammonium diborate

Difficultly sol in acetone (Naumann, B 1904, 37 4328)

**Ammonium tetraborate**,  $(\text{NH}_4)_2\text{B}_4\text{O}_7 + 4\text{H}_2\text{O}$ ,  
or perhaps  $\text{NH}_4\text{H}(\text{BO}_2)_2 + 1\frac{1}{2}\text{H}_2\text{O}$

Sol in 12 pts cold  $\text{H}_2\text{O}$ , decomp by heat (Rammelsberg, Pogg 90 21)

Sol in acetone (Eidmann, C C 1899, II 1014)

**Ammonium octoborate**,  $(\text{NH}_4)_2\text{B}_8\text{O}_{13} + 6\text{H}_2\text{O}$

Sol in 8 pts cold, decomp by boiling  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 90 21)

Min *Lardellerite* Sol in  $\text{H}_2\text{O}$  with decomp

**Ammonium dekaborate**,  $(\text{NH}_4)_2\text{B}_{10}\text{O}_{16} + 6\text{H}_2\text{O}$

Permanent Sol in  $\text{H}_2\text{O}$  (Rammelsberg)  $+ 8\text{H}_2\text{O}$  (Atterberg, Bull Soc (2) 22 350)

**Ammonium dodekaborate**,  $(\text{NH}_4)_2\text{B}_{12}\text{O}_{18} + 9\text{H}_2\text{O}$

Sol in hot  $\text{H}_2\text{O}$  (Bechi, Sill Am J (2) 17 129)

**Ammonium perborate**,  $\text{NH}_4\text{BO}_3$

See Perborate, ammonium

**Ammonium calcium borate**,  $(\text{NH}_4)_8\text{CaB}_4\text{O}_{11} = \text{CaB}_4\text{O}_7 + 4(\text{NH}_4)_2\text{O}$

**Ammonium magnesium borate**

Sol in  $\text{H}_2\text{O}$ , decomp by boiling (Rammelsberg, Pogg 49 451)

**Ammonium zinc borate**,  $4(\text{NH}_4)_2\text{B}_4\text{O}_7 \cdot \text{Zn}(\text{BO}_2)_2 + 5\text{H}_2\text{O}$

**Barium borate**,  $\text{Ba}(\text{BO}_2)_2$

Ppt (Ouvrard C R 1906 142 283)

Sol in 3 300 pts 45% alcohol

7,500 " 50 "

25,000 " 60 "

55,000 " 75 "

(Berg, Z anal 16 25)

$+ 10\text{H}_2\text{O}$  Sl sol in cold, more readily in hot  $\text{H}_2\text{O}$ , especially in presence of ammonium salts (Berzelius, Pogg 34 568) Sol in sodium citrate + Aq (Spiller) Insol in wood spirit (Fehlimen)

$2\text{Ba}(\text{O})\text{B}(\text{O})_2$  Decomp by  $\text{H}_2\text{O}$  forming  $\text{Ba}(\text{O}) \cdot \text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  (Ouvrard, C R 1906, 142 283)

$3\text{BaO} \cdot \text{B}_2\text{O}_3$  Easily sol in mineral acids Sl attacked by dil acetic acid (Ouvrard, C R 1901, 132 258)

$\text{BaB}_4\text{O}_7$  Slowly sol in warm dilute  $\text{HNO}_3$  + Aq (Ditte, C R 77 892)

$+ 5\text{H}_2\text{O}$  Sol in 100 pts cold, and more freely in hot  $\text{H}_2\text{O}$  When freshly pptd sol in cold  $\text{NH}_4\text{Cl}$  + Aq (Wackenroder, A 41 315),  $\text{NH}_4\text{NO}_3$  + Aq (Brett, Phil Mag (10 96), and  $\text{BaCl}_2$  + Aq (Rose)

$\text{BaB}_4\text{O}_{10} + 13\text{H}_2\text{O}$  (Laurent, A ch (67 215)

$\text{Ba}_2\text{B}_2\text{O}_5$  (Bloxam, Chem Soc 14 43)

$5\text{BaO} \cdot 2\text{B}_2\text{O}_3$

$\text{Ba}_2\text{B}_{10}\text{O}_{18} + 6\text{H}_2\text{O}$  Sol in 100 pts cold  $\text{H}_2\text{O}$  Easily sol in ammonium nitrate, or chloride, or barium chloride + Aq (Rose, Pogg 87 1)

$\text{Ba}_2\text{B}_6\text{O}_{11}$  Easily sol in warm dilute acids  $+ 6\text{H}_2\text{O}$

$+ 7\text{H}_2\text{O}$

$+ 15\text{H}_2\text{O}$  (Laurent, A ch (2) 67 2)

**Barium borate bromide**,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{HBr}$  (Ouvrard, C R 1906, 142 283)

**Barium borate chloride**,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{HCl}$  Unaffected by  $\text{H}_2\text{O}$  Sol in acids (Ouvrard, C R 1906, 142 283)

**Bismuth borate**,  $\text{BiBO}_3 + 2\text{H}_2\text{O}$

Ppt Sl sol in  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{S}$  Not decomp by  $\text{KOH}$  + Aq (Vanino, pr 1906, (2) 74 152)

**Cadmium borate**,  $\text{Cd}_3(\text{BO}_3)_2$

Insol in  $\text{H}_2\text{O}$ , easily sol in dil acids (Ouvrard, C R 1900, 130 174)

$\text{Cd}(\text{BO}_2)_2$  Difficultly sol in  $\text{H}_2\text{O}$  (Berzelius), insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl}$  + Aq (Ouvrard), easily sol in warm  $\text{NH}_4\text{Cl}$  + Aq (Rose)

(Guertler, Z anorg 1904, 40 242)

$3\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 3\text{H}_2\text{O}$  Ppt Sl in  $\text{H}_2\text{O}$  (Rose, Pogg 88 299)

$\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$  (Ditte, A ch 1883, (5) 30 255)

$\text{CdO} \cdot 4\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  decomp on heating (Ditte, A ch 1883, (5) 30 255)

**Cadmium borate bromide**,  $6\text{CdO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CdBr}_2$

Insol in  $\text{H}_2\text{O}$  and fuming  $\text{HCl}$  or  $\text{HBr}$  + Aq (Rousseau and Allure, C R 1894 116 72)

**Cadmium borate chloride**,  $6\text{CdO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CdCl}_2$

(Rousseau and Allure, C R 1894 116 72)

**Cadmium borate iodide**,  $6\text{CdO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CdI}_2$  (Allure, C R 1898 127 557)

**Cæsium borate**,  $\text{CsB}_3\text{O}_{10}$

Very sol in  $\text{H}_2\text{O}$ , less in alcohol (Reichle, Z anorg 4 116)

**Calcium borate,  $\text{Ca}(\text{BO}_2)_2$** 

Sl sol in  $\text{H}_2\text{O}$ , insol in alkali chlorides, or boiling conc acetic acid + Aq, sol in cold or hot solutions of ammonium salts, especially ammonium nitrate, in  $\text{CaCl}_2$  + Aq, and also easily sol in dilute mineral acids at  $50^\circ$  (Ditte, C R 80 490, 561)

+  $2\text{H}_2\text{O}$   
+  $4\text{H}_2\text{O}$ , two modifications of which one is very unstable (van't Hoff and Meyerhoffer, A 1906, 351 101)

+  $6\text{H}_2\text{O}$  When warmed in  $\text{H}_2\text{O}$  it goes over into  $\text{CaB}_2\text{O}_4 + 4\text{H}_2\text{O}$  (van't Hoff and Meyerhoffer)

Sol in  $\text{H}_2\text{O}$  without decomp, 1 l solution contains 2 g salt (Ditte, C R 96 1663)

$\text{CaB}_2\text{O}_7$  Decomp by  $\text{H}_2\text{O}$  (Blount, C N 54 208)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

+  $3\text{H}_2\text{O}$  (Ditte, C R 96 1663)

+  $4\text{H}_2\text{O}$  Min *Bechulte*

+  $6\text{H}_2\text{O}$  Min *Borocalcite* Sol in acids  
 $\text{CaB}_6\text{O}_{10} + 4\text{H}_2\text{O}$

+  $8\text{H}_2\text{O}$  Unstable On standing in the solution in which it is formed it changes into  $\text{CaB}_6\text{O}_{10} + 4\text{H}_2\text{O}$

+  $12\text{H}_2\text{O}$  Unstable Goes over into  $\text{CaB}_6\text{O}_{10} + 8\text{H}_2\text{O}$  (van't Hoff and Meyerhoffer, A 1906, 351 104)

$\text{CaB}_6\text{O}_{13} + 12\text{H}_2\text{O}$  (Ditte, C R 96 1663)  
 $2\text{CaO} \cdot \text{B}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ , sol in dil acids (Ouvrard, C R 1905, 141 353)

$\text{Ca}_2\text{B}_6\text{O}_{11}$  (Ditte, C R 77 785)

+  $3\text{H}_2\text{O}$  Min *Pandermite*, *Pricente* See  
 $4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$

+  $5\text{H}_2\text{O}$  Min *Colemanite*

If all the Ca is in form of colemanite, the solution contains in 100 g, 4.8 g  $\text{H}_2\text{BO}_3$  and 0.1 g CaO (van't Hoff, B A B 1907, 653)

+  $7\text{H}_2\text{O}$   
+  $9\text{H}_2\text{O}$  (van't Hoff and Meyerhoffer, A 1906, 351 101)

$3\text{CaO} \cdot \text{B}_2\text{O}_3$  Easily sol in dil acids (Ouvrard, C R 1901, 132 258)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$  (van't Hoff, B A B 1906, II 568)

$4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$  True composition of Pandermite (van't Hoff, B A B 1906, II 572)

**Calcium iron (ferrous) borate silicate,**

Min *Hommelite* Easily sol in  $\text{HCl}$  + Aq

**Calcium magnesium borate,  $\text{CaO}$ ,  $\text{MgO}$ ,  $3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$** 

Min *Hydroboracite* Somewhat sol in  $\text{H}_2\text{O}$  Easily sol in warm  $\text{HCl}$  + Aq or  $\text{HNO}_3$  + Aq  
 $3\text{CaO}$ ,  $3\text{MgO}$ ,  $4\text{B}_2\text{O}_3$  (Ditte, C R 77 894)

**Calcium sodium borate,  $2\text{CaO}$ ,  $\text{Na}_2\text{O}$ ,  $5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$** 

(van't Hoff, B A B 1907, 303)

$\text{Ca}_2\text{B}_{10}\text{O}_{18}$ ,  $\text{Na}_3\text{B}_3\text{O}_9 + 15$ , or  $24\text{H}_2\text{O}$

Min *Natroborocalcite*, *Ulexite* Decomp by boiling with  $\text{H}_2\text{O}$  Sol in acids

$\text{Ca}_2\text{Na}_4\text{B}_{12}\text{O}_{22} + 15\text{H}_2\text{O}$  Min *Franklan-dite* Sl sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{HCl}$ , and  $\text{HNO}_3$  + Aq

**Calcium borate bromide,  $3\text{CaO}$ ,  $3\text{B}_2\text{O}_3$ ,  $\text{CaBr}_2$** 

Sl attacked by  $\text{H}_2\text{O}$  Very sol in dilute acetic acid (Ouvrard, C R 1905, 141 1023)

$3\text{CaO}$ ,  $5\text{B}_2\text{O}_3$ ,  $\text{CaBr}_2$  Hardly attacked by cold  $\text{H}_2\text{O}$  or very dil acetic acid Sol in strong acids, even when dilute (Ouvrard, C R 1905, 141 1023)

**Calcium borate chloride,  $\text{Ca}_2\text{B}_2\text{O}_6$ ,  $\text{CaCl}_2$** 

Decomp quickly by moist air or  $\text{H}_2\text{O}$ , slowly by absolute alcohol (Chatelier, C R 99 276)

$3\text{CaO}$ ,  $3\text{B}_2\text{O}_3$ ,  $\text{CaCl}_2$  (Ouvrard, C R 1905, 141 353)

$3\text{CaO}$ ,  $5\text{B}_2\text{O}_3$ ,  $\text{CaCl}_2$  Sl attacked by cold  $\text{H}_2\text{O}$  and dil acetic acid + Aq Strong acids dissolve even when very dilute (Ouvrard, C R 1905, 141 352)

**Calcium borate silicate,  $2\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $2\text{SiO}_2 + \text{H}_2\text{O}$** 

Min *Datolite* Sol in  $\text{HCl}$  + Aq with separation of gelatinous silica

+  $2\text{H}_2\text{O}$  Min *Botryolite*

$\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $\text{SiO}_2$  Min *Danburite* Very sl attacked by  $\text{HCl}$  + Aq before ignition

**Chromous borate**

Precipitate Sol in free acids, borax + Aq (Moberg)

**Chromic borate,  $7\text{Cr}_2\text{O}_3$ ,  $4\text{B}_2\text{O}_3$** 

Insol in  $\text{H}_2\text{O}$ , sol in excess of borax + Aq (Hebberling, C C 1870 122)

**Chromic magnesium borate,  $3\text{Cr}_2\text{O}_3$ ,  $6\text{MgO}$ ,  $2\text{B}_2\text{O}_3$** 

Not attacked by acids (Ebelmen, A ch (3) 33 52)

$2\text{Cr}_2\text{O}_3$ ,  $9\text{MgO}$ ,  $3\text{B}_2\text{O}_3$  (Mallard, C R 105 1260)

**Cobaltous borate,  $3\text{CoO}$ ,  $2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  (Rose, Pogg 88 299)

$3\text{CoO}$ ,  $\text{B}_2\text{O}_3$  (Mallard, C R 105 1260)

$2\text{CoO}$ ,  $\text{B}_2\text{O}_3$  (Ouvrard, C R 1900, 130 337)

**Cobaltous borate bromide,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoBr}_2$** 

(Rousseau and Allanc, C R 1894, 119 73)

**Cobaltous borate chloride,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoCl}$** 

(Rousseau and Allanc, C R 1894, 118 1257)

**Cobaltous borate iodide,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoI}_2$**   
(Allanc, C R 1898, 127 557)**Cuprous borate,  $3\text{Cu}_2\text{O}$ ,  $2\text{B}_2\text{O}_3$** 

(Guertler, Z anorg 1904, 38 459)

**Cupric borate**

Composition depends on temperature and concentration of solutions Boiling  $H_2O$  dissolves out all the boric acid Sol in acids, slowly sol in hot conc  $NH_4Cl + Aq$

$Cu(BO_2)_2$  Insol in cold dil acids, even HF Slowly sol in hot conc HCl Not attacked by alkalies or alkali carbonates + Aq (Guertler, Z anorg 1904, **38** 456)

Insol in methyl acetate (Naumann, B 1909, **42** 3790)

**Cupric borate ammonia**,  $CuB_4O_7 \cdot 4NH_3 + 6H_2O$

Efflorescent Can be recrystallized from a little  $NH_4OH + Aq$  (Pasternack, A **151** 227)

**Didymium borate**,  $DiBO_3$ 

Insol in  $H_2O$  acidulated with HCl + Aq (Cleve, Bull Soc (2) **43** 363)

$Di_2(B_4O_7)_3$  Insol in  $H_2O$ , sol in acids (Friedrichs and Smith, A **191** 355)

**Glucinum borate, basic**,  $5GfO \cdot B_2O_3$ 

Insol in  $H_2O$ , sol in acids (Kruss and Moraht, B **23** 735)

**Iron (ferrous) borate**

Ppt  $H_2O$  dissolves out all the boric acid (Tunnersman)

**Iron (ferric) borate**,  $Fe_2(BO_2)_6 + 3H_2O$ 

Ppt Insol in  $H_2O$   
Min *Lagonite* Sol in acids  
 $2Fe_2O_3 \cdot 3B_2O_3$  (Mallard, C R **105** 1260)  
 $6Fe_2O_3 \cdot B_2O_3 + 6H_2O$  Ppt (Rose, Pogg **89** 473)

$9Fe_2O_3 \cdot B_2O_3 + 9H_2O$  Ppt (Rose)

**Iron (ferric) magnesium borate**,  $3Fe_2O_3 \cdot 6MgO \cdot 2B_2O_3$ 

Insol in  $H_2O$  Sol in conc HCl + Aq (Ebelmen, A ch (3) **33** 53)

$2Fe_2O_3 \cdot 9MgO \cdot 3B_2O_3$  (Mallard, C R **105** 1260)

**Iron (ferroferric) magnesium borate**,  $3MgO \cdot 1FeO \cdot FeO_2 \cdot B_2O_3$ 

Min *Ludwigite* Slowly sol in HCl + Aq when finely powdered

**Iron (ferrous) borate bromide**,  $6FeO \cdot 3B_2O_3 \cdot 1FeBr$ 

Slowly sol in hot  $HNO_3 + Aq$  (Rousseau and Allard, C R **116** 1445)

**Iron (ferrous) borate chloride**,  $6FeO \cdot 3B_2O_3 \cdot 1FeCl$ 

Slowly sol in hot  $HNO_3 + Aq$  (Rousseau and Allard, C R **116** 1195)

**Lanthanum borate**,  $2La_2O_3 \cdot B_2O_3$ 

(Nordenskjöld, Pogg. **114** 618)

$La_2(B_4O_7)_3$  Ppt (Smith)

Formula is  $La_2B_4O_{11} + cH_2O$  (Cleve, B **11** 910)

**Lead borate, basic**,

$2PbO \cdot B_2O_3 + 2H_2O$  Ppt  
 $4PbO \cdot 3B_2O_3 + 4H_2O$  Ppt  
+  $5H_2O$  Ppt  
 $6PbO \cdot 5B_2O_3 + 6H_2O$  Ppt  
 $8PbO \cdot 3B_2O_3 + 8H_2O$  Ppt  
 $9PbO \cdot 5B_2O_3 + 9H_2O$  Ppt (Rose, ogg **87** 470)

**Lead borate**,  $Pb(BO_2)_2 + H_2O$ 

Insol in  $H_2O$  Easily sol in dil HN  $_3$ , or boiling  $HC_2H_3O_2 + Aq$  Decomp by I  $SO_4$ , HCl, also by boiling KOH, or NaOH Aq  
Insol in alcohol (Herapath, Phil M (3) **34** 375)

Sol in  $NH_4Cl + Aq$ , sol in sat NaCl Aq'  
 $2PbO \cdot 3B_2O_3 + 4H_2O$  (Herapath)  
 $PbB_4O_7 + 4H_2O$  Slightly sol in pure  $H_2O$ , but insol in solutions of Na salts as Na  $B_4O_7 + Aq$  (Soubeiran)

**Lead borate chloride**,  $Pb(BO_2)_2 \cdot PbCl_2 + H_2O$ 

Insol in cold, very slowly decomp l hot  $H_2O$  into its constituents Easily sol i dil hot  $HNO_3 + Aq$ , insol in alcohol (Her path, Phil Mag (3) **34** 375)

**Lead borate nitrate**,  $Pb(BO_2)_2 \cdot Pb(NO_3)_2 + H_2O$ 

Insol in alcohol (Herapath)

**Lithium borate**,  $LiBO$ 

Solubility in $H_2O$				
100 g	$H_2O$ dissolve g	$LiBO$	at t°	
t°	g	$LiBO$	t°	g
0	0.7	30	4	
10	1.4	40	11	2
20	2.6	45	20	

(Le Chatcher, C R 1897, **124** 109)

Insol in acetone (Fidmann C C **1899**, II 1014, Naumann B 1904 **37** 4329)

Insol in methyl acetate (Naumann B 1909, **42** 3790)

Insol in ethyl acetate (Naumann B 1910, **43** 314)

+  $5H_2O$  (Le Chatcher Bull Soc 1899 (3) **21** 55)

+  $16H_2O$  Effloresces in the m slowly sol in cold  $H_2O$  rapidly in hot  $H_2O$  (Le Chatcher C R 1897, **124** 1092)

$Li_2H_2(BO_3)_4 + 14H_2O$  (Roeschle Z anorg **4** 166)

$Li_2B_4O_7$  Deliquescent easily sol i  $H_2O$  (Arfvedson A ch **10** 82)

Sol in acetone (Fidmann C C **1899**, II 1014)

Insol in acetone (Naumann B 1904, **37** 4329)

Insol in methyl acetate (Naumann B 1909 **42** 3790)

+  $5H_2O$  Insol in alcohol (Fidnger, Aich Ph (3) **8** 198)

$\text{Li}_2\text{O}$ ,  $3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ , insol in alcohol (Filsinger)  
 $\text{Li}_2\text{O}$ ,  $4\text{B}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$  (Le Chatelier, Bull Soc 1899, (3) 21 35)  
 $+10\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , insol in alcohol (Filsinger)  
 "Acid lithium borate" is less sol than the tetraborate (Gmelin)  
 $\text{Li}_2\text{O}$ ,  $5\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$  (Dukelski, C A 1908 1089)

### Magnesium borate, $\text{Mg}(\text{BO}_2)_2$

(Ditte, C R 77 893)  
 $+3\text{H}_2\text{O}$  Min *Pinnite*  
 $+4\text{H}_2\text{O}$  (Laurent, A ch (2) 67 215)  
 $+8\text{H}_2\text{O}$  Insol in cold or hot  $\text{H}_2\text{O}$ , easily sol in  $\text{HCl} + \text{Aq}$  Decomp by conc  $\text{HCl} + \text{Aq}$  into  $\text{H}_3\text{BO}_3$  and  $\text{MgCl}_2$  (Wohler)  
 $\text{MgB}_4\text{O}_7 + 8\text{H}_2\text{O}$  (Popp, A Suppl 8 1)  
 $\text{MgO}$ ,  $3\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$  Very slowly sol in  $\text{H}_2\text{O}$  (Rose, A 84 221)  
 Sol in 75 pts cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 49 445)  
 $2\text{MgO}$ ,  $\text{B}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ , but sol in  $\text{Na}_2\text{CO}_3 + \text{Aq}$  (Guertler, Z anorg 1904, 40 236)  
 $+ \text{H}_2\text{O}$  Very sl sol in  $1/10$  N  $\text{HCl} + \text{Aq}$  (van't Hoff, B A B 1907, 658)  
 Min *Ascharite*  
 $3\text{MgO}$ ,  $\text{B}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ , easily sol in acids (Ebelmen, A 80 208)  
 Very sl sol in cold, but somewhat decomp by boiling  $\text{H}_2\text{O}$  (Rammelsberg)  
 $+9\text{H}_2\text{O}$  Somewhat sol in cold  $\text{H}_2\text{O}$  (Wohler, Pogg 28 525)  
 $3\text{MgO}$ ,  $2\text{B}_2\text{O}_3$  Sol in warm  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$  (Ditte, C R 77 893)  
 $\text{MgO}$ ,  $6\text{B}_2\text{O}_3 + 18\text{H}_2\text{O} = \text{Mg}(\text{BO}_2)_2$ ,  $10\text{HBO}_2 + 13\text{H}_2\text{O}$  (Rammelsberg, Pogg 49 445)  
 $3\text{MgO}$ ,  $4\text{B}_2\text{O}_3$  Sol in hot dil acids, insol in acetic acid (Ditte, C R 77 893)  
 $5\text{MgO}$ ,  $2\text{B}_2\text{O}_3 + 1\frac{1}{2}$ , and  $3\text{H}_2\text{O}$  Min *Szibuite*  
 Difficultly sol in  $\text{HCl} + \text{Aq}$   
 $9\text{MgO}$ ,  $\text{B}_2\text{O}_3$  (Mallard, C R 105 260)

### Magnesium manganous borate, $3\text{Mg}_2\text{B}_2\text{O}_5$ , $4\text{MnB}_2\text{O}_7 + 7\text{H}_2\text{O}$

Min *Susselite* Sol in  $\text{HCl} + \text{Aq}$

### Magnesium potassium borate, $\text{KMgB}_{11}\text{O}_{19} + 9\text{H}_2\text{O}$

Min *Kaliborite* Insol in  $\text{H}_2\text{O}$  (Feit, Ch Z 1899, 13 1188)  
 $2\text{MgO}$ ,  $2\text{K}_2\text{O}$ ,  $11\text{B}_2\text{O}_3 + 20\text{H}_2\text{O}$  (van't Hoff and Ichnsten, B A B 1904, 936)

### Magnesium sodium borate, $\text{MgB}_4\text{O}_7$ , $\text{Na}_4\text{B}_4\text{O}_7 + 30\text{H}_2\text{O}$

Efflorescent About as sol in cold  $\text{H}_2\text{O}$  as borax solution separates out a Mg borate on warming, which redissolves on cooling  
 Decomp by boiling  $\text{H}_2\text{O}$  (Rammelsberg)

### Magnesium strontium borate, $3\text{MgO}$ , $3\text{SrO}$ , $4\text{B}_2\text{O}_3$

Easily sol in dil acids (Ditte, C R 77 895)

### Magnesium borate bromide, $2\text{Mg}_2\text{B}_2\text{O}_5$ , $\text{MgBr}_2$ or $6\text{MgO}$ , $8\text{B}_2\text{O}_3$ , $\text{MgBr}_2$

(Rousseau and Allaire, C R 1894, 119, 71)

### Magnesium borate chloride, $2\text{Mg}_2\text{B}_2\text{O}_5$ , $\text{MgCl}_2$

Min *Boracite* Insol in  $\text{H}_2\text{O}$ , slowly sol in acids (Kraut)

*Stassfurthite* Easily sol in warm acids (Bischof)

### Magnesium borate iodide, $6\text{MgO}$ , $8\text{B}_2\text{O}_3$ , $\text{MgI}_2$

(Allaire, C R 1898, 127 556)

### Magnesium borate phosphate, $\text{Mg}(\text{BO}_2)_2$ , $2\text{MgHPO}_4 + 7\text{H}_2\text{O}$

Min *Lüneburgite*

### Magnesium borate sulphate, $2\text{Mg}_2\text{B}_2\text{O}_5$ , $3\text{MgSO}_4 + 12\text{H}_2\text{O}$

Min *Magnesium sulphoborate*

Sol in mineral acids when ground (Nau-pert, B 1893, 26 874)

### Manganous borate, $\text{MnB}_4\text{O}_7$ (?)

Insol in  $\text{H}_2\text{O}$  (Berzelius), very sl sol in  $\text{H}_2\text{O}$  (Thomas, Am Ch J 4 358), decomp by warm, slowly by cold  $\text{H}_2\text{O}$  Sol in  $\text{MgSO}_4 + \text{Aq}$  (Berzelius)

$+3\text{H}_2\text{O}$  (Endemann and Paisley, Zeit angew Ch 1903, 16 176)

$+5\text{H}_2\text{O}$  Ppt (Endemann and Paisley, Zeit angew Ch 1903, 16 176)  
 Very hygroscopic (Endemann, Ar J 1903, 29 72)

$3\text{MnO}$ ,  $\text{B}_2\text{O}_3$  (Mallard, C R 105 1260)  
 Not attacked by  $\text{H}_2\text{O}$  Very sol in acids

(Ouvrard, C R 1900, 130 336)

$3\text{MnO}$ ,  $2\text{B}_2\text{O}_3$  (Mallard)

$\text{MnH}_4(\text{BO}_3)$  Very sl sol in  $\text{H}_2\text{O}$

Solubility in 2%  $\text{Na}_2\text{SO}_4 + \text{Aq}$  At  $18^\circ$ , 0.77 g  $\text{MnH}_4(\text{BO}_3)_2$  are dissolved per litre, at  $40^\circ$ , 0.65 g, at  $60^\circ$ , 0.36 g, at  $80^\circ$ , 0.12 g

Solubility in 2%  $\text{NaCl} + \text{Aq}$  1 l solution dissolves 1.31 g salt at  $18^\circ$ , 0.6 g at  $59^\circ$  and 0.29 g at  $80^\circ$

Solubility in 2%  $\text{CaCl}_2 + \text{Aq}$  1 l  $\text{CaCl}_2 + \text{Aq}$  dissolves 2.91 g salt at  $17^\circ$ , 2.44 g at  $43^\circ$ , 2.25 g at  $61^\circ$ , and 1.35 g at  $80^\circ$  (Hartley and Ramuge, Chem Soc 63 129)

### Manganous borate bromide, $6\text{MnO}$ , $8\text{B}_2\text{O}_3$ , $\text{MnBr}$

(Rousseau and Allaire, C R 1894, 119 73)

### Manganous borate chloride, $6\text{MnO}$ , $8\text{B}_2\text{O}_3$ , $\text{MnCl}$

(Rousseau and Allaire, C R 1894, 118 1257)

### Molybdenum borate, $\text{MoO}$ , $2\text{B}_2\text{O}_3$ (?)

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{H}_3\text{BO}_3 + \text{Aq}$  (Berzelius)

**Molybdenum borate,  $\text{Mo}_2\text{O}_3, \text{B}_2\text{O}_3$** 

Precipitate Insol in  $\text{H}_2\text{O}$ , sl sol in a solution of boric acid (Berzelius)

See **Boromolybdic Acid**

**Nickel borate,  $\text{Ni}(\text{BO}_2)_2 + 2\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  Easily sol in acids Easily sol in warm  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose, Pogg 88 299)

$2\text{NiO}, \text{B}_2\text{O}_3 + x\text{H}_2\text{O}$  Easily sol in acids (Rose)

$3\text{NiO}, 2\text{B}_2\text{O}_3 + 5\text{H}_2\text{O}$  Easily sol in acids (Rose)

$3\text{NiO}, \text{B}_2\text{O}_3$  Not attacked by  $\text{H}_2\text{O}$ , sol in acids (Ouvrard, C R 1900, 130 337)

**Nickel borate bromide,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiBr}_2$**   
(Rousseau, C R 1894, 119 73)**Nickel borate chloride,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiCl}_2$**   
(Rousseau, C R 1894, 118 1257)**Potassium borates**

Solubility of  $\text{B}_2\text{O}_3$  in  $\text{K}_2\text{O} + \text{Aq}$  at  $30^\circ$

Solution contains		Solid phase
% by wt $\text{K}_2\text{O}$	% by wt $\text{B}_2\text{O}_3$

At  $30^\circ$  only the three potassium borates  $\text{K}_2\text{O}, \text{B}_2\text{O}_3 + 2 5\text{H}_2\text{O}$ ,  $\text{K}_2\text{O}, 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  and  $\text{K}_2\text{O}, 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$  exist in stable form (Dukelski, Z anorg 1906, 50 42)

**Potassium metaborate,  $\text{KBO}_2$** 

Sol in small amount of  $\text{H}_2\text{O}$  (Berzelius, Pogg 34 568)

$+1\frac{1}{2}\text{H}_2\text{O}$  Only stable hydrate (Dukelski, Z anorg 1906, 50 42)

$+1\frac{1}{2}\text{H}_2\text{O}$  (Atterberg, Bull Soc ( ) 22 350)

**Potassium tetraborate,  $\text{K}_2\text{B}_4\text{O}_7$** 

Very sol in  $\text{H}_2\text{O}$

$+4\text{H}_2\text{O}$  (Atterberg, Bull Soc ( ) 22 350)

Only stable hydrate (Dukelski, l c)

$+5\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ , more so than

$\text{K}_2\text{B}_6\text{O}_{10}$  or  $\text{K}_2\text{B}_{12}\text{O}_{19}$

$+6\text{H}_2\text{O}$  (Atterberg, l c)

**Potassium hexaborate,  $\text{K}_2\text{B}_6\text{O}_{10} + 5$ , and  $8\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$

Does not exist (Dukelski, l c)

**Potassium dekaborate,  $\text{K}_2\text{B}_{10}\text{O}_{16} + 8\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (Rammelsberg)

Only hydrate (Dukelski)

**Potassium dodekaborate,  $\text{K}_2\text{B}_{12}\text{O}_{18} + 10\text{H}_2\text{O}$** 

Sl sol in cold, very sol in hot  $\text{H}_2\text{O}$

(Laurent, A ch 67 215)

$= \text{K}_2\text{B}_{10}\text{O}_{16}$  (Rammelsberg)

Does not exist (Dukelski)

**Potassium borate fluoride,  $\text{KBO}_2, \text{KF}$** 

Sol in  $\text{H}_2\text{O}$  (Schiff and Sestini, 228 72)

$\text{KBO}_2, 2\text{KF}$  Sol in little, decomposes by much  $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Schiff and Sestini, A 228 72)

**Rubidium borate,  $\text{RbB}_4\text{O}_7$** 

Anhydrous (Reischle, Z anorg 4 56)

$+6\text{H}_2\text{O}$  Not deliquescent or efflorescent Sol in  $\text{H}_2\text{O}$  (Reissig, A 127 33)

**Samarium borate,  $\text{SmBO}_3$** 

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Cleve, Bull Soc (2) 43 1670)

**Scandium borate,  $\text{ScBO}_3$** 

Sol in dil acids (Crookes Phil Trans 1910, 210 A 364)

**Silver borate,  $\text{AgBO}_2$** 

Sl sol in  $\text{H}_2\text{O}$  By washing with  $\text{H}_2\text{O}$  the boric acid is dissolved out (Rose, Chem Centr bl 1853 205)

Sol with decom in  $\text{Na}_2\text{SO}_4 + \text{A}$  (Henschel), sol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  if pptd old 1 l  $\text{H}_2\text{O}$  dissolves ca  $6 \times 10^{-4}$  g atoms at  $25^\circ$  (Abegg and Cox, Z phys C 1903, 46 11)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

$3\text{AgO}, 4\text{B}_2\text{O}_3$  (Rose, l c)

## Sodium borates

Solubility of  $B_2O_3$  in  $Na_2O + Aq$  at  $30^\circ$ 

Solution contains		Solid phase
% by wt $Na_2O$	% by wt $B_2O_3$

At  $30^\circ$ , only the four sodium borates  $Na_2O, B_2O_3 + 4H_2O$ ,  $Na_2O, B_2O_3 + 8H_2O$ ,  $Na_2O, 2B_2O_3 + 10H_2O$ , and  $Na_2O, 5B_2O_3 + 10H_2O$  exist as stable phases

(Dukelski, Z anorg 1906, 50 46)

Sodium metaborate,  $NaBO_3$ 

Anhydrous Easily sol in  $H_2O$ , with evolution of heat

+  $H_2O$  Easily sol in  $H_2O$  (Benedikt)+  $2H_2O$  Easily sol in  $H_2O$  (Benedikt, B 7 703)+  $3H_2O$  Easily sol in  $H_2O$  (Berzelius)+  $4H_2O$  Slightly efflorescent Sol in hot, less sol in cold  $H_2O$  Melts at  $57^\circ$  in its crystal  $H_2O$  (Dukelski, Z anorg 50 42)+  $4\frac{1}{2}H_2O$  (Atterberg, Z anorg 1906, 48 370)+  $5\frac{1}{2}H_2O$  (Atterberg)

+  $8H_2O$  (Atterberg)  
+  $4H_2O$  and +  $8H_2O$  are the only hydrates formed (Dukelski)

System  $Na_2O, B_2O_3, H_2O$  at  $60^\circ$  investigated by Sborgi (Real Ac Linc 1915, (5) 24 I, 443)

Sodium tetraborate,  $Na_4B_4O_7$  (Borax)100 g  $H_2O$  dissolve at $5^\circ$  10° 21 5° 30° 37 5°

1 3 1 6 2 8 3 9 5 6 g anhydrous salt

 $45^\circ$   $50^\circ$   $54^\circ$   $55^\circ$   $56^\circ$   $57^\circ$ 

8 1 10 5 13 3 14 2 15 0 16 0 g anhydrous salt

(Horn and van Wagener, Am Ch J 1903, 30 347)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Sol in amyl alcohol in the presence of meta-arsenous acid and excess of  $H_3BO_3$  (Auerbach, Z anorg 1903, 37 358)+  $4H_2O$ +  $5H_2O$ 100 g  $H_2O$  dissolve at $65^\circ$   $70^\circ$   $80^\circ$   $90^\circ$   $100^\circ$ 

22 0 24 4 31 4 40 8 52 3 g anhydrous salt

(Horn and van Wagener, Am Ch J 1903, 30 347)

+  $6H_2O$  Grows opaque in the air (Bechi, Sill Am J (2) 17 129)+  $10H_2O$  Only stable hydrate (Dukelski, Z anorg 50 30) Efflorescent on surface in dry air Not efflorescent when free from $Na_2CO_3$  (Sims)

Sol in 12 pts cold and 2 pts hot  $H_2O$  Sat cold  $Na_2B_4O_7 + Aq$  contains 9 23% and sat hot  $Na_2B_4O_7 + Aq$  contains 33 33%  $Na_2B_4O_7$  (Gmelin)

Sol in 20 pts cold and 6 pts boiling  $H_2O$  (Wallemus)Sol in 15 pts  $H_2O$  at  $18.7^\circ$  (Abt)100 pts  $H_2O$  at  $1.5^\circ$  dissolve 5 pts at  $60^\circ$  40 pts at  $100^\circ$  166 pts  $Na_2B_4O_7 + 10H_2O$  (Ure's Dictionary)

100 pts sat  $Na_2B_4O_7 + Aq$  at  $105.5^\circ$  contain 52 5 pts  $Na_2B_4O_7$  or 100 pts  $H_2O$  dissolve 110 54 pts  $Na_2B_4O_7$  or 1 pt  $Na_2B_4O_7$  is sol in 0.9047 pt  $H_2O$  at  $105.5^\circ$  (Griffith Quar J Sci 18 90)

Solubility in 100 pts  $H_2O$  at  $t^\circ$ 

t	Pts $Na_2B_4O_7$	Pts $Na_2B_4O_7 + 10H_2O$	t	Pts $Na_2B_4O_7$	Pts $Na_2B_4O_7 + 10H_2O$

50	12 93	27 41			

(Poggiale, A ch (3) 8 46)

100 pts  $H_2O$  dissolve 1 4 pts  $Na_2B_4O_7$  at  $0^\circ$ , and 55 3 pts at  $100^\circ$  (Mulder)

$Na_2B_4O_7 + Aq$  sat at  $15^\circ$  has sp gr = 1.0199, and contains 3.926 pts  $Na_2B_4O_7$  to 100 pts  $H_2O$  (Michel and Krafft, A ch (3) 41 471)

$\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat at  $17^\circ$  has sp gr = 1.0208 (Stolba, J pr 97 503)

Sp gr of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  at  $15^\circ$

$\frac{\%}{100} \text{Na}_2\text{B}_4\text{O}_7$	$\frac{\%}{100} \text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$	Sp gr	$\frac{\%}{100} \text{Na}_2\text{B}_4\text{O}_7$	$\frac{\%}{100} \text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$	Sp gr
1	0.52	1.0049	4	2.11	1.0199
2	1.06	1.0099	5	2.64	1.0249
3	1.59	1.0149	6	3.17	1.0299

(Gerlach, Z anal 28 473)

Sp gr of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat at  $15^\circ = 1.032$  (Gerlach)

Sat  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  boils at  $105.5^\circ$ , and contains 110.5 pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$  (Griffith)

Sat  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  forms a crust at  $103^\circ$ , and contains 60.14 pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$ , highest temp observed,  $104.3^\circ$  (Gerlach, Z anal 26 427)

B-pt of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  containing pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$

B pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$	B pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$
100.5	8.64	103.0	61.2
101.0	17.2	103.5	75.4
101.5	26.5	104.0	90.8
102.0	37.5	104.5	109.0
102.5	48.5	104.6	112.3

(Gerlach, Z anal 26 452)

M-pt of  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$  is  $75.5^\circ$  (Tilden, Chem Soc 45 407)

Insol in alcohol

100 g alcohol (0.941 sp gr) dissolve 2.45 g at  $15.5^\circ$  (U S P)

Sol in alcoholic solution of  $\text{NaCH}_3\text{CO}_2$  (Stromeyer)

Sol in 14.7 pts glycerine of 1.225 sp gr (Vogel)

Sol in 1 pt glycerine (Schultze, Arch Pharm (3) 6 149)

100 g glycerine dissolve 60.3 g at  $15.5^\circ$  (U S P)

Min Thermal

**Sodium borate,  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$**

Sol in 5-6 pts cold  $\text{H}_2\text{O}$  (Bolley A 68 122) Perhaps sodium hydrogen tetraborate  $\text{Na}_2\text{HB}_4\text{O}_7 + 4\frac{1}{2}\text{H}_2\text{O}$

$\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Atterberg, Z anorg 48 370)

Stable (Dukelski, Z anorg 50 42)

+  $11\text{H}_2\text{O}$  (Lament, C R 29 5)

**Sodium borate fluoride,  $\text{Na}_2\text{B}_4\text{O}_7 + 3\text{NaF} + 4\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$

Bischoff (B 7 112) considers this salt to be a mixture

$\text{Na}_2\text{B}_4\text{O}_7, 12\text{NaF} + 22\text{H}_2\text{O}$  Can be separated into its constituents by  $\text{H}_2\text{O}$  (Berzelius, Berz J B 23 96)

**Strontium borate,  $\text{Sr}(\text{BO}_2)_2$**

(Ditte, C R 77 788)

Easily hydrated by  $\text{H}_2\text{O}$  forming  $\text{Sr}(\text{BO}_2)_2 + 2\text{H}_2\text{O}$  Very sol in dil acetic acid (Ouvrard, C R 1906, 142 282)

Insol in acetone (Naumann, B 14, 37 4329)

+  $2\text{H}_2\text{O}$  (Ouvrard, l c)

+  $4\text{H}_2\text{O}$  (Ouvrard, l c)

+  $5\text{H}_2\text{O}$  1 l  $\text{H}_2\text{O}$  dissolves 2.3 g at  $10^\circ$

(Ditte, A ch 1883 (5) 30 253)

$\text{SrB}_2\text{O}_7$  Insol in  $\text{H}_2\text{O}$ , sol in dil acids

(Guerlier, Z anorg, 1904, 40 243)

+  $4\text{H}_2\text{O}$  Sol in 130 pts boiling  $\text{H}_2\text{O}$ , 100 pts  $\text{H}_2\text{O}$  at  $100^\circ$  dissolve 7.7 pts (Ure, Dict)

Easily sol in cold  $\text{NH}_4$  salts +  $\text{Aq}$ , sol in cold  $\text{HNO}_3 + \text{Aq}$

$2\text{SrO} \cdot \text{B}_2\text{O}_3$  Easily decomp by  $\text{H}_2\text{O}$  forming  $\text{B}_2\text{O}_3$ ,  $\text{SrO}$ ,  $4\text{H}_2\text{O}$  Very sol in acids (Ouvrard, C R 1906, 142 282)

$3\text{SrO} \cdot \text{B}_2\text{O}_3$  Less easily attacked by  $\text{H}_2\text{O}$  than Ca comp Very sol in mineral acids Sl attacked by dil acetic acid (Ouvrard, C R 1901, 132 258)

$\text{SrB}_2\text{O}_7$  Very sl sol in  $\text{H}_2\text{O}$ , sol in acids (Laurent)

$\text{SrB}_2\text{O}_7 + 7\text{H}_2\text{O}$  Ppt (Lament)

+  $12\text{H}_2\text{O}$  (Ditte)

$\text{Sr}_2\text{B}_4\text{O}_{13}$  Sol in cold mineral acids and acetic acid (Ditte, C R 77 785)

$2\text{SrO} \cdot 3\text{B}_2\text{O}_3$  Easily sol in acids (Ditte, l c)

**Strontium borate bromide,  $3\text{SrO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{SrBr}_2$**

As the chloride (Ouvrard, C R 1906, 142 283)

**Strontium borate chloride,  $3\text{SrO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{SrCl}_2$**

Sl attacked by cold  $\text{H}_2\text{O}$  not attacked by dilute acetic acid (Ouvrard, C R 1906 142 282)

**Thallous borate,  $\text{TlBO}_2 + \frac{1}{2}\text{H}_2\text{O}$**

Decomp in the air (Buchta J 1913 (2) 88 784)

$\text{TlBO}_2$  (Buchta J)

$\text{Tl}_2\text{B}_4\text{O}_7$  Ppt Sol in boiling  $\text{H}_2\text{O}$  insol in cold dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Crookes)

+  $2\text{H}_2\text{O}$  (Buchta J pr 191 (2) 88 774)

$\text{Tl}_2\text{B}_4\text{O}_{10} + 3\text{H}_2\text{O}$  (Buchta J)

$\text{Tl}_2\text{B}_4\text{O}_{11} + 4\text{H}_2\text{O}$  (Buchta J)

$\text{Tl}_2\text{B}_{10}\text{O}_{16} + 5\text{H}_2\text{O}$  (Buchta J)

$\text{Tl}_2\text{B}_{10}\text{O}_{17} + 7\text{H}_2\text{O}$  (Buchta J)

**Thorium borate (?)**

Precipitate Insol in  $\text{H}_2\text{O}$  and  $\text{LiBO}_2 + \text{Aq}$  (Berzelius)

**Tin (stannous) borate (?)**

Ppt (Wenzel)

**Divanadyl borate**

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{H}_3\text{BO}_3 + \text{Aq}$  (Berzelius)

**Ytterbium borate,  $\text{YbBO}_3$** 

Insol in conc  $\text{HCl}$ , sol in  $\text{HF}$  (Cleve, Z anorg 1902, **32** 148)

**Yttrium borate**

Precipitate (Berlin, Pogg **43** 105)

**Zinc borate,  $3\text{ZnO}, 2\text{B}_2\text{O}_3$** 

(Mallard, C R **105** 1260)

Decomp by  $\text{H}_2\text{O}$ , very sol in dil acids (Ouvrard, C R 1900, **130** 336)

$\text{ZnO}, 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with decomp (Ditte, A ch 1883, (5) **30** 256)

$3\text{ZnO}, 4\text{B}_2\text{O}_3 + \text{H}_2\text{O}$  Ppt (Holdermann, Arch Pharm 1904, **242** 567)

$\text{ZnO}, 4\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$  (Ditte, A ch 1883, (5) **30** 256)

$9\text{ZnO}, 4\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$  Sl sol in  $\text{H}_3\text{BO}_3 + \text{Aq}$  (Rose, Pogg **88** 299)

$3\text{ZnO}, \text{B}_2\text{O}_3$  Insol in mineral acids (le Chatelier, C R **113** 1034)

**Zinc borate ammonia,  $\text{ZnB}_4\text{O}_7, 4\text{NH}_3 + 6\text{H}_2\text{O}$** 

Easily sol in  $\text{NH}_4\text{OH}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$  (Buchner, A **151** 234)

**Zinc borate bromide,  $6\text{ZnO}, 8\text{B}_2\text{O}_3, \text{ZnBr}_2$** 

(Rousseau and Allaire, C R **116** 1446)

**Zinc borate chloride,  $6\text{ZnO}, 8\text{B}_2\text{O}_3, \text{ZnCl}_2$** 

Insol in  $\text{HCl}$  (Rousseau, C R 1894, **118** 1256)

**Zinc borate iodide,  $6\text{ZnO}, 8\text{B}_2\text{O}_3, \text{ZnI}_2$** 

(Allaire, C R 1898, **127** 556)

**Zirconium borate, (?)**

Insol in  $\text{H}_2\text{O}$

**Perboric acid**

See Perboric Acid

**Boric phosphoric acid**

See Phosphoboric acid

**Boric tungstic acid**

See Borotungstic acid

**Boric acid sulphur trioxide**

See Borosulphuric acid

**Borimide,  $\text{B}(\text{NH})_3$** 

Decomp by  $\text{H}_2\text{O}$ , insol in all indifferent solvents, sol in liquid  $\text{NH}_3 + \text{S}$  to form a dark blue solution (Stock, B 1901, **34** 3044)

**Borimide hydrochloride,  $\text{B}_2(\text{NH})_3, 3\text{HCl}$** 

Decomp by  $\text{H}_2\text{O}$ , insol in all ordinary organic solvents (Stock, B 1901, **34** 3045)

**Borofluorhydric acid,  $\text{HBF}_4$** 

See Fluoboric acid

**Borofluorides**

See Fluoborides

**Boromolybdic acid**

Sol in  $\text{H}_2\text{O}$  Decomp by alcohol (Berzelius)

**Boron, B**

(a) *Amorphous* Somewhat sol in pure  $\text{H}_2\text{O}$ , when not ignited Salts and acids separate it out of aqueous solution Upon evaporation of  $\text{H}_2\text{O}$  solution a crust is formed, which is only partially sol in  $\text{H}_2\text{O}$  (Berzelius, Pogg **2** 113) Decomp by hot  $\text{H}_2\text{SO}_4$  and cold moderately conc  $\text{HNO}_3 + \text{Aq}$  Strongly ignited amorphous B is much less easily attacked by reagents than freshly pptd, and is insol in  $\text{H}_2\text{O}$  (Berzelius) Insol in caustic alkalis +  $\text{Aq}$ , also in alcohol and ether

Above boron was very impure (Moissan, C R **114** 392)

Pure B is not attacked by acids, but has a strong reducing action on  $\text{KMnO}_4 + \text{Aq}$ ,  $\text{FeCl}_3 + \text{Aq}$ , etc (Moissan, C R **114** 617)

Does not melt at  $1500^\circ$  Readily sol in conc acids, as  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{H}_3\text{PO}_4$ , very sl sol in hydric acids, decomp  $\text{H}_2\text{O}$  at red heat (Moissan, A ch 1895, (7) **6** 313-14)

Insol in liquid  $\text{NH}_3$  (Gore, A ch 1898, **20** 827)

(b) *Crystallized* 1 Insol in  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq}$  Very slightly and slowly by boiling conc  $\text{H}_2\text{SO}_4$  Gradually so by conc  $\text{HNO}_3$  Formula is  $\text{Al}_2\text{B}_{10}$  (Hampe, A **183** 75)

2 Very slightly attacked by conc  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ , slowly but completely sol in conc  $\text{HNO}_3$ , insol in  $\text{KOH} + \text{Aq}$  Formula is  $\text{C}_2\text{Al}_3\text{B}_{10}$  (Hampe)

$\text{C}_2\text{Al}_3\text{B}_{10}$  (*crystalline*) Insol in a solution of  $\text{CrO}_3$  in  $\text{H}_2\text{SO}_4$  Insol in hot conc  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$  Sol in hot conc  $\text{HNO}_3$  (Biltz, B 1910, **43** 303)

**Boron tribromide,  $\text{BBr}_3$** 

Sol in  $\text{H}_2\text{O}$  or alcohol with decomp (Nickles, C R **60** 800)

**Boron phosphorus bromide,  $\text{BBr}_3, \text{PBr}_3$** 

Decomp by  $\text{H}_2\text{O}$

Sol in  $\text{CS}_2$  and  $\text{CHCl}_3$  Decomp by alcohol, ether, etc (Turle, C R **116** 1521)

$\text{BBr}_3, \text{PBr}_3$  Sl sol in cold, easily in hot  $\text{CS}_2$  (Turle)

**Boron bromide ammonia,  $\text{BBr}_3, 4\text{NH}_3$** 

Decomp by  $\text{H}_2\text{O}$  and alkalis (Besson, C R **114** 542)

**Boron bromide phosphine,  $\text{BBr}_3, \text{PH}_3$** 

Violently decomp by  $\text{H}_2\text{O}$  (Besson, C R **113** 78)

**Boron bromide phosphorus trichloride,  $2\text{BBr}_3\text{,PCl}_3$** 

Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{BBr}_3$ ,  $\text{PCl}_3$ ,  $\text{CS}_2$ , and  $\text{CHCl}_3$  Insol in petroleum ether (Tarble, C R 1901, 132 84)

**Boron bromide phosphorus pentachloride,  $2\text{BBr}_3\text{,PCl}_5$** 

Sol in  $\text{BBr}_3$  and  $\text{CS}_2$ , decomp by  $\text{H}_2\text{O}$ , insol in light petroleum (Tarble, C R 1901, 132 85)

**Boron bromide phosphorus diiodide,  $2\text{BBr}_3\text{,P}_2\text{I}_4$** 

Sol in  $\text{BBr}_3$ ,  $\text{CS}_2$ ,  $\text{CHCl}_3$ , insol in light petroleum, decomp by  $\text{H}_2\text{O}$  (Tarble, C R 1901, 132 205)

**Boron bromide phosphoryl chloride,  $\text{BBr}_3\text{,POCl}_3$** 

Very easily decomp (Oddo and Tealdi, Gazz ch it 1903, 33 (2) 431)

**Boron bromoiodide,  $\text{BBr}_2\text{I}$** 

Decomp violently by  $\text{H}_2\text{O}$  (Besson, C R 112 100)

$\text{BBI}$  (Besson, C R 112 100)

**Boron bromosulphide,  $\text{B}_2\text{S}_3\text{,BBr}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Stock, B 1901, 34 3040)

**Boron carbide,  $\text{B}_6\text{C}$** 

Very stable, insol in  $\text{HF}$  and in  $\text{HNO}_3$ , sol in  $\text{KOH}$  at red heat (Moissan, Bull Soc 1894, (3) 11 1101)

Insol in acids, sol in fused alkali (Moissan, C R 1894, 118 559)

$\text{BC}$  or  $\text{B C}$  Insol in all the usual solvents (Mullhauser, Z anorg 5 92)

**Boron trichloride,  $\text{BCl}_3$** 

Rapidly absorbed by  $\text{H}_2\text{O}$  and alcohol with decomposition

**Boron nitrosyl chloride,  $\text{BCl}_3\text{,NOCl}$** 

Decomp violently by  $\text{H}_2\text{O}$  (Geuther, J pr (2) 8 511)

**Boron phosphoryl chloride,  $\text{BCl}_3\text{,POCl}_3$** 

Decomp immediately by  $\text{H}_2\text{O}$  (Gustavson, Zeit Chem 1870 521)

**Boron chloride ammonia,  $2\text{BCl}_3\text{,3NH}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Berzelius, Pogg 2 147)

**Boron chloride phosphine,  $\text{BCl}_3\text{,PH}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Besson, C R 110 516)

**Boron chlorosulphide,  $\text{B}_2\text{S}_3\text{,BCl}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Stock, B 1901, 34 3040)

**Boron trifluoride,  $\text{BF}_3$** 

$\text{H}_2\text{O}$  absorbs 700 vols  $\text{BF}_3$  gas to form a

liquid of 1.77 sp gr On boiling,  $\frac{1}{5}$  of t  $\text{BF}_3$  is given off, and a residue boiling at  $16^\circ$  to  $200^\circ$ , with composition  $\text{BF}_3 + 2\text{H}_2\text{O}$  or  $\text{H}_2\text{O}_2 + 3\text{HF}$ , is left (J Davy, A ch 86 178)

1 ccm  $\text{H}_2\text{O}$  absorbs at  $0^\circ$  and 762 mm pressure 1.057 ccm  $\text{BF}_3$

1 vol conc  $\text{H}_2\text{SO}_4$  of 1.85 sp gr absorbs 50 vols  $\text{BF}_3$

Absorbed by alcohol with decomp

Cold oil of turpentine absorbs 6 % of  $\text{BF}_3$

**Boron fluoride ammonia,  $\text{BF}_3\text{,NH}_3$ ,  $\text{BF}_3\text{,2NH}_3$ , and  $\text{BF}_3\text{,3NH}_3$** 

Decomp by  $\text{H}_2\text{O}$

**Boron fluoride cyanhydric acid,  $\text{BF}_3\text{,HCN}$** 

Very unstable (Paton, C R 113 5)

**Boron fluoride phosphine,  $2\text{BF}_3\text{,PH}_3$** 

Very unstable at ordinary temp Decomp by  $\text{H}_2\text{O}$  (Besson, C R 110 80)

**Boron hydride,  $\text{BH}_3$** 

Not obtained free from  $\text{H}_2\text{Si}$  Sol in  $\text{H}_2\text{O}$  (Jones, Chem Soc 35 41)

See **Cyclotriborene**

$\text{B}_4\text{H}_{10}$  B-pt  $16-17^\circ$  at 760 mm

Very unstable Takes fire spontaneously in the air

Decomp by  $\text{H}_2\text{O}$ , dil  $\text{HCl}$ , and oxidized by conc  $\text{HNO}_3$  with explosive violence

Absorbed by  $\text{NaOH} + \text{Aq}$

Decomp by alcohol Sol in dry benzene (Stock, B 1912, 45 3562)

$\text{B}_6\text{H}_{12}$  B-pt  $100^\circ$  at atmospheric pressure

Decomp by  $\text{H}_2\text{O}$  With aqueous solutions, hydrogen is evolved (Stock, B 1913, 45 3565)

$\text{B}_3\text{H}$  Insol in  $\text{HCl}$  Sol in aqueous  $\text{NaOH} + \text{Aq}$  (Winkler, B 1890, 23 778)

$\text{B}_{10}\text{H}_{14}$  M-pt  $99.5^\circ$ , not attacked by cold or boiling  $\text{H}_2\text{O}$  Sol in dil  $\text{NaOH} + \text{Aq}$  Sol in alcohol, ether, benzene, in  $\text{CS}_2$  (Stock, B 1913, 46 3360)

**Boron iodide,  $\text{BI}_3$** 

Very hygroscopic, and instantly decomp by  $\text{H}_2\text{O}$  or alcohol Very sol in  $\text{CS}_2$ ,  $\text{CCl}_4$ , less sol in  $\text{PCl}_3$ ,  $\text{AsCl}_3$ , and in many organic liquids (Moissan, C R 112 717)

**Boron iodide ammonia,  $\text{BI}_3\text{,5NH}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Besson, C R 112 512)

**Boron iodophosphide,  $\text{BI}_3\text{P}$** 

Very hygroscopic, decomp by  $\text{H}_2\text{O}$  Not attacked by cold conc  $\text{H}_2\text{SO}_4$ , even if ming, but on heating decomposition takes place Very sol in  $\text{CS}_2$  Insol in benzene,  $\text{PCl}_3$ , or  $\text{CCl}_4$  (Moissan, C R 113 624)

$\text{BIP}$  Less hygroscopic than  $\text{BI}_3$ , but otherwise the properties are similar (Moissan)

**Boron nitride, BN**

Insol in  $H_2O$ , conc  $HNO_3$ , conc  $HCl$ +  
Aq, or conc solutions of alkalis

Decomp by hot conc  $H_2SO_4$  or  $HF$   
(Wohler, A 74 70)

**Boron trioxide,  $B_2O_3$** 

Deliquescent Sol in  $H_2O$  with a large in-  
crease in temp (Ditte, C R 85 1069)

1 pt dissolves—

at	18 75°	in	47 01 pts	$H_2O$
"	25°	"	27 75 "	"
"	37 5°	"	18 73 "	"
"	50°	"	15 13 "	"
"	62 5°	"	9 29 "	"
"	75°	"	7 28 "	"
"	87 5°	"	5 58 "	"
"	100°	"	4 74 "	"

Or 100 pts  $H_2O$  dissolve—

at	18 75°	2 13 pts	$B_2O_3$
"	25°	3 60 "	"
"	37 5°	4 24 "	"
"	50°	6 61 "	"
"	62 5°	10 76 "	"
"	75°	13 73 "	"
"	87 5°	17 92 "	"
"	100°	21 09 "	"

(Brandes and Firnhaber, Arch Pharm 7 50)

1 litre  $H_2O$  dissolves—

at	0°	11 00 g	$B_2O_3$
"	12°	16 50 "	"
"	20°	22 49 "	"
"	40°	39 50 "	"
"	62°	64 50 "	"
"	80°	95 00 "	"
"	102°	164 50 "	"

(Ditte, C R 85 1069)

Sat H O solution boils at 100° (Brandes  
and Firnhaber)

Sat H O solution boils at 103 3° (Grif-  
fiths, Quar J Sci 18 90)

Sol in acetic acid, hot conc  $HCl$ +Aq,  
 $HNO_3$ , and  $H_2SO_4$ . From the three latter it  
separates on cooling or dilution with H O

Solubility in  $Na_2O$ +Aq at 30

See Borates, sodium

Solubility in  $K_2O$ +Aq at 30°

See Borates, potassium

Insol in hot glacial acetic acid (Holt,  
Chem Soc 1911, 100 (2) 720)

Insol in alcohol (Graham)

Sol in alcohol (Berzelius, Ebdmen)

Sol in oils

See also Boric acid

**Boron trioxide potassium fluoride,  $B_2O_3, 2KF$** 

Gradually sol in  $H_2O$  Decomp by much  
 $H_2O$  Insol in alcohol (Schiff and Sestini,  
A 228 82)

**Boron oxychloride,  $BOCl$** 

(Gustavson, Zeit Chem 1870 521)

$BOCl_3$  Slowly decomp by  $H_2O$  (Coun-  
cler, J pr (2) 18 399)

Oxychlorides of either the above formulæ  
do not exist, the true formula for boron oxy-  
chloride is  $B_2O_{11}Cl_2$  (Lorenz, A 247 226)

**Boron phosphide,  $BP$** 

Insol in  $H_2O$  Sol in conc boiling alkalis  
+Aq with decomp Decomp by  $HNO_3$ +Aq  
(Besson, C R 113 78)

Insol in  $PCl_3$ ,  $AsCl_3$ ,  $SbCl_3$ ,  $CCl_4$ , and in  
fact in all known solvents

Not attacked by boiling  $H_2O$ , conc  $HCl$ , or  
 $HI$ +Aq Sol in conc  $HNO_3$  with decomp  
on heating Not attacked by cold  $H_2SO_4$   
(Moissan, C R 113 726)

$B_2P_3$  Not attacked by boiling conc  $HNO_3$   
+Aq Insol in all solvents (Moissan)

**Boron phosphoriodide**

See Boron iodophosphide

**Boron selenide,  $B_2Se_3$** 

Violently decomp by  $H_2O$  (Sabatier, C  
R 112 1000)

**Boron trisulphide,  $B_2S_3$** 

Decomp with violence with  $H_2O$  Com-  
bines with alcohol and ether (Fremy, A ch  
(3) 38 312)

Insol in most solvents, but sl sol in  $PCl_3$   
without decomp, more sol in  $SCl_2$ , but does  
not crystallize from the solution (Moissan,  
C R 115 203)

**Boron trisulphide ammonia,  $B_2S_3, 6NH_3$** 

Ppt (Stock, B 1901, 34 3042)

**Boron pentasulphide,  $B_2S_5$** 

Decomp by  $H_2O$  and alcohol (Moissan,  
C R 115 271)

**Borosulphuric acid,  $BOHSO_4+SO_3$** 

Decomp by H O (Schultz-Sellac, B 4  
12)

$B(HSO_4)_3$  Very deliquescent Easily sol  
in fuming  $H_2SO_4$  (D'Arcy, Chem Soc 55  
155)

$SO_3(O BO)_2$  Hygroscopic Deliquescent  
Sol in H O with decomp Decomp by cold  
alcohols (Pictet, Bull Soc 1908, (4) 3 1121)

$(SO_3)_2B_2O_3$  Hygroscopic Deliquescent  
Sol in  $H_2O$  with decomp Decomp by cold  
alcohols (Pictet, Bull Soc 1908, (4) 3 1121)

**Boronotungstic acid,  $H_4B_2W_9O_{32}+22H_2O=9WO_3, B_2O_3, 2H_2O+22H_2O$** 

Sol in less than  $\frac{1}{10}$  pt  $H_2O$ , and as easily  
sol in alcohol and ether Sp gr of aqueous  
solution is somewhat under 3 (Klein, A ch  
(5) 28 370)

**Aluminum boronotungstate,  $Al_4(B_2W_9O_{32})_3+65H_2O$** 

Extremely sol in  $H_2O$  (Klein)

**Ammonium —,  $(NH_4)_4B_2W_9O_{32}+18H_2O$** 

Quickly effloresces (Klein)

**Barium boronotungstate**,  $\text{Ba}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$

Sol in 4 pts cold, and less than  $\frac{1}{2}$  pt hot  $\text{H}_2\text{O}$  (Klein)

**Cadmium** —,  $\text{Cd}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Deliquescent

100 pts of salt dissolve in less than 8 pts  $\text{H}_2\text{O}$  at  $19^\circ$  Sp gr of solution is 3.28 (Klein)

Sp gr of sat solution at  $15.6^\circ/4^\circ = 3.2887$ , at  $16.2^\circ/4^\circ = 3.2868$  (Kahlbaum, Z anorg 1902, 29 229)

**Calcium** —,  $\text{Ca}_2\text{B}_2\text{W}_9\text{O}_{32} + 15\text{H}_2\text{O}$

Sol in  $\frac{1}{10}$  pt  $\text{H}_2\text{O}$  Solution has sp gr = 3.10 (Klein)

**Cerium** —,  $\text{Ce}_4(\text{B}_2\text{W}_9\text{O}_{32})_3 + 57\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sp gr of solution is over 3

**Chromium** —,  $\text{Cr}_4(\text{B}_2\text{W}_9\text{O}_{32})_3 + 74\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sp gr of solution is 2.80 (Klein)

**Cobalt** —,  $\text{Co}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sp gr of solution sat at  $19^\circ = 3.36$  (Klein)

100 pts  $\text{H}_2\text{O}$  dissolve 306.8 pts anhydrous salt at  $16.2^\circ$ , 288 pts at  $18.5^\circ$ , 299.7 pts at  $19.6^\circ$ , 286 pts at  $21^\circ$

Sp gr of solution sat at  $19.2^\circ/4^\circ = 3.1369$  (Kahlbaum, Z anorg 1902, 29 218)

**Copper** —,  $\text{Cu}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$

25 pts  $\text{H}_2\text{O}$  dissolve 100 pts salt Sp gr of solution = 2.6 (Klein)

**Lead** —,  $\text{Pb}_2\text{B}_2\text{W}_9\text{O}_{32} + 11\text{H}_2\text{O}$

Sl sol in cold easily sol in hot  $\text{H}_2\text{O}$  (Klein)

**Lithium** —, (?)

Very sol in  $\text{H}_2\text{O}$  Sp gr of solution is about 3

**Magnesium** —,  $\text{Mg}_2\text{B}_2\text{W}_9\text{O}_{32} + 22\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Klein)

**Manganese** —,  $\text{Mn}_2\text{B}_2\text{W}_9\text{O}_{32} + 17\text{H}_2\text{O}$

100 pts dissolve in 15 pts  $\text{H}_2\text{O}$  Sp gr of solution at  $19^\circ = 3.15$  (Klein)

**Mercurous** —,  $\text{Hg}_2\text{B}_2\text{W}_9\text{O}_{32} + 9\text{H}_2\text{O} + 14\text{H}_2\text{O} (?)$

Precipitate

Insol in  $\text{H}_2\text{O}$  (Klein)

Sol in 20,000 pts dil cold and 1000 pts boiling  $\text{HNO}_3$  + Aq of 1.2 sp gr

**Nickel** —,  $\text{Ni}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Sp gr of sat solution at  $19^\circ = 3.32$

100 pts  $\text{H}_2\text{O}$  dissolve 261.6 pts at  $21.2^\circ$  Sp gr  $15.7^\circ/4^\circ$  of solution = 2.2959 (Kahlbaum, Z anorg 1902, 29 218)

**Potassium boronotungstate**,  $\text{K}_2\text{B}_2\text{W}_9\text{O}_{32} + 13\text{H}_2\text{O}$

5 pts salt dissolve in 8 pts  $\text{H}_2\text{O}$  at  $9^\circ$  to form a solution of 1.38 sp gr The saturation at  $100^\circ$  has sp gr of over 2 (Klein)

**Silver** —,  $\text{Ag}_4\text{B}_2\text{W}_9\text{O}_{32} + 14\text{H}_2\text{O}$

Very sl sol in  $\text{H}_2\text{O}$

**Sodium** —,  $\text{Na}_2\text{B}_2\text{W}_9\text{O}_{32} + 23\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Solution sat at  $1^\circ$  contains 84 pts salt to 16 pts  $\text{H}_2\text{O}$  (Klein)

$\text{Na}_4\text{B}_2\text{W}_9\text{O}_{32} + 12\text{H}_2\text{O}$  Sol in less than  $\frac{1}{3}$  pt  $\text{H}_2\text{O}$

**Thallium** —,  $\text{Tl}_2\text{B}_2\text{W}_9\text{O}_{32} + 5\text{H}_2\text{O}$

Sl sol in hot  $\text{H}_2\text{O}$  and nearly insol in cold  $\text{H}_2\text{O}$  (Klein)

**Uranyl** —,  $(\text{UO}_2)_3(\text{B}_2\text{W}_9\text{O}_{32})_2 + 30\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Klein)

Sp gr of solution = 3.1

**Zinc** —,  $\text{Zn}_2\text{B}_2\text{W}_9\text{O}_{32} + 2\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Sp gr of solution is 3.15 (Klein)

### Borodecitungstic acid

**Barium borodecitungstate**,  $\text{Ba}_2\text{B}_2\text{W}_{11}\text{O}_{48} + 20\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Klein, C R 99 35)

**Borodecitungstic acid**,  $\text{H}_5\text{B}_2\text{W}_{11}\text{O}_{48} = 4\text{H}_2\text{O}, \text{B}_2\text{O}_3, 12\text{WO}_3$

Known only in solution, which decomposes into boronotungstic acid and tungstic acid, when evaporated to a certain concentration (Klein, C R 99 35)

**Barium potassium borodecitungstate**,  $3\text{BaO}, \text{K}_2\text{O}, \text{B}_2\text{O}_3, 12\text{WO}_3 + 28\text{H}_2\text{O}$

**Potassium** —,  $\text{K}_8\text{B}_2\text{W}_{11}\text{O}_{48} + 21\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Klein)

$2\text{K}_2\text{O}, 12\text{WO}_3, \text{B}_2\text{O}_3 + 18\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Klein)

**Borotetradecitungstic acid**,  $\text{H}_7\text{B}_2\text{W}_{14}\text{O}_{64} = 6\text{H}_2\text{O}, \text{B}_2\text{O}_3, 14\text{WO}_3$

Has not been obtained in the free state (Klein, A ch (5) 28 353)

**Barium borotetradecitungstate**,  $\text{Ba}_4\text{B}_2\text{W}_{14}\text{O}_{68} = 3\text{BaO}, \text{B}_2\text{O}_3, 14\text{WO}_3 + 5\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Klein)

**Barium sodium** —,  $3\frac{1}{2}\text{BaO}, 1\frac{1}{2}\text{Na}_2\text{O}, 5\text{H}_2\text{O}, \text{B}_2\text{O}_3, 14\text{WO}_3 + 29\text{H}_2\text{O}$

**Potassium** —,  $3\text{K}_2\text{O}, \text{H}_2\text{O}, \text{B}_2\text{O}_3, 14\text{WO}_3 + 22\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Klein)

**Silver** —,  $\text{Ag}_2\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{68} + 7\text{H}_2\text{O}$

Nearly insol in cold  $\text{H}_2\text{O}$  (Klein)

**Sodium** —,  $\text{Na}_4\text{H}_8\text{B}_2\text{W}_{14}\text{O}_{68} + 29\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Klein)

**Sodium strontium boroguanthetungstate**,  $3\frac{1}{2}\text{SrO}$ ,  $1\frac{1}{2}\text{Na}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3+29\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$  (Klein)

**Boroundevigntungstic acid**

**Barium boroundevigntungstic acid**,  $4\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $19\text{WO}_3+30\text{H}_2\text{O}$   
Can be cryst from  $\text{H}_2\text{O}$  (Ebenhusen, Dissert 1905)

**Boroguanthetungstic acid**,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+66\text{H}_2\text{O}$   
Deliquescent Somewhat more sol in  $\text{H}_2\text{O}$  than  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3+62\text{H}_2\text{O}$  Also more stable (Copaux, C R 1908, 147 975)

**Barium boroguanthetungstic acid**,  $5\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+54\text{H}_2\text{O}$   
100 pts  $\text{H}_2\text{O}$  dissolve 50 pts salt (Copaux, A ch 1909, (8) 17 217)  
 $6\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+58\text{H}_2\text{O}$  (Copaux, l c)

**Cadmium** —,  $5\text{CdO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+51\text{H}_2\text{O}$   
Extremely sol in  $\text{H}_2\text{O}$  (Copaux, l c)

**Calcium** —,  $5\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+44\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (Copaux, l c)

**Lithium** —,  $15\text{Li}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+38\text{H}_2\text{O}$   
(Copaux, l c)

**Magnesium** —,  $5\text{MgO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+42\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (Copaux, l c)

**Mercurous** —,  $9\text{Hg}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+25\text{H}_2\text{O}$   
(Copaux, l c)

**Potassium** —,  $5\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+36\text{H}_2\text{O}$   
(Copaux, l c)

**Sodium** —,  $5\text{Na}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3+5\text{H}_2\text{O}$   
As  $\text{NH}_4$  salt (Copaux, l c)

**Boroguanthetungstic acid**

**Potassium boroguanthetungstic acid**,  $5\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $25\text{WO}_3+34\text{H}_2\text{O}$  (Ebenhusen, Dissert 1905)

**Boroduodetungstic acid**,  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3+62\text{H}_2\text{O}$   
Decomp in boiling aqueous solution (Copaux, C R 1908, 147 975)

**Potassium boroduodetungstic acid**,  $6\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3+42\text{H}_2\text{O}$   
Decomp by boiling alkalis (Copaux, A ch 1909 (8) 17 217)

**Borovanadic acid**  
Sol in  $\text{H}_2\text{O}$  Easily decomp (Guyard, Bull Soc (2) 25 354)

**Metabromantimonic acid**,  $\text{HSbBr}_6+3\text{H}_2\text{O}$   
Very hygroscopic Loses  $\text{Br}_2$  in the air  
Decomp by  $\text{H}_2\text{O}$  with separation of antimonic acid (Weinland, B 1903, 36 256)

**Ammonium metabromantimonate**,  $\text{NH}_4\text{SbBr}_6+\text{H}_2\text{O}$   
Loses  $\text{Br}_2$  in the air Decomp by  $\text{H}_2\text{O}$  (Weinland, l c)

**Iron (ferric) metabromantimonate**,  $\text{Fe}(\text{SbBr}_6)_3+14\text{H}_2\text{O}$   
Very hygroscopic Decomp by  $\text{H}_2\text{O}$  (Weinland, l c)

**Lithium metabromantimonate**,  $\text{LiSbBr}_6+4\text{H}_2\text{O}$   
Very hygroscopic Loses  $\text{Br}_2$  in the air  
Decomp by  $\text{H}_2\text{O}$  (Weinland, l c)

**Nickel metabromantimonate**,  $\text{Ni}(\text{SbBr}_6)_2+12\text{H}_2\text{O}$   
Hygroscopic Decomp by  $\text{H}_2\text{O}$  (Weinland, l c)

**Potassium metabromantimonate**,  $\text{KSbBr}_6+\text{H}_2\text{O}$   
Loses  $\text{Br}_2$  in the air Decomp by  $\text{H}_2\text{O}$  (Weinland, l c)

**Bromarsenous acid**  
See Arsenyl bromide

**Bromauric acid**,  $\text{HAuBr}_4+3\text{H}_2\text{O}$   
(Lengfeld, Am Ch J 1901, 26 329)  
 $+5\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Thomser pr (2) 13 337)  
 $+6\text{H}_2\text{O}$  Sol in ether and  $\text{CHCl}_3$  without decomp (Lengfeld, Am Ch J 1901, 26 329)

**Ammonium bromaurate**,  $\text{NH}_4\text{AuBr}_4$   
Ppt (Gutbier, Z anorg 1914, 85 358)

**Barium bromaurate**  
Not deliquescent Sol in  $\text{H}_2\text{O}$  (v Bonsdorff, Pogg 17 261)

**Cæsium bromaurate**,  $\text{CsAuBr}_4$   
Sl sol in  $\text{H}_2\text{O}$  or alcohol Insol in ether (Wells and Wheeler, Sill Am J 144 157)  
Ppt (Gutbier, Z anorg 1914, 85 360)

**Cerium bromaurate**,  $\text{CeAuBr}_6+8\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Jolin, Bull Soc (2) 21 533)

**Didymium bromaurate**,  $\text{DyAuBr}_6+9\text{H}_2\text{O}$   
Very deliquescent Sol in  $\text{H}_2\text{O}$  (Cleve)

**Lanthanum bromaurate**,  $\text{LaAuBr}_6+9\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Cleve)

**Magnesium bromaurate**  
Deliquescent in moist air (v Bonsdorff)

**Manganese bromaurate**  
Deliquescent (v Bonsdorff)

**Potassium bromaurate, KAuBr<sub>4</sub>**

Sl sol in H<sub>2</sub>O. More sol in cold alcohol than in H<sub>2</sub>O (v Bonsdorff).  
 +2H<sub>2</sub>O. Sol in 5.12 pts H<sub>2</sub>O at 15°, 1.56 pts at 40°, and 0.48 pt at 67°. Decomp by ether. Sl sol in KBr + Aq (Schottlander, A 217 314).  
 +5H<sub>2</sub>O. Efflorescent (v Bonsdorff).

**Rubidium bromaurate, RbAuBr<sub>4</sub>**

As caesium bromaurate  
 Ppt (Gutbier, Z anorg 1914, 85 359)

**Samarium bromaurate, SmAuBr<sub>6</sub> + 10H<sub>2</sub>O**

Very deliquescent (Cleve, Bull Soc (2) 43 165)

**Sodium bromaurate, NaAuBr<sub>4</sub>**

Slowly sol in H<sub>2</sub>O (v Bonsdorff)

**Zinc bromaurate, Zn(AuBr<sub>4</sub>)<sub>2</sub>**

Very deliquescent (v Bonsdorff)

**Bromauricyanhydric acid**

Not known in free state

**Barium bromauricyanide, Ba[Au(CN)<sub>2</sub>Br<sub>2</sub>]<sub>2</sub> + 10H<sub>2</sub>O**

Very sol in hot or cold H<sub>2</sub>O, also in alcohol (Lindbom, Lund Univ Arsk 12 No 6)

**Cadmium bromauricyanide, Cd[Au(CN)<sub>2</sub>Br<sub>2</sub>]<sub>2</sub> + 6H<sub>2</sub>O**

Very sol in hot or cold H<sub>2</sub>O, but solution is unstable (Lindbom)

**Calcium bromauricyanide, Ca[Au(CN)<sub>2</sub>Br<sub>2</sub>]<sub>2</sub> + 10H<sub>2</sub>O**

Extremely sol in H<sub>2</sub>O and alcohol (Lindbom)

**Cobalt bromauricyanide, Co[Au(CN)<sub>2</sub>Br<sub>2</sub>]<sub>2</sub> + 9H<sub>2</sub>O**

Moderately sol in H<sub>2</sub>O. Less sol than other bromauricyanides (Lindbom)

**Potassium bromauricyanide, KAu(CN)<sub>2</sub>Br<sub>2</sub> + 3H<sub>2</sub>O**

Sol in H<sub>2</sub>O and alcohol

**Sodium bromauricyanide, NaAu(CN)<sub>2</sub>Br<sub>2</sub> + 2H<sub>2</sub>O**

Very sol in H<sub>2</sub>O or alcohol

**Strontium bromauricyanide, Sr[Au(CN)<sub>2</sub>Br]<sub>2</sub> + 2H<sub>2</sub>O**

Very sol in H<sub>2</sub>O or alcohol

**Zinc bromauricyanide, Zn[Au(CN)<sub>2</sub>Br]<sub>2</sub> + 8H<sub>2</sub>O**

Easily sol in cold or hot H<sub>2</sub>O

**Bromhydric acid, HBr**

Very sol in H<sub>2</sub>O

The most concentrated HBr + Aq has a sp gr of 1.78, and contains 82.02% HBr (Champion and Pellat, C R 70 620). This, or a weak acid on heating leaves a residue which

distils unchanged at 125–125.5° under 765 mm pressure, and contains 48.17% HBr (Topsoe), at 126° under 758 mm pressure, and contains 46.83% HBr (Bineau), and has sp gr = 1.486 at 20° (Bineau), sp gr = 1.3 at 20° (Champion and Pellat), sp gr = 1.1 at 20° (Topsoe).

According to Roscoe (A 116 214) an acid of constant composition, obtained by boiling a stronger or a weaker acid, if distilled under 752–76° mm pressure, contains 47.38–47.6% HBr, and boils at 126° at 760 mm pressure, but the composition is dependent on the pressure, as, for example, under 1952 mm pressure, the residue boils at 153°, and contains 46.3% HBr (Roscoe).

By conducting dry air through HBr + Aq an acid is obtained containing 51.65% HBr at 16°, and 49.35% HBr if at 100° (Roscoe).  
 1 vol H<sub>2</sub>O dissolves 600 vols HBr at 10° (Berthelot, C R 76 679).

1 pt H<sub>2</sub>O at t° and 760 mm pressure dissolves pts HBr

**Bromhydric cyanhydric acid, 3HBr, 2HCN**

Decomp by H<sub>2</sub>O and alcohol

Insol in ether (Gautier, A ch (4) 17 141)

**Bromic acid, HBrO<sub>3</sub>**

Known only in aqueous solution

Solution evaporated on water bath decomposes when it contains 4.26% HBrO<sub>3</sub>. In vacuo, in acid containing 50.59% HBrO<sub>3</sub>, corresponding to formula HBrO<sub>3</sub>+7H<sub>2</sub>O can be obtained

Not decomp by dil HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>+Ag. Conc H<sub>2</sub>SO<sub>4</sub> decomposes

Alcohol and ether are quickly oxidized by HBrO<sub>3</sub>

**Bromates**

Most of the bromates are very sol in H<sub>2</sub>O, a few are sl sol, but none are insol, the least sol being AgBrO<sub>3</sub> and Hg (BrO<sub>3</sub>)<sub>2</sub>

**Aluminum bromate, Al(BrO<sub>3</sub>)<sub>3</sub>**

Deliquescent (Rammelsberg, Pogg 55 63)

+9H<sub>2</sub>O Mpt 62° Less hygroscopic

than  $\text{Al}(\text{ClO}_3)_2$  (Dobrosserdow, C C 1907 I, 1723)

### Ammonium bromate, $\text{NH}_4\text{BrO}_3$

Decomposes spontaneously, sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 85)

### Barium bromate, $\text{Ba}(\text{BrO}_3)_2$

Solubility of  $\text{Ba}(\text{BrO}_3)_2$  in  $\text{H}_2\text{O}$  100 g sat  $\text{Ba}(\text{BrO}_3)_2 + \text{Aq}$  at  $t^\circ$  contain g anhydrous  $\text{Ba}(\text{BrO}_3)_2$

(Harkins, J Am Chem Soc 1911 33 1815)

+  $\text{H}_2\text{O}$  Sol in 130 pts cold, and 24 pts boiling  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 81)

Decomp by  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq}$

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

### Bismuth bromate

Known only in solution, which decom on evaporation (Rammelsberg, Pogg 55 )

### Cadmium bromate, $\text{Cd}(\text{BrO}_3)_2 + \text{H}_2\text{O}$

Sol in 0.8 pt cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 55 74)

+  $2\text{H}_2\text{O}$  (Topsoe, J B 1872, 164)

### Cadmium bromate ammonia, $\text{Cd}(\text{BrO}_3)_2 \cdot 3\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 55 74)

$\text{Cd}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$  Ppt (Ephraim B 1915, 48 51)

### Calcium bromate, $\text{Ca}(\text{BrO}_3)_2 + \text{H}_2\text{O}$

Sol in 1.1 pts cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 98)

### Cerous bromate, $\text{Ce}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 55 63)

Mpt  $49^\circ$ , very sol in  $\text{H}_2\text{O}$  with decomp (James, J Am Chem Soc 1909, 31 91)

### Cobaltous bromate, $\text{Co}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Sol in 2.2 pts cold  $\text{H}_2\text{O}$ , sol in  $\text{N}_2\text{O}_5 + \text{Aq}$  (Rammelsberg, Pogg 55 71)

### Cupric bromate, basic, $6\text{CuO} \cdot \text{Br}_2\text{O}_7 + 1 \cdot \text{H}_2\text{O}$

Ppt (Rammelsberg, Pogg 55 78)

### Cupric bromate, $\text{Cu}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 92)

### Cupric bromate ammonia, $\text{Cu}(\text{BrO}_3)_2 \cdot \text{NH}_3$

Completely sol in a little  $\text{H}_2\text{O}$ , but decomp by dilution

Insol in alcohol (Rammelsberg, Pogg 52 92)

### Didymium bromate, $\text{Dy}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Maignac)

### Dysprosium bromate, $\text{Dy}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Mpt  $75^\circ$  Easily sol in  $\text{H}_2\text{O}$  Difficultly sol in alcohol (Luntzsch, B 1911 44 275)

### Erbium bromate, $\text{Er}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Very sol in alcohol and  $\text{H}_2\text{O}$

### Glucinum bromate

Deliquescent

### Iron (ferrous) bromate, $\text{Fe}(\text{BrO}_3)_2$

Sol in  $\text{H}_2\text{O}$ , but solution decom very easily

### Iron (ferric) bromate, $\text{Fe}(\text{BrO}_3)_3$

Partially sol in  $\text{H}_2\text{O}$  with separation of a more basic salt Sol in  $\text{HBrO}_4 + \text{Aq}$  (Rammelsberg Pogg 55 68)

### Lanthanum bromate, $\text{La}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Sol in  $3\frac{1}{2}$  pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Maignac, Ann Min (5) 15 274)

Mpt  $37.5^\circ$  in its water of crystallization 416 pts are sol in 100 pts  $\text{H}_2\text{O}$  at  $25^\circ$  (James, J Am Chem Soc 1909, 31 13)

**Lead bromate, basic**,  $3\text{PbO}$ ,  $\text{Pb}(\text{BrO}_3)_2 + 2\text{H}_2\text{O}$

Ppt (Stromholm, Z anorg 1904, **38** 441)

**Lead bromate**,  $\text{Pb}(\text{BrO}_3)_2$

Sl sol in  $\text{H}_2\text{O}$  13.37 x  $10^{-1}\text{g}$  are contained in 1 liter of sat solution at  $20^\circ$  (Bottger, Z phys Ch 1903, **46** 603)

+  $\text{H}_2\text{O}$  Sol in 75 pts cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg **52** 96)

**Lithium bromate**,  $\text{LiBrO}_3$

Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg A **55** 63)

Not deliquescent (Potililtzin, B **23** 545 R)

Sp gr of solution sat at  $18^\circ = 1.833$ , and contains 60.4%  $\text{LiBrO}_3$  (Mylius, B 1897, **30** 1718)

+  $\text{H}_2\text{O}$  Not deliquescent (Potililtzin)

**Magnesium bromate**,  $\text{Mg}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Efflorescent Sol in 1.4 pts cold  $\text{H}_2\text{O}$  at  $15^\circ$  Melts in its water of crystallization when heated (Rammelsberg, Pogg **52** 89)

**Mercurous bromate, basic**,  $2\text{Hg}_2\text{O}$ ,  $\text{Br}_2\text{O}_5$

Insol in warm  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg, Pogg **55** 79)

**Mercurous bromate**,  $\text{Hg}_2(\text{BrO}_3)_2$

Decomp by  $\text{H}_2\text{O}$  into basic salt Difficultly sol in  $\text{HNO}_3 + \text{Aq}$ , easily sol in  $\text{HCl} + \text{Aq}$  (Rammelsberg)

**Mercuric bromate, basic**,  $2\text{HgO}$ ,  $\text{Br}_2\text{O}_5 + \text{H}_2\text{O}$

Slowly decomp by cold, quickly by hot  $\text{H}_2\text{O}$  into oxide and an acid salt

Easily sol in dil acids (Topsoe, W A B **66**, **2** 2)

**Mercuric bromate**,  $\text{HgBrO}_3 + 2\text{H}_2\text{O}$

Sol in 650 pts cold, and 64 pts boiling  $\text{H}_2\text{O}$  Sl sol in  $\text{HNO}_3 + \text{Aq}$  Easily sol in  $\text{HCl} + \text{Aq}$  (Rammelsberg, Pogg **55** 79)

**Mercuric bromate ammonia**

Sol with decomp in  $\text{HCl} + \text{Aq}$  (Storer's Dict)

**Neodymium bromate**,  $\text{Nd}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Mpt  $66.7^\circ$  146 pts are sol in 100 pts  $\text{H}_2\text{O}$  at  $25^\circ$  (James, J Am Chem Soc 1909, **31** 915)

**Nickel bromate**,  $\text{Ni}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Sol in 3.58 pts cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg **55** 69)

**Nickel bromate ammonia**,  $\text{Ni}(\text{BrO}_3)_2, 2\text{NH}_3$

Sol in  $\text{H}_2\text{O}$ , with decomposition of the major portion Insol in alcohol (Rammelsberg, l c)

$\text{Ni}(\text{BrO}_3)_2, 6\text{NH}_3$  Ppt (Ephraim, B 1915, **48** 50)

**Potassium bromate**,  $\text{KBrO}_3$

100 pts  $\text{H}_2\text{O}$  dissolve 6.58 pts  $\text{KBrO}_3$  at  $15^\circ$  (Rammelsberg) 100 pts  $\text{H}_2\text{O}$  dissolve 5.83 pts  $\text{KBrO}_3$  at  $17.1^\circ$  (Pohl W A B **6**

595), at  $0^\circ$ , 3.11 pts, at  $20^\circ$ , 6.92 pts, at  $40^\circ$ , 13.24 pts, at  $60^\circ$ , 22.76 pts, at  $80^\circ$ , 33.90 pts, at  $100^\circ$  49.75 pts  $\text{KBrO}_3$  Sat solution boils at  $104^\circ$  (Kremers, Pogg **97** 5)

1 l  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves 0.4715 moles  $\text{KBrO}_3$  (Geffcken, Z phys Ch 1904, **49** 296)

1 l  $\text{H}_2\text{O}$  dissolves 0.478 mol  $\text{KBrO}_3$  at  $25^\circ$  (Rothmund, Z phys Ch 1909, **69** 539)

Sp gr of  $\text{KBrO}_3 + \text{Aq}$  at  $19.5^\circ$

% $\text{KBrO}_3$	1	2	3	4	5
Sp gr	1.009	1.016	1.024	1.031	1.039

% $\text{KBrO}_3$	6	7	8	9	10
Sp gr	1.046	1.054	1.062	1.070	1.079

(Gerlach, Z anal **8** 290)

Solubility of  $\text{KBrO}_3$  in salts +  $\text{Aq}$  at  $25^\circ$

Salt	Moles of $\text{KBrO}_3$ sol in 1 liter of				
	5-N solution	N solution	2-N solution	3-N solution	4-N solution
$\text{NaNO}_3$	0.5745	0.6497	0.7680	0.9026	1.031
$\text{NaCl}$	0.5220	0.5616	0.6042	0.6244	0.640

(Geffcken, Z phys Ch 1904, **49** 296)

Easily sol in liquid  $\text{HF}$  (Franklin, Z anorg 1905, **46** 2)

Sl sol in alcohol (Rammelsberg)

Insol in absolute alcohol

Solubility in organic compds +  $\text{Aq}$  at  $25^\circ$

Solvent	Mol $\text{KBrO}_3$ sol in 1 litre

(Rothmund, Z phys Ch 1909, **69** 539)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

**Praseodymium bromate**,  $\text{Pr}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Mpt 56.5° 190 pts are sol in 100 pts  $\text{H}_2\text{O}$  at 25° (James, J Am Chem Soc 1909, 31 914)

**Samarium bromate**,  $\text{Sm}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Mpt 75° 114 pts are sol in 100 pts  $\text{H}_2\text{O}$  at 25° Very sl sol in alcohol (James, J Am Chem Soc 1909, 31 915)

**Scandium bromate**

(Crookes, Roy Soc Proc 1908, 80, A, 518)

**Silver bromate**,  $\text{AgBrO}_3$

1 pt  $\text{H}_2\text{O}$  dissolves 0.00810 pt  $\text{AgBrO}_3$  at 24.5° (Noyes, Z phys Ch 6 246)

Sol in 595.3 pts  $\text{H}_2\text{O}$  at 25°

Sol in 320.4 pts  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.21) at 25°

Sol in 2.2 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (sp gr 0.96) at 25° (Longi, Gazz ch it 13 87)

1 l  $\text{H}_2\text{O}$  dissolves 1.71 g  $\text{AgBrO}_3$  at 27° (Whitby, Z anorg 1910, 67 108)

Sl sol in  $\text{H}_2\text{O}$  1.59 x  $10^{-4}$  g are contained in 1 liter of sat solution at 20° (Bottger, Z phys Ch 1903, 46 603)

Insol in  $\text{HNO}_3$  (Lowig) Easily sol in

ate ammonia,  $\text{AgBrO}_3, 2\text{NH}_3$

in air or by  $\text{H}_2\text{O}$  (Rammelsberg 52 94)

**bromate**,  $\text{NaBrO}_3$

100 pts  $\text{H}_2\text{O}$  at 15° (Rammelsberg)

100 pts  $\text{H}_2\text{O}$  dissolve at—

0° 20° 40° 60° 80° 100°

27.54 34.48 50.25 62.57 75.75 90.9 pts  $\text{NaBrO}_3$  (Kremers, Pogg 94 271)

Easily forms supersaturated solutions

Sat solution boils at 109° (Kremers)

$\text{NaBrO}_3 + \text{Aq}$  containing 10.10%  $\text{NaBrO}_3$  has sp gr 20°/20° = 1.0818

$\text{NaBrO}_3 + \text{Aq}$  containing 11.09%  $\text{NaBrO}_3$  has sp gr 20°/20° = 1.0900

(Le Blanc and Rohland, Z phys Ch 1896 19 278)

Sp gr of  $\text{NaBrO}_3 + \text{Aq}$  at 19.5°

% $\text{NaBrO}_3$	5	10	15
Sp gr	1.041	1.083	1.129

% $\text{NaBrO}_3$	20	25	30
Sp gr	1.178	1.231	1.289

(Kremers, Pogg 97 5, calculated by Gerlach, Z anal 8 290)

Moderately sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 829)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

**Sodium bromate bromide**,  $3\text{NaBrO}_3, 2\text{NaBr} + 3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  or alcohol (Fritzsche)

**Strontium bromate**,  $\text{Sr}(\text{BrO}_3)_2 + \text{H}_2\text{O}$

Sol in 3 pts  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 84), less sol in  $\text{H}_2\text{O}$  than  $\text{SrBr}_2 + 6\text{H}_2\text{O}$  (Lowig)

**Thallous bromate**,  $\text{TlBrO}_3$

Sl sol in hot  $\text{H}_2\text{O}$ , easily sol in  $\text{HNO}_3 + \text{Aq}$  (Oettinger)

Easily sol in  $\text{H}_2\text{O}$  and dil acids (Ditte, A ch (6) 21 145)

**Terbium bromate**,  $\text{Tb}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

Not deliquescent (Potratz, C N 1905, 92, 3)

**Thallous bromate**,  $\text{TlBrO}_3$

1 l  $\text{H}_2\text{O}$  at 39.75° dissolves 2.216 x  $10^{-6}$  mol (Noyes and Abbott, Z phys Ch 1895, 16 130)

Sl sol in  $\text{H}_2\text{O}$  3.46 x  $10^{-1}$  gram are contained in 1 liter of sat solution at 20° (Bottger, Z phys Ch 1903, 46 603)

**Thallic bromate**,  $\text{Tl}(\text{BrO}_3)_3 + 3\text{H}_2\text{O}$

Very hygroscopic Easily decomp by  $\text{H}_2\text{O}$  (Gewecke, Z anorg 1912, 75 275)

**Thulium bromate**,  $\text{Tm}_2(\text{BrO}_3)_6 + 18\text{H}_2\text{O}$

Pptd from sat aqueous solution by 95% alcohol

$\text{NH}_4\text{OH}$  is the best precipitant (Juncs, J Am Chem Soc 1911, 33 1342)

**Tin (stannous) bromate** (?)

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$

**Uranyl bromate**,  $4\text{UO}_3, 3\text{Bi}_2\text{O}_3 + 16\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Rammelsberg)

**Yttrium bromate**,  $\text{Y}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$

More easily sol in  $\text{H}_2\text{O}$  than  $\text{Y}(\text{IO}_3)_3$  Sl sol in alcohol Insol in ether (Clayton)

Mpt 74° 168 pts are sol in 100 pts  $\text{H}_2\text{O}$  at 25°

Sl sol in alcohol (Juncs, J Am Chem Soc 1909, 31 916)

**Zinc bromate**,  $\text{Zn}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Sol in 1 pt cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 52 90)

**Zinc bromate ammonia**,  $\text{Zn}(\text{BrO}_3)_2 \cdot 2\text{NH}_3 + 3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  and alcohol Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Rammelsberg, Pogg 52 90)

$\text{Zn}(\text{BrO}_3)_2, 4\text{NH}_3$  Ppt (Lippmann, B 1915, 48 51)

**Perbromic acid**

See **Perbromic acid**

**Bromides**

Most bromides are sol in  $H_2O$ , many in alcohol, and some in ether

$AgBr$  and  $Hg_2Br_2$  are insol in  $H_2O$  or acids,  $PbBr_2$  and  $TlBr$  are sl sol therein  $Cu_2Br_2$  is insol in  $H_2O$ , sol in acids

*See under each element*

**Bromine, Br.**

1 pt Br dissolves at  $15^\circ$  in 33 pts  $H_2O$  (Lowig, Pogg **14** 485)

1 pt Br dissolves at  $15^\circ$  in 31 pts  $H_2O$  (Dancer, Chem Soc **15** 477)

**Solubility of Br in 100 pts  $H_2O$  at  $t^\circ$** 

t	Pts Br	$t^\circ$	Pts Br	$t^\circ$	Pts Br
5	3 600	15	3 226	25	3 167
10	3 327	20	3 208	30	3 126

(Dancer, *l c*)

A sat aqueous solution of Br contains 4.05% Br at  $0^\circ$ , 3.80% Br at  $3^\circ$ , 3.33% Br at  $10^\circ$  (Roozeboom, R t c **3** 29, 59, 73, 84)

1 l  $H_2O$  dissolves 34 g Br at  $25^\circ$  (Jakowkin, Z phys Ch **1896**, **20** 25)

1 pt is sol in 30 pts  $H_2O$  (Dietze, Chem Soc **1899**, **76** (2) 150)

100 pts  $H_2O$  dissolve at  
 $0^\circ$  10 34° 19 96° 30 17° 40 03° 49 85°  
 4 167 3 740 3 578 3 437 3 446 3 522  
 pts bromine

Liquid bromine as such is insol in  $H_2O$ , only the vapor dissolves (Winkler, Ch Z **1899**, **23** 688)

1 l  $H_2O$  dissolves 33.95 g  $Br_2$  at  $25^\circ$  (McLauchlan, Z phys Ch **1903**, **44** 617)

**Solubility of bromine vapor in  $H_2O$  at  $t^\circ$   
 $\alpha$  = coefficient of absorption**

t	$\alpha$	t	$\alpha$
0	60.5	42	8.6

40 31	229-26	9 22
50 25	274-53	6 50
60 04	314-46	4 84
69 98	154-54	3 82
80 22	396-74	2 94

**Solubility of liquid bromine  
(The mean of many determinations)**

Temp	$0^\circ$	10 34°	19 96	30 17°	40 03°	49 85°
Pts $H_2O$ that dissolve 1 pt $Br_2$	24 0	26 74	27 94	29 10	29 02	28 38

Much less  $Br_2$  is sol in ice cold  $H_2O$  in the presence of bromine hydrate

**Solubility in presence of bromine hydrate  
(The mean of many determinations)**

Temp	$0^\circ$	5 $12^\circ$
Pts $H_2O$ that dissolve 1 pt $Br_2$	42 39	26 26

(Winkler, Ch Z **1899**, **23** 688-689)

Solubility of  $Br_2$  in  $H_2O$  at  $25^\circ = 0.21$  mols in 1 l (Bray, J Am Chem Soc **1910**, **32** 398)

Sp gr of  $Br_2 + Aq$  containing pts Br in 1000 pts solution

Pts Br	Sp gr	Pts Br	Sp gr
10 72	1 00901	18 74-19 06	1 01491
10 68	1 00931	19 52-20 09	1 01585
12 05	1 00995	20 89-21 55	1 01807
12 21	1 01223	31 02-31 69	1 02367

(Stessor, N Edin Phil J **7** 287)

Sp gr of  $Br + Aq$  at  $32.5^\circ$

% Br by weight	Sp gr
0 7214	0 999814
1 1172	1 002520
1 6448	1 006100
1 9956	1 008870
2 5960	1 013200

(Joseph, Chem Soc **1915**, **107** 3)

Sol in conc  $HCl$ ,  $HBr$ , conc solutions of bromides, and in liquid  $SO$  (Sestini, Zeit Chem **1868** 718)

Much more sol in  $HCl + Aq$  than in  $H_2O$   
 100 cem  $HCl + Aq$  of 1.153 sp gr dissolve 36.4 g Br at  $12^\circ$

More sol in  $BrCl_3$  and  $BaCl_2 + Aq$  than in  $H_2O$  (Berthelot, C R **100** 761)

Bromine is not more sol in KBr+*Aq* than in  $H_2O$  (?) (Balard)

KBr+*Aq* containing 1 pt KBr to 6 pts  $H_2O$  takes up as much Br as it already contains, when this solution is heated the dissolved Br is separated 1 pt KBr+1 pt  $H_2O$  takes up twice as much Br as it already contains, much heat being evolved This solution loses Br on exposure to the air or when heated (Lowig)

#### Solubility of $Br_2$ in KBr+*Aq*

g Mols KBr per l	g at Br dissolved per l at 18°	g at Br dissolved per l at 26°
0 00	0 4448	0 4282
0 01	0 4634	0 4490
0 02	0 4823	0 4671
0 03	0 5049	0 4925
0 04	0 5243	0 5101
0 05	0 5431	0 5301
0 06	0 5668	0 5530
0 07	0 5895	0 5636
0 08	0 6059	0 5920
0 09	0 6301	0 5981
0 1	0 6533	0 6488
0 2	0 8718	0 8591
0 3	1 0549	1 0787
0 4	1 3124	1 2704
0 5	1 5436	1 4731
0 6	1 7712	1 6717
0 7	2 0006	1 9197
	2 2354	2 1029
	2 4851	2 3349

The above figures indicate that below a concentration of 0.1 g mol KBr per l just enough Br is dissolved to form  $KBr_3$ , while above that concentration somewhat larger amounts of Br are dissolved, which is greater at the lower temp

(Worley, Chem Soc 1905, 87 1109)

#### Solubility of $Br_2$ in NaBr+*Aq* at 25°

g NaBr per l	g atoms $Br_2$ per l	Sp gr
92 6	2 479	1 213
160 5	4 345	1 372
205 8	6 195	1 515

(Jakowkin, l c)

Crystallizes at  $4^\circ$  with  $10\text{H}_2\text{O}$

**Bromine chloride,  $\text{BrCl}$**

Sol in  $\text{H}_2\text{O}$ ,  $\text{CS}_2$ , ether, etc

**Bromine fluoride,  $\text{BrF}_3$**

Fumes in the air Decomps by  $\text{H}_2\text{O}$  (Lebeau, C R 1905, 141 1019)

**Bromine oxides**

No oxides of bromine are known in the free state See hypobromous, bromic, and perbromic acids

**Bromuric acid**

**Ammonium bromurate,  $(\text{NH}_4)_2\text{IrBr}_6$**

Less sol in cold  $\text{H}_2\text{O}$  than the K salt (Birnbau, Zeit Chem 1865 22)

Very sol in cold  $\text{H}_2\text{O}$  (Gutbier, B 1909, 42 3910)

**Cæsium bromurate,  $\text{Cs}_2\text{IrBr}_6$**

Sol in  $\text{H}_2\text{O}$  (Gutbier, B 1909, 42 3911)

**Potassium bromurate,  $\text{K}_2\text{IrBr}_6$**

Moderately sol in cold, more easily in hot  $\text{H}_2\text{O}$

Insol in alcohol or ether  
Sol in cold  $\text{H}_2\text{O}$  and in  $\text{HBr}$  + Aq (Gutbier, B 1909, 42 3910)

**Rubidium bromurate,  $\text{Rb}_2\text{IrBr}_6$**

Very sol in cold  $\text{H}_2\text{O}$  Sol in hot dil  $\text{HBr}$  + Aq (Gutbier, B 1909, 42 3911)

**Sodium bromurate**

Deliquescent Easily sol in  $\text{H}_2\text{O}$ , alcohol, or ether

**Bromurous acid,  $\text{H}_6\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$**

Easily sol in  $\text{H}_2\text{O}$ , alcohol, or ether (Birnbau, 1864)

**Ammonium bromurate,  $(\text{NH}_4)_6\text{Ir}_2\text{Br}_{12} + \text{H}_2\text{O}$**

Difficultly sol in  $\text{H}_2\text{O}$  (Birnbau)

**Potassium bromurate,  $\text{K}_6\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$**

Efflorescent Sol in  $\text{H}_2\text{O}$

**Silver bromurate,  $\text{Ag}_6\text{Ir}_2\text{Br}_{12}$**

Ppt Insol in  $\text{H}_2\text{O}$  or acids

**Sodium bromurate,  $\text{Na}_6\text{Ir}_2\text{Br}_{12} + 24\text{H}_2\text{O}$**

Efflorescent Very sol in  $\text{H}_2\text{O}$

**Bromocarbonatoplatin diamine carbonate,  $\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$**

Ppt

**Bromocarbonatoplatin diamine carbonate**

**bromoplatin diamine nitrate,**

$\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2$ , 2Bt Pt(N  $\text{H}_6$ )  
 $(\text{NO}_3)_2$

**Bromochloroplatin diamine chloride,**

$\text{Br Cl Pt}(\text{N H}_6)_2\text{Cl}$

Very sl sol in  $\text{H}_2\text{O}$  (Cl v c)

— chlorobromide,  $\text{Br Cl Pt N H}_6\text{Cl}$   
 $\text{Cl N H}_6\text{Br}$

Very sl sol in  $\text{H}_2\text{O}$

**Bromochloroplatinic acid**

**Potassium bromochloroplatinate,  $\text{K PtCl Br}$**

(Pitkin, J Am Chem Soc 2 408)

Mixture (Herty J Am Chem Soc 1896, 18 136)

$\text{K}_2\text{PtCl}_4\text{Br}_2$  Sl sol in cold  $\text{H}_2\text{O}$  much more sol in hot  $\text{H}_2\text{O}$  (Pitkin)

Mixture (Herty)

$\text{K}_2\text{PtCl}_3\text{Br}_3$  As above

$\text{K PtCl}_2\text{Br}_4$  (Pigeon, A ch 1894, (7) 2 488)

$\text{K PtCl Br}$  (Pitkin)

**Bromochromic acid**

**Potassium bromochromate,  $\text{KCrO}_4\text{Br}$**

Decomp by  $\text{H}_2\text{O}$  (Heintze, J pr (2) 4 225)

**Dibromochromium chloride,**

Ppt Nearly insol in fuming HCl (Bjerrum, B 1907, 40 2918)

**Bromohydroxyloplatin diamine bromide,**

Very sl sol in  $\text{H}_2\text{O}$  (Cleve)

**— chloride,**

Sol in  $\text{H}_2\text{O}$  (Cleve)

**— nitrate,**

Very sl sol in cold, moderately sol in hot  $\text{H}_2\text{O}$  (Cleve)

**Bromohydroxyloplatin monodiamine**

Easily sol in  $\text{H}_2\text{O}$  (Cleve)

**Bromomercurosulphurous acid****Ammonium bromomercurosulphate,**

Sol in  $\text{H}_2\text{O}$  (Barth, Z phys Ch 9 215)

**Potassium bromomercurosulphate,**

As above (B)

**Bromomolybdenum bromide,**

Insol in  $\text{H}_2\text{O}$  or acids, or even in boiling aqua regia. Easily sol in dilute, decomp by conc alkalis + Aq (Blomstrand, J pr 82 436)

**Bromomolybdenum chloride,  $\text{Br}_4\text{Mo}_3\text{Cl} + 3\text{H}_2\text{O}$** 

Insol in acids (Blomstrand)

**Bromomolybdenum chromate,  $\text{Br}_4\text{Mo}_3\text{CrO}_4 + 2\text{H}_2\text{O}$** 

Insol in dil acids. Sol in hot conc HCl + Aq. Insol in alkali chromates + Aq (Atterberg)

**Bromomolybdenum fluoride,  $\text{Br}_4\text{Mo}_3\text{F} + 3\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  (Atterberg)

**Bromomolybdenum hydroxide,  $\text{Br}_4\text{Mo}_3(\text{OH})$** 

Completely sol in alkalis if not heated over  $90^\circ$  (Atterberg)

**Bromomolybdenum iodide hydroxide,**

Precipitate (Blomstrand, J pr 77 92)

**Bromomolybdenum molybdate,  $\text{Br}_4\text{Mo}_3\text{MoO}_4$** 

Precipitate (Atterberg)

**Bromomolybdenum phosphate,**

Precipitate Insol in  $\text{H}_2\text{O}$  (Atterberg)

**Bromomolybdenum sulphate,  $\text{Br}_4\text{Mo}_3\text{SO}_4 + 3\text{H}_2\text{O}$** 

Precipitate Sl sol in boiling  $\text{H}_2\text{SO}_4$  (Atterberg)

**Dibromomolybdous acid,  $\text{MoOBr}_2(\text{OH}) + 1\frac{1}{2}\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  Very hygroscopic (Weinland, Z anorg 1905, 44 86)

**Tetrabromomolybdous acid,  $\text{MoBr}_4(\text{OH}) + 2\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  Hygroscopic (Weinland, l c)

**Diammonium pentabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Dicæsium pentabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Calcium tetrabromomolybdate,  $(\text{MoBr}_4\text{O})_2\text{Ca} + 7\text{H}_2\text{O}$** 

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Monolithium tetrabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Magnesium pentabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Monopotassium tetrabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Dipotassium pentabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Rubidium pentabromomolybdate,**

Hygroscopic Sol in  $\text{H}_2\text{O}$  (Weinland, l c)

**Bromonitratoplatin diamine nitrate,**

Decomp by  $\text{H}_2\text{O}$  (Cleve)

**— sulphate,**

Sl sol in  $\text{H}_2\text{O}$

Partition of bromine between  $\text{CCl}_4$  and salts + Aq

Ppt Insol in  $\text{H}_2\text{O}$  or acids

**Sodium bromurate,  $\text{Na}_2\text{IrBr}_6 + 24\text{H}_2\text{O}$**

Efflorescent Very sol in  $\text{H}_2\text{O}$

**Bromocarbonatoplatindiamine carbonate,  $\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_4)_2]_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$**

Ppt

**Bromocarbonatoplatindiamine carbonate bromoplatindiamine nitrate,**

$\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_4)_2]_2(\text{CO}_3)_2, 2\text{Br}_2\text{Pt}(\text{NH}_4)_2(\text{NO}_3)_2$

**Bromochloroplatindiamine chloride,**

$\text{Br Pt}(\text{NH}_4)_2\text{Cl}$

Very sl sol in  $\text{H}_2\text{O}$  (Clay)

— chlorobromide,  $\text{Br Pt}(\text{NH}_4)_2\text{Cl}$

Very sl sol in  $\text{H}_2\text{O}$

**Bromochloroplatinic acid**

**Potassium bromochloroplatinate,  $\text{K PtClBr}_4$**

(Pitkin *J Am Chem Soc* 2 408)

Mixture (Herty *J Am Chem Soc* 1906, 18 136)

$\text{K}_2\text{PtCl}_4\text{Br}_2$  Sl sol in cold  $\text{H}_2\text{O}$  and more sol in hot  $\text{H}_2\text{O}$  (Pitkin)

Mixture (Herty)

$\text{K PtCl}_3\text{Br}_2$  As above

$\text{K PtClBr}_4$  (Pigou, *Ch* 1894, (2 488)

$\text{K PtClBr}_4$  (Pitkin)

**Bromochromic acid**

**Potassium bromochromate,  $\text{KCrO}_4\text{Br}$**

Decomp by  $\text{H}_2\text{O}$  (Hantzsch, *J pr* (1) 4 225)

**Dibromochromium chloride,**

Ppt Nearly insol in fuming HCl (Bjerrum, B 1907, 40 2918)

**Bromohydroxyloplatin<sup>diamine</sup> bromide,**

Very sl sol in H<sub>2</sub>O (Cleve)

**— chloride,**

Sol in H<sub>2</sub>O (Cleve)

**— nitrate,**

Very sl sol in cold, moderately sol in hot H<sub>2</sub>O (Cleve)

**Bromohydroxyloplatin<sup>monodiamine</sup>**

Easily sol in H<sub>2</sub>O (Cleve)

**Bromomercurosulphurous acid****Ammonium bromomercurosulphite,**

Sol in H<sub>2</sub>O (Barth, Z phys Ch 9 215)

**Potassium bromomercurosulphite,**

As above (B)

**Bromomolybdenum bromide,**

Insol in H<sub>2</sub>O or acids, or even in boiling aqua regia Easily sol in dilute, decomp by conc alkalis + Aq (Blomstrand, J pr 82 436)

**Bromomolybdenum chloride, Br<sub>4</sub>Mo<sub>3</sub>Cl<sub>2</sub> + 3H O**

Insol in acids (Blomstrand)

**Bromomolybdenum chromate, B<sub>14</sub>Mo<sub>3</sub>CrO<sub>4</sub> + 2H O**

Insol in dil acids Sol in hot conc HCl + Aq Insol in alk di chromates + Aq (Atterberg)

**Bromomolybdenum fluoride, B<sub>14</sub>Mo<sub>3</sub>F<sub>2</sub> + 3H<sub>2</sub>O**

Insol in H<sub>2</sub>O (Atterberg)

**Bromomolybdenum hydroxide, B<sub>14</sub>Mo<sub>3</sub>(OH)<sub>2</sub>**

Completely sol in alkalis if not heated over 90° (Atterberg)

**Bromomolybdenum iodide hydroxide,**

Precipitate (Blomstrand, J pr 77 92)

**Bromomolybdenum molybdate, Br<sub>4</sub>Mo<sub>3</sub>MoO<sub>4</sub>**

Precipitate (Atterberg)

**Bromomolybdenum phosphate,**

Precipitate Insol in H<sub>2</sub>O (Atterberg)

**Bromomolybdenum sulphate, Br<sub>4</sub>Mo<sub>3</sub>SO<sub>4</sub> + 3H<sub>2</sub>O**

Precipitate Sl sol in boiling H<sub>2</sub>SO<sub>4</sub> (Atterberg)

**Dibromomolybdous acid, MoOBr (OH) + 1½H<sub>2</sub>O**

Sol in H<sub>2</sub>O Very hygroscopic (Weinland, Z anorg 1905, 44 86)

**Tetrabromomolybdous acid, MoBr<sub>4</sub>(OH) + 2H<sub>2</sub>O**

Sol in H<sub>2</sub>O Hygroscopic (Weinland, l c)

**Diammonium pentabromomolybdate,**

Hygroscopic Sol in H<sub>2</sub>O (Weinland, l c)

**Dicæsium pentabromomolybdate,**

Hygroscopic Sol in H O (Weinland, l c)

**Calcium tetrabromomolybdate, (MoBr<sub>4</sub>O)<sub>2</sub>Ca + 7H<sub>2</sub>O**

Hygroscopic Sol in H<sub>2</sub>O (Weinland, l c)

**Monolithium tetrabromomolybdate,**

Hygroscopic Sol in H<sub>2</sub>O (Weinland, l c)

**Magnesium pentabromomolybdate,**

Hygroscopic Sol in H O (Weinland, l c)

**Monopotassium tetrabromomolybdate,**

Hygroscopic Sol in H O (Weinland, l c)

**Dipotassium pentabromomolybdate,**

Hygroscopic Sol in H O (Weinland, l c)

**Dirubidium pentabromomolybdate,**

Hygroscopic Sol in H O (Weinland, l c)

**Bromonitratoplatin<sup>diamine</sup> nitrate,**

Decomp by H O (Cleve)

**— sulphate,**

Sl sol in H<sub>2</sub>O

**Bromonitritoplatin*semidiamine* nitrite,**

Sl sol in  $\text{H}_2\text{O}$  (Blomstrand)

**Bromonitrous acid****Platinum silver bromonitrite,  $\text{PtAg}_2\text{Br}_2(\text{NO}_2)_4$** 

Ppt (Miolati, Gazz ch it 1900, **30** 588)

**Bromopalladic acid****Ammonium bromopalladate,  $(\text{NH}_4)_2\text{PdBr}_6$** 

Difficultly sol in cold  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  and by hot conc  $\text{H}_2\text{SO}_4$  (Gutbier, B 1905, **38** 1907)

**Cæsium bromopalladate,  $\text{Cs}_2\text{PdBr}_6$** 

Difficultly sol in cold  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  or by hot conc  $\text{H}_2\text{SO}_4$  (Gutbier, l c)

**Potassium bromopalladate,  $\text{K}_2\text{PdBr}_6$** 

Difficultly sol in cold  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  or by hot conc  $\text{H}_2\text{SO}_4$  (Gutbier, l c)

**Rubidium bromopalladate,  $\text{Rb}_2\text{PdBr}_6$** 

Insol in cold  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  or by hot conc  $\text{H}_2\text{SO}_4$  (Gutbier, l c)

**Bromopalladious acid****Ammonium bromopalladite,  $(\text{NH}_4)_2\text{PdBr}_4$** 

Very stable Sol in  $\text{H}_2\text{O}$  (Smith, Z anorg 1894, **6** 381)

Very sol in cold  $\text{H}_2\text{O}$

Can be cryst from a very small amount of hot  $\text{H}_2\text{O}$  (Gutbier, B 1905, **38** 2387)

**Barium bromopalladite**

Not deliquescent Sol in  $\text{H}_2\text{O}$  (v Bonsdorff)

**Cæsium bromopalladite,  $\text{Cs}_2\text{PdBr}_4$** 

Very sol in  $\text{H}_2\text{O}$  (Gutbier, B 1905, **38** 2388)

**Manganese bromopalladite,  $\text{MnPdBr}_4$** 

Sol in  $\text{H}_2\text{O}$  and alcohol (v Bonsdorff)  
+  $7\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Smith, Z anorg 1894, **6** 382)

**Potassium bromopalladite,  $\text{K}_2\text{PdBr}_4$** 

Easily sol in  $\text{H}_2\text{O}$  (Joannis, C R **95** 295)

Very stable Sol in  $\text{H}_2\text{O}$  (Smith, Z anorg 1894, **6** 381)  
+  $2\text{H}_2\text{O}$  Unstable in the air (Smith, l c)

**Rubidium bromopalladite,  $\text{Rb}_2\text{PdBr}_4$** 

Can be cryst from a very small amount of hot  $\text{H}_2\text{O}$  (Gutbier, B 1905, **38** 2388)

**Sodium bromopalladite,  $\text{Na}_2\text{PdBr}_4 + 4\frac{1}{2}\text{H}_2\text{O}$** 

Very deliquescent Sol in  $\text{H}_2\text{O}$  (Smith, l c)

**Strontium bromopalladite,  $\text{SrPdBr}_4 + 6\text{H}_2\text{O}$** 

Stable in the air Very sol in  $\text{H}_2\text{O}$  (Smit, l c)

**Zinc bromopalladite**

Sol in  $\text{H}_2\text{O}$  (v Bonsdorff)

**Bromophosphatoplatin*diamine* phosphate,  $\text{BrPt}(\text{N}_2\text{H}_5)_2 + 2\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Bromophosphoric acid****Thorium bromophosphate,  $\text{ThBr}_4$** 

Insol in most acids and in fused alk carbonates Decomp by long boiling w conc  $\text{H}_2\text{SO}_4$  (Colani, C R 1909, **149** 20)

**Bromoplatinamine bromide,**

Sl sol in  $\text{H}_2\text{C}$  (Cleve, Sv V A H **10**, 31)

— nitrite,  $\text{Br}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$

Very sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Bromoplatin*diamine* bromide,**

Only sl sol in hot  $\text{H}_2\text{O}$  (Cleve)

— chloride,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$

Very sl sol in  $\text{H}_2\text{O}$  (Cleve)

— dichromate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$

Sl sol in  $\text{H}_2\text{O}$

— nitrate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$

Sl sol in cold, rather easily sol in hot  $\text{H}_2\text{O}$  (Cleve)

— phosphate,  $\text{Br}_2\text{Pt}[\text{N}_2\text{H}_5\text{PO}_2(\text{OH})] + 2\text{H}_2\text{O}$

Rather easily sol in hot  $\text{H}_2\text{O}$  (Cleve)

— sulphate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4$

Very sl sol in  $\text{H}_2\text{O}$

**Bromoplatin*monodiamine* nitrate,**

Easily sol in  $\text{H}_2\text{O}$

— sulphate,  $\text{Br}_2\text{Pt}(\text{NH}_3)_2\text{SO}_4 + \text{H}_2\text{O}$

Moderately sol in  $\text{H}_2\text{O}$  (Cleve)

**Bromoplatin*semidiamine* bromide,**

Sl sol in cold  $\text{H}_2\text{O}$  (Cleve)

**Bromodiplatin*diamine* anhydronitrate**

Sol in  $\text{HNO}_3 + \text{Aq}$

**Bromodiplatinum diamine chloride,**

Ppt (Cleve)

— **nitrate**,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{NO}_3)_4 + 2\text{H}_2\text{O}$ Moderately sol in hot  $\text{H}_2\text{O}$ — **sulphate**,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ 

Ppt (Cleve)

**Bromoplatinic acid**,  $\text{H}_2\text{PtBr}_6 + 9\text{H}_2\text{O}$ Very deliquescent, and sol in  $\text{H}_2\text{O}$ , alcohol, ether, chloroform, or acetic acid (Topsoe, J B 1868 273)**Ammonium bromoplatinate**,  $(\text{NH}_4)_2\text{PtBr}_6$ Sol in 200 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Topsoe)100 pts  $(\text{NH}_4)_2\text{PtBr}_6 + \text{Aq}$  sat at  $20^\circ$  contain 0.59 pt dry salt (Halberstadt, B 17 2965)**Barium bromoplatinate**,  $\text{BaPtBr}_6 + 10\text{H}_2\text{O}$ Sl deliquescent Very sol in  $\text{H}_2\text{O}$ **Cæsium bromoplatinate**,  $\text{Cs}_2\text{PtBr}_6$ Sl sol in dil  $\text{HBr} + \text{Aq}$  (Obermaier, Dissert)**Calcium bromoplatinate**,  $\text{CaPtBr}_6 + 12\text{H}_2\text{O}$ Sl deliquescent Very sol in  $\text{H}_2\text{O}$ **Cobalt bromoplatinate**,  $\text{CoPtBr}_6 + 12\text{H}_2\text{O}$ 

Deliquescent

**Copper bromoplatinate**,  $\text{CuPtBr}_6 + 8\text{H}_2\text{O}$ Very deliquescent, sol in  $\text{H}_2\text{O}$ **Lead bromoplatinate**,  $\text{PbPtBr}_6$ Easily sol in  $\text{H}_2\text{O}$ , but decomp by large amount**Lead tetrabromoplatinate**,  $[\text{PtBr}_4(\text{OH})_2]\text{Pb} \cdot \text{PbOH}$ Insol in  $\text{H}_2\text{O}$  (Miolati, C C 1900, II 810)**Magnesium bromoplatinate**,  $\text{MgPtBr}_6 + 12\text{H}_2\text{O}$ 

Not deliquescent

**Manganese bromoplatinate**,  $\text{MnPtBr}_6 + 6\text{H}_2\text{O}$ Sol in  $\text{H}_2\text{O}$   
+  $12\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ **Mercuric tetrabromoplatinate**,  $[\text{PtBr}_4(\text{OH})_2]\text{Hg}$ Insol in  $\text{H}_2\text{O}$  (Miolati, C C 1900, II 810)**Nickel bromoplatinate**,  $\text{NiPtBr}_6 + 12\text{H}_2\text{O}$ 

Deliquescent

**Potassium bromoplatinate**,  $\text{K}_2\text{PtBr}_6$ Sl sol in  $\text{H}_2\text{O}$  Insol in alcohol (v Bonadorff, Pogg 19 344)Sol in 10 pts boiling  $\text{H}_2\text{O}$  (Pitkin, C N 41 218)100 pts  $\text{K}_2\text{PtBr}_6 + \text{Aq}$  sat at  $20^\circ$  contain 2.02 pts dry salt (Halberstadt, B 17 2962)**Praseodymium bromoplatinate**,  $\text{PrBr}_3 \cdot \text{PtBr}_3 + 10\text{H}_2\text{O}$ Deliquescent, very sol in  $\text{H}_2\text{O}$ , sol in  $\text{HBr}$  (Von Schule, Z anorg 1898, 18 353)**Rubidium bromoplatinate**,  $\text{Rb}_2\text{PtBr}_6$ Sl sol in dil  $\text{HBr} + \text{Aq}$  (Obermaier Dissert)**Silver bromoplatinate**,  $\text{Ag}_2\text{PtBr}_6$ Insol in  $\text{H}_2\text{O}$  (Miolati, C C 1900, II 810)**Silver tetrabromoplatinate**,  $[\text{PtBr}_4(\text{OH})_2]\text{Ag}_2$ Ppt, insol in  $\text{H}_2\text{O}$  (Miolati, l c)**Sodium bromoplatinate**,  $\text{Na}_2\text{PtBr}_6 + 6\text{H}_2\text{O}$ Easily sol in  $\text{H}_2\text{O}$  and alcohol**Strontium bromoplatinate**,  $\text{SrPtBr}_6 + 10\text{H}_2\text{O}$ Sl deliquescent Very sol in  $\text{H}_2\text{O}$ **Thallium tetrabromoplatinate**,Insol in  $\text{H}_2\text{O}$  (Miolati, C C 1900, II 810)**Ytterbium bromoplatinate**,  $\text{YbBr}_3 \cdot 3\text{H}_2\text{PtBr}_6 + 30\text{H}_2\text{O}$ 

Ppt (Cleve, Z anorg 1902, 32 138)

**Zinc bromoplatinate**,  $\text{ZnPtBr}_6 + 12\text{H}_2\text{O}$ Sol in  $\text{H}_2\text{O}$ **Bromoplatinocyanhydric acid**,See **Perbromoplatinocyanhydric acid****Potassium bromoplatinocyanide**,  $5\text{K}_2\text{Pt}(\text{CN})_4$ Sol in  $\text{H}_2\text{O}$ **Bromoplatinous acid****Potassium bromoplatinite**,  $\text{K}_2\text{PtBr}_4 + 2\text{H}_2\text{O}$ Extremely sol in  $\text{H}_2\text{O}$  (Billmann und Anderson B 1903, 36 1566)**Bromopurpleochromium bromide**,Less sol in  $\text{H}_2\text{O}$  than chloropurpleochromium chloride (Jorgensen, J pr (2) 25 53)— **bromoplatinate**,  $\text{BrCr}(\text{NH}_3)_4\text{PtBr}_6$  (Jorgensen, l c)— **chloride**,  $\text{BrCr}(\text{NH}_3)_4\text{Cl}_2$ More sol in  $\text{H}_2\text{O}$  than the bromide (Jorgensen, l c)

**Bromopurpleochromium chromate,**Precipitate (Jorgensen, *l c*)**— nitrate,  $\text{BrCr}(\text{NH}_3)_5(\text{NO}_3)_2$** More sol than bromide and less than chloride (Jorgensen, *l c*)**Bromopurpleocobaltic bromide,**Sol in 530 pts  $\text{H}_2\text{O}$  at  $16^\circ$  Insol in alcohol,  $\text{NH}_4\text{Br}$ ,  $\text{KBr}$ , or  $\text{HBr} + \text{Aq}$  More sol in hot  $\text{H}_2\text{O}$  containing a little  $\text{HBr}$  (Jorgensen, *J pr* (2) **19** 49)**Bromopurpleocobaltic mercuric bromide,**More sol in  $\text{H}_2\text{O}$  than the corresponding  $\text{HgCl}_2$  salt (J)**— bromoplatinate**Very sl sol in cold  $\text{H}_2\text{O}$  (J)**— chloride,  $\text{CoBr}(\text{NH}_3)_5\text{Cl}_2$** Difficultly sol in cold  $\text{H}_2\text{O}$ , but much more easily than the bromide Insol in dil  $\text{HCl} + \text{Aq}$ , and in alcohol**— mercuric chloride,  $\text{CoBr}(\text{NH}_3)_5\text{Cl}$** Sl sol in  $\text{H}_2\text{O}$ **— chloroplatinate**Nearly or quite insol in  $\text{H}_2\text{O}$  (J)**— chromate,  $\text{CoBr}(\text{NH}_3)_5\text{CrO}_4$** Nearly insol in  $\text{H}_2\text{O}$ **— dithionate,  $\text{CoBr}(\text{NH}_3)_5\text{S}_2\text{O}_6$** Nearly insol in  $\text{H}_2\text{O}$ **— fluosilicate,  $\text{CoBr}(\text{NH}_3)_5\text{SiF}_6$** Very sl sol in cold  $\text{H}_2\text{O}$ , insol in alcohol**— nitrate,  $\text{CoBr}(\text{NH}_3)_5(\text{NO}_3)_2$** More sol in  $\text{H}_2\text{O}$  than the bromide, but less than the chloride Wholly insol in dil  $\text{HNO}_3 + \text{Aq}$  or alcohol**— oxalate,  $\text{CoBr}(\text{NH}_3)_5\text{C}_2\text{O}_4$** Nearly insol in  $\text{H}_2\text{O}$ **— sulphate,  $\text{CoBr}(\text{NH}_3)_5\text{SO}_4$** Can be crystallized from very dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Insol in alcohol  
 $+ 6\text{H}_2\text{O}$  Efflorescent**Bromopurpleorhodium bromide,**Much less easily sol in  $\text{H}_2\text{O}$  than the chloro chloride Insol in dil  $\text{HBr} + \text{Aq}$  and alcohol (Jorgensen, *J pr* (2) **27** 433)**— bromoplatinate,  $\text{BrRh}(\text{NH}_3)_5\text{PtBr}_4$** Almost insol in  $\text{H}_2\text{O}$ **— fluosilicate,  $\text{BrRh}(\text{NH}_3)_5\text{SiF}_6$** Sl sol in  $\text{H}_2\text{O}$  Sol in boiling  $\text{NaOH} + \text{Aq}$  as roseo salt**Bromopurpleorhodium nitrate,**Sl sol in  $\text{H}_2\text{O}$ , but much more sol than bromide**Bromorhodos acid****Ammonium bromorhodite,  $(\text{NH}_4)_2\text{RhBr}_5$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *Chem f c* 1911, **100** (2) 45)Sol in  $\text{H}_2\text{O}$  (Gutbier, *B* 1908, **41** 215)**Barium bromorhodite,  $\text{BaRhBr}_5$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *l c*)**Cæsium bromorhodite,  $\text{Cs}_2\text{RhBr}_5$** Difficultly sol in  $\text{H}_2\text{O}$  (Gutbier, *l c*)**Potassium bromorhodite,  $\text{K}_2\text{RhBr}_5$** Very sol in  $\text{H}_2\text{O}$  (Goloubkine, *l c*)Sol in  $\text{H}_2\text{O}$  (Gutbier, *l c*)**Rubidium bromorhodite,  $\text{Rb}_2\text{RhBr}_5$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *l c*)Difficultly sol in  $\text{H}_2\text{O}$  (Gutbier, *l c*)**Sodium bromorhodite,  $\text{Na}_2\text{RhBr}_5$** Very sol in  $\text{H}_2\text{O}$  (Goloubkine, *l c*)**Bromoruthenic acid****Potassium bromoruthenate,  $\text{K}_2\text{RuBr}_6$** Very sol in  $\text{H}_2\text{O}$  (Howe, *J Am Cl m Soc* 1904, **26** 946)**Potassium aquobromoruthenate,**Ppt (Howe, *l c*)**Rubidium bromoruthenate,  $\text{Rb}_2\text{RuBr}_6$** Sol in  $\text{H}_2\text{O}$  (Howe, *l c*)**Rubidium aquobromoruthenate,**Ppt (Howe, *l c*)**Bromoruthenious acid****Cæsium bromoruthenite,  $\text{Cs}_2\text{RuBr}_6 + \text{H}_2\text{O}$** Ppt (Howe, *J Am Chem Soc* 1904, **26** 945)**Potassium bromoruthenite,  $\text{K}_2\text{RuBr}_6$** Very sol in  $\text{H}_2\text{O}$  with decomp Very sol in dil  $\text{HBr}$  (Howe, *l c*)**Rubidium bromoruthenite,  $\text{Rb}_2\text{RuBr}_6 + \text{H}_2\text{O}$** Sol in dil  $\text{HBr}$  (Howe, *l c*)**Bromoselenic acid****Ammonium bromoselenate,  $(\text{NH}_4)_2\text{SeBr}_4$** Sol in  $\text{H}_2\text{O}$  with decomp (Muthmann and Schuler, *B* **26** 1008)**Cæsium bromoselenate,  $\text{Cs}_2\text{SeBr}_4$** Sl sol in  $\text{H}_2\text{O}$  (Fischer, *J Am Chem Soc* 1898, **20** 571)**Potassium bromoselenate,  $\text{K}_2\text{SeBr}_4$** As  $\text{NH}_4$  salt (M and S)

**Rubidium bromoselenate,  $\text{Rb}_2\text{SeBr}_6$** Less sol in  $\text{H}_2\text{O}$  than K salt (Lenher, *l c*)**Bromopyroselenious acid****Ammonium bromopyroselenite,  $\text{NH}_4\text{Br}, 2\text{SeO}_2 + 2\text{H}_2\text{O}$** More easily sol in  $\text{H}_2\text{O}$  than corresponding Cl compound (Muthmann and Schafer, B 1893, 26 1014)**Potassium bromopyroselenite,  $\text{KBr}, 2\text{SeO}_2 + 2\text{H}_2\text{O}$** Sol in  $\text{H}_2\text{O}$  (Muthmann and Schafer, B 26 1008)**Bromosmic acid****Ammonium bromosmate,  $(\text{NH}_4)_2\text{OsBr}_6$** Only sl sol in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg 1899, 21 135)**Cæsium bromosmate,  $\text{Cs}_2\text{OsBr}_6$** Nearly insol in  $\text{H}_2\text{O}$  and dil HBr (Gutbier, B 1913, 46 2103)**Potassium bromosmate,  $\text{K}_2\text{OsBr}_6$** Only sl sol in  $\text{H}_2\text{O}$  (Rosenheim, *l c*)**Rubidium bromosmate,  $\text{Rb}_2\text{OsBr}_6$** Difficultly sol in  $\text{H}_2\text{O}$  and in dil HBr (Gutbier, *l c*)**Silver bromosmate,  $\text{Ag}_2\text{OsBr}_6$** Ppt insol in  $\text{H}_2\text{O}$  (Rosenheim, *l c*)**Sodium bromosmate,  $\text{Na}_2\text{OsBr}_6 + 4\text{H}_2\text{O}$** Sol in  $\text{H}_2\text{O}$  (Rosenheim, *l c*)**Bromostannic acid,  $\text{H}_2\text{SnBr}_6 + 8\text{H}_2\text{O}$** Very deliquescent Sol in  $\text{H}_2\text{O}$  (Seubert, B 20 794)**Ammonium bromostannate,  $(\text{NH}_4)_2\text{SnBr}_6$** Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Raymann and Preis, A 223 323)**Cæsium bromostannate**Sol in  $\text{H}_2\text{O}$  (Raymann and Preis)**Calcium bromostannate,  $\text{CaSnBr}_6 + 6\text{H}_2\text{O}$** Very deliquescent Sol in  $\text{H}_2\text{O}$  (Raymann and Preis)**Cobalt bromostannate,  $\text{CoSnBr}_6 + 10\text{H}_2\text{O}$** 

Deliquescent (Raymann and Preis)

**Ferrous bromostannate,  $\text{FeSnBr}_6 + 6\text{H}_2\text{O}$** 

Deliquescent (Raymann and Preis)

**Lithium bromostannate,  $\text{Li}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$** 

Extremely deliquescent (Lewin, C R 113 541)

**Magnesium bromostannate,  $\text{MgSnBr}_6 + 10\text{H}_2\text{O}$** 

Deliquescent (Raymann and Preis)

**Manganous bromostannate,  $\text{MnSnBr}_6 + 6\text{H}_2\text{O}$** 

Deliquescent (Raymann and Preis)

**Nickel bromostannate,  $\text{NiSnBr}_6 + 8\text{H}_2\text{O}$** 

Deliquescent (Raymann and Preis)

**Potassium bromostannate,  $\text{K}_2\text{SnBr}_6$** Sol in  $\text{H}_2\text{O}$  (Topsoe)**Rubidium bromostannate**Sol in  $\text{H}_2\text{O}$  (Raymann and Preis)**Sodium bromostannate,  $\text{Na}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$** Not deliquescent, but extremely sol in  $\text{H}_2\text{O}$  (Seubert, B 20 796)**Strontium bromostannate,  $\text{SrSnBr}_6 + 6\text{H}_2\text{O}$** Very hygroscopic, and sol in  $\text{H}_2\text{O}$  (Raymann and Preis)**Bromosulphatoplutindiamine sulphate,**Rather easily sol in hot  $\text{H}_2\text{O}$ **Bromosulphobismuthous acid****Cuprous bromosulphobismuthite,  $2\text{Cu}_3\text{S}, \text{Bi}_2\text{S}_3, 2\text{BiSBr}$** Stable in the air and insol in  $\text{H}_2\text{O}$  at ord temp Partially decomp by boiling  $\text{H}_2\text{O}$  Decomp by mineral acids with the evolution of  $\text{H}_2\text{S}$  (Ducatte, C R 1902, 134 1212)**Lead bromosulphobismuthite,  $\text{PbS}, \text{Bi}_2\text{S}_3, 2\text{BiSBr}$** Insol in  $\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$  Decomp by dil mineral acids with evolution of  $\text{H}_2\text{S}$  (Ducatte, *l c*)**Bromotantalum bromide,  $(\text{Ta}_6\text{B}_{11})\text{Br} + 7\text{H}_2\text{O}$** Stable in the air when in the solid state Sol in  $\text{H}_2\text{O}$  without decomp Sol in propyl alcohol (Chapin, J Am Chem Soc 1910, 32 328)**Bromotantalum chloride,  $(\text{Ta}_6\text{B}_{12})\text{Cl} + 7\text{H}_2\text{O}$** (Chapin, *l c*)**Bromotantalum hydroxide,  $(\text{Ta}_6\text{B}_{11})(\text{OH})_2 + 10\text{H}_2\text{O}$** Sl sol in  $\text{HCl}$  Stable in the air below  $100^\circ$  Sol in alcohol Insol in ether (Chapin, *l c*)**Bromotantalum iodide,  $(\text{Ta}_6\text{B}_{11})\text{I} + 7\text{H}_2\text{O}$** (Chapin, *l c*)**Bromotelluric acid****Ammonium bromotellurate,  $(\text{NH}_4)_2\text{TeBr}_6$** Less sol in  $\text{H}_2\text{O}$  than K salt (Muthmann and Schmidt, B 1893, 26 1011)

**Cæsium bromotellurate, Cs<sub>2</sub>TeBr<sub>6</sub>**

Decomp by H<sub>2</sub>O  
 100 pts HBr+Aq (sp gr 1.49) dissolve  
 0.02 pt at 22°  
 100 pts HBr+Aq (sp gr 1.08) dissolve  
 0.13 pt at 22°  
 Insol in alcohol (Wheeler, Sill Am J 145 267)

**Potassium bromotellurate, K<sub>2</sub>TeBr<sub>6</sub>+3H<sub>2</sub>O**

Sol in little, decomp by much H<sub>2</sub>O (v Hauer)  
 Contains 2H<sub>2</sub>O (Wheeler, Sill Am J 145 267)  
 Efflorescent  
 100 pts HBr+Aq (sp gr 1.49) dissolve  
 6.57 pts at 22°  
 100 pts HBr+Aq (sp gr 1.08) dissolve  
 62.90 pts at 22°  
*Anhydrous* Stable on air (Wheeler)

**Rubidium bromotellurate, Rb<sub>2</sub>TeBr<sub>6</sub>**

Sol in a little hot H<sub>2</sub>O, but H<sub>2</sub>TeO<sub>3</sub> separates on cooling  
 100 pts HBr+Aq (sp gr 1.49) dissolve  
 0.25 pt at 22°  
 100 pts HBr+Aq (sp gr 1.08) dissolve  
 3.88 pts at 22° (Wheeler)

**Bromotetramine chromium bromide,**

Easily sol in H<sub>2</sub>O (Cleve)

**— chloride, CrBr(NH<sub>3</sub>)<sub>4</sub>Cl + H<sub>2</sub>O**

Sol in H<sub>2</sub>O (Cleve)

**— sulphate, CrBr(NH<sub>3</sub>)<sub>4</sub>SO<sub>4</sub> + H<sub>2</sub>O**

Easily sol in H<sub>2</sub>O (Cleve)

**Bromotetramine cobaltic sulphate,**

Sol in H<sub>2</sub>O (Vortmann and Blasberg, B 22 2652)

**Cadmium, Cd**

Not attacked by H<sub>2</sub>O Sol in HCl, or dil H<sub>2</sub>SO<sub>4</sub>+Aq, but more easily in HNO<sub>3</sub>+Aq Sol in HC<sub>2</sub>H<sub>3</sub>O+Aq

Chemically pure Cd like Zn is almost insol in dil acids, with the exception of HNO<sub>3</sub> (Weeren, B 1891, 24 1798)

Sol in HClO<sub>4</sub>+Aq without evolution of H<sub>2</sub> (Hendrixson, J Am Chem Soc 1904, 26 756)

Cadmium is sol in molten CdCl<sub>2</sub> and can be recryst therefrom (Auerbach, Z anorg 1901, 28 42)

From 4 g Cd in 32 g molten CdCl<sub>2</sub> at 650° 2.197 g were dissolved in ½ li (Helfenstein, Z anorg 1900, 23 295)

Moderately quickly sol in K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Aq More slowly sol in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Aq (Icvi, Gazz ch it 1908, 38 (1) 583)

Sol in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Aq without evolution of gas (Turrentine, J phys Chem 1907, 11 627)

Sol in sulphostannates+Aq (Storch, 1883, 16 2015)

½ ccm oleic acid dissolves 0.0293 g Cd in 6 days (Gates, J phys Chem 1911, 15 14)

Not attacked by sugar solution (König and Berg, C R 102 1170)

**Cadmium amalgam, Cd<sub>2</sub>Hg,**

Stable from 0°-44° Can be cryst from Hg without decomp if temp does not exceed 44° (Kerp Z anorg 1900, 25 68)

**Cadmium amide, Cd(NH<sub>2</sub>)<sub>2</sub>**

Decomp by H<sub>2</sub>O (Bohart, J phys Chem 1915, 19 543)

**Cadmium arsenide, Cd<sub>3</sub>As**

(Descamps, C R 86 1022)

Cd<sub>3</sub>As<sub>2</sub> Sol in dil cold HNO<sub>3</sub> Attacked by aqua regia (Granger, C R 1904, 8 575)

**Cadmium azoimide, Cd(N<sub>3</sub>)<sub>2</sub>**

Ppt (Curtius, J pr 1898, (2) 58 294)

**Cadmium subbromide, Cd<sub>4</sub>Br<sub>7</sub>**

Decomp by H<sub>2</sub>O (Morse and Jones, J Ch J 1890, 12 490)

**Cadmium bromide, CdBr<sub>2</sub>**

Deliquescent Very sol in H<sub>2</sub>O

Solubility in H<sub>2</sub>O at t°

t°	% CdBr	t	% CdBr
-4	32.0	48	60
-1	34.7	71	61
+1	36.3	104	61
2	36.0	155	63

(Forchheimer, Z phys Ch 1900, 34 29)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

Sol in  $\text{AlBr}_3$  (Isbekow, Z anorg 1913, 84, 27)

Sol in  $\text{HCl} + \text{Aq}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , alcohol, or ether (Berthelot, A ch 44 387)

Sol in 0.94 pt  $\text{H}_2\text{O}$ , 3.4 pts abs alcohol, 250 pts ether, and 16 pts alcohol-ether (1:1) (Eder, Dingl 221 89)

An  $\text{CdBr}_2$  is sol in acetone (Krug and M Frooy)

1 g  $\text{CdBr}_2$  is sol in 64.5 g acetone at  $18^\circ$  Sp gr of sat solution  $18^\circ/4^\circ = 0.8073$  (Naumann, B 1904, 37 4337)

Sol in acetone (Fidmann, C C 1899, II 1014)

Insol in mustard oil (Mathews, J phys Chem 1905, 9, 647)

Difficultly sol in methyl acetate (Naumann, B 1909, 42, 3790)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Sol in chinoline (Beckmann and Gabel, Z anorg 1906, 51 236)

100 g benzonitrile dissolve 0.857 g  $\text{CdBr}_2$  at  $18^\circ$  (Naumann, B 1914, 47 1370)

Mol weight determined in piperidine (Ferschland, Z anorg 1897, 15, 17)

+  $\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$

 $0^\circ$   $18^\circ$   $30^\circ$   $38^\circ$   
 37.92 48.90 56.90 61.84 g  $\text{CdBr}_2$   
 Sp gr of sat solution at  $18^\circ = 1.683$   
 (Dietz, Z anorg 1899, 20 261)

100 g sat solution of  $\text{CdBr}_2 + 4\text{H}_2\text{O}$  in absolute alcohol contain 20.93 g  $\text{CdBr}_2$  at  $15^\circ$

100 g sat solution of  $\text{CdBr}_2 + 4\text{H}_2\text{O}$  in absolute ether contain 0.4 g  $\text{CdBr}_2$  at  $15^\circ$  (Eder, Dingl 221 89)

### Cadmium hydrogen bromide

Decomp by  $\text{H}_2\text{O}$  (Berthelot, C R 91 1024)

### Cadmium caesium bromide, $\text{CdBr}_2, \text{CsBr}$

Easily sol in  $\text{H}_2\text{O}$  (Wells and Walden, Z anorg 5 270)

$\text{CdBr}_2, 2\text{CsBr}$  Decomp by  $\text{H}_2\text{O}$  into above comp (W and W)

$\text{CdBr}_2, 3\text{CsBr}$  Decomp by  $\text{H}_2\text{O}$  into  $\text{CdBr}_2, \text{CsBr}$  (W and W)

### Cadmium potassium bromide, $\text{CdBr}_2, \text{KBr} + \frac{1}{2}\text{H}_2\text{O}$

Sol in 0.79 pt  $\text{H}_2\text{O}$  at  $15^\circ$ , pptd by alcohol and ether (Eder, Dingl 221 89)

+  $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  without decomp from  $0.4^\circ - 112.5^\circ$  (Rimbach, B 1905, 38, 1554)

100 pts of the solution contain at  
 $0.4^\circ$   $15.8^\circ$   $50^\circ$   $112.5^\circ$   
 53.75 58.68 68.25 78.10 pts of the salt

$\text{CdBr}_2, 4\text{KBr}$  Sol in 1.40 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , pptd by alcohol and ether (Eder, Dingl 221 89)

Cannot be prepared in a pure state as it is decomp by  $\text{H}_2\text{O}$  below  $160^\circ$  (Rimbach, B 1905, 38 1560)

### Cadmium rubidium bromide, $\text{CdBr}_2, \text{RbBr}$

Sol in  $\text{H}_2\text{O}$  without decomp from  $0.4^\circ$  to  $107.5^\circ$

100 pts of the solution contain at  
 $0.4^\circ$   $14.5^\circ$   $49.2^\circ$   $107.5^\circ$   
 32.65 41.87 58.54 75.77 pts of the salt  
 (Rimbach, B 1905, 38 1556)

$\text{CdBr}_2, 4\text{RbBr}$  Sol in  $\text{H}_2\text{O}$  without decomp from  $0.5^\circ$  to  $114.5^\circ$

100 pts of the solution contain at  
 $0.5^\circ$   $13.5^\circ$   $51.5^\circ$   $114.5^\circ$   
 47.95 55.17 68.82 79.04 pts of the salt  
 (Rimbach, B 1905, 38 1561)

**Cadmium sodium bromide**,  $\text{CdBr}_2$ ,  $\text{NaBr} + 2\frac{1}{2}\text{H}_2\text{O}$

Sol at  $15^\circ$  in 104 pts  $\text{H}_2\text{O}$ , 37 pts abs alcohol, and 190 pts ether (sp gr 0.729) (Eder, Dingl **221** 89)

$3\text{CdBr}_2$ ,  $2\text{NaBr} + 6\text{H}_2\text{O}$  Stable in conc solutions and decomp only by great dilution (Jones and Knight, Am Ch J 1899, **22** 134)

**Cadmium bromide ammonia**,  $\text{CdBr}_2 \cdot 2\text{NH}_3$

Can be crystallized out of warm  $\text{NH}_4\text{OH} + \text{Aq}$  (Croft, Phil Mag **21** 356)

$\text{CdBr}_2$ ,  $3\text{NH}_3$  (Tassily, C R 1897, **124** 1022)

$\text{CdBr}_2$ ,  $4\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  (Croft)

**Cadmium bromide cupric oxide**,  $\text{CdBr}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$  (Mailhe, A ch 1902, (7) 27 383)

**Cadmium bromide hydrazine**,  $\text{CdBr}_2$ ,  $2\text{N}_2\text{H}_4$

Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg 1908, **60** 280)

**Cadmium bromide hydroxylamine**,  $\text{CdBr}_2$ ,  $2\text{NH}_2\text{OH}$

Sol in hot  $\text{H}_2\text{O}$  with formation of a basic salt Sol in dil acids Insol in alcohol and ether (Adams, Am Ch J 1902, **28** 218)

**Cadmium subchloride**,  $\text{Cd}_4\text{Cl}_7$

Decomp by  $\text{H}_2\text{O}$  and by acids (Morse and Jones, Am Ch J 1890, **12** 490)

**Cadmium chloride**,  $\text{CdCl}_2$

Sol at  $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
in 0.71 0.72 0.72 0.70 0.67 pts  $\text{H}_2\text{O}$

43.58 49.39 55.58 59.12 g CdCl

(Dietz, Z anorg 1899 **20** 257)

+5H<sub>2</sub>O (Worobieff, Z anorg 1898, **18** 386)

**Cadmium hydrogen chloride**, CdCl<sub>2</sub>, 2HCl+7H<sub>2</sub>O

Decomp in air (Berthelot, C R **91** 1024)

**Cadmium caesium chloride**, CdCl<sub>2</sub>, 2CsCl

Easily sol in H<sub>2</sub>O and dil HCl+Ag, insol in conc HCl+Ag (Godeffroy, B **8** 9)

Nearly insol in CsCl+Ag (Wells and Walden, Z anorg **5** 286)

CdCl, CsCl Sl sol in H<sub>2</sub>O, nearly insol in CdCl<sub>2</sub>+Ag (Wells and Walden)

**Cadmium calcium chloride**, 2CdCl, CaCl<sub>2</sub>+7H<sub>2</sub>O

Rather deliquescent, and very sol in H<sub>2</sub>O. When ignited is only sl sol in H<sub>2</sub>O with evolution of heat (v Hauer, J pr **63** 432)

CdCl<sub>2</sub>, 2CaCl<sub>2</sub>+12H<sub>2</sub>O Very deliquescent (v Hauer)

**Cadmium cobaltous chloride**, 2CdCl<sub>2</sub>, CoCl+12H<sub>2</sub>O

Deliquescent Sol in H<sub>2</sub>O (v Hauer, W A B **17** 331)

**Cadmium cupric chloride**, CdCl, CuCl+4H<sub>2</sub>O

Sol in H<sub>2</sub>O (v Hauer, W A B **17** 331)

**Cadmium hydrazine chloride**, CdCl<sub>2</sub>, N<sub>2</sub>H<sub>4</sub>HCl

Unstable in the air when moist Very so in H<sub>2</sub>O, sl sol in alcohol, sol in NH<sub>3</sub>+Ac (Curtius, J pr 1894, (2) **50** 334)

CdCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>HCl+4H<sub>2</sub>O Very sol in H<sub>2</sub>O, sl sol in alcohol (Curtius, J pr 189 (2) **50** 335)

**Cadmium iron (ferrous) chloride**, 2CdCl FeCl<sub>2</sub>+12H<sub>2</sub>O

Sol in H<sub>2</sub>O (v Hauer, W A B **17** 331)

**Cadmium lithium chloride**, CdCl, LiCl-3½H<sub>2</sub>O

Very deliquescent Decomp by solution in H<sub>2</sub>O, but not in alcohol (Chassevant, ch (6) **30** 39)

**Cadmium magnesium chloride**, 2CdCl, MgCl<sub>2</sub>+12H<sub>2</sub>O

Deliquescent in moist, stable in dry air. Easily sol in H<sub>2</sub>O with absorption of heat. Much more sol in hot than in cold H<sub>2</sub>O (Hauer)

Solubility in H<sub>2</sub>O at t°

t	G. CdMgCl in 100 g solution	G. Cd MgCl in 100 g H <sub>2</sub> O
24	45.61	53.86
26.5	49.69	98.77
45.5	53.51	115.10
67.2	58.14	138.90
121.8	65.48	189.69

(Rumbach, B 1897, **30** 3684)

CdCl, 2MgCl+12H<sub>2</sub>O Very deliquescent (v Hauer)

**Cadmium manganese chloride**, 2CdCl, MnCl<sub>2</sub>+12H<sub>2</sub>O

Deliquescent in moist, efflorescent in air Sol in H<sub>2</sub>O (v Hauer)

**Cadmium nickel chloride**, CdCl, 2NiCl, 12H<sub>2</sub>O

Sol in H<sub>2</sub>O (v Hauer, W A B **20** 411)  
2CdCl<sub>2</sub>, NiCl+12H<sub>2</sub>O Sol in H<sub>2</sub>O (Hauer)

**Cadmium potassium chloride**, CdCl, KCl, ½H<sub>2</sub>O

Sol in H<sub>2</sub>O without decomp (v Hauer)

+H<sub>2</sub>O 100 mol H<sub>2</sub>O dissolve at  
19° 3' 29° 7' 40° 1' 54° 5'

(Rimbach, B 1902, **35** 1305)

Decomp by H<sub>2</sub>O between 0° and 108°  
(Rimbach, B 1905, **38** 1571)

Sol in conc HCl without decomp (Rim-  
bach, B 1905, **38** 1571)

Not sol in CaCl<sub>2</sub>+Aq and LiCl+Aq with-  
out decomp (Rimbach, B 1905, **38** 1571)

**Cadmium sodium chloride**, CdCl<sub>2</sub>, 2NaCl+  
3H<sub>2</sub>O

Sol in 1 4 pts H<sub>2</sub>O at 16° (Croft)  
100 mol H<sub>2</sub>O dissolve at  
19° 3' 29° 7' 40° 1' 54° 5'  
3 93 4 29 4 73 5 18 mol CdCl<sub>2</sub>,  
2NaCl+3H<sub>2</sub>O

Stable between 19 and 55°  
(Sudhaus, Miner Jahrb Beil-Bd 1914, **37**  
25)

Sl sol in alcohol or wood alcohol (Croft)

**Cadmium strontium chloride**, 2CdCl<sub>2</sub>, SrCl<sub>2</sub>+  
7H<sub>2</sub>O

Sol in H<sub>2</sub>O (v Hauer)

**Cadmium chloride ammonia**, CdCl<sub>2</sub>, 2NH<sub>3</sub>

Nearly insol in H<sub>2</sub>O (v Hauer)  
CdCl<sub>2</sub>, 3NH<sub>3</sub>+ $\frac{1}{2}$ H<sub>2</sub>O  
CdCl<sub>2</sub>, 4NH<sub>3</sub>+ $\frac{1}{2}$ H<sub>2</sub>O  
CdCl<sub>2</sub>, 5NH<sub>3</sub> (Andr., C R **104** 908)  
CdCl<sub>2</sub>, 6NH<sub>3</sub> Difficultly sol in cold H<sub>2</sub>O  
(Schuler, A **87** 34)

**Cadmium chloride cupric oxide**,  $\text{CdCl}_2 \cdot 3\text{CuO} + 3\text{H}_2\text{O}$

Not decomp by  $\text{H}_2\text{O}$  (Mailhe, A ch 1902, (7) 27 378 and 174)

**Cadmium chloride hydrazine**,  $\text{CdCl}_2 \cdot 2\text{N}_2\text{H}_4$

Insol in  $\text{H}_2\text{O}$   
Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg 1908, 60 279)

+ $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Curtius, J pr 1894, (2) 50 345)

**Cadmium chloride hydroxylamine**,  $\text{CdCl}_2 \cdot 2\text{NH}_2\text{OH}$

Sl sol in cold, somewhat more in warm  $\text{H}_2\text{O}$  Very sol in hydroxylamine + Aq Very sl sol in alcohol and other organic solvents (Crismer, Bull Soc (3) 3 116)

Aq solution sat at 20° contains about 1% (Antonoff, C C 1905, II 810)

**Cadmium fluoride**,  $\text{CdF}_2$

Difficultly sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HF} + \text{Aq}$  (Berzelius, Pogg 1 26)

Very sol in  $\text{H}_2\text{O}$ , insol in 95% alcohol, sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$  with evolution of  $\text{HF}$  (Poulenc, C R 116 582)

1 l  $\text{H}_2\text{O}$  dissolves 0.289 mol  $\text{CdF}_2$  at 25°, or 100 cc sat aqueous solution contains 4.36 g  $\text{CdF}_2$  at 25° (Jaeger, Z anorg 1901, 27 35)

1 l of 1.08-N  $\text{HF}$  dissolves 0.372 mol  $\text{CdF}_2$  at 25° (Jaeger, Z anorg 1901, 27 35)  
Insol in liq  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

**Cadmium ceric fluoride**,  $\text{CdF}_2 \cdot 2\text{CeF}_4 + 7\text{H}_2\text{O}$

Ppt Decomp by  $\text{H}_2\text{O}$  (Rimbach, A 1909, 368 106)

**Cadmium columbium fluoride**

See Fluocolumbate, cadmium

**Cadmium molybdenyl fluoride**

See Fluoxymolybdate, cadmium

**Cadmium silicon fluoride**

**Cadmium stannic fluoride**

See Fluostannate, cadmium

**Cadmium titanium fluoride**

See Fluotitanate, cadmium

**Cadmium zirconium fluoride**

See Fluozirconate, cadmium

**Cadmous hydroxide**,  $\text{CdOH}$

Insol in  $\text{H}_2\text{O}$  Decomp by acids into cadmic salt (Morse and Jones, Am Ch J 12 488)

**Cadmium hydroxide**,  $\text{CdO} \cdot \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$   
1 l  $\text{CdO} \cdot \text{H}_2\text{O} + \text{Aq}$  contains 0.0026 g  $\text{CdO} \cdot \text{H}_2\text{O}$

at 25° (Bodlander, Z phys Ch 1898, 7 66)

Solubility in  $\text{H}_2\text{O} = 2.6 \times 10^{-4}$  (Herz, Z anorg 1900, 24 126)

Sol in acids, very sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$

Easily sol in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4$  succinate + Aq (Wittstein)

Freshly pptd  $\text{CdO} \cdot \text{H}_2\text{O}$  is sol in all haloids + Aq (Bersch, Z phys Ch 1891 8 392)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  increases with increase in concentration of  $\text{NH}_4\text{OH}$  (Et 1, B 1903, 36 3401)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at 25°

(Wershofen, Z phys Ch 1890, **5** 493)

Sol in ethyl acetate (Naumann, B 1914, **37** 3601)

**Cadmium sodium iodide**,  $\text{CdI}_2, 2\text{NaI} + 6\text{H}_2\text{O}$

Deliquescent (Croft)

Sol at  $15^\circ$  in 0.63 pt  $\text{H}_2\text{O}$ , 0.86 pt alcohol, and 10.1 pts ether (sp gr 0.7) (Eder, Dingl **221** 89)

**Cadmium strontium iodide**,  $\text{CdI}_2, \text{SrI}_2 + 8\text{H}_2\text{O}$

Deliquesces in moist, effloresces in dry, sol in  $\text{H}_2\text{O}$  (Croft)

**Cadmium iodide ammonia**,  $\text{CdI}_2, 2\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  (Rammelsberg)

$\text{CdI}_2, 4\text{NH}_3$  (Dawson and McCrae, Ch n Soc 1900, **77** 1246)

$\text{CdI}_2, 6\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$ , sol in warm, less sol in cold  $\text{NH}_4\text{OH} + \text{Aq}$  (Rammelsberg)

**Cadmium iodide hydrazine**,  $\text{CdI}_2 \cdot 2\text{N}_2\text{H}_4$

Easily sol in warm  $\text{NH}_4\text{OH} + \text{Aq}$  (Fenzl, Z anorg 1908, **60** 281)

**Cadmium iodide hydroxylamine**,  $\text{CdI}_2 \cdot 3\text{NH}_2\text{OH}$

Sol in  $\text{H}_2\text{O}$  and alcohol. Insol in ether (Adams, Am Ch J 1902, **28** 218)

**Cadmium iodide selenide**,  $\text{CdI}_2 \cdot 3\text{CdSe}$

Easily decomp (Fonzes-Ducon, C R 1900 **131** 897)

**Cadmium iodosulphide**,  $\text{CdI}_2 \cdot 2\text{CdS}$

Ppt (Naumann, B 1904 **37** 4338)

**Cadmium suboxide**,  $\text{Cd}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ , acids and  $\text{NH}_4\text{O} + \text{Aq}$  (Fenzl, Z anorg 1901, **27** 433)

$\text{CdO}$  Properties as cadmium hydroxide (Morse and Jones)

**Cadmium oxide**,  $\text{CdO}$

Insol in  $\text{H}_2\text{O}$ . Sol in acids. Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol in  $\text{NH}_4\text{Cl} + \text{Aq}$ , less in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett, 1837)

Insol in KOH, NaOH,  $K_2CO_3$ , and  $Na_2CO_3$   
+Aq

See also Cadmium hydroxide

Solubility in (calcium succate+sugar)+  
Aq

1 l solution containing 418.6 g sugar and  
34.3 g CaO dissolves 0.22 g CdO

1 l solution containing 174.4 g sugar and  
14.1 g CaO dissolves 0.48 g CdO

(Bodenbender, J B 1865 600)

Insol in acetone (Naumann, B 1904, 37  
4329)

Insol in methyl acetate (Naumann, B  
1909, 42 3790)

Insol in ethyl acetate (Naumann, B  
1904, 37 3601)

**Cadmium peroxide**,  $Cd_5O_8$  or  $Cd_3O_5$ (?)

(Haas)

$CdO_2$ ,  $Cd(OH)_2$  (Kouriloff, A ch (6) 23  
431)

Very stable towards  $H_2O$  Insol in  $NH_4OH$   
+Aq (Haas, B 1884, 17 2253)

$4CdO_2$ ,  $Cd(OH)_2$  Ppt Insol in NaOH+  
Aq (Eykman, C C 1905, I 1629)

$5CdO_2$ ,  $CdO+3H_2O$  Ppt (Teletow, C A  
1912, 43)

**Cadmium oxybromide**,  $CdO$ ,  $CdBr_2+H_2O$

Decomp by  $H_2O$  (Tassily, C R 1897,  
124 1023)

+ $2H_2O$  Stable in dry air, insol in  $H_2O$   
(Tassily, C R 1897, 124 1022)

+ $3H_2O$  Slowly decomp by  $H_2O$  (Tas  
sily, C R 1897, 124 1022)

+ $7H_2O$  (Mailhe, C R 1901, 132 1561)

**Cadmium oxychloride**,  $CdCl_2$ ,  $CdO+H_2O$

Sl sol in hot  $H_2O$  (Habermann, M Ch  
5 432)

+ $7H_2O$  (Mulhe, Bull Soc 1901, (3) 25  
791)

$2CdO$ ,  $CdCl_2$  Insol in  $H_2O$ , but slowly  
decomp thereby (Cunzoneri, Gazz ch it  
1897, 27 (2) 486)

**Cadmium oxyiodide**,  $CdO$ ,  $CdI_2+H_2O$

Decomp by  $H_2O$  (Tassily, C R 1897,  
124 1023)

+ $3H_2O$  Stable in dry air, insol in  $H_2O$   
(Tassily, C R 1897, 124 1022)

**Cadmium phosphide**,  $Cd_3P_2$

Sol in HCl+Aq with evolution of  $PH_3$

$Cd_3P_2$  in conc HCl+Aq (Lemmerling, B 12 152)

Easily decomp by acids (Kulisch, A 231  
327)

$CdP_2$  Decomp by boiling conc HCl+Aq  
(Renault, C R 76 283)

**Cadmium selenide**,  $CdSe$

Sol in HCl+Aq (Uellmann, A 116 122)

Easily decomp by acids (Fonze-Diacon,  
C R 1900, 131 897)

**Cadmium sulphide**,  $CdS$

Insol in  $H_2O$

Solubility in  $H_2O$  at  $16-18^\circ = 6.6 \times 10^{-6}$   
mols per l (Biltz, Z phys Ch 1907, 58  
291)

1 l  $H_2O$  dissolves  $9.00 \times 10^{-6}$  mols  $CdS$   
(artificial greenockite) at  $18^\circ$

1 l  $H_2O$  dissolves  $8.86 \times 10^{-6}$  mols pptd  
 $CdS$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58  
294)

Difficultly sol in hot dil HCl+Aq Easily  
sol in cold conc HCl+Aq (Stromeyer)  
Sol in  $HNO_3$ +Aq (Meissner), and boiling dil  
 $H_2SO_4$ +Aq (1 6) (A W Hoffmann, A  
115 286) Very sl sol in  $NH_4OH$ +Aq  
(Wackenroder, Report 46 226) Insol in  
KOH, or  $(NH_4)_2S$ +Aq Appreciably sol in  
an acid solution of  $NH_4Cl$  (Baxter and  
Hines, Z anorg 1905, 44 160)

Much more sol in  $(NH_4)_2S$ +Aq than usu-  
ally supposed (Ditte, C R 85 402) Sol-  
ubility increases by warming, and at  $68^\circ$  is  
twice that at ordinary temperatures A sat  
solution of  $(NH_4)_2S$  dissolves about 2 g  $CdS$   
to a litre Alkali sulphides dissolve much  
less (Ditte)

Fresenius (Z anal 20 236) could not con-  
firm the above According to Fresenius,  $CdS$   
is not appreciably sol in  $(NH_4)_2S$ +Aq

Insol in  $Na_2SO_3$  or  $KCN$ +Aq (Fresenius)

Insol in  $NH_4Cl$  or  $NH_4NO_3$ +Aq (Brett)

Sol in alkali sulpho-molybdates, -tung-  
states, -vanadates, -arsenates, -antimonates,  
-stannates+Aq (Storch, B 16 2015)

Insol in liquid  $NH_3$  (Franklin, Am Ch  
J 1898, 20 827)

Insol in acetone (Naumann, B 1904, 37  
4329, Erdmann, C C 1899, II 1014)

Insol in ethyl acetate (Naumann, B  
1910, 43 314)

Min Greenockite Sol in HCl+Aq

**Colloidal**—Solution of 4 g colloidal C  
in a litre  $H_2O$  remains transparent several  
days If it contains 11 g  $CdS$  in a litre, it is  
completely coagulated in 24 hours Solutions  
of salts of the following concentration cause  
an immediate coagulation in an aqueous solu-  
tion of  $CdS$  containing 3.62 g in a litre

(Prost, Belg Acad Bull (3) 14 312, J B 1887 537)

#### Cadmium pentasulphide, $\text{CdS}_5$

Insol in  $\text{H}_2\text{O}$  (Schiff, A 115 74)  
Mixture of CdS and S (Follenius, Z anal 13 412)

#### Cadmium potassium sulphide, $\text{K}_2\text{CdS}_4$

, anorg 1904, 42 439)

#### Cadmium sulphide, $3\text{CdS}$ , $\text{Na}_2\text{S}$

by  $\text{H}_2\text{O}$  (Schneider, J pr (2)

#### Cadmium sulphoiodide

See Cadmium iodosulphide

#### Cadmium telluride, $\text{CdTe}$

Not attacked by dil acids. Attacked in the cold only by  $\text{HNO}_3$  (Gibbals, J Am Chem Soc 1909, 31 908)

#### Cadmic acid

#### Potassium cadmate

Insol in  $\text{H}_2\text{O}$ , but gradually decomp when in contact therewith (Mummi, C R 63 330)

#### Cæsium, Cs

Decomp  $\text{H}_2\text{O}$  with great violence (Settemberg, A 211 100)

Very sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

#### Cæsium acetylide acetylene, $\text{Cs}_2\text{C}_2\text{H}_2$

Insol in  $\text{C}_6\text{H}_6$  and in  $\text{CHCl}_3$  (Moissan, C R 1903, 136 1218)

#### Cæsium amide, $\text{CsNH}_2$

Decomp by  $\text{H}_2\text{O}$ . Very sol in liquid  $\text{NH}_3$  (Rengade, C R 1905, 140 1185)

#### Cæsium ammonia, $\text{Cs}_3\text{NH}_3$

Sol in liquid  $\text{NH}_3$  (Moissan, C R 1903, 136 1177)

#### Cæsium azoumide, $\text{CsN}_3$

Deliquescent Stable in aq solution  
224 2 pts sol in 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$   
307 4 " " " 100 "  $\text{H}_2\text{O}$  "  $16^\circ$   
1 0366 " " " 100 " abs alcohol "  $16^\circ$   
Insol in pure ether (Curtius, J pr 1898, (2) 58 283)

#### Cæsium bromide, $\text{CsBr}$

Ppt (Chabrie, C R 1901, 132 679)  
Sat  $\text{CsBr} + \text{Aq}$  at  $25^\circ$  contains 55.23%  
 $\text{CsBr}$  (Foote, Am Ch J 1907, 37 125)

#### Cæsium tribromide, $\text{CsBr}_3$

Sol in  $\text{H}_2\text{O}$ , decomp by alcohols (Wells, Sill Am J 143 17)

#### Cæsium pentabromide, $\text{CsBr}_5$

Very unstable (Wells and Wheeler, Sill Am J 144 42)

#### Cæsium cobalt bromide, $\text{Cs}_2\text{CoBr}_4$

Decomp by  $\text{H}_2\text{O}$  (Campbell, Z anorg 1894, 8 126)

Decomp by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J Sci 1894, (3) 48 418)

$\text{Cs}_2\text{CoBr}_5$  Decomp by  $\text{H}_2\text{O}$  (Campbell, Z anorg 1894, 8 126)

Decomp by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J Sci 1894, (3) 48 418)

#### Cæsium copper bromide, $\text{CsBr}$ , $\text{CuBr}$

Sol in  $\text{H}_2\text{O}$  without decomp (Wells and Walden, Z anorg 5 304)

2  $\text{CsBr}$ ,  $\text{CuBr}_2$  (W and W)

#### Cæsium iridium bromide

See Bromiridate, cæsium

#### Cæsium iron (ferric) bromide, $\text{Cs}_2\text{FeBr}_4$

Sol in  $\text{H}_2\text{O}$  (Walden, Z anorg 1894, 7 332)

$\text{Cs}_2\text{FeBr}_4 + \text{H}_2\text{O}$  (Walden, Z anorg 1894 7 332)

#### Cæsium lead bromide, $\text{CsBr}$ , $2\text{PbBr}_2$

Nearly stable in aqueous solution (Walden, Sill Am J 145 127)

$\text{CsBr}$ ,  $\text{PbBr}_2$  Decomp by  $\text{H}_2\text{O}$  (Walden)

4  $\text{CsBr}$ ,  $\text{PbBr}_2$  As above

Solubility determinations show that the double salts formed by cæsium and lead bromides at  $25^\circ$  are  $\text{CsPbBr}_3$ ,  $\text{Cs}_2\text{PbBr}_4$ , and  $\text{Cs}_4\text{PbBr}_6$  (Foote, Am Ch J 1907 37 125)

#### Cæsium magnesium bromide, $\text{CsBr}$ , $\text{MgBr}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wheeler and Campbell, Z anorg 5 275)

**Cæsium mercuric bromide, CsBr, 2HgBr<sub>2</sub>**

Not decomp by H<sub>2</sub>O 100 pts solution sat at 16° contain 0.807 pt CsBr, 2HgBr<sub>2</sub>. Sol in hot strong alcohol, from which CsBr, HgBr<sub>2</sub> separates on cooling (Wells, Sill Am J 144 221)

CsBr, HgBr<sub>2</sub> Decomp by H<sub>2</sub>O into above salt Sol in alcohol without decomp (Wells)

2CsBr, HgBr<sub>2</sub> Decomp by H<sub>2</sub>O into CsBr, 2HgBr<sub>2</sub>

3CsBr, HgBr<sub>2</sub> As above

**Cæsium molybdenyl bromide, 2CsBr,**

MoOBr<sub>3</sub>

(Weinland and Knoll, Z anorg 1905, 44 107)

**Cæsium nickel bromide, CsNiBr<sub>3</sub>**

Decomp by H<sub>2</sub>O (Campbell, Z anorg 1894, 8 126)

Decomp by H<sub>2</sub>O and by alcohol (Campbell, Am J Sci 1894, (3) 48 418)

**Cæsium osmium bromide**

See Bromosmate, cæsium

**Cæsium palladium bromide**

See Bromopalladate, cæsium and bromopalladite, cæsium

**Cæsium platinum bromide**

See Bromoplatinate, cæsium

**Cæsium ruthenium bromide**

See Bromoruthenite, cæsium

**Cæsium selenium bromide**

See Bromoselenate, cæsium

**Cæsium tellurium bromide**

See Bromotellurate, cæsium

**Cæsium thallic bromide, CsBr, TlBr<sub>3</sub>**

Sol in H<sub>2</sub>O with decomp (Pitt, Z anorg 1895, 9 19)

By recryst from H<sub>2</sub>O, forms 3CsBr, 2TlBr<sub>3</sub> (Pitt, Am J Sci 1895 (3) 49 403)

3CsBr, 2TlBr<sub>3</sub> Can be recryst unchanged from H<sub>2</sub>O (Pitt, Am J Sci 1895, (3) 49 402)

**Cæsium tin (stannic) bromide**

See Bromostannate, cæsium

**Cæsium zinc bromide, 3CsBr, ZnBr<sub>2</sub>**

Sol in H<sub>2</sub>O (Wells and Campbell, Z anorg 5 275)

2CsBr, ZnBr<sub>2</sub> As above

**Cæsium bromide columbium oxybromide,**

2CsBr, CbOBr<sub>3</sub>

Unstable in moist air Decomp by H<sub>2</sub>O (Weinland, B 1906, 39 3059)

**Cæsium bromochloride, CsBr<sub>2</sub>Cl**

Properties as CsBr<sub>3</sub> (Wells)

CsBrCl<sub>2</sub> As above (Wells)

**Cæsium mercuric bromochloride,**

Cs<sub>2</sub>HgCl<sub>3</sub>Br<sub>2</sub>

Decomp by H<sub>2</sub>O finally to HgBr (Wells, Sill Am J 144 121)

Cs<sub>2</sub>HgCl<sub>3</sub>Br As above

CsHgClBr<sub>2</sub> As above

CsHg<sub>2</sub>ClBr<sub>4</sub> As above

CsHg<sub>5</sub>ClBr<sub>10</sub> As above

**Cæsium bromochloriodide, CsBrClI**

More sol in H<sub>2</sub>O than in alcohol Not decomp at once by ether (Wells)

**Cæsium bromiodide, CsBrI<sub>2</sub>**

Decomp by H<sub>2</sub>O Sol in alcohol Decomp by ether with residue of CsBr (Wells, Sill Am J 143 17)

CsBr<sub>2</sub>I More sol in H<sub>2</sub>O than in alcohol Not decomp by ether

CsBr<sub>2</sub>I + Aq sat at 20° contains about 4.45% CsBr<sub>2</sub>I (Wells)

**Cæsium carbide, Cs<sub>2</sub>C<sub>2</sub>**

Decomp by cold H<sub>2</sub>O (Moissan, C R 1903, 136 1221)

**Cæsium chloride, CsCl**

Very deliquescent, sol in H<sub>2</sub>O and alcohol

Solubility of CsCl at t°

t°	Pts by wt of CsCl in 100 pts solution
0	3
10	61.9
20	63.5
30	64.9
40	66.3
50	67.4

(Hinrichsen, Z phys Ch 1904, 50 99)

Solubility of CsCl at t°

t	% CsCl	t	% CsCl
0	61.7	60	69.7
10	63.6	70	70
20	65.1	80	71.4
30	66.4	90	72.2
40	67.5	100	73.0
50	68.0	119.4	74.4

(Berkeley, Trans Roy Soc 1904, 203 A 208)

A normal solution of CsCl has sp gr at 25° = 1.1076 (Wagner, Z phys Ch 1890, 5 36)

Sp gr at 20°/4° of a normal solution of CsCl = 1.125815 (Haugh, J Am Chem Soc 1912, 34 1151)

Sp gr of CsCl+Aq			
G equiv CsCl per l at 18°	Sp gr at 6°/8°	Sp gr at 18°/18°	Sp gr at 30°/30°
0 504	1 06556	1 06483	1 06452

(Foote and Haigh, J Am Ch Soc 1911, 461)

Insol in methyl acetate (Naumann, 1909, 42 3790)

Solubility in glycol at ord temp = 10 - 10.8% (de Coninck, Belg Acad Bull 19 359)

Insol in anhydrous pyridine and in 9% pyridine+Aq. Sol in 95% pyridine+ and in 93% pyridine+Aq (Kahlenberg, Am Chem Soc 1908, 30 1107)

Caesium chromium chloride, 2CsCl, CrCl<sub>3</sub> + H<sub>2</sub>O

Stable in the air. Sol in H<sub>2</sub>O (Wells, anorg 1895, 10 182)

2CsCl, CrCl<sub>3</sub>+4H<sub>2</sub>O, hygroscopic, very l in H<sub>2</sub>O (Wells, l c)

Caesium tri-aquo chromium chloride, CrCl<sub>3</sub>(OH<sub>2</sub>)<sub>4</sub>Cl, 2CsCl

Ppt (Werner, B 1901, 34 1602)

Caesium cobalt chloride, CsCoCl<sub>4</sub>+2H<sub>2</sub>O

Decomp by H<sub>2</sub>O and alcohol (Cunphy Z anorg 1894, 8 126)

Cs<sub>2</sub>CoCl<sub>7</sub> Decomp by H<sub>2</sub>O and by alcohol (Cunphy Z anorg 1894 8 126)

Cs<sub>2</sub>CoCl<sub>7</sub> Decomp by H<sub>2</sub>O and by alcohol (Cunphy Z anorg 1894 8 126)

Caesium cuprous chloride, Cs<sub>2</sub>Cl, CuCl

Decomp by H<sub>2</sub>O into CuCl, CsCl (Wells, Z anorg 5 306)

3CsCl, CuCl (Wells)

6CsCl, CuCl (Wells)

Caesium cupric chloride, 2CsCl, CuCl<sub>2</sub>

Easily sol in H<sub>2</sub>O and dil HCl + 4, insol in conc HCl+Aq (Godeffroy, 3 8 9)

Sol in small amount  $\text{H}_2\text{O}$  without decomp (Wells and Dupee, Z anorg 5 300)  
 $+2\text{H}_2\text{O}$  Efflorescent (W and D)  
 $3\text{CsCl}, 2\text{CuCl}_2 + 2\text{H}_2\text{O}$   
 $\text{CsCl}, \text{CuCl}_2$  Sol in  $\text{H}_2\text{O}$  without decomp (W and D)

### Cæsium gold chloride

See Chloraurate, cæsium

### Cæsium iridium tetrachloride

See Chloriridate, cæsium

### Cæsium iron (ferric) chloride, $\text{CsFeCl}_4 + \frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  Decomp in the air (Walden, Z anorg 1894, 7 332)  
 $\text{Cs}_2\text{FeCl}_5 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Walden)  
 $\text{Cs}_3\text{FeCl}_6 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Walden)

### Cæsium lanthanum chloride, $\text{Cs}_3\text{LaCl}_6 + 4\text{H}_2\text{O}$

Very hygroscopic Easily sol in  $\text{H}_2\text{O}$  (R J Meyer, Z anorg 1914, 86 273)

### Cæsium lead chloride, $\text{CsCl}, 2\text{PbCl}_2$

Nearly stable in aqueous solution (Campbell, Sill Am J 145 126)  
 $\text{CsCl}, \text{PbCl}_2$  Decomp by  $\text{H}_2\text{O}$  (Campbell)  
 $4\text{CsCl}, \text{PbCl}_2$  As above (Campbell)

### Cæsium lead tetrachloride

See Chloroplumbate, cæsium

### Cæsium magnesium chloride, $\text{CsCl}, \text{MgCl}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wells and Campbell, Z anorg 5 275)

### Cæsium manganous chloride, $\text{CsCl}, \text{MnCl}_2 + 2\text{H}_2\text{O}$

Not deliquescent, sol in  $\text{H}_2\text{O}$  (Saunders, Am Ch J 14 143)  
 $2\text{CsCl}, \text{MnCl}_2$  (Godffroy)  
 $+ 2\frac{1}{2}\text{H}_2\text{O}$  (Godffroy)  
 $+ 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Conc  $\text{HCl} + \text{Aq}$  precipitates anhydrous salt from aqueous solution (Godffroy, B 8 9)  
 The only salt which exists contains  $2\text{H}_2\text{O}$  (Saunders Am Ch J 14 143)

### Cæsium manganic chloride, $2\text{CsCl}, \text{MnCl}_3$

Easily decomp (Meyer and Best, Z anorg 1899, 22 187)

### Cæsium mercuric chloride, $\text{CsCl}, \text{HgCl}_2$

100 pts solution sat at  $17^\circ$  contain 1 406 pts  $\text{CsHgCl}_3$  Not decomp by  $\text{H}_2\text{O}$  Insol in absolute alcohol, but sol on diluting with  $\frac{1}{3}$  vol  $\text{H}_2\text{O}$  (Wells, Sill Am J 144 221)  
 $2\text{CsCl}, \text{HgCl}_2$  Easily sol in  $\text{H}_2\text{O}$  and dil  $\text{HCl} + \text{Aq}$ , insol in conc  $\text{HCl} + \text{Aq}$  (Godffroy)

$3\text{CsCl}, \text{HgCl}_2$  Decomp by  $\text{H}_2\text{O}$ , on re-crystallizing from  $\text{H}_2\text{O}$ ,  $\text{CsCl}, \text{HgCl}_2$  is finally formed (Wells, Sill Am J 144 221)

$\text{CsCl}, 5\text{HgCl}_2$  Decomp by  $\text{H}_2\text{O}$  (Wells)  
 Solubility determinations show that the only double salts of  $\text{CsCl}$  and  $\text{HgCl}_2$  which exist at  $25^\circ$  are  $\text{Cs}_3\text{HgCl}_5$ ,  $\text{Cs}_2\text{HgCl}_4$ ,  $\text{CsHgCl}_3$ ,  $\text{CsHg}_2\text{Cl}_5$ ,  $\text{CsHg}_3\text{Cl}_{11}$  (Foote, Am Ch J 1903, 30 340)

### Cæsium molybdenum chloride, $\text{Cs}_2\text{MoCl}_5 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  Nearly insol in alcohol and ether (Chilesotti, C C 1903, II 652)

### Cæsium molybdenyl chloride, $\text{CsCl}, \text{MoO}_2\text{Cl}_2 + \text{H}_2\text{O}$

Hygroscopic Decomp by  $\text{H}_2\text{O}$  (Weinland and Knoll, Z anorg 1905, 44 93)  
 $2\text{CsCl}, \text{MoO}_2\text{Cl}_2$  Hygroscopic Decomp by  $\text{H}_2\text{O}$  (Weinland and Knoll, Z anorg 1905, 44 92)  
 $2\text{CsCl}, 6\text{MoO}_2\text{Cl}_2 + 22\text{H}_2\text{O}$  Very hygroscopic Decomp by  $\text{H}_2\text{O}$  (Weinland and Knoll, Z anorg 1905, 44 94)  
 $2\text{CsCl}, \text{MoOCl}_3$  Only sl sol in  $\text{H}_2\text{O}$  (Nordenskiöld, B 1901, 34 1573)

### Cæsium neodymium chloride, $\text{Cs}_3\text{NdCl}_6 + 5\text{H}_2\text{O}$

Very hygroscopic Easily sol in  $\text{H}_2\text{O}$  (R J Meyer, Z anorg 1914, 86 273)

### Cæsium nickel chloride, $2\text{CsCl}, \text{NiCl}_2$

As the corresponding Cu salt  
 $\text{CsNiCl}_2$  Decomp by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J Sci 1894, (3) 48 418)

### Cæsium palladium dichloride

See Chloropalladate, cæsium

### Cæsium palladium tetrachloride

See Chloropalladate, cæsium

### Cæsium praseodymium chloride, $\text{Cs}_3\text{PrCl}_6 + 5\text{H}_2\text{O}$

Very hygroscopic Easily sol in  $\text{H}_2\text{O}$  (R J Meyer, Z anorg 1914, 86 273)

### Cæsium rhodium chloride

See Chlororhodite, cæsium

### Cæsium ruthenium chloride

See Chlororuthenite, cæsium and chlororuthenate, cæsium

### Cæsium oxyruthenium chloride, $\text{Cs}_2\text{RuO}_2\text{Cl}_4$

Ppt, decomp by  $\text{H}_2\text{O}$ , sol in cold  $\text{HCl}$  (Howe, J Am Chem Soc 1901, 23 779)

### Cæsium samarium chloride, $\text{Cs}_3\text{SmCl}_6 + 5\text{H}_2\text{O}$

Very hygroscopic Easily sol in  $\text{H}_2\text{O}$  (R J Meyer, Z anorg 1914, 86 273)

**Cæsium silver chloride,  $2\text{CsCl}$ ,  $\text{AgCl}$** 

Easily decomp by  $\text{H}_2\text{O}$  (Wells and Wheeler, *Sill Am J* **144** 155)

**Cæsium tellurium chloride**

See Chlorotellurate, cæsium

**Cæsium thallic chloride,  $2\text{CsCl}$ ,  $\text{TlCl}_3$** 

By recryst from  $\text{H}_2\text{O}$  forms  $3\text{CsCl}$ ,  $2\text{TlCl}_3$  (Pratt, *Am J Sci* 1895, (3) **49** 398)

$+\text{H}_2\text{O}$  Readily sol in hot  $\text{H}_2\text{O}$  but  $3\text{CsCl}$ ,  $2\text{TlCl}_3$  cryst from the solution (Pratt, *Am J Sci* 1895, (3) **49** 399)

$3\text{CsCl}$ ,  $2\text{TlCl}_3$  Can be recryst from  $\text{H}_2\text{O}$  without change (Pratt, *Am J Sci* 1895, (3) **49** 401)

$3\text{CsCl}$ ,  $\text{TlCl}_3 + 2\text{H}_2\text{O}$  Sol in 36.4 pts  $\text{H}_2\text{O}$  at  $17^\circ$  and 3 pts at  $100^\circ$  (Godeffroy, *Zeitsch d allgem osterri Apothekerv* **1880** No 9)

**Cæsium tin (stannic) chloride**

See Chlorostannate, cæsium

**Cæsium titanium chloride,  $\text{TiCl}_3$ ,  $2\text{CsCl} + \text{H}_2\text{O}$** 

Difficultly sol in  $\text{H}_2\text{O}$  (Stahler, *B* 1904,

**ungsten chloride,  $\text{Cs}_3\text{W}_2\text{Cl}_9$** 

is insol in cold  $\text{H}_2\text{O}$

sol in a hot mixture of equal pts  $\text{H}_2\text{O}$  and conc  $\text{HCl}$

Nearly insol in conc  $\text{HCl}$

Sol in very dil  $\text{NaOH} + \text{Aq}$

Nearly insol in most organic solvents (Olsson, *B* 1913, **46** 574)

**Cæsium uranous chloride,  $\text{Cs}_2\text{UCl}_6$** 

As K salt (Aloy, *Bull Soc* 1899, (3) **21** 264)

**Cæsium uranyl chloride,  $2\text{CsCl}$ ,  $(\text{UO})\text{Cl}$** 

Sol in  $\text{H}_2\text{O}$  (Wells, *Z anorg* 1895, **10** 183)

100 pts of the solution contain at  $29.75^\circ$ , 56.07 pts  $\text{UO}_2\text{Cl}_2$ ,  $2\text{CsCl}$  (Rimbach, *B* 1904, **37** 468)

Pptd from aq solution by gaseous  $\text{HCl}$  (Wells, *Am J Sci* 1894, (3) **50** 251)

**Cæsium vanadium chloride,  $\text{Cs}_2\text{VdCl}_5 + \text{H}_2\text{O}$** 

Difficultly sol in  $\text{H}_2\text{O}$  and alcohol (Stahler, *B* 1904, **37** 4412)

**Cæsium zinc chloride,  $3\text{CsCl}$ ,  $\text{ZnCl}_2$** 

Sol in  $\text{H}_2\text{O}$  (Wells and Campbell, *Z anorg* **5** 275)

$2\text{CsCl}$ ,  $\text{ZnCl}_2$  Easily sol in  $\text{H}_2\text{O}$  and dil  $\text{HCl} + \text{Aq}$  Insol in conc  $\text{HCl} + \text{Aq}$  (Godeffroy)

**Cæsium chloride chromic oxychloride,  $2\text{CsCl}$ ,  $\text{CrOCl}_3$** 

Decomp in the air

Sol in conc  $\text{HCl}$  without decomp (Weinland, *B* 1906, **39** 4045)

**Cæsium chloride columbium oxychloride  $2\text{CsCl}$ ,  $\text{CbOCl}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Weinland, *B* 1906 **39** 3057)

**Cæsium chloroiodide,  $\text{CsCl}_2\text{I}$** 

Properties as  $\text{CsBrClI}$  (Wells)

$\text{CsCl}_4\text{I}$  Sol in  $\text{H}_2\text{O}$ , from which it can be recrystallized without decomp (Well and Wheeler)

**Cæsium mercuric chloroiodide,  $\text{Cs}_2\text{HgCl}_2\text{I}_2$** 

Decomp instantly by  $\text{H}_2\text{O}$  to  $\text{HgI}_2$  (Wells)

**Cæsium fluoride,  $\text{CsF}$** 

Ppt (Chabrie, *C R* 1901, **132** 680)

$+1\frac{1}{2}\text{H}_2\text{O}$  100 g  $\text{H}_2\text{O}$  dissolve 366.5 g  $\text{CsF}$  at  $15^\circ$  (de Forcrand, *C R* 1911, **152** 1210)

**Cæsium hydrogen fluoride,  $\text{CsHF}_6$** 

Ppt (Chabrie, *C R* 1901, **132** 680)

**Cæsium tantalum fluoride**

See Fluotantalate, cæsium

**Cæsium tellurium fluoride,  $\text{CsF}$ ,  $1\text{eF}_4$** 

Decomp by  $\text{H}_2\text{O}$  (Wells, *Am J Sci* 1901 (4) **12** 190)

**Cæsium titanium fluoride**

See Fluotitanate, cæsium

**Cæsium zirconium fluoride**

See Fluozirconate, cæsium

**Cæsium hydride,  $\text{CsH}$** 

Decomp by  $\text{H}_2\text{O}$  with evolution of  $\text{H}_2$  (Moissan, *C R* 1903, **136** 589)

**Cæsium hydroxide,  $\text{CsOH}$** 

Very deliquescent and sol in  $\text{H}_2\text{O}$  So in alcohol

79.41%  $\text{CsOH}$  is contained in sat aq solution at  $15^\circ$  (de Forcrand, *C R* 1909 **14** 1344)

75.08%  $\text{CsOH}$  is contained in sat aq solution at  $30^\circ$  (Schreinemakers, *C C* **1909**, **11**)

**Cæsium iodide,  $\text{CsI}$** 

Sol in  $\text{H}_2\text{O}$

100 pts  $\text{H}_2\text{O}$  dissolve 44 pts  $\text{CsI}$  at 0 66.3 pts at  $14.5^\circ$ , 160 pts at  $61^\circ$

Sp gr of  $\text{CsI} + \text{Aq}$  sat at  $14^\circ = 1.39$  (Betekoff, *Bull Soc Pétrobr* (4) **2** 197)

**Cæsium periodide**

Solubility determinations show that  $\text{CsI}_3$  and  $\text{CsI}_5$  are the only periodides of cæsium existing between  $-4^\circ$  and  $+73^\circ$  (Foote, Am Ch J 1903, 29 203)

**Cæsium triiodide,  $\text{CsI}_3$** 

1 ccm sat  $\text{CsI} + \text{Aq}$  dissolves 0.0097 g  $\text{CsI}_3$ , and sp gr of solution is 1.154. Only sl decomp by solution in  $\text{H}_2\text{O}$ . Much more sol in alcohol than in  $\text{H}_2\text{O}$ . Not immediately decomp by ether (Wells, Sill Am J 143 17)

**Cæsium pentaoidide,  $\text{CsI}_5$** **Cæsium cobalt iodide,  $\text{Cs}_2\text{CoI}_4$** 

Decomp by  $\text{H}_2\text{O}$  (Campbell, Z anorg 1894, 8 12)

Deliquescent, decomp by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J Sci 1894, (3) 43 418)

**Cæsium lead iodide,  $\text{CsPbI}_2$** 

Sl sol in hot  $\text{CsI} + \text{Aq}$  (Wheeler, Sill Am J 145 129)

**Cæsium mercuric iodide,  $\text{CsI}, 2\text{HgI}_2$** 

Decomp by  $\text{H}_2\text{O}$  finally into  $\text{HgI}_2$  (Wells, Sill Am J 144 221)

$2\text{CsI}, 3\text{HgI}$  Decomp by  $\text{H}_2\text{O}$  finally into  $\text{HgI}$

$\text{CsI}, \text{HgI}_2$  As above

$2\text{CsI}, \text{HgI}$  Decomp by  $\text{H}_2\text{O}$  insol in alcohol

$3\text{CsI}, \text{HgI}_2$  As above

**Cæsium silver iodide,  $\text{CsI}, \text{AgI}$** 

(Penfield, Z anorg 1 100)

$\text{CsI}, 2\text{AgI}$  Moist sol in hot th un in cold acetone (Mush, Chem Soc 1913, 103 782)

**Cæsium tellurium iodide**

See Iodotellurate, cæsium

**Cæsium thallic iodide,  $\text{CsI}, \text{HI}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Pratt, Am J Sci 1895, (3) 49 403)

**Cæsium zinc iodide,  $3\text{CsI}, \text{ZnI}_2$** 

Sol in  $\text{H}_2\text{O}$  (Wells and Campbell, Z anorg 5 275)

$2\text{CsI}, \text{ZnI}_2$  As above

**Cæsium oxide,  $\text{Cs}_2\text{O}$** 

Absorbs  $\text{H}_2\text{O}$  and  $\text{CO}_2$  from the air. Decomp by  $\text{H}_2\text{O}$  and by liquid  $\text{NH}_3$  (Rengade, C R 1906, 143 593)

**Cæsium dioxide,  $\text{Cs}_2\text{O}_2$** 

Decomp by  $\text{H}_2\text{O}$  (Rengade, C R 1905, 140 1537)

**Cæsium trioxide,  $\text{Cs}_2\text{O}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Rengade, C R 1905, 140 1537)

**Cæsium tetroxide,  $\text{Cs}_2\text{O}_4$** 

Decomp by  $\text{H}_2\text{O}$  (Rengade, C R 1905, 140 1538)

**Cæsium sulphide,  $\text{Cs}_2\text{S} + 4\text{H}_2\text{O}$** 

Deliquescent, very sol in  $\text{H}_2\text{O}$  (Biltz, Z anorg 1906, 48 300)

**Cæsium disulphide,  $\text{Cs}_2\text{S}_2$** 

Anhydrous Sol in  $\text{H}_2\text{O}$  Hydrosopic (Biltz, Z anorg 1906, 50 72)

$+ \text{H}_2\text{O}$  From  $\text{Cs}_2\text{S}_2 + \text{Aq}$  Hydrosopic (Biltz, Z anorg 1906, 50 72)

**Cæsium trisulphide,  $\text{Cs}_2\text{S}_3$** 

Anhydrous Sol in  $\text{H}_2\text{O}$  Not hydrosopic (Biltz, Z anorg 1906, 50 75)

$+ \text{H}_2\text{O}$  From  $\text{Cs}_2\text{S}_3 + \text{Aq}$  (Biltz, Z anorg 1906, 50 76)

**Cæsium tetrasulphide,  $\text{Cs}_2\text{S}_4$** 

Sol in  $\text{H}_2\text{O}$  Insol in abs alcohol (Biltz, Z anorg 1906, 48 305)

**Cæsium pentasulphide,  $\text{Cs}_2\text{S}_5$** 

Mpt  $2^\circ$  Not hydrosopic. Very sol in cold 70% alcohol (Biltz, B 1905, 38 129)

**Cæsium hydrogen sulphide,  $\text{CsHS}$** 

Deliquescent, very sol in  $\text{H}_2\text{O}$  (Biltz, Z anorg 1906, 48 300)

**Cæsium copper tetrasulphide,  $\text{CsCuS}_4$** 

Sl sol in cold  $\text{H}_2\text{O}$

Decomp by conc and dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$

Sl sol in alcohol (Biltz, B 1907, 40 978)

**Calcium,  $\text{Ca}$** 

Decomp  $\text{H}_2\text{O}$  violently. Slowly attacked by cold  $\text{H}_2\text{SO}_4$ . Dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  or  $\text{HCl} + \text{Aq}$  attack violently and dissolve. Dil  $\text{HNO}_3 + \text{Aq}$  oxidizes, but fuming  $\text{HNO}_3$  scarcely attacks even on boiling (Bunsen and Matthiessen). Not attacked by anhydrous alcohol (Fies-Bodart and Jobin, A ch (3) 54 364)

Pure  $\text{Ca}$  is only very slowly decomp by  $\text{H}_2\text{O}$  at ordinary temp, sol in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  (Moissan, C R 1898, 129 589)

Insol in liquid  $\text{NH}_3$  (Gron, Am Ch J 1898, 20 527)

1 ccm conc acid dissolves 0.0334 g  $\text{Ca}$  in 6 days (Gates, J phys Chem 1911, 15 143)

**Calcium amalgam,  $\text{Ca}, \text{Hg}_4$** 

Decomp  $\text{H}_2\text{O}$  readily (Bercl, C R 1898, 127 619)

$\text{CaHg}_5$  Rapidly decomp in moist air (Schurger, Z anorg 1900, 25 425)

**Calcium amide,  $\text{Ca}(\text{NH}_2)_2$** 

(Moissan, A ch 1899, (7) 18 326)

**Calcium ammonia,  $\text{Ca}, 4\text{NH}_3$** Decomp at ordinary temp, takes fire in contact with the air, sl sol in liquid  $\text{NH}_3$  (Moissan, C R 1898, 127 691) $\text{Ca}, 6\text{NH}_3$  (Kraus, J Am Chem Soc 1908, 30 665)**Calcium arsenide,  $\text{Ca}_3\text{As}_2$** Decomp by cold  $\text{H}_2\text{O}$ , insol in cold fuming  $\text{HNO}_3$ , very sol in hot  $\text{HNO}_3$  (Lebeau, C R 1899, 128 98)**Calcium azomide,  $\text{Ca}(\text{N}_3)_2$** 

Hydroscopic, explosive

38 1 pts sol in 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$   
45 0 " " " 100 " " 15 2  
0 211 " " " 100 " abs alcohol " 16Sol in  $\text{H}_2\text{O}$ , decomp when heated and on standing in the air (Dennis, Z anorg 1898, 17 21)

Insol in pure ether (Curtius, J pr 1898, (2) 58 286)

**Calcium boride,  $\text{CaB}_2$** Not decomp by  $\text{H}_2\text{O}$  at  $250^\circ$ , sol in fused oxidizing agentsInsol in aq acids, sl sol in conc  $\text{H}_2\text{SO}_4$ , sol in dil or conc  $\text{HNO}_3$  (Moissan, C R 1897, 125 631-32)**Calcium bromide,  $\text{CaBr}$** Very deliquescent 100 pts  $\text{H}_2\text{O}$  dissolve—

If solubility  $S = \text{pts anhydrous } \text{CaCl}_2$  in 100 pts solution,  $S = 32 + 0.2148t$  from  $-18^\circ$  to  $+6^\circ$ ,  $S = 54.5 + 0.0755t$  from  $50^\circ$  to  $120^\circ$  (Étard, C R 98 1432)

According to Bakhuis Roozeboom, the solubility of  $\text{CaCl}_2$  varies according to the hydrate employed, and the following data were obtained as the result of very exact experiments

Solubility of  $\text{CaCl}_2 + 6\text{H}_2\text{O}$  in 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$ 

$t^\circ$	Pts $\text{CaCl}_2$	$t^\circ$	Pts $\text{CaCl}_2$	$t^\circ$	Pts $\text{CaCl}_2$
20 4	75 1	28 0	88 8	29 5	96 07
25 05	81 67	28 9	92 05	30 2	102 7

There are two modifications of  $\text{CaCl}_2 + 4\text{H}_2\text{O}$ ,  $\alpha$  and  $\beta$

Solubility of  $\text{CaCl}_2 + 4\text{H}_2\text{O}\beta$  in 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$ 

$t^\circ$	Pts $\text{CaCl}_2$	$t^\circ$	Pts $\text{CaCl}_2$
18 4	103 3	35 0	122 74
25 0	108 8	38 4	127 50
30 0	114 1		

Solubility of  $\text{CaCl}_2 + 4\text{H}_2\text{O}\alpha$  in 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$ 

$t^\circ$	Pts $\text{CaCl}_2$	$t^\circ$	Pts $\text{CaCl}_2$

Solubility of  $\text{CaCl}_2$  in ethyl alcohol

$\text{CaCl}_2$  forms with ethyl alcohol a complex  $\text{CaCl}_2 \cdot 3\text{C}_2\text{H}_5\text{OH}$

Solubility of  $\text{CaCl}_2 \cdot 3\text{C}_2\text{H}_5\text{OH}$  in  $\text{C}_2\text{H}_5\text{OH}$  at  $t^\circ$

$t^\circ$	% by weight of $\text{CaCl}_2 \cdot 3\text{C}_2\text{H}_5\text{OH}$	$t$	%
0	34 8	80	56 5
20	46 0	85	59 2
40	58 7	90	91 9
60	73 0	95	96 2
70	80 8	97 mpt	100

(Menschutkin, Z anorg 1907, 52 21)

Sp gr at  $16^\circ/4^\circ$  of  $\text{CaCl}_2$  + alcohol containing 5 668%  $\text{CaCl}_2 = 0 836 36$  (Schonrod Z phys Ch 1893, 11 768)

B-pt of an alcoholic solution of  $\text{CaCl}_2$

% $\text{CaCl}_2$	B pt
2 4	$78 43 + 0 70$
5 39	$78 43 + 2 11$
8 01	$78 43 + 4 18$
9 93	$78 43 + 5 55$
15 94	$78 43 + 11 71$

(Skinner, Chem Soc 61 340)

Sol sol in propyl alcohol (Berthelot)

100 g propyl alcohol dissolve 10 75 g  $\text{CaCl}_2$  (Schlamp Z phys Ch 1894, 14, 276)

Sol sol in amyl alcohol (Bous)

Pptd from alcoholic solution by ether (Dobbiner)

Sol in wood-spirit, sol in lignone (Liebig),  
insol in lignone (Gmelin)

Insol in acetone, sol in butyl alcohol  
(Wurtz)

Very sl sol in acetone (Krug and  
M'Elroy, J Anal Ch 6 184)

Solubility in acetone + Aq at 20°

CaCl<sub>2</sub> will salt out acetone from aqueous  
solution. The table shows the composition  
of the solutions at the points at  
which inhomogeneous solutions of CaCl<sub>2</sub>,  
acetone and H<sub>2</sub>O just become homogen-  
eous at 20° 100 g of the solution contain

g CaCl <sub>2</sub>	g H <sub>2</sub> O	g acetone

0 15	9 05	90 81

(Frankforter, J Am Chem Soc 1914, 36  
1125)

Sol in many compound ethers, as ethyl  
acetate (Liebig), ethyl lactate (Strecker)

Sol in considerable quantity in amyl sul-  
phocyanide (Medlock, Chem Soc 1 374)

Sol in valyl (Kolbe)

Very sol in conc HC<sub>2</sub>H<sub>3</sub>O (Liebig)

Solubility of CaCl in acetic acid

CaCl<sub>2</sub> forms with acetic acid a complex,  
CaCl<sub>2</sub>, 4CH<sub>3</sub>COOH

Solubility of CaCl<sub>2</sub>, 4CH<sub>3</sub>COOH in  
CH<sub>3</sub>COOH at t°

(Menschutkin, Z anorg 1907, 54 95)

Insol in benzomtrile (Naumann, B 1914,  
47 1370)

Insol in ethyl acetate (Naumann, B  
1910, 43 314)

Sl sol in anhydrous pyridine

Sol in 97%, 95% and 93% pyridine + Aq  
(Kahlenberg, J Am Chem Soc 1908, 30  
1107)

100 g sat solution of CaCl<sub>2</sub> in sat sugar +  
Aq at 31 25° contain 42 84 g sugar + 25 25 g  
CaCl<sub>2</sub>, or 100 g H<sub>2</sub>O dissolve 135 1 g sugar  
+ 79 9 g CaCl<sub>2</sub> at 31 25° (Kohler, Z Ver  
Zuckerind, 1907, 47 447)

+H<sub>2</sub>O (Bakhuus Roozeboom) See above

+2H O (Bakhuus Roozeboom) See above

+4H O Two modifications (Bakhuus  
Roozeboom) See above

α and β modifications (α = stable form)

(Kuznetsov, C A 1911, 842)

+6H<sub>2</sub>O Very deliquescent Sol in H O  
with absorption of much heat

250 pts CaCl<sub>2</sub> + 6H<sub>2</sub>O with 100 pts H<sub>2</sub>O  
at 10 8° lower the temp 23 2° (Rudorff, B  
2 68)

Melts in crystal H O at 28° (Tilden, Chem  
Soc 45 409), at 30 2° (Bakhuus Roozeboom)

Sat solution in H<sub>2</sub>O contains at

-22°	-17°	-5°	-5°	+4°

(Bodtker, Z phys Ch 1897, 22 510)

**Calcium hydroxylamine chloride**,  $\text{CaCl}_2$ ,  $3\text{NH}_2\text{OH}$ ,  $\text{HCl}$

(Antonow, J Russ Phys Chem Soc 1905, 37 479)

**Calcium iodine trichloride**,  $2\text{ICl}_3$ ,  $\text{CaCl}_2 + 8\text{H}_2\text{O}$

Hydroscopic (Weinland, Z anorg 1902, 30 142)

**Calcium mercuric chloride**,  $\text{CaCl}_2$ ,  $5\text{HgCl} + 8\text{H}_2\text{O}$

Decomp by cold  $\text{H}_2\text{O}$ , which dissolves out  $\text{CaCl}_2$ , but all dissolves on heating (v Bonsdorff, 1829)

$\text{CaCl}_2$ ,  $2\text{HgCl}_2 + 6\text{H}_2\text{O}$  Deliquescent  
Very sol in  $\text{H}_2\text{O}$  (v Bonsdorff)

$\text{CaCl}_2$ ,  $6\text{HgCl}_2 + 6\text{H}_2\text{O}$  Very deliquescent  
Decomp by  $\text{H}_2\text{O}$  (Stromholm, J pr 1902, (2) 66 521)

**Calcium lead chloride, basic**

See Calcium lead oxychloride

**Calcium magnesium chloride**,  $\text{CaCl}_2$ ,  $2\text{MgCl} + 12\text{H}_2\text{O}$

Min *Pachhydrite* Deliquescent  
100 pts  $\text{H}_2\text{O}$  dissolve 160 3 pts at  $15-75^\circ$   
By dissolving 20 pts in 80 pts  $\text{H}_2\text{O}$  the temp is raised  $7-75^\circ$  (Bischof)

**Calcium mercuric chloride, basic**,  $\text{CaCl}_2$ ,  $2\text{HgO} + 4\text{H}_2\text{O}$

See Calcium mercuric oxychloride

**Calcium thallic chloride**,  $2\text{HCl}_3$ ,  $\text{CaCl}_2 + 6\text{H}_2\text{O}$

Can be cryst from  $\text{H}_2\text{O}$  (Gewecke A 1909, 366 222)

**Calcium tin (stannic) chloride**

See Chlorostannate, calcium

**Calcium uranium chloride**,  $\text{CaCl}_2$ ,  $\text{UCl}_4$

Decomp by  $\text{H}_2\text{O}$  (Aloy, Bull Soc 1899, (3) 21 265)

**Calcium zinc chloride**

$\text{CaZnCl}_4 + 5\frac{1}{2}\text{H}_2\text{O}$ , and  $\text{Ca}_2\text{ZnCl}_6 + 6\text{H}_2\text{O}$   
Very hygroscopic (Ephraim, Z anorg 1910 67 379)

**Calcium chloride ammonia**,  $\text{CaCl}_2$ ,  $8\text{NH}_3$

Sol in  $\text{H}_2\text{O}$  with decomp (Faraday)

**Calcium chloride hydrazine**,  $\text{CaCl}_2$ ,  $2\text{N}_2\text{H}_4$ (?)

Ppt (Franzen, Z anorg 1908, 60 288)

**Calcium chloride hydroxylamine**,  $\text{CaCl}_2$ ,  $\text{NH}_2\text{OH} + 5\text{H}_2\text{O}$

Not hygroscopic (Antonow, J Russ Phys Chem Soc 1905, 37 479)

$\text{CaCl}_2$ ,  $2\text{NH}_2\text{OH}$

+  $\text{H}_2\text{O}$  Aqueous solution sat at  $20^\circ$  contains 56 6 pts salt

+  $2\text{H}_2\text{O}$  (Antonow, l c)

$2\text{CaCl}_2$ ,  $3\text{NH}_2\text{OH} + 6\text{H}_2\text{O}$  (Antonow, l c)

$2\text{CaCl}_2$ ,  $5\text{NH}_2\text{OH} + 4\text{H}_2\text{O}$  (Antonow, l c)

**Calcium chloride lead oxide**,  $\text{CaCl}_2$ ,  $3\text{PbO} + 3\text{H}_2\text{O}$

See Calcium lead oxychloride

**Calcium chloroferrite**,  $\text{CaO}$ ,  $\text{CaCl}_2$ ,  $\text{Fe}_2\text{O}_3$

Insol in  $\text{H}_2\text{O}$  (le Chatelier, C R 99 276)

**Calcium chlorofluoride**,  $\text{CaF}_2$ ,  $\text{CaCl}_2$

Decomp by  $\text{H}_2\text{O}$ , by very dil  $\text{HCl}$ ,  $\text{HNO}_3$  or acetic acid, by hot dil or conc  $\text{H}_2\text{SO}_4$   
Sol in conc  $\text{HCl}$  or  $\text{HNO}_3$  Insol in, and no decomp by cold or boiling alcohol (Defregg A ch 1904, (8) 1 355)

**Calcium cyanamide, basic**,  $\text{CN}(\text{COH})$ ,  $6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Meyer J pr 1878, (2) 1 42)

**Calcium cyanamide**,  $\text{CaCN}_2$

Decomp by  $\text{H}_2\text{O}$  (Meyer, J pr 1878, (2) 1 42)

**Calcium subfluoride**,  $\text{CaF}$

Decomp by  $\text{H}_2\text{O}$

Sol in hot dil  $\text{HCl}$  and somewhat sol in dil acetic acid

Somewhat sol in boiling absolute alcohol (Wohler, Z anorg 1909, 61 51)

**Calcium fluoride**,  $\text{CaF}_2$

Sol in 26,923 pts  $\text{H}_2\text{O}$  at  $15-5^\circ$  (Wilse, Ch Gaz 1850 366)

1 l  $\text{H}_2\text{O}$  dissolves 16 mg  $\text{CaF}_2$  at  $1^\circ$  (Kohlrausch, Z phys Ch 1904, 50 556)

16 3 mg in 1 l of sat solution at  $1^\circ$  (Kohlrausch, Z phys Ch 1908, 64 168)

When pptd not completely insol in  $H_2O$ , scarcely sol in dil, more sol in conc  $HCl + Aq$ , decomp by conc  $H_2SO_4$ , not decomp by dil alkaline solutions (Fresenius)

Not decomp by conc  $H_2SO_4$  below  $40^\circ$ , but forms a transparent syrup  $CaF_2$  is pptd from this solution by addition of  $H_2O$

Sol in conc  $HCl$  and  $HNO_3 + Aq$  in the same way, but the liquid is not viscid Very sl sol in  $HF$  Boiling  $HCl + Aq$  dissolves slightly Decomp by boiling  $HNO_3 + Aq$

Sol in  $NH_4$  salts +  $Aq$  (Rose)  
Partly decomp by boiling  $K_2CO_3$ , and  $Na_2CO_3 + Aq$  (Dulong, A ch 82 278)

Insol in liquid  $HF$  (Franklin, Z anorg 1905, 46 2)

Insol in acetone (Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Min *Fluorite* (*Fluorspar*) Calculated from electrical conductivity of  $CaF_2 + Aq$ , 1 l  $H_2O$  dissolves 14 mg  $CaF_2$  at  $18^\circ$  (Kohlrausch and Rose, Z phys Ch 12 241)

**Calcium hydrogen fluoride,  $CaH_2F_4 + 6H_2O$**

Decomp by boiling  $H_2O$  Sol in  $HF + Aq$  (Fremy, A ch (3) 47 35)

**Calcium tantalum fluoride**

See Fluotantalate, calcium

**Calcium stannic fluoride**

See Fluostannate, calcium

**Calcium titanium fluoride**

See Fluotitanate, calcium

**Calcium fluoiodide,  $CaI_2$**

Very deliquescent Decomp by cold  $H_2O$ , more rapidly by hot  $H_2O$ , by dil  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$  conc  $H_2SO_4$ , and by alcohol and by ether if these reagents are not absolute (De lauz, A ch 1904, (8) 1 358)

**Calcium hydride,  $CaH_2$**

Decomp by  $HCl + Aq$  (Winkler, B 24 1975 (Moldenhauer, Z anorg 1913, 82 136)

$CaH_2$  Readily decomp by  $H_2O$  and dil acids, almost insol in conc acids Insol in benzene, turpentine and alkyl haloids (Moissan, C R 1898 127 30-31)

Decomp  $H_2O$  and ether, sol in dil  $H_2SO_4$  and  $HNO_3$ , almost insol in conc  $H_2SO_4$  and  $HNO_3$  (von Lngyll, C C 1898, II 262)

Insol in  $CCl_4$ ,  $CS_2$ , alcohols and ethers No known solvent (Moissan, C C 1903, I 563)

**Calcium hydrosulphide,  $CaS_2H$**

Cryst with  $6H_2O$  Extremely sol in  $H_2O$  and alcohol  $\frac{1}{4}$  of its weight of  $H_2O$  at or-

dinary temp more than suffices to hold it in solution (Divers and Shumidzu, Chem Soc 45 271)

Sp gr of aqueous solution containing 32% anhydrous  $CaS_2H_2$  ( $64\% CaS_2H_2 + 6H_2O$ ) = 1.255, 37.5%  $CaS_2H_2$  ( $75.5\% CaS_2H_2 + 6H_2O$ ) = 1.310 (Divers and Shumidzu)

**Calcium hydroxide,  $CaO_2H_2$**

See also Calcium oxide

Sl sol in cold, and less in hot  $H_2O$

(Bassett and Laylor, Chem Soc 1914, **105**  
1926)Solubility of  $\text{CaO}$  in  $\text{KCl}$  and  $\text{NaCl} + \text{Aq}$ Curves are given which show that the solubility of lime in solutions of either  $\text{NaCl}$  or

$\text{KCl}$  is a maximum for all temps when the solution contains about 60 g of salt per l. It is a minimum at any fixed temp when the solution is sat, the solubility then being much less than in pure  $\text{H}_2\text{O}$  of the same temp. A solution of  $\text{NaCl}$  dissolves more lime at all temps and concentrations than a corresponding solution of  $\text{KCl}$ . In all cases the maximum solubility of lime occurs when the temp is lowest. With solutions of all concentrations the solubility decreases regularly as the temp increases (Cabot, J Soc Chem Ind 1897, **16** 417-419).

Solubility in  $\text{KCl} + \text{Aq}$  increases with increased quantities of  $\text{KCl}$  and then diminishes, becoming less than the solubility in  $\text{H}_2\text{O}$  alone (Kernot, Gazz ch it 1908, **38** (1) 532).

$\text{KOH}$  or  $\text{NaOH} + \text{Aq}$  containing 1 pt  $\text{KOH}$  or  $\text{NaOH}$  in 100 pts  $\text{H}_2\text{O}$  do not dissolve more than  $1/50000$  pt  $\text{CaO}_2\text{H}_2$ , but it is sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Pelouze, A ch (3) **33** 11).

KCl is a maximum for all temps when the solution contains about 60 g of salt per l. It is a minimum at any fixed temp when the solution is sat, the solubility then being much less than in pure  $\text{H}_2\text{O}$  of the same temp. A solution of NaCl dissolves more lime at all temps and concentrations than a corresponding solution of KCl. In all cases the maximum solubility of lime occurs when the temp is lowest. With solutions of all concentrations the solubility decreases regularly as the temp increases (Cabot, J Soc Chem Ind 1897, 16 417-419).

Solubility in KCl + Aq increases with increased quantities of KCl and then diminishes, becoming less than the solubility in  $\text{H}_2\text{O}$  alone (Kernot, Gazz ch it 1908, 38 (1) 532).

KOH or NaOH + Aq containing 1 pt KOH or NaOH in 100 pts  $\text{H}_2\text{O}$  do not dissolve more than  $\frac{1}{50000}$  pt  $\text{CaO}_2\text{H}_2$ , but it is sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Pelouze, A ch (3) 33 11).

2 00	0 186	8 5	91 5
1 00	0 165	14 2	85 8

(Berthelot, A ch (3) **46** 176)

1000 g  $\text{H}_2\text{O}$  dissolve 1.251 g  $\text{CaO}$ , 1000 g  $\text{H}_2\text{O} + 50$  g glycerine dissolve 1.865 g  $\text{CaO}$ , 1000 g  $\text{H}_2\text{O} + 100$  g glycerine dissolve 2.583 g  $\text{CaO}$ , 1000 g  $\text{H}_2\text{O} + 200$  g glycerine dissolve 4.040 g  $\text{CaO}$ , 1000 g  $\text{H}_2\text{O} + 400$  g glycerine dissolve 6.569 g  $\text{CaO}$  (Carles, Aich Pharm (3) **4** 558)

Insol in pure glycerine

Solubility of  $\text{CaO}_2\text{H}_2$  in glycerine + Aq at  $5^\circ$   
G = g glycerine in 100 g glycerine + A  
 $\frac{1}{2}\text{CaO}(\text{H})$  = millimols sol in 100 cc glycerine + Aq

G	$\frac{1}{2}\text{CaO}(\text{H})$	Sp gr
0	4 3	1 0003
7 15	8 13	1 0244
20 44	14 9	1 0537
31 55	22 5	1 0842
40 95	40 1	1 1137
48 7	44 0	1 1356
69 2	95 8	1 2027

(Herz and Knoch, Z anorg 1905, **46** 3)

Solubility in glycerine + Aq at  $25^\circ$ 

Solution contains			Sp g
% $\text{Ca}(\text{OH})_2$	% glycerine	% $\text{H}_2\text{O}$	
0 117	0		
0 178	3 50	96 32	1 00
0 413	15 59	80 28	
0 48	17 84	81 68	1 0
0 88	34 32	64 80	1 00
1 34	55 04	43 62	1 1

Solid phase in this system is  $\text{CaO} \cdot \text{H}_2\text{O}$ .  
(Cameron and Patten, J phys Chem 1914, **15** 71)

100 pts sugar dissolved in  $\text{H}_2\text{O}$  dissolve 50 pts  $\text{CaO}$  (Osann) 50 pts  $\text{CaO}$  (Ure) 49 6 pts  $\text{CaO}$  (Daniell) 29-30 6 pts  $\text{CaO}$  (Huntton) 23 pts  $\text{CaO}$  (Soubeiran)

Sugar solution at 100 takes up  $\frac{1}{4}$  mol  $\text{CaO}$  for each mol sugar at  $0^\circ$  if it contains not less than 25% of sugar it takes up 2 mols  $\text{CaO}$  to 1 mol sugar (Brunfauf)

Amount dissolved is proportional to the density and temperature of the solutions

Solubility of  $\text{CaO}$  in sugar + Aq

0 192	0 155	44 6	55 4
0 096	0 154	61 6	38 4
0 000	0 148		

(Berthelot, A ch (3) 46 176 )

Solutions of CaO in sugar, mannite, or glycerine afford an abundant ppt on being heated, but this redissolves on cooling (Berthelot)

Sol in sorbite + Aq (Pelouze), sl sol in quercite + Aq. Sol in monobasic C<sub>12</sub> sugar charate + Aq (Peligot) Much more sol in gelatine + Aq than in pure H<sub>2</sub>O

**Calcium hydroxyhydrosulphide, Ca(OH)SH + 3H<sub>2</sub>O**

Easily sol in H<sub>2</sub>O with almost immediate decomposition Insol in alcohol, but slowly

decomp thereby (Divers and Shimidzu, Chem Soc **45** 270)

### Calcium subiodide, $\text{CaI}$

Decomp by moisture (Wohler, Z anorg 1909, **61** 76)

### Calcium iodide, $\text{CaI}_2$

Deliquescent 100 pts  $\text{H}_2\text{O}$  dissolve—  
at 0° 20° 40° 43° 92°  
192 204 228 286 435 pts  $\text{CaI}_2$   
(Kremers, Pogg **103** 65)

Sp gr of  $\text{CaI}_2 + \text{Aq}$  at 19.5° containing  
5 10 15 20 25 30%  $\text{CaI}_2$ ,  
1.044 1.09 1.14 1.198 1.26 1.321

35 40 45 50 55 60%  $\text{CaI}_2$   
1.398 1.477 1.567 1.665 1.78 1.91  
(Kremers, calculated by Gerlach, Z anal **8** 285)

Sol in absolute alcohol (Gay-Lussac, A ch **91** 57)

Sol in acetone (Naumann, B 1904, **37** 4328, Eidmann, C C **1899**, II 1014)

Sol in ethyl acetate (Naumann, B 1910, **43** 314)

+4H<sub>2</sub>O (Kuznetzov, C A **1911** 842)

+6H<sub>2</sub>O Sat aq solution contains at  
—22° +7° 10° 19°  
61.6 65.0 65.1 66.3% salt

51° 64° 130° 248°  
69.4 75.9 81.3 87.1% salt

(Étard, A ch 1894 (7) **2** 543)

+7H<sub>2</sub>O (Kuznetzov)

### Calcium periodide, $\text{CaI}_3 + 15\text{H}_2\text{O}$

(Mosnier, A ch 1897, (7) **12** 401)

$\text{CaI}_4$  (Herz and Bulla, Z anorg 1911, **71** 255)

### Calcium mercuric iodide, $\text{CaI}_2 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$

Very deliquescent Sol in  $\text{H}_2\text{O}$ , alcohols, allyl iodide, aldehyde, acetic acid, ethyl oxalate and iniline Sl sol in nitrobenzene Completely insol in  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl iodide ethylene bromide,  $\text{C}_6\text{H}_6$ , monochlorobenzene and toluene (Duboin, C R 1906, **142** 573)

3C<sub>6</sub>H<sub>5</sub>I, 4HgI<sub>2</sub> + 24H<sub>2</sub>O Sol in H<sub>2</sub>O with pptn of red HgI

Very sol in alcohols, glycerine, ethyl acetate, methyl and isobutyl propionate, allyl iodide, aldehyde, acetone, aniline and ethyl oxalate Insol or sl sol in nitrobenzene Insol in  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , ethyl iodide, monochlorobenzene, etc (Duboin, C R 1906, **142** 397)

$\text{CaI}_2 \cdot 2\text{HgI}_2$

Decomp by  $\text{H}_2\text{O}$  (Boullay)

$\text{CaI}_2 \cdot 5\text{HgI}_2 + 8\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ ,

alcohols, glycerine, aldehyde, and acetic id, slowly by nitrobenzene and ethyl oxalate Insol in monochlorobenzene, toluene,  $\text{C}_6\text{H}_6$ , and ethylene bromide (Duboin, l c)

### Calcium silver iodide, $\text{CdI}_2 \cdot 2\text{AgI} + 6\text{H}_2\text{O}$

Immediately decomp by  $\text{H}_2\text{O}$  (Simmons, Roy Soc Proc **27** 120)

### Calcium zinc iodide, $\text{CaI}_2 \cdot \text{ZnI}_2 + 8\text{H}_2\text{O}$

Very hygroscopic (Ephraim, Z anorg 1910, **67** 384)

### Calcium iodide ammonia, $\text{CaI}_2 \cdot 6\text{NH}_3$

(Isambert, C R **66** 1259)

### Calcium nitride, $\text{Ca}_3\text{N}_2$

Sol in dil acids, insol in conc (water free) acids (Moissan, C R 1898, **127** 499)

### Calcium oxide, $\text{CaO}$

Decomp by  $\text{H}_2\text{O}$ , with evolution of much heat, to form  $\text{CaO}_2\text{H}_2$ , which see for solubility in  $\text{H}_2\text{C}$ , etc

### Calcium peroxide, $\text{CaO}_2$

Very sl sol in  $\text{H}_2\text{O}$ , easily sol in acids, and  $\text{NH}_4$  salts + Aq Insol in  $\text{NH}_4\text{OH} + \text{q}$  (Conroy, Chem Soc (2) **11**, 808)

+2H<sub>2</sub>O True composition is  $\text{CaO}_2\text{H}_2 + \text{H}_2\text{O}_2$  (de Forcrand, C R 1900, **130** 13)

+8H<sub>2</sub>O Efflorescent Difficultly sol in  $\text{H}_2\text{O}$  with gradual decomp Insol in alcohol or ether (Gay-Lussac and Thenard, A ch (2) **8** 313)

### Calcium oxybromide, $3\text{CaO} \cdot \text{CaBr}_2 + 16\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  and alcohol Very easily sol in hydracids and dil  $\text{HNO}_3$  (Fas, y, C R 1894, **119** 372)

### Calcium oxychloride, $\text{Ca}_4\text{O}_3\text{Cl} + 15\text{H}_2\text{O} = 3\text{CaO} \cdot \text{CaCl}_2 + 15\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  or alcohol (Rosen) Formula is  $\text{Ca}_2\text{HOCl} + 7\text{H}_2\text{O}$  (Grumsh, C N **30** 280)

+16H<sub>2</sub>O Decomp by H<sub>2</sub>O into  $\text{CaO}$  and  $\text{CaCl}_2$  until a maximum of 85 g  $\text{CaI}_2$  are dissolved per litre (Ditté, C R **91** 5)

4CaO,  $\text{CaCl}_2 + 14\text{H}_2\text{O}$  (Schreinemakers and Figue, Chem Weekbl 1911, **8** 685)

$\text{CaO} \cdot \text{CaCl}_2$  (Schreinemakers and Figue)

### Calcium lead oxychloride, $\text{CaCl}_2 \cdot \text{CaO} \cdot 2\text{PbO} + 4\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  with decomp (Andrić, C R **104** 359)

$\text{CaCl}_2 \cdot 3\text{PbO} + 3\text{H}_2\text{O}$  (Andrić)

### Calcium mercuric oxychloride, $\text{CaCl}_2 \cdot 2\text{HgO} + 4\text{H}_2\text{O}$

Decomp immediately by H<sub>2</sub>O (Klingner, B **16** 997)

**Calcium oxyiodide,  $3\text{CaO}, \text{CaI}_2 + 16\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$ , alcohol, and acids Sol in hydracids and in very dil  $\text{HNO}_3$  (Tassily, C R 1894, 119 372)

**Calcium oxysulphide,  $\text{Ca}_4\text{O}_3\text{S}_4 + 12\text{H}_2\text{O} = 3\text{CaO}, \text{CaS}_4 + 12\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  Not acted on by absolute alcohol (Schöne, Pogg 117 77)

According to Geuther (A 224 178) =  $\text{CaS}_3, 2\text{CaO} + 10$ , or  $11\text{H}_2\text{O}$  Sol in dil  $\text{HCl} + \text{Aq}$  with separation of S

$\text{Ca}_5\text{O}_4\text{S}_4 + 18\text{H}_2\text{O} = 4\text{CaO}, \text{CaS}_4 + 18\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ , but not acted on by absolute alcohol (Schöne, Pogg 117 82)

According to Geuther (A 224 178) =  $\text{CaS}_3, 3\text{CaO} + 14$ , or  $15\text{H}_2\text{O}$

$\text{Ca}_6\text{O}_5\text{S}_5 + 20\text{H}_2\text{O} = 5\text{CaO}, \text{CaS}_5 + 20\text{H}_2\text{O}$  (Rose, Pogg 55 433)

Sol in 400 pts cold, decomp by boiling  $\text{H}_2\text{O}$  (Buchner), sl sol in cold, much more in hot  $\text{H}_2\text{O}$ , but it is not deposited on cooling Aqueous solution sat at  $6^\circ - 7^\circ 2'$  has sp gr = 1.0105 (Herschel), sol in alcohol (Gay-Lussac), insol in alcohol (Gmelin)

**Calcium phosphide,  $\text{CaP}$** 

Deliquescent Decomp in moist air or with  $\text{H}_2\text{O}$  Not attacked by conc  $\text{HNO}_3$ , but decomp by dil  $\text{HNO}_3 + \text{Aq}$  (Thénard, A ch (3) 14 14)

$\text{Ca}_3\text{P}_2$  Crystallized

Decomp by  $\text{H}_2\text{O}$

Not attacked by conc  $\text{H}_2\text{SO}_4$  Violently attacked by dil  $\text{H}_2\text{SO}_4$

Not attacked by abs alcohol, ether, benzene or oil of turpentine (Moissan, C R 1899, 128 792)

$\text{Ca}_2\text{P}_3$  Insol in liquid  $\text{CO}_2$  (Buchner, Z phys Ch 1906, 54 674)

**Calcium selenide,  $\text{CaSe}$** 

Sl sol in  $\text{H}_2\text{O}$  Very easily decomp (Fabre, C R 102 1469)

**Calcium silicide,  $\text{CaSi}_2$** 

Slowly decomp by  $\text{H}_2\text{O}$ , sol in conc  $\text{H}_2\text{SO}_4$  and dil  $\text{HNO}_3$  with evolution of  $\text{H}_2$  With conc  $\text{HCl}$  it gives  $\text{H}_2$ , Si and silicon hydride with dil  $\text{HCl}$ ,  $\text{H}_2$  and a yellow substance Sol in alkali + Aq or  $\text{NH}_3 + \text{Aq}$  with evolution of  $\text{H}_2$  (Moissan, C R 1902, 134 505)

Two modifications

(a) Only sl sol in  $\text{HNO}_3$ , decomp  $\text{H}_2\text{O}$  to give an insol ppt on addition of  $\text{HCl}$

(b) Easily sol in  $\text{HNO}_3$  and acetic acid, decomp  $\text{HCl}$  to give a ppt which is sol in  $\text{KOH} + \text{Aq}$  (de Chalmot, Am Ch J 1896, 18, 320)

$\text{Ca}_3\text{Si}_2$  Slowly decomp by  $\text{H}_2\text{O}$ , rapidly by dil acetic acid or by  $\text{H}_2\text{SO}_3 + \text{Aq}$  without evolution of spontaneously inflammable gas (Hönigschmid, M 1909, 30 497)

Decomp by dil min acids, with evolution

of spontaneously inflammable gas (Hackspill, Bull Soc 1908, (4) 3 619)

$\text{Ca}_6\text{Si}_{10}$  Insol in all solvents Decomp by boiling  $\text{H}_2\text{O}$ , by conc  $\text{HCl}$  and by acetic acid Sol in dil alkali and alkali carbonates + Aq Hardly attacked by conc  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$  (Kolb, Z anorg 1909, 64 349)

$\text{Ca}_{11}\text{Si}_{10}$  Easily decomp by boiling with  $\text{H}_2\text{O}$  Decomp by dil acetic acid, dil or conc  $\text{HCl}$  (Kolb, Z anorg 1909, 64 349 and 356)

**Calcium siliconitride,  $\text{CaSi}_2\text{N}_3$** 

(Kolb, Z anorg 1909, 64 363)

$\text{Ca}_2\text{Si}_3\text{N}_4$  Slowly decomp by boiling with  $\text{H}_2\text{O}$ , somewhat more rapidly with dil  $\text{NaOH} + \text{Aq}$  Slowly decomp by conc  $\text{HCl}$  (Kolb, l c)

$\text{Ca}_{11}\text{Si}_{10}\text{N}_1$  Completely decomp by  $\text{HCl}$  (Kolb, l c)

**Calcium sulphide,  $\text{CaS}$** 

500 pts  $\text{H}_2\text{O}$  dissolves 1 pt  $\text{CaS}$  completely, less  $\text{H}_2\text{O}$  dissolves out  $\text{CaS}_2\text{H}_2$  and leaves  $\text{CaO}_2\text{H}_2$  Very much  $\text{H}_2\text{O}$  decomposes completely into  $\text{CaO}_2\text{H}_2$  and  $\text{H}_2\text{S}$  (Béchamp, A ch (4) 16 222)

Not decomp by  $\text{H}_2\text{O}$ , and only sl sol therein at ordinary temp (Pelouze)

After 48 hours contact with  $\text{CaS}$ , 1 l  $\text{H}_2\text{O}$  contains at

10°	18°	40°	60°	90°
0 15	0 23	0 30	0 48	0 33 g $\text{CaS}$

After boiling for 2 hours, 0.27 g  $\text{CaS}$  is dissolved, addition of  $\text{NaCl}$  diminishes solubility, but  $\text{Na}_2\text{SO}_4$  increases it Lime-water dissolves at  $14^\circ$  0.18 g  $\text{CaS}$ , the same amount which  $\text{H}_2\text{O}$  dissolves at  $60^\circ$  Milk of lime dissolves 0.55 g at  $60^\circ$   $\text{H}_2\text{O}$  containing 3 to 79 g  $\text{Na}_2\text{O}$  per litre dissolves only traces of  $\text{CaS}$  at  $10^\circ$ , but at  $40 - 60^\circ$ , or by boiling, a large amount of  $\text{Na}_2\text{S}$  is formed (Kolb, A ch (4) 7 126)

Sol in 12,500 pts  $\text{H}_2\text{O}$  at  $12.6^\circ$  (Scheurer-Kestner, Répert chim appl 1862 331)

Sat  $\text{Na}_2\text{CO}_3 + \text{Aq}$  has scarcely any action on  $\text{CaS}$ , but a dilute solution has more action (Kolb)

Sol in  $\text{H}_2\text{O}$  and sulphur, forming  $\text{CaS}_4$

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

Insol in methyl acetate (Numann B 1909, 42 3790)

Insol in ethyl acetate (Numann B 1904, 37 3601)

Insol in methylal (Fidmann, C C 1899, II 1014)

Sol in 10 pts glycerine (Cup and Grout J Pharm (3) 26 81)

Sol in sugar + Aq (Stoll, C C 1900, I 1044)

**Calcium tetrasulphide,  $\text{CaS}_4$** 

Known only in solution

**Calcium pentasulphide,  $\text{CaS}_5$** 

Sol in  $\text{H}_2\text{O}$  and alcohol (Berzelius)  
 Exists only in aqueous solution (Schone,  
 Pogg 117 73)

**Calcium hydroxyl sulphide,  $\text{Ca}(\text{OH})\text{SH} + 3\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  with immediate decomp  
 and separation of  $\text{Ca}(\text{OH})_2$  Insol in alcohol,  
 but slowly decomp thereby (Divers and  
 Shumidzu, Chem Soc 45 270)

**Calcium stannic sulphide**

See Sulphostannate, calcium

**Calomel**

See Mercurous chloride

**Carbamic acid****Ammonium carbamate acid carbonate (commercial carbonate of ammonia)**

See Carbonate carbamate, ammonium hydrogen

— (salts of hartshorn),  $2\text{NH}_4\text{HCO}_3$ ,  
 $\text{NH}_4\text{CONH}_2$

See Carbonate carbamate, ammonium hydrogen

**Carbazote silicon,  $\text{C SiN}$** 

Insol in acids, even  $\text{HF}$ , also in boiling  
 $\text{KOH} + \text{Aq}$  (Schutzenberger and Colson,  
 C R 92 1508)

**Carbon, C**

Insol in all solvents

Diamond is unacted upon by  $\text{KClO}_3 + \text{fum}$   
 $\text{HNO}_3$ , graphite forms graphitic acid by  
 $\text{KClO}_3 + \text{fum}$   $\text{HNO}_3$ , amorphous carbon is  
 sol in  $\text{KClO}_3 + \text{fum}$   $\text{HNO}_3$  (Berthelot, A  
 ch (4) 19 399)

Diamond is sol in molten iron at  $1160^\circ$   
 Amorphous carbon is insol in molten iron at  
 $1160^\circ$ , but becomes sol therein by heating to  
 $1400^\circ$  (Hempel, B 18 998)

Insol in liquid  $\text{CO}_2$  (Buchner Z phys  
 Ch 1906 54 674)

Charcoal is sol in liquid  $\text{NH}_3$  (Gore  
 Am Ch J 1898 20 830)

The quantity of carbon dissolved by iron  
 diminishes by increasing phosphorus, falling  
 by about 0.5% for each additional 2.0% of  
 phosphorus (Fettweis, Metallurg 1906,  
 3 60)

Solubility in iron is reduced by the presence  
 of tin and of sulphur (Wust, Metallurg  
 1906 3 169)

The solubility of C in iron is increased by  
 the presence of chromium 9.2% C dissolved  
 when 62% Cr is present in the mixture  
 (Gorens, Metallurg 1907, 4 18)

**Carbon boride,  $\text{CB}_2$** 

Insol in boiling  $\text{HNO}_3 + \text{Aq}$  (Joly, R  
 97 456)

**Carbon suboxide,  $\text{C}_3\text{O}_2$** 

B-pt  $+7^\circ$  at 761 mm

Sol in  $\text{H}_2\text{O}$  with formation of malonic acid  
 Slowly decomp on standing in a sealed  
 tube (Diels, B 1906, 39 696)

**Carbon monoxide, CO**

Sol in 50 vols recently boiled  $\text{H}_2\text{O}$  (Davy)

Sol in 16 vols  $\text{H}_2\text{O}$  (de Saussure)

Sol in 27 vols  $\text{H}_2\text{O}$  (Dalton)

100 vols  $\text{H}_2\text{O}$  dissolve 6.2 vols CO at  $18^\circ$  (Davy)

Solubility of CO in  $\text{H}_2\text{O}$  1 vol  $\text{H}_2\text{O}$  at  
 dissolves V vols CO reduced to  $0^\circ$  and 761 mm

$t^\circ$	V	$t^\circ$	V	$t^\circ$	V

6	0.02857	13	0.02504	20	0.2312

(Bunsen's Gasometry, pp 287, 128, 16)

Coefficient of absorption = 0.032874

0.00081632t + 0.000016421t (Bunsen and  
 Pauli, A 93 16)

Solubility of CO in  $\text{H}_2\text{O}$

$\beta$  = Vol CO absorbed by 1 vol  $\text{H}_2\text{O}$  at a  
 partial pressure of 760 mm

$\beta'$  = Vol CO (reduced to  $0^\circ$  and 760 mm)  
 absorbed by 1 vol of  $\text{H}_2\text{O}$  under a total pres-  
 sure of 760 mm

q = g CO dissolved by 100 g  $\text{H}_2\text{O}$  at a  
 total pressure of 760 mm

(Cassuto, Phys. Zeit 1904, 5 236)

Coefficient of absorption of CO in H<sub>2</sub>O at 25° equals 0.0154 (Findlay and Creighton, Biochem J 1911, 5 294)

Cuprous chloride in an hydrochloric acid or ammoniacal solution, and ammoniacal solutions of cuprous salts absorb large amounts of CO (Tchiling, C R 30 488)

Cuprous chloride dissolved in HCl + Aq absorbs 15-20 vols CO (Berthelot, A ch (3) 51 66)

Absorbed by KOH, NaOH, Ba(OH)<sub>2</sub> and Cu(OH)<sub>2</sub> + Aq more readily by ether, alcohol, and wood spirit with formation of formic acid (Berthelot, A ch (3) 61 463)

Sol in HCN (Bottinger, B 10 1122)

1 vol alcohol absorbs 0.20443 vols CO gas at all temperatures between 0° and 25° (Carius, A 94 135)

100 vol alcohol (0.84 sp gr) dissolve 14 vols CO at 18° 100 vols rectified naphtha (0.784 sp gr) 20.0 vols CO at 18° 100 vol oil of lavender (0.88 sp gr) 15.6 vol CO at 18° 100 vols olive oil (0.915 sp gr) 14.2 vol CO at 18° 100 vols sat KCl + Aq (1.165 sp gr) 2 vols CO at 18° (de Saussure 1814)

1 vol oil of turpentine absorbs 0.16-0.20 vol CO (de Saussure)

Sol in ether (Regnault)

Insol in caoutchouc

(de Saussure Gilberts Ann Phys 47 187)		

About half as sol in NaCl+Aq (15% NaCl) as in H<sub>2</sub>O

Much more sol in Na<sub>2</sub>HPO<sub>4</sub>+Aq or Na<sub>2</sub>CO<sub>3</sub>+Aq than in H<sub>2</sub>O, the quantity dissolved increasing with the amount of salt in the solution. The solubility in these solutions depends on the coefficient of solubility in H<sub>2</sub>O plus the product of a constant coefficient multiplied by the amount of salt in the solution, this constant being 0 0001 for Na<sub>2</sub>HPO<sub>4</sub>, and 0 005 for Na<sub>2</sub>CO<sub>3</sub>, Arch (3) 47 307)

Direct determinations are not accurate (I M.C.V., A Suppl 2 157)

1 mol Na<sub>2</sub>HPO<sub>4</sub> in dil Na HPO<sub>4</sub>+Aq absorbs 2 mols CO (Setschenow)

Solutions of salts of similar constitution are equivalent in regard to their power of absorption of CO, when they contain the same percentage of crystal water. Experiments were made with solutions of alum, MgSO<sub>4</sub>, 7H<sub>2</sub>O, and ZnSO<sub>4</sub>, 7H<sub>2</sub>O, containing 10% of the salts. The MgSO<sub>4</sub> solution absorbed the greatest proportional amount of CO<sub>2</sub>, and the alum the least. The further rule was deduced that with salts of similar constitution and the same amount of crystal water, the

absorptometric equivalents are identical with the chemical equivalents (Setschenow, B 6 1461)

Salts can be divided into two classes, according as CO<sub>2</sub> has chemical action on the salt or not. In the first case, i.e., when there is chemical combination or action of CO<sub>2</sub> on the salt in solution, the amount of CO<sub>2</sub> absorbed increases with increasing concentration of the solution, in the second case, however, the amount of CO<sub>2</sub> decreases with the strength of the solution. Several salts can be arranged in a series as regards their power of absorption, beginning with that which has the greatest, as follows Na<sub>2</sub>CO<sub>3</sub>, Na<sub>2</sub>B<sub>4</sub>O<sub>7</sub>, Na<sub>2</sub>HPO<sub>4</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>7</sub>, Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>, NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, MnO<sub>2</sub>, MCl, M<sub>2</sub>SO<sub>4</sub>. The division between the two classes occurs in this series at Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>.

The matter is discussed at length in the original papers (Setschenow, Mémoires Acad St Petersb 22 No 6. Also further, Setschenow, ib 34 No 3, and 35 No 7. See also Ostwald, Allgemeine Chemie, 2<sup>te</sup> Aufl vol 1, p 629)

(Setschenow, A ch 1892, (6) 25 226)

CO<sub>2</sub> is not disengaged at ordinary temp from H<sub>2</sub>O, in which  $\frac{1}{1000}$  pt of CaCO<sub>3</sub> or MgCO<sub>3</sub> is held in solution thereby. These solutions have a great power of retaining CO<sub>2</sub> even at a boiling temp or with diminished pressure, and they also absorb CO<sub>2</sub> from the air in much larger quantity than pure H<sub>2</sub>O (Bineau).

BaCO<sub>3</sub> in H<sub>2</sub>O also retains CO<sub>2</sub> even after long boiling (Storer).

CO<sub>2</sub> is also absorbed from the air by Na<sub>2</sub>CO<sub>3</sub> or K<sub>2</sub>CO<sub>3</sub> + Aq, especially if dilute.

P	S	P	S
760	0.953	1063	0.940
895	0.941	1223	0.940
983	0.940	1302	0.942

(Findlay and Creighton, Chem Soc 1910, 97 555)

Solubility of CO<sub>2</sub> in CS<sub>2</sub> increases approximately with the pressure. The absorption is greater at lower temp and less at higher temp than is required by Dalton's law (Woukoloff, C R 1889, 108 674)

Absorption of CO<sub>2</sub> by sugar + Aq

Sugar + Aq	Grams CO absorbed by 75 cc of solution at 15.5° and 720 mm
1/10-N sugar solution	0.1225
1/1-N " "	0.1089
1-N " "	0.0931

(Christoff, Z phys Ch 1905, 53 329)

Absorption of CO<sub>2</sub> in sugar + Aq at 20°

Conc of solution	Sp gr	Coefficient of absorption
1/8 mol per l	1.01518	0.846
1/4 " " "	1.03125	0.815
1/2 " " "	1.06372	0.756
1 " " "	1.12809	0.649

(Usher, Chem Soc 1910, 97 72)

*Liquid*—Not miscible with H<sub>2</sub>O, though slightly sol therein, or with fatty oils, miscible with alcohol, ether, CS<sub>2</sub>, and the essential oils (Thilorier, Mitchell)

Unacted upon by H<sub>2</sub>O, sol in alcohol, ethers, petroleum, oil of turpentine, and CS<sub>2</sub> (Mareska and Donny)

Petroleum dissolves 5 to 6 vols liquid CO<sub>2</sub> (Caillaud, C R 75 1271)

Sl sol in CS<sub>2</sub> (Caillaud)

*Solid*—When immersed in H<sub>2</sub>O, rapidly volatilizes and dissolves. With alcohol or ether it forms a semi-fluid mixture (Channing, Am J Sci (2) 5 186)

Only slightly sol in anhydrous ether, but may be mixed therewith to a paste (Thilorier)

Sol in methyl chloride below -65° at the point of sat without decomp (Villard, C R 1895, 120 1413)  
+6H<sub>2</sub>O (Villard, C R 1894, 119 59)

**Carbon selenide, C<sub>4</sub>Se**

Sol only in hot conc H<sub>2</sub>SO<sub>4</sub> (Villard, Ch Z 1906, 30 810)

C<sub>2</sub>Se Insol in H<sub>2</sub>O, CS<sub>2</sub>, and ether. Easily sol in hot conc H<sub>2</sub>SO<sub>4</sub>, sol in conc NaOH + Aq from which it is pptd by HCl (V Bartsch)

**Carbon silicide CSi**

(*Carborundum*) Not attacked by any acids, even HF, sl attacked by caustic alkalis or carbonates (Acheson, C R 1898, 179)

Not attacked by KOH + Aq (Schlenker, C R 114 1089)

**Carbon monosulphide, CS**

Insol in H<sub>2</sub>O, alcohol, oil of turpentine, or benzene, somewhat sol in CS<sub>2</sub> or ether sol in warm HNO<sub>3</sub>, sol in conc KOH Aq (Sidot, C R 81 32)

Readily absorbed by alcohol and a little (Deninger, J pr 1895, (2) 51 349)

**Carbon disulphide, CS<sub>2</sub>**

Very sl sol in H<sub>2</sub>O  
1 l H<sub>2</sub>O dissolves 2-3 g CS<sub>2</sub> (Chandrasekhar, Soc 43 562), 3.5-4.52 g (Peligot, ib 43 563)  
30 ccm CS<sub>2</sub> shaken with 8690 ccm H<sub>2</sub>O at 20-23° for 18 days decreased 11 ccm in 14 days and 1.4 ccm in the next 3 days by daylight, and 0.6 ccm in the last 5 days (no light). Part of the CS<sub>2</sub> was decomp and 7.8 ccm were dissolved, therefore H<sub>2</sub>O dissolves 1/1000 of its weight CS (Sestini, Gazz ch 1 473)

Solubility of CS<sub>2</sub> in H<sub>2</sub>O

100 pts H <sub>2</sub> O dissolve	0.203 pts CS <sub>2</sub> at 13°
" "	0.191 " " 16°
" "	0.168 " " 27°

93 54	7 00	47 90	0 00

(Tuchschmidt and Follenius, B 4 583)

Miscible with absolute alcohol, ether, ethereal and fatty oils, and liquid CO<sub>2</sub>

*Ironcarbon disulphide*, C<sub>3</sub>S<sub>2</sub>

Insol in H<sub>2</sub>O, easily sol in alcohol ether, chloroform, benzene, and CS<sub>2</sub>. The alcoholic and ethereal solutions decomp on standing (Lengyel, B 26 2960)

Sol in alcohol with decomp. Sol in CS<sub>2</sub> and in benzene (Stock, B 1912, 45 3575)

*Solid modification* Insol in H<sub>2</sub>O and ordinary solvents. Sol in KOH+Ag (Lengyel)

*Carbon sulphoselenide*, CS<sub>2</sub>Se

Mpt -55°, bpt +84°

Decomp by light. Not attacked by H<sub>2</sub>O

Sol in hot conc HNO<sub>3</sub>. Decomp by Bi<sub>2</sub> to oil. Sol in alcohol with decomp. Miscible with CS<sub>2</sub> (Stock, B 1914, 47 150)

*Carbon sulphotelluride*, CS<sub>2</sub>Te

Mpt -4° Very unstable

Miscible with CS<sub>2</sub> and benzene without decomp (Stock, B 1914, 47 142)

*Carbonatochloroplatindiamine carbonate chloroplatindiamine nitrate*

CO<sub>3</sub> [Pt N<sub>2</sub>H<sub>6</sub>]<sub>2</sub> (CO<sub>3</sub>)<sub>2</sub>, Cl<sub>2</sub>Pt(N<sub>2</sub>H<sub>6</sub>NO<sub>3</sub>)<sub>2</sub>

Precipitate (Cleve, J B 1867 321)

*Carbonatotrinitratoplatin diamine carbonate*

ate, (NO<sub>3</sub>)<sub>2</sub> [Pt(N<sub>2</sub>H<sub>6</sub>)<sub>2</sub>](CO<sub>3</sub>)<sub>2</sub>

Sol in boiling H<sub>2</sub>O (Cleve)

*Carbonatotetramine cobaltic bromide*, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>Br

Much less sol than chloride (Jorgensen, Z anorg 2 279)

— *carbonate*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>CO<sub>3</sub>+3H<sub>2</sub>O  
Very sol in H<sub>2</sub>O (Jorgensen)

— *chloraurate*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>AuCl<sub>4</sub>+  
½H<sub>2</sub>O

Somewhat sol in H<sub>2</sub>O, nearly absolutely insol in alcohol (Jorgensen)

— *chloride*, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>Cl

Easily sol in H<sub>2</sub>O, insol in alcohol (Jorgensen)

— *chloroplatinate*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>PtCl<sub>6</sub>+  
2H<sub>2</sub>O

Nearly insol in H<sub>2</sub>O and alcohol (Jorgensen)

— *chloroplatinite*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>PtCl<sub>4</sub>

Nearly insol in H<sub>2</sub>O, wholly in alcohol (Jorgensen)

— *dithionate*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>S<sub>2</sub>O<sub>6</sub>  
Ppt (Jorgensen)

— *iodide*, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>I

Much less sol than bromide or chloride (Jorgensen)

— *nitrate*, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>NO<sub>3</sub>+½H<sub>2</sub>O

Sol in about 15 pts cold H<sub>2</sub>O, insol in alcohol (Jorgensen)

— *sulphate*, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>3</sub>]<sub>2</sub>SO<sub>4</sub>+3H<sub>2</sub>O

Considerably less sol in H<sub>2</sub>O than the nitrate (Jorgensen)

*Carbonic acid*, H<sub>2</sub>CO<sub>3</sub>

See Carbon dioxide

*Carbonates*

Carbonates of Na, K, Rb, and Cs are easily sol in H<sub>2</sub>O, carbonates of Li and H are much less sol, other carbonates are nearly or quite insol. All carbonates are sol to some extent in H<sub>2</sub>O containing CO<sub>2</sub>. All carbonates, except those of NH<sub>4</sub>, Rb, and Cs, are insol in alcohol.

Sol in those acids which are themselves sol in H<sub>2</sub>O, except HCN and H<sub>3</sub>BO<sub>3</sub>.

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 824)

**Aluminum carbonate, basic**

$5\text{Al}_2\text{O}_3, 6\text{CO}_2 + 37\text{H}_2\text{O} = 3\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 14\text{H}_2\text{O}$  (Seubert, Z anorg 1893, 4 67)

$\text{Al}_2\text{O}_3, \text{CO}_2$  (Parkmann, Sill Am J (2) 34 324)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 16\text{H}_2\text{O}$  (Muspratt and Danson, A 72 120)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 9\text{H}_2\text{O}$  (Wallace, Chem Gaz 1858 410)

$5\text{Al}_2\text{O}_3, 3\text{CO}_2 + 18\text{H}_2\text{O}$  (Bley, J pr 39 11)

$2\text{Al}_2\text{O}_3, \text{CO}_2 + 6\text{H}_2\text{O} = 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$  Sol in cold dil acids (Schlumberger Bull Soc 1895, (3) 13 46)

$+8\text{H}_2\text{O}$  (Urban and Renoul J Pharm (4) 30 340)  $= 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 9\text{H}_2\text{O}$  (Seubert Z anorg 1893 4 67)

$8\text{Al}_2\text{O}_3, 3\text{CO}_2 + 40\text{H}_2\text{O}$  (Langlois, A ch (3) 48 505)

All are precipitates, insol in  $\text{H}_2\text{O}$ , sol in acids, and give off  $\text{CO}_2$  at slight heat

There are no definite carbonates of aluminum (Cameron, J phys Chem 1908, 12 572)

**Aluminum ammonium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$** 

Precipitate (Rose, Pogg 91 460)

**Aluminum sodium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, 2\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}$** 

Precipitate Sol in cold dil acids (Bley, J pr 39 22)

**Ammonium carbonate,  $(\text{NH}_4)_2\text{CO}_3 + \text{H}_2\text{O}$** 

Sol at  $15^\circ$  in its own weight  $\text{H}_2\text{O}$  Solution in  $\text{H}_2\text{O}$  gives off gas at  $70-75^\circ$ , and boils at  $75-80^\circ$  Sl sol in cold dil  $\text{NH}_4\text{OH} + \text{Aq}$ , more sol at ordinary temp Insol in conc  $\text{NH}_4\text{OH} + \text{Aq}$  (Divers, Chem Soc (2) 8 171, 259, and 364)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 826)

Insol in alcohol  
Insol in  $\text{CS}_2$  (Aictowski, Z anorg 1894, 6 257)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

100 g pure glycerine dissolve 20 g  $(\text{NH}_4)_2\text{CO}_3$  at  $15^\circ$  (Ossendowski, Pharm J 1907, 79 575)

**Ammonium hydrogen carbonate,  $\text{NH}_4\text{HCO}_3$** 

Sol at  $15^\circ$  in about 8 pts  $\text{H}_2\text{O}$  (Berthollet, J Phys 66 168)

Sol at  $128^\circ$  in about 6 pts  $\text{H}_2\text{O}$  (J Davy, N Ednib J 16 245)

Solution decomp on air or by gentle heat or by addition of the solid salt (Berthollet)

100 pts  $\text{H}_2\text{O}$  dissolve at  $0^\circ$ , 11.9 pts, at  $10^\circ$ , 15.85 pts, at  $20^\circ$ , 21 pts, at  $30^\circ$ , 27 pts  $\text{NH}_4\text{HCO}_3$  (Dibbitts J pr (2) 10 417)

**Solubility of  $\text{NH}_4\text{HCO}_3$  in  $\text{NH}_4\text{Cl} - 1$ , sat with  $\text{CO}_2$ , at  $t^\circ$**

(Fedotieff and Koltunoff, Z anorg 191, 251) , 85

Insol in alcohol (J Davy)

Insol in acetone (Eidmann, C C 899, II 1014, Naumann, B 1904, 37 4329)

**Ammonium dihydrogen carbonate,**  
 $(\text{NH}_4)_2\text{H}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$ 

Sol in 5 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , decomp by more  $\text{H}_2\text{O}$  or by heat (Divers, Chem Soc (2) 8 171, 359, and 364)

Sl sol in alcohol

**Ammonium hydrogen carbonate carbamate,**  
 $2\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CONH}_2$  (*Salis of harts-horn*)

1 pt salt dissolves at

$13^\circ$  in 4 pts  $\text{H}_2\text{O}$

$16\ 7^\circ$  " 3 " "

$32\ 2^\circ$  " 2 " "

$40\ 6^\circ$  " 2 " "

$49^\circ$  " 2 " "

(J Davy, N Edinb J 16 245)

Strong alcohol dissolves out carbamate, and the carbonate remains undissolved

$\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CO}_2\text{NH}_2$  (*Commercial carbonate of ammonia*)

Sol at  $15^\circ$  in 4 pts  $\text{H}_2\text{O}$ , at  $65^\circ$  in  $1\frac{1}{2}$  pts  $\text{H}_2\text{O}$  (Divers)

30 pts salt + 100 pts  $\text{H}_2\text{O}$  lower temp from  $15\ 3^\circ$  to  $3\ 2^\circ$  (Rudorff, B 2 68)

Sol in 1 667 pts cold and 0 833 pt hot  $\text{H}_2\text{O}$  (Fourcroy)

100 pts  $\text{H}_2\text{O}$  at  $13^\circ$  dissolve 25 pts

$17^\circ$  30

$37^\circ$  37

$41^\circ$  40

$49^\circ$  50

(Berzelius)

100 pts  $\text{H}_2\text{O}$  at  $1\ 5^\circ$  dissolve 33 pts at  $100^\circ$  100 pts (Ure's Dict.)

Sol in 2 pts  $\text{H}_2\text{O}$  at  $15\ 5^\circ$  and in less than 1 pt boiling  $\text{H}_2\text{O}$  sat solution at  $15\ 5^\circ$  contains 33 3% and sat boiling solution 50% (Abl)

Sat aqueous solution at 10 contains 15 7% (Eller)

Sat aqueous solution at (?) contains 6 1% (Muscrobrock)

cold as sat sol % (Fourcroy)  
solves out first and  $\text{NH}_4\text{HCO}_3$  later (Scanlan)

Conc alcohol dissolves out carbamate and leaves carbonate (Hunefeld, J pr 7 25)

Insol in acetone (Naumann, B 1904, 37 4328)

**Ammonium cerous carbonate,  $(\text{NH}_4)_2\text{CO}_3,$**   
 $\text{Ce}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$ 

Ppt Very sl sol in conc  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Meyer Z anorg 1904, 41 104)

**Ammonium chromous carbonate,  $(\text{NH}_4)_2\text{CO}_3,$**   
 $\text{CrCO}_3 + \text{H}_2\text{O}$ 

Decomp by moist air, sol in dil  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$  (Baugé, C R 1896, 122 476)

**Ammonium cobaltous carbonate,  $(\text{NH}_4)_2\text{CO}_3,$**   
 $\text{CoCO}_3 + 4\text{H}_2\text{O}$ 

Permanent Sol in  $\text{H}_2\text{O}$  (Deville, A ch (3) 35 460)

$(\text{NH}_4)_2\text{O} 2\text{CoO}, 4\text{CO}_2 + 9\text{H}_2\text{O}$  Quickly decomp on air, sol in  $\text{H}_2\text{O}$  (Deville)  
+  $12\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

**Ammonium didymum carbonate,  $(\text{NH}_4)_2\text{CO}_3,$**   
 $\text{D}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ 

Insol in  $\text{H}_2\text{O}$  (Clevé)

**Ammonium dysprosium carbonate,**  
 $\text{NH}_4\text{Dy}(\text{CO}_3)_3 + \text{H}_2\text{O}$ 

Only sl sol in  $\text{H}_2\text{O}$  (Jantsch, B 1911, 44 1277)

**Ammonium glucinum carbonate**,  $2(\text{NH}_4)_2\text{CO}_3$ ,  $3\text{GIC}_3(?)$

Very sol in cold decomp by hot  $\text{H}_2\text{O}$   
Nearly insol in alcohol (Debray)

Composition is  $(\text{NH}_4)_2\text{CO}_3$ ,  $2\text{GIC}_3$ ,  
 $\text{Gl}(\text{OH})_2 + 2\text{H}_2\text{O}$  (Humpidge, Royal Soc  
Proc **39** 1)

**Ammonium lanthanum carbonate**,  $\text{La}_2(\text{CO}_3)_3$ ,  
 $(\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$

Ppt (Meyer, Z anorg 1904, **41** 102)

**Ammonium magnesium carbonate**,  
 $(\text{NH}_4)_2\text{Mg}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$

Sol in 71 pts  $\text{H}_2\text{O}$  with decomp, more  
sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Divers, Chem Soc **51**  
196)

$\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$  dissolves very  
slightly, more sol in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$   
(Favre, A ch (3) **10** 473)

**Ammonium magnesium hydrogen carbonate**,  
 $(\text{NH}_4)_2\text{Mg}_2\text{H}_2(\text{CO}_3)_4 + 8\text{H}_2\text{O}$ , or  $12\text{H}_2\text{O}$

Decomp on air (Deville, A ch (3) **35**  
454)

**Ammonium neodymium carbonate**,  
 $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{Nd}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Ppt Sl sol in conc  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$   
(Meyer, Z anorg 1904, **41** 106)

**Ammonium nickel carbonate**,  $\text{NH}_4\text{HCO}_3$ ,  
 $\text{NiCO}_3 + 4\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Deville, A ch (3) **35** 452)

**Ammonium praseodymium carbonate**,  
 $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{Pr}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Ppt Insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Meyer  
Z anorg 1904, **41** 105)

**Ammonium samarium carbonate**,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{Sm}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Ppt

**Ammonium scandium carbonate**,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $2\text{Sc}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$

Difficultly sol in  $\text{H}_2\text{O}$  Sol in cold alkali-  
carbonate + Aq, less sol in hot (R Meyer,  
Z anorg 1910, **67** 410)

**Ammonium tin (stannous) carbonate**,  
 $(\text{NH}_4)_2\text{CO}_3$ ,  $2\text{SnCO}_3 + 3\text{H}_2\text{O}$

Decomp by cold  $\text{H}_2\text{O}$  (Deville, A ch (3)  
**35** 456)

**Ammonium uranyl carbonate**,  $2(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{UO}_2\text{CO}_3$

Sol at  $15^\circ$  in 20 pts  $\text{H}_2\text{O}$  more abundantly  
in  $\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$  (Ebelmen)

Insol in pure  $\text{H}_2\text{O}$ , sol in  $\text{H}_2\text{O}$  containing  
 $(\text{NH}_4)_2\text{CO}_3$  Solution is decomp by boiling  
(Berzelius)

Sol in  $\text{SO}_2 + \text{Aq}$  (Berthier A ch (3) **7**  
76)  
 $3(\text{NH}_4)_2\text{CO}_3$ ,  $2(\text{UO}_2)\text{CO}_3 + 4\text{H}_2\text{O}$  S in  
 $\text{H}_2\text{O}$  (Giollitti C C **1905**, II 227)

**Ammonium vanadyl carbonate**,  $3(\text{NH}_4)_2\text{O}$ ,  
 $7\text{VO}_2$ ,  $5\text{CO}_2 + 16\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$

Sol in acids and alkalies (Kopp, Z  
anorg **1905**, **45** 350)

**Ammonium yttrium carbonate**,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{Y}_2(\text{CO}_3)_3 + 2\text{H}_2\text{O}$

Insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Mosand)

**Ammonium zinc carbonate, basic**,  $\text{NH}_4\text{OH}$ ,  $2\text{CO}_2 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Kassner, Arch Pharm (3)  
**27** 673)

**Ammonium zinc carbonate**,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{ZnCO}_3$

Insol in  $\text{H}_2\text{O}$  (Deville)

Quite sol in  $\text{H}_2\text{O}$ , more sol than  
 $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{MgCO}_3$  Tolerably perm  
ent in the air Slowly decomp by cold, r  
idly by hot  $\text{H}_2\text{O}$

Very sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Not att  
ked by alcohol (Favre, A ch (3) **10** 481)

**Barium carbonate**,  $\text{BaCO}_3$

Sol in 4304 pts cold, and 2304 pts b ling  
 $\text{H}_2\text{O}$  (Fourcroy)

Sol in 47 620 pts  $\text{H}_2\text{O}$  (Bineau, A ch  
(3) **51** 290)

Sol in 14,137 pts  $\text{H}_2\text{O}$  at  $16-20^\circ$  and  
15,421 pts at  $100^\circ$  (Fresenius)

Sol in 12 027 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Kre  
Pogg **85** 247)

Calculated from electrical conductivity of  
solution, 1 pt  $\text{BaCO}_3$  is sol in 64,070 pts  $\text{H}_2\text{O}$   
at  $8.8^\circ$  and 45,566 pts at  $24.2^\circ$  (Holler  
un, Z phys Ch **12** 125)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	g sol in 100 g H <sub>2</sub> O

38	$6.27 \times 10^{-1}$

(Weissenberger, Z phys Ch **1914**, **88** 10)

"Solubility product" =  $8.1 \times 10^{-10}$  m l  
(McCoy and Smith, J Am Chem Soc **31**,  
**33** 473)

Sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$  (See barium hydrogen  
carbonate)

Easily sol in dil acids Not acted up by  
conc  $\text{HNO}_3 + \text{Aq}$

Not decomp by 1 pt  $\text{H}_2\text{SO}_4 + 6$  pt ab-  
solute alcohol Slowly decomp by pt

$\text{HNO}_3$  + 6 pts absolute alcohol Slowly decomp by 1 pt  $\text{H}_2\text{C}_2\text{O}_4$  + 6 pts absolute alcohol

Not decomp by absolute alcoholic solutions of racemic, tartaric, citric, or glacial acetic acids (Babington and Phillips, 1816)

Almost completely insol in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$  when digested in such a solution and allowed to stand 1 pt  $\text{BaCO}_3$  dissolves in 141 000 pts of such a solution (Fresenius)

Not more sol in  $\text{NaCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Karsten)

Sol in cold  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4$  succinate + Aq (Vogel, J pr 7 453)

2 mols  $\text{NH}_4\text{Cl}$  dissolved in  $\text{H}_2\text{O}$  dissolve 1 mol  $\text{BaCO}_3$  by continued boiling (Smith, Phil Mag J 9 540)

Solubility in  $\text{H}_2\text{O}$  increases by addition of  $\text{NH}_4\text{Cl}$ , at first strongly, then less strongly and finally strongly again (D'Agustino and Pellegrino, Gazz ch it 1908 38 (1) 532)

Somewhat sol in  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Wackenroder, A 24 30)

Solubility of  $\text{BaCO}_3$  in  $\text{KCl} + \text{Aq}$  at bpt of solution

Slowly sol in conc  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{ZnSO}_4$ ,  $\text{Ca}(\text{NO}_3)_2$ , or  $\text{CaCl}_2 + \text{Aq}$ , but insol in  $\text{ZnCl}_2 + \text{Aq}$  (Karsten)

SI decomp by boiling  $\text{K}_2\text{SO}_4 + \text{Aq}$

SI decomp in the cold by 1 pt  $\text{K}_2\text{SO}_4 + 2$  pts  $\text{Na}_2\text{SO}_4 + \text{Aq}$

Decomp by salts of Al, Mn, Cr, Fe, U, Bi, Cd, Cu, Hg, Pb, Sn<sup>II</sup>, Sn<sup>IV</sup>, Hg<sub>2</sub>, Rh, Ir, Au, with pptn of oxide of metal (Rose, Tr)

Pptn of  $\text{BaCO}_3$  is hindered by presence of alkali citrates or metaphosphates

Sol in solutions of various salts, as in the case of calcium carbonate (see *Calcium carbonate*) The solvent power of these solutions for barium carbonate is somewhat less than for calcium carbonate

Insol in acetone (Naumann B 1904, 37 4329)

Insol in methyl acetate (Naumann, B B 1909, 42 3790), ethyl acetate (Naumann, B 1904, 37 3602)

Insol in acetone and in methylal (Eidmann, C C 1899, II 1014)

Min *Witherite*

**Barium hydrogen carbonate,  $\text{BaH}_2(\text{CO}_3)_2$  (?)**

100 pts  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0 079 pt  $\text{BaCO}_3$  (Bineau)

100 pts  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0 17 pt  $\text{BaCO}_3$  (Lassaigne)

100 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  under a pressure of 4-6 atmospheres dissolve 0 725 pt  $\text{BaCO}_3$  Upon evaporating,  $\text{BaCO}_3$  is deposited (Wagner, Z anal 6 167)

$\text{BaCO}_3$  is sol in 833 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  at  $10^\circ$  (Lassaigne)

$\text{BaCO}_3$  is sol in 830 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  at  $10^\circ$  (Fourcroy)

$\text{BaCO}_3$  is sol in 1550 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  at  $10^\circ$  (Bergman)

100 cc  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  dissolve 0 73 g  $\text{BaH}(\text{CO}_3)_2$  (McCoy and Smith, J Am Chem Soc 1911, 33 473)

**Barium calcium carbonate,  $\text{BaCO}_3$ ,  $\text{CaCO}_3$**

Min *Barytocalcite* *Bromilite* Sol in dil acids

**Barium uranyl carbonate,  $\text{BaUO}_4 \cdot 2\text{UO}_3 \cdot 2\text{CO}_2 + 5\text{H}_2\text{O}$**  Decomp by  $\text{H}_2\text{O}$  (Blinkoff Dissert 1900)

+ 8H<sub>2</sub>O Decomp by  $\text{H}_2\text{O}$  (Blinkoff)

**Bismuth carbonate, basic,  $(\text{BiO})_2\text{CO}_3 + \frac{1}{2}\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$ , sol in acids Insol in  $\text{CO}_2 + \text{Aq}$  (Bergman)

Completely sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , sl sol in  $\text{K}_2\text{CO}_3 + \text{Aq}$ , insol in  $\text{Na}_2\text{CO}_3 + \text{Aq}$  (Lau-gier)

Absolutely insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  unless  $\text{H}_3\text{PO}_4$  or  $\text{H}_3\text{AsO}_4$  are present (Berzelius)

Insol in  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$  (Rose)

Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Wackenroder) Insol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)

Sol in  $\text{CaCl}_2 + \text{Aq}$  (Pearson)

Min *Bismuthosphaerite*

$3\text{Bi}_2\text{O}_3$ ,  $\text{CO}_2$  Min *Bismuthite* Easily sol in acids

$4\text{Bi}_2\text{O}_3$ ,  $3\text{CO}_2 + 4\frac{1}{2}\text{H}_2\text{O}$  Min *Bismuth spar* Easily sol in acids

**Bismuth potassium carbonate,  $\text{Bi}_2\text{OK}_4(\text{CO}_3)_4 + \text{H}_2\text{O}$** 

Decomp by large quantities of  $\text{H}_2\text{O}$  (Reynolds, Chem Soc 1898, 73 266)

**Cadmium carbonate,  $\text{CdCO}_3$** 

Insol in  $\text{H}_2\text{O}$ , easily sol in acids, insol in  $\text{K}_2\text{CO}_3$ , and  $\text{Na}_2\text{CO}_3 + \text{Aq}$ , very sl sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Fresenius)

Easily sol in  $\text{NH}_4$  sulphate, nitrate, and succinate +  $\text{Aq}$  (Wittstein)

Sol in  $\text{KCN} + \text{Aq}$ , sol in cold  $\text{NH}_4\text{Cl} + \text{Aq}$ , less sol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett, 1837)

Not prevented from pptn by non-volatile organic substances (Rose)

Not pptd from solutions containing sodium citrate (Spiller)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4329)

$+ \frac{1}{2}\text{H}_2\text{O}$  (Lefort, J B 1847 346)

(Kraut, Z anorg 1897, 13 14)

**Cadmium carbonate hydrazine,  $\text{CdCO}_3 \cdot 2\text{N}_2\text{H}_4$** 

Easily sol in cold  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg 1908, 60 281)

**Cæsium carbonate,  $\text{Cs}_2\text{CO}_3$** 

Very deliquescent, and sol in  $\text{H}_2\text{O}$

100 pts absolute alcohol dissolve 11.1 pts  $\text{Cs}_2\text{CO}_3$  at  $19^\circ$ , 20.1 pts  $\text{Cs}_2\text{CO}_3$  at boiling temp (Bunsen)

**Cæsium hydrogen carbonate,  $\text{CsHCO}_3$** 

Not deliquescent Sol in  $\text{H}_2\text{O}$

**Calcium carbonate basic,  $\text{CaO} \cdot \text{CaCO}_3 + \text{H}_2\text{O}$** 

Hardened by  $\text{H}_2\text{O}$ , but not dissolved (Raoult, C R 92 189)

**Calcium carbonate,  $\text{CaCO}_3$** 

More sol in cold than in hot  $\text{H}_2\text{O}$  (Gmelin) When recently pptd sol in 8834 pts boiling water 10 601 pts cold  $\text{H}_2\text{O}$  much less sol in  $\text{H}_2\text{O}$  (NH<sub>4</sub>OH and (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>: 65 246 pts of which 1 pt  $\text{CaCO}_3$  (Fresenius (1846) A 59 122) Sol in 16 000 pts pure  $\text{H}_2\text{O}$  (Brandes 1 5) Sol in 12 858 pts pure  $\text{H}_2\text{O}$  at  $15^\circ$  (Krem 85 247) Sol in 16 000–24 000 pts pure  $\text{H}_2\text{O}$  (Buehler 2)

1 l  $\text{H}_2\text{O}$  dissolves 34 mg  $\text{CaCO}_3$  (Hevallet, Z anal 8 91, Hoffmann, Z anal 414)

1 l  $\text{H}_2\text{O}$  may contain 0.016 g  $\text{CaCO}_3$  (Birch 1 pt is sol in 62 500 pts  $\text{H}_2\text{O}$  (Birch 3) 51 290)

1 l  $\text{H}_2\text{O}$  dissolves 0.02 g  $\text{CaCO}_3$ , 1 pt  $\text{CaCO}_3$  is sol in 50 000 pts  $\text{H}_2\text{O}$  (Ligot)

Solubility is much affected by  $\text{CO}_2$  of the air 1 l  $\text{H}_2\text{O}$  at  $16^\circ$  dissolves 13.1 mg  $\text{CaCO}_3$  (Schlesinger, C R 74 1552)

Calculated from electrical conductivity of  $\text{CaCO}_3 + \text{Aq}$ , 1 pt  $\text{CaCO}_3$  is sol in 99,000 pts  $\text{H}_2\text{O}$  at  $8^\circ$ , and 80,040 pts at  $23.8^\circ$  (Holle-mann, Z phys Ch 12 125)

By continued boiling  $\text{CaH}_2(\text{CO}_3)_2$ ,  $\text{CaCO}_3$  remains in solution (Weltzien, 136 165)

**Solubility in  $\text{H}_2\text{O}$  at different pressures**

Pressure in atmos	Solubility
1	1079
2	1403
4	1820
6	2109

(Engel, C R 101 949)

100 pts  $\text{H}_2\text{O}$  dissolve 0.0005 pt (calculated as  $\text{CaO}$ ) from pptd  $\text{CaCO}_3$  and 0.0007 pt from calcspar (Lubavin, J russ S 389)

1 l  $\text{H}_2\text{O}$  dissolves 13 mg  $\text{CaCO}_3$  (Kohlrausch, Z phys Ch 1893, 12 24)

1 l  $\text{CO}_2$  free water dissolves 17.4 mg  $\text{CaO}$  or 31.0 mg  $\text{CaCO}_3$  (Gothé Ch Z 1915, 39 305)

$\text{CaCO}_3$  dissolves in 9662 pts  $\text{H}_2\text{O}$  (Pollacci C C 1896, II 946)

1 l  $\text{H}_2\text{O}$  free from  $\text{CO}_2$  dissolves 9 mg  $\text{CaCO}_3$  (McCoy and Smith J Am Soc 1911, 33 473)

Found dissolved in 10,000 pts seawater (Davy)

Pptd amorphous  $\text{CaCO}_3$  dissolves in 1600 pts seawater Pptd crystalline  $\text{CaCO}_3$  dissolves in 8000 pts seawater (Irving and Young, Chem Soc 56 344)

Artificial sea water sat with  $\text{CO}_2$  dissolves  $\text{CaCO}_3$  corresponding to 57.27 mg of combined  $\text{CO}_2$  per litre at  $15^\circ$

Sea water which contains 52–55 mg nitril combined  $\text{CO}_2$  per litre must be sat with  $\text{CaCO}_3$  (Cohen Chem Soc 1900, 2) 725)

For action of  $\text{H}_2\text{CO}_3 + \text{Aq}$ , see *Calcium hydrogen carbonate*

Sol in  $\text{H}_2\text{SO}_4$ , even when native Sol in acids generally When treated with acids in closed vessels effervescence ceases on increase of pressure, but is renewed at once on removing it (Link, 1814)

Unacted upon by conc  $\text{HNO}_3$ , even when boiling, as  $\text{Ca}(\text{NC}_3)_2$  is insol in conc  $\text{HNO}_3$

Not decomp by mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 6 pts absolute alcohol, but immediately by  $\text{HNO}_3$ +absolute alcohol

Not decomp by absolute alcoholic solutions of oxalic, racemic, tartaric, citric, or glacial acetic acids (Babington and Phillips, 1816)

Unacted upon by glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , even when boiling

Freshly pptd  $\text{CaCO}_3$  is sol in cold  $\text{NH}_4\text{Cl}$ +Aq, but the solution becomes cloudy on exposure to air, a portion, however, of  $\text{CaCO}_3$  remains dissolved, which cannot be pptd even by boiling If ppt is washed and allowed to stand 24 hours, it is not as sol in  $\text{NH}_4\text{Cl}$  as at first, but natural  $\text{CaCO}_3$  is not wholly insol in  $\text{NH}_4\text{Cl}$ +Aq, it is, however, much less sol than  $\text{MgCO}_3$  (Vogel, J pr 7 453)

Sol in boiling  $\text{NH}_4\text{Cl}$ +Aq with evolution of  $\text{NH}_3$  (Demarcay, 1834)

When  $\text{NH}_4\text{OH}$ +Aq, incompletely sat with  $\text{CO}_2$ , is mixed with  $\text{CaCl}_2$ +Aq, no ppt occurs even during several days if kept in a closed vessel, and only a slight ppt if the mixture is exposed to the air, but  $\text{CaCO}_3$  is pptd if the solution is boiled

$\text{NH}_4\text{OH}$ +Aq wholly sat with  $\text{CO}_2$  produces ppt when mixed with  $\text{CaCl}_2$ +Aq, but pptn is not complete until heat is applied Also when an excess of  $\text{CaCl}_2$ +Aq is added to a solution of crystallized carbonate of ammonia, only a portion of the  $\text{CaCO}_3$  is pptd until the solution is boiled (Vogel, 1814)

When  $\text{CaCl}_2$ +Aq mixed with  $\text{NH}_4\text{OH}$ +Aq is exposed to an atmos of pure  $\text{CO}_2$ , no ppt occurs for several hours, but  $\text{CaCO}_3$  is completely pptd in several days (Vogel)

When recently pptd, readily sol in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3$ +Aq (Brett 1837, Wackenroder, A 41 315)

When recently pptd, readily sol in  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4$  succinate+Aq (Wittstein)

Sol in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ +Aq (Thomson)

More sol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3$ +Aq, or in neutral potassium, or sodium salts+Aq than in  $\text{H}_2\text{O}$  (Fresenius)

From solutions in  $\text{NH}_4$  salts,  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3$ +Aq precipitate  $\text{CaCO}_3$  more completely than  $\text{BaCO}_3$  (Fresenius)

When boiled with  $\text{NH}_4\text{Cl}$ +Aq,  $\text{CaCO}_3$  is dissolved, and  $(\text{NH}_4)_2\text{CO}_3$  given off (D Smith)

$\text{CaCl}_2$ +Aq prevents pptn of  $\text{CaCO}_3$  in the cold as do also  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl}$ +Aq, but it is pptd when boiled, if the latter solutions are not too conc  $\text{K}_2\text{SO}_4$ ,  $\text{KNO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{Na}_2\text{SO}_4$ +Aq have a similar effect A large excess of  $(\text{NH}_4)_2\text{CO}_3$ +Aq when quickly added to  $\text{CaCl}_2$ +Aq produces

no ppt in the cold  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3$ +Aq act likewise (Storer, Am J Sci (2) 25 41)

1 g  $\text{CaCO}_3$  requires 13.98 g  $\text{NH}_4\text{Cl}$ , 8.380 g  $(\text{NH}_4)_2\text{SO}_4$ , or 14.438 g  $\text{NH}_4\text{NO}_3$  to effect solution (Bertrand, Monit Sci (3) 10 477)

Less sol in Na than in  $\text{NH}_4$  salts, but more than in K salts (Berthelot)

When  $\text{NH}_4\text{OH}$ +Aq, partially neutralized by  $\text{CO}_2$ , is mixed with  $\text{CaO}_2\text{H}_2$ +Aq, no cloudiness appears until the mixture is boiled, when more  $\text{CO}_2$  has been added to  $\text{NH}_4\text{OH}$ +Aq a ppt appears at first, which disappears and only reappears on addition of much  $\text{CaO}_2\text{H}_2$ +Aq, but  $\text{NH}_4\text{OH}$ +Aq does not dissolve pptd  $\text{CaCO}_3$  (Vogel)

#### Solubility in $\text{NH}_4$ salts+Aq at 25°

$\text{NH}_4$ salt	Millimols $\text{NH}_4$ salt per l	Millimols $\text{CaO}$ dis- solved per l
$\text{NH}_4\text{Cl}$	1000	6 770
	500	5 008
	250	3 724
	125	2 743
$\text{NH}_4\text{NO}_3$	500	5 267
	250	3 830
	125	2 779
	62.5	2 004
Triammonium citrate	500	66 87
	250	39 80
	125	22 64
	62.5	14 92

(Rindell, Z phys Ch 1909, 70 454)

#### Solubility of $\text{CaCO}_3$ in $\text{NH}_4\text{Cl}$ +Aq at 12–18° Time, 98 days

g per l of sat solution	
$\text{NH}_4\text{Cl}$	$\text{CaCO}_3$
53.5	0.423
100	0.609
200	0.645

(Cantoni and Goguelia, Bull Soc 1905, (3) 33 27)

#### Solubility of $\text{CaCO}_3$ in $\text{NH}_4\text{NO}_3$ +Aq at 15°

g per l of sat solution	
$\text{NH}_4\text{NO}_3$	$\text{CaCO}_3$
0	0.131
5	0.211
10	0.258
20	0.340
40	0.462
80	0.584

(Berju and Kosminiko, Landw Vers Sta 1904, 60 422)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  dissolves a little  $\text{CaCO}_3$  (Welter and Berthollet, 1789)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  retains a little  $\text{CaCO}_3$  in solution at ordinary temperature, which is pptd on boiling (Eliot and Storer, Proc Am Acad 1860, 5 63)

$\text{CaO}_2\text{H}_2 + \text{Aq}$ , mixed with dil  $\text{NaOH}$ ,  $\text{KOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ , gives no immediate ppt when  $\text{CO}_2$  is passed through it, unless boiled. Sol in boiling  $\text{MgCl}_2 + \text{Aq}$  even when dilute (Cousté)

Not decomp when boiled with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{MgSO}_4$ , and  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ , but partially decomp by boiling with  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_3$ ,  $(\text{NH}_4)_2\text{SO}_3$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{HPO}_3$ ,  $\text{Na}_2\text{HPO}_3$ ,  $(\text{NH}_4)_2\text{HPO}_3$ ,  $\text{K}_2\text{HASO}_4$ ,  $\text{Na}_3\text{AsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4 + \text{Aq}$ . With the  $\text{NH}_4$  salts the decomposition is complete (Dulong, A ch 82 286)

Not decomp by alkali sulphates + Aq (Malaguti)

Precipitation of  $\text{CaCO}_3$  is much hindered by alkali citrates or metaphosphates

#### Solubility in $\text{KCl} + \text{Aq}$ at $25^\circ$

(Cameron and Robinson, J phys Chem 1907, 11 578)

The solubility of  $\text{CaCO}_3$  in  $\text{Na}_2\text{S} + \text{Aq}$  in equilibrium with air steadily increases with increasing amounts of  $\text{CaSO}_4$  in the solution up to saturation point of the  $\text{CaSO}_4$ . In the presence of solid  $\text{CaSO}_4$  the solubility of  $\text{CaCO}_3$  is much decreased (Cameron and Seidell, J phys Chem 1902, 6 56)

See under  $\text{CaH}_2(\text{CO}_3)$

Solubility in  $\text{Na}_2\text{SO}_4 + \text{Aq}$  in contact with  $\text{CO}_2$  free air at  $25^\circ$

The solubility of  $\text{CaCO}_3$  in  $\text{CO}_2$ -free water

is therefore increased by the addition of NaCl, NaNO<sub>3</sub> or Na<sub>2</sub>SO<sub>4</sub>, 10H<sub>2</sub>O, but decreased by the addition of Na<sub>2</sub>CO<sub>3</sub> or CaCl<sub>2</sub>, 6H<sub>2</sub>O

(Gothe, Ch Z 1915, 39 306)

Sol in ferric chloride or nitrate + Aq with evolution of CO<sub>2</sub> and pptn of Fe<sub>2</sub>O<sub>3</sub>·H<sub>2</sub>O (Fuchs, 1831), also in chlorides or nitrates of Al, Mn, Cr, or U, but not in FeCl<sub>3</sub> + Aq

Sol in cold SnCl<sub>4</sub> + Aq with pptn of SnO<sub>2</sub>  
Insol in conc Na<sub>2</sub>SO<sub>4</sub>, MgSO<sub>4</sub>, BaCl<sub>2</sub>, MgCl<sub>2</sub>, Pb(NO<sub>3</sub>)<sub>2</sub>, or AgNO<sub>3</sub> + Aq (Karssten)

Abundantly sol when freshly precipitated in CaCl + Aq, and MgSO<sub>4</sub> + Aq (Hunt)

Absolutely insol at 15-19° in BaO<sub>2</sub>H<sub>2</sub> + Aq, also on boiling

1 l H<sub>2</sub>O containing 3-4 g MgSO<sub>4</sub> dissolves 1-2 g CaCO<sub>3</sub>, and also 1 g MgCO<sub>3</sub> (Hunt, Am J Sci (2) 26 109)

100 pts NaCl + Aq (2.525% NaCl) dissolve 0.0037 pt (calculated as CaO) pptd CaCO<sub>3</sub>, and 0.0053 pt calc spar (Lubavin, J russ Soc 24 389)

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 827)

Insol in liquid CO. (Buchner, Z phys Ch 1906, 54 674)

Alcohol dissolves traces of CaCO<sub>3</sub> (Grischow)

Sol in Na citrate + Aq (Spiller)

Sol in Ca succinate + Aq (Barreswill)

Insol in acetone (Naumann, B 1904, 37 4329)

Insol in acetone and in methylal (Eidmann, C C 1899, 11 1014)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

*Amorphous* Solubility in H<sub>2</sub>O cannot be determined because of its instability (Kendall Phil Mag 1912, (6) 23 972)

*Mineral* In contact with air free from CO<sub>2</sub> 1 l H<sub>2</sub>O dissolves at

25°                      50°                      100°  
0.01433    0.01504    0.01779 g calcite

(Kendall, Phil Mag 1912, (6) 23 964)

In contact with air containing 3.7 pts CO<sub>2</sub> per 10,000 the solubility of calcite in H<sub>2</sub>O was found to be 0.04608 g per l at 25° and 0.02925 g per l at 50° (Kendall, Phil Mag 1912 (6) 23 973)

*Min Aragonite* In contact with air free from CO<sub>2</sub> 1 l H<sub>2</sub>O dissolves at

25°                      50°                      100°  
0.01528    0.01617    0.01902 g aragonite

(Kendall, Phil Mag 1912, (6) 23 964)

+5H<sub>2</sub>O Efflorescent

+6H<sub>2</sub>O (Pelouze)

Calcium hydrogen carbonate, CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>

Known only in aqueous solution

CaCO<sub>3</sub> dissolves in CO<sub>2</sub> + Aq

CaCO<sub>3</sub> is sol in 1428 pts H<sub>2</sub>O sat with CO at 0° and 1136 pts at 10° (Lassaigne J ch med 4 312)

Bineau could dissolve even rarer quantities of H<sub>2</sub>O sat with CO only 1/5 (CO to form CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>)

Chalk dissolves in 994.5 pts H<sub>2</sub>O sat with CO<sub>2</sub> while Iceland spar requires 3149 pts (Bischof)

CaCO<sub>3</sub> is sol in 1015 pts H<sub>2</sub>O sat with CO at 21° and 748.3 mm (Warrington Chem Soc 6 296)

Solubility of CaCO<sub>3</sub> in CO<sub>2</sub> + Aq at p pressure in atmospheres CaO + CO<sub>2</sub> = mg CO<sub>2</sub> and CaC dissolved, corresponding to CaCO<sub>3</sub> = mg CaCO<sub>3</sub>

p	CaO + CO <sub>2</sub>	CaCO <sub>3</sub>
0 000504	60 96	74 6
0 000808	72 11	85 0

0 2538	1072	663 4
0 4167	1500	787 5
0 5533	1846	885 5
0 7297	2270	972
0 9841	2864	1086

(Schlosing, C R 74 1522)

With high pressure, 1 l H<sub>2</sub>O containing CO<sub>2</sub> dissolves at most 3 g CaCO<sub>3</sub>. This maximum is reached at 5° under 4 atmospheres' pressure, at 10-13° under 5 atmospheres, and at 20° under 7 atmospheres (Caro, Arch Pharm (3) 4 145)

CaCO<sub>3</sub> is sol in about 1000 pts H<sub>2</sub>CO<sub>3</sub> + Aq, and solubility is considerably increased by Na<sub>2</sub>SO<sub>4</sub> or MgSO<sub>4</sub>

1000 pts H<sub>2</sub>O sat with CO<sub>2</sub> dissolve pts Carrara marble at t°, and B = height of barometer in millimetres

t°	B	Pts CaCO <sub>3</sub>	t	B	Pts CaCO <sub>3</sub>
7 5	754	1 224	22 0	746	0 920
8 5	752	1 202	26 0	740	0 875
9 5	754	1 115	26 5	743	0 860
20 5	741	0 975	27 0	741	0 885
21 5	744	0 935	28 0	737	0 770

Or, from 7.5-9.5°, 1000 pts H<sub>2</sub>O sat with CO<sub>2</sub> dissolve 1.181 pts CaCO<sub>3</sub>, from 20.5-22°, 0.9487 pt CaCO<sub>3</sub>, from 26-28°, 0.855 pt CaCO<sub>3</sub>

Other varieties of  $\text{CaCO}_3$  are dissolved as follows in 1000 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$

Variety	t°	B	Pts $\text{CaCO}_3$
Lunenburg chalk	18	740	0 835
Pptd $\text{CaCO}_3$	18	740	0 950
Iceland spar	18	735	1 970
Calcite	12	754	1 223

(Treadwell and Reuter, Z anorg 1898, 17 185)

1 l  $\text{H}_2\text{O}$  sat with carbonic acid dissolves 1.30 g  $\text{CaCO}_3$  at 13.2°, 1.45 g at 2.8° (Treadwell, Z anorg 1898, 17 189)

At 30° C in equilibrium with the more than 3 per cent of the calcium is combined as  $\text{CaCO}_3$ . At lower temperatures and lesser concentrations the percentage of normal carbonate is even less, and practically all the calcium present is combined as  $\text{Ca}(\text{HCO}_3)_2$  (Cameron and Briggs, J phys Chem 1901, 5 549)

With pressures less than 4.5 atmospheres of  $\text{CO}_2$  no other than normal calcium carbonate or a hydrate of the normal carbonate can exist as the solid phase at 0° (Cameron, J phys Chem 1908, 12 566)

Solubility in  $\text{H}_2\text{O}$  in contact with air containing  $\text{CO}_2$  with varying partial pressures at t°

Min *Dolomite* 1 l H<sub>2</sub>O sat with CO<sub>2</sub> at  
18° and 750 mm dissolves 0.31 g dolomite  
(Cossa, B 2 697)

Not obtained by evaporating solution but  
can be crystallized from CO<sub>2</sub>+Aq between  
100° and 200° (Hoppe-Seyler)

Dolomite is dissolved by CO<sub>2</sub> and H<sub>2</sub>O,  
but solution is prevented partially by CaCO<sub>3</sub>,  
and wholly by MgCO<sub>3</sub> (Leather and Sen,  
C A 1915 181)

Insol in cold dil acids (Dolomite, J  
Phys 39 1)

Insol in cold acetic acid (Forchhammer)

**Calcium potassium carbonate**, CaK<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>

Decomp by H<sub>2</sub>O (Reynolds, Chem Soc  
1898, 73 265, Butschli, C A 1907 23)  
2CaCO<sub>3</sub>, 3K<sub>2</sub>CO<sub>3</sub>+6H<sub>2</sub>O (Butschli)

**Calcium sodium carbonate**, CaNa<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>

*Anhydrous* Decomp by H<sub>2</sub>O  
+2H<sub>2</sub>O (Butschli, C A 1907 222)  
+5H<sub>2</sub>O Min *Gaylussite* Sparngl sol  
in H<sub>2</sub>O

**Calcium uranyl carbonate**, CaCO<sub>3</sub>, UO<sub>2</sub>C  
+20H<sub>2</sub>O

Min *Liebigite* Sol in HCl+Aq  
+xH<sub>2</sub>O Decomp by H<sub>2</sub>O (Blinkoff,  
Dissert 1900)

2CaO, 4UO<sub>3</sub>, 3CO<sub>2</sub>+24H<sub>2</sub>O Decomp by  
H<sub>2</sub>O (Blinkoff, Dissert 1900)

**Calcium carbonate chloride**, CaCO<sub>3</sub>, CaCl<sub>2</sub>+  
6H<sub>2</sub>O

Sol in H<sub>2</sub>O with immediate decomp  
(Fritzsche, J pr 83 213)

**Cerous carbonate**, Ce(CO<sub>3</sub>)<sub>3</sub>+5, and 9H<sub>2</sub>O

Insol in H<sub>2</sub>O, and solution of CO<sub>2</sub> in H<sub>2</sub>O  
(Vauquelin)

Somewhat sol in (NH<sub>4</sub>) CO<sub>3</sub>+Aq (John)

Insol in neutral salt solutions and neutral  
alkali carbonates+Aq, easily sol in HCl+Aq  
(Berthier A ch (3) 7 77)

**Ceric carbonate**, Ce(CO<sub>3</sub>)<sub>3</sub>+12H<sub>2</sub>O

Precipitate (Hisinger, A ch 94 108)

Insol in H<sub>2</sub>O Sol in slight trace in  
Na<sub>2</sub>CO<sub>3</sub>+Aq, sl sol in NaHCO<sub>3</sub>+Aq, and  
in (NH<sub>4</sub>) CO<sub>3</sub>+Aq (Rosc)

**Cerous lanthanum carbonate fluoride**

Min *Bathasite*, *Hamantite* *Hydrofluorite*  
Slowly decomp by HCl+Aq easily by  
H<sub>2</sub>SO<sub>4</sub>

**Cerous potassium carbonate**, Ce(CO<sub>3</sub>)<sub>3</sub>,  
K CO<sub>3</sub>+3H<sub>2</sub>O

Ppt (John)

Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K CO<sub>3</sub>+12H<sub>2</sub>O Ppt

Sol in 30% K<sub>2</sub>CO<sub>3</sub>+Aq (Meyer, Z  
anorg 1904, 41 103)

**Percevic potassium carbonate**,  $\text{Ce}_2\text{O}_3(\text{CO}_3)_3$ ,  $4\text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$

*Crystalline* Sl sol in  $\text{H}_2\text{O}$  containing  $\text{K}_2\text{CO}_3$ , sol in dil  $\text{H}_2\text{SO}_4$  with decomp (Job, C R 1899, 128 1098)

**Cerous sodium carbonate**,  $\text{Ce}_2(\text{CO}_3)_3$ ,  $2\text{Na}_2\text{CO}_3 + 2\text{H}_2\text{O}$

Ppt (John)  
 $2\text{Ce}_2(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O} (?)$  Ppt  
Easily decomp (Meyer, Z anorg 1904, 41 103)

**Chromous carbonate**,  $\text{CrCO}_3$

Sol in much  $\text{H}_2\text{O}$ , sl sol in  $\text{KHCO}_3 + \text{Aq}$  (Moberg, J pr 44 328, Moissan, A ch (5) 21 199)

**Chromic carbonate, basic**,  $\text{Cr}_2\text{O}_3$ ,  $2\text{CO}_2$

Precipitate (Parkmann, Sil Am J (2) 34 321)

$\text{Cr}_2\text{O}_3$ ,  $\text{CO}_2 + 4\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , sol in acids, when freshly pptd is sol in  $\text{K}_2\text{CO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and still more sol in  $\text{KOH} + \text{Aq}$  (Meissner)

Insol in ethyl acetate (Naumann, B 1910, 43 314), methyl acetate (Naumann, B 1909, 42 3790)

$2\text{Cr}_2\text{O}_3$ ,  $\text{CO}_2 + 6\text{H}_2\text{O}$  Precipitate (Langlois, A ch (3) 48 502)

**Chromous potassium carbonate**,

$\text{CrCO}_3$ ,  $\text{K}_2\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  when freshly prepared, slowly polymerizes stable in dry air, decomp in moist air sol in acids with decomp (Baugé, C R 1895, 126 1568)

**Chromous sodium carbonate**,  $\text{CrNa}_2(\text{CO}_3)_2 + \text{H}_2\text{O}$

Decomp when heated In Aq solution, passes into the hydrate containing 10 mols  $\text{H}_2\text{O}$  (Baugé, C R 1897 125 1179)

+10  $\text{H}_2\text{O}$  Very sol in cold  $\text{H}_2\text{O}$ , Aq solution decomp below  $100^\circ$  effloresces in the air, sol in  $\text{HCl} + \text{Aq}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Baugé, C R 1897, 125 1178)

**Cobaltous carbonate, basic**,  $\text{CoCO}_3$ ,  $2\text{CO} + 4\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  sol in  $(\text{NH}_4)_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$

Sol in cold  $\text{NH}_4\text{NO}_3$  and  $\text{NH}_4\text{Cl} + \text{Aq}$  (Beutt 1837)

Sol in  $\text{CO} + \text{Aq}$  and acid alkali carbonates + Aq from which it is pptd on boiling Very sol in conc  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ , largely sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and partly sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Berzelius)

Not pptd from solutions containing  $\text{Na}$  citrate (Spillier)

$4\text{CoO}$ ,  $\text{CO} + 4\text{H}_2\text{O}$  Ppt (Beetz)

+  $31\frac{1}{2}\text{H}_2\text{O}$  (Meigen, C C 1905, I 1363)

**Cobaltous carbonate, basic**,  $3\text{CoO}$ ,  $\text{CO}_2 + 2\text{H}_2\text{O}$

(Meigen, C C 1905, I 1363)

$3\text{H}_2\text{O}$  (Rose, Pogg 84 551)

$3\text{CoO}$ ,  $2\text{CO}_2 + 4\text{H}_2\text{O}$  (Bratun, Z anal 6 76)

$2\text{CoO}$ ,  $\text{CO}_2 + 3\frac{1}{2}\text{H}_2\text{O}$  Converted into  $5\text{CoO}$ ,  $2\text{CO} + 4\text{H}_2\text{O}$  by  $\text{H}_2\text{O}$  (Beetz)

**Cobaltous carbonate**,  $\text{CoCO}_3$

*Anhydrous* Not attacked by cold conc  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  (Senarmont, A ch (3) 30 129)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

Min *Sphaerocobaltite* Sl attacked by cold  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$

+  $\frac{2}{3}\text{H}_2\text{O}$  Sol in acids (Dewille, A ch (3) 33 95)

+  $6\text{H}_2\text{O}$  (Dewille)

Decomp by  $\text{H}_2\text{O}$  with formation of a basic carbonate (Berzelius)

**Cobaltous potassium carbonate**,  $\text{CoCO}_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Dewille, A ch (3) 33 90)

Ppt Decomp by  $\text{H}_2\text{O}$  (Reynolds, Chem Soc 1898, 73 264)

$\text{CoCO}_3$ ,  $\text{KHCO}_3 + 4\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Dewille)

**Cobaltous sodium carbonate**,  $\text{CoCO}_3$ ,  $\text{Na}_2\text{CO}_3 + 4\text{H}_2\text{O}$ , and  $10\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Dewille, A ch (3) 33 75)

**Cupric carbonate, basic**

The compounds produced by pptn of copper solutions by carbonates are unstable and possess varying solubilities in solutions of  $\text{CO}_2$ . On treatment with solutions of  $\text{CO}$  these subst mcs pass over into an apparently stable compound possessing a definite solubility in solutions of  $\text{CO}$  of definite concentration, which solubility increases with the concentration of  $\text{CO}_2$ . Solubility of this compound in various salts—Aq is recorded (Fric, J Am Chem Soc 1908, 30 1374)

$8\text{CuO}$ ,  $\text{CO} + 5\text{H}_2\text{O}$  (Dewille, A ch (3) 33 75)

$6\text{CuO}$ ,  $\text{CO}$  (Fridl, Chem Soc 14 70)

$3\text{CuO}$ ,  $\text{CO} + 2\text{H}_2\text{O}$  (Fric, A ch (3) 10 119)

$5\text{CuO}$ ,  $2\text{CO}_2 + 6\text{H}_2\text{O}$  (Straube)

$2\text{CuO}$ ,  $\text{CO}_2 + \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , easily sol in acids, even  $\text{H}_2\text{SO}_3 + \text{Aq}$ , sl sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , 30,720 pts of the solution containing 1 pt of  $\text{CuO}$  (John) Sol in 4690 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 4–6 atmos pressure (Wagner) Sol in 3833 pts sat  $\text{H}_2\text{CO}_3 + \text{Aq}$  (Lussaigne, J ch med 4 312)

Sol in  $\text{NH}_4$  salts + Aq Partially sol in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ , and more sol in

$\text{NaHCO}_3$ , or  $\text{KHCO}_3 + \text{Aq}$ , sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Favre, A ch (3) 10 18)

Less sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  than  $\text{CuO}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  (Thomson, 1831) Sol in  $\text{KCN} + \text{Aq}$  (Berzelius) Sol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)

Sol in ferric salts with pptn of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$   
Insol in liq  $\text{NH}_3$  (Franklin and Kraus, Am Ch J 1898, 20 827)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

Sol in ethyl amine carbonate + Aq (Wurtz)

Sol in cane sugar + Aq (Pescher, Repert 1820, 6 85)

Not pptd from solutions containing sodium citrate (Spiller)

Insol in pyridine (Schroeder, Dissert 1901)

Min *Malachite* Sol in acids, and  $\text{NH}_4\text{OH} + \text{Aq}$

+  $2\text{H}_2\text{O}$  (Favre)

$8\text{CuO}$ ,  $5\text{CO}_2 + 7\text{H}_2\text{O}$  (Groger, Z anorg 1900, 24 137)

$3\text{CuO}$ ,  $2\text{CO}_2 + \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in hot conc  $\text{NaHCO}_3 + \text{Aq}$

Min *Azurite*

**opper potassium carbonate, basic**,  $8\text{CuO}$ ,  $2\text{K}_2\text{CO}_3$ ,  $7\text{CO}_2 + 17\text{H}_2\text{O}$

Ppt, decomp by  $\text{H}_2\text{O}$  (Groger, B 1901, 34 430)

Mixture (Wood and Jones, C A 1907 2667)

$5\text{CuO}$ ,  $4\text{CO}_2$ ,  $\text{K}_2\text{CO}_3 + 10\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Deville, A ch (3) 33 102)

**Cupric potassium carbonate**,  $\text{CuCO}_3$ ,  $\text{K}_2\text{CO}_3$   
Decomp by  $\text{H}_2\text{O}$  (Wood and Jones, C A 1907 2667)

+  $\text{H}_2\text{O}$  (Wood and Jones)

+  $4\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Reynolds, Chem Soc 1898, 73 263)

Could not be obtained (Wood and Jones)  
 $2\text{CuCO}_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Wood and Jones)

**Cupric sodium carbonate**,  $\text{CuCO}_3$ ,  $\text{Na}_2\text{CO}_3$

Not decomp by cold  $\text{H}_2\text{O}$  (Debray, C R 49 218)

+  $3\text{H}_2\text{O}$

**Cupric zinc carbonate**,  $2\text{CuO}$ ,  $3\text{ZnO}$ ,  $2\text{CO}_2 + 3\text{H}_2\text{O}$ , or  $3\text{CuO}$ ,  $9\text{ZnO}$ ,  $4\text{CO}_2 + 8\text{H}_2\text{O}$

Min *Aurichalcite* Easily sol in  $\text{HCl} + \text{Aq}$

**Cupric carbonate ammonia (cuprammonium carbonate)**,  $\text{CuCO}_3$ ,  $2\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  Insol in alcohol and ether Sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Favre, A ch (3) 10 116)

**Didymium carbonate**,  $\text{D}_{12}(\text{CO}_3)_3 + \text{H}_2\text{O}$ , or  $6\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Only traces dissolve in  $\text{CO}_2 + \text{Aq}$  Insol in solutions of alkali carbonates or bicarbonates + Aq (Marignac, A ch (3) 38 166) Very sl sol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose)

Insol in acetone (Naumann, B 1904, 7 4329)

+  $8\text{H}_2\text{O}$  (Cleve, Bull Soc (2) 43 363)

**Didymium potassium carbonate**,  $\text{D}_{12}(\text{CO}_3)_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Cleve, Bull Soc (2) 3 363)

+  $12\text{H}_2\text{O}$  (Cleve)

**Didymium sodium carbonate**,  $2\text{D}_{12}(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 9\text{H}_2\text{O}$

Ppt (Cleve)

$\text{D}_{12}(\text{CO}_3)_3$ ,  $2\text{Na}_2\text{CO}_3 + 8\text{H}_2\text{O}$  Ppt (Cleve)

**Dysprosium carbonate**,  $\text{Dy}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Jantsch, B 1911, 4 1277)

**Erbium carbonate**,  $\text{Er}_2\text{O}_3$ ,  $2\text{CO}_2 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Hoglund)

**Erbium sodium carbonate**,  $\text{Er}_2(\text{CO}_3)_3$ ,  $5\text{Na}_2\text{CO}_3 + 36\text{H}_2\text{O}$

Efflorescent Decomp by  $\text{H}_2\text{O}$

**Gadolinium carbonate, basic**,  $\text{Gd}(\text{OH})\text{CO}_3 + \text{H}_2\text{O}$

Ppt (Benedicks, Z anorg 1900, 22 41)

**Glucinum carbonate, basic**,  $3\text{GdO}$ ,  $\text{CO}_2$ ,  $4\text{GdO}$ ,  $\text{CO}_2$ ,  $5\text{GdO}$ ,  $\text{CO}_2 + 5\text{H}_2\text{O}$ , etc

Not perceptibly sol in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{CO}_3 + \text{H}_2\text{O}$

Decomp by boiling  $\text{H}_2\text{O}$  Easily sol in  $\text{NH}_4\text{OH}$

Sol in  $\text{NH}_4$  salts, and  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$

Sol in alkali carbonates, especially  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Vauquelin) Sl sol in  $\text{K}_2\text{CO}_3 + \text{Aq}$  When solution in  $(\text{NH}_4)_2\text{CO}_3$  is boiled, a more basic carbonate is pptd (Rose)

**Glucinum carbonate**,  $\text{GdCO}_3 + 4\text{H}_2\text{O}$

Efflorescent Sol in 278 pts  $\text{H}_2\text{O}$  (Klatz, J pr 106 242)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 828)

No definite carbonate of glucinum exists (Cameron, J phys Chem 1908, 12 572)

**Glucinum potassium carbonate**,  $3\text{GICO}_3 \cdot 2\text{K}_2\text{CO}_3$

Easily sol in  $\text{H}_2\text{O}$ , but decomp by boiling (Debray) Less easily sol in alcohol

**Indium carbonate**,  $\text{In}_2(\text{CO}_3)_3$

Ppt Insol in  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$   
Sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Winkler, J pr 94 1)

**Iron (ferric) carbonate, basic**

$9\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 12\text{H}_2\text{O}$  (Wallace, Chem Gaz 1858 410)  
 $3\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 4\text{H}_2\text{O}$ , and  $8\text{H}_2\text{O}$  (Barrat, C N 1 110)  
 $+ 6\text{H}_2\text{O}$  (Wallace)  
 $2\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 1\frac{1}{2}\text{H}_2\text{O}$  (Rother, Pharm J Trans (3) 4 576)  
 $\text{Fe}_2\text{O}_3 \cdot \text{CO}_2$  (Parkmann, Sill Am J (2) 34 321)

These and other similar basic salts are ppts, easily decomp on standing into  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$

**Iron (ferrous) carbonate,  $\text{FeCO}_3$**

Insol in  $\text{H}_2\text{O}$   
Sol in acids, even in  $\text{H}_2\text{CO}_3 + \text{Aq}$   
See **Carbonate, ferrous hydrogen**  
Min *Siderite Spathic ore* SI attacked by dil acids Sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$  under pressure  
Insol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)  
 $+ \text{H}_2\text{O}$  SI sol in  $\text{H}_2\text{O}$ , easily sol in acids, sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$   
Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  Sol in ferric salts + Aq with evolution of  $\text{CO}_2$  and pptn of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$   
Soluble in an aqueous solution of cane sugar

Solubility in salts + Aq free from  $\text{CO}_2$

Salt	g salt per 1000 g $\text{H}_2\text{O}$	1 l of solvent dissolves g $\text{FeCO}_3$
$\text{NaCl}$	351 2	0 35042
$\text{MgCl}_2 + 6\text{H}_2\text{O}$	2300 0	4 2049
$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$	137 7 sat at $+14^\circ$	0 70085 0 93444
$\text{MgSO}_4 + 7\text{H}_2\text{O}$	105 3 sat at $+18^\circ$	1 4667 2 9334

(Fhlert, Z Elektrochem 1912, 18 728)

**Iron (ferrous) hydrogen carbonate**,  
 $\text{FeH}_2(\text{CO}_3)_2(?)$

known only in aqueous solution  
By conducting  $\text{CO}_2$  at ordinary pressure through  $\text{H}_2\text{O}$ , in which Fe is suspended, a solution containing 9 l pts  $\text{FeCO}_3$  to 10,000 pts  $\text{H}_2\text{O}$  is obtained (v Hauer, J pr 81 391)

100 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  dissolve 0 72 pt  $\text{FeCO}_3$  (Wagner)

$\text{FeCO}_3$  dissolves in 1381 pts  $\text{H}_2\text{O}$  saturated with  $\text{CO}_2$ , under a pressure of 4-6 atmospheres (Wagner, J B 1867 135)

1 l  $\text{H}_2\text{O}$  dissolves 6 1907 g  $\text{FeCO}_3$  (pure) under a  $\text{CO}_2$  pressure of 2 atmos (Ehlert, Z Elektrochem 1912, 18 728)

Solubility in various salts + Aq in presence of  $\text{CO}_2$  under pressure of 2 atmos

Salt	With $\text{CO}_2$ of 2 atmos pressure	
	g salt per 1000 g $\text{H}_2\text{O}$	1 l of solvent dissolves g $\text{FeCO}_3$

Insol in  $\text{H}_2\text{O}$   $\text{CO}_2 + \text{Aq}$  dissolves traces  
Insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$

Insol in acetone (Naumann, B 1904, 37 4329)

Min *Lanthanite*

**Lanthanum potassium carbonate,  $\text{La}_2(\text{CO}_3)_3$ ,  $\text{K CO}_3 + 12\text{H}_2\text{O}$** 

Sol in 30%  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Meyer, Z anorg 1904, 41 101)

**Lanthanum sodium carbonate,  $2\text{La}_2(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 20\text{H}_2\text{O} (?)$** 

Ppt Easily decomp (Meyer, Z anorg 1904, 41 102)

**Lead carbonate, basic,  $2\text{PbCO}_3$ ,  $\text{PbO}_2\text{H}_2$ ,  $5\text{PbCO}_3$ ,  $3\text{PbO}_2\text{H}_2$ ,  $3\text{PbCO}_3$ ,  $\text{PbO}_2\text{H}_2$ ,  $5\text{PbCO}_3$ ,  $\text{PbO}_2\text{H}_2$** 

*White Lead* Insol in  $\text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , even under pressure Sol in dil, insol in conc  $\text{KOH} + \text{Aq}$  Insol in normal, or acid alkali carbonates + Aq (Bottger)

Sol in cold dil  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett)  
 $\text{PbCO}_3$ ,  $\text{PbO}_2\text{H}_2$  Very sl sol in  $\text{H}_2\text{O}$  (Yorke)

$2\text{PbCO}_3$ ,  $\text{PbO}_2\text{H}_2$   
Solubility is less than 0.0002 millimol Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  (Pleissner, C C 1907, II 1056)

When not exposed to air, sol in 32,000 pts  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (0.2 g per l), 26,000 pts  $\text{KNO}_3 + \text{Aq}$  (0.2 g per l), 23,000 pts  $\text{CaCl}_2 + \text{Aq}$  (0.2 g per l), 4600 pts  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.2 g per l), 4300 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$ .

When exposed to air in beakers, sol in 43,000 pts  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (0.2 g per l), 43,000 pts  $\text{KNO}_3 + \text{Aq}$  (0.2 g per l), 26,000 pts  $\text{CaCl}_2 + \text{Aq}$  (0.2 g per l), 26,000 pts  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.2 g per l), 4300 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  (0.2 g per l) (Muir, Chem Soc 31 664)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

$3\text{PbO}$ ,  $4\text{PbCO}_3 + 2\text{H}_2\text{O}$  Ppt (Stromholm, Z anorg 1904, 38 446)

**Lead carbonate,  $\text{PbCO}_3$** 

Sol in 50,551 pts  $\text{H}_2\text{O}$  at ordinary temp

Sol in 23,450 pts  $\text{H}_2\text{O}$  with little ammonium acetate, carbonate and free ammonia, and in somewhat less  $\text{H}_2\text{O}$ , containing much ammonium nitrate with carbonate and free ammonia (Fresenius, A 59 124)

Calculated from electrical conductivity of  $\text{PbCO}_3 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 3 mg  $\text{PbCO}_3$  at  $10^\circ$  (Kohlrausch and Rose, Z phys Ch 12 241)

Solubility is 0.0002 millimol Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  (Pleissner, C C 1907, II 1056)

Sl sol in  $\text{H}_2\text{O}$   $1.5 \times 10^{-4}$  g are contained in 1 l of sat solution at  $20^\circ$  (Bottger, Z phys Ch 1903, 46 604)

Easily sol in acids, even  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , but not decomp by conc  $\text{HNO}_3 + \text{Aq}$  on account of insolubility of  $\text{Pb}(\text{NO}_3)_2$  in  $\text{HNO}_3 + \text{Aq}$  Insol in a mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 6 pts absolute alcohol, or in an alcoholic solution of racemic or tartaric acids

Insol in  $\text{H}_2\text{CO}_3 + \text{Aq}$  (Jahn, A 28 117)  
Very sl sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , but soln is prevented by traces of various salts (Lassaigne, J ch méd 4 312)  
Sol in 7144 pts sat  $\text{H}_2\text{CO}_3$  ( $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  under 4-6 atmos pressure dissolve only traces of Pb, 1000 pts of solution containing 0.5 pt  $\text{PbCO}_3$  (Wagner, Z anal 6 17)

Solubility of  $\text{PbCO}_3$  in  $\text{H}_2\text{CO}_3 + \text{Aq}$  is 18%

mg per l	
$\text{CO}$	$\text{PbCO}_3$
0	1 75
2 8	6
5 4	7
14 4	8 2
26	9 9
43 5	10 9
106	15 4

(Pleissner, C C 1907, II 1056)

Sol in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ , and  $\text{NH}_4\text{Cl}$  Aq (Weppen, 1837) Sol in  $\text{KOH} + \text{Aq}$ , n ab- s of  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ , and still more sl at  $100^\circ$ , but absolutely insol in  $\text{NaCl}$ ,  $\text{KHCO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Rose) nsol in  $\text{NH}_4\text{OH} + \text{Aq}$ , sol in  $\text{KOH}$  or  $\text{NaOH}$  Aq, decomp by boiling  $\text{Ca}(\text{NO}_3)_2 + \text{Aq}$  (Fresenius)

Sl decomp (Persoz), not at all decomp (Malaguti) by alkali sulphates + Aq

Partially decomp by boiling with  $\text{H}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{MgSO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{NaNH}_4\text{HPO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{N}_2\text{SO}_3$ ,  $(\text{NH}_4)_2\text{SO}_3$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_3\text{AsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K CrO}_4 + \text{Aq}$  With the  $\text{NH}_4$  salts the decomp is complete (Dulong, A C 82 290)

Easily sol in hot  $\text{NH}_4\text{Cl} + \text{Aq}$  (Fresenius, Rose)

When 1 mol  $\text{PbCO}_3$  is boiled with 1 mol  $\text{K}_2\text{C}_2\text{O}_4$ , 15% of the  $\text{PbCO}_3$  is decomp with 1 mol  $\text{K CO}_3$ , 93.28% is decomp (Malaguti)

Not decomp by  $\text{K SO}_4 + \text{Aq}$  (Rose)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

Sol in an aqueous solution of acetates (Murett, 1844)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Not pptd in presence of  $\text{NaCl}$  acetate (Spiller)

Min (Fresenius)

**Lead sodium carbonate,  $4\text{PbCO}_3$ ,  $\text{Na}_2\text{CO}_3$** 

Insol in  $\text{H}_2\text{O}$  (Fresenius, Pogg 47 19)

**Lead carbonate bromide,  $\text{PbCO}_3$ ,  $\text{PbBr}$** 

Insol in  $\text{H}_2\text{O}$  (Storer & Diet)

**Lead carbonate chloride,  $\text{PbCO}_3$ ,  $\text{PbCl}_2$** 

Insol in  $\text{H}_2\text{O}$  (Miller, Chem Soc (2) 8 37)

Min *Phosgenite* Easily sol in acids

**Lead carbonate iodide,  $\text{PbCO}_3$ ,  $\text{PbI}_2$** 

Insol in  $\text{H}_2\text{O}$  (Poggiale)

**Lead carbonate sulphate,  $\text{PbCO}_3$ ,  $\text{PbSO}_4$** 

Min *Lanarkite* Sol in  $\text{HNO}_3 + \text{Aq}$  with residue of  $\text{PbSO}_4$   
 $3\text{PbCO}_3$ ,  $\text{PbSO}_4$  Min *Leadhillite* As above

**Lithium carbonate,  $\text{Li}_2\text{CO}_3$** 

100 pts  $\text{H}_2\text{O}$  dissolve 1 pt  $\text{Li}_2\text{CO}_3$  (Vauquelin, A ch 7 284)

100 pts  $\text{H}_2\text{O}$  at  $13^\circ$  dissolve 0.769 pt  $\text{Li}_2\text{CO}_3$ , at  $102^\circ$ , 0.778 pt  $\text{Li}_2\text{CO}_3$  (Kremers, Pogg 99 48)

100 pts  $\text{H}_2\text{O}$ , cold or hot, dissolve 1.2 pts  $\text{Li}_2\text{CO}_3$  (Troost, A ch (3) 51 103)

100 pts  $\text{H}_2\text{O}$  dissolve 1.4787 pts at  $15^\circ$ , 0.7162 pt at  $100^\circ$  (Draper, C N 55 169)

100 pts  $\text{H}_2\text{O}$  dissolve pts  $\text{Li}_2\text{CO}_3$  at  $t^\circ$

t	Pts $\text{Li}_2\text{CO}_3$	$t^\circ$	Pts $\text{Li}_2\text{CO}_3$
0	1 539	75	0 866
10	1 406	100	0 728
20	1 329	102	0 796
50	1 181		

0.796 pt is dissolved at  $102^\circ$  in less than  $\frac{1}{4}$  hour, and 0.955 in 1 hour (Beketow, J russ Soc 1884 591)

Sat solution at  $15^\circ$  has sp gr 1.014, and contains 1 g  $\text{Li}_2\text{CO}_3$  to 70 g  $\text{H}_2\text{O}$ , while solution sat at  $0^\circ$  has sp gr 1.0168 and contains 1 g  $\text{Li}_2\text{CO}_3$  in 64.6 g  $\text{H}_2\text{O}$ . By long spontaneous evaporation at  $15^\circ$  a solution can be obtained of 1.0278 sp gr containing 1 g  $\text{Li}_2\text{CO}_3$  in 45.57 g  $\text{H}_2\text{O}$  (Flückiger, Arch Pharm (3) 25 549)

By boiling for an instant with  $\text{H}_2\text{O}$  a solution is obtained, which has sp gr 1.0074 and contains 1 g  $\text{Li}_2\text{CO}_3$  to 139 g  $\text{H}_2\text{O}$  (Flückiger, Arch Pharm (3) 26 543)

0.1687 mol is sol in 11  $\text{H}_2\text{O}$  at  $25^\circ$  (Rothmund, Z phys Ch 1909, 69 531)

Sat  $\text{Li}_2\text{CO}_3 + \text{Aq}$  contains at

$95^\circ$        $75^\circ$   
 0.723      0.833% by wt  $\text{Li}_2\text{CO}_3$

(Schugriff, Z anorg 1914, 86 159)

Sat solution boils at  $102^\circ$  (Kremers)

More sol in  $\text{CO} + \text{Aq}$  than in  $\text{H}_2\text{O}$  100

pts sat  $\text{CO}_2 + \text{Aq}$  dissolve 5.25 pts  $\text{Li}_2\text{CO}_3$  (Troost) See  $\text{LiHCO}_3$   
 Sol in  $\text{NH}_4$  salts +  $\text{Aq}$

Solubility in salts +  $\text{Aq}$  at  $25^\circ$

(Rothmund, Z phys Ch 1909, **69** 51)

Insol in methyl acetate (Naumann, B 1909, **42** 3790), ethyl acetate (Naumann, B 1904, **37** 3601)

Insol in acetone (Naumann, B 1914, **37** 4329, Eidmann, C C 1899, II 1014)

Lithium hydrogen carbonate, LiHCO<sub>3</sub>

100 pts H<sub>2</sub>O dissolve 5.501 pts at 13°  
(Bewad, B 17 406 R)

**Magnesium carbonate, basic**,  $\text{Mg}_3\text{C}_2\text{O}_7 + 3\text{H}_2\text{O} = 3\text{MgO}, 2\text{CO}_2 + 3\text{H}_2\text{O}$  or  $2\text{MgCO}_3, \text{MgO}, \text{H}_2\text{O} + 2\text{H}_2\text{O}$  (Fritzsche, Pogg 37 310)

*Magnesia alba*,  $3\text{MgCO}_3, \text{Mg}(\text{OH})_2 + 4\text{H}_2\text{O}, 4\text{MgCO}_3, \text{Mg}(\text{OH})_2 + 5\text{H}_2\text{O}$ , or  $5\text{MgCO}_3, 2\text{Mg}(\text{OH})_2 + 7\text{H}_2\text{O}$

Very sl sol in  $\text{H}_2\text{O}$  Sol in 10,000 pts hot or cold  $\text{H}_2\text{O}$  (Bineau)

Sol in 2500 pts cold, and 9000 pts hot  $\text{H}_2\text{O}$  (Fyfe)

Sol in  $\text{H}_2\text{O}$  containing  $\text{CO}_2$

Very easily sol in acids

Easily sol in dil  $\text{HCl} + \text{Aq}$

Easily sol in  $\text{NH}_4$  sulphate, nitrate, or succinate +  $\text{Aq}$ , also in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Wittstein) Sol in cold  $\text{Na}_2\text{CO}_3, \text{K}_2\text{CO}_3, \text{K}_2\text{SO}_4, \text{KCl}$ , or  $\text{KNO}_3 + \text{Aq}$  (Longchamp), also in  $\text{NH}_4\text{Cl} + \text{Aq}$ , separating out on heating (Vogel, J pr 7 455) Slowly sol in conc  $\text{BaCl}_2, \text{CaCl}_2$ , or  $\text{ZnSO}_4 + \text{Aq}$  (Karsten)

Sol in  $\text{MgSO}_4 + \text{Aq}$  (Dulong)

Sol in ferric salts +  $\text{Aq}$  with evolution of  $\text{CO}_2$  and pptn of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (Fuchs)

Sol in boiling  $\text{Co}, \text{Ni}, \text{Zn}, \text{Mn}$ , or  $\text{Cu}$  nitrates or chlorides +  $\text{Aq}$

Mm *Hydromagnesite*,  $4\text{MgO}, 3\text{CO}_2 + 4\text{H}_2\text{O}$

+  $10\text{H}_2\text{O}$  Sol in considerable amount in  $\text{H}_2\text{CO}_3 + \text{Aq}$  as  $\text{MgH}_2(\text{CO}_3)_2 + \text{Aq}$  (Engel, C R 100 911)

**Magnesium carbonate,  $\text{MgCO}_3$**

*A, hydrous* Insol in  $\text{H}_2\text{O}$  1 l  $\text{H}_2\text{O}$  dissolves 106 mg  $\text{MgCO}_3$  (Chevalet, Z anal 8 91) Sol in 5071 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Kremers)  $\text{MgCO}_3$  combines with  $\text{H}_2\text{O}$  to form  $\text{MgCO}_3 \cdot 3\text{H}_2\text{O}$ , and +  $5\text{H}_2\text{O}$ , which are less sol in  $\text{H}_2\text{O}$  than anhydrous salt (Engel, C R 101 814)

Very hygroscopic About 20 g are sol in 1 l  $\text{H}_2\text{O}$  (Engel, C R 1899, 129 598)

0 7156 g are sol in 1 l  $\text{H}_2\text{O}$  at  $15^\circ$

0 627 g are sol in 1 l  $\text{H}_2\text{O}$  at  $15^\circ$  with vapour pressure of  $\text{CO}_2$  equal to zero

6 977 grams are sol in 1 l  $\text{H}_2\text{O}$  at  $15^\circ$  with vapour pressure  $\text{CO}_2$  equal to 1 atm (Treadwell and Reuter, Z anorg 1898, 17 202)

94 4 mg are sol in 1 l of  $\text{CO}_2$ -free water (Gothe, Ch Z 1915, 39 306)

Solubility in  $\text{H}_2\text{O}$  in equilibrium with  $\text{Mg}(\text{HCO}_3)_2$  and  $\text{CO}_2$

System  $\text{MgCO}_3, \text{Mg}(\text{HCO}_3)_2$  and  $\text{CO}_2$  at  $30^\circ \text{C}$

Solubility in  $\text{H}_2\text{O}$  in equilibrium with  $\text{Mg}(\text{HCO}_3)_2$  and  $\text{CO}_2$ —*Continued*

System  $\text{MgCO}_3, \text{Mg}(\text{HCO}_3)_2$  and  $\text{CO}_2$  at  $30^\circ \text{C}$

Total Mg (gram atoms per liter)	Mg as $\text{MgCO}_3$ Per cent	Mg as $\text{Mg}(\text{HCO}_3)_2$ Per cent
0 00100	50 00	50 00
0 00545	51 92	48 08
0 00667	53 93	46 07

Total salts in solution Grams per liter	$\text{MgCO}_3$		$\text{Mg}(\text{HCO}_3)_2$	
	Grams per liter	Per cent	Grams per liter	Per cent
0 1144	0 0418	36 5	0 0726	63 5
0 6174	0 2368	38 2	0 3806	61 7
0 7479	0 3012	40 3	0 4467	59 7

In a solution near the saturation point and in equilibrium with atmospheric air upwards of 50 per cent of the magnesium is in the form of the normal carbonate When the solution is brought in contact with the solid phase, the proportion of the base combined as normal carbonate falls to about 34 per cent, or lower (Cameron and Briggs, J phys Chem 1901, 5 552-3)

For solubility in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , see *Magnesium hydrogen carbonate*

Scarcely acted upon by  $\text{HCl} + \text{Aq}$  (Senarmont)

The solubility of  $\text{MgCO}_3$  in  $\text{NaCl} + \text{Aq}$  when in contact with ordinary air increases with increasing concentration of  $\text{NaCl}$  up to a maximum, and then decreases (Cameron and Seidell, J phys Chem 1903, 7 579)

Solubility of  $\text{MgCO}_3$  in salts +  $\text{Aq}$  in equilibrium with an atmosphere free from  $\text{CO}_2$

$\text{NaCl} + \text{Aq}, t = 23^\circ$

## Solubility in salts + Aq

g salt added per litre	mg $\text{MgCO}_3$ dissolved per litre
0 0	94 4
0 585 g $\text{NaCl}$	128 3
1 17 g "	134 4
2 93 g "	120 95
0 85 g $\text{NaNO}_3$	122 85
1 70 g "	138 80
4 25 g "	137 20

Solubility in salts + Aq—*Continued*

g salt added per litre	mg $\text{MgCO}_3$ dissolved per litre
0 805 g $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$	145 05
1 61 g "	162 05
4 03 g "	150 75
0 53 g $\text{Na}_2\text{CO}_3$	98 6
1 06 g "	53 5
2 65 g "	15 7
0 51 g $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	47 0
1 02 g "	39 5
2 55 g "	35 3

The solubility of  $\text{MgCO}_3$  in  $\text{CO}_2$ -free water is increased by the addition of  $\text{NaCl}$ ,  $\text{NaNO}_3$ , or  $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  but decreased by the addition of  $\text{Na}_2\text{CO}_3$  or  $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$

(Gothe, Ch Z 1915, 39 306)

Insol in liquid  $\text{NH}_3$  (Franklin, Arr Ch J 1898, 20 828)

Insol in acetone (Naumann, B 304, 37 4329)

Insol in acetone and in methylal (Naumann, C C 1899, II 1014)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1904, 37 3601)

Min *Magnesite* Very sl attacked by warm conc  $\text{HCl} + \text{Aq}$  100 pts  $\text{H}_2\text{O}$  dissolve 0 0027 pt, calculated as  $\text{MgO}$  (Lubavinsky, J Russ Soc 24 3 1911)

Solution in  $\text{H}_2\text{O}$  contains 0 018 g  $\text{MgCO}_3$  and 0 065 g  $\text{CO}_2$  per l at  $20^\circ$  (Wells, J Am Chem Soc 1915, 37 1705)

Solution in  $\text{H}_2\text{O}$  containing 27 2 g  $\text{CaCl}_2$  per l contains 0 028 g  $\text{Mg}$  and 0 086 g  $\text{CO}_2$  per l at  $20^\circ$  (Wells, J Am Chem Soc 1915, 37 1705)

+  $\text{H}_2\text{O}$   
+  $2\text{H}_2\text{O}$  Decomp by suspension in  $\text{H}_2\text{O}$  into basic salt (Engel, C R 100 911)

+  $3\text{H}_2\text{O}$  Small quantities of this salt are wholly dissolved by much  $\text{H}_2\text{O}$  (Biney, J Chem Soc 1891, 121 122)

The solution contains in 100 pts at—

$0^\circ$  6 5° 8° 16°  
0 15 0 153 0 155 0 179 pts  $\text{MgCO}_3 + \text{H}_2\text{O}$  (Nørgaard, 1850)

Decomp by boiling  $\text{H}_2\text{O}$  into a basic salt and  $\text{CO}_2$  100 pts  $\text{H}_2\text{O}$  dissolve 0 1518 pt at  $19^\circ$  (Fritzsch, Pogg 37 304)

Sol in 48 pts  $\text{H}_2\text{O}$ , and decomp by large amt (Fourcroy)

100 pts  $\text{H}_2\text{O}$  dissolve 0 1518 pt at  $1^\circ$ , or sol in 658 pts  $\text{H}_2\text{O}$  at  $19^\circ$  (Beckurts, J B 1881 212)

100 pts  $\text{H}_2\text{O}$  dissolve 0 0812 pt, calculated as  $\text{MgO}$  (Lubavinsky, J Russ Soc 24 3 1911)

Solution in  $\text{H}_2\text{O}$  contains 0 36 g  $\text{Mg}$  and 1 01 g  $\text{CO}_2$  per l at  $20^\circ$  (Wells, J Am Chem Soc 1915, 37 1707)

Solubility in  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  has been determined at  $20^\circ$ ,  $25^\circ$ ,  $30^\circ$ ,  $34^\circ$  and

at  $\text{CO}_2$  pressures corresponding with 0.5 to 30.3%  $\text{CO}_2$  in the gas phase (Leather and Sen, Chem Soc 1915, 108 (2) 13)

Easily sol in acids even when dil

Not decomp by 1 pt  $\text{H}_2\text{SO}_4 + 6$  pts alcohol, or by alcoholic solutions of glacial acetic, racemic, or tartaric acids, but is slowly decomp by alcoholic solution of citric acid, or  $\text{HNO}_3 + \text{abs}$  alcohol (Butin, 1827)

100 pts  $\text{NaCl} + \text{Aq}$  (2.525%) dissolve 0.1250 ppt, calculated as  $\text{MgO}$  (Lubavin)

1%  $\text{Na}_2\text{CO}_3 + \text{Aq}$ , when mixed with 1%  $\text{MgSO}_4 + \text{Aq}$ , cause no ppt, but 1.5–2% solutions ppt this salt (Brandes, 1825)

More sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  than  $\text{CaCO}_3$  Sol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ , but less easily than in  $\text{NH}_4\text{Cl} + \text{Aq}$

### Solubility in $\text{KHCO}_3 + \text{Aq}$ at $t^\circ$

Values are given in mol/litre

	0 8435	0 0119	

The experiments were performed in such a way as to prevent, as far as possible, loss of  $\text{CO}$  from the solutions

(Auerbach, Z Elektrochem 1904, 10 164)

11  $\text{H}_2\text{O}$ , containing 6%  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  and

a little  $\text{NaCl}$ , dissolves 5 g  $\text{MgCO}_3$  (Hunt, Sil Am J (2) 42 49)

More sol in cold alkali borates +  $\text{Aq}$  than in hot (Wittstein)

Sol in  $\text{Na citrate} + \text{Aq}$

+  $4\text{H}_2\text{O}$  Efflorescent

+  $5\text{H}_2\text{O}$  Two modifications

$\alpha$  Plates Sol in 600 pts  $\text{H}_2\text{O}$  at  $0-7^\circ$ , solution gradually separates out  $\text{MgCO}_3 + 2\text{H}_2\text{O}$   $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 3–4 atmos pressure dissolves 9% at  $0-4^\circ$   $\text{MgSO}_4 + \text{Aq}$  dissolves 4% moist salt at 3–4°, and it is easily sol in  $\text{Na}_2\text{CO}_3$ , or  $\text{NaHCO}_3 + \text{Aq}$  (Norgaard)

$\beta$  Prisms More efflorescent than  $\alpha$  Sol in 600 pts  $\text{H}_2\text{O}$  but not in  $\text{MgSO}_4$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$  Both forms are decomp by boiling  $\text{H}_2\text{O}$  (Norgaard)

### Magnesium hydrogen carbonate,

$\text{MgH}_2(\text{CO}_3)_2(?)$

Known only in solution

1 l  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 1 atmos pressure dissolves 23.5 g  $\text{MgCO}_3$  (Bineau)

1 l carbonic acid water dissolves 0.115 g magnesite at  $18^\circ$  and 0.75 m pressure (Cossa, B 2 697)

1 pt  $\text{MgCO}_3$  dissolves in  $\text{H}_2\text{O}$  saturated with  $\text{CO}_2$  at  $5^\circ$  and a pressure of—

1 2 3 4 5 6 atmospheres  
in 161 144 134 100 7 110 76 pts  $\text{H}_2\text{O}$

(Merkel, Techn J B 1867 213)

$\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 3–4 atmos pressure and  $0-4^\circ$  dissolved 9%  $\text{MgCO}_3 + 5\text{H}_2\text{O}$  (Norgaard)

$\text{MgCO}_3 + 3\text{H}_2\text{O}$  is sol in 72.4 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at  $20^\circ$  and ord pressure, 30.5 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 2 atmos pressure, 26.0 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 3 atmos pressure, 21.1 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 4 atmos pressure, 17.09 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat at 5 atmos pressure (Beckurts, J B 1881 212)

1  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  at p pressure and  $t^\circ$  dissolves g  $\text{MgCO}_3$

p atmos	t	$\text{MgCO}_3$	p mm	$t^\circ$	$\text{MgCO}_3$
1 0	19 5	27 79	751	13 4	28 45

6 2	19 2	48 51	765	70	8 1
7 5	19 5	51 2	765	82	4 9
9 0	18 7	56 5	765	91	2 4
			765	100	0 0

(Engel and Ville, C R 93 34)

The low figures of other observers are due to their using basic carbonates By very careful experiments it was found that 1 l  $\text{H}_2\text{O}$

sat with  $\text{CO}_2$  at 1 atmos pressure and  $t^\circ$  dissolved the following amts of  $\text{MgCO}_3$

$t^\circ$	$\text{MgCO}_3$	$t^\circ$	$\text{MgCO}_3$	$t^\circ$	$\text{MgCO}_3$
3 5	35 6	18	22 1	40	22 1
12	26 5	30	15 8	50	9 5

(Engel, C R 100 444)

1 9540 g are sol 1 l  $\text{H}_2\text{O}$  at  $15^\circ$  (Treadwell and Reuter, Z anorg 1898, 17 202)

$\text{MgH}_2(\text{CO}_3)_2$  is not stable except in the presence of free  $\text{CO}_2$

At  $15^\circ$  and 760 mm, a solution having the partial pressure of  $\text{CO}_2=0$ , contains 1 9540 g  $\text{MgH}_2(\text{CO}_3)_2$  and 0 7156 g  $\text{MgCO}_3$  per liter (Treadwell and Reuter, Z anorg 1898, 17 204)

Solubility of  $\text{MgH}_2(\text{CO}_3)_2$  in  $\text{H}_2\text{O}$  containing carbonic acid, at  $15^\circ$

% carbonic acid in the gas at $0^\circ$ and 760 mm	partial pressure mm Hg	mg free $\text{CO}_2$	mg $\text{MgH}_2(\text{CO}_3)_2$ in 100 cc of the solution	mg $\text{MgCO}_3$ in 100 cc of the solution	mg Mg

(Cameron and Seidell)

**Magnesium potassium carbonate,**  
 $\text{MgK}_2(\text{CO}_3)_2+4\text{H}_2\text{O}$

Quickly decomp by cold  $\text{H}_2\text{O}$  (De lle, A ch (3) 33 87)

Ppt Decomp by  $\text{H}_2\text{O}$  (Reynolds, C m Soc 1898, 73, 264)

$\text{MgKH}(\text{CO}_3)_2+4\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  but decomp thereby into an insol basic Mg carbonate, and  $\text{MgH}_2(\text{CO}_3)_2$  and  $\text{KHCO}_3$ , which dissolve (Berzelius)

**Magnesium rubidium hydrogen carbonate,**  
 $\text{MgRbH}(\text{CO}_3)_2+4\text{H}_2\text{O}$

Decomp in the air (Erdmann, A 97, 294 75)

**Magnesium sodium carbonate,  $\text{MgCO}_3$**   
 $\text{Na}_2\text{CO}_3$

Quickly decomp with  $\text{H}_2\text{O}$  (Dewill, A ch (3) 33 89)

+15 $\text{H}_2\text{O}$  (Norgaard)

**Magnesium sodium carbonate/sodium chloride,  $\text{MgCO}_3$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{NaCl}$**

Decomp by  $\text{H}_2\text{O}$  (de Schulten, C R 1896, 122 1427)

**Manganous carbonate,  $\text{MnCO}_3$**

Permanent Practically insol in  $\text{H}_2\text{O}$  sol in  $\text{H}_2\text{CO}_3+\text{Aq}$  and in acids generally

1 l  $\text{H}_2\text{O}$  dissolves 0 065 g at  $25^\circ$  (A no and Valla, Att Accad I inc 1911 20, II 6)

Insol in liquid  $\text{NH}_3$  (Franklin, Am J 1898, 20 828)

Insol in ethyl acetate (Naumann B 1910, 43 314)

Min Rhodochrosite

+ $\frac{1}{2}$ , or 1 $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  So in acids Sol in  $\text{H}_2\text{CO}_3+\text{Aq}$  1 pt  $\text{MnCO}_3$  requires 2000 pts  $\text{H}_2\text{CO}_3+\text{Aq}$  for solution

(Lassaigne) Sol in 7680 pts  $H_2O$ , and 3840 pts  $H_2O$  containing  $CO_2$  (Jahn) When freshly precipitated is sol in  $NH_4$  salts + Aq (Wittstein) Not more sol in  $H_2O$  containing  $Na_2CO_3$  or  $K_2CO_3$  than in pure  $H_2O$  (Ebelmen) Insol in  $NH_4Cl$ , or  $NH_4NO_3$  + Aq (Brett)

Sol in ferric salts + Aq, with evolution of  $CO_2$  and pptn of  $Fe_2C_6H_5$  (Fuchs)

Not pptd in presence of Na citrate (Spiller)

#### Manganous potassium carbonate,

Ppt Decomp by  $H_2O$  alone

Sl sol in  $Mn(C_2H_3O_2)_2$  + Aq or  $K_2CO_3$  + Aq (Reynolds, Chem Soc 1898, 73 264)

#### Manganous carbonate hydroxylamine,

Ppt Sol in acids (Goldschmidt and Syngros, Z anorg 5 138)

#### Mercurous carbonate, $Hg_2CO_3$

Ppt Decomp by hot  $H_2O$  Sol in hot or warm  $NH_4Cl$  + Aq, but less easily than mercuric carbonate, less sol in  $NH_4NO_3$  + Aq (Brett, 1837)

Sl sol in  $K_2CO_3$  + Aq, partially sol with decomp in  $NH_4OH$  + Aq (Wittstein)

#### Mercuric carbonate, basic, $4HgO, CO$

Can be washed with cold  $H_2O$  without decomp (Millon, A ch (3) 19 368)

$3HgO, CO_2$  Insol in cold  $H_2O$  Sol in  $CO_2$  + Aq, sl sol in  $K_2CO_3$  + Aq Easily sol in  $NH_4Cl$  + Aq (Berzelius)

#### Neodymium potassium carbonate, $Nd_2(CO_3)_3,$

Ppt Sol in 30%  $K_2CO_3$  + Aq (Meyer, Z anorg 1904, 41 105)

#### Neodymium sodium carbonate, $2Nd_2(CO_3)_3,$

Ppt Easily decomp

Sl sol in conc  $Na_2CO_3$  + Aq (Meyer, Z anorg 1904, 41 106)

#### Nickel carbonate, basic, $3NiO, CO_2 + 5H_2O$

Min Zarautic Easily sol in  $HCl$  + Aq

Pptd nickel carbonate is a basic salt of varying composition Insol in  $H_2O$  or  $H_2CO_3$  + Aq Sol in acids Sol in  $(NH_4)_2CO_3$  + Aq,

very sl sol in  $Na_2CO_3$  + Aq, sol in warm  $NH_4Cl$  + Aq, and  $KCN$  + Aq (Rose)

Not pptd in presence of Na citrate (Spiller)

#### Nickel carbonate, $NiCO_3$

1 l  $H_2O$  dissolves 0.0925 g at 25% (Agno and Valla, Att Accad Linc 1911, 20, II 706)

Not attacked by cold conc  $HCl$ , or  $HNO_3$  + Aq (Senarmont, A ch (3) 30 138)

+  $6H_2O$  Sol in acids (Deville, A ch (3) 35 446)

See also Carbonate, nickel, basic

#### Nickel potassium carbonate, $NiCO_3, K_2CO_3 + 4H_2O$

Ppt (Deville, A ch (3) 33 96)

$NiCO_3, KHCO_3 + 4H_2O$  Decomp by  $H_2O$ , but may be washed by  $KHCO_3$  + Aq without decomp (Rose, Pogg 84 566)

#### Nickel sodium carbonate, $NiCO_3, Na_2CO_3 + 10H_2O$

Ppt (Deville)

#### Nickel carbonate hydroxylamine, $2Ni(OH)_2,$

Ppt (Goldschmidt and Syngros, Z anorg 1894, 5 143)

Ppt (Goldschmidt and Syngros)

#### Palladium carbonate, $PdCO_3, 9PdO + 10H_2O$

Insol in  $H_2O$ , partly sol in  $NH_4OH$  + Aq, sl sol in  $Na_2CO_3$  + Aq, sol in acids (Kane, 1842)

#### Potassium carbonate, $K_2CO_3$

Deliquescent Verv sol in  $H_2O$  with evolution of heat

Sol in 1.05 pts  $H_2O$  at 3 0.962 pt at 6 0.900 pt at 12.6 0.747 pt at 26 and 0.490 pt at 70 (Osann)

Sol in 0.92 pt  $H_2O$  (M R and P)

Sol in 0.922 pt  $H_2O$  at 15 (Gerlach)

Sol in 1 pt  $H_2O$  (Ahl)

100 pts  $H_2O$  at 15 dissolves 100 pts  $K_2CO_3$  (Ure's Dict)

Solubility in 100 pts  $H_2O$  at  $t^\circ$

2 73	56 50	40 77			

(Frankforter and Cohen, J Am Chem Soc 1914, **36** 1121)

Insol in benzonitrile (Naumann, B 1914, **47** 1370)

Insol in methyl acetate (Naumann, B 1909, **42** 3790), ethyl acetate (Naumann, B 1910, **34** 314)

Sol in phenol  
Sol in 13.5 pts glycerine of 1.225 sp gr (Vogel, N Rept 16 557)

100 g sat  $K_2CO_3$  + sugar + Aq contains 22.44 g  $K_2CO_3$  and 56 g sugar at 31.25° (Kohler, Z Ver Zuckeind 1897, **47** 447)

+  $H_2O$   
+  $1\frac{1}{2}H_2O$  Very deliquescent (Pohl)  
Deliquescent only in very moist air (Stedeler)

Sol in  $H_2O$  with evolution of heat (Pohl)  
Sol at 17.6° with absorption of heat, at 32° with evolution of heat, and at 25° with neither absorption nor evolution of heat (Berthelot, C R **78** 1722)

Sat solution of  $K_2CO_3 + 1\frac{1}{2}H_2O$  in  $H_2O$  contains 53.27 g anhydrous  $K_2CO_3$  in 100 g solution at 30° (de Wail, Dissert 1910)

+  $2H_2O$  Salt usually given as containing  $1\frac{1}{2}H_2O$  contains  $2H_2O$  (Gerlach, Z anal **26** 460)

Sat solution of  $K_2CO_3 + 2H_2O$  contains 112 g anhydrous  $K_2CO_3$  in 100 g  $H_2O$  at 25° (Osaki, J Tok Ch Soc 1911, **32** 870)

+  $4H_2O$  Not deliquescent in closed vessels (Gerlach, l c)

Potassium hydrogen carbonate,  $KHCO_3$

Not deliquescent

Sol in 3.5 pts  $H_2O$  at 15° (Redwood) Sol in 4 pts  $H_2O$  at moderate temperatures (Bergmann in 0.8333 pt boiling  $H_2O$  (Pelletier) in 4 pts col 1.2 pts boiling  $H_2O$  (M R and P s Pharm) 4 pts  $H_2O$  at 18.75° (Abl) 100 pts  $H_2O$  at dissolve 30 pts and at 100 83 pts (Urc s Diet 100 pts  $H_2O$  at 10-11.2° dissolve 26.1 pts K and the sp gr of solution is 1.1536 (Anthon 161 216)

100 pts  $H_2O$  dissolve at—

0°	10°	20°	30°
19 61	23 23	26 91	30 57 pts $KHCO_3$
40°	50°	60°	70°
34 15	37 92	41 35	45 24 pts $KHCO_3$

(Poggiale, A ch (3) 8 468)

100 pts  $H_2O$  dissolve pts  $KHCO_3$  at

t°	Pts $KHCO_3$	t°	Pts K <sub>2</sub>	O <sub>3</sub>
0	22 4	40	45	
20	33 2	60	46	

(Dibbitts, J pr (2) 10 417)

Sp gr of  $KHCO_3$  + Aq at 15° contains 5%  $KHCO_3$  = 1.0328, containing 10% K<sub>2</sub>CO<sub>3</sub> = 1.0674 (Kohlrausch, Z anal **28** 472)

Sol in 1200 pts boiling alcohol (Berthelot) Insol in alcohol (Dumas)

100 pts  $H_2O$  dissolve 19.3 pts  $KHCO_3$  and 8.3 pts  $NaHCO_3$  if the sat solution of is sat with former, and 26.1 pts  $KHCO_3$  and 6.0 pts  $NaHCO_3$  if the sat solution of the former is sat with the latter, all at 10° (Mulder, J B **1866** 67)

Insol in sat  $K_2CO_3$  + Aq (Engel, C R **102** 365)

Solubility of  $KHCO_3 + KNO_3$  in  $H_2O$  in atmosphere of  $CO_2$

1 litre of the solution contains			
at 11°		at 20°	
Mol $KHCO_3$	Mol $KNO_3$	Mol $KHCO_3$	Mol $KNO_3$
0 60	2 33	0 60	3
0 39	2 17	0 59	2
0 76	2 03	1 53	2
1 16	1 92	1 91	2
1 55	1 81		

This case is complicated by the fact that  $KNO_3$  is more sol in  $H_2O$  sat with  $CO_2$  than in pure  $H_2O$

(Louden, C R 1900, **131** 261)

Insol in benzonitrile (Naumann, B **47** 1370)

Insol in methyl acetate (Naumann, B 1909, **42** 3790) ethyl acetate (Naumann, B 1910, **43** 314)

Potassium praseodymium carbonate,  $K_2O_3$ ,  $Pr(CO_3)_3 + 12H_2O$

Ppt Sol in 0%  $K_2CO_3$  + Aq (Mey, Z inorg 1904, **41** 104)

**Potassium samarium carbonate**,  $K_2CO_3$ ,  $Sm_2(CO_3)_3 + 12H_2O$   
(Cleve)

**Potassium silver carbonate**,  $KAgCO_3$   
Decomp by  $H_2O$  (de Schulten, C R 105 811)

Ppt Decomp by  $H_2O$  (Reynolds, Chem Soc 1898, 73 265)

**Potassium sodium carbonate**,  $KNaCO_3 + 6H_2O$

Slightly efflorescent Sol in 0.75 pt  $H_2O$  at  $12.5^\circ$ , in 0.54 pt  $H_2O$  at  $15^\circ$

Sat solution at  $15^\circ$  has sp gr = 1.366 (Stolba, J pr 94 406)

Decomp by recrystallizing from  $H_2O$ , but crystallizes undecomposed from sat  $K_2CO_3 + Aq$

Sol in  $H_2O$  (Osaka, C A 1911 2601)

See  $K_2CO_3 + Na_2CO_3$  under  $Na_2CO_3 + 3H_2O$  (Kremann and Zitek, M 1909

30 317) Does not exist (Osaka)

$K_2CO_3, 2Na_2CO_3 + 18H_2O$  Sl efflorescent Very sol in  $H_2O$  (Marignac)

**Potassium stannous carbonate**,  $K_2CO_3, 2SnCO_3 + 2H_2O$

Decomp by  $H_2O$  (Deville)

**Potassium uranyl carbonate**,  $2K_2CO_3, (UO_2)_2CO_3$

Sol without decomp in 13.5 pts  $H_2O$  at  $15^\circ$ , and in somewhat less warm  $H_2O$  Sol in boiling  $H_2O$  with decomp

More sol in  $K_2CO_3$ , or  $KHCO_3 + Aq$  than in  $H_2O$  (Rose)

Insol in alcohol (Ebelmen, A ch (3) 5 189)

**Potassium zinc carbonate**,  $4K_2O, 6ZnO, 11CO_2 + 8H_2O$

Can be washed with cold  $H_2O$  without decomp (Deville, A ch (3) 33 99)

**Praseodymium carbonate**,  $Pr_2(CO_3)_3 + 8H_2O$

Sol in  $H_2O$  (von Schule, Z anorg 1898, 18 362)

**Praseodymium sodium carbonate**,  $2Pr_2(CO_3)_3, 3Na_2CO_3 + 22H_2O(?)$

Ppt Easily decomp (Meyer, Z anorg 1904, 41 105)

**Radium carbonate**

Less sol in  $H_2O$  than corresponding Ba comp (Curie, Dissert 1903)

**Rubidium carbonate**,  $Rb_2CO_3$

Very deliquescent, and sol in  $H_2O$  100 pts absolute alcohol dissolve 0.74 pt  $Rb_2CO_3$  (Bunsen)

**Rubidium hydrogen carbonate**,  $RbHCO_3$

Not deliquescent Easily sol in  $H_2O$  (Bunsen)

**Samarium carbonate**,  $Sm(CO_3)_3 + 3H_2O$

Insol in  $H_2O$  (Cleve, Bull Soc (2) 43 168)

**Samarium sodium carbonate**,  $Sm(CO_3)_3, Na_2CO_3 + 16H_2O$

Ppt (Cleve)

**Scandium carbonate**,  $Sc(CO_3)_3 + 12H_2O$

(Crookes, Roy Soc Proc 1908, 80, A 518)

**Scandium sodium carbonate**,  $Sc_2(CO_3)_3, 4Na_2CO_3 + 6H_2O$

Difficultly sol in  $H_2O$

Sol in cold, less sol in hot alkali carbonates + Aq (R Meyer, Z anorg 1910, 67 410)

**Silver carbonate**,  $Ag_2CO_3$

Somewhat sol in  $H_2O$  Sol in 31,978 pts  $H_2O$  at  $15^\circ$  (Kremers, Pogg 85 243) 1 g  $Ag_2CO_3$  dissolves in 2 l boiling  $H_2O$  (Joulin, A ch (4) 30 260)

Solubility in  $H_2O$  at  $25^\circ = 1.16 \times 10^{-4}$  mol/l (Spencer and Le Pla, Z anorg 1910, 65 14)

1 l  $H_2O$  at  $25^\circ$  dissolves  $1.2 \times 10^{-4}$  gram atoms of silver (Abegg and Cox, Z phys Ch 1903, 46 11)

Insol in  $H_2CO_3 + Aq$  (Bergman) Sol in 961 pts  $H_2CO_3 + Aq$  (Lassaigne) 1 l sat  $H_2CO_3 + Aq$  dissolves 0.846 g  $Ag_2CO_3$  at  $15^\circ$  (Johnson, C N 54 75)

Sol in  $(NH_4)_2CO_3 + Aq$  or  $NH_4OH + Aq$ , sl sol in  $K_2CO_3 + Aq$  (Wittstein) Easily sol in  $Na_2S_2O_3 + Aq$  (Herschel, 1819) Sol in hot  $NH_4Cl + Aq$ , and sl sol in  $NH_4NO_3 + Aq$  (Brett, 1837) Not pptd in presence of Na citrate (Spiller) Decomp by  $HCl + Aq$ , and chlorides + Aq

Somewhat sol in conc  $NaNO_3 + Aq$  (de Coninck, Belg Acad Bull 1909, 333)

Insol in liquid  $NH_3$  (Franklin, Am Ch J 1898, 20 829)

Insol in alcohol

Insol in methyl acetate (Naumann B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

**Silver carbonate ammonia**

Easily sol in  $H_2O$  Sol in  $NH_4OH + Aq$  from which it is precipitated by absolute alcohol (Berzelius)

$Ag_2CO_3, 4NH_3$  Ppt Insol in alcohol (Keen, C N 31 231)

**Sodium carbonate**,  $Na_2CO_3$

*Anhydrous* Sol in  $H_2O$  with evolution of heat

Sol in 967 pts  $H_2O$  at  $15^\circ$  (Thomson, 1831)  $H_2O$  at  $14.6^\circ$  dissolve 7.74 pts  $Na_2CO_3$  or 20.64 pt  $Na_2CO_3, 10H_2O$  is sol in rather less than 1 pt boiling  $H_2O$  (Thomson, 1831)

Sol in 2 pts  $H_2O$  (Berzeman) Sol in 2 pts  $H_2O$  at  $18.7^\circ$  (Abel)

Solubility in 100 pts H <sub>2</sub> O at t°						Possesses four different degrees of solubility, according to different states of mole constitution and degrees of hydration (L A ch (3) 44 330 )	Little more sol at 34-38° than at 104° maximum of solubility is probably at (Lowel)	out 5°

(Mulder, Schenk Verhandl 1864 120 )

Unable to form supersaturated solution  
Supersat Na<sub>2</sub>CO<sub>3</sub>+Aq (2 pts Na<sub>2</sub>CO<sub>3</sub>+10H<sub>2</sub>O 1 pt H<sub>2</sub>O) may be kept in a closed with cotton wool (Schroder) ask

When supersat Na<sub>2</sub>CO<sub>3</sub>+Aq is exposed to low temperatures, the 10H<sub>2</sub>O salt crystallizes out, but under other circumstances two other salts are formed, each containing 7H<sub>2</sub>O one is four times as sol at 10° as the 10H<sub>2</sub>O salt, and the other twice as sol See above (Lowel, A ch (3) 33 337 )

See also Na<sub>2</sub>CO<sub>3</sub>+H<sub>2</sub>O, 7H<sub>2</sub>O, and 10 H<sub>2</sub>O

(Poggiale, A ch (3) 8 468)

Min Froma, Urao Ste  $\text{Na}_3\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$

**Trisodium hydrogen carbonate**,  $\text{Na}_3\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$

True formula of "Trona" and "Urao" (Zepharovich, Zeit Kryst **13** 135, de Mondesir, C R **104** 1505)

**Sodium thorium carbonate**,  $3\text{Na}_2\text{CO}_3, \text{Th}(\text{CO}_3)_2 + 12\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Cleve)

**Sodium uranyl carbonate**,  $2\text{Na}_2\text{CO}_3, (\text{UO}_2)\text{CO}_3$

Slowly sol in  $\text{H}_2\text{O}$  Solution sat at  $15^\circ$  has sp gr = 1.161 (Anthon, Dingl **156** 207)

**Sodium yttrium carbonate**,  $\text{Na}_2\text{CO}_3, \text{Y}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$

Ppt Not decomp by cold  $\text{H}_2\text{O}$  (Cleve)

**Sodium zinc carbonate**,  $3\text{Na}_2\text{O}, 8\text{ZnO}, 11\text{CO}_2 + 8\text{H}_2\text{O} = 3\text{Na}_2\text{CO}_3, 8\text{ZnCO}_3 + 8\text{H}_2\text{O}$

Sl decomp by pure  $\text{H}_2\text{O}$  (Wohler)

Less easily decomp by  $\text{H}_2\text{O}$  than most double carbonates (Deville, A ch (3) **33** 101)

$\text{Na}_2\text{O}, 3\text{ZnO}, 4\text{CO}_2 + 3\text{H}_2\text{O}$  (Kraut, Z anorg **1897**, **13** 13)

**Sodium carbonate sulphite**,  $\text{Na}_2\text{CO}_3, 2\text{Na}_2\text{SO}_3 + 21\text{H}_2\text{O}$

Sol in hot  $\text{H}_2\text{O}$ , sl sol in cold  $\text{H}_2\text{O}$  (Johnson, J Soc Chem Ind **1895**, **14** 271)

**Strontium carbonate**,  $\text{SrCO}_3$

Sol in 18,045 pts  $\text{H}_2\text{O}$  at ordinary temp (Fresenius)

Sol in 12,522 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Kremers, Pogg **85** 247)

Sol in 33,000 pts  $\text{H}_2\text{O}$  (Bineau, C R **41** 511)

Less sol in  $\text{H}_2\text{O}$  than  $\text{SrSO}_4$  (Dulong)

Sol in 1536 pts boiling  $\text{H}_2\text{O}$  (Hcpe, Edinb Trans **4** 5)

Calculated from electrical conductivity of  $\text{SrCO}_3 + \text{Aq}$ ,  $\text{SrCO}_3$  is sol in 121,760 pts  $\text{H}_2\text{O}$  at  $8^\circ$  and 91,468 pts at  $24.3^\circ$  (Holleman, Z phys Ch **12** 130)

1 l  $\text{H}_2\text{O}$  dissolves 11 mg  $\text{SrCO}_3$  at  $18^\circ$  (Kohlrausch and Rose, Z phys Ch **12** 241)  
"Solubility product" =  $15.67 \times 10^{-10}$  mol litic (McCoy and Smith, J Am Chem Soc **1911**, **33** 473)

Sol in 833 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  at  $10^\circ$  (Gmelin)

Sol in 56,545 pts  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$

Quite sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ , but reprecipitated on addition of  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Fresenius)

Partially decomp by boiling with aqueous solutions of  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{SO}_3$ ,  $\text{Na}_2\text{SO}_3$ ,  $(\text{NH}_4)_2\text{SO}_3$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,

$\text{Na}_2\text{AsO}_3$ ,  $\text{K}_2\text{AsO}_3$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$  and  $\text{K}_2\text{CrO}_4$  Decomp is complete with the  $\text{NH}_4$  salts (Dulong, A ch **82** 286)

Sl decomp by  $\text{Na}_2\text{SO}_4$ , or  $\text{K}_2\text{SO}_4 + \text{Aq}$  (Persoz)

Easily sol in  $\text{NH}_4$  chloride, nitrate, or succinate +  $\text{Aq}$ , but less so than  $\text{BaCO}_3$  (Fresenius) Sol in ferric salts +  $\text{Aq}$ , with pptn of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  Sol in Na citrate +  $\text{Aq}$  (Spiller) Not decomp by a mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 6 pts absolute alcohol, or by alcoholic solutions of tartaric, racemic, citric or glacial acetic acids, immediately decomp by  $\text{HNO}_3$  + absolute alcohol, or  $\text{H}_2\text{C}_2\text{O}_4$  + abs alcohol

Solubility of  $\text{SrCO}_3$  in  $\text{NH}_4\text{Cl} + \text{Aq}$

C	I	L	(	I

Insol in absolute alcohol (I), and ether (C)

Insol in acetone and pyridine (Naumann, B **1904**, **37** 4329)

Insol in methyl acetate (Naumann, B **1909**, **42** 3790)

**Thallos carbonate, acid**,  $\text{HlO}, 2\text{CO}_2$

Rather easily sol in cold  $\text{H}_2\text{O}$  (Carstensen)

**THCO<sub>3</sub>** (Giorgis, Gazz ch it 1894, 24 474-479)

**Thalious carbonate platinocyanide**,  $Tl_2CO_3 \cdot Tl_2Pt(CN)_4$

Sl sol in hot, insol in cold H<sub>2</sub>O (Friswell, Chem Soc (2) 9 461)

**Thorium carbonate, basic**,  $2ThO_3 \cdot CO_2 + 3H_2O$

Insol in CO<sub>2</sub>+Aq, but sol in excess of alkali carbonates+Aq, if conc

**Tin (stannous) carbonate**,  $2SnCO_3 \cdot CO_2$

Easily decomp on air, insol in H<sub>2</sub>O or H<sub>2</sub>CO<sub>3</sub>+Aq (Deville, A ch (3) 35 448)

**Uranyl carbonate, basic**,  $5(UO_2)(OH)_2 \cdot 3(UO_2)CO_3 + 6H_2O$

Ppt (Seubert and Elten, Z anorg 1893, 4 80)

**Ytterbium carbonate, basic**,  $Yb(OH)CO_3 + H_2O$

Ppt (Cleve, Z anorg 1902, 32 146)

**Ytterbium carbonate**,  $Yb_2(CO_3)_3 + 4H_2O$

Ppt (Cleve, Z anorg 1902, 32 146)

**Yttrium carbonate**,  $Y_2(CO_3)_3 + 3H_2O$

Insol in H<sub>2</sub>O, very sl sol in H<sub>2</sub>CO<sub>3</sub>+Aq Sol in SO<sub>2</sub>+Aq and all mineral acids Sol in NH<sub>4</sub> salts, and alkali carbonates+Aq to some extent More sol in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq than in K<sub>2</sub>CO<sub>3</sub>+Aq (Berlin) More sol in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq than cerium, but 5 or 6 times less sol than glucinum carbonate (Vauquelin) Sol in large excess of KHCO<sub>3</sub>+Aq (Rose) Slowly sol in NH<sub>4</sub> salts+Aq (Berzelius)

**Zinc carbonates, basic**,  $8ZnO \cdot CO_2 + 2H_2O$ ,  $5ZnO \cdot 2CO_2 + 3$ , or  $7H_2O$ ,  $3ZnO \cdot CO_2 + H_2O$ ,  $11ZnO \cdot 4CO_2 + 14H_2O$ ,  $14ZnO \cdot 5CO_2 + 9H_2O$ ,  $2ZnO \cdot CO_2 + H_2O$ ,  $8ZnO \cdot 3CO_2 + 5H_2O$ , etc

All ppts formed from Zn salts and carbonates+Aq Sol in 2000-3000 pts cold H<sub>2</sub>O, separates out on heating and does not redissolve on cooling (Schindler) Sol in 20,895 pts H<sub>2</sub>O at 15° (Kremers, Pogg 85 248) Sol in 44,600 pts H<sub>2</sub>O at ord temp (Fresenius)

Sol in 1428 pts sat H<sub>2</sub>CO<sub>3</sub>+Aq (Las saigne) Sol in 189 pts H<sub>2</sub>CO<sub>3</sub>+Aq sat at 4-6 atmos (Wagner, Z anal 6 107) Easily sol in KOH, NaOH, NH<sub>4</sub>OH, (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq, and in acids Somewhat sol in alkali bicarbonates and NH<sub>4</sub> salts+Aq (Fresenius) Sol in hot (Fuchs), also cold (Brett, 1837) NH<sub>4</sub>Cl+Aq, less sol in NH<sub>4</sub>NO<sub>3</sub>+Aq (Brett)

Sol in all NH<sub>4</sub> salts+Aq excepting (NH<sub>4</sub>)<sub>2</sub>S +Aq (Terrel, Bull Soc (2) 9 441)

Insol in Na CO<sub>3</sub>, or K CO<sub>3</sub>+Aq Sol in ferric salts+Aq with pptn of Fe<sub>2</sub>O<sub>3</sub>·H<sub>2</sub>O (Fuchs, 1831)

The carbonates described by Boussingault, Wackenroder, Rose, and probably all salts between ZnO, CO<sub>2</sub> and 5ZnO, 2CO<sub>2</sub>, are mixtures (Kraut, Z anorg 1897, 13 1-15)

$3ZnO \cdot CO_2 + 2H_2O$  Min *Zinc bloom*, *Hydrozincite*

$ZnCO_3 \cdot 3ZnO \cdot H_2O$  Min *4uricalcule*

**Zinc carbonate**,  $ZnCO_3$

1 l H<sub>2</sub>O at 15° dissolves 0.01 g, 1 l H<sub>2</sub>O dissolves  $1.64 \times 10^{-4}$  mols, or 0.206 g ZnCO<sub>3</sub> at 25° (Ageno and Valla, Att acc Linc 1911, 20, II 706)

1 l 5.85% NaCl+Aq dissolves 0.0586 g, 1 l 7.45% KCl+Aq dissolves 0.0477 g ZnCO<sub>3</sub> (Essen, Gm -K 4, 1 680)

Sol in acids, KOH+Aq, and NH<sub>4</sub> salts+Aq

Sol in H<sub>2</sub>CO<sub>3</sub>+Aq

Solubility in various salts+Aq

Solvent	g ZnCO <sub>3</sub> sol in 1 l of the solvent

(Ehlert, Z Elektrochem 1912, 18 728)

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 830)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Min *Calamine*, *Smithsonite*

*Calamine* is sol in NH<sub>4</sub>OH+Aq only in the presence of NH<sub>4</sub> salts (Brandhorst, Zeit angew Ch 1904, 17 513)

+ $\frac{1}{2}$ H<sub>2</sub>O (Mikusch, Z anorg 1908, 56 366)

+H O (Belar, Zeit kryst 1890, 17 126)

**Zinc carbonate ammonia**,  $ZnCO_3 \cdot NH_3$

Slowly decomp by H O, but not on the air or by boiling with alcohol (Favre, A ch (3) 10 474)

**Zinc carbonate hydroxylamine**,  $ZnCO_3 \cdot 2NH_2O$

Insol in H O Decomp by acids (Goldschmidt and Syngros, Z anorg 5 129)

**Zirconium carbonate**,  $3ZrO \cdot CO + 6H_2O$

Decomp by hot H O, all CO being given off (Hermann)

Sol in alkali carbonates+Aq

**Percarbonic acid***See* Percarbonic acid**Carbonic anhydride, CO<sub>2</sub>***See* Carbon dioxide**Carbonophosphoric acid****Potassium carbonophosphate, (K<sub>2</sub>HPO<sub>4</sub>)<sub>2</sub>, 2CO<sub>2</sub>, 2KHCO<sub>3</sub>**

Known only in solution (Barillé, C R 1903, 137 566)

**Carbonyl bromide, COBr<sub>2</sub>**Decomp by H<sub>2</sub>O (Besson, C R 1895, 120 192)**Carbonyl platinumous bromide, CO, PtBr<sub>2</sub>**Sol in H<sub>2</sub>O with almost instant decomp  
Sol in absolute alcohol (Pullinger, Chem Soc 59 603)Quite easily sol in hot C<sub>6</sub>H<sub>6</sub>, insol in ligroine, and can be crystallized from CCl<sub>4</sub>  
Very easily sol in HBr+Aq (Mylus and Forster, B 24 2432)**Carbonyl bromochloride, COClBr**

Decomp by H O (Besson)

**Carbonyl chloride, COCl<sub>2</sub>***Phosgene* Cold H<sub>2</sub>O dissolves 1-2 vols COCl<sub>2</sub> gas with slow decomposition Alcohol decomp immediately Immediately absorbed by KOH, or NH<sub>4</sub>OH+Aq Very sol in glacial HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, benzene, and most liquid hydrocarbons (Berthelot, Bull Soc (2) 13 14)Sol in SCl<sub>2</sub>1 vol AsCl<sub>3</sub> absorbs 10 vols COCl<sub>2</sub>**Dicarbonyl cuprous chloride, Cu<sub>2</sub>Cl<sub>2</sub>, 2CO+4H<sub>2</sub>O**

Decomp by air (Jones, Am Ch J 1899, 22 305)

**Carbonyl platinumous chloride, 2COCl, PtCl**Sl deliquescent Easily sol in H<sub>2</sub>O without decomp, sl sol in alcohol Almost insol in CCl<sub>4</sub> (Pullinger, Chem Soc 59 600)**Monocarbonyl platinumous chloride, CO, PtCl**Decomp by H<sub>2</sub>O and alcohol, sol in hot CCl<sub>4</sub> (Schutzenberger, A ch (4) 15 100)

Sol in conc HCl+Aq (Mylus and Forster)

**Dicarbonyl platinumous chloride, 2CO, PtCl<sub>2</sub>**Decomp by H<sub>2</sub>O and alcohol Sol in CCl<sub>4</sub> (Schutzenberger)Decomp by conc HCl+Aq into CO and CO, PtCl<sub>2</sub> (Mylus and Forster)**Sesquicarbonyl platinumous chloride, 3CO, 2PtCl<sub>2</sub>**Decomp by H<sub>2</sub>O or alcohol Much more sol in CCl<sub>4</sub> than 2CO, PtCl.**Carbonyl platinumous iodide, CO, PtI<sub>2</sub>**Not hygroscopic Insol in, but slowly decomp by, H<sub>2</sub>O Easily sol in benzene ether, also in alcohol, which decomp on warming, sol in HI+Aq (Mylus and Forster)**Carbonyl platinumous sulphide, CO, PtS**

Easily decomp Insol in ordinary solvents (Mylus and Forster)

**Carbonyl sulphide, COS**H<sub>2</sub>O absorbs 1 vol COSAbsorption of COS by H<sub>2</sub>O at t°

t°	Coefficient of absorption
0	1 333
10	0 835
20	0 561
30	0 403

(Winkler, Z phys Ch 1906, 55 351)

1 ccm H<sub>2</sub>O at 13.5° and 756 mm pr dissolves 0.8 ccm COS (Hempel, Z angew ch 1901, 14 867)1 ccm of a hydrochloric acid solution of Cu<sub>2</sub>Cl<sub>2</sub> absorbs about 0.2 ccm COS (Hempel)**Carbonyl ferrocyanhydric acid**H<sub>3</sub>Fe(CO)(CN)<sub>5</sub>Very sol in H<sub>2</sub>O, decomp on heating (Muller, A ch (6) 17 94)**Cobalt carbonyl ferrocyanide**Sl sol in H<sub>2</sub>O, very sol in dil HNO<sub>3</sub>+ (M)**Cupric carbonyl ferrocyanide,**Cu<sub>2</sub>[Fe(CO)(CN)<sub>5</sub>]Insol in H<sub>2</sub>O H<sub>2</sub>SO<sub>4</sub> or dil HNO<sub>3</sub>+ (M)**Iron (ferric) carbonyl ferrocyanide,**Fe<sub>3</sub>[Fe(CO)(CN)<sub>5</sub>]Insol in H<sub>2</sub>O Sol in HCl O<sub>4</sub>+Aq Insol in acetic, lactic, succinic, tartaric, and citric acids+Aq but easily sol in the neutral salts of those acids Insol in KCl, or KNO<sub>3</sub>+Aq but sensibly sol in NaHPO<sub>4</sub>+Aq Insol even on warming in very dil H<sub>2</sub>SO<sub>4</sub> or H<sub>2</sub>P<sub>4</sub>+Aq (Muller)**Potassium carbonyl ferrocyanide,**K<sub>3</sub>Fe(CO)(CN)<sub>5</sub>+3½H<sub>2</sub>O100 pts H<sub>2</sub>O dissolve 148 pts at 0° (Muller, C R 104 992)

**Silver carbonyl ferrocyanide,**

Insol in  $\text{H}_2\text{O}$ , sl sol in dil  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3$ +Aq, scarcely attacked by conc  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ +Aq (Muller)

**Sodium carbonyl ferrocyanide,**

Sol in  $\text{H}_2\text{O}$  (Muller)

**Uranyl carbonyl ferrocyanide,**

Sl sol in  $\text{H}_2\text{O}$ , but more easily if  $\text{H}_2\text{O}$  is acidified with  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$

**Cericotungstic acid****Ammonium cericotungstate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{Ce}_2\text{O}_3$ ,  $16\text{WO}_3$ + $2\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$ , but decomp by boiling therewith (Smith, J Am Chem Soc 1904, 26 1481)

**Cerium, Ce**

Decomp pure  $\text{H}_2\text{O}$  very slowly at ordinary temp Not attacked by cold conc  $\text{H}_2\text{SO}_4$  or red fuming  $\text{HNO}_3$  Sol in dil  $\text{H}_2\text{SO}_4$ +Aq,  $\text{HNO}_3$ +Aq, and conc or dil  $\text{HCl}$ +Aq (Hillebrand and Norton, Pogg 155 633)

**Cerous bromide,  $\text{CeBr}_3$** 

*Anhydrous* As the chloride (Robinson, Proc Roy Soc 37 150)

Sol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4328)

Sol in methyl acetate (Naumann, B 1909, 42 379C)

+ $x\text{H}_2\text{O}$  Very deliquescent (John)

**Cerium gold bromide,  $\text{CeBr}_3$ ,  $\text{AuBr}_3$ + $8\text{H}_2\text{O}$** 

*See Bromaurate, cerium*

**Cerium carbide,  $\text{CeC}_2$** 

Decomp by fused alkali nitrates, chlorates, hydroxides and carbonates, and by conc  $\text{H}_2\text{SO}_4$  on heating Insol in conc  $\text{HNO}_3$ , decomp by  $\text{H}_2\text{O}$  and dil acids (Moissan, C R 1896, 122 359)

$\text{CeC}_3$  Not attacked by hot conc acids (Delafontaine, J B 1865 176)

**Cerous chloride,  $\text{CeCl}_3$** 

*Anhydrous* Deliquescent Sol in  $\text{H}_2\text{O}$  with hissing and evolution of heat, sol in alcohol

Sol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4328)

Difficultly sol in methyl acetate (Naumann, B 1909, 42 3790)

+ $7\text{H}_2\text{O}$  Insol in  $\text{NH}_4\text{OH}$ +Aq (Dennis, Z anorg 1894, 7 260)

+ $7\frac{1}{2}\text{H}_2\text{O}$  Deliquescent (Berzelius)

Decomp by boiling with  $\text{H}_2\text{O}$  Sol in 1 pt  $\text{H}_2\text{O}$  at ord temp and 3-4 pts alcohol (Dumas)

**Ceric chloride**

Known only in solution, which decomposes by slight heat (Berzelius)

**Cerous mercuric chloride**

Not deliquescent (v Bonsdorff)

$\text{CeCl}_3$ ,  $4\text{HgCl}_2$ + $10\text{H}_2\text{O}$  Permanent, easily sol in  $\text{H}_2\text{O}$  (John, Bull Sec (2) 21 533)

**Cerium stannic chloride**

*See Chlorostannate, cerium*

**Cerous chloride zinc iodide**

Sol in  $\text{H}_2\text{O}$  and alcohol (Holzmann, J pr 84 76)

**Cerous fluoride,  $\text{CeF}_3$** 

Insol ppt

+ $\frac{1}{2}\text{H}_2\text{O}$

**Ceric fluoride,  $\text{CeF}_4$** 

Insoluble precipitate (Berzelius)

+ $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Brauner, B 14 1944)

**Ceric cobaltous fluoride,  $2\text{CeF}_4$ ,  $\text{CoF}_2$ + $7\text{H}_2\text{O}$** 

Ppt Easily decomp by  $\text{H}_2\text{O}$  (Rumbach, A 1909, 368 107)

**Ceric cupric fluoride,  $2\text{CeF}_4$ ,  $\text{CuF}_2$ + $7\text{H}_2\text{O}$** 

Ppt Decomp by  $\text{H}_2\text{O}$  (Rumbach, l c)

**Ceric nickel fluoride,  $2\text{CeF}_4$ ,  $\text{NiF}_2$ + $7\text{H}_2\text{O}$** 

Ppt Decomp by  $\text{H}_2\text{O}$  (Rumbach, l c)

**Ceric potassium fluoride,  $2\text{CeF}_4$ ,  $3\text{KF}$ + $2\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  (Brauner, B 14 1944, 15 109)

Could not be obtained pure (Rumbach, l c)

**Ceric zinc fluoride,  $2\text{CeF}_4$ ,  $\text{ZnF}_2$ + $7\text{H}_2\text{O}$** 

Ppt Decomp by  $\text{H}_2\text{O}$  (Rumbach, l c)

**Ceroceric fluoride  $2\text{CeF}_3$ ,  $\text{CeF}_4$** 

*Min Fluocerite*

**Cerium hydride,  $\text{CeH}_2$** 

Decomp by acids (Winkler, B 24 873)

$\text{CeH}_3$  Decomp in moist air, decomp by hot or cold  $\text{H}_2\text{O}$ , sol in acids with evolution of  $\text{H}_2$  Decomp by alkalis (Muthmann, A 1902, 325 266)

**Cerous hydroxide,  $\text{Ce}_2\text{O}_3$ ,  $x\text{H}_2\text{O}$** 

Easily sol in acids Insol in excess of alkali hydroxides+Aq Sol in  $(\text{NH}_4)_2\text{CO}_3$ +Aq

100 ccm of a solution in glycerine+Aq containing about 60% by vol of glycerine contain 7.9 g  $\text{Ce}_2\text{O}_3$  (Muller, Z anorg 1905, 43 322)

Exists in two modifications one insol in

cold HCl + Aq, the other sol in cold HCl + Aq (Brauner, C N 1895, 71 283)

### Ceric hydroxide, $2\text{CeO}_2, 3\text{H}_2\text{O}$

Sol in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ , also in HCl + Aq, forming cerous chloride and free chlorine. Insol in hydrofluoric, acetic, or formic acids + Aq. Somewhat sol in dil  $\text{HNO}_3$ , or HCl + Aq (Ordway, Am J Sci (2) 26 205). Insol in  $\text{NH}_4\text{OH}$ , KOH, and NaOH + Aq. Sol in alkali carbonates + Aq (Dumas).

Sl sol in  $(\text{NH}_4)_2\text{CO}_3$  + Aq (Ordway). 100 cem of a solution in glycerine + Aq containing about 60% by vol of glycerine contain 0.08 g  $\text{CeO}_2$  (Muller, Z anorg 1905, 43 232).

### Cerous iodide, $\text{CeI}_3$

Sol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4323).

+  $9\text{H}_2\text{O}$ . Very deliquescent and sol in  $\text{H}_2\text{O}$  (Lange, J pr 82 134).

Sol in alcohol.

### Cerium nitride, $\text{CeN}$

Decomp by  $\text{H}_2\text{O}$  and alkali. Sol in mineral acids with formation of cerous and ammonium salts (Muthmann, A 1902, 325 272).

### Cerous oxide, $\text{Ce}_2\text{O}_3$

When ignited, insol in HCl + Aq, when long digested with  $\text{H}_2\text{SO}_4$ , is sol in HCl + Aq with addition of alcohol.

### Ceric oxide, $\text{CeO}_2$

When ignited, is only dissolved in traces, even on heating, by HCl or  $\text{HNO}_3$  + Aq. Sol in conc  $\text{H}_2\text{SO}_4$  when warmed. Sol in the cold in a solution of KI in HCl + Aq (Bunsen), in a mixture of HCl and  $\text{FeCl}_2$  + Aq, or any reducing substance.

### Cerium peroxide, $\text{Ce}_4\text{O}_9$

Insol in boiling conc acids. Sol in  $\text{H}_2\text{SO}_4$  by long digestion (Popp, A 131 361).

Probably does not exist (Rammelsberg, Pogg 108 40).

$\text{Ce}_2\text{O}_5$  (Hermann, J pr 30 184).

Probably does not exist (Rammelsberg).

$\text{CeO}_2 + x\text{H}_2\text{O}$ . Sol in HCl + Aq (Popp, A 131 361), (Lecoq de Boisbaudran, C R 100 605).

$\text{CeO}_2 + \text{H}_2\text{O}_2$ , according to Cleve (Bull Soc (2) 43 57).

### Cerium oxycarbide, $\text{CeC}_2, 2\text{CeO}_2$

Stable in the air. Slowly attacked by cold  $\text{H}_2\text{O}$ . With hot  $\text{H}_2\text{O}$  and with acids, it gives unsat hydrocarbons (Sterba, C R 1902, 134 1053).

### Cerium oxychloride, $\text{CeOCl}$

Slightly attacked by hot conc HCl + Aq. Slowly sol in conc  $\text{HNO}_3$  + Aq (Wohler).

Easily sol in dil acids (Didier, C R 1 1882).

### Cerium oxychloride tungsten trioxide, $\text{CeO}_2, \text{WO}_3$

(Didier, C R 102 823).

### Cerium selenide

Insol in  $\text{H}_2\text{O}$ , difficultly sol in acids (Berzelius).

### Cerium silicide, $\text{CeSi}_2$

Insol in  $\text{H}_2\text{O}$ , by which it is acted upon only very slowly.

Sol in HCl and HF + Aq with evolution of  $\text{H}_2$ .

Not attacked by alkalis + Aq or  $\text{NH}_4\text{OH}$  + Aq.

Insol in organic solvents (Sterba, C 1902, 135 170).

### Cerium silicide, $\text{Ce}_2\text{Si}_3$

Insol in acids (Ullik, W A B 52, 115).

### Cerium disulphide, $\text{Ce}_2\text{S}_4$

Not decomp by cold  $\text{H}_2\text{O}$ .

Slowly sol in cold dil  $\text{H}_2\text{SO}_4$ , HCl and acetic acid. Rapidly sol in warm dil  $\text{H}_2\text{SO}_4$ , HCl and acetic acid with decomp (Biltz, 1908, 41 3342).

### Cerium sesquisulphide, $\text{Ce}_2\text{S}_3$

Insol in, and not decomp by  $\text{H}_2\text{O}$ , but easily decomp by the weakest acids (M sander), (Didier, C R 100 1161).

### Monochloramine, $\text{NH}_2\text{Cl}$

Easily sol in  $\text{H}_2\text{O}$  (Ruschig, Ch Z 190 31 926).

### Chlorotetraamine comps

See Chlorotetramine comps

### Metachlorantimonic acid, $\text{HSbCl}_6 + 4\text{H}_2\text{O}$

Hydroscopic. Sol in  $\text{H}_2\text{O}$  with decomp. Sol in alcohol, acetone, and acetic acid (Weinland, Z anorg 1905 44 1).

### Metachlorantimonic acid ammonia, $\text{HSbCl}_6, 2\text{NH}_3$

Sol in  $\text{H}_2\text{O}$  and in alcohol (Weinland, Z anorg 1905, 44 59).

### Aluminum metachlorantimonate, $\text{AlSbCl}_6 + 15\text{H}_2\text{O}$

Hydroscopic.

Sol in dil HCl + Aq (Weinland, B 190 36 254).

<b>Ammonium metachlorantimonate</b> , $\text{NH}_4\text{SbCl}_6 + \text{H}_2\text{O}$ Hydroscopic Sol in $\text{H}_2\text{O}$ Solution decomp slowly when cold, rapidly on warming Sol in dil $\text{HCl}$ (Weinland, B 1903, 36 251)	Sol in dil $\text{HCl} + \text{Aq}$ (Weinland, B 1903, 36 250)
<b>Cadmium metachlorantimonate ammonia</b> , $\text{Cd}(\text{SbCl}_6)_2, 7\text{NH}_3$ Ppt (Weinland and Schmid, Z anorg 1905, 44 56)	<b>Rubidium metachlorantimonate</b> , $\text{RbSbCl}_6$ Hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland)
<b>Calcium metachlorantimonate</b> , $\text{Ca}(\text{SbCl}_6)_2 + 9\text{H}_2\text{O}$ Hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland, B 1903, 36 253)	<b>Silver metachlorantimonate ammonia</b> , $\text{AgSbCl}_6, 2\text{NH}_3$ Decomp by $\text{H}_2\text{O}$ (Weinland and Schmid)
<b>Chromium metachlorantimonate</b> , $\text{Cr}(\text{SbCl}_6)_3 + 13\text{H}_2\text{O}$ Hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland)	<b>Zinc metachlorantimonate ammonia</b> , $\text{Zn}(\text{SbCl}_6)_2, 4\text{NH}_3$ (Weinland and Schmid)
<b>Chromium orthochlorantimonate</b> , $\text{CrSbCl}_6 + 10\text{H}_2\text{O}$ Hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland)	<b>Chlorarsenious acid</b> <i>See Arsenyl chloride</i>
<b>Cupric metachlorantimonate ammonia</b> , $\text{Cu}(\text{SbCl}_6)_2, 5\text{NH}_3$ (Weinland and Schmid, Z anorg 1905, 44 55)	<b>Chloraureic acid</b> , $\text{HAuCl}_4 + 4\text{H}_2\text{O}$ Sol in $\text{H}_2\text{O}$ , alcohol, and ether Sol in $\text{POCl}_3$ (Walden, Z anorg 1900, 25 212) Difficultly sol in $\text{PCl}_3$ (Walden) Cryst with $3\text{H}_2\text{O}$ as stated by Weber and Schottlander and not with $4\text{H}_2\text{O}$ as stated by Thomsen (Schmudt, C C 1906, II 855)
<b>Glucium metachlorantimonate</b> , $\text{Gl}(\text{SbCl}_6)_2 + 10\text{H}_2\text{O}$ Very hydrescopic Sol in dil $\text{HCl}$ (Weinland, B 1903, 36 252)	<b>Chloraurates</b> All chloraurates are easily sol in $\text{H}_2\text{O}$ and in alcohol (v Bonsdorff, 1829)
<b>Iron (ferric) orthochlorantimonate</b> , $\text{FeSbCl}_6 + 8\text{H}_2\text{O}$ Hydroscopic Can easily be cryst from dil $\text{HCl} + \text{Aq}$ (Weinland)	<b>Ammonium chloraurate</b> , $\text{NH}_4\text{AuCl}_4 + \text{H}_2\text{O}$ Very easily sol in $\text{H}_2\text{O}$ $+ 2\text{H}_2\text{O}$ Very easily sol in $\text{H}_2\text{O}$
<b>Lithium metachlorantimonate</b> , $\text{LiSbCl}_6 + 4\text{H}_2\text{O}$ Very hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland, l c)	<b>Barium chloraurate</b> , $\text{Ba}(\text{AuCl}_4)_2 + x\text{H}_2\text{O}$ Deliquescent in moist air Sol in $\text{H}_2\text{O}$ and alcohol (v Bonsdorff, Pogg 17 261)
<b>Magnesium pyrochlorantimonate</b> , $\text{MgSbCl}_6 + 9\text{H}_2\text{O}$ Hydroscopic Sol in dil $\text{HCl} + \text{Aq}$ (Weinland)	<b>Cadmium chloraurate</b> Not deliquescent Sol in $\text{H}_2\text{O}$ and alcohol (v Bonsdorff)
<b>Nickel metachlorantimonate ammonia</b> , $\text{Ni}(\text{SbCl}_6)_2, 6\text{NH}_3$ Sol in $\text{H}_2\text{O}$ (Weinland and Schmid, Z anorg 1905, 44 57)	<b>Cæsium chloraurate</b> , $\text{CsAuCl}_4$ 100 pts aqueous sat solution contain at 10° 20° 30° 40° 50° 0.5 0.8 1.7 3.2 5.4 pts anhydrous salt, 60° 70° 80° 90° 100° 8.2 12.0 16.3 21.7 27.5 pts anhydrous salt (Rosenblatt, B 19 2538) $+ \frac{1}{2}\text{H}_2\text{O}$ (Wells and Wheeler, Am J (3) 44 157)
<b>Potassium metachlorantimonate</b> , $\text{KSbCl}_6 + \text{H}_2\text{O}$ Hydroscopic Sol in $\text{H}_2\text{O}$ Solution decomp slowly when cold rapidly when warmed	<b>Calcium chloraurate</b> , $\text{Ca}(\text{AuCl}_4)_2 + 6\text{H}_2\text{O}$ Deliquescent Sol in $\text{H}_2\text{O}$ and alcohol (v Bonsdorff) <b>Cerium chloraurate</b> , $\text{CeCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$ Extremely deliquescent Easily sol in $\text{H}_2\text{O}$ and absolute alcohol (Holzmann, C C 1863 206) $+ 13\text{H}_2\text{O}$ (John, Bull Soc (2) 21 534)

**Cobalt chloraurate**,  $\text{Co}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and alcohol (Topsoe)

**Didymium chloraurate**,  $\text{DyCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$

Very deliquescent (Cleve, Bull Soc (2)

43 361)

$2\text{DyCl}_3, 3\text{AuCl}_3 + 20\text{H}_2\text{C}$  (Cleve)

**Gadolinium chloraurate**,  $\text{GdCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Benedicks, Z anorg 1900, 22 404)

**Lanthanum chloraurate**,  $\text{LaCl}_3, \text{AuCl}_3 + 5\text{H}_2\text{O}$

Deliquescent in moist air Sol in  $\text{H}_2\text{O}$  (Cleve, B 8 128)

**Lithium chloraurate**,  $\text{LiAuCl}_4$

100 pts aqueous solution contain at

10° 20° 30° 40°  
53 1 57 7 62 5 67 3 pts anhydrous salt,

50° 60° 70° 80°  
72 0 76 4 81 0 85 7 pts anhydrous salt  
(Rosenbladt)

+2 $\text{H}_2\text{O}$  (Antony and Lucchesi, Gazz ch  
it 1890, 20 601)

+4 $\text{H}_2\text{O}$  Not stable

Sol in  $\text{H}_2\text{O}$  and alcohol (Fasbender, C C  
1894, I 409)

**Magnesium chloraurate**,  $\text{Mg}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$

Somewhat deliquescent Sol in  $\text{H}_2\text{O}$  and  
alcohol (Topsoe)

+12 $\text{H}_2\text{O}$

**Manganese chloraurate**,  $\text{Mn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol  
(Topsoe)

+12 $\text{H}_2\text{O}$

**Nickel chloraurate**,  $\text{Ni}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol  
(Topsoe)

**Potassium chloraurate**,  $\text{KAuCl}_4$

Anhydrous Very stable (Lainer, W A  
B 99, 2b 247)

100 pts solution in  $\text{H}_2\text{O}$  contain at

10° 20° 30°  
27 7 38 2 43 7 pts anhydrous salt,

40° 50° 60°  
59 2 70 0 80 2 pts anhydrous salt

(Rosenbladt, B 19 2538)

Sol in  $\text{H}_2\text{O}$  and alcohol, insol in ether  
(Fasbender, C C 1894, I 409)

1 pt is sol in 4 pts 98% alcohol (Fas-  
bender, C C 1894, II 609)

+2 $\text{H}_2\text{O}$  Efflorescent

+½ $\text{H}_2\text{O}$

**Praseodymium chloraurate**,  $\text{PrCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sol in conc HCl (v  
Schule Z anorg 1898, 18 354)

**Rubidium chloraurate**,  $\text{RbAuCl}_4$

100 pts sat  $\text{RbAuCl}_4 + \text{Aq}$  contain at

10° 20° 30° 40° 50°  
4 6 9 0 13 4 17 7 22 2 pts anhydrous sal

60° 70° 80° 90° 100°  
26 6 31 0 35 3 39 7 44 2 pts anhydrous sal  
(Rosenbladt)

1 pt sol in 54 pts 98% alcohol Insol  
ether (Fasbender, C C 1894, II 609)

**Samarium chloraurate**,  $\text{SmCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$

Deliquescent Easily sol in  $\text{H}_2\text{O}$  (Clev  
Bull Soc (2) 43 165)

**Scandium chloraurate**,  $3\text{ScCl}_3, 2\text{AuCl}_3 + 21\text{H}_2\text{O}$

Very deliquescent (Crookes, Phil Tran  
1910, 210 A, 365)

**Silver chloraurate**,  $\text{AgAuCl}_4$

Decomp in the air  
Decomp by  $\text{H}_2\text{O}$ , HCl and  $\text{NH}_3$  (Herr-  
mann, B 1894, 27 597)

**Sodium chloraurate**,  $\text{NaAuCl}_4 + 2\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  and absolute alcohol  
100 pts aqueous solution contain at

10° 20° 30°  
58 2 60 2 64 0 pts anhydrous salt,

40° 50° 60°  
69 4 77 5 90 0 pts anhydrous salt  
(Rosenbladt)

Easily sol in  $\text{NaCl} + \text{Aq}$   
Easily sol in  $\text{H}_2\text{O}$ , alcohol and ether (Fas-  
bender, C C 1894, I 409)

**Strontium chloraurate**

Sol in  $\text{H}_2\text{O}$  (v Bonsdorff)

**Thallium chloraurate**

(Carstensen)

**Ytterbium chloraurate**,  $\text{YbCl}_3, \text{AuCl}_3 + 9\text{H}_2\text{O}$

Ppt (Cleve, Z anorg 1902, 32 138)

**Yttrium chloraurate**,  $\text{YtCl}_3, 2\text{AuCl}_3 + 16\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Cleve)

**Zinc chloraurate**,  $\text{Zn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Topsoe)  
+12 $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and alcohol (v  
Bonsdorff)

**Chlorauricyanhydric acid****Barium chlorauricyanide**,  $\text{Ba}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ Very sol in  $\text{H}_2\text{O}$  or alcohol (Lindbom, Lund Univ Arsk 12 No 6)**Potassium chlorauricyanide**,  $\text{KAu}(\text{CN})_2\text{Cl}_2 + \text{H}_2\text{O}$ Very sol in  $\text{H}_2\text{O}$  or alcohol**Strontium chlorauricyanide**,  $\text{Sr}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ Sol in  $\text{H}_2\text{O}$ **Zinc chlorauricyanide**,  $\text{Zn}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 7\text{H}_2\text{O}$ Very sol in  $\text{H}_2\text{O}$ **Chlorhydric acid, HCl***Liquid* Miscible with liquid  $\text{CO}_2$ , and  $\text{H}_2\text{S}$ *Gas* Absorbed by  $\text{H}_2\text{O}$  with production of much heat $\text{H}_2\text{O}$  absorbs 400–500 vols at ord temp and pressure or a little less than 1 pt. by weight (Dalton)1 vol  $\text{H}_2\text{O}$  absorbs 480 vols at  $0^\circ$  sp gr of sat solution is 1.2109 (Davy)1 vol  $\text{H}_2\text{O}$  absorbs 417 822 vols at  $20^\circ$  the vol in creasing to 1 4138 vols 1 vol of  $\text{HCl} + \text{Aq}$  then contains 311 vols  $\text{HCl}$  has sp gr 1.1958 and contains 40.39%  $\text{HCl}$  by weight (Thomson 1831)1 vol  $\text{H}_2\text{O}$  absorbs 464 vols and sat solution has 1.21 sp gr and contains 42.4%  $\text{HCl}$  by weight (Wittstein) $\text{H}_2\text{O}$  sat at  $0^\circ$  contains 480 times its vol of  $\text{HCl}$  and sp gr = 1.2109 sat at ord temp contains 38.3% of its weight in  $\text{HCl}$  and sp gr = 1.192 (Berzelius)1 vol  $\text{H}_2\text{O}$  absorbs 5 vols  $\text{HCl}$  at  $0^\circ$  and 760 mm pressure and the liquid formed has the given sp gr and contains the given per cent  $\text{HCl}$

14	0.752	36	0.649	58	0.568
16	0.742	38	0.641	60	0.561
18	0.731	40	0.633		
20	0.721	42	0.626		

(Roscoe and Dittmar)

Conc  $\text{HCl} + \text{Aq}$  loses  $\text{HCl}$ , and dil  $\text{HCl} + \text{Aq}$  loses  $\text{H}_2\text{O}$  on warming, until an acid of constant composition is formed, containing 20.18%  $\text{HCl}$ , with a sp gr of 1.101 at  $15^\circ$ , which can be distilled unchanged at  $110^\circ$  (Bineau, A ch (3) 7 257)

The above is true if barometer is at 760 mm, but the composition changes with the pressure as follows—

Mm Hg	% HCl	Mm Hg	% HCl	Mm Hg	% HCl
50	23.2	800	20.2	1700	18.8
100	22.9	900	19.9	1800	18.7
200	22.3	1000	19.7	1900	18.6
300	21.8	1100	19.5	2000	18.5
400	21.4	1200	19.4	2100	18.4
500	21.1	1300	19.3	2200	18.3
600	20.7	1400	19.1	2300	18.2
700	20.4	1500	19.0	2400	18.1
760	20.24	1600	18.9	2500	18.0

(Roscoe and Dittmar)

Conc  $\text{HCl} + \text{Aq}$  gradually gives off  $\text{HCl}$  on the air until it has a sp gr 1.128 at  $15^\circ$ , and contains 25.2%  $\text{HCl}$  (Bineau, l c)According to Roscoe and Dittmar, this depends on the temperature. If a current of air is passed through  $\text{HCl} + \text{Aq}$ , acid or water is given off according as the acid is strong or weak, until an acid of constant composition for a given temperature is formed, as follows—

Temp	% HCl	Temp	% HCl	Temp	% HCl
$0^\circ$	25.0	$35^\circ$	23.9	$70^\circ$	22.6
5	24.9	40	23.8	75	22.3
10	24.7	45	23.6	80	22.0
15	24.6	50	23.4	85	21.7
20	24.4	55	23.2	90	21.4
25	24.3	60	23.0	95	21.1
30	24.1	65	22.8	100	20.7

From the above it is seen that the acid which distils unchanged at a given pressure, that is, boils at a certain constant temperature, is identical with the acid which undergoes no change in composition by a current of dry air at the same temperature, and under the ordinary pressure, thus—

Mm Hg	B pt	% HCl	Temp of air current	% HCl
100	61–62°	22.8	62°	22.9
200	76–77	22.1	77	22.2
300	84–85	21.7	85	21.7
380	91	21.3	91	21.4
490	97	20.9	98	21.1
620	103	20.6		

(Roscoe and Dittmar)

Solubility of HCl in H<sub>2</sub>O at 0° under different degrees of pressure P=partial pressure in mm Hg,  $\bar{e}$ , total pressure minus the tension of aqueous vapour at the given temp., G=grammes of HCl dissolved in 1 g H<sub>2</sub>O at the pressure P and 0° temp

72 43	24 37	3 2
60 25	36 25	3 5

(Schreinemakers, Z phys Ch 1912, 79 553)

+  $H_2O$  F-pt - 15 35°  
Very sol in  $H_2O$  but only slightly sol in HCl (Rupert, J Am Chem Soc 1909, 31 886)

+  $2H_2O$  M-pt - 17 4°  
+  $3H_2O$  M-pt - 24 8° (Pickering, B 1893 26 280)

The composition of the hydrates formed by HCl at different dilutions is calculated

from determinations of the lowering of the f-pt produced by HCl, and of the conductivity and sp gr of HCl+Aq (Jones, Am Ch J 1905, 34 323)

### Chlorhydric cyanhydric acid, 3HCl, 2HCN

Decomp by H<sub>2</sub>O or alcohol, sol in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> Insol in ether, chloroform, or acetic ether (Clausen, B 16 309)

HCl, HCN Sol in H<sub>2</sub>O, absolute alcohol, HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, and CHCl<sub>3</sub>, with decomp, decomp is especially rapid in H<sub>2</sub>O (Gautier, A ch (4) 17 130)

### Chloric acid, HClO<sub>3</sub>

Known only in aqueous solution, which can be concentrated in vacuo to a sp gr of 1.282 at 14.2°, and then contains 40.10% HClO<sub>3</sub>, corresponding to HClO<sub>3</sub>+7H<sub>2</sub>O, if left longer in vacuo over H<sub>2</sub>SO<sub>4</sub> an acid corresponding to HClO<sub>3</sub>+4½H<sub>2</sub>O is obtained. Aqueous solution of HClO<sub>3</sub> decomp at 40° (Kammereis, Pogg 138 390)

### Chlorates

All chlorates except mercurous chlorate are sol in H<sub>2</sub>O, most of them are deliquescent, many are sol in alcohol

### Aluminum chlorate, Al(ClO<sub>3</sub>)<sub>3</sub>+6H<sub>2</sub>O

Very hygroscopic (Dobroserdow, G C 1904, II 177)  
+9H<sub>2</sub>O Very sol in cold but much less than in hot H<sub>2</sub>O (Dobroserdow)

### Ammonium chlorate, NH<sub>4</sub>ClO<sub>3</sub>

Easily sol in H<sub>2</sub>O less sol in alcohol  
Much less sol in H<sub>2</sub>O at 0° than NaClO<sub>3</sub> (Storer)  
Very sl sol in absolute alcohol (Wichter, J pr 30 321)

### Barium chlorate, Ba(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O

Sol in 4 pts cold, and less hot H<sub>2</sub>O (Chevenix)

100 pts H<sub>2</sub>O dissolve at  
0 20° 40 60 80° 100°  
22.8 37.0 52.1 77.5 98.0 126.1 pts Ba(ClO<sub>3</sub>)<sub>2</sub>

100 grms sat Ba(ClO<sub>3</sub>)<sub>2</sub>+Aq at t contains grms anhydrous Ba(ClO<sub>3</sub>)<sub>2</sub>

t°	Gram Ba(ClO <sub>3</sub> ) <sub>2</sub>	t	Gram Ba(ClO <sub>3</sub> ) <sub>2</sub>
Freezing point -2.749 ± 0.004	15.28	50	36.69
0	16.90	60	40.05
+10	21.23	70	43.04
20	25.26	80	45.90
25	27.53	90	48.70
30	29.43	99.1	51.17
40	33.16	104.6	52.67

\* 104.6° is bpt at 740 mm pressure = 105.0° at 760 mm pressure

(Anschutz, Z phys Ch 1906, 56 238)

### Solubility of Ba(ClO<sub>3</sub>)<sub>2</sub> in H<sub>2</sub>O

t°	g Ba(ClO <sub>3</sub> ) <sub>2</sub> in 100 g H <sub>2</sub> O	Sp gr
0	25.5	1.195
20	39.3	1.274
40	55.9	1.355
60	74.1	1.433
80	92.1	1.508
100	113.2	1.580
105.6*	120	1.600

\* Bpt of sat solution

(Carlson, Dissert 1910)

Only slight traces dissolve in absolute alcohol (Wachter, J pr 30 334)

Sol in acetone (Eidmann, C C 1899, I 1014)

Difficultly sol in acetone (Naumann, B 1904, 37 4328)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethylacetate (Naumann, B 1910, 43 314)

### Bismuth chlorate

Known only in solution, which decomp on evaporation

### Cadmium chlorate, Cd(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O

Very deliquescent, sol in H<sub>2</sub>O and alcohol  
Melts in crystal H<sub>2</sub>O at 80° (Wichter, J pr 30 321)

Solubility in H<sub>2</sub>O

Sat solution contains at

-20°	-15°	0°	+18°
72.18	72.53	74.95	76.36
49°	69°		
80.08	82.95	Cd(ClO <sub>3</sub> ) <sub>2</sub>	

Sp gr of solution containing 76.36 Cd(ClO<sub>3</sub>)<sub>2</sub> at 18° = 2.284 (Meusser, B 1912, 35 1422)

Sol in acetone (Naumann, B 1904, 37 4328)

### Cadmium chlorate ammonia, Cd(ClO<sub>3</sub>)<sub>2</sub>+6NH<sub>3</sub>

Ppt (Liphum, P 1913 48 49)

### Cæsium chlorate, CsClO<sub>3</sub>

100 g H<sub>2</sub>O dissolve at

0°	5°	19.8	30	42.2
24.6	30	62.8	93.3	119
30	77	99		
19.40	11.65	76.33	CsClO <sub>3</sub>	

(Calzolari, Acc Sc med di Ferrara 1911 85 160)

### Calcium chlorate, Ca(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O

Deliquescent, very sol in H<sub>2</sub>O and alcohol (Wichter, J pr 30 323)

Melts in its water of crystallization at over 100°

Sp gr of solution sat at 18°=1 729, containing 64%  $\text{Ca}(\text{ClO}_3)_2$  (Myhus B 1897, 30 1718)

Sol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4328)

### Chromic chlorate

Easily sol in  $\text{H}_2\text{O}$  (Prudhomme, C C 1890, 1 668)

### Cobaltous chlorate, $\text{Co}(\text{ClO}_3)_2 + 2\text{H}_2\text{O}$

(Meusser, B 1902, 35 1418)

+4 $\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$

Sat solution contains at

18°	21°	35°	47°	61°
64 19	64 39	67 09	69 66	76 12%

$\text{Co}(\text{ClO}_3)_2$

Sp gr of solution containing 64 19%  $\text{Co}(\text{ClO}_3)_2$  at 18°=1 861 (Meusser, B 1902, 35 1418)

+6 $\text{H}_2\text{O}$  Very deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol Melts in crystal  $\text{H}_2\text{O}$  at 50° (Wachter, J pr 30 321)

Solubility in  $\text{H}_2\text{O}$

Sat solution contains at

-21°	-19°	0°	+10 5°
53 30	53 61	57 45	61 83%

$\text{Co}(\text{ClO}_3)_2$   
(Meusser, B 1902, 35 1418)

### Cupric chlorate, basic, $\text{Cu}(\text{ClO}_3)_2, 3\text{Cu}(\text{OH})_2$

Insol in  $\text{H}_2\text{O}$  Very sol in dil acids Sol in warm conc  $\text{Cu}(\text{ClO}_3)_2 + \text{Aq}$ , the solubility increases with the conc and temp (Bourne, B 1 Soc 1898, (3) 19 950)

### Cupric chlorate, $\text{Cu}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$

Solubility in  $\text{H}_2\text{O}$

Sat solution contains at

-31°	-21°	+0 8°	18°	45°
54 59	57 12	58 51	62 17	66 17

59 6°	71°
69 42	76 9%

$\text{Cu}(\text{ClO}_3)_2$

Sp gr of the solution containing 62 17%  $\text{Cu}(\text{ClO}_3)_2$  at 18°=1 695 (Meusser, B 1902, 35 1420)

+6 $\text{H}_2\text{O}$  Very deliquescent Easily sol in  $\text{H}_2\text{O}$  and alcohol Melts in its crystal  $\text{H}_2\text{O}$  at 65° (Wachter, J pr 30 321)

Sp gr of  $\text{Cu}(\text{ClO}_3)_2 + \text{Aq}$  at 15°

% $\text{Cu}(\text{ClO}_3)_2$	2 106	4 778	6 945
Sp gr	1 01620	1 03857	1 05714

% $\text{Cu}(\text{ClO}_3)_2$	10 016	14 387
Sp gr	1 0844	1 12531

(Irube, Gm -K 5 1, 921)

Sol in acetone (Naumann, B 1904, 37 4328)

### Cupric chlorate ammonia, $\text{Cu}(\text{ClO}_3)_2, 4\text{NH}_3$

Ppt Not hygroscopic Insol in alcohol  
 $\text{Cu}(\text{ClO}_3)_2, 6\text{NH}_3$  Not hygroscopic (Ephraim, B 1915, 48 46)

### Erbium chlorate, $\text{Er}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol

### Glucinum chlorate

Known only in aqueous solution, which decomposes on evaporation

### Ferrous chlorate

Known only in solution

### Ferric chlorate, $\text{Fe}(\text{ClO}_3)_3$

Sol in  $\text{H}_2\text{O}$

Basic salt Insol in  $\text{H}_2\text{O}$

### Lanthanum chlorate, $\text{La}(\text{ClO}_3)_3$

Deliquescent (Cleve)

### Lead chlorate, $\text{Pb}(\text{ClO}_3)_2 + \text{H}_2\text{O}$

Deliquescent, easily sol in  $\text{H}_2\text{O}$  and alcohol (Wachter, J pr 30 321)

Sp gr of solution sat at 18°=1 947 and contains 60 2%  $\text{Pb}(\text{ClO}_3)_2$  (Myhus, B 1897, 30 1718)

100 g  $\text{H}_2\text{O}$  dissolve 440 g  $\text{Pb}(\text{ClO}_3)_2$  at 18°, sp gr of sat solution=1 63 (Carlson, Dissert 1910)

### Lithium chlorate, $\text{LiClO}_3 + \frac{1}{2}\text{H}_2\text{O}$

Very deliquescent and sol in  $\text{H}_2\text{O}$  Very easily sol in alcohol Melts at 50° in its crystal water (Wachter, J pr 30 321)

$\text{LiClO}_3 + \text{Aq}$  sat at 18° contains 75 8%  $\text{LiClO}_3$  Sp gr=1 815 (Myhus, B 1897, 30 1718)

483 g  $\text{LiClO}_3$  dissolve in 100 g  $\text{H}_2\text{O}$  at 15°, sp gr of solution=1 82 (Carlson, Dissert 1910)

Contains 3 $\text{H}_2\text{O}$ , and is not deliquescent (Lagorio, Zeit f Kryst 15 80)

Salt is anhydrous (Retgers, Z phys Ch 5 449)

### Magnesium chlorate, $\text{Mg}(\text{ClO}_3)_2$

128 1 g  $\text{Mg}(\text{ClO}_3)_2$  dissolve in 100 g  $\text{H}_2\text{O}$  at 19°, sp gr of solution=1 59 (Carlson, Dissert 1910)

Sp gr of solution containing 56 5%  $\text{Mg}(\text{ClO}_3)_2$  at 18°=1 564 (Meusser, l c)

Sp gr of solution sat at 18°=1 594, containing 56 3%  $\text{Mg}(\text{ClO}_3)_2$  (Myhus, B 1897, 30 1718)

Sol in acetone (Naumann, B 1904, 37 4328)

Sol in acetone (Eidmann, C C 1899, II 1014)

+2 $\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$

Sat solution contains at

39 5°	61°	68°	93°

(Carlson, Dissert 1910)

Insol in methyl acetate (Naumann, B  
 1909, 42 3790), ethyl acetate (Naumann  
 B 1910, 43 314)

100 g glycerol dissolve 20 g  $\text{NaClO}_3$  at  
 15 5° (Ossendowski, Pharm J 1907, 79  
 575)

**Strontium chlorate,  $\text{Sr}(\text{ClO}_3)_2 + 5\text{H}_2\text{O}$** 

Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Topsoe, W A B 66, 2 29)

Sp gr of solution sat at  $18^\circ$  containing 63.3%  $\text{Sr}(\text{ClO}_3)_2 = 1.839$  (Mylius, B 1897, 30 1718)

Easily sol in  $\text{H}_2\text{O}$ , less in alcohol, but more sol in alcohol than  $\text{SrCl}_2$  (Souhay, A 102 381)

Insol in absolute alcohol (Wachter)

**Thallous chlorate,  $\text{TlClO}_3$** 

Sol in  $\text{H}_2\text{O}$ , but decomp by heating

100 pts  $\text{H}_2\text{O}$  dissolve at

$0^\circ$   $20^\circ$   $50^\circ$   $80^\circ$   $100^\circ$

2.80 3.92 12.67 36.65 57.31 pts  $\text{TlClO}_3$   
(Murr, Chem Soc 29 857)

1.1  $\text{TlClO}_3 + \text{Aq}$  sat at  $10^\circ$  contains 25.637 g  $\text{TlClO}_3$  (Roozeboom, Z phys Ch 8 532)

1.1  $\text{H}_2\text{O}$  dissolves 0.134 equivalents  $\text{TlClO}_3$  at  $20^\circ$ , or 38.51 g in 1.1 of the solution (mean of 10 experiments) (Noyes and Farrell, J Am Chem Soc 1911, 33 1657)

Solubility in  $\text{Ti}_2\text{SO}_4 + \text{Aq}$  at  $20^\circ$

G equiv per l		Solid phase
$\text{HClO}_3$	$\text{Ti}_2\text{SO}_4$	
0.1058	0.1366	$\text{TlClO}_3 + \text{Ti}_2\text{SO}_4$

(Noyes and Farrell, *l c*)

**Thallic chlorate,  $\text{H}(\text{ClO}_3)_3 + 4\text{H}_2\text{O}$** 

Very deliquescent, sol in  $\text{H}_2\text{O}$  Decomp slowly in the air (Gewecke, Z anorg 1912, 75 273)

**Ytterbium chlorate**

Sol in  $\text{H}_2\text{O}$  (Popp, A 131 179)

**Yttrium chlorate,  $\text{Y}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$** 

Deliquescent Easily sol in alcohol Sl sol in ether (Clève)

**Zinc chlorate,  $\text{Zn}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$** 

Solubility in  $\text{H}_2\text{O}$

Sat solution contains at

$+15^\circ$   $30^\circ$   $40^\circ$   $55^\circ$   
66.52 67.66 69.06 75.44%  $\text{Zn}(\text{ClO}_3)_2$

Sp gr of solution containing 66.52%  $\text{Zn}(\text{ClO}_3)_2$  at  $15^\circ = 1.916$

(Meusser, B 1902, 35 1417)

More sol in  $\text{H}_2\text{O}$  than chlorates of Mg, Co, Ni or Cu, less sol than chlorate of Cd, more sol than  $\text{Zn}(\text{NO}_3)_2$  (Meusser, *l c*)

$+6\text{H}_2\text{O}$  Very deliquescent Easily sol in  $\text{H}_2\text{O}$  and alcohol Melts in crystal  $\text{H}_2\text{O}$  at  $60^\circ$  (Vauquelin, A ch 95 113)

**Solubility in  $\text{H}_2\text{O}$** 

Sat solution contains at

$-18^\circ$   $0^\circ$   $8^\circ$   $15^\circ$   
55.62 59.19 60.20 67.32%  $\text{Zn}(\text{ClO}_3)_2$   
(Meusser, *l c*)

Sp gr of solution sat at  $18^\circ$  containing 65%  $\text{Zn}(\text{ClO}_3)_2 = 1.914$  (Mylius, B 1897, 30 1718)

**Zinc chlorate ammonia,  $\text{Zr}(\text{ClO}_3)_2 \cdot 4\text{NH}_3$** 

$\text{Zn}(\text{ClO}_3)_2 \cdot 6\text{NH}_3$  Ppt (Ephram, B 1915, 48 48)

**Perchloric acid**

See Perchloric acid

**Chlorides**

Most chlorides are sol in  $\text{H}_2\text{O}$ , a few, however, are insol or nearly so therein, the chief of which are  $\text{AgCl}$ ,  $\text{Hg}_2\text{Cl}_2$ ,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{PtCl}_2$ , and  $\text{AuCl}$ . Several chlorides are decomp into insol basic salts or hydroxides, either by the addition of  $\text{H}_2\text{O}$ , as in the case of  $\text{BiCl}_3$  and  $\text{SbCl}_3$ , or on evaporating the aqueous solution, as  $\text{AlCl}_3$ ,  $\text{ZnCl}_2$ ,  $\text{MgCl}_2$ , etc

Some chlorides are sol in alcohol or ether  
See under each element

**Chlorine,  $\text{Cl}_2$** 

The maximum solubility of  $\text{Cl}$  in  $\text{H}_2\text{O}$  is at  $10^\circ$  (Schonfeld), at  $8-10^\circ$  (Gay-Lussac), at  $9-10^\circ$  (Pelouze)

Solubility decreases from  $9-0^\circ$ , at  $100^\circ$  the solubility = 0 (Gay-Lussac)

$\text{Cl}_2 + \text{Aq}$  sat at  $6^\circ$  has sp gr = 1.003 (Berthelot)

1 vol  $\text{H}_2\text{O}$  at  $t^\circ$  absorbs vols  $\text{Cl}$  reduced to  $0^\circ$  and 760 mm pressure

(Bray)

**Chlorine oxide,  $\text{Cl}_2\text{O}_{17}$** 

Very easily decomp (Millon, A 46 281)  
Probably a mixture of  $\text{ClO}_2$  and O

**Chlorine heptoxide,  $\text{Cl}_2\text{O}_7$** 

Explosive, decomp by  $\text{H}_2\text{O}$ , sol in well cooled benzene with sl decomp (Michael, Am Ch J 1909, 23 447)

**Chlorirididramine chloride,**

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  (Skobkoff, A 84 275)

**— nitrate,  $\text{Cl}_2\text{Ir}(\text{N}_2\text{H}_5\text{NO}_3)_2$** Sol in  $\text{H}_2\text{O}$ **— sulphate,  $\text{Cl}_2\text{Ir}(\text{N}_2\text{H}_5\text{SO}_4)$** 

Sl sol in cold, much more easily in hot H O

**Chloriridic acid****Chloriridates**

Most of the chloriridates are very difficultly sol in H O, but a little more sol than the corresponding chloroplatinates. Insol or nearly so in alcohol, but not so difficultly sol as the chloroplatinates (Rose)

**Ammonium chloriridate,  $(\text{NH}_4)_2\text{IrCl}_6$** 

Sol in 20 pts cold  $\text{H}_2\text{O}$  (Vauquelin), sl sol in cold, much more in hot  $\text{H}_2\text{O}$  (Claus), sol in  $\text{HCl} + \text{Aq}$  (Soblewsky), insol in cold  $\text{NH}_4\text{Cl} + \text{Aq}$  (Claus), insol in alcohol (Berzelius)

100 pts H O dissolve at

14 4° 26 8° 39 4°

0 699 0 905 1 226 pts  $(\text{NH}_4)_2\text{IrCl}_6$ ,

52 2° 61 2° 69 3°

1 608 2 130 2 824 pts  $(\text{NH}_4)_2\text{IrCl}_6$ 

(Rimbach and Korten, Z anorg 1907, 52 407)

**Cæsium chloriridate,  $\text{Cs}_2\text{IrCl}_6$** 

Only sl sol in H O (Delepine, C R 1908, 146 1268)

**Lithium chloriridate,  $\text{Li}_2\text{IrCl}_6$** 

Somewhat deliquescent, very sol in  $\text{H}_2\text{O}$  (Antony, Gazz ch it 23, 1 190)

**Potassium chloriridate,  $\text{K}_2\text{IrCl}_6$** 

Sl sol in cold  $\text{H}_2\text{O}$ , sol in 15 pts boiln  $\text{H}_2\text{O}$ , less sol in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ , insol in alcohol or sat  $\text{KCl}$  and  $\text{CaCl}_2 + \text{Aq}$ . Insol in liqnd  $\text{NH}_3$  (Gore, Am Ch 1898, 20 829)

**Rubidium chloriridate,  $\text{Rb}_2\text{IrCl}_6$** 

Very sl sol in  $\text{H}_2\text{O}$  (Rimbach, Z anorg 1907, 52 408)

**Sodium chloriridate,  $\text{Na}_2\text{IrCl}_6 + 6\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$ , sol in alcohol of 0.8 sp gr

**Thallium chloriridate,  $\text{Tl}_2\text{IrCl}_6$** 

Decomp by hot  $\text{HCl}$  forming  $\text{Tl}_3\text{IrCl}_6$  (Delépine, C R 1909, 149 1073)

**Chloriridium pentamine comps**

See Iridopentamine chloro comps

**Chloriridosulphurous acid****Potassium chloriridosulphite,  $\text{K}_4\text{Ir}_2\text{Cl}_2(\text{SO}_3)_4$** Insol in cold, decomp by hot  $\text{H}_2\text{O}$ 

$\text{K}_4\text{Ir}_2\text{Cl}_2(\text{SO}_3)_4, 2\text{K}_2\text{SO}_3$  Decomp by  $\text{H}_2\text{O}$   
 $\text{Cl}_2\text{Ir}_2(\text{SO}_3)_2, 8\text{KCl} + 4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  insol in alcohol (Claus, J p 42 354)

**Chloriridous acid****Ammonium chloriridite,  $(\text{NH}_4)_3\text{IrCl}_6$** 

Decomp by  $\text{H}_2\text{O}$  (Delepine, C R 190 146 1268)

+  $1\frac{1}{2}\text{H}_2\text{O}$  Sol in H O (Claus) $\text{IrCl}_6(\text{H}_2\text{O})(\text{NH}_4)_2$  (Delepine)**Cæsium chloriridite,  $\text{IrCl}_6(\text{H}_2\text{O})\text{Cs}$** 

(Delepine)

**Lithium chloriridite,  $\text{Li}_2\text{IrCl}_6 + 12\text{H}_2\text{O}$** 

Deliquescent, sol in H O and alcohol (Delepine, C R 1914, 158 1277)

**Lithium sodium chloriridite,  $\text{LiNaIrCl}_6 - 12\text{H}_2\text{O}$** 

Stable in aq solution in the presence of excess of lithium salt (Delepine, C R 1914, 158 1278)

$\text{LiNa}_2\text{IrCl}_6 + 12\text{H}_2\text{O}$  Stable in aq solution in the presence of excess of sodium salt (Delepine, C R 1914, 158 1278)

**Potassium chloriridite,  $\text{K}_3\text{IrCl}_6$** Decomp by  $\text{H}_2\text{O}$  (Delepine)

+  $3\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$ , insol in alcohol, insol in sat  $\text{KCl} + \text{Aq}$  (Berzelius)  
 $\text{IrCl}_6(\text{H}_2\text{O})\text{K}_2$  (Delepine)

**Rubidium chloriridite**,  $\text{IrCl}_5(\text{H}_2\text{O})\text{Rb}_2$ 

(Delepine)

**Silver chloriridite**,  $\text{Ag}_2\text{IrCl}_6$ Insol in  $\text{H}_2\text{O}$  or acids, sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$ 

Ppt (Delépine, Bull Soc 1910, (4), 7 55)

**Sodium chloriridite**,  $\text{Na}_2\text{IrCl}_6 + 12\text{H}_2\text{O}$ Efflorescent, sol in  $\frac{1}{2}$  pt  $\text{H}_2\text{O}$  Insol in alcohol Melts in crystal  $\text{H}_2\text{O}$  at  $50^\circ$ **Thallium chloriridite**,  $\text{Tl}_3\text{IrCl}_6$ Sol in hot  $\text{HCl}$ , pptd on cooling (Delepine, C R 1909, 149 1073)**Chlorotetramine chromium comps**

See Chlorotetramine chromium comps

**Chloro-azouimide**,  $\text{N}_3\text{Cl}$ Sl sol in  $\text{H}_2\text{O}$  (Raschig, B 1908, 41 4194)**Chlorobromo comps**

See Bromochloro comps

**Chlorocarbonic acid**

See Carbonyl chloride

**Chlorochromic acid**  $\text{CrO}_2\frac{\text{OH}}{\text{Cl}}$ 

Known only in its salts

 $\text{CrOCl}_2$  See Chromyl chloride**Ammonium chlorochromate**,  $\text{NH}_4\text{CrO}_3\text{Cl} = \text{CrO}_2\frac{\text{Cl}}{\text{ONH}_4}$ More sol in  $\text{H}_2\text{O}$  than the K salt (Peligot, A ch 52 283)**Barium chlorochromate chloride**, $\text{Ba}(\text{CrO}_3\text{Cl})$ ,  $\text{BaCl}$ Deliquescent Very sol in  $\text{H}_2\text{O}$  (Pratorius A 201 1) $+ \text{H}_2\text{O}$  Not deliquescent**Calcium chlorochromate**,  $\text{Ca}(\text{CrO}_3\text{Cl})$ 

Deliquescent (Peligot)

 $+ 5\text{H}_2\text{O}$  Very deliquescent (Pratorius)**Chromous chlorochromate**

See Trichromyl chloride

**Cobalt chlorochromate**,  $\text{Co}(\text{CrO}_3\text{Cl}) + 9\text{H}_2\text{O}$ Deliquescent, melts at  $10^\circ$  in crystal  $\text{H}_2\text{O}$  (Pratorius)**Lithium chlorochromate**,  $\text{LiCrO}_3\text{Cl}$ Sol in  $\text{H}_2\text{O}$  acidified with  $\text{HCl}$  without decomp (Lowenthal, Z anorg 1894, 6 357)**Magnesium chlorochromate**,  $\text{Mg}(\text{CrO}_3\text{Cl})_2$ 

Deliquescent (Peligot)

 $+ 9\text{H}_2\text{O}$  Less deliquescent than the other chlorochromates (Pratorius, A 201 1)Very hygroscopic, sol in  $\text{H}_2\text{O}$  acidified with  $\text{HCl}$  without decomp (Lowenthal, Z anorg 1894, 6 359)**Nickel chlorochromate**,  $\text{Ni}(\text{CrO}_3\text{Cl}) + 9\text{H}_2\text{O}$ Deliquescent, melts in its crystal  $\text{H}_2\text{O}$  at  $46-48^\circ$  (Pratorius)**Potassium chlorochromate**,  $\text{KCrO}_3\text{Cl} = \text{CrO}_2(\text{Cl})\text{OK}$ Sol in  $\text{H}_2\text{O}$  with decomp Cryst from  $\text{H}_2\text{O}$  containing  $\text{HCl}$  without decomp (Peligot)

Sol in acetone (Naumann B 1904, 37 4328)

**Sodium chlorochromate**,  $\text{NaCrO}_3\text{Cl}$ 

Deliquescent (Peligot)

 $+ 2\text{H}_2\text{O}$  Deliquescent (Pratorius)**Strontium chlorochromate**,  $\text{Sr}(\text{CrO}_3\text{Cl})_2 + 4\text{H}_2\text{O}$ Deliquescent, melts in crystal  $\text{H}_2\text{O}$  at  $72^\circ$  (Pratorius)**Thalious chlorochromate**,  $\text{TlCrO}_3\text{Cl}$ Decomp by  $\text{H}_2\text{O}$  (Lachaud and Leprieux, C R 103 198)**Zinc chlorochromate**,  $\text{Zn}(\text{CrO}_3\text{Cl}) + 9\text{H}_2\text{O}$ Deliquescent, melts at  $37.5^\circ$  in crystal  $\text{H}_2\text{O}$  (Pratorius)Very hygroscopic, very sol in  $\text{H}_2\text{O}$  and acids (Lowenthal, Z anorg 1894, 6 360)**Dichlorochromium bromide**, $[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Br}$ Vlry deliquescent Sol in fuming  $\text{HBr}$  in a mixture of equal volumes ether and fuming  $\text{HBr}$ , in alcohol and in acetone (Bjerrum, B 1907, 40 2919)**Chlorochromotetrammonium comps**

See Chlorotetramine chromium comps

**Chlorocolumbium bromide**,  $(\text{C}^{10}\text{Cl}_{12})\text{Br} + 7\text{H}_2\text{O}$ Sol in a small quantity of cold  $\text{H}_2\text{O}$  (Harned, J Am Chem Soc 1913, 35 1083)**Chlorocolumbium chloride**,  $(\text{C}^{10}\text{Cl}_{12})\text{Cl} + 7\text{H}_2\text{O}$ Insol in cold, sol in boiling  $\text{H}_2\text{O}$ Not easily decomp by boiling with  $\text{NH}_4\text{OH}$  Conc  $\text{HNO}_3$  decomp a boiling solution of this comp Completely sol in conc alkalies (Harned, J Am Chem Soc 1913, 35 1080)

**Chlorocolumbium hydroxide**,  $(\text{Cb}_2\text{Cl}_{12})(\text{OH})_2 + 8\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in acids and alkalis (Harned, J Am Chem Soc 1913, **35** 1082)

**Chloroctamine cobaltic carbonate**,

Very sol in  $\text{H}_2\text{O}$  (Vortmann and Blasberg, B **22** 2651)

$\text{Cl}_2\text{Co}_2(\text{NH}_3)_8(\text{CO}_3)_2 + \text{H}_2\text{O}$  (Vortmann and Blasberg)

**Chloroferrous acid**

**Calcium chloroferite**,  $\text{CaO}$ ,  $\text{CaCl}_2$ ,  $\text{Fe}_2\text{O}_3$

Insol in  $\text{H}_2\text{O}$  (le Chatelier, C R **99** 276)

**Dichlorofulminoplatinum**,

Insol in  $\text{H}_2\text{O}$  (v Meyer, J pr (2) **18** 305)

**Trichlorofulminoplatinum**,

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (v Meyer)

**Tetrachlorofulminoplatinum**

Insol in  $\text{H}_2\text{O}$  (v Meyer)

**Chlorohydroxylonitroplatinsamid-**

**amine nitrate**,  $(\text{OH})\text{ClNO}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$

Easily sol in hot  $\text{H}_2\text{O}$  (Cleve)

**Chlorohydroxyloplatin diamine bromide**,

Sl sol in  $\text{H}_2\text{O}$

— **carbonate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)\text{CO}_3$

Insol in  $\text{H}_2\text{O}$  (Cleve)

— **chloride**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5\text{Cl})$

Sl sol in  $\text{H}_2\text{O}$  (Cleve)

— **chromate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)\text{CrO}_4$

Nearly insol in  $\text{H}_2\text{O}$

— **dichromate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$

Ppt (Cleve)

— **nitrate** (Raewsky's nitrate),

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  (Gerhardt)

**Chlorohyposulphuric acid**,  $\text{S}_2\text{O}_3\text{Cl}_4$

See Sulphur oxytetrachloride

**Chloromanganic acid**

See Manganic hydrogen chloride

**Chloromercurosulphrous acid**

**Ammonium chloromercurosulphite**,

Sol in  $\text{H}_2\text{O}$  (Barth, Z phys Ch **9** 205)

**Barium chloromercurosulphite**,

Insol in  $\text{H}_2\text{O}$  (Barth)

**Potassium chloromercurosulphite**,  $\text{KSO}_3\text{HgCl}$

Sol in  $\text{H}_2\text{O}$  (Barth)

**Sodium chloromercurosulphite**,  $\text{NaSO}_3\text{HgCl} + \text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Barth)

**Chloromolybdenum bromide**,

Insol in  $\text{H}_2\text{O}$  and dil acids, sol in alcohol  $+ 6\text{H}_2\text{O}$  At first easily sol in  $\text{H}_2\text{O}$ , but a precipitate soon forms Can be crystallized from dil  $\text{HBr} + \text{Aq}$  Sol in alcohol and ether (Blomstrand)

**Chloromolybdenum potassium bromide**,

Decomp by  $\text{H}_2\text{O}$  Can be cryst from  $\text{HBr} + \text{Aq}$  (Blomstrand)

**Chloromolybdenum chloride**,  $\text{Cl}_4\text{Mo}_3\text{Cl}_2 =$   
**molybdenum dichloride**,  $\text{MoCl}_2$

Insol in  $\text{H}_2\text{O}$ , easily sol in  $\text{HCl} + \text{Aq}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , sl sol in  $\text{HNO}_3$ , sol in  $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{KOH} + \text{Aq}$ , with separation of precipitate on boiling, sol in alcohol and ether (Blomstrand, J pr **77** 96)

Very sol in conc  $\text{HCl}$  (Rosenham and Kohn, Z anorg **1910** **66** 2)

$+ 3\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$

$+ 4\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Lucht and Kempe, A **170** 351)

$+ 6\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , alcohol, or ether (Blomstrand)

**Chloromolybdenum hydrogen chloride**,

Sol in  $\text{H}_2\text{O}$ , but ppt forms after a few minutes (Rosenham and Kohn, Z anorg **1910**, **66** 5)

**Chloromolybdenum potassium chloride**,

Decomp by pure  $\text{H}_2\text{O}$ , can be recrystallized from  $\text{HCl} + \text{Aq}$  (Blomstrand, J pr **77** 108)

**Chloromolybdenum hydroxide**,  $\text{Cl}_4\text{Mo}_3(\text{OH})_2 + 2\text{H}_2\text{O}$ 

Insol in  $\text{H}_2\text{O}$  or alcohol Easily sol in strong acids if fresh, and washed only with cold  $\text{H}_2\text{O}$  If washed with warm  $\text{H}_2\text{O}$ , it is less sol in acids If precipitated hot, is insol in acids, even  $\text{H}_2\text{SO}_4$  or fuming  $\text{HNO}_3$  (Blomstrand, J pr 77 100)  
 $+8\text{H}_2\text{O}$

**Chloromolybdenum iodide**,  $\text{Cl}_4\text{Mo}_3\text{I}_2 + 3\text{H}_2\text{O}$ 

Precipitate  
 $+6\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and alcohol

**Chloromolybdenum potassium iodide**,  $\text{Cl}_4\text{Mo}_3\text{I}_2, 2\text{KI} + 2\text{H}_2\text{O}$ 

Decomp by  $\text{H}_2\text{O}$  Recryst from  $\text{HI} + \text{Aq}$  (Blomstrand)

**Chloromolybdenum oxybromide**,  $\text{Cl}_4\text{Mo}_3\text{OH Br} + 2\text{H}_2\text{O}$ 

Insol in alcohol (Blomstrand, J pr 77 116)

**Chloromolybdic acid**,  $\text{MoOCl}_3(\text{OH}) + 7\text{H}_2\text{O}$ 

Very hygroscopic (Weinland, B 1904, 37 572)

**Diammonium tetrachloromolybdate**,  $\text{MoCl}_4(\text{ONH}_4)_2 + 2\text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis and ammonia (Weinland, Z anorg 1905, 44 83)

**Cæsium chlorotrimolybdate, acid**,  $\text{Mo}_3\text{O}_{11}\text{Cl}_{14}(\text{Cs O}) + 22\text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis, and ammonia (Weinland, l c)

**Monocæsium trichloromolybdate**,  $\text{MoOCl}_3(\text{OCs}) + \text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis and ammonia (Weinland)

**Dicæsium tetrachloromolybdate**,  $\text{MoCl}_4(\text{OCs})_2$ 

Hygroscopic Sol in  $\text{H}_2\text{O}$  with decomp Sol in dilute acids, alkalis, and ammonia (Weinland, Z anorg 1905, 44 83)

**Monopotassium trichloromolybdate**,  $\text{MoOCl}_3(\text{OK}) + \text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis, and ammonia (Weinland)

**Dipotassium tetrachloromolybdate**,  $\text{M Cl}_4(\text{OK}) + 2\text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis, and ammonia (Weinland)

**Potassium hydrogen chlorotrimolybdate**,  $\text{Mo}_3\text{O}_{11}\text{Cl}_{14}, \text{K}_2\text{O} + 6\text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis, and ammonia (Weinland)

**Monorubidium trichloromolybdate**,  $\text{MoOCl}_3(\text{ORb}) + \text{H}_2\text{O}$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acids, alkalis, and ammonia (Weinland)

**Dicubidium tetrachloromolybdate**,  $\text{MoCl}_4(\text{ORb})_2$ 

Hygroscopic Decomp by  $\text{H}_2\text{O}$  Sol in dilute acid, alkalis, and ammonia (Weinland)

**Chloronitratoplatinamine nitrite**,  $\text{Cl Pt}(\text{NH}_3\text{NO}_2)_2$ 

Easily sol in  $\text{H}_2\text{O}$

**Chloronitratoplatin diamine nitrate**,  $\text{Cl Pt}(\text{N}_2\text{H}_5\text{NO}_3)_2$ 

Decomp by  $\text{H}_2\text{O}$  with formation of  $\text{Cl Pt}[(\text{NH}_3)_2\text{NO}_3]_2$

**— sulphate**,  $\text{Cl Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4 + \text{H}_2\text{O}$ 

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$

**Chloronitritotetramine cobaltic chloride**,  $\text{Cl}(\text{NO})\text{Co}(\text{NH}_3)_4\text{Cl}$ 

Not very sol in cold  $\text{H}_2\text{O}$  (Jørgensen, Z anorg 5 195)

**Chloronitritoplatin semidiamine chloride**,  $\text{Cl}_2(\text{NO}_2)\text{Pt}(\text{NH}_3)_2\text{Cl}$ 

100 pts solution in  $\text{H}_2\text{O}$  sat at  $18^\circ$  contain 18 pts salt, sat at  $100^\circ$ , 6 pts

Insol in abs alcohol or ether Not decomp by conc  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{C O}_4 + \text{Aq}$ , and by  $\text{H}_2\text{SO}_4$  only at a high heat

Formula given was  $\text{PtNH}_4\text{Cl}_6\text{O}_5$  (Peyson, J B 1855 421)

**— nitrite**,  $\text{Cl}(\text{NO}_2)\text{Pt}(\text{NH}_3)_2\text{NO}_2$ 

Sol in  $\text{H}_2\text{O}$  (Blomstrand)

**Chlorophosphatoplatin diamine phosphate**,  $\text{ClPt}(\text{N H}_3)_2 + 2\text{H}_2\text{O}$ 

Nearly insol in cold, and only very sl sol in hot  $\text{H}_2\text{O}$  (Raewsky)

**Chloronitrous acid****Iridium potassium chloronitrite**,  $\text{Ir}_2\text{Cl}_2(\text{NO})_4, 6\text{KCl}$ 

Ppt, decomp by boiling  $\text{H}_2\text{O}$  Sol in cold  $\text{H}_2\text{O}$  (Leidic, C R 1902, 134 1583)

$\text{Ir}_3\text{K}_{12}\text{Cl}_{16}(\text{NO}_2)_8 + 4\text{H}_2\text{O}$  Ppt (Quen-  
nessen, C R 1905, 141 258)

### Chloropalladic acid

#### Chloropalladates

The chloropalladates are generally very sol  
in  $\text{H}_2\text{O}$ , and sol in alcohol (v Bonsdorff,  
Pogg 17 264)

**Ammonium chloropalladate**,  $(\text{NH}_4)_2\text{PdCl}_6$   
Sl sol in  $\text{H}_2\text{O}$  (Berzelius)

**Barium chloropalladate**  
Sol in  $\text{H}_2\text{O}$  and alcohol (v Bonsdorff)

**Cadmium chloropalladate**  
As above

**Cæsium chloropalladate**,  $\text{Cs}_2\text{PdCl}_6$   
Nearly insol in cold  $\text{H}_2\text{O}$  Decomp by  
boiling with  $\text{H}_2\text{O}$  or by hot conc  $\text{H}_2\text{SO}_4$   
(Gutbier, B 1905, 38 2386)

**Calcium chloropalladate**  
Deliquescent, sol in  $\text{H}_2\text{O}$  and alcohol (v  
Bonsdorff, 1829)

**Glucinum chloropalladate**,  $\text{GIPdCl}_6 + 8\text{H}_2\text{O}$   
ic, and sol in  $\text{H}_2\text{O}$   
**uropalladate**,  $\text{MgPdCl}_6 +$   
cent, sol in  $\text{H}_2\text{O}$

**Nickel chloropalladate**,  $\text{NiPdCl}_6 + 6\text{H}_2\text{O}$   
Extremely deliquescent

**Potassium chloropalladate**,  $\text{K}_2\text{PdCl}_6$   
Sl sol in cold  $\text{H}_2\text{O}$  Decomp by long boil-  
ing with  $\text{H}_2\text{O}$  Sl sol in dil  $\text{HCl} + \text{Aq}$  with-  
out decomp Insol in  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl}$   
 $+ \text{Aq}$  Insol in alcohol (Berzelius)

**Rubidium chloropalladate**,  $\text{Rb}_2\text{PdCl}_6$   
Insol in cold  $\text{H}_2\text{O}$  Decomp by boiling  
with  $\text{H}_2\text{O}$  or by hot conc  $\text{H}_2\text{SO}_4$  (Gutbier,  
B 1905, 38 2387)

**Zinc chloropalladate**,  $\text{ZnPdCl}_6 + 6\text{H}_2\text{O}$   
Very deliquescent (v Bonsdorff)

### Chloropalladous acid

**Aluminum chloropalladite**,  $\text{Al}_2\text{Pd}_2\text{Cl}_{10} +$   
 $20\text{H}_2\text{O}$   
Deliquescent Sol in  $\text{H}_2\text{O}$ , alcohol, or  
ether (Welkow, B 7 804)

**Ammonium chloropalladite**,  $(\text{NH}_4)_2\text{PdCl}_4 +$   
 $\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  Insol in alcohol Sol  
in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Claus)

Easily sol in  $\text{H}_2\text{O}$  (Gutbier, B 1905, 38  
2386)

**Barium chloropalladite**  
Easily sol in  $\text{H}_2\text{O}$  or alcohol

**Cadmium chloropalladite**  
Not deliquescent

**Cæsium chloropalladite**,  $\text{Cs}_2\text{PdCl}_4$   
Can be cryst from hot  $\text{H}_2\text{O}$  (Gutbier, B  
1905, 38 2386)

**Calcium chloropalladite**  
Deliquescent Sol in  $\text{H}_2\text{O}$  or alcohol

**Glucinum chloropalladite**,  $\text{GIPdCl}_4 + 6\text{H}_2\text{O}$   
Very hygroscopic, very sol in  $\text{H}_2\text{O}$ , alcohol,  
or ether (Welkow)

**Magnesium chloropalladite**  
Deliquescent Easily sol in  $\text{H}_2\text{O}$  (v  
Bonsdorff)

**Manganese chloropalladite**  
Sol in  $\text{H}_2\text{O}$  and alcohol

**Nickel chloropalladite**  
Sol in  $\text{H}_2\text{O}$

**Potassium chloropalladite**,  $\text{K}_2\text{PdCl}_4$   
Much more sol in hot than cold  $\text{H}_2\text{O}$   
(Joannis, C R 95 295) Sol in  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$  (Berzelius) Sol in cold sat  $\text{KCl} + \text{Aq}$   
(Gibbs, Sill Am J (2) 31 70) Insol in al-  
cohol (Wollaston) Somewhat sol in al-  
cohol of 0.84 sp gr, but insol in absolute al-  
cohol, decomp on boiling (Berzelius)

**Rubidium chloropalladite**,  $\text{Rb}_2\text{PdCl}_4$   
Can be cryst from hot  $\text{H}_2\text{O}$  (Gutbier, B  
1905, 38 2387)

**Sodium chloropalladite**  
Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol

**Zinc chloropalladite**  
Very deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol  
(v Bonsdorff)

**Chlorophosphoarsenouridic acid**,  $2\text{IrCl}_3,$   
 $3\text{H}_3\text{PO}_3, 3\text{H}_3\text{PO}_4, 5\text{H}_3\text{AsO}_4(?)$   
Very sol in  $\text{H}_2\text{O}$  (Geisenheimer)

**Lead chlorophosphoarsenouridate**,  $4\text{IrCl}_3,$   
 $3\text{Pb}_2\text{H}_2(\text{PO}_3)_2, 3\text{Pb}_3(\text{PO}_4)_2,$   
 $5\text{Pb}_2\text{H}_2(\text{AsO}_4)_2$   
Insol in  $\text{H}_2\text{O}$

**Chlorophosphouridic acid**,  $2\text{IrCl}_3, 3\text{H}_3\text{PO}_4,$   
 $3\text{H}_3\text{PO}_3$   
Very sol in  $\text{H}_2\text{O}$  Insol in alcohol  
(Geisenheimer, A ch (6) 23 254)  
 $2\text{IrCl}_3, 3\text{H}_3\text{PO}_4$  Sol in  $\text{H}_2\text{O}$  and alcohol

**Ammonium chlorophosphoride**,  $2\text{IrCl}_3$ ,  
 $3(\text{NH}_4)_3\text{PO}_4$ ,  $3(\text{NH}_4)_2\text{HPO}_3$

Very deliquescent Very sol in  $\text{H}_2\text{O}$   
 (Geisenheimer)

**Lead chlorophosphoride**,  $4\text{IrCl}_3$ ,  
 $3\text{Pb}_3(\text{PO}_4)_2$ ,  $3\text{PbH}_3(\text{PO}_3)_2$

Insol in  $\text{H}_2\text{O}$  or acetic acid, very sol in dil  
 $\text{HNO}_3 + \text{Aq}$  (Geisenheimer)

**Silver chlorophosphoride**,  $2\text{IrCl}_3$ ,  
 $3\text{AgH}_2\text{PO}_4$ ,  $3\text{AgH}_2\text{PO}_3$

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3 + \text{Aq}$ , and  
 $\text{NH}_4\text{OH} + \text{Aq}$  (Geisenheimer)

### Chlorophosphoplatinic acid

See Chloroplatinophosphoric acid

### Chlorophosphoric acid

**Thorium chlorophosphate**,  $3\text{ThO}_2$ ,  $\text{ThCl}_4$ ,  
 $2\text{P}_2\text{O}_5$

Insol in  $\text{H}_2\text{O}$  and acids, decomp by boil-  
 ing with  $\text{H}_2\text{SO}_4$  and fusing with alkali car-  
 bonates (Colani, C R 1909, 149 208)

**Chloroplatinamine chloride**,  $\text{Cl}_2\text{Pt}$ ,  $\frac{\text{NH}_3\text{Cl}}{\text{NH}_3\text{Cl}}$

Sol in about 700 pts  $\text{H}_2\text{O}$  at  $0^\circ$ , and 33–34  
 pts at  $100^\circ$  Not attacked by boiling conc  
 $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  Sol in boiling  $\text{KOH} + \text{Aq}$   
 with decomp Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Cleve,  
 Sv V A H 10, 9 30)

— **nitrite**,  $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NO}_2)$

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$

— **nitrite silver nitrite**,  $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$ ,  
 $\text{AgNO}_2$

Easily sol in hot, sl sol in cold  $\text{H}_2\text{O}$   
 (Cleve)

— **nitritochloride**,  $\text{Cl}_2\text{Pt}$ ,  $\frac{\text{NH}_3\text{NO}_2}{\text{NH}_3\text{Cl}}$

Sol in  $\text{H}_2\text{O}$  (Cleve)

**Chloroplatinamine bromide**,  
 $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6\text{Br})$

Sl sol in hot  $\text{H}_2\text{O}$  (Cleve)

— **chloride** (Gros' chloride),  
 $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6\text{Cl})_2$

Nearly insol in cold, and only sl sol in hot  
 $\text{H}_2\text{O}$  Sol in hot conc  $\text{KOH} + \text{Aq}$ , with de-  
 comp (Grimm)

Sol in cold  $\text{KOH} + \text{Aq}$  without decomp  
 Nearly insol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Buckton)  
 $+ \text{H}_2\text{O}$  (Ruswsky)

— **chloroplatinate**,  $\text{NCl}_2\text{Pt}(\text{N}_2\text{H}_6\text{Cl})_2$ ,  $\text{PtCl}_4$

Easily sol in hot  $\text{H}_2\text{O}$

— **chloroplatinite**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6\text{Cl})_2$ ,  $\text{PtCl}_2$

Sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Chloroplatinamine chromate**,

Nearly insol in  $\text{H}_2\text{O}$  (Cleve)

— **dichromate**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6)_2\text{Cr}_2\text{O}_7$

Sl sol in cold, more sol in hot  $\text{H}_2\text{O}$   
 (Cleve)

— **nitrate** (Gros' nitrate),  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6\text{NO}_3)_2$

Much more easily sol in hot than in cold  
 $\text{H}_2\text{O}$  Sol in hot  $\text{KOH} + \text{Aq}$  with decomp  
 Nearly insol in conc  $\text{HNO}_3 + \text{Aq}$

— **nitritochloride**,  $\text{Cl}_2\text{Pt}$ ,  $\frac{\text{N}_2\text{H}_6\text{NO}_2}{\text{N}_2\text{H}_6\text{Cl}}$

Ppt (Jorgensen)

— **phosphate**

See Chlorophosphatoplatinamine phos-  
 phate

— **sulphate**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6)_2\text{SO}_4$

Sl sol in both cold or hot  $\text{H}_2\text{O}$  (Cleve)  
 $+ x\text{H}_2\text{O}$  Sl sol in cold, easily in hot  
 $\text{H}_2\text{O}$  (Grimm)

— **sulphocyanide**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_6)_2(\text{CNS})_2$   
 $+ \text{H}_2\text{O}$

Ppt (Cleve)

**Chloroplatinmonodiamine chloride**,

Quite easily sol in  $\text{H}_2\text{O}$  (Cleve)

**Chloroplatinsemidiamine carbonate chlo-  
 ride**,  $2\text{Pt}(\text{NH}_3)_2\text{Cl}_2$ ,  $\text{Pt}_2(\text{NH}_3)_4\text{Cl}_2(\text{CO}_3)$

Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol and ether  
 Decomp by cold  $\text{HCl} + \text{Aq}$  (Schon, Z anorg  
 1897, 13 37)

**Chloroplatinsemidiamine chloride**,

Sol in 300 pts  $\text{H}_2\text{O}$  at  $0^\circ$ , and 65 pts at  
 $100^\circ$  Not decomp by conc  $\text{H}_2\text{SO}_4$  Sol in  
 $\text{KOH} + \text{Aq}$  without decomp (Cleve)

**Chloroplatinic acid**,  $\text{H}_2\text{PtCl}_6 + 6\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$ , alcohol, or ether  
 $+ 4\text{H}_2\text{O}$  Deliquescent (Pigeon, C R  
 112 1218)

$\text{PtCl}_4$ ,  $\text{HCl} + 2\text{H}_2\text{O}$  (Pigeon)

**Aluminum chloroplatinate**,  $\text{AlCl}_3$ ,  $\text{PtCl}_4 +$   
 $15\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  and alcohol (Welkow, B  
 7 304)  
 Insol in ether

**Ammonium chloroplatinate**,  $(\text{NH}_4)_2\text{PtCl}_6$

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$   
 (Fresenius)

100 pts  $\text{H}_2\text{O}$  dissolve 0.666 pt at ord  
 temp and 12.5 pts at  $100^\circ$  (Crookes, C N  
 9 37)

Insol in cold HCl + Aq. Separates out on cooling from solution in hot HCl, HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>. (Fischer)

Very sl sol in cold, easily in hot NH<sub>4</sub>OH + Aq. (Fresenius)

Conc NH<sub>4</sub>Cl + Aq ppts it almost completely from aqueous solution. (Bottger)

Sol in NH<sub>4</sub> succinate + Aq. (Döpping)

Less sol in H<sub>2</sub>PtCl<sub>6</sub> + Aq than in H<sub>2</sub>O. (Rogojski, A. ch (3) 41 452)

Sol in SnCl<sub>2</sub> + Aq. (Fischer)

Very sol with decomp in KCNS + Aq. (Claus)

At 15–20°, sol in 26,535 pts 97.5% alcohol, in 1476 pts 76% alcohol, and in 665 pts 55% alcohol. If free HCl is present, it is sol in 672 pts 76% alcohol. (Fresenius, A. 59 118)

Insol in absolute alcohol or ether

**Barium chloroplatinate**, BaPtCl<sub>6</sub> + 6H<sub>2</sub>O

Permanent, sol in H<sub>2</sub>O, decomp by alcohol. (v. Bonsdorff, Pogg 17 250)

**Barium monochloroplatinate**, PtCl(OH)<sub>2</sub>Ba + H<sub>2</sub>O

Insol in H<sub>2</sub>O and in org solvents. (Bellucci, C. C. 1903, I 131)

**Barium pentachloroplatinate**, OH PtCl<sub>5</sub>Ba + H<sub>2</sub>O

(Miolati, Chem. Soc. 1900, 78 (2) 732)

**Cadmium chloroplatinate**, CdPtCl<sub>6</sub> + 6H<sub>2</sub>O

Deliquescent, and easily sol in H<sub>2</sub>O. (v. Bonsdorff)

**Cæsium chloroplatinate**, Cs<sub>2</sub>PtCl<sub>6</sub>

100 pts H<sub>2</sub>O dissolve it

0°	10°	20°	30°
0.024	0.050	0.079	0.110 pts Cs <sub>2</sub> PtCl <sub>6</sub> ,
40°	50°	60°	70°
0.142	0.177	0.213	0.251 pts Cs <sub>2</sub> PtCl <sub>6</sub> ,
80°	90°	100°	
0.291	0.332	0.377	pts Cs <sub>2</sub> PtCl <sub>6</sub>
(Bunsen, Pogg 113 337)			

Sol in 1308 pts H<sub>2</sub>O at 15°, and 261 pts at 100°. (Crookes, C. N. 9 205)

**Calcium chloroplatinate**, CaPtCl<sub>6</sub> + 8H<sub>2</sub>O

Deliquescent, easily sol in H<sub>2</sub>O. (v. Bonsdorff)

**Calcium monochloroplatinate**, PtCl(OH)Ca + H<sub>2</sub>O

Insol in H<sub>2</sub>O and in org solvents. (Bellucci, C. C. 1903, I 131)

**Cerium chloroplatinate**, CeCl<sub>3</sub>, PtCl<sub>4</sub> + 13H<sub>2</sub>O

Deliquescent, very sol in H<sub>2</sub>O or alcohol, insol in ether.

4CeCl<sub>3</sub>, 3PtCl<sub>4</sub> + 5H<sub>2</sub>O. Deliquescent, easily sol in H<sub>2</sub>O or alcohol, insol in ether. (Holzmann, J. pr. 84 80)

**Chromium chloroplatinate**, CrCl<sub>3</sub>, PtCl<sub>4</sub> + 10½H<sub>2</sub>O

Deliquescent. (Nilson, B. 9 1056)

+ 10H<sub>2</sub>O. Very sol in H<sub>2</sub>O and alcohol. Nearly insol in acetone. (Higley, J. Am. Chem. Soc. 1904, 26 617)

**Cobalt chloroplatinate**, CoPtCl<sub>6</sub> + 6H<sub>2</sub>O

Very deliquescent. (Jørgensen)

**Copper chloroplatinate**, CuPtCl<sub>6</sub> + 6H<sub>2</sub>O

Deliquescent in moist air. (v. Bonsdorff)

**Didymium chloroplatinate**, D<sub>2</sub>Cl<sub>3</sub>, PtCl<sub>4</sub> + 13H<sub>2</sub>O

Less deliquescent than the cerium salt. (Marignac)

+ 10½H<sub>2</sub>O. Deliquescent. (Cleve, Bull. Soc. (2) 43 361)

**Erbium chloroplatinate**, ErCl<sub>3</sub>, PtCl<sub>4</sub> + 11H<sub>2</sub>O

Very deliquescent. (Cleve)

**Gadolinium chloroplatinate**, GdCl<sub>3</sub>, PtCl<sub>4</sub> + 10H<sub>2</sub>O

Ppt. (Benedicko, Z. anorg. 1900, 22 204)

**Glucinum chloroplatinate**, GlPtCl<sub>6</sub> + 8H<sub>2</sub>O

Deliquescent in moist air. Very sol in H<sub>2</sub>O, moderately in alcohol. Insol in ether. (Welkow, B. 6 1288)

**Indium chloroplatinate**, 2InCl<sub>3</sub>, 3PtCl<sub>4</sub> + 36H<sub>2</sub>O

Deliquescent. (Nilson)

**Iron (ferrous) chloroplatinate**, FePtCl<sub>6</sub> + 6H<sub>2</sub>O

Deliquescent. (Lopsoc)

**Iron (ferric) chloroplatinate**, FeCl<sub>3</sub>, PtCl<sub>4</sub> + 10½H<sub>2</sub>O

Deliquescent. (Nilson)

**Lanthanum chloroplatinate**, LaCl<sub>3</sub>, PtCl<sub>4</sub> + 13H<sub>2</sub>O

Deliquescent, extremely sol in H<sub>2</sub>O. (Cleve)

**Lead chloroplatinate**, PbPtCl<sub>6</sub> + 3H<sub>2</sub>O

Easily sol in H<sub>2</sub>O and alcohol. (Lopsoc) with decomp. (Bunsen, Z. anorg. Chem. 1867 520)

**Lead monochloroplatinate**, [PtCl(OH)]Pb, Pb(OH)

Ppt. (Bellucci, Chem. Soc. 1902, 82, II 155)

**Lead pentachloroplatinate, basic**, PtCl(OH)Pb, Pb(OH)

(Miolati, Chem. Soc. 1900, 78 (2) 732)

**Lithium chloroplatinate**, Li<sub>2</sub>PtCl<sub>6</sub> + 6H<sub>2</sub>O

Extremely deliquescent. (Jørgensen), efflorescent. Easily sol in H<sub>2</sub>O, alcohol, or ether-alcohol, insol in ether. (Scheibler)

**Lithium pentachloroplatinate**, OH PtCl<sub>5</sub>Li

Very hygroscopic. (Miolati, Chem. Soc. 1900, 78 (2) 732)

**Magnesium chloroplatinate,  $\text{MgPtCl}_6 \cdot 6\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and abs alcohol  
+12 $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

**Manganese chloroplatinate,  $\text{MnPtCl}_6 \cdot 6\text{H}_2\text{O}$** 

Not deliquescent, sol in  $\text{H}_2\text{O}$   
+12 $\text{H}_2\text{O}$  Sl efflorescent

**Nickel chloroplatinate,  $\text{NiPtCl}_6 \cdot 6\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$

**Potassium chloroplatinate,  $\text{K}_2\text{PtCl}_6$** 

100 pts  $\text{H}_2\text{O}$  dissolve at

0° 10° 20° 30° 40° 50°  
0.74 0.90 1.12 1.41 1.76 2.17 pts  $\text{K}_2\text{PtCl}_6$ ,

**Silver pentachloroplatinate,**  $(OH)PtCl_5Ag_2$ Ppt, stable in boiling  $H_2O$  (Miolati, Chem Soc 1900, 78 (2) 732)**Silver chloroplatinate ammonia,**  $Ag_2PtCl_6, 2NH_3$ Insol in  $H_2O^*$  (Birnbaum)**Sodium chloroplatinate,**  $Na_2PtCl_6 + 6H_2O$ Easily sol in  $H_2O$  Sat solution at 15° contains 39.77 g  $Na_2PtCl_6$  and has sp gr of 1.368 Sol in  $NaCl + Aq$  More sol in absolute alcohol than in 95% alcohol Sat solution in abs alcohol contains 11.90%, 95% alcohol, 6.34% Mixture of equal parts of alcohol and ether dissolve 2.43% Insol in ether (Precht, Z anal 18 502)**Sodium pentachloroplatinate,**  $(OH)PtCl_5Na_2$ 

Exists only in solution (Miolati, l c)

**Strontium chloroplatinate,**  $SrPtCl_6 + 8H_2O$ Very sol in  $H_2O$ **Strontium monochloroplatinate,**  $PtCl(OH)_5Sr + H_2O$ Insol in  $H_2O$  and org solvents (Bellucci, C C 1903, I 131)**Thallium chloroplatinate,**  $Tl_2PtCl_6$ Very sl sol in  $H_2O$  Sol in 15,585 pts  $H_2O$  at 15°, and 1948 pts at 100° (Crookes)**Thallium monochloroplatinate,**  $[PtCl(OH)_5]Tl$ 

Ppt (Bellucci, Chem Soc 1902, 82 (2) 155)

**Thallium pentachloroplatinate,**  $(OH)PtCl_5Tl_2$ 

(Miolati, Chem Soc 1900, 78 (2) 732)

**Thorium chloroplatinate,**  $ThCl_4, PtCl_4 + 12H_2O$ 

Very deliquescent (Cleve, Bull Soc (2) 21 118)

**Tin (stannic) chloroplatinate,**  $SnCl_4, PtCl_4 + 12H_2O$ 

(Nilson B 9 1142)

**Ytterbium chloroplatinate,**  $2YbCl_3, PtCl_4 + 22H_2O$ , and  $+35H_2O$ 

Ppt (Cleve, Z anorg 1902, 32 137)

**Vanadyl chloroplatinate,**  $(VO)PtCl_4 + 10\frac{1}{2}H_2O$ Sol in  $H_2O$ , cryst from  $PtCl_4 + Aq$  (Brauner, M 3 58)**Yttrium chloroplatinate,**  $4YCl_3, 5PtCl_4 + 52H_2O$ Very deliquescent (Cleve)  
 $2YCl_3, 3PtCl_4 + 30H_2O$  (Nilson, B 9 1059)  
 $2YCl_3, PtCl_4 + 21H_2O$  (Nilson)**Zinc chloroplatinate,**  $ZnPtCl_6 + 6H_2O$ Deliquescent, sol in  $H_2O$  and alcohol**Zinc tetrachloroplatinate,**  $ZnPt(OH)Cl_4 + 5H_2O$ Extremely sol in  $H_2O$  and alcohol (Miolati, Z anorg 1900, 22 458)**Zirconyl chloroplatinate,**  $(ZrO)PtCl_6 + 12H_2O$   
(Nilson)**Chloroplatinocyanhydripyrophosphoric**

acid,  $ClPtP O_5H_4 = ClPt \begin{cases} \nearrow P(OH)_2 \\ \searrow O \\ \nearrow PO(OH)_2 \end{cases}$

Not deliquescent Sol in  $H_2O$  (Schutzenberger, Bull Soc (2) 18 154)**Chloroplatinocyanhydric acid,**  
 $H_2Pt(CN)_4Cl_2$ 

See Perchloroplatinocyanhydric acid

**Potassium chloroplatinocyanide**,  $5K_2Pt(CN)_4$ ,  
 $K_2Pt(CN)_4Cl_2 + 21H_2O$   
 Sol in  $H_2O$ , insol in alcohol

**Silver chloroplatinocyanide**,  
 $Ag_2(PtCl_2(CN)_4)_2$   
 Ppt (Miolati, C C 1901, I 500)

**Chloroplatinophosphoric acid**,  
 $Cl_2PtP(OH)_3$   
 Very deliquescent, and sol in  $H_2O$   
 (Schutzenberger, Bull Soc (2) 17 493)

**Lead chloroplatinophosphate**,  $Pb_3(Cl_2PtPO_3)_2$   
 $+ 8H_2O$

Ppt  
 $Pb_3(Cl_2PtPO_3)_2$ ,  $2PbO + 4H_2O$  Ppt  
 (Schutzenberger, Bull Soc (2) 17 494)

**Silver chloroplatinophosphate**,  $Ag_2HPO_3$ ,  
 $PtCl_2$   
 Ppt (Schutzenberger, Bull Soc (2) 17 494)

**Chloroplatinodiphosphoric acid**,  $PtCl_2$ ,  
 $P_2(OH)_6$   
 Very deliquescent, and easily sol in  $H_2O$   
 (Schutzenberger, Bull Soc (2) 18 153)

**Chloroplatinopyrophosphoric acid**,  
 $ClPt \begin{array}{c} \nearrow P(OH)_2 \\ \searrow O \\ \searrow P(OH)_3 \end{array}$   
 Less deliquescent than chloroplatinodiphosphoric acid

**Chloroplatinous acid**,  $H_2PtCl_4$   
 Known only in solution

**Aluminum chloroplatinite**,  $AlPtCl_5 + 10\frac{1}{2}H_2O$   
 Very deliquescent, sol in  $H_2O$  (Nilson, J pr (2) 15 260)

**Ammonium chloroplatinite**,  $(NH_4)_2PtCl_4$   
 Sl sol in cold, easily in hot  $H_2O$  Insol in alcohol (Peyrone, A 55 206)

**Barium chloroplatinite**,  $BaPtCl_4 + 3H_2O$   
 Not deliquescent, sol in  $H_2O$  Very sl sol in 93% alcohol

**Cadmium chloroplatinite ammonia**,  $CdPtCl_4$ ,  
 $4NH_3$   
 Insol in  $H_2O$  or  $NH_4OH + Aq$  Sol in  $HCl + Aq$  (Thomson, B 2 668)

**Cæsium chloroplatinite**,  $Cs_2PtCl_4$   
 Sl sol in cold, easily in hot  $H_2O$   
 100 pts  $H_2O$  dissolve 3 4 pts salt at 20°  
 " " 6 73 " " 40°  
 " " 8 68 " " 60°  
 " " 10 92 " " 80°  
 " " 12 10 " " 100°  
 (Godeffroy, A 181 176)

$Cs_2PtCl_4$  Ppt Very sensitive to sunlight Decomp by  $H_2O$  into the higher and lower chlorides (Wohler, B 1909, 42 4104)

**Calcium chloroplatinite**,  $CaPtCl_4 + 8H_2O$   
 Deliquescent, sol in  $H_2O$

**Cerium chloroplatinite**,  $CeCl_3$ ,  $2PtCl_2 + 10\frac{1}{2}H_2O$   
 Deliquescent, easily sol in  $H_2O$  (Nilson, B 9 1847)

**Chromium chloroplatinite**,  $Cr_2Pt_3Cl_{12} + 18H_2O$   
 Deliquescent

**Cobalt chloroplatinite**,  $CoPtCl_4 + 6H_2O$   
 Sl deliquescent in moist, efflorescent in dry air

**Copper chloroplatinite**,  $CuPtCl_4 + 6H_2O$   
 Extremely deliquescent (Topsøe)

**Copper chloroplatinite ammonia** (cuprammonium chloroplatinite),  
 $Cu(NH_3)_4PtCl_4$   
 Insol in  $H_2O$  or  $NH_4OH + Aq$ , easily sol in  $H_2SO_4 + Aq$  (Millon and Commaillie, C R 57 822)

**Didymium chloroplatinite**,  $D_1Cl_3$ ,  $2PtCl_2 + 10H_2O$   
 Deliquescent, very sol in  $H_2O$  (Nilson)  
 $2D_1Cl_3$ ,  $3PtCl_2 + 18H_2O$  As above (Nilson)

**Erbium chloroplatinite**,  $ErPtCl_5 + 13\frac{1}{2}H_2O$   
 Deliquescent  
 $Er_2Pt_3Cl_{12} + 24H_2O$  Deliquescent in moist air

**Glucinum chloroplatinite**,  $GIPtCl_4 + 5H_2O$   
 Deliquescent in moist air Sol in  $H_2O$  in all proportions

**Iron (ferrous) chloroplatinite**,  $FePtCl_4 + 7H_2O$   
 Deliquescent Rather sl sol in cold, very sol in hot  $H_2O$  (Nilson)

**Lanthanum chloroplatinite**,  $L_1Pt_3Cl_{12} + 18$ ,  
 and  $27H_2O$   
 Deliquescent

**Lead chloroplatinite**,  $PbPtCl_4$   
 Insol in cold  $H_2O$

**Lithium chloroplatinite**,  $Li_2PtCl_4 + 6H_2O$   
 Sol in  $H_2O$

**Magnesium chloroplatinite**,  $MgPtCl_4 + 6H_2O$   
 Not very deliquescent, very sol in  $H_2O$

**Manganese chloroplatinite,  $\text{MnPtCl}_4 + 6\text{H}_2\text{O}$** 

As the Mg salt

**Mercurous chloroplatinite**

Ppt

**Nickel chloroplatinite,  $\text{NiPtCl}_4 + 6\text{H}_2\text{O}$** 

As the Co salt

**Potassium chloroplatinite,  $\text{K}_2\text{PtCl}_4$** Moderately sol in  $\text{H}_2\text{O}$ , insol in alcohol**Rubidium chloroplatinite,  $\text{Rb}_2\text{PtCl}_4$** Sl sol in cold, easily in hot  $\text{H}_2\text{O}$ **Silver chloroplatinite,  $\text{Ag}_2\text{PtCl}_4$** Insol in  $\text{H}_2\text{O}$   $\text{NH}_4\text{OH} + \text{Aq}$  dissolves out  $\text{AgCl}$  (Lang) $\text{AgCl}$ ,  $\text{PtCl}_2$ (?) As above (Commaille, Bull Soc (2) 6 262)**Silver chloroplatinite ammonia,  $\text{Ag}_2\text{PtCl}_4, 4\text{NH}_3$** 

(Thomsen)

**Sodium chloroplatinite,  $\text{Na}_2\text{PtCl}_4 + 4\text{H}_2\text{O}$** Deliquescent, very sol in  $\text{H}_2\text{O}$ **Strontium chloroplatinite,  $\text{SrPtCl}_4 + 6\text{H}_2\text{O}$** y sol in  $\text{H}_2\text{O}$ **Tantalum chloroplatinite,  $\text{TaPtCl}_4$** sol even in boiling  $\text{H}_2\text{O}$ **Thallium chloroplatinite,  $\text{Th}_2\text{Pt}_2\text{Cl}_{14} + 24\text{H}_2\text{O}$** 

very deliquescent

**Yttrium chloroplatinite,  $\text{Y}_2\text{Pt}_2\text{Cl}_{12} + 24\text{H}_2\text{O}$** 

Deliquescent

**Zinc chloroplatinite,  $\text{ZnPtCl}_4 + 6\text{H}_2\text{O}$** Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$ , insol in alcohol**Zinc chloroplatinite ammonia,  $\text{ZnPtCl}_4, 4\text{NH}_3$** Sl sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{HCl} + \text{Aq}$   
Insol in alcohol (Thomsen, J B 1868 278)**Zirconyl chloroplatinite,  $(\text{ZrO})\text{PtCl}_4 + 8\text{H}_2\text{O}$** 

(Nilson)

**Trichloroplatinous acid,  $\text{H}_2\text{Pt}(\text{OH})\text{Cl}_3$** Sol in  $\text{H}_2\text{O}$  (Miolati, Z anorg 1902, 33 265) $+ \text{H}_2\text{O}$  (Nilson, J pr (2) 15 260)**Lead trichloroplatinite,  $\text{PbPt}(\text{OH})\text{Cl}_3$** 

Ppt (Miolati)

**Silver trichloroplatinite,  $\text{Ag}_2\text{Pt}(\text{OH})\text{Cl}_3$** 

Ppt (Miolati)

**Chloroplatosulphurous acid****Ammonium chloroplatosulphite, acid,**Sol in  $\text{H}_2\text{O}$  (Birnbbaum, A 152 149)**Ammonium chloroplatosulphite chloride sulphite,  $\text{NH}_4\text{PtClSO}_3, (\text{NH}_4)_2\text{SO}_3, \text{NH}_4\text{Cl}$** 

Very deliquescent (Birnbbaum)

**Ammonium chloroplatosulphite sulphite,**Sol in  $\text{H}_2\text{O}$  (Birnbbaum)**Barium chloroplatosulphite chloride ammonium chloride,  $\text{Ba}(\text{ClPtSO}_3)_2,$** Sol in  $\text{H}_2\text{O}$  (Birnbbaum)**Potassium chloroplatosulphite ammonium chloride,  $\text{KPtClSO}_3, 2\text{NH}_4\text{Cl}$** 

Very deliquescent (Birnbbaum, A 152 142)

**Potassium chloroplatosulphite chloride,  $\text{KPtClSO}_3, 2\text{KCl}$** Deliquescent, sol in  $\text{H}_2\text{O}$  (Birnbbaum, A 152 145)**Potassium chloroplatosulphite ammonium potassium sulphite,  $\text{KPtClSO}_3, (\text{NH}_4)\text{KSO}_3 + 3\text{H}_2\text{O}$** 

Very deliquescent (Birnbbaum, A 159 120)

**Sodium chloroplatosulphite ammonium chloride,  $\text{NaPtClSO}_3, 2\text{NH}_4\text{Cl}$** 

Very deliquescent (Birnbbaum, A 159 117)

**Chloroplumbic acid,  $\text{H}_2\text{PbCl}_6$** 

Decomp in solution on standing (Gutbier, J pr 1914, (2) 90 497)

**Ammonium chloroplumbate,  $(\text{NH}_4)_2\text{PbCl}_6$** Ppt Difficultly sol in v small amount of  $\text{H}_2\text{O}$  Solution decomp slowly when cold more rapidly when warmedDecomp by a large amount of  $\text{H}_2\text{O}$  Sol without decomp in 20%  $\text{HCl}$  Decomp by dil acids and alkalis (Elbs, Z Elektrochem 1903, 9 778)Difficultly sol in small amount of  $\text{H}_2\text{O}$  and solution decomp slowly in the cold, more rapidly when warmed Decomp by a large amount of  $\text{H}_2\text{O}$  (Gutbier, J pr 1914, (2) 90 498)Sol in cold  $\text{HNO}_3$  without decomp (Friedrich, M 1893, 14 511)Insol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$  (Nikoljukin B 18 370 R) $5\text{NH}_4\text{Cl}, 2\text{PbCl}_4$  Not hygroscopic Decomp by  $\text{H}_2\text{O}$  with pptn of  $\text{PbO}_2$  Sol in  $\text{HCl} + \text{Aq}$  and in cold  $\text{HNO}_3 + \text{Aq}$  without

decomp (Classen and Zahorski, Z anorg 4 100)

Composition is  $2\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_4$  (Friedrich, W A B 102, 2b 527)

**Cæsium chloroplumbate**,  $\text{Cs}_2\text{PbCl}_6$

Nearly absolutely insol in conc  $\text{CsCl} + \text{Aq}$  in presence of  $\text{Cl}$  (Wells, Z anorg 4 335)

1 ccm conc  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$  dissolves 0.000049 g  $\text{Cs}_2\text{PbCl}_6$  (Wells, Z anorg 4 341)

Reacts with  $\text{H}_2\text{O}$  as the corresponding ammonium salt (Gutbier, J pr 1914, (2) 90 500)

**Potassium chloroplumbate**,  $\text{K}_2\text{PbCl}_6$

Decomp by  $\text{H}_2\text{O}$ , sol in  $\text{KCl} + \text{Aq}$  (Wells, Z anorg 4 335)

Readily decomp in the air (Gutbier, J pr 1914, (2) 90 499)

**Rubidium chloroplumbate**,  $\text{Rb}_2\text{PbCl}_6$

Decomp by  $\text{H}_2\text{O}$ , sl sol in conc  $\text{RbCl} + \text{Aq}$  (Wells, Z anorg 4 335)

1 ccm conc  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$  dissolves 0.003 g  $\text{Rb}_2\text{PbCl}_6$  (Wells, Z anorg 4 341)

Reacts with  $\text{H}_2\text{O}$  as the corresponding ammonium salt (Gutbier, J pr 1914, (2) 90 499)

Decomp by conc  $\text{H}_2\text{SO}_4$ , Insol in 96% alcohol (Erdmann, A 1896, 294 76)

**Chloropurpureochromium bromide**,

Somewhat more easily sol in  $\text{H}_2\text{O}$  than the chloride (Jorgensen, J pr (2) 20 105)

— **chloride**,  $\text{CrCl}(\text{NH}_3)_5\text{Cl}_2$

Difficultly sol in cold, and decomp by hot  $\text{H}_2\text{O}$

1 pt dissolves in 154 pts  $\text{H}_2\text{O}$  at  $16^\circ$  Insol in conc  $\text{HCl} + \text{Aq}$  More sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  than in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp (Jorgensen, J pr (2) 20 105)

— **mercuric chloride**,  $\text{CrCl}(\text{NH}_3)_5\text{Cl}$ ,  $3\text{HgCl}_2$

Very difficultly sol in  $\text{H}_2\text{O}$  (Jorgensen)

— **chloroplatinate**,  $\text{CrCl}(\text{NH}_3)_5(\text{PtCl}_6)$

Extremely difficultly sol in  $\text{H}_2\text{O}$  (Jorgensen)

— **chromate**,  $\text{CrCl}(\text{NH}_3)_5(\text{CrO}_4)$

Sl sol in  $\text{H}_2\text{O}$ , sl more sol than chloropurpureocobalt chromate (Jorgensen)

— **dithionate**,  $\text{CrCl}(\text{NH}_3)_5(\text{S}_2\text{O}_6)$

Very sl sol in cold, but much more easily in hot  $\text{H}_2\text{O}$  (Jorgensen)

**Chloropurpureochromium ferrocyanide**,

Very difficultly sol in cold  $\text{H}_2\text{O}$  (Jorgensen)

— **fluosilicate**,  $\text{CrCl}(\text{NH}_3)_5(\text{SiF}_6)$

Very difficultly sol in  $\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (Jorgensen, J pr (2) 20 105)

— **mercuric iodide**,  $\text{CrCl}(\text{NH}_3)_5\text{I}_2$ ,  $2\text{HgI}_2$

Decomp by  $\text{H}_2\text{O}$ , sol in alcohol and warm  $\text{KCN} + \text{Aq}$

$\text{CrCl}(\text{NH}_3)_5\text{I}_2$ ,  $\text{HgI}_2$  Very difficultly sol in cold  $\text{H}_2\text{O}$ , easily sol in  $\text{KCN} + \text{Aq}$  (Jorgensen, l c)

— **nitrate**,  $\text{CrCl}(\text{NH}_3)_5(\text{NO}_3)$

Sol in 71 pts  $\text{H}_2\text{O}$  at  $17.5^\circ$  Insol in  $\text{HNO}_3 + \text{Aq}$  (Jorgensen)

— **oxalate**,  $\text{CrCl}(\text{NH}_3)_5\text{C}_2\text{O}_4$

Very sl sol in cold  $\text{H}_2\text{O}$  (Jorgensen, l c)

— **sulphate**,  $\text{CrCl}(\text{NH}_3)_5\text{SO}_4 \cdot 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , precipitated by alcohol (Jorgensen)

— **sulphate, acid**,  $[\text{CrCl}(\text{NH}_3)_5]_2\text{SO}_4(\text{HSO}_4)_6$

Quite sol in  $\text{H}_2\text{O}$  (Jorgensen, J pr (2) 20 185)

— **pentasulphide**,  $\text{CrCl}(\text{NH}_3)_5\text{S}_5$

Very sl sol in cold, easily sol in warm  $\text{H}_2\text{O}$  Decomp by dil  $\text{HCl} + \text{Aq}$  Insol in alcohol (Jorgensen)

**Chloropurpureocobaltic bromide**,

Properties resemble the chloride very closely Sol in 214 pts  $\text{H}_2\text{O}$  at  $14.3^\circ$  (Jorgensen, J pr (2) 18 205)

— **mercuric bromide**,

Ppt (J)

— **bromoplatinate**,  $\text{CoCl}(\text{NH}_3)_5\text{Br}_2$ ,  $\text{PtBr}_4$

Very sl sol in  $\text{H}_2\text{O}$  (J)

— **carbonate**,  $\text{CoCl}(\text{NH}_3)_5\text{CO}_3 \cdot 4\frac{1}{2}\text{H}_2\text{O}$

Efflorescent, very easily sol in  $\text{H}_2\text{O}$  (J)

— **chloride**,  $\text{CoCl}(\text{NH}_3)_5\text{Cl}_2$

Very sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  Sol in 244 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  (Claudet, Phil Mag J (4) 2 253). In 287 pts  $\text{H}_2\text{O}$  at  $10.2^\circ$  and 255 pts at  $11.5^\circ$  (Rose, Pogg 20 152) 100 pts  $\text{H}_2\text{O}$  dissolve 0.232 pt  $\text{CoCl}_2$ ,  $5\text{NH}_3$ , at  $0^\circ$ , and 1.031 pts at  $46.6^\circ$  (Kurnakoff, J Russ Soc 24 629)

Sl decomp by cold, completely by boiling  $\text{H}_2\text{O}$ , decomp prevented by a little  $\text{HCl}$  Pptd from aqueous solution by alcohol,  $\text{HCl}$ ,

or sat KCl or NaCl + Aq, not deromp by boiling HCl + Aq (Claudet, *l c*) Nearly insol in cold, but sol in hot  $H_2O$ , to which a few drops of HCl have been added Less sol in dil HCl + Aq than luteocobaltic chloride (Rogojski, A ch (3) 41 447)

Insol in alcohol (Gibbs and Genth)

**Chloropurpureocobaltic antimony chloride,**  
 $2CoCl(NH_3)_5Cl_2, SbCl_3$

Ppt Decomp by  $H_2O$  (Gibbs)

— **bismuth chloride**

Insol in conc HCl Easily decomp by  $H_2O$  (Gibbs)

— **mercuric chloride,  $CoCl(NH_3)_5Cl_2, 3HgCl_2$**

Insol in cold, less sol in hot  $H_2O$  than chloropurpureocobaltic chloride Insol in cold fuming HCl + Aq, sl sol in hot HCl + Aq, separating on cooling, sl sol in hot aqua regia, moderately sol in hot  $HNO_3$  + Aq, partly sol in cold conc  $H_2SO_4$ , wholly on warming Easily sol in warm  $H_2C_2O_4$  + Aq Insol in  $HgCl_2$  + Aq

Moderately sol in  $NH_4OH$  + Aq or  $(NH_4)_2CO_3$  + Aq (Carstanjen)

$CoCl(NH_3)_5Cl_2, 2HgCl_2$  Sl sol in cold, but much more easily in hot  $H_2O$  (Gibbs, Proc Am Acad 10 33)

— **chloropalladite,  $CoCl(NH_3)_5Cl, PdCl_2$**

Sl sol in cold, moderately sol in hot  $H_2O$  (Carstanjen)

— **chloroplatinate,  $CoCl(NH_3)_5Cl_2, PtCl_4$**

Nearly insol in cold Very sl sol in hot  $H_2O$  (Gibbs and Genth, Sill Am J (2) 23 319)

— **chromate,  $CoCl(NH_3)_5CrO_4$**

Very sl sol in  $H_2O$  (J)

— **dichromate,  $CoCl(NH_3)_5Cr_2O_7$**

Much more easily sol in  $H_2O$  than the neutral salt (J)

— **dithionate,  $CoCl(NH_3)_5S_2O_6$**

Very sl sol in cold, more easily in hot  $H_2O$  (J)

— **manganic fluoride**

Ppt Sl sol in dil  $HCl$  + Aq (Christensen, J pr (2) 35 161)

— **fluosilicate,  $CoCl(NH_3)_5SiF_6$**

Very sl sol in  $HCl$  + Aq

— **iodide,  $CoCl(NH_3)_5I$**

Much more sol in  $H_2O$  than bromide or chloride Sol in 54.5 pts  $H_2O$  at  $15.6^\circ$ , and 50 pts at  $19.3^\circ$  (J)

**Chloropurpureocobaltic mercuric iodide,**  
 $CoCl(NH_3)_5I_2, 2HgI_2$

Sl sol in  $H_2O$  (J)

$CoCl(NH_3)_5I_2, HgI_2$  Very sl sol in cold  $H_2O$  (J)

— **nitrate,  $CoCl(NH_3)_5(NO_3)_2$**

Sol in 80 pts  $H_2O$  at  $15^\circ$  Rather easily sol in hot  $H_2O$  (Jorgensen J pr (2) 18 209)

— **oxalate,  $CoCl(NH_3)_5C_2O_4$**

Sl sol in  $H_2O$  (J)

— **pyrophosphate,  $CoCl(NH_3)_5(H_2P_2O_7)$**

Sl and very slowly sol in cold, much more easily in warm  $H_2O$  (J)

$[CoCl(NH_3)_5]_2P_2O_7 + xH_2O$  Quite easily sol in  $H_2O$

— **diphosphopentamolybdate,**

$[CoCl(NH_3)_5]_2(5MoO_3, 2HPO_4)$

Ppt Nearly insol in pure  $H_2O$ , more sol in dil  $H_2SO_4$  + Aq without decomp (J)

$[CoCl(NH_3)_5]_2(5MoO_3, 2NH_4PO_4)$  Ppt As above

— **sulphate,  $CoCl(NH_3)_5SO_4$**

Anhydrous Slowly sol in 125-131.9 pts  $H_2O$  at  $16^\circ$

+  $2H_2O$  Sol in 133.4 pts  $H_2O$  at  $17.3^\circ$  Rather easily sol in hot  $H_2O$ , and much more rapidly in conc  $H_2SO_4$  (J)

Decomp by  $H_2O$  into neutral sulphate Sol in  $H_2SO_4$

— **tartrate,  $CoCl(NH_3)_5(C_4H_4O_6)_2 + 2\frac{1}{2}H_2O$**

Moderately sol in  $H_2O$ , insol in alcohol

— **thiosulphate,  $CoCl(NH_3)_5S_2O_3$**

Nearly insol in cold  $H_2O$ , very sl sol in boiling  $H_2O$  with partial decomp (J)

**Chloropurpureoiridium comps**

See Iridopentamine comps

**Chloropurpureorhodium carbonate,**

$ClRh(NH_3)_5CO_3 + H_2O$

Easily sol in  $H_2O$  (Jorgensen)

— **chloride,  $ClRh(NH_3)_5Cl$**

Sol in 179 pts  $H_2O$  at  $17^\circ$  and more easily in hot  $H_2O$  Sol in conc  $H_2SO_4$  or boiling  $N_2OH$  + Aq without decomp Very sl sol in cold dil  $HCl$  + Aq (1:1) Sl sol in hot  $HCl$  + Aq Insol in alcohol (Jorgensen, J pr (2) 27 433, 34 394)

— **rhodium chloride,**  
 $3ClRh(NH_3)_5Cl_2, 2RhCl_3$

Ppt (Jorgensen, Z anorg 5 75)

**Chloropurpleorhodium chloroplatinate,**

Insol in cold  $\text{H}_2\text{O}$  (J)

**fluosilicate,  $\text{ClRh}(\text{NH}_3)_5\text{SiF}_6$**

Very sl sol in cold  $\text{H}_2\text{O}$  Sol in  $\text{NaOH} + \text{Aq}$  as roseo salt (J)

**hydroxide,  $\text{ClRh}(\text{NH}_3)_5(\text{OH})_2$**

Known only in solution (J)

**nitrate,  $\text{ClRh}(\text{NH}_3)_5(\text{NO}_3)_2$**

Sl sol in cold  $\text{H}_2\text{O}$ , but more easily than the chloride Sol in boiling  $\text{NaOH} + \text{Aq}$  as roseo salt (J)

**sulphate,  $\text{ClRh}(\text{NH}_3)_5\text{SO}_4 + 2\text{H}_2\text{O}$**

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  (J)  
 $4\text{ClRh}(\text{NH}_3)_5\text{SO}_4 \cdot 3\text{H}_2\text{SO}_4$  Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  (J)

**Chlororhodous acid**

**Ammonium chlororhodite,  $(\text{NH}_4)_2\text{RhCl}_6 + \text{H}_2\text{O}$**

(Guthrie, B 1908, 41 213)  
 Sol in  $\text{H}_2\text{O}$ , insol in alcohol (Wollaston)  
 Not obtainable (Leidie, A ch (6) 17 275)  
 $(\text{NH}_4)_2\text{RhCl}_6 + 1\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , but less easily than Na salt, insol in alcohol Sol in dil  $\text{NH}_4\text{Cl} + \text{Aq}$  (Claus, J B 1855 423) (Guthrie, l c)

**Ammonium chlororhodite nitrate,**

Very sol in  $\text{H}_2\text{O}$  Decomp by boiling with  $\text{H}_2\text{O}$  Sl sol in  $\text{HNO}_3 + \text{Aq}$  (Leidie, C R 107 234)

**Barium chlororhodite,  $\text{Ba}_2(\text{RhCl}_6)$**

Resembles the Na salt (Bunsen, A 146 276)

**Cæsium chlororhodite,  $\text{Cs}_2\text{RhCl}_6 + \text{H}_2\text{O}$**

Difficulty sol in  $\text{H}_2\text{O}$  (Guthrie, B 1908, 41 214)

**Lead chlororhodite,  $\text{Pb}_2(\text{RhCl}_6)_2$**

Ppt Insol in  $\text{H}_2\text{O}$  (Claus) Not obtainable (Leidie)

**Mercurous chlororhodite,  $\text{Hg}_2\text{RhCl}_6$**

Ppt Insol in  $\text{H}_2\text{O}$  (Claus) Not obtainable (Leidie)

**Potassium chlororhodite,  $\text{K}_2\text{RhCl}_6 + \text{H}_2\text{O}$**

Not efflorescent Sl sol in  $\text{H}_2\text{O}$  Sl sol in  $\text{KCl} + \text{Aq}$  (Gibbs) Insol or sl sol in alcohol (Berzelius)  
 Salt is anhydrous (Leidie)  
 Contains  $1\text{H}_2\text{O}$  (Seubert and Kobbé, B 23 2556)

Can be cryst from  $\text{H}_2\text{O}$  containing a little  $\text{HCl}$  (Guthrie, B 1908 41 212)

$\text{K}_2\text{RhCl}_6 + 3\text{H}_2\text{O}$  Efflorescent Sl sol in  $\text{H}_2\text{O}$  Aqueous solution decomp to above on standing (Claus)

Not obtainable (Leidie)

Also obtained by Seubert and Kobbé B 23 2556)

$+1\frac{1}{2}\text{H}_2\text{O}$  (Leidie, C R 111 106)

**Rubidium chlororhodite,  $\text{Rb}_2\text{RhCl}_6 + \text{H}_2\text{O}$**

Difficulty sol in  $\text{H}_2\text{O}$  (Guthrie B 1908, 41, 214)

**Silver chlororhodite,  $\text{Ag}_2\text{RhCl}_6$**

Ppt Insol in  $\text{H}_2\text{O}$  (Claus)

Not obtainable (Leidie)

**Sodium chlororhodite,  $\text{Na}_4\text{RhCl}_{12} + 15\text{H}_2\text{O}$**

Efflorescent Sol in 15 pts  $\text{H}_2\text{O}$  Melts in crystal  $\text{H}_2\text{O}$  at  $50^\circ$  Insol in alcohol (Claus)

$+12\text{H}_2\text{O}$  (Guthrie, B 1908 41 213)

**Chlororuthenic acid**

**Ammonium chlororuthenate,  $\text{NH}_4\text{RuCl}_6$**

Easily sol in  $\text{H}_2\text{O}$  (Claus)  
 Formula is  $(\text{NH}_4)\text{Ru}(\text{NO})\text{Cl}$  (Joh C R 107 994)  
 Sol in  $\text{H}_2\text{O}$  with decomp sol in  $\text{HCl}$  (Howe, J Am Chem Soc 1904 26 549)

**Ammonium aquochlororuthenate,**

Ppt (Howe J Am Chem Soc 1904 26 548)

**Cæsium chlororuthenate,  $\text{Cs}_2\text{RuCl}_6$**

Sl sol in  $\text{H}_2\text{O}$  Sol in hot dil  $\text{HCl} + \text{Aq}$  (Howe, J Am Chem Soc 1901 23 754)

**Potassium chlororuthenate,  $\text{K}_2\text{RuCl}_6$**

Very sol in  $\text{H}_2\text{O}$  Very sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  Insol in  $70^\circ\text{C}$  (Claus)  
 Formula is  $\text{K}_2\text{Ru}(\text{NO})\text{Cl}$  (Joh C R 107 994)  
 Very sl sol in cold  $\text{H}_2\text{O}$  Insol in alcohol (Claus)

Partially decomp in hot  $\text{Aq}$  (Antonov, Gazz ch it 1899 29 52)

Easily sol in  $\text{H}_2\text{O}$  with decomp Sol in  $\text{HCl}$  (Howe J Am Chem Soc 1904, 26 549)

**Potassium aquochlororuthenate,**

Sol in  $\text{H}_2\text{O}$  (Howe J Am Chem Soc 1904, 26 547)

**Rubidium chlororuthenate,  $\text{Pb}_2\text{RuCl}_6$**

Sl sol in  $\text{H}_2\text{O}$ , sol in hot dil  $\text{HCl} + \text{Aq}$  (Howe, J Am Chem Soc 1901 23 754)

**Chlororuthenious acid**

**Ammonium chlororuthenite**,  $(\text{NH}_4)_4\text{Ru}_2\text{Cl}_{10}$   
Sl sol in  $\text{H}_2\text{O}$  Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  or alcohol (Claus, J pr 80 282)

**Cæsium chlororuthenite**,  $\text{Cs}_2\text{RuCl}_6 + \text{H}_2\text{O}$   
Sl sol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Howe, J Am Chem Soc 1901, 23 785)

**Potassium chlororuthenite**,  $\text{K}_4\text{Ru}_2\text{Cl}_{10}$   
Moderately sol in cold, more easily in hot  $\text{H}_2\text{O}$  Decomp easily by heating Insol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$  Insol in 80% alcohol

**Rubidium chlororuthenite**,  $\text{Rb}_2\text{RuCl}_6 + \text{H}_2\text{O}$   
Sl sol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Howe, J Am Chem Soc 1901, 23 786)

**Sodium chlororuthenite**,  $\text{Na}_4\text{Ru}_2\text{Cl}_{10}$   
Deliquescent Sol in  $\text{H}_2\text{O}$  or alcohol

**Trichlorosilcomercaptane**

See Silicon chlorohydrosulphide

**Chlorosmic acid**

**Chlorosmate**,  $(\text{NH}_4)_2\text{OsCl}_6$   
 $\text{H}_2\text{O}$  Insol in alcohol and  $\text{H}_2\text{O}$   
Jl.

**Ammonium chlorosmate**,  $\text{K}_2\text{OsCl}_6$   
Properties as the  $\text{NH}_4$  salt

**Potassium amino chlorosmate**,  
 $(\text{NH}_4)_2\text{OsCl}_6 \cdot 2\text{KCl}$   
Ppt (Brizard, A ch 1900, (7) 21 375)

**Potassium ammo. chlorosmate hydrogen chloride**,  $(\text{NH}_4)_2\text{CsCl}_3 \cdot 2\text{KCl} \cdot \text{HCl}$   
Ppt (Brizard, A ch 1900, (7) 21 378)

**Silver chlorosmate**,  $\text{Ag}_2\text{OsCl}_6$   
Insol in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$  (Claus and Jacoby)

**Silver chlorosmate ammonia**,  $\text{Ag}_2\text{OsCl}_6 \cdot 2\text{NH}_3$   
Sol in much  $\text{H}_2\text{O}$  Sl sol in  $\text{KOH} + \text{Aq}$   
Easily sol in  $\text{KCN} + \text{Aq}$  (C and J)

**Sodium chlorosmate**,  $\text{Na}_2\text{OsCl}_6 + 2\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  or alcohol

**Chlorosmious acid**

**Ammonium chlorosmite**,  
 $(\text{NH}_4)_4\text{Os}_2\text{Cl}_{10} + 3\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  and alcohol, insol in ether (Claus and Jacoby, J pr 90 65)

**Potassium chlorosmite**,  $\text{K}_4\text{Os}_2\text{Cl}_{12} + 6\text{H}_2\text{O}$   
Very easily sol in  $\text{H}_2\text{O}$  or alcohol Insol in ether (C and J)

**Chlorosmisulphurous acid**

**Potassium hydrogen chlorosmisulphite**,  
 $\text{OsCl}_4(\text{SO}_3)_4 \cdot \text{K}_6\text{H}_2$   
Ppt (Rosenheim, Z anorg 1900, 24 422)

**Sodium chlorosmisulphite**,  
 $\text{OsCl}_2(\text{SO}_3)_4 \cdot \text{Na}_6 + 10\text{H}_2\text{O}$   
Ppt (Rosenheim, Z anorg 1900, 24 420)

**Chloropyroselenious acid**

**Ammonium chloropyroselenite**,  $\text{NH}_4\text{Cl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Muthmann and Schafer, B 26 1008)

**Potassium chloropyroselenite**,  $\text{KCl}$ ,  $2\text{SeO}_2 + \text{H}_2\text{O}$   
As  $\text{NH}_4$  salt (M and S)

**Rubidium chloropyroselenite**,  $\text{RbCl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$   
As  $\text{NH}_4$  salt (M and S)

**Chlorostannic acid**,  $\text{SnO}(\text{OH})\text{Cl}$   
(Mallet, Chem Soc 35 524)  
 $\text{H}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$  Extremely deliquescent,  
sol in  $\text{H}_2\text{O}$  (Seubert, B 20 793)

**Ammonium chlorostannate**,  $(\text{NH}_4)_2\text{SnCl}_6$   
(pink salt)  
Sol in 3 pts  $\text{H}_2\text{O}$  at  $14.5^\circ$  Solution decomp on boiling when dilute, but not when conc (Bollev)

**Barium chlorostannate**,  $\text{BaSnCl}_6 + 5\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Lewy, A ch (3) 16 308)

**Cæsium chlorostannate**,  $\text{Cs}_2\text{SnCl}_6$   
Nearly insol in conc  $\text{HCl} + \text{Aq}$  (Sharples, Sil Am J (2) 47 178)

**Calcium chlorostannate**,  $\text{CaSnCl}_6 + 5\text{H}_2\text{O}$   
Very deliquescent (Lewy, A ch (3) 16 308)

**Cerium chlorostannate**,  $\text{CeSnCl}_7 + 9\text{H}_2\text{O}$   
Deliquescent Sol in  $\text{H}_2\text{O}$  (Cleve, Bull Soc (2) 31 197)

**Cobalt chlorostannate**,  $\text{CoSnCl}_6 + 6\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Jorgensen)

**Didymium chlorostannate**,  $\text{DlCl}_3$ ,  $\text{SnCl}_4 + 10\frac{1}{2}\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Cleve)

**Glucinum chlorostannate**,  $\text{GlSnCl}_6 + 8\text{H}_2\text{O}$   
Deliquescent Sol in  $\text{H}_2\text{O}$  (Atterberg Sv V A Handl 12 No 4 14)

**Lanthanum chlorostannate**,  $4\text{LaCl}_3, 5\text{SnCl}_4 + 45\text{H}_2\text{O}$

Deliquescent Sol in  $\text{H}_2\text{O}$  (Cleve)

**Lithium chlorostannate**,  $\text{Li}_2\text{SnCl}_6 + 8\text{H}_2\text{O}$

Sol in little  $\text{H}_2\text{O}$  without decomp, but decomp by dilution (Chassevant, A ch (6) 30 42)

**Magnesium chlorostannate**,  $\text{MgSnCl}_6 + 6\text{H}_2\text{O}$

Very deliquescent (Lewy)

**Manganous chlorostannate**,  $\text{MnSnCl}_6 + 6\text{H}_2\text{O}$

Deliquescent in moist, efflorescent in dry air (Jorgensen)

**Nickel chlorostannate**,  $\text{NiSnCl}_6 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Jorgensen)

**Potassium chlorostannate**,  $\text{K}_2\text{SnCl}_6$

Sol in  $\text{H}_2\text{O}$

**Sodium chlorostannate**,  $\text{Na}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Topsoe, Gm K Handb 6te auf III 149)

**Strontium chlorostannate**,  $\text{SrSnCl}_6 + 8\text{H}_2\text{O}$

Sl deliquescent, and easily sol in  $\text{H}_2\text{O}$  (Topsoe)

**Yttrium chlorostannate**,  $\text{YCl}_3, \text{SnCl}_4 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Cleve, Bull Soc (2) 31 197)

**Zinc chlorostannate**,  $\text{ZnSnCl}_6 + 6\text{H}_2\text{O}$

(Bron, C C 1904, II 410)

**Chlorosulphobismuthous acid**

**Cuprous chlorosulphobismuthite**,  
 $2\text{Cu}_2\text{S}, \text{Bi}_2\text{S}_3, 2\text{BiSCl}$

Stable in air and insol in  $\text{H}_2\text{O}$  at ord temp

Decomp by boiling  $\text{H}_2\text{O}$

Decomp by mineral acids with evolution of  $\text{H}_2\text{S}$  (Ducatte, C R 1902, 134 1212)

**Lead chlorosulphobismuthite**,  $\text{PbS}, \text{Bi}_2\text{S}_3, 2\text{BiSCl}$

Stable in the air Insol in  $\text{H}_2\text{O}$ , decomp by boiling  $\text{H}_2\text{O}$ , sol in dil acids with decomp and evolution of  $\text{H}_2\text{S}$  (Ducatte)

**Chlorosulphonic acid**,  $\text{HClSO}_3$

See Sulphuryl hydroxyl chloride

**Chloropyrosulphonic acid**

**Ammonium chloropyrosulphonate**,  
 $\text{ClS}_2\text{O}_6\text{NH}_4$

Fumes in the air

Decomp by  $\text{H}_2\text{O}$  and alcohol (Traube, B 1913, 46 2519)

**Sodium chloropyrosulphonate**,  $\text{ClS}_2\text{O}_6\text{Na}$

Fumes in the air

Decomp by  $\text{H}_2\text{O}$  and alcohol (Traube)

**Chlorosulphuric acid**,  $\text{HSO}_3\text{Cl}$

See Sulphuryl hydroxyl chloride

$\text{SO}_2\text{Cl}_2$  See Sulphuryl chloride

**Aluminum chlorosulphate**,  $\text{Al}(\text{SO}_4)\text{Cl} + 6\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Nearly insol in abs alcohol (Recoura, Bull Soc 1902, (3) 27 1155)

**Chromium chlorosulphate**,  $\text{CrClSO}_4 + 5\text{H}_2\text{O}$

Green (Weinland, Z anorg 1905, 48 253) (Recoura, C R 1902, 135 164)

Violet (Weinland, Z anorg 1905, 48 254)

Very sol in  $\text{H}_2\text{O}$  Insol in a mixture of alcohol and acetone (Recoura, C R 1902, 135 164)

+  $8\text{H}_2\text{O}$  Two isomeric modifications

(a) Green needles Easily sol in  $\text{H}_2\text{O}$  (Weinland, Z anorg 1906, 48 251)

(b) Violet plates Easily sol in  $\text{H}_2\text{O}$  (Weinland)

**Chlorosulphurous acid**

**Ammonium palladious trichlorosulphite**,  
 $(\text{NH}_4)_2\text{PdCl}_3\text{SO}_3 + \text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg 1900, 23 30)

**Chlorotelluric acid**

**Ammonium chlorotellurate**,  $(\text{NH}_4)_2\text{TeCl}_6$

Sol without decomp in a small amt of  $\text{H}_2\text{O}$ , but decomp by much  $\text{H}_2\text{O}$  or alcohol

**Cæsium chlorotellurate**,  $\text{Cs}_2\text{TeCl}_6$

Decomp by  $\text{H}_2\text{O}$  Sol in dil  $\text{HCl} + \text{Aq}$   
100 pts  $\text{HCl} + \text{Aq}$  (sp gr 1.2) dissolve 0.05 pt at  $22^\circ$

100 pts  $\text{HCl} + \text{Aq}$  (sp gr 1.05) dissolve 0.78 pt at  $22^\circ$

Insol in alcohol (Wheeler, Sill Am J 145 267)

**Potassium chlorotellurate**,  $\text{K}_2\text{TeCl}_6$

Deliquescent, decomp by  $\text{H}_2\text{O}$  and absolute alcohol (Berzelius)

The most sol in  $\text{H}_2\text{O}$  of the chloro- or bromo-tellurates Easily sol in dil  $\text{HCl} + \text{Aq}$ , conc  $\text{HCl} + \text{Aq}$  ppts  $\text{KCl}$  (Wheeler, Sill Am J 145 267)

**Rubidium chlorotellurate**,  $\text{Rb}_2\text{TeCl}_6$

Decomp by  $\text{H}_2\text{O}$  Much more sol in dil  $\text{HCl} + \text{Aq}$  than  $\text{Cs}_2\text{TeCl}_6$

100 pts  $\text{HCl} + \text{Aq}$  (sp gr 1.2) dissolve 0.34 pt at  $22^\circ$

100 pts  $\text{HCl} + \text{Aq}$  (sp gr 1.05) dissolve, 13.99 pts at  $22^\circ$

Sl sol in alcohol (Wheeler)

**Chlorotetramine chromium bromide,**

Very easily sol in  $\text{H}_2\text{O}$  (Cleve, 1861, (Jorgensen, J pr (2) 42 210)

— **chloride**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$ 

Sol in  $\text{H}_2\text{O}$ , but decomp by boiling. Sol in  $\text{HCl} + \text{Aq}$ , and this solution may be boiled without decomp (Cleve)

Sol in 15.7 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Jorgensen, J pr 42 208)

— **chromate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{CrO}_4$ 

Precipitate (Cleve)

— **fluosilicate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$ 

Sl sol in  $\text{H}_2\text{O}$  (Jorgensen, J pr (2) 42 218)

— **hydroxide**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2$ 

Known only in solution (Cleve)

— **iodide**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})\text{I}$ 

Easily sol in  $\text{H}_2\text{O}$  (Cleve)

— **nitrate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})(\text{NO}_3)$ 

Very easily sol in  $\text{H}_2\text{O}$  (Cleve), (Jorgensen, J pr (2) 42 209)

— **sulphate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})\text{SO}_4$ 

Very difficultly sol in cold, more easily in hot  $\text{H}_2\text{O}$  (Cleve)

**Chlorotetramine cobaltic bromide,**

More sol in  $\text{H}_2\text{O}$  than chloride. Nearly insol in  $\text{HBr} + \text{Aq}$  (1:1) (Jorgensen, J pr (2) 42 215)

— **chloride**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})\text{Cl}$ 

Sol in about 40 pts  $\text{H}_2\text{O}$ , and is identical with octamine cobaltic purpurcochloride of Vortmann (Jorgensen, J pr (2) 42 211)

— **chloroplatinate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})\text{PtCl}_6 + 2\text{H}_2\text{O}$ 

Sl sol in  $\text{H}_2\text{O}$  (Jorgensen)

— **chromate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})\text{CrO}_4$ 

Easily sol in cold  $\text{H}_2\text{O}$  (Jorgensen, J pr (2) 42 216)

— **fluosilicate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$ 

Sl sol in  $\text{H}_2\text{O}$ . Nearly insol in  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (Jorgensen, J pr (2) 42 219)

— **sulphate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})\text{SO}_4$ 

Sol in  $\text{H}_2\text{O}$  (Jorgensen, J pr (2) 42 211)

**Chlorotitanic acid**,  $\text{TiCl}_4 \cdot 2\text{HCl} = \text{H}_2\text{TiCl}_6$ 

Known only in solution (Kowalewsky, Z anorg 1900, 25 192)

**Chlorous acid**,  $\text{HClO}_2$ 

Known only in aqueous solution.  $100 \text{ H}_2\text{O}$  at  $8.5^\circ$  and 753 mm pressure dissolves 4.7 g  $\text{ClO}_2$ . Hydrate with 50.07–67.43  $\text{H}_2\text{O}$ , perhaps  $\text{HClO}_2 \cdot \text{H}_2\text{O}$ , separates out at  $0^\circ$  (Brandan, A 151 340)

Pure  $\text{HClO}_2$  is not known even in solution (Garzaroli-Thurnlakh, A 209 184)

**Chlorites**

All chlorites are easily sol in  $\text{H}_2\text{O}$  and in alcohol, with gradual decomp

**Ammonium chlorite**

Known only in aqueous solution, which decomposes on evaporation or long standing

**Barium chlorite**,  $\text{Ba}(\text{ClO}_2)_2$ 

Deliquescent, easily sol in  $\text{H}_2\text{O}$ . Solution decomp on evaporation. Easily sol in alcohol (Millon, A ch (3) 7 298)

**Lead chlorite**,  $\text{Pb}(\text{ClO}_2)_2$ 

Nearly insol in cold  $\text{H}_2\text{O}$ , and only sl sol in hot  $\text{H}_2\text{O}$ . Sol in  $\text{KOH} + \text{Aq}$  (Garzaroli and Hayn, A 209 203)

**Lead chlorite chloride**,  $6\text{Pb}(\text{ClO})_2 \cdot 4\text{PbCl}_2$ 

Rather difficultly sol in  $\text{H}_2\text{O}$  (Schmel, 109 317)

**Potassium chlorite**,  $\text{KClO}_2$ 

Very deliquescent and sol in  $\text{H}_2\text{O}$ . Sol in alcohol of  $35^\circ$  (Millon, A ch (3) 7 323). Sol in  $\text{HClO} + \text{Aq}$

**Silver chlorite**,  $\text{AgClO}_2$ 

Sol in hot, less in cold  $\text{H}_2\text{O}$ . Easily decomp by heating above  $110^\circ\text{C}$ . Decomp by weakest acids (Millon, A ch (3) 7 329)

**Sodium chlorite**,  $\text{NaClO}_2$ 

Very deliquescent, and sol in  $\text{H}_2\text{O}$

**Strontium chlorite**,  $\text{Sr}(\text{ClO}_2)_2$ 

Deliquescent and sol in  $\text{H}_2\text{O}$ . Decomp by slow evaporation (Millon, A ch (3) 7 327)

**Chloroxyfulminoplatinum**,

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (V Meyer, J pr (2) 18 30)

**Chloruronic acid**,  $\text{H}_2\text{UO}_4 \cdot (\text{Cl} + 2\text{H}_2\text{O})$ 

Sol in  $\text{H}_2\text{O}$ , sl sol in alcohol (Mylius, Z 1901, 34 2776)

**Chromacichloride**,  $\text{Cr}(\text{OCl})_2$ 

See Chromyl chloride

**Chromatiodic acid**

See Chromiodic acid

**Chromic acid,  $H_2CrO_4$** 

Very sol in  $H_2O$  (Moissan, C R 98 1851)

Does not exist except in solution (Field, Chem Soc 61 405)

The composition of the hydrates formed by  $H_2CrO_4$  at different dilutions is calculated from determinations of the lowering of the fr-pt produced by  $H_2CrO_4$  and of the conductivity and sp gr of  $H_2CrO_4 + Aq$  (Jones, Am Ch J 1905, 34 333)

See also **Chromium trioxide**

**Chromates**

Chromates of the alkali metals and of Ca, Mg, and Sr are sol in  $H_2O$ , the others are generally insol or sl sol in  $H_2O$ , but sol in  $HNO_3 + Aq$

**Aluminum chromate, basic,  $Al_2O_3, CrO_3 + 7H_2O$** 

Easily sol in  $NH_4OH + Aq$ , alum, or acetic acid + Aq Insol in  $NH_4Cl + Aq$  (Farne, Chem Soc 4 300)

Insol as such as  $H_2O$ , but easily decomp into  $H_2CrO_4$  and a basic insol comp Sol in alkaline solutions and acids Decomp by many salts (Eliot and Storer, Proc Am Acad 5 214)

**Aluminum sodium chromate silicate,**

(Weyberg, C B Miner, 1904 727)

**Ammonium chromate, basic,  $5(NH_4)_2O, 4CrO_3(?)$** 

Easily sol in cold  $H_2O$  (Pohl, W A B 6 592)

**Ammonium chromate,  $(NH_4)_2CrO_4$** 

Very sol in  $H_2O$ , pptd from aqueous solution by alcohol (Malaguti and Sarzeau)

100 g  $H_2O$  dissolve 40.46 g at  $30^\circ$  (Schrenemakers, Chem Weekbl 1905, 1 395)

Sol in  $H_2O$  without decomp (Schrenemakers, C C 1905, II 1067)

Sp gr of  $(NH_4)_2CrO_4 + Aq$  at  $t^\circ/4^\circ$

$t^\circ$	13°	13.7°	19.6°
% $(NH_4)_2CrO_4$	10.52	19.75	28.04
Sp gr	1.0633	1.1197	1.1727

(Slotte, W Ann 1881, 14 18)

Sl sol in liquid  $NH_3$  (Franklin, Am Ch J 1898, 20 826)

Difficulty sol in acetone (Naumann, B 1904, 37 4328)

**Ammonium dichromate,  $(NH_4)_2Cr_2O_7$** 

Less sol in  $H_2O$  than  $(NH_4)_2CrO_4$  (Moser)

100 g  $H_2O$  dissolve 47.17 g at  $30^\circ$

(Schrenemakers, Chem Weekbl 1905, 1 395)

Sp gr of  $(NH_4)_2Cr_2O_7 + Aq$  at  $t^\circ/4^\circ$

$t^\circ$	12°	10.5°	12°
% $(NH_4)_2Cr_2O_7$	6.85	13.00	19.93
Sp gr	1.0393	1.0782	1.1258

(Slotte, W Ann 1881, 14 18)

Sol in alcohol (Rautzer, Zeit angew ch 1913, 26 456)

Insol in benzonitrile (Naumann, B 1914, 47 1370)

Insol in acetone (Naumann, B 1904, 37 4328)

**Ammonium trichromate,  $(NH_4)_2Cr_3O_{10}$** 

Not deliquescent, but very sol in  $H_2O$  (Siewert)

Decomp by  $H_2O$  into chromic acid and dichromate (Jager and Kruss, B 22 2036)

Sol in acetone (Naumann, B 1904, 37 4328)

**Ammonium tetrachromate,  $(NH_4)_4Cr_4O_{13}$** 

Deliquescent Decomp by  $H_2O$  (Jager and Kruss, B 22 2037)

**Ammonium heptachromate  $(NH_4)_7Cr_7O_{19} +$** **Ammonium barium chromate,**

Ppt Decomp by  $H_2O$  (Groger, Z anorg 1908, 58 414)

**Ammonium cadmium chromate,  $(NH_4)_2O, 4CdO, 4CrO_3 + 3H_2O$** 

Ppt Decomp by boiling  $H_2O$  (Groger, M 1904, 25 533)

**Ammonium cadmium chromate ammonia,  $(NH_4)_2CrO_4, CdCrO_4, \frac{1}{2}NH_3 + 1\frac{1}{2}H_2O$** 

Decomp by  $H_2O$  (Groger, Z anorg 1908, 58 418)

$(NH_4)_2Cd(CrO_4)_2 \cdot 2NH_3$  Insol in cold decomp by hot  $H_2O$

Sol in dil acids or in  $NH_4OH + Aq$  (Briggs, Chem Soc 1903, 83 395)

**Ammonium chromous chromate(?)**

Difficultly sol in  $H_2O$  Insol in alcohol, ether, chloroform, or glacial acetic acid Easily sol in conc acids, from which it is separated on dilution Decomp by  $NaOH + Aq$  (Heintze, J pi (2) 4 220)

**Ammonium chromyl chromate,  $3(NH_4)_2O, 2CrO, 3CrO_3$** 

Nearly insol in  $H_2O$  (Pascal C R 1909, 148 1465)

**Ammonium cobaltous chromate**

Ppt Easily decomp (Briggs, Z anorg 1907, **56** 247)

$(NH_4)_2O$ ,  $4CoO$ ,  $4CrO_3 + 3H_2O$  Insol in  $H_2O$  Sol in cold dil  $H_2SO_4$  (Groger, Z anorg 1906, **49** 202)

**Ammonium cobaltous dichromate,**

Sl hygroscopic, sol in  $H_2O$ , insol in alcohol (Kruss, Z anorg 1895, **8** 454)

**Ammonium cobaltous chromate ammonia,**

Ppt, decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 422)

**Ammonium cupric dichromate,**

Sol in  $H_2O$  (Kruss, Z anorg 1895, **8** 455)

**Ammonium cupric chromate ammonia,**

Decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 420)

Insol in cold, decomp by hot  $H_2O$  Sol in dil acids or in  $NH_4OH + Aq$  (Briggs, Chem Soc 1903, **83** 394)

**Ammonium iron (ferric) chromate,**

More easily decomp by  $H_2O$  than  $K_2CrO_4$ ,  $Fe_2(CrO_4)_3 + 4H_2O$  (Hensgen, B **12** 1300)  
 $6CrO_3$ ,  $5Fe_2O_3$ ,  $6(NH_4)_2O$ , and  $4CrO_3$ ,  $Fe_2O_3, (NH_4)_2O + 4H_2O$  Ppts (Lepierre, C R 1894, **119** 1217)

**Ammonium lithium chromate,  $NH_4LiCrO_4 + 2H_2O$** 

Not deliquescent (Rammelsberg)

**Ammonium lead chromate,  $(NH_4)_2CrO_4, PbCrO_4$** 

Ppt Decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 424)

**Ammonium magnesium chromate,**

Much more sol in  $H_2O$  than the corresponding sulphate (v Hauer)

Sol in  $H_2O$  (Groger, Z anorg 1908, **58** 416)

**Ammonium manganous chromate,**

Sol in  $H_2O$  (Hensgen, R t c **3** 433)

**Ammonium nickel chromate,  $(NH_4)_2CrO_4, NiCrO_4 + 6H_2O$** 

Sol in  $H_2O$  (Groger, Z anorg 1906, **51** 353)

Can be cryst from  $H_2O$  under  $40^\circ$  (Briggs, Chem Soc 1903, **83** 392)

**Ammonium nickel chromate ammonia,**

Decomp by  $H_2O$  (Groger, Z anorg 1906, **51** 354)

$(NH_4)_2Ni(CrO_4)_2$ ,  $2NH_3$  Insol in cold  $H_2O$  Decomp by hot  $H_2O$  Sol in dil acids or in  $NH_4OH + Aq$  (Briggs, Chem Soc 1903, **83** 393)

+  $6H_2O$  (Briggs, Proc Chem Soc 1902, **18** 254)

**Ammonium potassium chromate,  $NH_4KCrO_4$** 

Sol in  $H_2O$  (E Kopp, C N **11** 16)

+  $H_2O$  (Étard, C R **85** 443)  
 $2(NH_4)_2CrO_4$ ,  $3K_2CrO_4$  Very sol in  $H_2O$  (Zehenter, M 1897, **18** 51)

**Ammonium silver chromate,  $(NH_4)_2CrO_4, 3Ag_2CrO_4$** 

Decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 423)

**Ammonium sodium chromate,  $NH_4NaCrO_4 + 2H_2O$** 

Very sol in  $H_2O$  (Zehenter, M 1897, **18** 54)

**Ammonium strontium chromate,  $(NH_4)_2CrO_4, SrCrO_4$** 

Ppt Decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 415)

**Ammonium uranyl chromate,  $(NH_4)_2CrO_4, 2(UO_2)CrO_4 + 6H_2O$** 

Decomp by boiling with  $H_2O$  Sol in acidulated  $H_2O$  (Formanek, A **257**, 106)  
 +  $3H_2O$  (Formanek)

**Ammonium zinc chromate,  $(NH_4)_2O, 2ZnO, 2CrO_3 + H_2O$** 

Decomp by hot  $H_2O$  (Groger, M 1904, **25** 520)

**Ammonium zinc chromate ammonia,**

Insol in cold, decomp by hot  $H_2O$  Sol in dil acids or in  $NH_4OH + Aq$  (Briggs, Chem Soc 1903, **83** 394)

$4ZnCrO_4$ ,  $2(NH_4)_2CrO_4$ ,  $3NH_3 + 3H_2O$   
 Ppt Decomp by  $H_2O$  (Groger, Z anorg 1908, **58** 416)

**Ammonium dichromate chloride mercuric chloride,  $(NH_4)_2Cr_2O_7, 2NH_4Cl, 4HgCl_2 + 2H_2O$** 

Ppt Sol in cold, more sol in warm  $H_2O$  (Stromholm, Z anorg 1912, **75** 280)

**Ammonium dichromate chloride mercuric cyanide,  $(NH_4)_2Cr_2O_7, 4NH_4Cl, 6Hg(CN) + 4H_2O$** 

(Stromholm, Z anorg 1913, **80** 157)

**Ammonium chromate chromyl fluoride,**Sol in  $\text{H}_2\text{O}$  (Varenne, C R 91 989)**Ammonium chromate iodate**

See Chromiodate, ammonium

**Ammonium dichromate mercuric chloride,**Cannot be recryst. from  $\text{H}_2\text{O}$  or  $\text{HgCl}_2 + \text{Aq}$ , but from  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + \text{Aq}$  (Jäger and Kruss, B 22 2044)+  $\text{H}_2\text{O}$  (Richmond and Abel, Chem Soc Q J 3 199)Cannot be made to crystallize with  $\text{H}_2\text{O}$  (Jäger and Kruss)3  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7, \text{HgCl}_2$  Decomp by  $\text{H}_2\text{O}$  (J and K)4  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7, \text{HgCl}_2$  Decomp by  $\text{H}_2\text{O}$  (J and K)**Ammonium chromate phosphate**

See Phosphochromate, ammonium

**Ammonium chromate tellurate**

See Chromotellurate, ammonium

**Barium chromate,  $\text{BaCrO}_4$** Extremely sl sol in  $\text{H}_2\text{O}$ Calculated from electrical conductivity of  $\text{BaCrO}_4 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 3.8 mg  $\text{BaCrO}_4$  at  $18^\circ$  (Kohlrausch and Rose, Z phys Ch 12 241)When not ignited,  $\text{BaCrO}_4$  is sol in 86,957 pts  $\text{H}_2\text{O}$ , 22,988 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (0.5%  $\text{NH}_4\text{Cl}$ ), 3670 pts  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (5%  $\text{HC}_2\text{H}_3\text{O}_2$ ), 1986 pts  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (10%  $\text{HC}_2\text{H}_3\text{O}_2$ ), 1813 pts  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (10%  $\text{CrO}_3$ ). When ignited, 160,000 pts  $\text{H}_2\text{O}$  are necessary for solution (Schweitzer, by Fresenius, Z anal 29 414)Sol in 23,000 pts boiling  $\text{H}_2\text{O}$  (Mescherzelski, Z anal 21 399)3.5 mg  $\text{BaCrO}_4$  are dissolved in 1 l of sat solution at  $18^\circ$  (Kohlrausch, Z phys Ch 1908, 64 168)Easily sol in  $\text{HNO}_3, \text{HCl}$ , or chromic acid +  $\text{Aq}$ , from which it is precipitated by  $\text{NH}_4\text{OH}$ , or by dilution with  $\text{H}_2\text{O}$  (Bahr)Insol in  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq}$  (Schweitzer)Sol in 49,381 pts  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  (0.75% salt) at  $15^\circ$ , in 23,355 pts  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  (1.5% salt) at  $15^\circ$ , in 45,162 pts  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.5% salt) at  $15^\circ$  (Fresenius, Z anal 29 418)Easily sol in alkali tartrates, or citrates +  $\text{Aq}$  (Fleischer, J pr (2) 5 326)0.22  $\times 10^{-4}$  g equiv  $\text{BaCrO}_4$  are dissolved in 1 l of 45% alcohol at ord temp (Guerin, Dissert, 1912)Insol in acetic acid and in  $\text{M}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ 

Partly sol in a mixture of the two, except

in presence of  $\text{MC}_2\text{H}_3\text{O}_2$  (Caron and Raquet, Bull Soc 1906, (3) 35 1064)

Not completely insol in acetic acid (Baubigny, Bull Soc 1907, (4) 1 58)

Insol in acetone (Naumann, B 1904, 37 4329)

Insol in methyl acetate (Naumann, B 1900, 42 3790)

**Barium dichromate,  $\text{BaCr}_2\text{O}_7 + 2\text{H}_2\text{O}$** Decomp by  $\text{H}_2\text{O}$  with separation of  $\text{BaCrO}_4$  Sol in  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (Bahr, J B 1863 358)Sol in cold  $\text{H}_2\text{O}$  with formation of  $\text{BaCrO}_4$  and  $\text{CrO}_3$ 

Insol in glacial acetic acid (Mayer, B 1903, 36 1742)

**Barium calcium chromate,  $\text{BaCa}(\text{CrO}_4)_2$** 

(Bourgeois Bull Soc Min 1879, 2 124)

**Barium potassium chromate,  $\text{BaK}_2(\text{CrO}_4)_2$** Decomp by  $\text{H}_2\text{O}$  (Gieger, Z anorg 1907, 54 186)Decomp by  $\text{H}_2\text{O}$  Stable in  $\text{K}_2\text{CrO}_4 + \text{Aq}$ , containing2 181 pts K  $\text{CrO}_4$  per 100 pts  $\text{H}_2\text{O}$  at  $11.5^\circ$

(Barre, C R 1914, 158 497)

**Barium potassium trichromate,**

Extremely deliquescent (Bahr)

**Bismuth chromates, basic**These comps are insol in  $\text{H}_2\text{O}$  even in presence of  $\text{H}_2\text{CrO}_4$ , sol in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  (Lowe, J pr 67 288)100 pts  $\text{H}_2\text{O}$  dissolve 0.00008 pt "bismuth chromate", 100 pts acetic acid dissolve 0.00021 pt "bismuth chromate", 100 pts  $\text{HNO}_3 + \text{Aq}$  (sp gr = 1.038) dissolve 0.00024 pt "bismuth chromate", 100 pts  $\text{KOH} + \text{Aq}$  (sp gr = 1.33) dissolve 0.00016 pt "bismuth chromate" (Praison, Phil Mag (4) 11 206)Not insol in dil  $\text{HNO}_3 + \text{Aq}$  unless K  $\text{CrO}_4$  is present Less sol in hot  $\text{NaOH} + \text{Aq}$  than  $\text{PbCrO}_4$  (Storer)

"Bismuth chromate" is insol in acetone (Naumann, B 1904, 37 4329)

3  $\text{Bi}_2\text{O}_3, 2\text{CrO}_3 = 2(\text{BiO})_2\text{CrO}_4, \text{Bi}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HNO}_3 + \text{Aq}$  $\text{Bi}_2\text{O}_3, \text{CrO}_3 = (\text{BiO})_2\text{CrO}_4$  Insol in  $\text{H}_2\text{O}$ , easily sol in dil  $\text{HCl} + \text{Aq}$ , less in dil  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Murr) $\text{Bi}_2\text{O}_3, 2\text{CrO}_3 = (\text{BiO})_2\text{CrO}_4$  Insol in  $\text{H}_2\text{O}$ 5  $\text{Bi}_2\text{O}_3, 11\text{CrO}_3 + 6\text{H}_2\text{O}$  (Murr, Chem Soc 31 24)

$3\text{Bi}_2\text{O}_3, 7\text{CrO}_3$  Insol in  $\text{H}_2\text{O}$ , easily sol in mineral acids, especially  $\text{HCl} + \text{Aq}$  Partly sol in  $\text{KOH} + \text{Aq}$

**Bismuth chromate, acid**,  $\text{Bi}_2\text{O}_3, 4\text{CrO}_3 + \text{H}_2\text{O}$

Insol in hot or cold  $\text{H}_2\text{O}$  Sol in dil  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  (Muir, Chem Soc 30 17)

**Bismuth potassium chromate**,  $\text{Bi}_2(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$

Insol in  $\text{H}_2\text{O}$  Decomp with hot  $\text{H}_2\text{O}$   
 $\text{Bi}_2\text{O}_3, \text{K}_2\text{O}, 6\text{CrO}_3 + \text{H}_2\text{O}$  (Preis and Raymann, J B 1880 336)

**Bromomolybdenum chromate**

(Atterberg)

**Cadmium chromate, basic**,  $2\text{CdO}, \text{CrO}_3 + \text{H}_2\text{O}$

Very sl sol in  $\text{H}_2\text{O}$ , very slowly sol in  $\text{NH}_4\text{OH} + \text{Aq}$  with combination (Malaguti and Sarzeau, A ch (3) 9 431)

Composition as above (Freese, B 2 478)

**Cadmium chromate**,  $\text{CdCrO}_4$

Insol in  $\text{H}_2\text{O}$ , sol in acids, decomp by heating with  $\text{H}_2\text{O}$  (Schulz, Z anorg 1895,

$\text{O}_4 + \text{Aq}$  (Briggs,

sup by boiling  $\text{H}_2\text{O}$  (Schulz, 10 153)

**Chromate**,  $\text{CdO}, 2\text{CrO}_3 + \text{H}_2\text{O}$

sol in  $\text{H}_2\text{O}$  without decomp, hygroscopic (Schulz, Z anorg 1895, 10 152)

Easily sol in  $\text{H}_2\text{O}$  but decomp on evaporation (Groger, Z anorg 1910, 66 11)

**Cadmium trichromate**,  $\text{CdCr}_3\text{O}_{19} + \text{H}_2\text{O}$

Deliquescent (Groger, Z anorg 1910, 66 12)

**Cadmium chromate ammonia**,  $\text{CdCrO}_4, 4\text{NH}_3 + 3\text{H}_2\text{O}$

Efflorescent Decomp, by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in alcohol and ether (Malaguti and Sarzeau)

**Cadmium potassium chromate**,  $\text{CdK}(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$

Ppt Decomp by  $\text{H}_2\text{O}$  (Groger, Z anorg 1907, 54 189)

$3\text{CdO}, \text{K}_2\text{O}, 3\text{CrO}_3 + 3\text{H}_2\text{O}$  Ppt (Preis and Raymann, Sitzungsb bohms Gesell 1880)

$4\text{CdO}, \text{K}_2\text{O}, 4\text{CrO}_3 + 3\text{H}_2\text{O}$  Ppt Slowly decomp by  $\text{H}_2\text{O}$  (Groger, M 1904, 25 533)

**Cadmium potassium dichromate**,

$\text{CdCr}_2\text{O}_7, \text{K}_2\text{Cr}_2\text{O}_7 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , sl hygroscopic (Krüss, Z anorg 1895, 8 454)

**Cadmium dichromate mercuric cyanide**,  
 $\text{CdCr}_2\text{O}_7, 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  without decomp (Krüss, Z anorg 1895, 8 460)

**Cæsium chromate**,  $\text{Cs}_2\text{CrO}_4$

(Chabrié, C R 1901, 132 680)

Aq solution sat at  $30^\circ$  contains 47% (Schrenemakers, C C 1909, I 11)

**Cæsium dichromate**,  $\text{Cs}_2\text{Cr}_2\text{O}_7$

(Chabrié, C R 1901, 132 680)

Much more sol in hot  $\text{H}_2\text{O}$ , than in cold (Fraprie, Am J Sci 1906, (4) 21 309)

Aq solution sat at  $30^\circ$  contains 5.2% (Schrenemakers, C C 1909, I 11)

**Cæsium trichromate**,  $\text{Cs}_2\text{Cr}_3\text{O}_{10}$

Decomp by  $\text{H}_2\text{O}$  (Schrenemakers, Chem Weekbl 1908, 5 811)

Sol. in  $\text{H}_2\text{O}$  (Fraprie, Am J Sci 1906, (4) 21 315)

**Cæsium tetrachromate**,  $\text{Cs}_2\text{Cr}_4\text{O}_{13}$

Sol in  $\text{H}_2\text{O}$  with decomp (Schrenemakers, Chem Weekbl 1908, 5 811)

**Cæsium cobaltous chromate**,

$\text{Cs}_2\text{Co}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$

(Briggs, Z anorg 1907, 56 248)

**Cæsium magnesium chromate**,

$\text{Cs}_2\text{Mg}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$

(Briggs, Chem Soc 1904, 85, 680)

**Cæsium nickel chromate**,  $\text{Cs}_2\text{Ni}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$

Sol in cold  $\text{H}_2\text{O}$  without much change, but decomp by warm  $\text{H}_2\text{O}$  (Briggs, Chem Soc 1904, 85 679)

**Calcium chromate basic**,  $\text{Ca}_2\text{CrO}_4 + 3\text{H}_2\text{O}$

Sol in 230 pts  $\text{H}_2\text{O}$  without decomp (Mylus and Wrochem, Gm K 3 I, 1385)

**Calcium chromate**,  $\text{CaCrO}_4$

*Anhydrous* Very sl sol in  $\text{H}_2\text{O}$  (Siewert, J B 1862 148)

Aq solution sat at  $18^\circ$  contains 2.3%  $\text{CaCrO}_4$ , sp gr = 1.023 (Mylus and Wrochem, B 1900, 33 3688)

Insol in acetone (Numann, B 1904, 37 4329)

$+\frac{1}{2}\text{H}_2\text{O}$  Aq solution sat at  $18^\circ$  contains 4.4%  $\text{CaCrO}_4$ , sp gr = 1.044 (Mylus and Wrochem, B 1900, 33 3688)

$+\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	$0^\circ$	$8^\circ$	$13^\circ$	$18^\circ$	$25^\circ$
% $\text{CaCrO}_4$	11.5	10.8	10.3	9.6	9.1

$t^\circ$	$40^\circ$	$60^\circ$	$75^\circ$	$90^\circ$	$100^\circ$
% $\text{CaCrO}_4$	7.8	5.7	4.6	3.6	3.1

(Mylus and Wrochem, Gm -K 3 I, 1386)

Sp gr of solution containing 9.6% by wt  $\text{CaCrO}_4$  at  $18^\circ = 1.096$  (Mylius and Wrochem, B 1900, **33**, 3688)  
 $+2\text{H}_2\text{O}$  Sol in 241.3 pts  $\text{H}_2\text{O}$  at  $14^\circ$  (Siewert)  
 Sol in 34 pts  $\text{H}_2\text{O}$  (Schwarz, Dingl 198 159)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$

$\alpha$  modification

$t^\circ$	$0^\circ$	$20^\circ$	$30^\circ$	$45^\circ$
% $\text{CaCrO}_4$	14.75	14.22	13.89	12.53

$\beta$  modification

$t^\circ$	$0^\circ$	$14^\circ$	$18^\circ$	$19.5^\circ$	$30^\circ$	$40^\circ$
% $\text{CaCrO}_4$	9.8	10	10.3	10.4	10.4	10.4

(Mylius and Wrochem Gm-K 3 I, 1387)

$\alpha$  modification Sp gr of the solution containing 14.3% by wt  $\text{CaCrO}_4$  at  $18^\circ = 1.149$  (Mylius and Wrochem, B 1900, **33**, 3688)

$\beta$  modification Sp gr of the solution containing 10.3% by wt  $\text{CaCrO}_4$  at  $18^\circ = 1.105$  (Mylius and Wrochem, B 1900, **33**, 3688)

Easily sol in  $\text{H}_2\text{O}$  containing  $\text{CrO}_3$

Insol in absolute alcohol

50 cc of alcohol (29%) dissolve 0.608 g  $\text{CaCrO}_4$ , 50 cc of alcohol (53%) dissolve 0.44 g  $\text{CaCrO}_4$  (Fresenius, Z anal **30**, 672)

Sol in acids and in dilute alcohol (Caron and Raquet, Bull Soc 1906, (3) **35**, 1064)

**Calcium dichromate**,  $\text{CaCr}_2\text{O}_7 + 3\text{H}_2\text{O}$

Very deliquescent (Bahr, J pr **60**, 60)

In sat solution at  $18^\circ$ , 61%  $\text{CaCr}_2\text{O}_7$  is present (Mylius and Wrochem, Gm-K 3 I, 1387)

Sol in acetone (Naumann, B 1904, **37**, 4328)

**Calcium potassium chromate**,  $\text{CaCrO}_4$ ,

$\text{K}_2\text{CrO}_4$

(Barre, C R 1914, **158**, 495)

$+ \text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Duncan)

Insol in  $\text{H}_2\text{O}$  when ignited

$+ 2\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$ , even after ignition Insol in alcohol (Duncan, J B **1850**, 313)

Formed below  $45^\circ$  (Barré, C R 1914, **158**, 495)

Sol in cold  $\text{H}_2\text{O}$  Sl sol in sat  $\text{K}_2\text{CrO}_4 + \text{Aq}$  (Groger, Z anorg 1907, **54**, 187)

Two modifications Solubility of  $\alpha$  modification is somewhat less than that of the  $\beta$  modification (Wyrouboff, Bull Soc Min 1891, **14**, 255)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	$0^\circ$	$15^\circ$
Solubility of $\alpha$	23.06	25.06
" $\beta$	23.01	24.45

(Rakowski, C C **1909**, I 133)

$4\text{CaCrO}_4$ ,  $\text{K}_2\text{CrO}_4$

$5\text{CaCrO}_4$ ,  $\text{K}_2\text{CrO}_4$  Sol in much  $\text{H}_2\text{O}$  (Bahr)

**Calcium chromate potassium sulphate**,

$\text{CaCrO}_4$ ,  $\text{K}_2\text{SO}_4 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Hannay, Chem Soc **32**, 399)

$\text{CaCrO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{K}_2\text{CrO}_4$  As above (H)

**Cerous chromate**

Insol in  $\text{H}_2\text{O}$

**Calcium strontium chromate**,  $\text{CaSr}(\text{CrO}_4)_2$

(Bourgeois, Bull Soc Min 1879, **2**, 123)

**Ceric dichromate**,  $\text{CeO}_2$ ,  $2\text{CrO}_3 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sol in acids, decomp completely by boiling  $\text{H}_2\text{O}$  (Bricout, C R 1894, **118**, 145)

**Chromic chromate**,  $\text{CrO}_2 = \text{Cr}_2\text{O}_3$ ,  $\text{CrO}_3$

Insol as such in  $\text{H}_2\text{O}$ , but decomp thereby into  $\text{CrO}_3$  and  $\text{Cr}_2\text{O}_3$ , decomp by alkaline and many saline solutions Easily sol in dil acids if recently pptd, but with difficulty if dried at a high temp (Eliot and Storer, Proc Am Acad **5**, 207)

$\text{Cr}_2\text{O}_{12} = \text{Cr}_2\text{O}_3$ ,  $3\text{CrO}_3$  Sol in  $\text{HCl} + \text{Aq}$  Very slowly sol in  $\text{HNO}_3 + \text{Aq}$  Slowly decomp by  $\text{H}_2\text{SO}_4$  or  $\text{NH}_4\text{OH} + \text{Aq}$  Easily decomp by  $\text{KOH} + \text{Aq}$

Does not exist (Eliot and Storer, l c)

$\text{Cr}_2\text{O}_{15} = 3\text{CrO}_3$ ,  $2\text{CrO}_3$  Easily sol in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  difficulty sol in acetic acid Easily sol in  $\text{KOH} + \text{Aq}$  (Traube, A **66**, 108)

Existence doubtful

$\text{Cr}_2\text{O}_9 = 2\text{Cr}_2\text{O}_3$ ,  $\text{Cr}_2\text{O}_3$  Insol in all acids, even aqua regia, slowly attacked by a boiling conc solution of alkali hydroxides (Geuther and Merz, A **118**, 62)  $\text{Cr}_2\text{O}_3$  according to Wohler

**Chromic cupric chromate**,  $\text{CuCr}_4\text{O}_9$ ,  $\text{Cr}_2\text{O}_3 + 12\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$  Sol in  $\text{HCl}$  and  $\text{HNO}_3$  (Rosenfeld, B 1879, **12**, 957)

$6\text{CuO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $\text{CrO}_3 + 9\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol in acids (Rosenfeld, B 1879, **12**, 958)

**Chromic potassium chromate**,  $\text{Cr}_2\text{H}(\text{CrO}_4)_2$ ,  $\text{K}_2\text{CrO}_4(?)$

Insol in  $\text{H}_2\text{O}$ , alcohol, or acetic acid Not attacked by cold  $\text{HNO}_3 + \text{Aq}$ , sl oxidized when hot Insol in cold, easily sol in hot  $\text{H}_2\text{SO}_4$  Sl sol in  $\text{SO}_2 + \text{Aq}$  Sol in conc  $\text{HCl} + \text{Aq}$  (Tommasi, Bull Soc (2) **17**, 396)

**Chromous potassium chromate**,

$\text{K}_2\text{CrO}_4(\text{CrO}_2)_2 = \text{K}_2\text{Cr}(\text{CrO}_4)(?)$

Sat cold solution in  $\text{H}_2\text{O}$  contains 9% of the salt Insol in alcohol and ether (Heintze, J pr (2) **4**, 212)

**Cobaltous chromate, basic**,  $3\text{CoO}$ ,  $\text{CrO}_3 + 4\text{H}_2\text{O}$

Ppt Decomp by  $\text{H}_2\text{O}$  (Malaguti and Sarzeau, A ch (3) 9 431)

True formula is  $2\text{CoO}$ ,  $\text{CrO}_3 + 2\text{H}_2\text{O}$  (Freese, Pogg 140 252)

$4\text{CoO}$ ,  $3\text{CrO}_3 + 2\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$  (Gröger, Z anorg 1906, 49 203)

**Cobaltous chromate,  $\text{CoCrO}_4$**

Much more sol in  $\text{H}_2\text{O}$  than  $\text{NiCrO}_4$ . Easily sol in hot dil  $\text{HNO}_3 + \text{Aq}$  (Briggs, Z anorg 1909, 63 327)  
 $+ 2\text{H}_2\text{O}$  Ppt (Briggs, Z anorg 1909, 63 328)

**Cobaltous dichromate,  $\text{CoCr}_2\text{O}_7 + \text{H}_2\text{O}$**

Deliquescent Very sol in  $\text{H}_2\text{O}$  (Briggs, Z anorg 1907, 56 247)

**Cobaltous potassium chromate, basic**

$\text{K}_2\text{O}$ ,  $4\text{CoO}$ ,  $4\text{CrO}_3 + 3\text{H}_2\text{O}$

Sol in cold dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Groger, Z anorg 1906, 49 199)

**Cobaltous potassium chromate,  $\text{K}_2\text{Co}(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$  (Groger, Z anorg 1906, 49 200)

**chromate, basic**,  $3\text{CuO}$ ,  $\text{CrO}_3 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Easily sol in dil  $\text{HNO}_3 + \text{Aq}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by  $\text{KOH} + \text{Aq}$  (Malaguti and Sarzeau, A ch (3) 9 434)

$7\text{CuO}$ ,  $2\text{CrO}_3 + 5\text{H}_2\text{O}$  Ppt (Rosenfeld, B 13 1469)

$7\text{CuO}$ ,  $\text{CrO}_3 + 5\text{H}_2\text{O}$  Ppt (R)

**Cobaltous dichromate mercuric cyanide**,  $\text{CoCr}_2\text{O}_7$ ,  $2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$

Very stable Sol in  $\text{H}_2\text{O}$  (Kruss, Z anorg 1895, 8 458)

**Cupric chromate,  $\text{CuCrO}_4$**

Insol in  $\text{H}_2\text{O}$ , very sol in chromic acid and in other acids, decomp by boiling with  $\text{H}_2\text{O}$  (Schulz, Z anorg 1895, 10 152)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

**Cupric dichromate, basic**,  $\text{CuCr}_2\text{O}_7$ ,  $2\text{CuO}$  (Stanley, C N 54 194)

**Cupric dichromate,  $\text{CuCr}_2\text{O}_7 + 2\text{H}_2\text{O}$**

Deliquescent Very easily sol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and alcohol (Droge, A 101 39)

Aqueous solution is decomp by boiling (Malaguti and Sarzeau, A ch (3) 9 456)

Very hygroscopic Very sol in  $\text{H}_2\text{O}$  without decomp (Schulz, Z anorg 1895, 10 150)

**Cupric tetrachromate,  $\text{CuCr}_4\text{O}_{13} + 2\text{H}_2\text{O}$**

Deliquescent Decomp when its solution in  $\text{H}_2\text{O}$  is concentrated (Gröger, Z anorg 1910, 66 15)

**Cupric lead chromate**,  $2(\text{PbCrO}_4, \text{PbO})$

Min *Vauquelinite* Sol in acids

**Cupric potassium chromate, basic**,  $\text{KCu}_2(\text{OH})(\text{CrO}_4)_2 + \text{H}_2\text{O}$

Ppt (Gröger, M 1903, 24 485)

$3\text{CuO}$ ,  $\text{K}_2\text{O}$ ,  $3\text{CrO}_3 + 2\text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{A}$  (Knop, A 70 52)

Does not exist (Rosenfeld, B 13 1472)  
 $4\text{CuO}$ ,  $\text{K}_2\text{O}$ ,  $4\text{CrO}_3 + \text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$  (Gerhardt)  
 $+ 3\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$  (Gröger, Dissert 1880)

**Cupric potassium chromate ammonia**,  $\text{K}_2\text{Cu}(\text{CrO}_4)_2, 2\text{NH}_3$

Very sol in dil  $\text{NH}_3 + \text{Aq}$  decomp by  $\text{H}_4$  (Briggs, Chem Soc 1904, 85 672)

**Cupric chromate ammonia,  $\text{CuCrO}_4, 4\text{NH}_3$**

Decomp by  $\text{H}_2\text{O}$  Sol in dil  $\text{NH}_4\text{OH}$  Aq (Parravano and Pastre, Gazz ch 1 1907, 37 (2), 255)

$4\text{CuCrO}_4, 3\text{NH}_3 + 5\text{H}_2\text{O}$  Sol in  $\text{HCl}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in organic solvents, easily sol in  $\text{AgNO}_3 + \text{Aq}$  (Schuyten, C C 190 I 399)

$2\text{CuCrO}_4, 7\text{NH}_3 + \text{H}_2\text{O}$  Decomp by  $\text{H}_4$  Very sol in dil  $\text{NH}_4\text{OH} + \text{Aq}$  (Briggs, Chem Soc 1904, 85 673)

$3\text{CuO}$ ,  $2\text{CuO}$ ,  $10\text{NH}_3 + 2\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ , sl sol or insol in alcohol, ether,  $\text{NH}_4\text{OH} + \text{Aq}$  (Malaguti and Sarzeau)  
Decomp by hot  $\text{H}_2\text{O}$ , insol in alcohol (Böttger)

**Cupric dichromate ammonia,  $\text{CuCr}_2\text{O}_7, 4\text{NH}_3 + 2\text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$  Sol in dil  $\text{NH}_4\text{OH}$  Aq (Parravano and Pastre, Gazz ch 1 1907, 37 (2) 255)

**Cupric dichromate mercuric cyanide**,  $\text{CuCr}_2\text{O}_7, \text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$

Not hygroscopic Sol in  $\text{H}_2\text{O}$  (Kruss, anorg 1895, 8 461)

**Didymium chromate,  $\text{Dy}_2(\text{CrO}_4)_3$**

Sl sol in  $\text{H}_2\text{O}$ , easily in dil acids (Friedrichs and Smith, A 191 353)  
 $+ 7\text{H}_2\text{O}$  (Cleve)

**Didymium potassium chromate**,  $\text{Dy}_2(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$

Precipitate Decomp by  $\text{H}_2\text{O}$  (Cleve)

**Dysprosium chromate**,  $\text{Dy}_2(\text{CrO}_4)_3 \cdot 10\text{H}_2\text{O}$ 

Very sl sol in  $\text{H}_2\text{O}$  1 0002 pt is sol in 100 pts  $\text{H}_2\text{O}$  at  $25^\circ$  (Jantsch, B 1911, 44 1276)

**Glucinum chromate, basic**,  $\text{GlCrO}_4 \cdot 13\text{H}_2\text{O}$ 

Ppt Insol in  $\text{H}_2\text{O}$  (Creuzberg, Dmgl 163 449)

$\text{GlCrO}_4 \cdot 6\text{H}(\text{OH}_2)$  Ppt Insol in  $\text{H}_2\text{O}$  (Glassmann, B 1907, 40 2603)

**Glucinum chromate**,  $\text{GlCrO}_4 + \text{H}_2\text{O}$ 

Decomp by  $\text{H}_2\text{O}$  with separation of the basic chromate (Glassmann, B 1907, 40 2603)

**Gold (auric) chromate**,  $\text{Au}(\text{CrO}_4)_3 \cdot \text{CrO}_3$ 

Ppt (Orloff, Ch Z 1907, 31 1182)

**Indium chromate**

Ppt (Meyer)

**Indium dichromate**

Very sol in  $\text{H}_2\text{O}$  Known only in solution

**Iron (ferric) chromate, basic**

Decomp by  $\text{H}_2\text{O}$  (Maus)

$\text{Fe}_2\text{O}_3 \cdot \text{CrO}_3$  Insol in  $\text{H}_2\text{O}$ , but decomp thereby, or by saline solutions, easily sol in acids Sol in  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (Eliot and Stoici, Proc Am Acad 5 216)

**Iron (ferric) dichromate**

Sol in  $\text{H}_2\text{O}$  and alcohol (Maus, Pogg 9 132)

**Iron (ferric) potassium chromate, basic,**

$2\text{CrO}_3 \cdot 6\text{Fe}_2\text{O}_3 \cdot 3\text{K}_2\text{O}$

$4\text{CrO}_3 \cdot 3\text{Fe}_2\text{O}_3 \cdot 4\text{K}_2\text{O}$

$10\text{CrO}_3 \cdot 6\text{Fe}_2\text{O}_3 \cdot 7\text{K}_2\text{O}$

$11\text{CrO}_3 \cdot 3\text{Fe}_2\text{O}_3 \cdot 4\text{K}_2\text{O} + 9\text{H}_2\text{O}$

$9\text{CrO}_3 \cdot 2\text{Fe}_2\text{O}_3 \cdot 6\text{K}_2\text{O} + 6\text{H}_2\text{O}$

$9\text{CrO}_3 \cdot 2\text{Fe}_2\text{O}_3 \cdot 6\text{K}_2\text{O} + 10\text{H}_2\text{O}$

$10\text{CrO}_3 \cdot 3\text{Fe}_2\text{O}_3 \cdot 6\text{K}_2\text{O} + 5\text{H}_2\text{O}$

$7\text{CrO}_3 \cdot 2\text{Fe}_2\text{O}_3 \cdot 2\text{K}_2\text{O} + 7\text{H}_2\text{O}$

$4\text{CrO}_3 \cdot \text{Fe}_2\text{O}_3 \cdot \text{K}_2\text{O} + 4\text{H}_2\text{O}$

$6\text{CrO}_3 \cdot 2\text{Fe}_2\text{O}_3 \cdot 3\text{K}_2\text{O}$

$16\text{CrO}_3 \cdot 4\text{Fe}_2\text{O}_3 \cdot 5\text{K}_2\text{O} + 8\text{H}_2\text{O}$

Above compounds are ppts, insol in  $\text{H}_2\text{O}$ , alcohol and ether (Ispicre, C R 1894, 119, 1215-18)

**Iron (ferric) potassium chromate,**

$\text{Fe}_2(\text{CrO}_4)_3 \cdot \text{K}_2\text{CrO}_4 + 4\text{H}_2\text{O}$

Decomp by much  $\text{H}_2\text{O}$ , conc  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  Not decomp by alcohol (Hensgen, B 12 1300)

**Iron (ferric) sodium chromate, basic,**

$5\text{CrO}_3 \cdot 7\text{Fe}_2\text{O}_3 \cdot 4\text{Na}_2\text{O}$

Ppt (Lepierre, C R 1894, 119, 1217)

**Lanthanum chromate**,  $\text{La}_2(\text{CrO}_4)_3$ 

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$ , easily sol in acids (Ferichs and Smith, A 191 355)

$+8\text{H}_2\text{O}$  Ppt (Cleve)

**Lanthanum potassium chromate**

(Cleve)

**Lead chromate, basic**,  $2\text{PbO} \cdot \text{CrO}_3$  (*chrome red*)

Insol in  $\text{H}_2\text{O}$ , acetic acid dissolves out  $\frac{1}{2}$  the  $\text{PbO}$  Sol in  $\text{KOH} + \text{Aq}$  (Badams, Pogg 3 221)

Insol in acetone (Naumann, B 1904, 37 4329)

$3\text{PbO} \cdot \text{CrO}_3$  (Hermann, Pogg 28 162)  $+ \text{H}_2\text{O}$  Ppt (Stromholm, Z anorg 1904, 38 443)

Min *Melanochrome*, *Phaenochrome* Sol in acids

$\text{PbO}$ ,  $\text{PbCrO}_4$  Ppt (S)

**Lead chromate**,  $\text{PbCrO}_4$ 

Insol in  $\text{H}_2\text{O}$  Pptd from  $\text{Pb}(\text{NO}_3)_2$  in presence of 70,000 pts  $\text{H}_2\text{O}$  (Harting)

Calculated from electrical conductivity of  $\text{PbCrO}_4 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 0.2 mg  $\text{PbCrO}_4$  at  $18^\circ$  (Kohlrausch and Rose, Z phys Ch 12 241)

1 l  $\text{H}_2\text{O}$  dissolves  $1.2 \times 10^{-6}$  g  $\text{PbCrO}_4$  at  $25^\circ$  (Hevesy, Z anorg 1913, 82 328)

Sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Storer), sl sol in dil  $\text{HNO}_3 + \text{Aq}$

Sol in 560 pts  $\text{HNO}_3 + \text{Aq}$  of 1.12 sp gr, in 150 pts  $\text{HNO}_3 + \text{Aq}$  of 1.225 sp gr, in 130 pts  $\text{HNO}_3 + \text{Aq}$  of 1.265 sp gr, in 80 pts  $\text{HNO}_3 + \text{Aq}$  of 1.395 sp gr (Storei's Diet)

Solubility of  $\text{PbCrO}_4$  in  $\text{HNO}_3 + \text{Aq}$  at  $18^\circ$   
(Millimols per l)

0.1N	0.2N	0.3N	0.4N
0.506	0.844	1.13	1.44

(Beck and Stegmüller, l c)

Easily decomp by hot  $\text{HCl} + \text{Aq}$  (Fresenius)

Solubility of  $\text{PbCrO}_4$  in  $\text{HCl} + \text{Aq}$   
(Millimols per l)

$t^\circ$	0.1N	0.2N	0.3N	0.4N	0.5N	0.6N
18	0.186	0.393	0.654	1.07	1.56	2.20
25	0.239	0.485	0.839	1.32	1.96	2.90
37	0.357	0.744	1.31	2.10	3.28	4.60

(Beck and Stegmüller, Arb k Gesund Amt 1910, 34 446)

Insol in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

Easily sol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  1 l  $\text{KOH} + \text{Aq}$  ( $\frac{1}{2}$  normal) dissolves 11.9 g  $\text{PbCrO}_4$  at  $15^\circ$ , 16.2 g at  $60^\circ$ , 26.1 g at  $80^\circ$

38.5 g at 102° (Lachaud and Lepierre, Bull Soc (3) 6 230)

Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett, 1837)

Sol in  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ , almost completely insol in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$

Not pptd in presence of Na citrate (Spiller)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

Insol in acetone (Naumann, B 1904, 37 4329)

Min *Crocoite* Sol in hot  $\text{HCl} + \text{Aq}$ , difficultly sol in  $\text{HNO}_3 + \text{Aq}$ , sol in  $\text{KOH} + \text{Aq}$

#### Lead dichromate, $\text{PbCr}_2\text{O}_7$

Decomp by  $\text{H}_2\text{O}$

+ $2\text{H}_2\text{O}$  As above (Preis and Raymann, B 13 340)

#### Lead lithium chromate, $\text{PbCrO}_4$ , $\text{Li}_2\text{CrO}_4$

(Lachaud and Lepierre, C R 110 1035)

#### Lead potassium chromate, $\text{PbCrO}_4$ , $\text{K}_2\text{CrO}_4$

Insol in hot or cold  $\text{H}_2\text{O}$  or in alcohol Dil acids dissolve out  $\text{K}_2\text{CrO}_4$  (Lachaud and Lepierre, C R 110 1035)

Decomp by  $\text{H}_2\text{O}$  Stable in contact with solutions containing

8 950 pts	$\text{K}_2\text{CrO}_4$	per 100 pts	$\text{H}_2\text{O}$	at	10°
8 077	"	"	"	"	27 5°
7 629	"	"	"	"	37 5°
7 150	"	"	"	"	50 0°
6 145	"	"	"	"	76 0°
4 940	"	"	"	"	100 0°

(Barre, C R 1914, 158 497)

#### Lead sodium chromate, $\text{PbCrO}_4$ , $\text{Na}_2\text{CrO}_4$

Sol in  $\text{H}_2\text{O}$  (?) (Lachaud and Lepierre)

$\text{PbCrO}_4$ ,  $2\text{PbO}$ ,  $\text{Na}_2\text{CrO}_4$  (L and L)

#### Lithium chromate, $\text{Li}_2\text{CrO}_4$

100 cc of solution sat at 18° contain 85 g anhydrous salt (Kohlrausch, B A B 1897 90)

99.94 pts are sol in 100 pts  $\text{H}_2\text{O}$  at 30° (Schreinemakers, C C 1905 II, 1486)

+ $2\text{H}_2\text{O}$  Very easily sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 128 323)

100 g  $\text{H}_2\text{O}$  dissolve 111 g salt at 20° (Von Weimarn, C C 1911 II, 1300)

Sp gr of solution sat at 18° = 1.574, and contains 52.6%  $\text{Li}_2\text{CrO}_4$  (Mylius and Wrochem, B 1897, 30 1718)

#### Lithium dichromate, $\text{Li}_2\text{Cr}_2\text{O}_7$

130.4 pts are sol in 100 pts  $\text{H}_2\text{O}$  at 30° (Schreinemakers, C C 1905 II, 1486)

+ $2\text{H}_2\text{O}$  Deliquescent Sol in  $\text{H}_2\text{O}$  (Rammelsberg)

#### Lithium potassium chromate, $\text{K}_2\text{CrO}_4$ , $\text{Li}_2\text{CrO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Hydroscopic (Zehenter, M 1897, 18 54)

#### Magnesium chromate, $\text{MgCrO}_4$

Sol in  $\text{H}_2\text{SO}_4$ , and  $\text{HCl}$ , insol in  $\text{H}_2\text{O}$  (Dufau, C R 1896, 123 888)

Sp gr of  $\text{MgCrO}_4 + \text{Aq}$  sat at t°/4°

t°	13 6°	14 5°	13
% $\text{MgCrO}_4$	12 31	21 86	27 1
Sp gr	1 0886	1 1641	1 170

(Slotte, W Ann 1881, 14 19)

Sol in acetone (Naumann, B 1904 37 4328)

+ $7\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$  (Vauquelin) 100 cm of solution sat at 18° contain 0 g

$\text{MgCrO}_4$  (Kohlrausch, B A B 1897 9)

Sp gr of solution sat at 18° = 1.422, and contains 42%  $\text{MgCrO}_4$  (Mylius and Wrochem, B 1897, 30 1718)

+ $5\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Wyrouff, Bull Soc Min 12 60)

#### Magnesium dichromate, $\text{Mg}_2\text{Cr}_2\text{O}_7$

Sol in  $\text{H}_2\text{O}$

Sl sol in alcohol (Reinitzer, Zeit anorg 1913, 26 456)

#### Magnesium potassium chromate, $\text{MgCrO}_4$ , $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$

100 pts  $\text{H}_2\text{O}$  dissolve 28.2 pts at 20°, 4.3 pts at 60° (Schweitzer)

Sol in  $\text{H}_2\text{O}$  Sl sol in sat  $\text{K}_2\text{CrO}_4 + \text{Aq}$  (Gieger, Z anorg 1907, 54 188)

Insol in alcohol

+ $6\text{H}_2\text{O}$  Efflorescent (Briggs, C R Soc 1904, 85 679)

#### Magnesium rubidium chromate,

$\text{MgRb}_2(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$

(Briggs Chem Soc 1904, 85 679) (Bailey, Chem Soc 1911, 99 1327)

#### Magnesium sodium chromate

(Stanley, C N 54 194)

#### Manganous chromate, $2\text{MnO}$ , $\text{CrO}_3 + \frac{1}{2}\text{O}_2$

Ppt Sol in dil  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$  (Warrington and Reimschuesch, J 3 78)

#### Manganous potassium chromate, $\text{MnCrO}_4$ , $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  Sol in dil  $\text{H}_2\text{O}$  (Gieger, Z anorg 1905, 44 459)

$2\text{MnCrO}_4$ ,  $\text{K}_2\text{CrO}_4 + 4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Hensgen, R t c 3 433)

#### Mercurous chromate, basic, $4\text{HgO}$ , $3\text{CrO}_3$

Very sl sol in cold, more in boiling  $\text{H}_2\text{O}$  Sl sol in  $\text{HNO}_3 + \text{Aq}$  Decomp by  $\text{H}_2\text{O}$

+ $\text{Aq}$  Sl sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)

Does not exist (Richter, B 15 148)

$3\text{Hg}_2\text{O}$ ,  $\text{CrO}_3$  Sol in  $\text{HNO}_3 + \text{Aq}$  (Zehenter)

$3\text{Hg}_2\text{O}$ ,  $2\text{CrO}_3$  Ppt (Fichter, Z anorg 1912, **76** 350)

**Mercurous chromate,  $\text{Hg}_2\text{CrO}_4$**

Very sl sol in cold, more readily in hot  $\text{H}_2\text{O}$  Sl sol in dil  $\text{HNO}_3$ +Aq, sol in conc  $\text{HNO}_3$ , sol in  $\text{KCN}$ +Aq, insol in  $\text{Hg}_2(\text{NO}_3)_2$ +Aq (Rose, Pogg **53** 124)

Less sol in  $\text{K}_2\text{CrO}_4$ +Aq than in  $\text{H}_2\text{O}$  (Fichter, Z anorg 1912, **76** 349)

Insol in acetone (Naumann, B 1904, **37** 4329)

**Mercuric chromate, basic,  $2\text{HgO}$ ,  $\text{CrO}_3$**

Sol in  $\text{HCl}$ , and in  $\text{HNO}_3$ +Aq (Geuther)  $3\text{HgO}$ ,  $\text{CrO}_3$  Sl sol in  $\text{H}_2\text{O}$  (Millon)

The only true compound All others are mixtures of  $\text{HgO}$  or  $\text{HgCrO}_4$  with this compound (Cox, Z anorg 1904, **40** 155)

$4\text{HgO}$ ,  $\text{CrO}_3$  Sl sol in  $\text{H}_2\text{O}$  (Millon, A ch (3) **13** 365)

$7\text{HgO}$ ,  $2\text{CrO}_3$  Easily sol in warm  $\text{HNO}_3$ , when freshly precipitated Easily sol in  $\text{HCl}$ +Aq (Geuther, A **106** 247)

Does not exist (Freese, B **2** 477)  
 $5\text{HgO}$ ,  $\text{CrO}_3$  Easily sol in  $\text{HCl}$ +Aq  
Very sl sol in  $\text{HNO}_3$ +Aq Decomp by  $\text{H}_2\text{O}$  into—

$6\text{HgO}$ ,  $\text{CrO}_3$  Insol in  $\text{H}_2\text{O}$  (Jager and Kruss, B **22** 2049)

**Mercuric chromate,  $\text{HgCrO}_4$**

Decomp by  $\text{H}_2\text{O}$  and acids into basic salt (Geuther)

Sol in acids Sol in warm  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3$ +Aq Sol in  $\text{Hg}(\text{NO}_3)_2$ , or  $\text{HgCl}_2$ +Aq

Insol in ethyl acetate (Naumann, B 1910, **43** 314)

Insol in acetone (Naumann, B 1904, **37** 4329)

**Mercuric dichromate,  $\text{HgCr}_2\text{O}_7$**

Ppt (Gawłowski, C C **1906** II, 1307)

**Mercurous potassium chromate,**

$\text{Hg}_2\text{K}_2(\text{CrO}_4)_2$

Ppt, decomp by  $\text{H}_2\text{O}$  (Groger, Z anorg 1907, **54** 191)

**Mercuric chromate, basic, ammonia,  $12\text{HgO}$ ,  $3\text{CrO}_3$ ,  $2\text{NH}_3$ + $3\text{H}_2\text{O}$**

(Groger, Z anorg 1908, **58** 420)

**Mercuric chromate ammonia,  $\text{HgCrO}_4$ ,  $2\text{NH}_3$ + $\text{H}_2\text{O}$**

(Groger, Z anorg 1908, **58** 419)

**Mercuric chromate sulphide,  $2\text{HgCrO}_4$ ,  $\text{HgS}$**

Not attacked by weak acids (Palm, C C **1863** 121)

**Nickel chromate, basic,  $4\text{NiO}$ ,  $\text{CrO}_3$ + $6\text{H}_2\text{O}$**

Insol in  $\text{H}_2\text{O}$ , easily sol in  $\text{NH}_4\text{OH}$ +Aq (Malaguti and Sarzeau, A ch (3) **9** 451)

$3\text{NiO}$ ,  $\text{CrO}_3$ + $6\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , sol in  $\text{NH}_4\text{OH}$ +Aq (Freese, J B **1869** 271)

$2\text{NiO}$ ,  $\text{CrO}_3$ + $6\text{H}_2\text{O}$  As above (Schmidt, A **156** 19)

$5\text{NiO}$ ,  $2\text{CrO}_3$ + $12\text{H}_2\text{O}$  As above (Schmidt)

**Nickel chromate,  $\text{NiCrO}_4$**

Not attacked by boiling  $\text{H}_2\text{O}$

Nearly insol in hot dil  $\text{HNO}_3$  Slowly sol in conc  $\text{HNO}_3$  and aqua regia

Somewhat sol in  $\text{NH}_3$ +Aq (Briggs, Z anorg 1909, **63** 326)

**Nickel dichromate,  $2\text{NiCr}_2\text{O}_7$ + $3\text{H}_2\text{O}$**

Slowly sol in cold, rapidly sol in hot  $\text{H}_2\text{O}$

Deliquescent (Briggs, Z anorg 1907, **56** 246)

**Nickel potassium chromate,  $\text{NiCrO}_4$ ,  $\text{K}_2\text{CrO}_4$ + $2\text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$  (Groger, Z anorg 1906, **51** 353)

+ $6\text{H}_2\text{O}$  Efflorescent (Briggs, Chem Soc 1904, **85** 678)

**Nickel rubidium chromate,  $\text{NiRb}(\text{CrO}_4)_2$ + $6\text{H}_2\text{O}$**

Sl efflorescent at ord temp (Briggs, Chem Soc 1904, **85** 678)

**Nickel chromate ammonia,  $\text{NiCrO}_4$ ,  $6\text{NH}_3$ + $4\text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$  Quite easily sol in  $\text{NH}_4\text{OH}$ +Aq of 0.96 sp gr (Schmidt) Insol in alcohol or ether

**Potassium chromate,  $\text{K}_2\text{CrO}_4$ ,  $\text{K}_2\text{Cr}_2\text{O}_7$ , etc**

System  $\text{K}_2\text{O}$ ,  $\text{CrO}_3$ ,  $\text{H}_2\text{O}$  at  $0^\circ$

(Stortenbeker, C C 1907, II 1558)

**Rubidium dichromate chloride mercuric chloride,  $Rb_2Cr_2O_7, 2RbCl, 4HgCl_2 + 2H_2O$** Sol in  $H_2O$ Solution sat at  $20.5^\circ$  contains 5.35% salt (Stromholm, Z anorg 1912, 75 284)**Silver (argentous) chromate,  $Ag_4CrO_4$** 

Sol in dil acids (Wohler und Rautenberg)

Existence very doubtful

**Silver chromate,  $Ag_2CrO_4$** Absolutely insol in  $H_2O$  Sol in acids, ammonia, and alkali chromates +  $Aq$  (Warrington, A 27 12)Appreciably sol in cold, and still more in hot  $H_2O$  (Memcke, A 261 341)100 ccm  $H_2O$  dissolve 0.064 gram  $Ag_2CrO_4$  at  $100^\circ$ , 100 ccm  $H_2O$  containing 50 grains

of the following salts dissolve the given amts of  $\text{Ag}_2\text{CrO}_4$  at  $100^\circ$   $\text{NaNO}_3$ , 0.064 gram,  $\text{KNO}_3$ , 0.192 gram,  $\text{NH}_4\text{NO}_3$ , 0.320 gram,  $\text{Mg}(\text{NO}_3)_2$ , 0.256 gram (Carpenter, J S C I **5** 236)

According to electrical conductivity of  $\text{Ag}_2\text{CrO}_4 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 28 mg  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$  (Kohlrausch and Rose, Z phys Ch **12** 241)

1 l  $\text{H}_2\text{O}$  dissolves 25 mg  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$  (Kohlrausch, Z phys Ch 1904, **50** 356)

25 mg are contained in 1 l of sat solution at  $18^\circ$  Solubility increases unusually rapidly with temp (Kohlrausch, Z phys Ch 1908, **64** 168)

Sol in 26,378 pts cold  $\text{H}_2\text{O}$  and 9116 pts  $\text{H}_2\text{O}$  at  $100^\circ$  (Koninek and Nihoul, Zeit anorg Ch 1891, **5** 295)

1 l  $\text{H}_2\text{O}$  dissolves  $1.2 \times 10^{-4}$  gram atoms of silver at  $25^\circ$  (Abegg and Cox, Z phys Ch 1903, **46** 11)

1 l  $\text{H}_2\text{O}$  dissolves 0.029 g  $\text{Ag}_2\text{CrO}_4$  at  $25^\circ$  (Schafer, Z anorg 1905, **45** 310)

1 l  $\text{H}_2\text{O}$  dissolves 0.0256 g  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$ , 0.0341 g at  $27^\circ$ , 0.0534 g at  $50^\circ$  (Whitby Z anorg 1910, **67** 108)

Sol in hot  $\text{NH}_4\text{OH} + \text{Aq}$  of sp gr 0.94 (15.63%  $\text{NH}_3$ ), sl sol in cold  $\text{NH}_4\text{OH} + \text{Aq}$  of sp gr 0.91 (24.99%  $\text{NH}_3$ ) (Margosches, Z anorg 1904, **41** 73)

Solubility of  $\text{Ag}_2\text{CrO}_4$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$

Mols $\text{NH}_4\text{OH}$ per l	Mols $\times 10^3$ $\text{Ag}_2\text{CrO}_4$ per l

Sat solution at 18° contains 74 6% Na<sub>2</sub>Cr<sub>4</sub>O<sub>13</sub> and has sp gr = 1 926 (Mylius and Funk, B 1900, 33 3688)

#### Sodium uranyl chromate, Na<sub>2</sub>CrO<sub>4</sub>

2(UO<sub>2</sub>)CrO<sub>4</sub> + 10H<sub>2</sub>O

Easily sol in H<sub>2</sub>O (Formánek, A 257 108)

100 pts of the solution in H<sub>2</sub>O contain 52 52 pts of the anhydrous salt at 20° (Rumbach, B 1904, 37 482)

#### Sodium chromate silicate, Na<sub>2</sub>O, Cr<sub>2</sub>O<sub>3</sub>, 2SiO<sub>2</sub> + 14H<sub>2</sub>O

Not decomp by HCl + 1q (Singer, Disser 1910)

2Na<sub>2</sub>O, 3Cr<sub>2</sub>O<sub>3</sub>, 6SiO<sub>2</sub> Not decomp by boiling conc acids except HF (Weyberg C B Miner, 1908 519)

5Na<sub>2</sub>O, 2Cr<sub>2</sub>O<sub>3</sub>, 11SiO<sub>2</sub> (Weyberg)

3Na<sub>2</sub>O, 2Cr<sub>2</sub>O<sub>3</sub>, 9SiO<sub>2</sub> (Weyberg)

#### Strontium chromate, SrCrO<sub>4</sub>

Somewhat sol in H<sub>2</sub>O Sol in 840 pts H<sub>2</sub>O (Meschevskij, Z anal 21 399), sol in 831 8 pts H<sub>2</sub>O at 15° (Fresenius, Z anal 29 419)

100 cc H<sub>2</sub>O dissolve 0 4651% at 10° 1% at 20°, 2 417% at 50°, 3% at 100° (Reichard, Ch Z 1903, 27 877)

Easily sol in HCl, HNO<sub>3</sub>, or H<sub>2</sub>CrO<sub>4</sub> + 1q

Sol in 512 pts 0 5% NH<sub>4</sub>Cl + 1q at 15°

Sol in 63 7 pts 1% HC H<sub>3</sub>O + 1q at 15°

Sol in 348 8 pts solution containing 0 75% NH<sub>4</sub>C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, 4 drops HC H<sub>3</sub>O, and 6 drops (NH<sub>4</sub>)<sub>2</sub>CrO<sub>4</sub> + 1q (Fresenius)

100 ccm NH<sub>4</sub>Cl + 1q sat at bpt dissolve 1 g SrCrO<sub>4</sub> (Dumesnil, A ch 1900 7) 20 125)

50 ccm alcohol (29%) dissolve 0 0066 g SrCrO<sub>4</sub>

50 ccm alcohol (53%) dissolve 0 001 g SrCrO<sub>4</sub> (Fresenius, Z anal 30 672)

#### Strontium dichromate, SrCr<sub>2</sub>O<sub>7</sub>

Easily sol in H<sub>2</sub>O

#### Strontium trichromate, SrCr<sub>3</sub>O<sub>10</sub> + 3H<sub>2</sub>O

Very deliquescent, and sol in H<sub>2</sub>O (Preis and Ravmann, B 13 340)

#### Strontium chromate mercuric hydrogen chloride, SrCrO<sub>4</sub>, 2HgCl<sub>2</sub>, HCl

According to Stromholm 1:1 SrCl<sub>2</sub>:SrCrO<sub>4</sub> 4HgCl<sub>2</sub> + H<sub>2</sub>O

Recryst from H<sub>2</sub>O (Imbert and Belugon Bull Soc 1897 (3) 17 471)

2SrCrO<sub>4</sub>, 6HgCl<sub>2</sub>, HCl (Imbert and Belugon)

#### Thallos chromate, TlCrO<sub>4</sub>

100 pts H<sub>2</sub>O dissolve 0 05 pt at 60° (Rupp and Zimmer, Z anorg 1902 33 157)

Ppt Insol in cold moderately conc HC H<sub>3</sub>O + 1q or in very dil HNO<sub>3</sub> + 1q and very sl sol on boiling therewith Dil NH<sub>4</sub>OH, and Na<sub>2</sub>CO<sub>3</sub> + 1q have the same action Attacked by very dil HCl + 1q Sol in hot conc HCl + 1q Decomp by dil H<sub>2</sub>SO<sub>4</sub> + 1q (Carstanjen)

1 l KOH+Aq (112 g per l) dissolves about 3.5 g  $\text{Ti}_2\text{CrO}_4$  on boiling, which separates out on cooling

Boiling conc KOH+Aq (31% KOH) dissolves 15 g  $\text{Ti}_2\text{CrO}_4$  per litre (Lepierre and Lachaud, C R 113 196)

#### Thalious dichromate, $\text{Ti}_2\text{Cr}_2\text{O}_7$

Insol in  $\text{H}_2\text{O}$ , etc Has the same properties as  $\text{Ti}_2\text{CrO}_4$

#### Thalious trichromate, $\text{Ti}_2\text{Cr}_3\text{O}_{10}$

Sol in 2814 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and 438.7 pts at  $100^\circ$  (Crookes)

#### Thallic chromate

Ppt

#### Thorium chromate, basic, $\text{Th}(\text{OH})_2\text{CrO}_4$

Ppt, unstable in solution (Palmer, Am Ch J 1895, 17 278)

#### Thorium chromate, $\text{Th}(\text{CrO}_4)_2 \cdot \text{H}_2\text{O}$

Ppt Sol in HCl and  $\text{NH}_4\text{Cl}$ +Aq 1 pt is sol in 284 pts  $\text{H}_2\text{O}$  at  $22^\circ$  (Palmer, Am Ch J 1895, 17 375 and 278)

+ $3\text{H}_2\text{O}$  Ppt (Haber, M 1897, 18 689)  
+ $8\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Chydenius, Pogg 119 54)

#### Tin (stannous) chromate

Ppt Sol in dil acids (Berzelius)

#### Tin (stannic) chromate

Ppt (Leykauf, J p 19 127)

#### Uranyl chromate, basic, $\text{UO}_3 \cdot 2(\text{UO})_2\text{CrO}_4 \cdot 8\text{H}_2\text{O}$

Ppt (Orloff, Ch Z 1907, 31 375)

$\text{UO}_3 \cdot (\text{UO})_2\text{CrO}_4 \cdot 6\text{H}_2\text{O}$  (Orloff)

#### Uranyl chromate, $(\text{UO})_2\text{Cr}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$

1 pt is sol in 133 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , slowly sol in alcohol to give a solution which is decomp on boiling (Orloff, Ch Z 1907, 31 375)

+ $11\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Formáněk, A 257 108)

#### Yttrium chromate

Deliquescent Easily sol in  $\text{H}_2\text{O}$  (Bailin)

#### Zinc chromate, basic, $4\text{ZnO} \cdot \text{Cr}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$

(Groger, Z anorg 1911, 70 135)

+ $5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , sol in hot  $\text{H}_2\text{CrO}_4$ +Aq, slowly sol in  $\text{NH}_4\text{OH}$ +Aq (Malaguti and Sarzeau, A ch (3) 9 431)

$3\text{ZnO} \cdot \text{Cr}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (Groger)  
 $2\text{ZnO} \cdot \text{Cr}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (Briggs, Z anorg 1907, 56 254)

+ $1\frac{1}{2}\text{H}_2\text{O}$  Ppt Insol in  $\text{H}_2\text{O}$  Sol in hot  $\text{H}_2\text{CrO}_4$ +Aq (Prussen and Phillipona, A 149 92)

+ $2\text{H}_2\text{O}$  Ppt Not wholly insol in  $\text{H}_2\text{O}$  (Prussen and Phillipona)

$3\text{ZnO} \cdot 2\text{CrO}_3 \cdot \text{H}_2\text{O}$  (Gröger)

#### Zinc chromate, $\text{ZnCrO}_4$

Insol in  $\text{H}_2\text{O}$ , very sol in acids, decomposed by boiling with  $\text{H}_2\text{O}$  (Schulze, Z anorg 1895, 10 154)

Insol in liquid  $\text{NH}_3$  (Franklin, Am J 1898, 20 830)

Insol in acetone (Naumann, B 1894, 37 4329)

+ $\text{H}_2\text{O}$  (Groger, Z anorg 1911, 70 1)

#### Zinc dichromate, $\text{ZnCr}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$

Hygroscopic

Very sol in  $\text{H}_2\text{O}$  and sl decomp by boiling (Schulze, Z anorg 1895, 10 153)

#### Zinc trichromate, $\text{ZnCr}_3\text{O}_{10} \cdot 3\text{H}_2\text{O}$

Deliquescent, very sol in  $\text{H}_2\text{O}$  (Gröger, Z anorg 1910, 66 10)

#### Zinc chromate ammonia, $\text{ZnCrO}_4 \cdot \text{NH}_3 \cdot \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Groger, Z anorg 1908, 58 417)

$\text{ZnCrO}_4 \cdot 4\text{NH}_3 \cdot 5\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH}$ +Aq Insol in alcohol and ether (Malaguti and Sarzeau, A ch (3) 9 431)

+ $3\text{H}_2\text{O}$  Efflorescent Decomp by  $\text{H}_2\text{O}$  Easily sol in dil acids and  $\text{NH}_4\text{OH}$ +Aq (Bieler, A 151 223)

$2\text{ZnO} \cdot 3\text{CrO}_3 \cdot 10\text{NH}_3 \cdot 10\text{H}_2\text{O}$  P (Malaguti and Sarzeau)

#### Zinc dichromate mercuric cyanide, $\text{ZnCr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2 \cdot 7\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Stable in aqueous solution at  $100^\circ$  (Kriess, Z anorg 1895, 3 460)

#### Perchromic acid

See Perchromic acid

#### Chromicomolybdic acid, $(\text{CrO}_3)_2 \cdot 12\text{MoO}_3 \cdot 28\text{H}_2\text{O}$

Slowly sol in  $\text{H}_2\text{O}$  (Hull, J Am Chem Soc 1907, 29 708)

#### Ammonium chromicomolybdate, $3(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot 12\text{MoO}_3 \cdot 20\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Stuart, J p 61 457, H 1, J Am Chem Soc 1907, 29 695)

+ $26\text{H}_2\text{O}$  (Muckwald, Dissert, 1895)

#### Ammonium barium chromicomolybdate, $(\text{NH}_4)_2\text{O} \cdot 22\text{BaO} \cdot \text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 \cdot 20\text{H}_2\text{O}$

(Hall, J Am Chem Soc 1907, 29 707)

**Barium chromicomolybdate**,  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 18\text{H}_2\text{O}$ ,  $5\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$

Ppts (Hall, J Am Chem Soc 1907, **29** 705)

**Lead chromicomolybdate**,  $4\text{PbO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 22\text{H}_2\text{O}$ , and  $+24\text{H}_2\text{O}$

Ppts (Hall, J Am Chem Soc 1907, **29** 706)

**Mercurous chromicomolybdate**,  $8\text{Hg}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$

Ppt (Hall, J Am Chem Soc 1907, **29** 707)

**Potassium chromicomolybdate**,  $\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $3\text{MoO}_3$

Sol in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$  (Bradbury, Z anorg 1894, **7** 46)

$3\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$  Sol in  $38.51$  pts  $\text{H}_2\text{O}$  at  $17^\circ$  (Struve, Hall)  $+24\text{H}_2\text{O}$  (Hall)

$4\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$  (Hall, J Am Chem Soc 1907, **29** 709)

$7\text{K}_2\text{O}$ ,  $2\text{Cr}_2\text{O}_3$ ,  $24\text{MoO}_3 + 32\text{H}_2\text{O}$  (Hall)

**Silver chromicomolybdate**,  $5\text{Ag}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 17\text{H}_2\text{O}$

Ppt (Hall)

**Sodium chromicomolybdate**,  $3\text{Na}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 21\text{H}_2\text{O}$

Efflorescent Easily sol in  $\text{H}_2\text{O}$  (Struve)

**Chromic sulphuric acid**

See Sulphochromic acid

**Chromicyanhydric acid**,

$\text{H}_3\text{Cr}(\text{CN})_6(?)$

Insol in  $\text{H}_2\text{O}$  (Kaiser, A Suppl **3** 163)

**Ammonium chromicyanide**,  $(\text{NH}_4)_3\text{Cr}(\text{CN})_6$

Easily sol in  $\text{H}_2\text{O}$  (Kaiser, A Suppl **3** 163)

**Cupric chromicyanide**,  $\text{Cu}_2[\text{Cr}(\text{CN})_6]$

Ppt Insol in dil or conc acids, except on heating Insol in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$  (Kaiser)

**Lead chromicyanide, basic**,  $3\text{Pb}(\text{CN})_2$ ,  $2\text{Cr}(\text{CN})_3$ ,  $\text{Pb}(\text{OH})$

Ppt Sol in  $\text{HNO}_3$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{Pb}$  salts  $+ \text{Aq}$  (Kaiser)

**Potassium chromicyanide**,  $\text{K}_3\text{Cr}(\text{CN})_6$

Very sol in  $\text{H}_2\text{O}$

$100$  pts cold  $\text{H}_2\text{O}$  dissolve  $30.9$  pts salt Insol in absolute alcohol, but somewhat sol in dil alcohol

Sol in conc  $\text{H}_2\text{SO}_4$  without decomp (Kaiser, A Suppl **3** 170)

**Silver chromicyanide**,  $\text{Ag}_3\text{Cr}(\text{CN})_6$

Insol in all solvents, excepting  $\text{KCN} + \text{Aq}$  (Kaiser)

Sol in large excess of  $\text{HCl} + \text{Aq}$  Sl sol in cold, easily sol in hot conc  $\text{HNO}_3$  Very sol in conc  $\text{H}_2\text{SO}_4$  Insol in hot or cold acetic acid (Cruser, Dissert 1896)

**Chromisulphocyanhydric acid**

$\text{H}_3\text{Cr}(\text{SCN})_6$

Known only in aqueous solution

**Ammonium chromisulphocyanide**,

$(\text{NH}_4)_3\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Rossler, A **141** 185)

**Barium chromisulphocyanide**,  $\text{Ba}_3[\text{Cr}(\text{SCN})_6]_2 + 16\text{H}_2\text{O}$

Deliquescent, and sol in  $\text{H}_2\text{O}$  (R)

**Lead chromisulphocyanide**,  $\text{Pb}_3[\text{Cr}(\text{SCN})_6]$ ,  $4\text{PbO}_2\text{H}_2 + 8\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp thereby into— $\text{Pb}_2[\text{Cr}(\text{SCN})_6]_2$ ,  $4\text{PbO}_2\text{H}_2 + 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$

**Potassium chromisulphocyanide**,  $\text{K}_3\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Sol in  $0.72$  pt  $\text{H}_2\text{O}$  and  $0.94$  pt alcohol

**Silver chromisulphocyanide**,  $\text{Ag}_3\text{Cr}(\text{SCN})_6$

Insol in  $\text{H}_2\text{O}$  or conc  $\text{HNO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$

**Sodium chromisulphocyanide**,  $\text{Na}_3\text{Cr}(\text{SCN})_6 + 7\text{H}_2\text{O}$

Deliquescent, sol in  $\text{H}_2\text{O}$

**Chromium**,

*Two modifications*—(a) Not attacked by  $\text{H}_2\text{O}$  Easily sol in cold  $\text{HCl} + \text{Aq}$  Sl sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Deville) Easily sol in a hot mixture of  $1$  pt  $\text{H}_2\text{SO}_4$  and  $20$  pts  $\text{H}_2\text{O}$  (Regnault, A ch **62** 357) Easily sol in warm conc  $\text{H}_2\text{SO}_4$  (Gmelin) Very slowly sol in hot  $\text{HNO}_3 + \text{Aq}$  (Vauquelin) Insol in dil or conc  $\text{HNO}_3 + \text{Aq}$  (Deville) Very slowly (Richter), not at all (Berzelius) sol in hot aqua regia Easily sol in  $\text{HF} + \text{Aq}$  (β) Insol in all acids, even aqua regia (Fremy), probably contains  $\text{Si}$

Pure  $\text{Cr}$  is sol in conc  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and dil  $\text{HNO}_3$ , sol in  $\text{HgCl}_2 + \text{Aq}$

Insol in fuming  $\text{HNO}_3$  and aqua regia (Moissan, C R **1894** 119, 187)

$\text{Cr}$  prepared by aluminothermic method is sol in haloid acids to form chromic and chromous salts, even in absence of au (Döring, J pr 1902, (2) **66** 65, 1906, (2) **73** 393)

Aluminothermic  $\text{Cr}$  is active in contact

with HCl, HBr, HI, HF,  $\text{H}_2\text{SO}_4$ ,  $\text{H}_2\text{C}_2\text{O}_4$ , i.e., sol in cold conc or warm dil acids. Is inactive in contact with conc  $\text{HNO}_3$ ,  $\text{H}_2\text{Cr}_2\text{O}_4$ ,  $\text{HClO}_3$ ,  $\text{HClO}_4$ ,  $\text{H}_3\text{PO}_4$ , KOH, citric, formic, acetic and tartaric acids. Cause attributed to a different electric state (Hittorff, Z phys Ch 1898, 25 729)

### Chromium ammonia compounds

See—

**Bromotetramine chromium compounds,**  
 $\text{BrCr}(\text{NH}_3)_4\text{X}_2$

**Bromopurpleochromium compounds,**  
 $\text{BrCr}(\text{NH}_3)_5\text{X}_2$

**Chlorotetramine chromium compounds,**  
 $\text{ClCr}(\text{NH}_3)_4\text{X}_2$

**Chloropurpleochromium compounds,**  
 $\text{ClCr}(\text{NH}_3)_5\text{X}_2$

**Diamine chromium sulphocyanides,**  
 $\text{Cr}(\text{NH}_3)_2(\text{SCN})_4\text{M}$

**Erythrochromium compounds,**  
 $(\text{HO})\text{Cr}_2(\text{NH}_3)_{10}\text{X}_2$

**Iodopurpleochromium compounds,**  
 $\text{ICr}(\text{NH}_3)_5\text{X}_2$

**Iodotetramine chromium compounds,**  
 $\text{ICr}(\text{NH}_3)_4\text{X}_2$

**Luteochromium compounds,**  $\text{Cr}(\text{NH}_3)_6\text{X}_3$

**Rhodochromium compounds,**  
 $(\text{HO})\text{Cr}_2(\text{NH}_3)_{10}\text{X}_5$

**Rhodosechromium compounds,**  
 $(\text{HO})_3\text{Cr}_2(\text{NH}_3)_6\text{X}_3$

**Roseochromium compounds,**  
 $\text{Cr}(\text{NH}_3)_5(\text{OH})_2\text{X}_4$

**Xanthochromium compounds,**  
 $(\text{HO})_2\text{Cr}(\text{NH}_3)_5\text{X}_2$

### Chromium arsenide, $\text{CrAs}$

Insol in mineral acids (Dieckmann, Z anorg 1914, 86 294)

$\text{Cr}_2\text{As}_3$  Insol in mineral acids (Dieckmann)

### Chromium azoimide, $\text{CrN}_3$

Pptd by addition of alcohol and ether  
Insol in  $\text{H}_2\text{O}$  (Curtius, J pr 1900, (2) 61 410)

### Chromium boride, $\text{CrB}$

Insol in HCl, dil  $\text{H}_2\text{SO}_4$ , HF, HF +  $\text{HNO}_3$   
Sl sol in  $\text{HNO}_3$  and in aqua regia (Wedekind, B 1907, 40 299)

Sol in cold dil or conc HCl, HF, and  $\text{H}_2\text{SO}_4$  (Jassonneix, C R 1906, 143 1151)

$\text{Cr}_3\text{B}_2$  Sol in conc or dil HF, HCl,  $\text{H}_2\text{SO}_4$ , insol in  $\text{HNO}_3$  or alkalis + Aq (Jassonneix)

### Chromous bromide, $\text{CrBr}_2$

Sol in  $\text{H}_2\text{O}$  Not deliquescent in dry air (Moissan, C R 92 1051)

### Chromic bromide, $\text{CrBr}_3$

*Anhydrous* Insol in  $\text{H}_2\text{O}$ , but dissolves at once in presence of the least trace of  $\text{CrBr}_2$  (Bauk, A 111 382)

+  $6\text{H}_2\text{O}$  Deliquescent Very sol in  $\text{H}_2\text{O}$   
 $\text{H}_2\text{O}$  dissolves more than 2 pts crystals at ord temp Very sol in alcohol Insol in ether (Recoura, C R 110 1029)

*Blue modification* Insol in alcohol (Recoura, C R 110 1193)

Very hygroscopic Easily sol in alcohol and acetone Insol in ether (Werne A 1902, 322 343)

+  $8\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Varenne, C R 93 727)

### Chromium molybdenyl bromide,

Apparently wholly insol in dil acids  
Sol in hot conc HCl + Aq with decomp  
Insol in  $\text{M}_2\text{CrO}_4$  + Aq (Atterberg)

+  $2\text{H}_2\text{O}$  Apparently wholly insol in dil acids

Sol in hot conc HCl + Aq with decomp  
Insol in  $\text{M}_2\text{CrO}_4$  + Aq (Atterberg)

### Chromic rubidium bromide, $\text{CrBr}_3$ , 2R Br + $\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  with decomp (Werner A 1902, 322 345)

### Chromic bromide ammonia

See Bromotetramine chromium bromide

### Chromous bromide hydrazine,

Insol in  $\text{H}_2\text{O}$  Sol in acids Insol in alcohol, ether and similar solvents (Traube, B 1913, 46 1507)

### Chromium carbide, $\text{Cr}_4\text{C}$

(Moissan C R 1894, 119 187)

$\text{Cr}_4\text{C}_2$  Does not decomp  $\text{H}_2\text{O}$  at ordinary temp or at  $100^\circ$ , insol in conc HCl, HI,  $\text{HNO}_3$ , and aqua regia sol in dil HCl (slowly), insol in fused KOH sol in fused  $\text{KNO}_3$  (Moissan, Bull Soc 1894 (3) 117 1016)

### Chromium iron carbide, $3\text{Fe}_3\text{C} \cdot 2\text{Cr}_4\text{C}$

Decomp by  $\text{H}_2\text{O}$ , sol in gaseous hydrocarbons, insol in  $\text{HNO}_3$  and aqua regia (Williams, C R 1898, 127 484)

### Chromium tungsten carbide, $\text{CW}$ , $3\text{Cr}_4\text{C}$

Not attacked by acids

Slowly attacked by fused KOH or alkali carbonates Rapidly decomp by fused alkali nitrates or  $\text{KClO}_3$  (Moissan, C R 1903, 137 294)

### Chromous chloride, $\text{CrCl}_2$

Deliquescent Very sol in  $\text{H}_2\text{O}$  with evolution of much heat (Moberg, J pr 29 1)

Practically insol in ether Moderately sol in absolute alcohol, methyl alcohol, and acetaldehyde (Rohland, Z anorg 1899, 21 39)

+1½H<sub>2</sub>O (Moissan, A ch (5) 25 40)  
+2H<sub>2</sub>O (Knight and Rich, Chem Soc 1911, 99 89)  
+3H<sub>2</sub>O (Knight and Rich)

**Chromic hydrogen chloride, 3CrCl<sub>3</sub>, 2HCl + 13H<sub>2</sub>O**

Decomp by H<sub>2</sub>O (Recoura, C R 100 1227)

Sl sol in liquid NH<sub>3</sub> (Gore, Am Ch J 1898, 20 827)

**Chromic chloride, CrCl<sub>3</sub>**

*Anhydrous*—*Peach-blossom-colored modification* Insol in pure H<sub>2</sub>O (Pelgrot), but by long continued boiling of the finely divided salt with H<sub>2</sub>O, traces are dissolved with decomp Not decomp by boiling conc H<sub>2</sub>SO<sub>4</sub>, or other acids, even aqua regia

Easily sol with evolution of heat in H<sub>2</sub>O containing only 1/40,000 pt CrCl<sub>3</sub> (Pelgrot, J pr 36 150) Also sol in presence of traces of SnCl<sub>2</sub> (5 mg SnCl<sub>2</sub> cause 1 g CrCl<sub>3</sub> to dissolve), FeCl<sub>3</sub>, Cu<sub>2</sub>Cl<sub>2</sub>, Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>, and other reducing substances, chlorides without reducing properties have no effect (Pelouze, A ch (3) 14 251) TiCl<sub>3</sub> and SO<sub>2</sub> have similar solvent action (Ebelmen, A ch (3) 20 390), also Zn+dil acids (Moberg)

Insol in dil alkalis+Ag, very slowly decomp by boiling conc alkalis or alkali carbonates+Ag (Fellenberg, Pogg 50 76)

Difficulty sol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in CS (Arcowski, Z anorg 1894, 6 257)

Insol in acetone (Eidmann, C C 1899 II, 1014)

Practically insol in absolute ethyl alcohol, methyl alcohol, acetaldehyde and ether (Rohland, Z anorg 1899, 21 39)

*Yellow* Sl sol in benzonitrile (Naumann, B 1914, 47 1369)

*Violet modification* Very sol in H<sub>2</sub>O to form a green solution (Moberg, J pr 44 325)

The violet mod is almost insol in H<sub>2</sub>O but if 1/20,000 pt chromous chloride is present, it is readily sol (Rohland, Z anorg 1899, 21 39)

+4H<sub>2</sub>O Sl deliquescent Very sol in H<sub>2</sub>O, alcohol and ethyl acetate (Godeffroy, Bull Soc (2) 43 229)

+6H<sub>2</sub>O Deliquescent Sol in H<sub>2</sub>O, but probably decomp to CrOCl<sub>2</sub>

Practically insol in ether Moderately sol in absolute ethyl alcohol, methyl alcohol and acetaldehyde (Rohland, Z anorg 1899, 21 39)

"Monochlorochromic chloride" is sol in ether and fuming HCl(1 1) (Bjerrum, B 1906, 39 1599)

### Green modification

Solubility in H<sub>2</sub>O at 25°

25 g green CrCl<sub>3</sub>+6H<sub>2</sub>O and 10 g H<sub>2</sub>O

Time	Total Solubility in %	Composition of the sat solution	
		% violet salt	% green salt
¼ hr	58 36	8 30	91 70
½ hr		12 57	87 43
4 hrs	63 27	24 80	75 20
1 day	68 50	37 64	62 36
2 days		40 90	59 10
3 "	68 95	42 78	57 22
11 "		42 84	57 16
13 "		42 39	57 61
19 "	68 58	42 62	57 38

(Ohe, Z anorg 1906, 51 55)

Solubility of green CrCl<sub>3</sub>+6H<sub>2</sub>O in H<sub>2</sub>O at 32°

10 g CrCl<sub>3</sub>+6H<sub>2</sub>O and 4 g H<sub>2</sub>O

Time	Total solubility in %	Composition of the dissolved substance		Solid phase
		% violet salt	% green salt	
7'	63 69	12 87	87 13	Almost all dissolved
45'	66 24	21 43	78 57	
2h 5'	69 53	34 53	65 47	
48h	69 33	45 27	54 73	
* 11 dys	70 81	45 27	54 73	

\* First 8 days at 35°

(Ohe, Z anorg 1907, 53 276)

Solubility of green CrCl<sub>3</sub>+6H<sub>2</sub>O in H<sub>2</sub>O at 35°

10 g CrCl<sub>3</sub>+6H<sub>2</sub>O and 3 3 g H<sub>2</sub>O

Time	Total solubility in %	Composition of the dissolved substance	
		% violet salt	% green salt
8'	65 85	16 47	83 53
38'	66 74	25 02	74 98
1h	66 21	25 45	74 55
2h 10'	68 90	31 47	68 53
4h	70 79	36 28	63 72
23h	71 34	42 95	57 05
72h	70 79	42 88	57 12

(Ohe, l c)

If a solution saturated with the green hexahydrate below 32° is cooled, the decahydrate separates out, if the solution is saturated above 32°, both the decahydrate and hexahydrate separate out on cooling (Ohe, l c)

*Violet modification*Solubility in H<sub>2</sub>O at 25°25 g violet CrCl<sub>3</sub> + 6H<sub>2</sub>O and 10 ccm of a 35% solution of green CrCl<sub>3</sub> + 6H<sub>2</sub>O

(Olie, Z anorg 1907, 53 275)

The composition of the hydrates formed by CrCl<sub>3</sub> at different dilutions is calculated from determinations of the lowering of t<sub>f</sub> and of the conductivity and sp gr of CrCl<sub>3</sub> + Aq (Jon, Am Ch J 1905, 34 310)

**Chromic glucinum chloride**, CrCl<sub>3</sub>, Gl + H<sub>2</sub>O

Sol in H<sub>2</sub>O with decomp (Neumann, 244 329)

**Chromic lithium chloride**, CrCl<sub>3</sub>, 2LiCl - 4H<sub>2</sub>O

Very hygroscopic

Sol in ice water but solution soon decomposes

Easily sol in alcohol (Werner, B 1901, 34 1603)

[Cr(OH<sub>2</sub>)Cl<sub>2</sub>]I + 4H<sub>2</sub>O

Very hygroscopic Sol in ice cold H<sub>2</sub>O and in alcohol (Werner, B 1901, 34 160)

**Chromic magnesium chloride**, CrCl<sub>3</sub>, MgCl<sub>2</sub> + H<sub>2</sub>O

Decomp by H<sub>2</sub>O (Neumann)

**Chromic phosphoric chloride**, CrCl<sub>3</sub>, PCl<sub>5</sub>

Decomp by H<sub>2</sub>O (Gronlund)

**Chromium platinum chloride**

See chloroplatinate, chromium

**Chromic potassium chloride**, CrCl<sub>3</sub>, KCl

Decomp by H<sub>2</sub>O

CrCl<sub>3</sub>, 2KCl + H<sub>2</sub>O (Neumann, A 24 329)

CrCl<sub>3</sub>, 3KCl Easily sol in H<sub>2</sub>O with decomp (Fremy, A ch (3) 12 361)

**Chromic rubidium chloride**,  $\text{CrCl}_3 \cdot 2\text{RbCl} + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Neumann, A 244 329)

Slowly sol in cold, rapidly sol in hot  $\text{H}_2\text{O}$  with decomp (Werner, B 1901, 34 1603)  
 $\text{CrCl}_3 \cdot 3\text{RbCl} + 8\text{H}_2\text{O}$  Unstable Decomp by alcohol (Werner, B 1906, 39 1830)

**Chromic sodium chloride**,  $\text{CrCl}_3 \cdot \text{NaCl}$

Sol in  $\text{H}_2\text{O}$  (Berzelius)

$\text{CrCl}_3 \cdot 3\text{NaCl}$  Sol in  $\text{H}_2\text{O}$  (Berzelius)

**Chromic thallium chloride**,  $\text{CrCl}_3 \cdot 3\text{TlCl}$

Sol with decomp in  $\text{H}_2\text{O}$  (Neumann, A 244 329)

**Chromic chloride ammonia**

See Chlorotetramine chromium chloride

**Chromous chloride hydrazine**,  $\text{CrCl}_3 \cdot 2\text{N}_2\text{H}_4$

Insol in  $\text{H}_2\text{O}$  Sol in acids Insol in alcohol, ether and similar solvents (Traube, B 1913, 46 1506)

**Chromic chloride ferric oxide**

$\text{Fe}_2\text{O}_3$  is easily sol in dil, difficultly sol in conc  $\text{CrCl}_3 + \text{Aq}$  (Béchamp A, ch (3) 57 311)

**Chromous fluoride**,  $\text{CrF}_2$

Sl sol in  $\text{H}_2\text{O}$ , hot  $\text{H}_2\text{SO}_4$  or dil  $\text{HNO}_3$   
 Sol in boiling  $\text{HCl}$  Insol in alcohol (Poulenc, C R 1893, 116 254)

**Chromic fluoride**,  $\text{CrF}_3$

Perfectly sol in  $\text{H}_2\text{O}$  (Berzelius)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

+  $3\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Werner and Costachescu, B 1908, 41 4243)

+  $3\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Poulenc, C R 1893, 116 255)

+  $6\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Werner and Costachescu, B 1908, 41 4242)

+  $9\text{H}_2\text{O}$  Violet modification Very sl sol in  $\text{H}_2\text{O}$  Insol in alcohol Sol in  $\text{HCl}$  and  $\text{KOH} + \text{Aq}$  (Poulenc, Gazz ch it 20 582)

**Chromium hexafluoride**,  $\text{CrF}_6$

Decomp by  $\text{H}_2\text{O}$  with evolution of heat (Berzelius)

Correct composition is  $\text{CrO}_2\text{F}_2$  (Oliveri, Gazz ch it 16 218)

**Chromic cobaltous fluoride**,  $\text{CrF}_3 \cdot \text{CoF}_2 + 7\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Petersen, J pr (2) 40 60)

**Chromic cupric fluoride**,  $\text{CrCuF}_5 + 5\text{H}_2\text{O}$

Can be cryst from  $\text{HF} + \text{Aq}$  (Higley, J Am Chem Soc 1904, 26 630)

**Chromic nickel fluoride**,  $\text{CrF}_3 \cdot \text{NiF}_2 + 7\text{H}_2\text{O}$

Somewhat more sol in  $\text{H}_2\text{O}$  than  $\text{CrF}_3$ ,  $\text{CoF}_2 + 7\text{H}_2\text{O}$  (Petersen, J pr (2) 40 61)

**Chromic potassium fluoride**,  $\text{CrF}_3 \cdot 3\text{KF}$

Nearly insol in  $\text{H}_2\text{O}$  (Christensen, J pr (2) 35 161)

$\text{CrF}_3 \cdot 2\text{KF} + \text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{O}$  Sol in conc  $\text{HCl} + \text{Aq}$  (Christensen)

**Chromic sodium fluoride**,  $\text{CrF}_3 \cdot 2\text{NaF} + \text{H}_2\text{O}$

(Wagner, B 19 896)

**Chromic thalious fluoride**,  $2\text{CrF}_3 \cdot 3\text{TlF}$

Sol in hot  $\text{H}_2\text{O}$ , less sol in cold Sl sol in  $\text{HF}$  (Ephraim, Z anorg 1909, 61 242)

**Chromic zinc fluoride**,  $\text{CrF}_3 \cdot \text{ZnF}_2 + 7\text{H}_2\text{O}$

Can be cryst from  $\text{HF} + \text{Aq}$  (Higley, J Am Chem Soc 1904, 26 630)

Colloidal solution is perfectly clear (Biltz, B 1902, 35 4433)

**Chromous hydroxide**,  $\text{CrO}_2\text{H}$

Decomp by  $\text{H}_2\text{O}$ , especially if hot (Pellet, A ch (3) 12 539)

Slowly sol in cold conc acids, even aqua regia, almost insol in dil acids (Moberg, J pr 43 119)

**Chromic hydroxide**,  $\text{Cr}_2\text{O}_3 \cdot x\text{H}_2\text{O}$ , probably  $\text{Cr}_2\text{O}_3\text{H}_6$

Insol in  $\text{H}_2\text{O}$  Easily sol in acids Easily sol in cold  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , much less sol in cold  $\text{NH}_4\text{OH} + \text{Aq}$ , the presence of  $\text{NH}_4\text{Cl}$  has no influence upon solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fresenius) Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  if it has been thoroughly washed

Insol in  $\text{KCN} + \text{Aq}$ , but sl sol in  $\text{KCN} + \text{HCN} + \text{Aq}$  (Rodgers, 1834)

Gradually sol in dil  $\text{FeCl}_3 + \text{Aq}$ , after three months, 2 mols  $\text{Cr}_2\text{O}_3\text{H}_6$  are dissolved by 1 mol  $\text{FeCl}_3$  without pptn of  $\text{FeO}_2\text{H}_6$  (Béchamp, A ch (3) 57 296)

Alsl sol in  $\text{CrCl}_3 + \text{Aq}$ , in four months,  $1\frac{1}{2}$  mols  $\text{Cr}_2\text{O}_3\text{H}_6$  are dissolved by 1 mol  $\text{CrCl}_3$  (Béchamp)

Sol in  $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$ , and clear solution formed as long as 3 mols  $\text{HNO}_3$  are present for 8 mols  $\text{Cr}_2\text{O}_3$  (Ordway, Sill Am J (2) 27 197)

Chromic hydroxide, pptd by alkalis is easily sol in excess of the reagent, after being dried in a vacuum, however, it is insol in alkalis (Herz, Z anorg 1901, 28 344)

Freshly pptd it is sol in aq alkali, but it is readily changed into a modification which is insol (Herz, Z anorg 1902, 31 352)

The solubility of chromic hydroxide in an

aqueous solution of red chromic chloride is not directly proportional to the concentration of the latter—a basic chloride is probably formed (Fischer, Z anorg 1904, 40 43)

Not pptd in presence of Na citrate (Spiller)

Insol in amylamine+Aq, not pptd in presence of alkali tartrates, sugar, etc

$\text{Cr}_2\text{O}_3\text{H}_2 + 4\text{H}_2\text{O}$  Difficultly sol in acids

$\text{Cr}_2\text{O}_3\text{H}_2 + \text{H}_2\text{O}$  Extremely hygroscopic

Exists in a soluble modification, obtained by dialysis, solution can be diluted with pure  $\text{H}_2\text{O}$ , but gelatinizes with traces of salts (Graham, Roy Soc Trans 1861 183)

$\text{Cr}_2\text{O}_3(\text{OH})$  Insol in boiling dil HCl+Aq

$\text{Cr}_2\text{O}(\text{OH})_4$  (Guignet's green) Scarcely sol in boiling HCl+Aq (Salvetat, C R 48 295)

Guignet gave formula as  $2\text{Cr}_2\text{O}_3 + 3\text{H}_2\text{O}$

### Chromochromic hydroxide, $\text{Cr}_2\text{O}_4, \text{H}_2\text{O} (?)$

Slightly attacked by acids (Peligot, A ch (3) 12 539)

### Chromous iodide, $\text{CrI}$

Easily sol in  $\text{H}_2\text{O}$  (Moissan, A ch (5) 25 401)

### Chromic iodide, $\text{CrI}_3 (?)$

Insol in cold, sol in hot  $\text{H}_2\text{O}$ , but no separation occurs on cooling (Berlin)

+9H<sub>2</sub>O Hygroscopic Sol in alcohol and acetone Insol in  $\text{CHCl}_3$  (Higley, J Am Chem Soc 1904, 26 628)

### Chromous iodide hydrazine, $\text{CrI} \cdot 2\text{N}_2\text{H}_4$ (Traube, B 1913, 46 1507)

### Chromium nitride, $\text{CrN}$

Insol in dil acids and alkalis, conc  $\text{HNO}_3$ , HCl or HF+Aq, even on heating. Slowly sol in hot aqua regia or cold  $\text{H}_2\text{SO}_4$ . Sol in cold solutions of alkali hypochlorites (Ufer, A 112 281)

Insol in HCl,  $\text{HNO}_3$  and aqua regia (Férée, Bull Soc 1901 (3) 25 618)

Unacted upon by acids at ordinary temperatures (Smits, Chem Soc 1897, 72 (2) 33)

$\text{Cr}_2\text{N}_2$  Slowly attacked by conc  $\text{HNO}_3$ , and by  $\text{HNO}_3 + \text{HCl}$ . All other reagents act without action (Henderson and Gaultly, J Soc Chem Ind 1908, 27 357)

$\text{CrN}_3$  See Chromium azonide

### Chromous oxide, $\text{CrO}$

Insol in  $\text{HNO}_3$  and dil  $\text{H}_2\text{SO}_4 + \text{Aq}$   
Sol in HCl (Férée, Bull Soc 1901, (3) 25 619)

### Chromic oxide, $\text{Cr}_2\text{O}_3$

When ignited is nearly insol in acids, but dissolves in  $\text{H}_2\text{SO}_4$  by long boiling. Insol in liquid HCl (Gore)

Insol in acetone (Fidmann, C C 1 19 II, 1014)

Solubility in (calcium succinate+sugar)+Aq

1 l solution containing 418.6 g sugar and 34.3 g CaO dissolves 1.07 g  $\text{Cr}_2\text{O}_3$ , 1 l solution containing 296.5 g sugar and 24.2 g CaO dissolves 0.56 g  $\text{Cr}_2\text{O}_3$ , 1 l solution containing 174.4 g sugar and 14.1 g CaO dissolves 0.20 g  $\text{Cr}_2\text{O}_3$  (Bodenbender, J B 1 15 600)

See also Chromic hydroxide

+ $\text{H}_2\text{O}$  The compound to which Bunsen gave the formula  $\text{Cr}_2\text{O}_3$ . Insol in acids, but easily attacked by  $\text{HNO}_3$  (Férée, Bull Soc 1901, (3) 25 620)

### Chromochromic oxide, $\text{Cr}_2\text{O}_4 = \text{CrO}, \text{Cr}_2\text{O}_3$

Known only in form of hydroxide, which is

+3H<sub>2</sub>O Stable in dry air. Decomposes in moist air (Bauge, C R 1898, 127 552)

$\text{Cr}_2\text{O}_5$ , or  $\text{Cr}_2\text{O}_6 (?)$  Insol in acids (in aqua regia (Bunsen, Pogg 91 622)

Not obtainable (Geuther, A 118 66)

Formula is  $\text{CrO}_3 + \text{H}_2\text{O}$  (Férée)

### Chromium trioxide, $\text{CrO}_3$

Deliquescent, and very sol in  $\text{H}_2\text{O}$  to form solution of  $\text{H}_2\text{CrO}_4$  or  $\text{H}_2\text{Cr}_2\text{O}_7$

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	$0^\circ$	$15^\circ$	$50^\circ$	$100^\circ$
% $\text{CrO}_3$	62.08	62.38	64.55	66.39

**Chromium peroxide**, Cr<sub>2</sub>O<sub>7</sub>(<sup>2</sup>)

More sol in ether than in H<sub>2</sub>O Ether  
solution is somewhat more stable than aque-  
ous solution (Aschoff, J pr **81** 401)

Formula is Cr<sub>2</sub>O<sub>7</sub> H<sub>2</sub>O (Mossan C R  
**97** 96)

**Chromium peroxide ammonia**, CrO<sub>3</sub>, 3NH<sub>3</sub>

Sol in H<sub>2</sub>O with partial decomp

Sl sol in NH<sub>4</sub>OH+Aq

Sol with decomp in 20% acetic acid  
(Hofmann, B 1905 **38** 3060)

**Chromium tetroxide potassium cyanide**,

CrO<sub>4</sub>, 3KCN

Sol in H<sub>2</sub>O Insol in other ordinary  
solvents (Wiede, B 1899, **32**, 381)

**Chromic oxychloride**

From  $\text{Cr}_2\text{O}_3$  Sol in  $\text{H}_2\text{O}$  as long as 1 mol  $\text{CrCl}_3$  is present for  $2\frac{1}{2}$  mols  $\text{Cr}_2\text{O}_3\text{H}_6$  (Ordway, *Sill Am J* (2) **27** 197)

$\text{Cr}_2\text{O}_3, 2\text{CrCl}_3$  Sol in  $\text{H}_2\text{O}$  (Kletzensky, *Zeit Ch* **1866** 277)

$\text{Cr}_2\text{O}_3, \text{CrCl}_3 = \text{CrOCl}$  *Anhydrous* Only partly sol in  $\text{H}_2\text{O}$

+  $3\text{H}_2\text{O}$  Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Peligot)

$\text{Cr}_2\text{O}_3, 4\text{CrCl}_3 + 6\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 2\text{H}_2\text{O}$  (Peligot, *J pr* **37** 38)

+  $9\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Moberg),  $= \text{Cr}_2(\text{OH})_2\text{Cl}_4 + 2\text{H}_2\text{O}$  (Schiff, *A* **124** 157)

$\text{Cr}_2\text{O}_3, 7\text{CrCl}_3 = \text{Cr}_2\text{OCl}_7$  Very sol in  $\text{H}_2\text{O}$  with decomp (Besson and Fourmier, *C R* 1909, **148** 1194)

$\text{Cr}_2\text{O}_3, 8\text{CrCl}_3 + 24\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Moberg),  $= \text{Cr}_2(\text{OH})\text{Cl}_5 + 4\text{H}_2\text{O}$  (Schiff, *l c*)

$(\text{CrO}_3)_2\text{Cl}_2$  (Pascal, *C R* 1909, **148** 1464)

$\text{Cr}_2\text{O}_3\text{Cl}_4$  Insol in  $\text{H}_2\text{O}$  (Pascal, *C R* 1909, **148** 1464)

From  $\text{CrO}_3$

See Chromyl chloride

**Chromic oxychloride potassium chloride,  $\text{CrOCl}_3, 2\text{KCl}$** 

Decomp in the air

Sol in conc  $\text{HCl}$  without decomp (Weinland, *B* 1906, **39** 4043)

**Chromic oxychloride rubidium chloride,  $\text{CrOCl}_3, 2\text{RbCl}$** 

Decomp in the air

Sol in conc  $\text{HCl}$  without decomp (Weinland, *B* 1906, **39** 4045)

**Chromium oxyfluoride,  $\text{CrO}_2\text{F}_2$** 

See Chromyl fluoride

**Chromium phosphide,  $\text{CrP}$** 

Insol in acids, but a trace dissolves in aqua regia Insol in  $\text{HF} + \text{Aq}$  (Berzelius)

Not attacked by acids or by aqua regia (Granger, *C N* 1898, **77** 228)

Insol in all acids except a mixture of  $\text{HNO}_3$  and  $\text{HF}$  (Maronneau, *C R* 1900, **130** 658)

Insol in mineral acids (Dieckmann, *Z anorg* 1914, **86** 295)

Insol in aqua regia (Granger, *C R* 1897, **124**, 191)

$\text{CrP}_3$  Insol in mineral acids (Dieckmann *Z anorg* 1914, **86** 295)

**Chromous selenide,  $\text{CrSe}$** 

(Moissan, *C R* **90** 817)

**Chromic selenide,  $\text{Cr}_2\text{Se}_3$** 

Insol in  $\text{H}_2\text{O}$  (Moissan, *C R* **90** 817)

**Chromic potassium selenide,  $\text{K}_2\text{Cr}_2\text{Se}_4$** 

Insol in  $\text{HCl}$  Easily sol in conc  $\text{HN}$  (Milbauer, *Z anorg* 1904, **42** 451)

**Chromium silicide,  $\text{Cr}_2\text{Si}$** 

Sol in fused  $\text{KNO}_3$ , insol in cold  $\text{HCl}$  d aqua regia

Insol in  $\text{HF} + \text{Aq}$  (Moissan, *C R* **18**, **121** 625)

$\text{CrSi}_2$  Sol in  $\text{HF}$  Insol in  $\text{HCl}$  d aqua regia (Chalmot, *Am Ch J* 1897, **69**)

$\text{Cr}_2\text{Si}_2$  Insol in dil  $\text{HCl}$ , sol in wa n conc  $\text{HCl}$  and in  $\text{HF}$ , insol in  $\text{HNO}_3$  d  $\text{H}_2\text{SO}_4$  (Lebeau, *C R* 1903, **136** 1330)

$\text{Cr}_3\text{Si}$  Sol in  $\text{HF}$ , insol in other aci, sol in fused  $\text{KOH}$  and fused alkali nitra s and carbonates (Zettel, *C R* 1898, **1**, 834)

**Chromous sulphide,  $\text{CrS}$** 

Insol in  $\text{H}_2\text{O}$  or  $\text{K}_2\text{S} + \text{Aq}$  (Peligot) Easily sol in acids (Moissan, *C R* **81** 7)

Sol in cold conc acids

Sol in molten alkalis (Mourlot, *C* 1895, **121** 944)

Min *Daubreite*

**Chromic sulphide,  $\text{Cr}_2\text{S}_3$** 

Insol in  $\text{H}_2\text{O}$  or alkali sulphides +  $\text{Aq}$  l attacked by  $\text{HCl} + \text{Aq}$  (W Muller, *Po* **127** 404)

$\text{HNO}_3 + \text{Aq}$  decomposes or not accordi g to method of preparation Easily decomp by aqua regia

Insol in caustic alkalis +  $\text{Aq}$

Insol in  $\text{K S} + \text{Aq}$  (Berzelius)

**Chromochromic sulphide,  $\text{Cr}_3\text{S}_4 = \text{CrS}, \text{Cr}_2\text{S}_3$** 

Insol in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or dil  $\text{H}_2\text{SO}_4 + \text{A}$  Easily sol in  $\text{HNO}_3 + \text{Aq}$  (Grogg, *W A* **81** (2) 531)

**Chromic zinc sulphide,  $\text{Cr}_2\text{ZnS}_4$** 

(Grogg *W A B* 1880, **81** 334)

**Chromicyanhydric acid****Cadmium chromicyanide,  $(\text{Cd})_2(\text{Cr}(\text{CN})_6)_2$** 

Readily sol in excess of  $\text{KCN}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by conc  $\text{HCl}$ ,  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  Slowly decomp by co, rapidly by hot dil  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$

Quickly dissolved by aqua regia Decon by boiling with  $\text{Na}_2\text{O}_2$ , by  $\text{NaOH} + \text{Aq}$  a l by  $\text{Na}_2\text{CO}_3 + \text{Aq}$  Slowly decomp by boili g acetic acid (Cruser and Miller, *J A Chem Soc* 1906, **28** 1136)

**Cobaltous chromicyanide,  $\text{Co}_2[\text{Cr}(\text{CN})_6]$** 

Sol in cold, readily sol in hot conc  $\text{H}$  l or  $\text{H}_2\text{SO}_4$  Sl sol even in boiling cor

**HNO<sub>3</sub>** Slowly sol in cold dil H<sub>2</sub>SO<sub>4</sub>, HCl or HNO<sub>3</sub>. Readily sol in boiling dil HCl or H<sub>2</sub>SO<sub>4</sub>. Decomp but not entirely dissolved by aqua regia. Readily sol in an excess of KCN. Decomp by NH<sub>4</sub>OH, NaOH or Na<sub>2</sub>CO<sub>3</sub>+Aq. Decomp by boiling with Na<sub>2</sub>O<sub>2</sub>. Insol in cold or boiling acetic acid (Cruser and Miller)

**Cuprous chromicyanide, Cu<sub>2</sub>Cr(CN)<sub>6</sub>**

Sol in KCN, cold conc or boiling dil HNO<sub>3</sub>+Aq. Slowly sol in cold conc H<sub>2</sub>SO<sub>4</sub>, still more slowly sol in dil H<sub>2</sub>SO<sub>4</sub> but rapidly sol in hot dil and conc H<sub>2</sub>SO<sub>4</sub>. Readily decomp by aqua regia. Decomp by dil or conc HCl, slowly going into solution in the cold, but quickly on boiling (Cruser and Miller)

**Cupric chromicyanide, Cu<sub>2</sub>[Cr(CN)<sub>6</sub>]<sub>2</sub>**

Slowly sol in cold dil HCl, HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub> on boiling the first two readily dissolve it, but the H<sub>2</sub>SO<sub>4</sub> dissolves it only slowly. Sol in aqua regia or cold conc H<sub>2</sub>SO<sub>4</sub>. Readily sol in cold or hot conc HCl. Decomp by cold, dissolved by boiling HNO<sub>3</sub>. Decomp by boiling Na<sub>2</sub>O<sub>2</sub>+Aq. Decomp by NH<sub>4</sub>OH, NaOH or Na<sub>2</sub>CO<sub>3</sub>+Aq. Readily sol in an excess of KCN+Aq. Insol in cold acetic acid (Cruser and Miller)

**Nickel chromicyanide, Ni<sub>3</sub>[Cr(CN)<sub>6</sub>]<sub>2</sub>**

Slowly sol in cold, readily sol in hot dil HCl, HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>. Slowly sol in cold, readily sol in hot conc H<sub>2</sub>SO<sub>4</sub>, HCl or HNO<sub>3</sub>. Slowly decomp by cold, rapidly by boiling aqua regia. Readily sol in excess of KCN. Sol in NH<sub>4</sub>OH+Aq. Decomp by NaOH, Na<sub>2</sub>CO<sub>3</sub>+Aq or Na<sub>2</sub>O<sub>2</sub>+Aq. Insol in cold dil sol in boiling acetic acid (Cruser and Miller)

**Potassium thallous chromicyanide,**

(Fischer and Benzian, Ch Z 1902, 26 50)

**Thallous chromicyanide, Hg<sub>2</sub>Cl(CN)<sub>4</sub>**

Easily sol in H<sub>2</sub>O (Fischer and Benzian, Ch Z 1902, 26 50)

**Zinc chromicyanide, Zn<sub>3</sub>[Cr(CN)<sub>6</sub>]<sub>2</sub>**

Insol in H<sub>2</sub>O. Sol in excess of NH<sub>4</sub>OH, NaOH and KCN+Aq. Decomp by Na<sub>2</sub>CO<sub>3</sub>+Aq. Sol in cold dil HCl. Slowly sol in dil H<sub>2</sub>SO<sub>4</sub> and in dil HNO<sub>3</sub>. By boiling with dil acids a clear solution is quickly obtained (Cruser, Dissert 1906)

**Chromisulphocyanhydric acid**

**Cæsium chromisulphocyanide,**

Less sol in H<sub>2</sub>O than K salt (Osann, Dissert 1907)

**Lithium chromisulphocyanide,**

Extremely deliquescent (Osann)

**Rubidium chromisulphocyanide,**

Appreciably less sol in H<sub>2</sub>O and alcohol than the K salt (Osann)

**Chromocyanidic acid, H<sub>2</sub>Cr(CN)<sub>6</sub>**

Decomp rapidly on air. Sol in H<sub>2</sub>O (Moissan, A ch (6) 4 144)

**Potassium chromocyanide, K<sub>4</sub>Cr(CN)<sub>6</sub>**

Very sol in H<sub>2</sub>O, 100 pts H<sub>2</sub>O dissolve 32.33 pts at 20°. Much more sol in hot H<sub>2</sub>O. Insol in alcohol, ether, benzene, or chloroform (Moissan, A ch (6) 4 136)

Above salt was K<sub>3</sub>Cr(CN)<sub>6</sub> (Christensen) +3H<sub>2</sub>O (Christensen, J pr (2) 31 166)

**Chromiodic acid, CrO<sub>3</sub>, HIO<sub>3</sub>+2H<sub>2</sub>O**

Deliquescent (Berg, C R 104 1514)

**Ammonium chromiodate, CrO<sub>3</sub>, NH<sub>4</sub>IO<sub>3</sub>+H<sub>2</sub>O**

Moderately sol in H<sub>2</sub>O (Berg)

**Lithium chromiodate, CrO<sub>3</sub>, LiIO<sub>3</sub>+H<sub>2</sub>O**

Very sol in H<sub>2</sub>O (Berg)

**Magnesium chromiodate**

Sol in H<sub>2</sub>O (Berg)

**Potassium chromiodate, CrO<sub>3</sub>, KIO<sub>3</sub>**

Sol in H<sub>2</sub>O (Berg)

+H<sub>2</sub>O=KCrIH<sub>2</sub>O<sub>7</sub>. Sl decomp by H<sub>2</sub>O (Blomstrand, J pr (2) 40 331)

**Silver chromiodate, CrO<sub>3</sub>, AgIO<sub>3</sub>**

Sl attacked by cold, rapidly decomp by hot H<sub>2</sub>O (Berg, C R 111 42)

**Sodium chromiodate, CrO<sub>3</sub>, NaIO<sub>3</sub>+H<sub>2</sub>O**

Very sol in H<sub>2</sub>O (Berg)

**Chromosulphocyanhydric acid**

**Sodium chromosulphocyanide,**

Unstable

Decomp by H<sub>2</sub>O (Koppel, Z anorg 1905, 45 360)

**Chromosulphuric acid, H<sub>2</sub>Cr(SO<sub>4</sub>)<sub>4</sub>**

Sol in H<sub>2</sub>O in all proportions, but solution is easily decomp on standing or boiling (Recoura, Bull Soc (3) 9 586)

H<sub>4</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>6</sub> As above

H<sub>6</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>8</sub> As above

**Ammonium chromosulphate,**Sol in  $\text{H}_2\text{O}$  after a few minutes (Recoura)**Chromium potassium chromosulphate,**Sol in  $\text{H}_2\text{O}$  (Recoura, Bull Soc 1897, (3) 17 934)**Potassium chromosulphate,  $\text{K}_2\text{Cr}_2(\text{SO}_4)_4 + 4\text{H}_2\text{O}$** Sol in  $\text{H}_2\text{O}$  in a few minutes (Recoura, Bull Soc (3) 9 590)**Sodium chromosulphate,  $\text{Na}_2\text{Cr}_2(\text{SO}_4)_4 + 10\text{H}_2\text{O}$** 

As K salt (Recoura)

**Chromotelluric acid****Ammonium chromotellurate,**Sol in  $\text{H}_2\text{O}$  (Berg, C R 1911, 152 1588)**Potassium chromotellurate,**Sl sol in cold  $\text{H}_2\text{O}$  without decomp  
Sol in boiling  $\text{H}_2\text{O}$  (Berg, Bull Soc 1911, (4) 9 583)**Chromous acid,  $\text{H}_2\text{Cr}_2\text{O}_4 = \text{Cr}_2\text{O}_3, \text{H}_2\text{O}$** 

Chromic hydroxide shows slightly acid properties, and salts corresponding to the above acid are known

**Aluminum ferrous magnesium chromite (chrome iron ore),  $(\text{Fe}, \text{Mg})\text{O}, (\text{Cr}, \text{Al})\text{O}_3$** Insol in  $\text{H}_2\text{O}$  or acids, even a mixture of  $\text{H}_2\text{SO}_4$  and  $\text{HF}$  (Ebelmen)**Barium chromite,  $\text{BaCr}_2\text{O}_4$** Insol in  $\text{H}_2\text{O}$  (Gaber Bull Soc (2) 27 436)**Barium tetrachromite,  $\text{BaO} \cdot 4\text{Cr}_2\text{O}_3$** Undecomposed by steam at red heat insol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , sol in fused  $\text{KOH} + \text{KNO}_3$  decomp in the air (Dufau C R 1896, 122 1120)**Cadmium chromite,  $\text{CdCr}_2\text{O}_4$** 

Not attacked by acids (Viard C R 109 142)

**Calcium chromite,  $\text{CaCr}_2\text{O}_4$** Insol in  $\text{H}_2\text{O}$  (Gaber, Bull Soc (2) 27 436)Insol in  $\text{HCl}$ ,  $\text{HF}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , sol in gaseous  $\text{HCl}$  and  $\text{HF}$  at red heat, sol in fused  $\text{KOH}$ ,  $\text{KNO}_3$ ,  $\text{KClO}_3$ ,  $\text{K}_2\text{CO}_3$  (Dufau, C R 1895, 121 690) $2\text{CaO}, \text{Cr}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$ ,  $\text{KOH}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , slowly decomp by  $\text{H}_2\text{CO}_3$  or  $\text{M}_2\text{CO}_3 + \text{Aq}$ , insol in sugar solution (Pelouze, A ch (3) 33 9) $4\text{CaO}, \text{Cr}_2\text{O}_3$  Attacked by  $\text{H}_2\text{O}$  (Morris, C R 1894, 119 188)**Cobaltous chromite,  $\text{CoCr}_2\text{O}_4$** 

(Elliot, Dissert, Gottingen, 1862)

**Cuprous chromite,  $\text{Cu}_2\text{O}, \text{Cr}_2\text{O}_3$** Insol in  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.4) (Wohler Z phys Ch 1908, 62 445)**Cupric chromite basic,  $5\text{CuO}, 4\text{Cr}_2\text{O}_3$**   
(Wohler, Z phys Ch 1908, 62 445)**Cupric chromite,  $\text{CuCr}_2\text{O}_4$** Not attacked by  $\text{HNO}_3 + \text{Aq}$  (Persoz, A ch (3) 25 283)Not attacked by conc  $\text{HCl}$   
Insol in dil acids (Wohler, Z phys Ch 1908, 62 446) $\text{CuO}, 3\text{Cr}_2\text{O}_3$  (Rosenfeld, B 1879, 1 958)**Glucinum chromite,  $\text{GlCr}_2\text{O}_4$** Insol in  $\text{H}_2\text{O}$  (Mallard, C R 105 1260)**Iron (ferrous) chromite (chrome iron ore)**

See Chromite, aluminum ferrous magnesian

**Iron (ferroferric) chromite,  $\text{FeO}, \text{Fe}_2\text{O}_3, \text{Cr}_2\text{O}_3$** Not attacked by  $\text{HCl} + \text{Aq}$  (Ebelmen)**Iron (ferrous) magnesium chromite**Insol in  $\text{HCl} + \text{Aq}$  Slightly attacked by  $\text{H}_2\text{SO}_4$ **Lead chromite,  $\text{PbCr}_2\text{O}_4$** Ppt Insol in  $\text{KOH} + \text{Aq}$  (Chance C R 43 927)**Lithium chromite,  $\text{Li}_2\text{Cr}_2\text{O}_4$** 

Very sl sol in acids (Weyberg, C R 1906 II 1659)

**Magnesium chromite,  $\text{MgO} \cdot 2\text{Cr}_2\text{O}_3$** Insol in  $\text{H}_2\text{O}$  (Nichols Sil Am J 47 16) $\text{MgCr}_2\text{O}_4$  Insol in acids or alkalis, except boiling  $\text{H}_2\text{SO}_4$  (Schweitzer, J pr 3 259)

Could not be obtained (Viard, Bull Soc (3) 5 934)

Easily attacked by boiling  $\text{H}_2\text{SO}_4 + \text{Aq}$   
Less easily by  $\text{HCl}$  or  $\text{HF} + \text{Aq}$  not attacked by boiling  $\text{HNO}_3$  (Dufau, C R 1896, 123 886) $2\text{MgO}, \text{Cr}_2\text{O}_3$  Insol in  $\text{H}_2\text{O}$  or acid (Nichols) $5\text{MgO}, 4\text{Cr}_2\text{O}_3$  Insol in acids (Viard C R 112 1003) $3\text{MgO}, 2\text{Cr}_2\text{O}_3$  As above (V)

**Manganese chromite,  $\text{MnCr}_2\text{O}_4$** 

Entirely insol in acids (Fbelmen, A ch (3) 33 44)

**Zinc chromite,  $\text{ZnCr}_2\text{O}_4$** 

Insol in acids and alkalis (Viard, C R 109 142)

+xH<sub>2</sub>O (Chancel, C R 43 927)  
3ZnO, 2Cr<sub>2</sub>O<sub>3</sub> As above (Viard, C R 112 1003)

6ZnO, 5Cr<sub>2</sub>O<sub>3</sub> As above (V)  
8ZnO, 3Cr<sub>2</sub>O<sub>3</sub> (Groger M 1904, 25, 520)

**Chromovanadic acid**

**Ammonium chromovanadate**,  $2(\text{NH}_4)_2\text{O}$ ,  
2CrO<sub>3</sub>, V<sub>2</sub>O<sub>5</sub>+7H<sub>2</sub>O

Sol in H<sub>2</sub>O (Ditte, C R 102 1105)

**Chromyl amide,  $\text{CrO}_2(\text{NH}_2)$** 

Sol in H<sub>2</sub>O (Ohly, C N 1899, 80 134)

**Chromyl subchloride,  $(\text{CrO}_2)_2\text{Cl}_2$** 

Deliquescent, sol in H<sub>2</sub>O with decomp, insol in dry ether (Pascal, C R 1909, 148, 1463)

**Chromyl chloride (chlorochromic acid)  $\text{CrO}_2\text{Cl}$** 

Decomp by H<sub>2</sub>O with evolution of much heat Sol in glacial acetic acid without decomposition

Sol in CCl<sub>4</sub>, C<sub>6</sub>H<sub>6</sub> (mol wt det.) (Oddo, Gazz ch it 1899, 29 (2) 318, Chem Soc 1900, 78 (2) 75)

**Trichromyl chloride,  $\text{Cr}_3\text{O}_7\text{Cl}_2$** 

Deliquescent Sol in H<sub>2</sub>O with gradual decomposition Sol in conc HCl+aq (Thorpe, Chem Soc (2) 8 31)

Scarcely sol in CS<sub>2</sub>  
Sol in alcohol and ether (Rawson, C N 1889 59 155)

**Chromyl chlorides**

From Cr<sub>2</sub>O<sub>3</sub>

See Chromium oxychlorides

**Chromyl chloride nitrogen trioxide,**

$\text{Cr}_2\text{Cl}_2\text{O}_7$ , 2N<sub>2</sub>O

Sol in H<sub>2</sub>O with decomp (Thomson, C R 1899, 129 528)

**Chromyl fluoride,  $\text{CrOF}$** 

Decomp by H<sub>2</sub>O with evolution of heat (Olive, Gazz ch it 16 218)

**Clay**

See Silicate, aluminum, Al<sub>2</sub>O<sub>3</sub>, SiO<sub>2</sub>+2H<sub>2</sub>O

**Cobalt, Co**

Not attacked by H<sub>2</sub>O

Sol in dil HCl, or H<sub>2</sub>SO<sub>4</sub>, or HNO<sub>3</sub>+aq  
Conc hot H<sub>2</sub>SO<sub>4</sub>, and HNO<sub>3</sub> decomp with evolution of SO<sub>2</sub> or NO gas

Exists also in passive state See Iron (Nickles, J pr 61 186)

Sol in conc KOH+aq when in finely divided state (Winkler, J pr 91 211)

Sol in NH<sub>4</sub>OH+aq in presence of air (Hodgkinson and Bellairs, C N 1895, 71 73)

**Cobalt ammonia compounds**

See—

Anhydrooxycobaltamine compounds,

As  $\text{Co}_3\text{As}_2$  (Ducelliez, C R 1908, 147 425)

$\text{CoAs}_2$  As  $\text{Co}_3\text{As}_2$  (Ducelliez, C R 1908, 147 425)

$\text{Co}_2\text{As}_3$  As  $\text{Co}_3\text{As}_2$  (Ducelliez, C R 1908, 147 425)

$\text{Co}_3\text{As}_2$  Very sl attacked by hot conc HCl, less by  $\text{H}_2\text{SO}_4$ . Easily sol in  $\text{HNO}_3$  and aqua regia. Sl attacked by fused alkalis and alkali carbonates (Ducelliez, C R 1908, 147 425)

$\text{CoAs}_2$  Min *Skutterudite* Sol in  $\text{HNO}_3$  + Aq, with separation of  $\text{As}_2\text{O}_3$

**Cobalt arsenide sulphide,  $\text{CoAs}_2$ ,  $\text{CoS}_2$** 

Min *Cobaltite* Sol in  $\text{HNO}_3$  + Aq, with separation of S and  $\text{As}_2\text{O}_3$

*Glauco-dote* Completely sol in  $\text{HNO}_3$  + Aq

**Cobalt azomide, basic,  $\text{Co}(\text{OH})\text{N}_3$** 

Insol in  $\text{H}_2\text{O}$

Sol in  $\text{HN}_3$  + Aq (Curtius, J pr 1898, (2) 58 300)

**Cobalt potassium azomide,  $\text{KN}_3$ ,  $\text{Co}(\text{N}_3)_2$** 

Sol in  $\text{H}_2\text{O}$ , Aq solution decomp on boiling (Curtius, J pr 1898, (2) 58 301)

**Cobalt boride,  $\text{Co}_2\text{B}$** 

Attacked by  $\text{HNO}_3$  (Jassonneix, C R 1907, 145 240)

CoB Decomp by moist air and by alkali nitrates, chlorates, hydroxides and carbonates, decomp by steam at red heat and by acids (Moissan, C R 1896, 122 425)

Not attacked by HCl, rapidly attacked by  $\text{HNO}_3$ . Not attacked by dil but decomp by conc  $\text{H}_2\text{SO}_4$ . Rapidly attacked by aqua regia (Moissan, A ch 1896, (7) 9 272)

$\text{CoB}_2$  (Jassonneix, C R 1907, 145 241)

**Cobaltous bromide,  $\text{CoBr}_2$** 

Deliquescent Sol in  $\text{H}_2\text{O}$ , alcohol, and ether

Sat  $\text{CoBr}_2$  + Aq contains at

59° 75° 97°  
66.7 66.8 68.1%  $\text{CoBr}_2$

(Etard, A ch 1894, (7) 2 542)

Nearly insol in  $\text{AsBr}_3$  (Walden, Z anorg 1902, 29 374)

Sol in  $\text{SO}_2\text{Cl}(\text{OH})$  (Walden)

Sol in quinine (Beckmann and Gabel, Z anorg 1906, 51 236)

1g  $\text{CoBr}_2$  is sol in 9.74g methyl acetate at 18°. Sp gr 1.8°/4° of sat solution = 1.013 (Naumann, B 1909, 42 3792)

Difficultly sol in ethyl acetate (Naumann, B 1910, 43 314)

Sol in acetone (Eidmann, C C 189, II 1014, Naumann, B 1904, 37 4328)

Mol weight determined in pyridine (Werner, Z anorg 1897, 15 24)

+2, and 6 $\text{H}_2\text{O}$  (Hartley, Chem Soc ( ) 12 214)

**Cobaltous hydrazine bromide hydrazine,  $2\text{CoBr}_2$ ,  $4\text{N}_2\text{H}_4\text{HBr}$ ,  $\text{N}_2\text{H}_4(?)$** 

Sol in  $\text{H}_2\text{O}$  with decomp (Ferratini, C 1912 1613)

**Cobaltous mercuric bromide, basic,**

(Mailhe, A ch 1902, (7) 27 369)

**Cobalt stannic bromide**

See Bromostannate, cobalt

**Cobaltous bromide ammonia,  $\text{CoBr}_2$ ,  $6\text{NH}_3$** 

Sol in  $\text{H}_2\text{O}$  with residue of cobalt hydroxide (Rammelsberg, Pogg 55 245)

**Cobaltous bromide hydrazine,  $\text{CoBr}_2$ ,  $2\text{N}_2\text{H}_4$** 

Decomp by boiling with  $\text{H}_2\text{O}$  (Franze, Z anorg 1908, 60 270)

**Cobalt carbonyl,  $\text{Co}(\text{CO})_4$** 

Insol in  $\text{H}_2\text{O}$ . More or less sol in  $\text{CS}_2$  ether, alcohol and  $\text{Ni}(\text{CO})_4$ . Relative stable with non-oxidizing acids. Quick decomp by oxidizing acids (Mond, Hir and Cowap, C N 1908, 98 165)

**Cobaltous chloride,  $\text{CoCl}$** 

Deliquescent Sol in  $\text{H}_2\text{O}$  with evolution of heat 100 pts  $\text{H}_2\text{O}$  dissolve 4.5 pts  $\text{CoCl}$  at 0° (Engel, A ch (6) 17 355)

100 pts sat  $\text{CoCl}$  + Aq at 1° contain pt  $\text{CoCl}$

(Pearce and Moore, Am Ch J 1913 50 226)

Mol weight determined in piperidine, and pyridine (Werner Z anorg 1897, 15 18 and 23)

Sol in urethane (Castoro, Z anorg 1899, 20 61)  
 $+ \text{H}_2\text{O}$

+2H<sub>2</sub>O Very deliquescent (Bersch, J B 1867 291)  
17 16 pts sol in 100 pts acetone at 0°  
17 06 " " 100 " " 25°

(Laszczyński, B 1894, 27 2287)

+4H<sub>2</sub>O Deliquescent (Bersch)

+6H<sub>2</sub>O Not deliquescent Easily sol in H<sub>2</sub>O

Solubility of CoCl<sub>2</sub>+6H<sub>2</sub>O in ethyl alcohol +Aq at 11.5° under addition of increasing amounts of CoCl<sub>2</sub>

P = Percent of alcohol by volume

G = Grams of CoCl<sub>2</sub> added

C<sub>c</sub> = Grams of CoCl<sub>2</sub> in 5 cc of the solution

C<sub>w</sub> = Grams of water in 5 cc of the solution, calculated from

(1) the water content of the alcohol

(2) the water of crystallization which had gone into solution

(3) the water held mechanically in CoCl<sub>2</sub>+6H<sub>2</sub>O

"	0 650	0 500	2 186

(Bodtker, Z phys Ch 1897, 22 508)

Easily soluble in absolute ethyl alcohol 100 pts absolute alcohol dissolve at room temperature 56 20 pts CoCl<sub>2</sub> Water precipitates CoCl<sub>2</sub>+6H<sub>2</sub>O from a solution of CoCl<sub>2</sub> in absolute alcohol (Bodtker)

100 pts absolute ether dissolve 0 291g CoCl<sub>2</sub>+6H<sub>2</sub>O (Bodtker, Z phys Ch 1897, 22 511)

Anhydrous ethylene glycol dissolves 10 6% CoCl<sub>2</sub>+6H<sub>2</sub>O at 16 4° (de Coninck, Chem Soc 1904, 86, (2) 741)

**Cobaltous hydrazine chloride,**  
CoCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>HCl+2½H<sub>2</sub>O

Sol in H<sub>2</sub>O (Ferradini, C A 1912 1613)

**Cobaltous iodine chloride,** CoCl, 2ICl<sub>3</sub>+8H<sub>2</sub>O

Decomp by H<sub>2</sub>O CCl<sub>4</sub> separates ICl<sub>3</sub> (Weinland and Schlegel milch, Z anorg 1902 30 157)

**Cobalt lithium chloride,** CoCl, LiCl+5H<sub>2</sub>O

Very deliquescent Sol in H<sub>2</sub>O with decomp Sol in LiCl+Aq without decomp Sol in alcohol without decomp (Chassavant, A ch (6) 30 27)

**Cobaltous mercuric chloride basic,** CoCl<sub>2</sub>, HgCl<sub>2</sub>, 6CoO+20H<sub>2</sub>O

(Mailhe, A ch 1902, (7) 27 369)

**Cobaltous mercuric chloride,** CoCl<sub>2</sub>, HgCl<sub>2</sub>  
Very deliquescent (v Bonsdorff)

**Cobaltous thallic chloride,** 2TlCl<sub>3</sub>, CoCl +8H<sub>2</sub>O

Hydroscopic, can be cryst from H<sub>2</sub>O (Gewecke, A 1909, 366 222)

**Cobaltous tin (stannic) chloride,** CoCl<sub>2</sub>, SnCl<sub>4</sub>+6H<sub>2</sub>O

See Chlorostannate, cobaltous

**Cobaltous chloride ammonia,** CoCl<sub>2</sub>, 2NH<sub>3</sub>

Decomp by H<sub>2</sub>O (F Rose)

CoCl<sub>2</sub>, 4NH<sub>3</sub> Decomp by H<sub>2</sub>O (H Rose)

CoCl<sub>2</sub>, 6NH<sub>3</sub> Decomp by H<sub>2</sub>O Sol in dil NH<sub>4</sub>OH+Aq with ease, but difficultly in conc NH<sub>4</sub>OH+Aq Insol in absolute alcohol (Fremy)

**Cobaltous chloride hydrazine,** CoCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>

Insol in cold H<sub>2</sub>O

Slowly decomp by cold, rapidly by hot H<sub>2</sub>O

Easily sol in dil acids and NH<sub>4</sub>OH+Aq (Franzen, Z anorg 1908, 60 270)

**Cobaltous chloride hydroxylamine,**  
CoCl<sub>2</sub>, 2NH<sub>2</sub>OH

Decomp in the air, sol in H<sub>2</sub>O (Feldt, B 1894, 27 403)

**Cobaltic chloride hydroxylamine,**  
CoCl<sub>3</sub>, 6NH<sub>2</sub>OH

Insol in alcohol

Sol in acidified H<sub>2</sub>O without decomp sol in conc H<sub>2</sub>SO<sub>4</sub> without decomp (Feldt B 1894 27 404)

**Cobaltous fluoride,** CoF

Sl sol in H<sub>2</sub>O insol in alcohol and ether, slowly attacked by cold HCl H<sub>2</sub>SO<sub>4</sub> or HNO<sub>3</sub>+Aq (Poulenc C R 114 1129)

Insol in liquid NH<sub>3</sub> (Gore Am Ch J 1898, 29 527)

+2H<sub>2</sub>O Sol in a little H<sub>2</sub>O without decomp Decomp into oxyfluoride by boiling with much H<sub>2</sub>O Sol in HCl+Aq (Berzelius)

+4H<sub>2</sub>O Two modifications

Solubility of α mod at 15° = 2 2328 g/g  
β " " = 2 203 g/g

(Costichescu Ann Sci Univ Jassy, 1912 7, 1, 10)

**Cobaltic fluoride,** CoF<sub>3</sub>

Sol in conc H<sub>2</sub>SO<sub>4</sub> (Bubrien, Chem Soc 1905, 88, (2) 393)

**Cobaltous hydrogen fluoride**,  $\text{CoF}_2$ ,  $5\text{HF} + 6\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  and dil acids  
Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp (Bohm, Z anorg 1905, 43 330)

**Cobalt columbium fluoride**

See Fluocolumbate, cobalt

**Cobaltous iron (ferric) fluoride**,

$\text{CoF}_2$ ,  $\text{FeF}_3 + 7\text{H}_2\text{O}$

Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 269)

**Cobaltous manganic fluoride**,  $2\text{CoF}$ ,  $\text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$

(Christensen, J pr (2) 34 41)

**Cobalt molybdenyl fluoride**

See Fluoxymolybdate, cobalt

**Cobaltous potassium fluoride**,  $\text{CoF}_2$ ,  $\text{KF}$

Sl sol in  $\text{H}_2\text{O}$ , less in ethyl or methyl alcohol, insol in amyl alcohol or benzene  
Decomp by hot  $\text{H}_2\text{SO}_4$  (Poulenc, C R 114 747)

$+ \text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Wagner, B 19 896)

$\text{CoF}$ ,  $2\text{KF}$

**Cobaltous sodium fluoride**,  $\text{CoF}_2$ ,  $\text{NaF} + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wagner, B 19 896)

**Cobaltous stannic fluoride**

See Fluostannate, cobaltous

**Cobalt vanadium fluoride**

See Fluovanadate, cobalt

**Cobaltous hydroxide**,  $\text{Co}_2\text{O}_3\text{H}_2$

Insol in  $\text{H}_2\text{O}$  Sol in acids Insol in  $\text{KOH} + \text{Aq}$  Sol in ammonium sulphate, chloride, nitrate, or succinate +  $\text{Aq}$  (Brett)

Sol in warm acetic acid, insol in  $\text{NH}_4\text{OH} + \text{Aq}$  and cold  $\text{NH}_4\text{Cl} + \text{Aq}$ , but sol in warm  $\text{NH}_4\text{Cl} + \text{Aq}$  (de Schulten, C R 109 266)

Insol in  $\text{H}_2\text{O}$  and dil  $\text{KOH} + \text{Aq}$ , somewhat sol in conc  $\text{KOH} + \text{Aq}$  easily sol in  $\text{NH}_4$  salts +  $\text{Aq}$  (Fresenius)

Easily sol in  $\text{KCN} + \text{Aq}$  (Rodgers, 1834)

Sol in conc  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Gmelin)

Not pptd by  $\text{KOH} + \text{Aq}$  in presence of  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  or  $\text{NH}_4$  citrate (Spiller)

Sol in large amt in boiling  $\text{NH}_4\text{SCN} + \text{Aq}$  (Grossmann, Z anorg 1908, 58 269)

Insol in methyl, or amyl amine +  $\text{Aq}$  (Wurtz)

Many non-volatile organic substances prevent its pptn

**Cobaltic hydroxide**,  $3\text{Co}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$

(Mills, Phil Mag (4) 35 257)

$\text{Co}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$  Decomp by  $\text{HCl} + \text{Aq}$ ,

gives brown solutions with cold  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , which soon decomp (Wernicke Pogg 141 120)

$\text{Co}_2\text{O}_3\text{H}_2 = \text{Co}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$  Sol in warm  $\text{HCl}$ ,  $\text{HNO}_3$ , and  $\text{H}_2\text{SO}_4$ , with decomp (Proust)  
Sol in cold  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ , but decomp on standing or warming (Winkelblech)

Sol in racemic, tartaric oxalic or citric acid as cobaltous salt

Sol in conc acetic acid without immediate decomp (Remele) Solution is not decomp by boiling Sol in warm sat  $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$  with decomp

Not attacked by cold or hot  $\text{NH}_4\text{OH} + \text{Aq}$   
Insol in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$

Sol when freshly pptd in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (Geuther, A 123 157)

**Cobaltocobaltic hydroxide**,  $\text{Co}_2\text{O}_4$ ,  $3\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in oxalic acid, solution decomp by heat Sol in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$  (Gibbs and Genth, Sil Am J (2) 23 257)

$\text{Co}_2\text{O}_4 \cdot 7\text{H}_2\text{O}$  Sol in weak acids, especially  $\text{HC}_2\text{H}_3\text{O}_2$  without decomp (Fremy)

$\text{Co}_2\text{O}_7$ ,  $6\text{H}_2\text{O}$  Min Heterogeneous Sol in dil  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$

**Cobaltous iodide**,  $\text{CoI}$

Deliquescent, and very sol in  $\text{H}_2\text{O}$

100 pts sat  $\text{CoI} + \text{Aq}$  at  $t^\circ$  contain  
pts  $\text{CoI}$

+9	61 4	46	79 0	156	83 1

(Etard C R 113 699)

Sol in  $\text{SO}(\text{OCH}_3)$  (Walden Z anorg 1902, 29 388)

Sol in  $\text{SOCl}_2$  (Walden Z anorg 1900 25 216)

Sol in  $\text{POCl}_3$  (Walden Z anorg 1900 25 212)

Sol in  $\text{S Cl}_2$  (Walden Z anorg 1900 25 217)

Nearly insol in  $\text{AsBr}_3$  (Walden Z anorg 1902, 29 374)

Sol in  $\text{AsCl}_3$  (Walden Z anorg 1900 25 214)

Easily sol in alcohol  
Sol in acetone (Fidmann C C 1899 II 1014) (Naumann, B 1904 37 4528)

Sol in quinoline (Beckmann and Gabel Z anorg 1906, 51 236)

Sol in methylacetate (Naumann B 1900 42, 3790)

$+ 2\text{H}_2\text{O}$   
 $+ 4\text{H}_2\text{O}$  Very deliquescent (Etard)

+6H<sub>2</sub>O (Hartley, Chem Soc (2) 12 214)  
 +9H<sub>2</sub>O Very hygroscopic (Bolschakoff, C C 1898, II 660)

**Cobaltous lead iodide**, 2 CoI<sub>2</sub>, PbI<sub>2</sub>+3H<sub>2</sub>O  
 Decomp by H<sub>2</sub>O (Mosnier, A ch 1897, (7) 12 412)

**Cobaltous mercuric iodide**, CoI<sub>2</sub>, HgI + 6H<sub>2</sub>O

Partially decomp by H<sub>2</sub>O  
 Sol in alcohol and acetone (Dobroserdoff, C C 1901, II 332)

CoI<sub>2</sub>, 2HgI<sub>2</sub>+6H<sub>2</sub>O Decomp by H<sub>2</sub>O, sol in alcohol and acetone (Dobroserdoff, C C 1901, II 332)

**Cobaltous iodide ammonia**, CoI<sub>2</sub>, 4NH<sub>3</sub>

Decomp by H<sub>2</sub>O Sol in NH<sub>4</sub>OH+ Aq (Rammelsberg, Pogg 48 155)

CoI<sub>2</sub>, 6NH<sub>3</sub> Insol in NH<sub>4</sub>OH+ Aq (Rammelsberg)

**Cobaltous iodide hydrazine**, CoI<sub>2</sub>, 2N H<sub>4</sub>

Sl sol in H<sub>2</sub>O Easily sol in acids (Franzen, Z anorg 1911, 70 147)

**Cobaltic octamine compounds**

See Octamine cobaltic compounds

**Cobaltous oxide**, CoO

Insol in H<sub>2</sub>O Easily sol in dil or conc HCl or HNO<sub>3</sub>+Aq Slowly sol in cold, but easily in hot dil H<sub>2</sub>SO<sub>4</sub>+Aq, acetic, or tartaric acid +Aq Insol in NH<sub>4</sub>OH+ Aq Sol in hot NH<sub>4</sub>Cl+ Aq, KOH, or NaOH+ Aq (Rose)

Insol in NH<sub>4</sub>Cl or NH<sub>4</sub>NO<sub>3</sub>+Aq (Brett, 1834)

Insol in K<sub>2</sub>CO<sub>3</sub>+Aq Sol in boiling Co and Ni nitrates +Aq, with pptn of the oxides (Persoz)

Easily sol in dil acids, even tartaric, acetic, and oxalic acids Not attacked by NH<sub>4</sub>OH+ Aq Sol in 13% NH<sub>4</sub>Cl+ Aq with evolution of NH<sub>3</sub>, also in NH<sub>4</sub>SCN+ Aq Sol in warm conc NaOH, and KOH+ Aq (Zimmerman, A 232 324)

Solubility in (calcium sucrose + sugar) + Aq  
 1 l solution containing 418.6 g sugar and 34.3 g CaO dissolves 1.56 g CoO 1 l solution containing 296.5 g sugar and 24.2 g CaO dissolves 0.29 g CoO (Bodenbender, J B 1865 600)

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 827)

See also Cobaltous hydroxide

**Cobaltic oxide**, Co<sub>2</sub>O<sub>3</sub>

Decomp by most acids, even in the cold, with formation of cobaltous salts Sol in acetic acid without immediate decomp

See also Cobaltic hydroxide

**Cobaltocobaltic oxide**, Co<sub>3</sub>O<sub>4</sub>=CoO, Co<sub>2</sub>O<sub>3</sub>

Insol in boiling conc HCl, HNO<sub>3</sub>, or aqua regia Sol by long standing with H<sub>2</sub>SO<sub>4</sub> (Gibbs and Genth, Sill Am J (2) 23 257)

See also Cobaltocobaltic hydroxide

Co<sub>3</sub>O<sub>4</sub>=2CoO, Co<sub>2</sub>O<sub>3</sub>

Co<sub>3</sub>O<sub>4</sub>=4CoO, Co<sub>2</sub>O<sub>3</sub> Not attacked by boiling dil HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>+Aq (Beetz)

Co<sub>3</sub>O<sub>4</sub>=6CoO, Co<sub>2</sub>O<sub>3</sub>+20H<sub>2</sub>O Sol in dil acids, with residue of Co<sub>2</sub>O<sub>3</sub>, which dissolves on warming (Gentele, J pr 69 131 +8H<sub>2</sub>O As above (Gentele))

**Cobaltous oxychloride**, CoCl<sub>2</sub> 3CoO+ 3½H<sub>2</sub>O

Ppt Very sl sol in H<sub>2</sub>O (Habeimann M 5 432)

**Cobaltous oxychloride hydroxylamine**, CoOCl, 2NH<sub>2</sub>OH

Insol in H<sub>2</sub>O, unstable, insol in alcohol (Feldt, B 1894, 27 404)

**Cobaltous oxyfluoride**, CoO, CoF +H<sub>2</sub>O

Ppt (Berzelius Pogg 1 26)

**Cobaltous oxyiodide**, CoO, CoI<sub>2</sub>

Insol in H<sub>2</sub>O (Rammelsberg)

**Cobaltous oxysulphide**, CoO, CoS

Cold HCl+ Aq dissolves out CoO, hot HCl+ Aq decomp with evolution of H<sub>2</sub>S (Arfvedson, Pogg 1 64)

**Cobalt phosphide**, Co P

Sol in conc HNO<sub>3</sub> Slowly attacked by HCl and H<sub>2</sub>SO<sub>4</sub> (Munroe, C R 1900 130 658)

Sol in HNO<sub>3</sub>, aqua regia and in fused alkalis (Gauger, Bull Soc 1896, (3) 15 1089)

Co P<sub>3</sub> Insol in HNO<sub>3</sub> and aqua regia stable in the air even when heated (Gauger, Bull Soc 1896, (3) 15 1087)

Co<sub>2</sub>P<sub>2</sub> Insol in conc HCl+ Aq Sol in HNO<sub>3</sub>+ Aq (Rose Pogg 24 332)

**Cobalt subselelide**, Co Se

Sol in bromine water

Only sl attacked by boiling fuming HCl (Fonzes-Diacon, C R 1900 131 704)

**Cobalt monoselelide**, CoSe

(Little, A 112 211)

**Cobalt diselelide** CoSe<sub>2</sub>

Sol in Br<sub>2</sub>+Aq

Only sl attacked by boiling fuming HCl (Fonzes-Diacon, C R 1900, 131 705)

**Cobalt sesquiselemdie,  $\text{Co}_2\text{Se}_3$** Sol in  $\text{Br}_2 + \text{Aq}$ Only sl attacked by boiling fuming  $\text{HCl}$  (Fonzes-Diacon, C R 1900, 131 704)**Cobalt selenide,  $\text{Co}_3\text{Se}_4$** Sol in  $\text{Br}_2 + \text{Aq}$ Only sl attacked by boiling fuming  $\text{HCl}$  (Fonzes-Diacon, C R 190, 131 704)**Cobalt silicide,  $\text{Co}_2\text{Si}$** Sol in  $\text{HF}$  and aqua regia Insol in cold  $\text{H}_2\text{O}$  Decomp by steam at red heat Sol in fused alkali carbonates (Vigouroux, C R 1895, 121 687) $\text{CoSi}$  Insol in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  Sol in aqua regia and  $\text{HCl}$ , and in fused  $\text{KOH}$  (Lebeau, C R 1901, 132 557)Not attacked by dil or conc  $\text{HNO}_3$ , or conc  $\text{H}_2\text{SO}_4$  Sol in aqua regia and in conc  $\text{HCl}$ Not attacked by dil alkali hydroxides +  $\text{Aq}$ , attacked by fused alkali (Lebau, Bull Soc 1901, (3), 25 540) $\text{CoSi}_2$  Sl sol in hot conc  $\text{HCl}$  and hot conc alkali +  $\text{Aq}$  Sol in  $\text{HF}$ , insol in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  (Lebeau, C R 1902, 135 476)**Cobaltous sulphide,  $\text{CoS}$** *Anhydrous* Easily sol in acids, even  $\text{HCl}$ , but only slowly in the latter case (Hjortdahl, C R 65 75)Not attacked by cold dil  $\text{HCl} + \text{Aq}$  (Ebelmen, A ch (3) 25 94)*Min Seypoorte*+  $\text{zH}_2\text{O}$  1 l  $\text{H}_2\text{O}$  dissolve 41.62 + 10<sup>-6</sup> moles  $\text{CoS}$  at 18° (Weigel, Z phys Ch 1907, 58 294)

Sol in conc mineral acids, very sl sol in cold dil acids, scarcely sol in acetic acid (Wackemoder)

Sol when still moist in  $\text{SO} + \text{Aq}$  (Berthier)Easily sol in  $\text{HNO}_3$ , but only very sl sol in  $\text{HCl} + \text{Aq}$  Not pptd from very dil acid solutions by  $\text{H}_2\text{S}$ Insol in  $\text{H}_2\text{O}$ , alkalis and alkali carbonates, or sulphides +  $\text{Aq}$  (Fresenius)Insol in  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)When pptd by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ , shows a brown colour in presence of 200,000 pts  $\text{H}_2\text{O}$  (Pfaff)Tartaric acid, etc does not hinder the pptn by  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Rose)Sol in potassium thiocarbonate +  $\text{Aq}$  (Rosenblatt, Z anal 26 15)Sol in  $\text{N}_2\text{S}_x$  or  $\text{K}_2\text{S}_x + \text{Aq}$  (de Koninck, Zeit angew Ch 1891 202)**Cobaltic sulphide,  $\text{Co}_2\text{S}_3$** Partially decomp by  $\text{HCl} + \text{Aq}$ , sol in  $\text{HNO}_3 + \text{Aq}$  with decompositionSl attacked by  $\text{HCl} + \text{Aq}$ , and slowly even by aqua regia (Schneider, J pr (2) 9 209)*Min Cobalt pyrite*+  $\text{zH}_2\text{O}$  Insol in  $\text{KCN} + \text{Aq}$  (Fleek J pr 97 303) More sol in  $\text{HCl} + \text{Aq}$  than  $\text{CoS}$  (Dingler, Berz, J B 10 130)**Cobaltocobaltic sulphide,  $\text{Co}_3\text{S}_4$** *Min Lammite* Sol in warm  $\text{HNO}_3 + \text{Aq}$ , with residue of  $\text{S}$ **Cobalt disulphide,  $\text{CoS}_2$** Not attacked by alkalis or acids except  $\text{HNO}_3$  and aqua regia (Setterberg Pogg 7 40)**Cobalt sulphide,  $\text{Co}_2\text{S}_3$** Easily sol in hot  $\text{HCl}$  with evolution of  $\text{H}_2\text{S}$  (and  $\text{H}^?$ ) (Proust)**Cobalt potassium sulphide,  $\text{K Co}_{11}\text{S}_{10}$** Slowly sol in cold  $\text{HCl}$  and aqua regia Quickly sol in warm aqua regiaSol in  $\text{HF}$  and  $\text{H}_2\text{SO}_4$  only on warming Insol in  $(\text{NH}_4)_2\text{S}$ , organic acids, alkalis,12%  $\text{HCl} + \text{Aq}$  and  $\text{KCN} + \text{Aq}$  (Milbauer, Z anorg 1904, 42 447)**Cobalt telluride,  $\text{CoTe}$** 

(Fabre, C R 105 673)

**Cobalt decamine sulphurous acid**

See Decamine cobaltisulphurous acid

**Cobaltic acid****Potassium cobaltate,  $\text{K Co}_9\text{O}_{16} + 2\text{H}_2\text{O}$ , or  $3\text{H}_2\text{O}$** Insol in  $\text{H}_2\text{O}$  (Pebal, A 100 262), but decomp by long boiling Sol in conc acids  $\text{K}_2\text{O}$ ,  $\text{rCoO}_2$  Sol in  $\text{H}_2\text{O}$  (Winkler, J pr 91 351)

Does not exist (Donath W A B 102, 2b 71)

**Cobaltcyanhydric acid,  $\text{H Co}(\text{CN})_6 + 1/2\text{H}_2\text{O}$** Deliquescent Very sol in  $\text{H}_2\text{O}$  and only sl decomp on boilingSol in  $\text{HCl} + \text{Aq}$  without decomp even on boiling Sl sol in conc more sol in dil  $\text{HNO}_3 + \text{Aq}$  Not decomp by boiling conc  $\text{HNO}_3 + \text{Aq}$  or aqua regia Insol in conc sl sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Sol in alcohol Insol in ether (Zwenger A 162 157)**Ammonium cobalticyanide,  $(\text{NH})_4\text{Co}(\text{CN})_6 + 1/2\text{H}_2\text{O}$** Very sol in  $\text{H}_2\text{O}$ , sl sol in alcohol**Ammonium barium cobalticyanide,  $\text{NH}_4\text{BaCo}(\text{CN})_6 + \text{H}_2\text{O}$** Sol in  $\text{H}_2\text{O}$  (Weselsky)**Ammonium calcium cobalticyanide,  $\text{NH}_4\text{CaCo}(\text{CN})_6 + 10\text{H}_2\text{O}$** Sol in  $\text{H}_2\text{O}$

**Ammonium lead cobalticyanide,**

Sol in 831 pts  $\text{H}_2\text{O}$  at  $18^\circ$ , and sl sol in 93% alcohol (Schuler)

**Ammonium mercuric cobalticyanide,**

Sol in  $\text{H}_2\text{O}$  with decomp

Insol in alcohol (Soenderop, Dissert 1899)

**Ammonium sodium cobalticyanide,**

Only sl sol in  $\text{H}_2\text{O}$  (Weselsky, B 2 598)

**Ammonium strontium cobalticyanide,**

Sol in  $\text{H}_2\text{O}$  (W)

**Barium cobalticyanide, basic,  $\text{Ba}_3[\text{Co}(\text{CN})_6]_2$ ,  $\text{BaO}_2\text{H}$** 

Not very stable Cannot be recryst without partial decomp (W)

**Barium cobalticyanide,  $\text{Ba}_3[\text{Co}(\text{CN})_6] + 10\text{H}_2\text{O}$** 

Sl efflorescent Very sol in  $\text{H}_2\text{O}$  Insol in alcohol

**Barium cobalticyanide chloride,**

Sol in  $\text{H}_2\text{O}$  without decomp (W)

**Barium lithium cobalticyanide,  $\text{BaLiCo}(\text{CN})_6 + 15\text{H}_2\text{O}$** 

The most sol of the double cobalticyanides (Weselsky)

**Barium potassium cobalticyanide,**

Sol in  $\text{H}_2\text{O}$  (W)

**Bismuth cobalticyanide  $\text{BiCo}(\text{CN})_6$** 

Ppt (Mathews J Am Chem Soc 1900, 22 275)

+  $5\text{H}_2\text{O}$  Moderately stable with dil min acids, more stable with conc acids than Cd or Zn comp

Decomp by  $\text{NH}_3$  and alkalis (Fischer and Cuntze, Ch Z 1902, 26 872)

**Cadmium cobalticyanide,  $\text{Cd}[\text{Co}(\text{CN})_6] + 7\frac{1}{2}\text{H}_2\text{O}$** 

Attacked by strong min acids only when hot Behaves as Zn salt, toward conc  $\text{H}_2\text{SO}_4$  and dil and conc  $\text{HCl}$

Insol in  $\text{K}_2\text{Co}(\text{CN})_6 + \text{Aq}$  Sol in  $\text{NH}_4\text{OH}$  and  $\text{NH}_4\text{Cl} + \text{Aq}$  (Fischer and Cuntze, Ch Z 1902, 26 573)

**Cadmium potassium cobalticyanide,**

Not attacked by  $\text{H}_2\text{O}$  (Fischer and Cuntze, Ch Z 1902, 26, 873)

**Cadmium sodium cobalticyanide,**

(Fischer and Cuntze, Ch Z 1902, 26 873)

**Cadmium cobalticyanide ammonia,**

(Fischer and Cuntze, Ch Z 1902, 26 873)

$\text{Cd}_3[\text{Co}(\text{CN})_6]_2, 5\text{NH}_3 + 3\text{H}_2\text{O}$  (Fischer and Cuntze, Ch Z 1902, 26 873)

$\text{Cd}_3[\text{Co}(\text{CN})_6]_2, 7\text{NH}_3$  (Fischer and Cuntze, Ch Z 1902, 26 873)

$\text{Cd}_3[\text{Co}(\text{CN})_6]_2, 9\text{NH}_3 + 2\text{H}_2\text{O}$  (Fischer and Cuntze, Ch Z 1902, 26 873)

**Calcium potassium cobalticyanide,**

Sol in  $\text{H}_2\text{O}$  (W)

**Cobaltous cobalticyanide,  $\text{Co}_3[\text{Co}(\text{CN})_6]_2 + 14\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  and acids Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by  $\text{KOH} + \text{Aq}$

**Cupric cobalticyanide,  $\text{Cu}_3[\text{Co}(\text{CN})_6]_2 + 7\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  and acids Sol in  $\text{NH}_4\text{OH} + \text{Aq}$

**Cupric cobalticyanide ammonia,**

Sol in  $\text{H}_2\text{O}$  (Zwenger)

**Lead cobalticyanide, basic,  $\text{Pb}_3[\text{Co}(\text{CN})_6]_2, 3\text{PbO}_2\text{H}_2 + 11\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  or alcohol, somewhat sol in hot  $\text{Pb}(\text{C}_2\text{H}_3\text{O}) + \text{Aq}$  (Schuler)

**Lead cobalticyanide,  $\text{Pb}_4[\text{Co}(\text{CN})_6] + 4\text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$  Insol in alcohol

(Zwenger)  
+  $7\text{H}_2\text{O}$  Sol in 177 pts  $\text{H}_2\text{O}$  at  $18^\circ$ , and 163 pts at  $19^\circ$  Insol in absolute alcohol Sl sol in 93% alcohol (Schuler, W A B 79 302)

**Lead potassium cobalticyanide,  $\text{PbKCo}(\text{CN})_6 + 3\text{H}_2\text{O}$** 

Sol in 674 pts  $\text{H}_2\text{O}$  at  $18^\circ$  and much more easily in hot  $\text{H}_2\text{O}$  Insol in absolute, sl sol in 93% alcohol (Schuler)

**Lead cobalticyanide nitrate,  $\text{Pb}_4[\text{Co}(\text{CN})_6]_2, \text{Pb}(\text{NO}_3)_2 + 12\text{H}_2\text{O}$** 

Sol in 1691 pts  $\text{H}_2\text{O}$  at  $18^\circ$ , 1679 pts at  $19^\circ$ , and much less hot  $\text{H}_2\text{O}$

Nearly insol in 93% alcohol (Schuler)

**Mercurous cobalticyanide,  $\text{Hg}_2\text{Co}(\text{CN})_6$** 

Ppt Decomp by  $\text{HCl}$  Not attacked by cold, but by hot conc  $\text{H}_2\text{SO}_4$  Not attacked by  $\text{HNO}_3$ , acetic or oxalic acid Decomp by alkalis +  $\text{Aq}$  (Miller and Mathews, J Am Chem Soc 1900 22 64)

**Mercuric cobaltcyanide,  $\text{Hg}_2[\text{Co}(\text{CN})_6]_2$** 

Sl sol in  $\text{H}_2\text{O}$ , decomp by boiling  
 Insol in alcohol and ether Not attacked  
 by  $\text{HCl}$  (Soenderop, Dissert, 1899)

**Mercuric potassium cobaltcyanide,  
 $\text{K}_6\text{HgCo}_2(\text{CN})_{14}$** 

Sol in  $\text{H}_2\text{O}$  with decomp Insol in al-  
 cohol Sl sol in ether (Soenderop, Dissert,  
 1899)

$\text{K}_6\text{Hg}_3\text{Co}_4(\text{CN})_{24}$  (Soenderop, Dissert  
 1899)

**Mercuric sodium cobaltcyanide,  
 $\text{Na}_6\text{Hg}_3\text{Co}_4(\text{CN})_{24} + 4\text{H}_2\text{O}$** 

Extremely deliquescent (Soenderop,  
 Dissert, 1899)

**Nickel cobaltcyanide,  $\text{Ni}_3[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  and acids Not attacked by  
 boiling  $\text{HCl} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
 Decomp by  $\text{KOH} + \text{Aq}$

**Nickel cobaltcyanide ammonia,  
 $\text{Ni}_3[\text{Co}(\text{CN})_6]_2 \cdot 4\text{NH}_3 + 7\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$

**Potassium cobaltcyanide,  $\text{K}_3\text{Co}(\text{CN})_6$**   
Easily sol in  $\text{H}_2\text{O}$  Insol in alcohol**Potassium strontium cobaltcyanide,  
 $\text{K}_2\text{SrCo}(\text{CN})_6 + 9\text{H}_2\text{O}$**   
Sol in  $\text{H}_2\text{O}$  (Weselsky)**Potassium thallium cobaltcyanide,  
 $\text{K}_3\text{Tl}[\text{Co}(\text{CN})_6]$** 

More sol in  $\text{H}_2\text{O}$  than corresponding  
 K salt (Fischer und Benzin Ch Z 1902,  
 26 49)

**Potassium zinc cobaltcyanide,  
 $\text{K}_2\text{ZnCo}(\text{CN})_6 + 3\text{H}_2\text{O}$**   
(Fischer und Cuntze, Ch Z 1902, 26 873)**Potassium cobaltcyanide mercuric chloride,  
 $2\text{K}_3\text{Co}(\text{CN})_6 + 3\text{HgCl}_2$**   
(Soenderop Dissert 1899)**Potassium cobaltcyanide mercuric iodide,  
 $4\text{K}_3\text{Co}(\text{CN})_6 + \text{HgI}_2$** 

Sol in  $\text{H}_2\text{O}$  with subsequent decomp  
 Sol in alcohol and ether with decomp  
 (Soenderop Dissert, 1899)

**Silver cobaltcyanide,  $\text{Ag}_3\text{Co}(\text{CN})_6$** 

Insol in  $\text{H}_2\text{O}$  and acids Sol in  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$

**Silver cobaltcyanide ammonia,  $\text{Ag}_3\text{Co}(\text{CN})_6 \cdot$   
 $\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$**   
Insol in  $\text{H}_2\text{O}$  (Zwenger)**Sodium cobaltcyanide,  $\text{Na}_3\text{Co}(\text{CN})_6 + 2\text{H}_2\text{O}$**   
Easily sol in  $\text{H}_2\text{O}$ , insol in alcohol**Sodium zinc cobaltcyanide,  $\text{NaZnCo}(\text{CN})_6$   
 $+ \text{H}_2\text{O}$**   
(Fischer und Cuntze, Ch Z 1902, 26 873)**Strontium cobaltcyanide,  $\text{Sr}_3[\text{Co}(\text{CN})_6]_2 + 10\text{H}_2\text{O}$**   
Very sol in  $\text{H}_2\text{O}$  (Weselsky)**Thallium cobaltcyanide,  $\text{Tl}_3\text{Co}(\text{CN})_6$** 

100 pts  $\text{H}_2\text{O}$  dissolve 3.6 pts at  $0^\circ$ , 5.86 pts  
 at  $9.5^\circ$ , 10.04 pts at  $19.5^\circ$  (Fronmuller, B  
 11 91)

**Yttrium cobaltcyanide,  $\text{YCo}(\text{CN})_6 + 2\text{H}_2\text{O}$**   
Nearly insol in  $\text{H}_2\text{O}$  (Cleve)**Zinc cobaltcyanide,  $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$**   
Sol in  $\text{HCl} + \text{Aq}$  and salt is pptd by dilu-  
 tion with  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{SO}_4$  Insol  
 in  $\text{K}_4\text{Co}(\text{CN})_6 + \text{Aq}$  Sol in  $\text{NH}_4\text{OH}$  and  
 $\text{NH}_4\text{Cl} + \text{Aq}$  (Fischer und Cuntze, Ch Z  
 1902, 26 873)**Zinc cobaltcyanide ammonia,  
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 5\text{NH}_3$**   
Decomp by  $\text{H}_2\text{O}$  and acids (Fischer und  
 Cuntze, Ch Z 1902, 26 873)  
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 6\text{NH}_3$  (Fischer und  
 Cuntze)  
 $+ 3\text{H}_2\text{O}$  (Fischer und Cuntze)  
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 \cdot 10\text{NH}_3 + 9\text{H}_2\text{O}$  Decomp  
 by  $\text{H}_2\text{O}$  (Fischer und Cuntze)**Cobaltumolybdic acid****Ammonium barium cobaltous cobaltumolyb-  
date,  $\frac{1}{2}(\text{NH}_4)_2\text{O}, 1\frac{1}{2}\text{BaO}, \text{CoO}, \text{CoO},$   
 $10\text{MoO}_3 + 15\frac{1}{2}\text{H}_2\text{O}$**   
Difficultly sol in  $\text{H}_2\text{O}$  (Friedheim and  
 Keller B 1906 39 4306)**Ammonium cobaltous cobaltumolybdate,  
 $2(\text{NH}_4)_2\text{O}, \text{CoO}, \text{CoO}, 10\text{MoO}_3 + 12\text{H}_2\text{O}$**   
Much more sol in  $\text{H}_2\text{O}$  than  $3(\text{NH}_4)_2\text{O}$   
 $\text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 20\text{H}_2\text{O}$  Sp gr of  
 cold sat solution = 1.096 (Friedheim and  
 Keller)  
 $3(\text{NH}_4)_2\text{O}, \text{CoO}, \text{CoO}, 12\text{MoO}_3 + 20\text{H}_2\text{O}$   
 100 cc cold sat aqueous solution contain  
 3 g of the salt Sp gr of the solution = 1.0234  
 Sol in conc  $\text{HCl}$   
 Decomp by conc  $\text{H}_2\text{SO}_4$ , by  $\text{KOH} + \text{Aq}$   
 and by  $\text{NaOH} + \text{Aq}$  (Friedheim and Keller)**Barium cobaltous cobaltumolybdate,  
 $3\text{BaO}, \text{CoO}, \text{CoO}_2, 9\text{MoO}_3 + 25\text{H}_2\text{O}$**   
Sl sol in  $\text{H}_2\text{O}$  (Friedheim and Keller)

**Cobaltous potassium cobaltmolybdate**,  
 $\text{CoO}, 3\text{K}_2\text{O}, \text{CoO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$   
 (Kurnakoff, Ch Z 1890, 14 113)

+11H<sub>2</sub>O Sol in conc HCl Decomp by  
 KOH+Aq and by NaOH+Aq (Friedheim  
 and Keller)

$3\text{K}_2\text{O}, \text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 15\text{H}_2\text{O}$  Sl  
 sol in H<sub>2</sub>O Sol in conc HCl Decomp by  
 KOH+Aq and by NaOH+Aq (Friedheim  
 and Keller)

+20H<sub>2</sub>O (Kurnakoff, Ch Z 1890, 14  
 113)

**Potassium cobaltmolybdate**,  
 $3\text{K}_2\text{O}, \text{CoO}_2, 9\text{MoO}_3 + 6\frac{1}{2}\text{H}_2\text{O}$

Ppt (Hall, J Am Chem Soc 1907, 29  
 703)

### Cobaltnitrocyanhydric acid

**Potassium cobaltnitrocyanide**,  
 $\text{K}_4\text{Co}_2(\text{CN})_8\text{NO}_2 + 3\text{H}_2\text{O}$

Very sol in H<sub>2</sub>O but quickly decomp  
 Insol in alcohol (Rosenheim and Kopp-  
 pel, Z anorg 1898, 17 68)

**Silver cobaltnitrocyanide**,  
 $\text{Co}_2\text{Ag}_6\text{NO}_2(\text{CN})_{10} + 6\text{H}_2\text{O}$ , and +21H<sub>2</sub>O  
 (Rosenheim and Koppel)

**Sodium cobaltnitrocyanide**,  
 $\text{Na}_6\text{Co}_4(\text{NO}_2)(\text{CN})_{10} + 11\text{H}_2\text{O}$

Very deliquescent Sol in H<sub>2</sub>O (Rosen-  
 heim and Koppel)

**Cobaltisulphurous acid**,  $\text{H}_6\text{Co}_2(\text{SO}_3)_6$

Not obtained in a solid state (Berglund,  
 Acta Lund 1872)

### Cobaltisulphites

The cobaltisulphites are insol or at least  
 very sl sol in H<sub>2</sub>O (Berglund, Acta Lund  
 1872 23)

**Ammonium cobaltous cobaltisulphite**,  
 $(\text{NH}_4)_2\text{SO}_3, 2\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3 + 14\text{H}_2\text{O} =$   
 $(\text{NH}_4)_4\text{Co}_2\text{Co}_2(\text{SO}_3)_7 + 14\text{H}_2\text{O}$

Scarcely sol in H<sub>2</sub>O, but decomp thereby  
 Easily sol in acids, when finely divided,  
 also in H<sub>2</sub>SO<sub>3</sub>+Aq (Berglund)

$2(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3, \text{Co}(\text{SO}_3)_3 + 8\text{H}_2\text{O} =$   
 $(\text{NH}_4)_4\text{CoCo}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}$  As above  
 (Berglund)

**Barium cobaltisulphite**  $3\text{BaSO}_3, \text{Co}(\text{SO}_3)_3 +$   
 $12\text{H}_2\text{O} = \text{Ba}_3\text{Co}_2(\text{SO}_3)_7 + 12\text{H}_2\text{O}$

Ppt Insol in H<sub>2</sub>O Not attacked by cold  
 acids even H<sub>2</sub>SO<sub>4</sub>, but is decomp by boiling  
 therewith (Berglund, Acta Lund 1872)

**Bismuth cobaltisulphite**,  $\text{Bi}_2\text{Co}_2(\text{SO}_3)_6$

Insol in H<sub>2</sub>O, dil HNO<sub>3</sub>, or HCl+Aq  
 (Berglund, Acta Lund 1872 31)

**Calcium cobaltisulphite**,  $\text{Ca}_3\text{Co}_2(\text{SO}_3)_6$   
 Ppt Insol in H<sub>2</sub>O or HCl+Aq (Berg-  
 lund, Acta Lund 1872 30)

**Cobaltous cobaltisulphite**,  $\text{Co}_3\text{Co}_2(\text{SO}_3)_6$   
 $3\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_3$

Ppt (Berglund, B 7 470)

**Cobaltous potassium cobaltisulphite**,  
 $\text{CoK}_4\text{Co}_2(\text{SO}_3)_6$

Insol in H<sub>2</sub>O (Berglund)

**Silver cobaltisulphite**,  $\text{Co}_2(\text{SO}_3)_3, 3\text{Ag}_2\text{SO}_3$   
 Properties as the following comp (Berg-  
 lund)

**Silver cobaltous cobaltisulphite**,  $\text{CoSO}_3,$   
 $\text{Co}_2(\text{SO}_3)_3, 2\text{Ag}_2\text{SO}_3 + 9\text{H}_2\text{O}$

Insol in H<sub>2</sub>O Insol in HNO<sub>3</sub>+Aq De-  
 comp by HCl or H<sub>2</sub>S+Aq (Berglund)

**Sodium cobaltous cobaltisulphite**

Decomp by H<sub>2</sub>O, so that it has not been  
 obtained pure (Berglund, Acta Lund 1872  
 29)

**Cobaltoctamine sulphurous acid**

See Octamine cobaltisulphurous acid

**Cobaltocobalticyanhydric acid**,  
 $\text{H}_3\text{Co}_3(\text{CN})_{11}$

Unstable (Jackson and Comey, Am Ch  
 J 1897 19, 277)

**Barium cobaltocobalticyanide**,

$\text{BaHCo}_3(\text{CN})_{11} + 1\frac{1}{2}\text{H}_2\text{O}$

Somewhat sol in H<sub>2</sub>O when pure

The crude salt is insol even in hot H<sub>2</sub>O  
 (Jackson and Comey)

**Cupric cobaltocobalticyanide**,  $\text{Cu}_3\text{Co}_6(\text{CN})_{11}$   
 $+ 4\text{H}_2\text{O}$

Ppt (Jackson and Comey)

**Potassium hydrogen cobaltocobalticyanide**  
 $\text{K}_2\text{HCo}_3(\text{CN})_{11} + 2\text{H}_2\text{O}$

Sl sol in cold easily sol in hot H<sub>2</sub>O

Insol in alcohol (Jackson and Comey)

$\text{KH}_2\text{Co}_3(\text{CN})_{11} + \text{H}_2\text{O}$  Insol in cold c  
 hot H<sub>2</sub>O when impure

The pure salt is slowly sol in cold H<sub>2</sub>O  
 More sol in warm H<sub>2</sub>O (Jackson and  
 Comey)

**Silver cobaltocobalticyanide**,  $\text{Ag}_3\text{Co}_3(\text{CN})_{11}$   
 $+ \text{H}_2\text{O}$

Ppt (Jackson and Comey, B 1896, 24  
 1021)

**Zinc cobaltocobalticyanide**,  $\text{ZnHCo}_3(\text{CN})_{11}$   
 $+ 3\text{H}_2\text{O}$

Ppt (Jackson and Comey)

**Cobaltocyanhydric acid**,  $\text{H}_4\text{Co}(\text{CN})_6$   
Very unstable Sol in  $\text{H}_2\text{O}$  Insol in alcohol

**Cuprous potassium cobaltocyanide**,  
 $\text{K}_3\text{CuCo}(\text{CN})_6$   
(Straus, Z anorg 1895, 9 17)

**Potassium cobaltocyanide**,  $\text{K}_4\text{Co}(\text{CN})_6$   
Decomp on air Very deliquescent, and sol in  $\text{H}_2\text{O}$  Insol in alcohol and ether (Descamps, Zeit Ch 1868 952)

### Cobaltous acid

**Barium cobaltite**,  $\text{BaCoO}_3$   
Insol in  $\text{H}_2\text{O}$  or dil  $\text{HCl}$  Sol in  $\text{HCl} + \text{Aq}$  (Rousseau, C R 109 64)  
 $\text{BaCo}_2\text{O}_5$  As above (Rousseau)

**Cobaltous potassium cobaltite**,  $3\text{CoO}_2, \text{CoO}, \text{K}_2\text{O}$   
Rapidly hydrolysed by  $\text{H}_2\text{O}$   
Sol in conc  $\text{HCl}$  (Bellucci, Chem Soc 1907, 92, (2) 354)

**Magnesium cobaltite**,  $\text{MgCoO}_3$   
Insol in  $\text{H}_2\text{O}, \text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$   
Easily sol in  $\text{NH}_4\text{Cl} + \text{Aq}$ , from which it is pptd by  $\text{KOH} + \text{Aq}$  (Berzelius, Pogg 33 126)  
Sol in  $\text{HF}, \text{HCl}, \text{HNO}_3 + \text{H}_2\text{SO}_4$ , decomp and partially dissolved by  $\text{NH}_4\text{OH} + \text{Aq}$ , quite stable when heated (Dufau, C R 1896, 123 240)

**Potassium cobaltite**  
According to Bellucci and Dominici the compounds formerly described are more or less decomp by hydrolysis (C C 1907 I, 1530)

**Sodium cobaltite**  
Sol in  $\text{NaOH} + \text{Aq}$ , but pptd by diluting the solution

**Columbic acid (Niobic acid)**,  $3\text{Cb}_2\text{O}_5, 4\text{H}_2\text{O}$ , or  $3\text{Cb}_2\text{O}_5, 7\text{H}_2\text{O}$   
Easily sol in  $\text{HF}$ , very sl sol in  $\text{HCl} + \text{Aq}$ , but is sol in  $\text{H}_2\text{O}$  after being treated with  $\text{HCl} + \text{Aq}$  Sol in conc  $\text{H}_2\text{SO}_4$  Sol in  $\text{KOH} + \text{Aq}$  Insol in  $\text{NaOH} + \text{Aq}$ , but becomes sol in  $\text{H}_2\text{O}$  by being treated with  $\text{NaOH} + \text{Aq}$  Sol in boiling  $\text{Na}_2\text{CO}_3 + \text{Aq}$  (Rose, Pogg 113 109)  
Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 830)  
 $\text{Cb}_2\text{O}_5, 4\text{H}_2\text{O}$   
 $\text{Cb}_2\text{O}_5, 7\text{H}_2\text{O}$  (Santesson, Bull Soc (2) 24 52)

**Aluminum columbate**,  $\text{Al}_2\text{O}_3, 3\text{Cb}_2\text{O}_5 + 12\text{H}_2\text{O}$   
Ppt (E F Smith, J Am Chem Soc 1908, 30 1652)

**Barium columbate**,  $7\text{BaO}, 6\text{Cb}_2\text{O}_5 + 18\text{H}_2\text{O}$   
Ppt (Bedford, J Am Chem Soc 1905, 27 1218)

**Cadmium columbate**,  $\text{CdO}, \text{Cb}_2\text{O}_5$   
Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson, Z anorg 1896, 12 199)  
 $+ 3\frac{1}{2}\text{H}_2\text{O}$  Ppt (E F Smith, J Am Chem Soc 1908, 30 1652)

**Cæsium columbate**,  $4\text{Cs}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (E F Smith, J Am Chem Soc 1908, 30 1654)  
 $7\text{Cs}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 30\text{H}_2\text{O}$  Ppt (E F Smith, J Am Chem Soc 1908, 30 1655)

**Calcium columbate**,  $2\text{CaO}, \text{Cb}_2\text{O}_5$   
Insol in  $\text{H}_2\text{O}$  (Joly, C R 81 266)  
 $\text{CaO}, \text{Cb}_2\text{O}_5$  Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson, Z anorg 1896, 12 198)

**Cobalt columbate**,  $\text{CoO}, \text{Cb}_2\text{O}_5$   
Sol in conc boiling  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson)

**Copper columbate**,  $\text{CuO}, \text{Cb}_2\text{O}_5$   
Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson)  
 $+ 3\frac{1}{2}\text{H}_2\text{O}$  Ppt (E F Smith, J Am Chem Soc 1908, 30 1652)

**Iron (ferrous) columbate**,  $\text{Fe}(\text{CbO}_3)_2$   
Min *Columbite* Insol in acids

**Iron (ferrous) columbate tantalate**,  
 $x\text{Fe}(\text{TaO}_3)_2, y\text{Fe}(\text{CbO}_3)_2$   
Min *Tantalite* Not attacked by acids  
 $\text{Fe}(\text{CbO}_3)_2, 4\text{Fe}(\text{TaO}_3)_2$  Min *Taprobite*

**Lithium columbate**,  $7\text{Li}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 26\text{H}_2\text{O}$   
Ppt (E F Smith, J Am Chem Soc 1908, 30 1655)

**Magnesium columbate**,  $\text{MgO}, \text{Cb}_2\text{O}_5$   
Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson, Z anorg 1896, 12 196)  
 $+ 4\text{H}_2\text{O}$  Precipitate (Rummelsberg)  
 $+ 7\text{H}_2\text{O}$  Ppt (E F Smith, J Am Chem Soc 1908, 30 1651)  
 $4\text{MgO}, \text{Cb}_2\text{O}_5$  Insol in  $\text{H}_2\text{O}$  (Joly, C R 81 266)  
 $3\text{MgO}, \text{Cb}_2\text{O}_5$  As above

**Manganous columbate**  
Insol in  $\text{H}_2\text{O}$  (Joly, C R 81 266)  
 $3\text{MnO}, 5\text{Cb}_2\text{O}_5$  Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{H}_2\text{SO}_4$  at red heat (Larsson, Z anorg 1896, 12 201)

**Potassium columbate,  $\text{KCbO}_3$** 

Sol in  $\text{H}_2\text{O}$  (Joly, in Fremy's Encyc Ch)  
 $\text{K}_2\text{Cb}_4\text{O}_7 + 5\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Santesson)

$\text{K}_2\text{Cb}_5\text{O}_{16} + 5\text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{O}$   
 $\text{K}_4\text{Cb}_6\text{O}_{17} + 11\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Santesson, Bull Soc (2) 24 53)

$\text{K}_4\text{Cb}_8\text{O}_{22} + 11\text{H}_2\text{O}$  (Santesson)

$\text{K}_5\text{Cb}_9\text{O}_{13} + 13\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

$\text{K}_5\text{Cb}_9\text{O}_{10} + 16\text{H}_2\text{O}$  Efflorescent Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (4) 8 20)

Very sol in  $\text{H}_2\text{O}$  (E F Smith, J Am Chem Soc 1908, 30 1652)

$\text{K}_{14}\text{Cb}_{12}\text{O}_{37} + 27\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Insol in alcohol (E F Smith)

$\text{K}_{16}\text{Cb}_{14}\text{O}_{48} + 32\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

**Potassium sodium columbate,  $3\text{K}_2\text{O}, \text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$** 

Very slightly sol in  $\text{H}_2\text{O}$  Insol in alkalis (Marignac)

**Rubidium columbate,  $3\text{Rb}_2\text{O}, 4\text{Cb}_2\text{O}_5 + 9\frac{1}{2}\text{H}_2\text{O}$** 

(E F Smith, J Am Chem Soc 1908, 30 1655)

$4\text{Rb}_2\text{O} + 3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (E F Smith)

**Silver columbate,  $\text{Ag}_2\text{O}, \text{Cb}_2\text{O}_5 + 2\text{H}_2\text{O}$** 

Ppt (E F Smith)

$7\text{Ag}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Bedford, J Am Chem Soc 1905, 27 1218)

**Sodium columbate,  $\text{NaCbO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$** 

Completely sol in  $\text{H}_2\text{O}$  (Rose)

Ppt (E F Smith, J Am Chem Soc 1908, 30 1651)

$+ 2\frac{1}{2}\text{H}_2\text{O}$  Sl sol in cold  $\text{H}_2\text{O}$  Insol in  $\text{NaOH} + \text{Aq}$  (Santesson)

$2\text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  or  $\text{NaOH} + \text{Aq}$  (Santesson)

$8\text{Na}_2\text{O}, 7\text{Cb}_2\text{O}_5$  1 pt is sol in 195–200 pts  $\text{H}_2\text{O}$  at 14–20°, in ether 75–80 pts or in 103 pts boiling water (Rose)

$7\text{Na}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 32\text{H}_2\text{O}$  Very stable Sol in  $\text{H}_2\text{O}$  (Bedford, J Am Chem Soc 1905, 27 1217)

**Thorium columbate,  $5\text{Th}_2\text{O}_3, 16\text{Cb}_2\text{O}_5$** 

Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{HKSO}_4$  at red heat (Larsen, Z anorg 1896, 12 202)

**Yttrium columbate,  $\text{Y}_2\text{O}_3, \text{CbO}_3$** 

Insol in  $\text{H}_2\text{O}$  (Joly, C R 81 1261)

Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{HKSO}_4$  at red heat (Larsen)

**Zinc columbate,  $\text{ZnO}, \text{Cb}_2\text{O}_5$** 

Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{HKSO}_4$  at red heat (Larsen)

$7\text{ZnO}, 6\text{Cb}_2\text{O}_5 + 25\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Bedford, J Am Chem Soc 1905, 27 1218)

**Zirconium columbate,  $\text{ZrO}_2, 5\text{Cb}_2\text{O}_5$** 

Sol in boiling conc  $\text{H}_2\text{SO}_4$ , insol in most acids, decomp by  $\text{HKSO}_4$  at red heat (Larsen)

**Percolumbic acid**

See Percolumbic acid

**Columbium (Niobium),  $\text{Cb}$** 

Scarcely attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia Conc  $\text{H}_2\text{SO}_4$  dissolves easily on warming

Sol in fused oxidizing agents, sol in hot conc  $\text{H}_2\text{SO}_4$  and in  $\text{HF}$ , also in  $\text{HF} + \text{HNO}_3$ , insol in other acids (Moissan, C R 1901 133 24)

**Columbium pentabromide,  $\text{CbBr}_5$** 

(Rose, Pogg 104 422)

**Columbium carbide nitride,  $3\text{CbC}, 2\text{CbN}$** 

(Joly, Bull Soc (2) 25 506)

**Columbium trichloride,  $\text{CbCl}_3$** 

Not deliquescent, not attacked by  $\text{H}_2\text{O}$  but easily oxidised by  $\text{HNO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Roscoe, C N 37 25)

**Columbium pentachloride,  $\text{CbCl}_5$** 

Decomp by  $\text{H}_2\text{O}$  with separation of hydrate of  $\text{Cb}_2\text{O}_5$  Sol in cold  $\text{HCl} + \text{Aq}$  forming a solution which soon gelatinises, and separates out  $\text{CbO}_5$  by heat or dilution, with hot  $\text{HCl} + \text{Aq}$ , forms a cloudy solution which does not gelatinise Sol in  $\text{H}_2\text{SO}_4$  to form clear liquid which gelatinises on heating Sol in  $\text{KOH} + \text{Aq}$  Sol in alcohol with slight residue (Rose, Pogg 104 422)

**Columbium pentafluoride,  $\text{CbF}_5$** 

Very hygroscopic, sol in  $\text{H}_2\text{O}$  without separation of columbic acid (Ruff, B 1909 42 492)

**Columbium fluoride with MF**

See Fluocolumbate, M

**Columbium hydride,  $(\text{CbH})_2$** 

Insol in  $\text{HCl}$ ,  $\text{HNO}_3$ , and dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  even on boiling Sol in boiling conc  $\text{H}_2\text{SO}_4$  and in fused  $\text{KHSO}_4$  Sol in cold  $\text{HCl} + \text{Aq}$  if not too dilute Also attacked by  $\text{KOH} + \text{Aq}$  (Marignac N Arch Phys Nat 31 89)

Not attacked by boiling  $\text{H}_2\text{O}$ , or boiling  $\text{HCl}$

Oxidized by hot  $\text{H}_2\text{SO}_4$  Insol in boiling  $\text{HNO}_3$  (Muthmann, A 1907, 355 90)

**Columbium hydroxide  $\text{CbO}_3, \text{rH}_2\text{O}$** 

See Columbic acid

**Columbium nitride**

Not attacked by boiling nitric acid or aqua regia, but sol in a cold mixture of  $\text{HNO}_3$  and  $\text{HF}$  (Rose, Pogg 111 426)

$\text{Cb}_3\text{N}_5$  Not attacked by boiling  $\text{H}_2\text{O}$  or  $\text{HCl}$  Insol in conc  $\text{HNO}_3$ , and  $\text{H}_2\text{SO}_4$

Decomp by fused  $\text{KOH}$  Not attacked by boiling with  $\text{KOH} + \text{Aq}$  (Muthmann, A 1907, 355 94)

**Columbium dioxide,  $\text{Cb}_2\text{O}_3$** 

Sol when still moist in boiling dil  $\text{HCl} + \text{Aq}$  Insol in hot  $\text{HNO}_3$ , less sol in aqua regia than in  $\text{HCl} + \text{Aq}$  Sol in conc  $\text{H}_2\text{SO}_4$  after long heating (Rose)

Insol in  $\text{H}_2\text{O}$ ,  $\text{KOH}$ , or conc acids, even when boiling (Delafontaine)

**Columbium trioxide,  $\text{Cb}_2\text{O}_3$** 

Insol in acids except  $\text{HF}$  (Smith, Z anorg 1894, 7 28)

**Columbium tetroxide,  $\text{Cb}_2\text{O}_4$** 

Not attacked by cold or hot  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or aqua regia Slightly attacked by boiling  $\text{KOH} + \text{Aq}$  (Delafontaine)

**Columbium pentoxide,  $\text{Cb}_2\text{O}_5$** 

When ignited insol in hot conc  $\text{H}_2\text{SO}_4$ . When it has not been ignited it forms a clear solution with  $\text{H}_2\text{SO}_4$ , which can be diluted without forming any precipitate (Rose, Pogg 112 549)

Sol in fused  $\text{KHSO}_4$ , which can be diluted with  $\text{H}_2\text{O}$  without causing pptn Insol in  $\text{HF}$

**Columbium oxybromide,  $\text{CbOBr}_3$** 

Decomp by  $\text{H}_2\text{O}$  into  $\text{Cb}_2\text{O}_3$  and  $\text{HBr}$  Sol in hot  $\text{H}_2\text{SO}_4$  and conc  $\text{HCl} + \text{Aq}$  (Rose, Pogg 104 442)

$3\text{H}_2\text{O}$ ,  $\text{Cb}_2\text{O}_4$ ,  $\text{HBr} (?)$  Easily sublimed (Smith, Z anorg 1894, 7 97)

**Columbium oxybromide rubidium bromide,  $\text{CbOBr}_3$ ,  $2\text{RbBr}$** 

Unstable in moist air Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1905 39 3059)

**Columbium oxychloride,  $\text{CbOCl}_3$** 

Attracts  $\text{H}_2\text{O}$  from air without deliquescing and decomposed Decomp with  $\text{H}_2\text{O}$  with evolution of heat Insol in hot or cold  $\text{HCl} + \text{Aq}$  Sol by long contact with  $\text{H}_2\text{SO}_4$  to a cloudy liquid, which clears up on warming, but soon separates out  $\text{Cb}_2\text{O}_5$  Sol in cold  $\text{KOH} + \text{Aq}$  and hot  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Rose)

Sol in alcohol, from which it is precipitated by ether (Blomstrand)

$3\text{H}_2\text{O}$ ,  $\text{Cb}_2\text{O}_4$ ,  $\text{HCl}$  Sublimate (Smith, Z anorg 1894, 7 97)

**Columbium oxychloride rubidium chloride,  $\text{CbOCl}_3$ ,  $2\text{RbCl}$** 

Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1906, 39 3057)

**Columbium oxyfluoride,  $\text{CbOF}_3$** 

(Joly, C R 81 1266)

**Columbium oxyfluoride with MF**

See Fluoxycolumbate, and Fluoxyhypocolumbate, M

**Columbium oxysulphide,  $\text{Cb}_2\text{OS}_3$** 

Insol in boiling  $\text{HCl} + \text{Aq}$  Slowly decomp into  $\text{Cb}_2\text{O}_3$  by boiling with  $\text{HNO}_3$  or aqua regia Insol in boiling dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Converted into columbic sulphate, sol in  $\text{H}_2\text{O}$ , by boiling conc  $\text{H}_2\text{SO}_4$  Sl sol in hot  $\text{HF}$  Insol in boiling  $\text{K}_2\text{S} + \text{Aq}$  (Rose, Pogg 111 193)

**Copper, Cu**

Copper is not attacked by distilled  $\text{H}_2\text{O}$ , or by  $\text{NH}_4\text{NO}_3$ ,  $\text{KNO}_3$ , or  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ , or by a mixture of those salts in solution (Muir, cited by Carnelly, Chem Soc 30 1)

Distilled  $\text{H}_2\text{O}$  has slight action on Cu 100 cem  $\text{H}_2\text{O}$  dissolved from 2 sq dem Cu from 0.035 mg Cu in one hour up to 0.280 mg in 72 hours 100 cem  $\text{H}_2\text{O}$  dissolved 0.44 mg from 6 sq dem in 48 hours Presence of solder diminishes solubility about one-half At 90–100° the amount dissolved is about one-half that at ord temp (Carnelly, Chem Soc 30 1)

100 cem distilled  $\text{H}_2\text{O}$  dissolved only 1 mg Cu from 11.8 sq cm during a week while air free from  $\text{CO}_2$  was conducted through the solution When the air contained  $\text{CO}$  3 mg were dissolved (Wagner, Dingl 221 259)

100 l sea water dissolved 12.96 g Cu from 1 sq m (Calvert and Johnson, C N 11 171)

**Solubility in  $\text{H}_2\text{SO}_4$** 

Not attacked by dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Vogel, Schw J 32 301)

Action of  $\text{H}_2\text{SO}_4$  at ordinary temp is very slight even after a long time (Barruel J Pharm 20 13 [1834])

$\text{H}_2\text{SO}_4$  has no action below 130 Calvert and Johnson, Chem Soc 19 458

$\text{H}_2\text{SO}_4$  acts slightly even at 20° 16.3 g  $\text{H}_2\text{SO}_4$  (1.843 sp gr) dissolved the following amts from 3 g Cu having a surface of 65 sq cm at the given temp

Temp	Time	Cu dissolved
19°	14 days	About 6
60	120 min	2.5
80	30 "	1.5
100	30 "	3.1
124	30 "	22.7
130	30 "	32.6
137	30 "	35.0
150	30 "	69.2
170	10 "	51.62
195	2 "	22.2
220	1/2 "	70.2
270	few seconds	nearly 100

With dilute acid the action was much less violent, as is seen in the following table—

Tem	Time	Acid	Sp gr	% Cu dissolved
100°	30 min	H <sub>2</sub> SO <sub>4</sub>	1 843	2 380
100	30 "	2H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1 8295	0 585
100	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1 780	0
100	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1 620	0
130	30 "	H <sub>2</sub> SO <sub>4</sub>	1 843	32 6
130	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1 780	1 18
130	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1 620	0
165	15 "	H <sub>2</sub> SO <sub>4</sub>	1 843	70
165	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1 780	16 5
165	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1 620	2 7

(Pickering, Chem Soc 33 112)

Cu is very sl attacked by cold HCl+Aq of 1 12 sp gr, but somewhat more on warming. Even less sol in dil HCl+Aq (Lowe, Z anal 4 361)

Sol in warm conc HI+Aq (Rose)

Slowly attacked by H<sub>2</sub>SO<sub>4</sub>+Aq (Causse, Bull Soc (2) 45 3)

More or less sol in all dil mineral acids and also in organic acids, as acetic, tartaric, etc., when supply of air is afforded, but absolutely insol in the latter acids when air is wholly excluded. The importance of this fact in the use of Cu cooking utensils is manifest.

Easily attacked by ord HNO<sub>3</sub>+Aq

With very conc HNO<sub>3</sub>+Aq (sp gr 1 52) it becomes passive, as in the case of Fe

Pure dil HNO<sub>3</sub>+Aq of 1 07 sp gr or less does not attack Cu at 20°, but if NO<sub>2</sub> or KNO<sub>3</sub> is added the action begins at once. If HNO<sub>3</sub>+Aq is more conc the Cu is attacked. HNO<sub>3</sub>+Aq of 1 106 sp gr begins to act at -2°, and of 1 217 sp gr at -10°

HNO<sub>3</sub>+Aq of 1 512 sp gr attacks Cu violently at 20°, but action soon ceases on account of formation of a crust of Cu(NO<sub>3</sub>), insol in pure HNO<sub>3</sub> (Millon, A ch (3) 6 95)

Easily sol in 2N-HClO<sub>3</sub>+Aq at 50° (Hendrixson, J Am Chem Soc 1904, 26 756)

Not appreciably sol in anhydrous HF (Poulenc, A ch 1894, (7) 2 12)

When in contact with the air, Cu is soon oxidised by acids, alkalis (especially NH<sub>4</sub>OH+Aq), and many fatty bodies

Sol in (NH<sub>4</sub>) CO<sub>3</sub>+Aq (Traube, B 18 1887)

Slowly sol in NH<sub>4</sub>OH+Aq (Schonbein, B A B 1856 580)

Sol in KI+Aq when warm and conc (Rose)

When finely divided, Cu is easily sol in hot FeCl<sub>3</sub>+Aq

Action of dilute solutions of salts on solubility of Cu in H<sub>2</sub>O

100 ccm solution of the following salts dissolve the amts of Cu given below, from a surface of 1 sq decm in 48 hours

Salts	G salt dissolved in 100 ccm H <sub>2</sub> O	Mg Cu dissolved
H <sub>2</sub> O		0 11
KNO <sub>3</sub>	0 01 0 05 5 00	0 07 0 13 0 16
NaNO <sub>3</sub>	0 05 5 00	0 18 0 19
CaSO <sub>4</sub>	0 05	0 11
K <sub>2</sub> SO <sub>4</sub>	0 05 5 00	0 12 0 28
MgSO <sub>4</sub>	0 05 5 00	0 16 0 34
Na <sub>2</sub> CO <sub>3</sub>	0 01 0 05 5 00	0 05 0 11 2 80
K <sub>2</sub> CO <sub>3</sub>	0 05 5 00	0 14 2 35
NaCl	0 01 0 05 5 00	0 05 0 13 7 50
KCl	5 00	8 17
(NH <sub>4</sub> ) SO <sub>4</sub>	0 05 5 00	0 66 28 50
NH <sub>4</sub> NO <sub>3</sub>	0 01 0 05 5 00	0 17 0 66 60 00
NH <sub>4</sub> Cl	0 05 5 00	0 92 158 75

At 100° the action of KNO<sub>3</sub>, K<sub>2</sub>SO<sub>4</sub>, and NH<sub>4</sub>NO<sub>3</sub> is diminished while that of (NH<sub>4</sub>) SO<sub>4</sub>, Na<sub>2</sub>CO<sub>3</sub>, and NaCl is increased

Tables are also given for mixtures of the above salts (Cunlley Chem Soc 30 1)

Solubility of Cu in dilute salt solutions. 11 5 sq cm Cu were used, and the action continued one week, while air with or without CO<sub>2</sub> was passed through the solution continually

100 ccm solution of the following salts dissolved the given amts Cu

Salt	G salt dissolved in 100 ccm H <sub>2</sub> O	Mg Cu dissolved with out CO <sub>2</sub>	Mg Cu dissolved with CO <sub>2</sub>
NaCl	0 50	4	115
KCl	0 50	4	115
MgCl <sub>2</sub>	0 83	5	112
NH <sub>4</sub> Cl	1 00	904	138
K <sub>2</sub> SO <sub>4</sub>	1 00	0	4
KNO <sub>3</sub>	1 00	0	3
Na <sub>2</sub> CO <sub>3</sub>	1 00	0	
NaOH	0 923	0	
CaO <sub>2</sub> H <sub>2</sub>	sat	0	

(Wagner, Dingl 221 260)

Distilled H<sub>2</sub>O dissolved no Cu from 420 sq mm in 150 hours at ord temp

NH<sub>4</sub>NO<sub>3</sub>+Aq with less than 0.4 g per litre showed the same result

KNO<sub>3</sub>+Aq or (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>+Aq containing 0.1 to 0.2 g per litre dissolved no Cu

H<sub>2</sub>O containing carbonates+nitrates, carbonates+sulphates, or chlorides+nitrates also dissolved no Cu

NH<sub>4</sub>NO<sub>3</sub>+Aq containing 0.4 g per litre dissolved 3 mg per litre after 150 hours contact

From a surface of 2100 sq m of Cu, H<sub>2</sub>O charged with CO<sub>2</sub> at ord pressure, and containing the following salts in solution, dissolved the given amts Cu in 120 hours

Salt	G salt dissolved in 1 l H <sub>2</sub> O	Mg Cu dissolved
H <sub>2</sub> O		1 0
K <sub>2</sub> CO <sub>3</sub>	0 2	0 2
CaCl <sub>2</sub>	0 2	1 80
NH <sub>4</sub> NO <sub>3</sub>	0 02	1 40
NH <sub>4</sub> NO <sub>3</sub>	0 04	1 40
K <sub>2</sub> CO <sub>3</sub> + NH <sub>4</sub> NO <sub>3</sub>	0 1	1 00
K <sub>2</sub> CO <sub>3</sub> + NH <sub>4</sub> NO <sub>3</sub>	0 02	
K <sub>2</sub> CO <sub>3</sub> + NH <sub>4</sub> NO <sub>3</sub>	0 2	
NH <sub>4</sub> NO <sub>3</sub> + CaCl <sub>2</sub>	0 04	0 1
NH <sub>4</sub> NO <sub>3</sub> + CaCl <sub>2</sub>	0 2	3 6

From a surface of 2100 sq m, H<sub>2</sub>O charged with CO<sub>2</sub> at pressure of 6 atmos dissolved 0.6 mg in 48 hours

H<sub>2</sub>O when charged with CO at 6 atmos and containing

16 mg NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 0.8 mg in 48 hours

80 mg NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 1.4 mg in 48 hours

40 mg K<sub>2</sub>CO<sub>3</sub> per litre, dissolved 1.2 mg in 48 hours (Muir, Proc Soc Manchester, 15 31)

Sol in KCN+Aq (Goyder, C N 1894, 69 262)

A solution of (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> containing 0.829 g

in 110 cc dissolves 0.2050-0.2279 g Cu (Turrentine, J phys Chem 1907, 11 625)

Sl attacked by liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 827)

Amts Cu dissolved by action of various oils on 8 sq in Cu by 10 days' exposure and subsequent 67 days—

	Amt Cu dissolved in 10 days	Amt Cu dissolved in subsequent 67 days
Linseed oil	0 3000 grain	0 2435 grain
Olive oil	0 2200 "	0 0200 "
Colza oil	0 0170 "	0 1230 "
Almond oil	0 1030 "	0 1170 "
Seal oil	0 0485 "	0 0315 "
Sperm oil	0 0030 "	0 0575 "
Castor oil	0 0065 "	0 0035 "
Neatsfoot oil	0 1100 "	
Sesame oil	0 1700 "	0 0015 "
Paraffine oil	0 0015 "	

(Watson, C N 36 200)

Qualitative results of the action of various oils on Cu are also given by Thompson (C N 34 176, 200, 219)

½ ccm oleic acid dissolves 0.0157 g Cu in 6 days (Gates, J phys Chem 1911, 15 143)

Sol in an alkaline solution of gelatine (3.54 %) copper gauze dissolved in 48 hours (Lidoff, C C 1899, II 471)

#### Cuprous acetylde, Cu C<sub>2</sub>

Decomp by heating with H<sub>2</sub>O or KCN+Aq Decomp by HNO<sub>3</sub> (Keiser, Am Ch J 1892, 14 289)

Not decomp by H<sub>2</sub>SO<sub>4</sub>, NH<sub>4</sub>OH, KOH+Aq or acetic acid, even on warming The dry salt is sol in very dil HCl+Aq without evolution of gas Sol in conc KCN+Aq (Böttger, A 1859, 109 356)

#### Cupric acetylde, CuC

Easily sol in HCl Turns brown in the air and becomes insol in acids (Phillips, Z anorg 1894, 6 241)

3Cu<sub>2</sub>C<sub>2</sub>O<sub>4</sub>+2H<sub>2</sub>O Solubility as that of Cu<sub>2</sub>C<sub>2</sub>H<sub>2</sub>O<sub>4</sub> (Soderbaum B 1897 30 764)

Cu<sub>2</sub>C<sub>2</sub>H<sub>2</sub>O<sub>4</sub> Insol in H<sub>2</sub>O When dry is violently decomp by conc H<sub>2</sub>SO<sub>4</sub> or not too dil HNO<sub>3</sub> Rapidly decomp by warming with dil acids especially HCl

Insol in NH<sub>4</sub>OH+Aq in absence of air partially sol in presence of air

Insol in organic solvents (Soderbaum B 1897, 30 762)

#### Cuprous acetylde iodide, Cu C I CuI

Ppt (Berthelot and Delepine A ch 1900, (7) 19 54)

**Cupric arsenide,  $\text{Cu}_3\text{As}_2$** 

(Reinsch, J pr 24 244)  
 $\text{Cu}_3\text{As}_2$  (Gehlen)  
 $\text{Cu}_3\text{As}_2$  Ppt Decomp by acids (Kane, Pogg 44 471)  
 $\text{Cu}_3\text{As}$  Min *Domeykite* Insol in HCl  
 +Aq, sol in  $\text{HNO}_3$   
 $\text{Cu}_3\text{As}$  Min *Algodonite*  
 $\text{Cu}_3\text{As}$  Min *Darwinite*

**Cuprous azoimide,  $\text{CuN}_3$** 

Insol in  $\text{H}_2\text{O}$  (Curtius)  
 Sensitive to sunlight (Wohler, B 1913, 46 2053)

**Cupric azoimide, basic,  $\text{CuO}$ ,  $\text{CuN}_3$** 

Insol in  $\text{H}_2\text{O}$  (Wohler, B 1913, 46 2055)

**Cupric azoimide,  $\text{CuN}_3$** 

Very explosive  
 Very sl sol in  $\text{H}_2\text{O}$  Decomp by boiling with  $\text{H}_2\text{O}$  (Curtius, J pr 1898, (2) 58 296)

**Copper azoimide ammonia,  $\text{CuN}_3$ ,  $2\text{NH}_3$** 

Ppt Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids (Dennis, J Am Chem Soc 1907 29, 19)

**Copper boride,  $\text{Cu}_3\text{B}_2$** 

(Marsden, J B, 1880 330)

**Cuprous bromide,  $\text{Cu}_2\text{Br}_2$** 

1 l  $\text{H}_2\text{O}$  dissolves at  $18^\circ\text{--}20^\circ$   
 0 4320 millimols bromine  
 0 3157 " cupric copper  
 0 1061 " cuprous copper  
 (Bodlander, Z anorg 1902, 31 460)

Sol in HBr, HCl without decomp, or  $\text{HNO}_3$ +Aq with decomp, also in  $\text{NH}_4\text{OH}$ +Aq Insol in boiling conc  $\text{H}_2\text{SO}_4$  or  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq (Berthelot, A ch 44 385)  
 Sol in  $\text{H}_2\text{SO}_3$ +Aq (Lean and Whatmough, Chem Soc 1898, 73 151)  
 Sol in NaCl, and  $\text{Na}_2\text{S}_2\text{O}_3$ +Aq (Renault, C R 59 319)

Solubility of  $\text{Cu}_2\text{Br}_2$  in KBr+Aq  
 All values recorded in millimols per litre

KBr	Total copper	Cupric copper	Cuprous copper
25	0 119	0 012	0 107
40	0 200	0 013	0 187
60	0 310	0 025	0 285
80	0 423	0 012	0 411
100	0 5836	0	0 5836
120	0 6934	0	0 6934
500	8 719		8 719

(Bodlander and Storbeck, Z anorg 1902, 31 462)

Difficultly sol in methyl acetate (Naumann, B 1909, 42 3790)

Sol in ethyl acetate (Naumann, B 1910 43 314)

Insol in acetone (Naumann, B 1904 37 4329, Erdmann, C C 1897, II 1014)

100 g acetonitrile dissolve 3 86 g  $\text{Cu}_2\text{Br}$  at  $18^\circ$  (Naumann and Schier, B 1914, 47 249)

Sol in pyridine (Naumann, B 1904, 37 4609)

Mol weight determined in pyridine methyl and ethyl sulphides (Werner, Z anorg 1897, 15 19, 26, and 28)

**Cupric bromide,  $\text{CuBr}_2$** 

Deliquescent Very sol in  $\text{H}_2\text{O}$  Insol in benzene (Franchimont, B 16 387)

Very sl attacked by cold or even hot  $\text{H}_2\text{SO}_4$  (Viard, C R 1902, 135 169)

Moderately sol in liquid  $\text{NH}_3$  (Horr Am Ch J 1908, 39 219)

100 g 95% formic acid dissolve 0 16 g a  $21^\circ$  (Aschan, Ch Z 1913, 37 1117)

100 g acetonitrile dissolve 24 43 g  $\text{CuBr}_2$  at  $18^\circ$  (Naumann and Schier, B 1914, 47 249)

Sol in benzonitrile (Naumann, B 1914 47 1369)

Sol in methyl acetate (Naumann, B 1909, 42 3790)

Sol in acetone (Naumann, B 1904, 3 4328)

Sol in acetone with a brown color (Erdmann, C C 1899, II 1014)

+ $2\text{H}_2\text{O}$ (?) (Berthelot, A ch 183 44 385)

+ $4\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Sabatier Bull Soc 1894, (3) 11 677)

**Cupric hydrogen bromide,  $\text{CuBr}$ , HBr  $2\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  (Sabatier Bull Soc 1894, (3) 11 681)

+ $10\text{H}_2\text{O}$  (Weinland and Knoll, Z anorg 1905, 44 116)

**Cupric lithium bromide,  $\text{CuBr}_2 \cdot 2\text{LiBr} + 6\text{H}_2\text{O}$** 

Very hygroscopic (Sementschenko, anorg 1899, 19 336)

Very hygroscopic, decomp by  $\text{H}_2\text{O}$  (Kurnakoff, C C 1899, I 16)

**Cupric potassium bromide,  $\text{CuBr}_2$ , KBr**

Decomp by  $\text{H}_2\text{O}$  (Sabatier, Bull Soc 1894, (3) 11 683)

**Cuprous bromide ammonia,  $\text{Cu}_2\text{Br}_2$ ,  $2\text{NH}_3$** 

Stable when dry

Easily sol in  $\text{HNO}_3$  and  $\text{NH}_4\text{OH}$ +Aq Other mineral acids and acetic acid separ

$\text{CuBr}_2$  (Richards, Z anorg 1898, 17 24)

$\text{Cu}_2\text{Br}_2 \cdot 6\text{NH}_3$  (Lloyd)  
 $\text{Cu}_2\text{Br}_2 \cdot 3\text{NH}_3$  (Lloyd, J phys Che 1908, 12 399)

**Cupric bromide ammonia,  $\text{CuBr}_2 \cdot 2\text{NH}_3$** 

Sol in  $\text{NH}_4\text{Br} + \text{Aq}$  without decomp (Richards, B 23 3790)

$3\text{CuBr}_2 \cdot 10\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  (Richards, Am Ch J 15 651)

$\text{CuBr}_2 \cdot 3\text{NH}_3$  Completely sol in a little  $\text{H}_2\text{O}$ , but is decomp by dilution Insol in alcohol (Rammelsberg, Pogg 55 246)

$\text{CuBr}_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  dissolves 69.03 pts  $\text{CuBr}_2 \cdot 4\text{NH}_3$  at  $25^\circ$  (Pudschies, Dissert)

$\text{CuBr}_2 \cdot 5\text{NH}_3$  As above (Rammelsberg)

$\text{CuBr}_2 \cdot 6\text{NH}_3$  Sol in small amts of  $\text{H}_2\text{O}$ , but decomp on dilution (Richards)

**Cupric bromide nitric oxide,  $\text{CuBr}_2 \cdot \text{NO}$** 

Decomp by  $\text{H}_2\text{O}$  (Manchot, B 1914, 47 1607)

**Cuprous chloride,  $\text{Cu}_2\text{Cl}_2$** 

1.53 g  $\text{Cu}_2\text{Cl}_2$  dissolve in 100 g  $\text{H}_2\text{O}$  at  $21.5^\circ$ , 1.55 g at  $26.5^\circ$  (Kremann and Noss, M 1912, 33 1206)

(Etard, A ch 1894 (7) 2 560)

See also under  $\text{CuCl} + 2\text{H}_2\text{O}$ 1 g  $\text{CuCl}$  is sol in 1.1 g methyl acetate at  $18^\circ$ . Sp gr  $18.4^\circ$  of the sat solution = 0.939 (Naumann, B 1909, 42 3793)1 g  $\text{CuCl}$  is sol in 2.49 g ethyl acetate at  $18^\circ$ . Sp gr of sat solution  $18.4^\circ = 0.9055$  (Naumann, B 1904, 37 3603)

Difficultly sol in ethyl acetate (Naumann, B 1910, 43 314)

1 pt sol in 249.3 pts ethyl acetate at 10° (Alexander, Dissert 1899)

Solubility in acetone

34.7 g acetone dissolve 1 g  $\text{CuCl}_2$  at 18°  
Sp gr of sat solution 18°/4° = 0.8154 (Naumann, B 1904, 37 4329)

140 pts are sol in 100 pts acetone at 56° (Laszczyński, B 1894, 27 2287)

Sol in acetone and methylal 1 gram dissolves in 34.08 grams of acetone at 18° (Eidmann, C C 1899, II, 1014)

100 pts absolute ether dissolve 0.043 g  $\text{CuCl}_2$  (Bodtker, Z phys Ch 1897, 22 511)

Mol weight determined in pyridine and methyl sulphide (Werner, Z anorg 1897, 15 20 and 25)

100 g sat solution in acetonitrile contains 1.57 g  $\text{CuCl}_2$  (Naumann and Schier, B 1914, 47 249)

Sl sol in benzonitrile (Naumann, B 1914, 47 1369)

Sol in boiling dipropylamine (Werner, Z anorg 1897, 15 34)

Sol in urethane (Lcy, Z phys Ch 1897, 22 81), (Castoro Z anorg 1899, 20, 61)

+ $\text{H}_2\text{O}$  (Ditte, A ch (5) 22 551)

Sol in  $\text{H}_2\text{O}$  with slight decomp (Sabatier, Bull Soc 1895, (3) 13 601)

+ $2\text{H}_2\text{O}$  Deliquescent 100 g  $\text{H}_2\text{O}$  dissolve 121.4 g  $\text{CuCl} + 2\text{H}_2\text{O}$  at 16.1° (Rudorff)

Aq sol at 35° contains 9.659 Mol %  $\text{CuCl}$   
" 15° " 9.934 " "

(Schlenker, C C 1911, II 349)

$\text{CuCl} + 2\text{H}_2\text{O} + \text{Aq}$  sat at 30° contains 43.95%  $\text{CuCl}$  (Moorburg, C C 1904, II 1362)

43.95 g anhydrous  $\text{CuCl}$  are dissolved in 100 g  $\text{CuCl} + \text{Aq}$  at 30° (Schlenker, Arch neer Sc 1910 [2] 15 117)

44.47% by weight anhydrous  $\text{CuCl}$  is dissolved in  $\text{H}_2\text{O}$  at 35° (Schlenker and Thoms Verh k Akad Wet Amst 1912, 21 333)

Solubility of  $\text{CuCl} + 2\text{H}_2\text{O}$  in ethyl alcohol + Aq at 11°

Percent ethyl alcohol by volume	Gram $\text{CuCl} + 2\text{H}_2\text{O}$ in
99 %	1.175
98 %	1.116
96 %	1.097
95 %	1.070
94 %	1.059

Anhydrous salt dissolves readily in absolute ethyl alcohol,  $\text{CuCl} + 2\text{H}_2\text{O}$  is precipitated by  $\text{H}_2\text{O}$

Solubility of  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  in ethyl alcohol + Aq at 11.5° C under addition of increasing amounts of  $\text{CuCl}_2$

P = Percent of ethyl alcohol by volume

G = Grams of  $\text{CuCl}_2$  added

Cc = Grams of  $\text{CuCl}_2$  in 5 cc of the solution

Cw = Grams of water in 5 cc of the solution, calculated from

- (1) the water content of the alcohol
- (2) the water of crystallization which had gone into solution
- (3) the water held mechanically in  $\text{CuCl}_2 + 2\text{H}_2\text{O}$

(de Coninck, C R 1900, 131 59)

## Solubility in organic solvents

Sol in propyl alcohol, hot glycol, hot glycerine, hot paraldehyde, hot crys acetic acid, pure acetone, 30% methylamine+aq, pure pyridine, pure α-picoline, acetonitrile, sl sol in isobutyl and amyl alcohols, crystallizable formic acid, ethyl acetate, insol in cold glycol, cold glycerine, cold paraldehyde, benzaldehyde, cold crystallizable acetic acid, ord ether, abs ether, hot and cold CS<sub>2</sub>, cold aniline, cold orthotoluidine, methylene chloride, ethyl iodide, propyl iodide, ethylene bromide, benzene, toluene, xylene, ligroin, nitrobenzene, cold piperidine and essence of terebenthine (de Coninck, C R 1900, 131 59)

+5H<sub>2</sub>O

Aq sol at 35° contains 2.921 Mol % CuCl<sub>2</sub>  
15° " 1 11

(Schreinemakers, C C 1911, II 349)

## Cuprous hydrogen chloride, CuCl, HCl

Sol in H<sub>2</sub>O (Neumann, M 1894, 15 493)Cupric hydrogen chloride, CuCl<sub>2</sub>, HCl+3H<sub>2</sub>O

Decomp by H<sub>2</sub>O Sol in HCl+aq below 0° (Engel, C R 106 273)

CuCl, 2HCl Deliquescent Very sol in H<sub>2</sub>O (Alexander, Dissert 1899)

+5H<sub>2</sub>O Properties as above (Sabbatier, C R 106 1724)

CuCl<sub>2</sub>, 3HCl Sol in H<sub>2</sub>O (Neumann M 1894, 15 493)

Cupric gold (auric) chloride, CuCl<sub>2</sub>, 2AuCl<sub>3</sub>+6H<sub>2</sub>O

10% is sol in H<sub>2</sub>O at 18° Valhuysen Z anorg 1911, 70 210

Cupric lithium chloride, CuCl<sub>2</sub>, LiCl+2½H<sub>2</sub>O

Decomp on air Decomp by dissolving in H<sub>2</sub>O Sol in conc LiCl+aq without decomp

Decomp by alcohol (Chassevant, A ch (6) 30 33)

+2H<sub>2</sub>O (Meyerhoffer, W A B 100, 2b 621)

Cupric mercuric chloride

Easily sol in H<sub>2</sub>O (v Bonsdorff)

Cupric mercuric potassium chloride, CuCl<sub>2</sub>, 3HgCl, 6KCl+2H<sub>2</sub>O

Deliquescent in moist air Sol in boiling H<sub>2</sub>O without decomp, and recrystallises if cooled slowly Insol in absolute alcohol (v Bonsdorff, Pogg 33 81)

Cuprous nitrosyl chloride, Cu<sub>2</sub>Cl, 2NOCl

Very deliquescent and sol in H<sub>2</sub>O with immediate decomp (Sudborough, Chem Soc 59 638)

Cuprous potassium chloride, CuCl, 4KCl

Sol in H<sub>2</sub>O (Vitscherlich, A ch 73 384)  
For solubility data, see CuCl—KCl under cuprous chloride

Cupric potassium chloride

CuCl, KCl (Meyerhoffer, Z phys Ch 3 336)

Sol in H<sub>2</sub>O, only sl sol in conc HCl—aq (Groger, Z anorg 1899 19 330)

CuCl, 2KCl—2H<sub>2</sub>O Sol in H<sub>2</sub>O and alcohol (Berzelius Pogg 13 478)

The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr pt produced by the salt and on the conductivity and sp gr of its aqueous solutions (Jones, Am Ch J 1905 34 322)

For solubility data see CuCl—KCl under cupric chloride

Cupric rubidium chloride, CuCl, 2RbCl

Easily sol in H<sub>2</sub>O and HCl—aq (Godefroy, B 8 9)

+2H<sub>2</sub>O Sol in H<sub>2</sub>O Wvrouboff, J B 1887 538)

Cuprous sodium chloride

Very sol in H<sub>2</sub>O

**Cupric sodium chloride**

Easily sol in conc NaCl+Aq Sol in alcohol of 0.837 sp gr

No double salt exists (Scheinemakers and de Paat, Z phys Ch 1909, 65 586)

**Cupric thallic chloride,  $\text{CuCl}_2 \cdot 2\text{TlCl}_3$** 

Sol in  $\text{H}_2\text{O}$  (Willm, A ch (4) 5 55)  
+6 $\text{H}_2\text{O}$  Can be cryst from  $\text{H}_2\text{O}$   
(Gewecke, A 1909, 366 225)

**Cuprous chloride ammonia,  $\text{Cu}_2\text{Cl}_2 \cdot \text{NH}_3$** 

(Lloyd, J phys Chem 1908, 12 399)  
 $\text{Cu}_2\text{Cl}_2 \cdot 2\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  or acids,  
not by alcohol (Ritthausen, J pr 59 369)  
 $\text{Cu}_2\text{Cl}_2 \cdot 3\text{NH}_3$  (Lloyd, J phys Chem  
1908, 12 399)  
 $\text{Cu}_2\text{Cl}_2 \cdot 6\text{NH}_3$  (Lloyd, J phys Chem 1908  
12 399)

**Cupric chloride ammonia,  $\text{CuCl}_2 \cdot 2\text{NH}_3$** 

Decomp by  $\text{H}_2\text{O}$  (Kane, A ch 72 273)  
 $\text{CuCl}_2 \cdot 4\text{NH}_3$  Sol in  $\text{H}_2\text{O}$  (Bouzat, C R  
1902, 135 294)

+ $\text{H}_2\text{O}$  (*Cuprammonium chloride*) Sol  
in  $\text{H}_2\text{O}$  and hot  $\text{NH}_4\text{OH}$ +Aq  
+2 $\text{H}_2\text{O}$  Sol in small amt of  $\text{H}_2\text{O}$   
 $\text{Cu}(\text{OH})_2$  is pptd by dilution (Bouzat,  
A ch 1903, (7) 29 350)  
 $\text{CuCl}_2 \cdot 5\text{NH}_3$  (Bouzat, A ch 1903, (7) 29  
350)

+11 $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  On dilution  
 $\text{Cu}(\text{OH})_2$  is pptd Sol in  $\text{NH}_4\text{OH}$ +Aq,  
solubility decreases as  $\text{NH}_3$  concentration  
increases (Bouzat, A ch 1903, (7) 29 350)  
 $\text{CuCl}_2 \cdot 6\text{NH}_3$  (completely sol in  $\text{H}_2\text{O}$   
(Rose, Pogg 20 55)

Sol in  $\text{H}_2\text{O}$  but decomp by great dilution  
with pptn of  $\text{Cu}(\text{OH})_2$

Sol in liquid  $\text{NH}_3$  (Bouzat, A ch  
1903 (7) 29 350)

**Cuprocupric chloride ammonia,  $\text{CuCl} \cdot \text{CuCl} \cdot \text{NH}_3 + \text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  or alcohol Abundantly  
sol in  $\text{NH}_4\text{Cl}$ +Aq but with partial decom-  
position (Ritthausen)

**Cupric chloride ammonia platinous chloride,**

$\text{CuCl} \cdot 4\text{NH}_3 \cdot \text{PtCl}_2$   
See Platodiamine cupric chloride

**Cuprous chloride carbon monoxide,**

$\text{CuCl} \cdot 2\text{CO} + \text{H}_2\text{O}$   
Very sol in  $\text{HCl}$  (sp gr 1.19) with evolu-  
tion of  $\text{CO}$  Sol in  $\text{NH}_4\text{OH}$ +Aq (Min-  
chot and Friend, A 1908, 359 110)  
 $2\text{CuCl} \cdot \text{CO} + 2\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Ber-  
thelot, A ch 1896, (3) 46 488)  
 $4\text{CuCl} \cdot 3\text{CO} + 7\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ ,  
but decomp therewith very quickly Sol  
in  $\text{CuCl}$ + $\text{HCl}$

**Cupric chloride hydrazine,  $\text{CuCl}_2 \cdot 2\text{N}_2\text{H}_4$** 

Easily decomp (Hofmann and Marburg,  
A 1899, 305 222)

**Cuprous chloride mercuric sulphide,  $\text{Cu}_2\text{Cl}_2 \cdot 2\text{HgS}$** 

Insol in  $\text{H}_2\text{O}$ , sol in conc hot  $\text{HCl}$ +Aq,  
not decomp by boiling dil  $\text{H}_2\text{SO}_4$ +Aq, but  
decomp by conc  $\text{H}_2\text{SO}_4$  (Heumann, B 7  
1390)

**Cuprous fluoride,  $\text{Cu}_2\text{F}_2$** 

Insol in  $\text{H}_2\text{O}$  or  $\text{HF}$  Sol in conc  $\text{HCl}$ +  
Aq, from which it is precipitated by  $\text{H}_2\text{O}$   
Insol in alcohol (Berzelius, Pogg 1 28)  
Decomp by  $\text{H}_2\text{O}$  into sol  $\text{CuF}_2$  Sol in  
boiling  $\text{HCl}$ +Aq and in  $\text{HNO}_3$ +Aq Only  
sl attacked by warm  $\text{H}_2\text{SO}_4$  (Poulenc, C R  
116 1447)

**Cupric fluoride,  $\text{CuF}_2$** 

Easily takes up  $\text{H}_2\text{O}$  to form  $\text{CuF}_2 \cdot 2\text{H}_2\text{O}$   
Sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HF}$ +Aq (Poulenc, C  
R 116 1448)

**Solubility at 25° in  $\text{HF}$ +Aq**

Normality of $\text{HF}$ +Aq	g atoms Cu in 1000 c c of solution
0.12	0.0307
0.28	0.1164
0.57	0.2494
1.05	0.388
2.25	0.463

Solubility is decreased by presence of  $\text{Kf}$   
(Jugot, Z anorg 1901, 27 29)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J  
1895, 20 527)

Insol in methyl acetate (Naumann, B  
1909 42 3790) ethyl acetate (Naumann  
B 1910 43 311)

Insol in acetone (Fidmann, C C 1899  
II 1014, Naumann B 1904, 37 4329)  
+2 $\text{H}_2\text{O}$  Sl sol in cold, decomp by ho  
 $\text{H}_2\text{O}$  (Berzelius)

**Cupric hydrogen fluoride,  $\text{CuF}_2 \cdot 5\text{H}_2\text{O} + 2\text{H}_2\text{O}$** 

Deliquescent  
Easily sol in  $\text{H}_2\text{O}$  and dil acids  
Sol in  $\text{NH}_4\text{OH}$ +Aq with decomp (Bohm  
Z anorg 1901, 43, 329)

**Cupric potassium fluoride,  $\text{CuF}_2 \cdot 2\text{Kf}$** 

Easily sol in  $\text{H}_2\text{O}$   
 $\text{CuF}_2 \cdot \text{Kf}$  Very sl sol in  $\text{H}_2\text{O}$  sl sol in  
dil acids (Helmholt, Z anorg 3 115)

**Cupric rubidium fluoride,  $\text{CuF}_2 \cdot \text{Rbf}$** 

As the K salt (Helmholt)

**Cupric silicon fluoride**

See Fluosilicate, cupric

**Copper stannic fluoride**  
See Fluostannate, copper

**Copper tantalum fluoride**  
See Fluotantalate, copper

**Copper titanium fluoride**  
See Fluotitanate, copper

**Copper tungstyl fluoride**  
See Fluoxytungstate, copper

**Copper zirconium fluoride**  
See Fluozirconate, copper

**Cupric fluoride ammonia,  $\text{CuF}_2 \cdot 4\text{NH}_3 + 5\text{H}_2\text{O}$**

Decomp rapidly in the air  
Easily sol in  $\text{H}_2\text{O}$   
Decomp by boiling with  $\text{H}_2\text{O}$  with evolution of  $\text{NH}_3$   
Easily sol in dil acids (Bohm, Z anorg 1905, 43 333)

**Cuprous hydride,  $\text{CuH}$**

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Wurtz, C R 18 102)  
Sol in warm conc  $\text{HCl}$  with decomp (Bartlett, Am Ch J 1895, 17 187)

**Cupric hydride,  $\text{CuH}_2$**

Sol in  $\text{HCl}$  with decomp (Bartlett, Am Ch J 1895, 17 187)

**Copper hydrosulphide,  $7\text{CuS} \cdot \text{H}_2\text{S}$**

(Linder and Picton, Chem Soc 1892, 61 120)

$9\text{CuS} \cdot \text{H}_2\text{S}$  (Linder and Picton)  
 $22\text{CuS} \cdot \text{H}_2\text{S}$  (Linder and Picton)

**Cuprous hydroxide,  $\text{Cu}_2\text{O} \cdot x\text{H}_2\text{O}$**

Sol in acids as cupric salt Insol in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$   
Sol in  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , sol in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$

**Cuprocupric hydroxide,  $\text{CuOH} \cdot 3\text{Cu}(\text{OH}) + 3\text{H}_2\text{O}$**

Sol in acids (Francke, Dissert 1907)

**Cupric hydroxide,  $3\text{CuO} \cdot \text{H}_2\text{O}$**

Insol in  $\text{H}_2\text{O}$  or dil alkalies Easily sol in warm  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose)  
Much more difficultly sol than  $\text{Cu}_2\text{O} \cdot \text{H}_2\text{O}$  in  $\text{KOH} + \text{Aq}$  (Chodnew, J pr 28 220)  
True composition is  $6\text{CuO} \cdot \text{H}_2\text{O}$   
See also Cupric oxide  
 $\text{CuO}_2 \cdot \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , but decomp into  $6\text{CuO} \cdot \text{H}_2\text{O}$  by being boiled therewith  
Extremely easily sol in acids  
Sol in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$

(Dawson, Chem Soc 1909, 95 373)

Sl sol in alkali carbonates + Aq, especially  $\text{KHCO}_3$  and  $\text{NaHCO}_3$  (Berzelius)

Sol in cold  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq, but pptd on warming (Field, Chem Soc (2) 1 28)

Partially sol when freshly pptd in  $\text{KC}_2\text{O}_8$  + Aq (Rodgers, 1834)

Sol in  $(\text{NH}_4)_2\text{S}_2\text{O}_8$  + Aq (Moreau, Apot Ztg 1901, 16 383)

Sol in  $\text{MSCN}$  + Aq, more difficultly sol in  $\text{NH}_4\text{SCN}$  + Aq than  $\text{ZnO}_2\text{H}_2$  (Gronmann, Z anorg 1908, 58 269)

Very sol in hydroxylamine (Jannasch and Cohen, J pr 1905, (2), 72 14)

Insol in acetone (Fudmann, C C 1896, II 1014)

Sol in large amt in  $\text{NaC}_2\text{H}_3\text{O}_2$  + Aq (Mecer, 1844)

Not pptd in presence of  $\text{Na}_2\text{C}_2\text{O}_4$  (Sillman, 1844)

Insol in cane sugar + Aq, unless an alkali or alkaline earth is present (Peschier)

Recently pptd  $\text{CuO}_2\text{H}_2$  is easily sol in cane sugar with  $\text{NaOH}$ ,  $\text{KOH}$ , or  $\text{Ca}(\text{OH})_2$  + Aq, less sol in presence of  $\text{SrO}_2\text{H}_2$  or  $\text{BaO}_2$  (Becquerel)

Not pptd by  $\text{KOH}$  + Aq in solutions containing tartaric acid, cane sugar, and many other non-volatile organic substances

Sol in  $\text{Ca}$ ,  $\text{Ba}$ ,  $\text{Sr}$ ,  $\text{K}$  or  $\text{Na}$  sucrates + Aq, and ppts of double sucrates form when solutions of the first three bases are heated, but no

ppt forms in the last two cases even at 100° (Hunton)

Insol in simple Ca, Ba, or K succates + Aq, but immediately sol when an excess of cane sugar + Aq is present (Pelgot)

Moderately sol in amylamine, easily sol in methyl, less in ethylamine (Wurtz)

Sol in sorbine + Aq (Pelouze)

Not pptd in presence of aromatic oxyacids or phenols of the ortho series. Thus in presence of salicylic acid, pyrocatechin, gallic acid, pyrogallie acid, etc., NaOH + Aq does not ppt  $\text{CuO}_2\text{H}_2$  from Cu solutions, but pptn is not prevented by benzoic acid, resorcin, hydroquinone, etc (Weith, B 9 342)

Sol in solutions of alkali salts of "spaltungsprodukte" of albumen (Kalle and Co, Pat 1901)

Sol in starch emulsion which has become thin liquid in an alternating magnetic field (Rosenthal, C C 1908, I 593)

$\text{CuO}$ ,  $2\text{H}_2\text{O}$  (Rubénovitch, C R 1899, 129 336)

$\text{CuO}$ ,  $3\text{H}_2\text{O}$  (Kosmann, Z anorg 1893, 3 373)

$2\text{CuO}$ ,  $3\text{H}_2\text{O}$  (Cross, Gm — K 5 1, 753)

$4\text{CuO}$ ,  $\text{H}_2\text{O}$  Insol in  $\text{NH}_4\text{OH}$  + Aq (Mailhe, A ch 1902, (7) 27 393)

**Cupric hydroxide ammonia**,  $\text{CuO}_2\text{H}_2$ ,  $4\text{NH}_3$

Present in ammoniacal solution of  $\text{CuO}_2\text{H}_2$  (Dawson, Z phys Ch 1909, 69 110)

**Cuprous imide**,  $\text{Cu}_2\text{NH}$

Decomp at 160° forming  $\text{Cu}_3\text{N}$

Readily hydrolysed by  $\text{H}_2\text{O}$

Sol in liquid  $\text{NH}_3$  solutions of  $\text{NH}_4\text{NO}_3$  (Franklin, J Am Chem Soc 1912, 34 1502)

**Cuprous iodide**,  $\text{Cu}_2\text{I}_2$

Insol in  $\text{H}_2\text{O}$ , or dil acids

Calculated from electrical conductivity of  $\text{Cu}_2\text{I}_2$  + Aq, 1 l  $\text{H}_2\text{O}$  dissolves about 8 mg  $\text{Cu}_2\text{I}_2$  at 18° (Kohlrausch and Rose, Z phys Ch 12 241)

Sol in conc  $\text{H}_2\text{SO}_4$  (Vitali, Gm — K 5 1, 947)

Sol with difficulty in conc  $\text{HCl}$  + Aq. Decomp by conc  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ . Insol in  $\text{NaCl}$ ,  $\text{KNO}_3$ ,  $\text{Na}_2\text{SO}_3$ ,  $\text{KBr}$ , or  $\text{NH}_4\text{Cl}$  + Aq. Sol in  $\text{NH}_4\text{OH}$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{KCN}$ , or  $\text{KI}$  + Aq (Renault, C R 59 558)

Appreciably sol in N/10  $\text{HCl}$ . Practically insol in N/10  $\text{H}_2\text{SO}_4$  (Moser, Z anal 1904, 43 604)

Results of experiments on solubility of  $\text{Cu}_2\text{I}_2$  in  $\text{I}_2$  + Aq in presence of acids and salts are given by Bray and MacKay.

$\text{Cu}_2\text{I}_2$  was found to be sl sol in  $\text{H}_2\text{O}$  but a considerable amt dissolves in presence of  $\text{I}_2$ , owing to formation of  $\text{CuI}_2$  and  $\text{CuI}_3$  (J Am Chem Soc 1910, 32 1207)

Solubility of  $\text{Cu}_2\text{I}_2$  in  $\text{I}_2$  + Aq at 20°

22 0	4-N	7 1263
22 0	4-N	6 9768

The solutions undergo change in the course of a few days, iodine being set free, the solubility of the cuprous iodide is not markedly affected thereby

(Kohn, Z anorg 1909, 63 337)

1 l of a 0.2N solution of  $\text{KI}$  dissolves 0.000157 g mol  $\text{CuI}$  (Bodlander, Z anorg 1902, 31 475)

Very sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

Insol in  $\text{CS}_2$  (Arctowski, Z anorg 1894, 6 257)

Practically insol in methylene iodide (Retgers, Z anorg 1893, 3 347)  
Sol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in acetone (Naumann, B 1904, 37 4329), (Eidmann, C C 1899, II 1014)  
100 g acetonitrile dissolve 3.52 g  $\text{Cu}_2\text{I}_2$  at  $18^\circ$  (Naumann and Schier, B 1914, 47 249)

Min *Marshale* (Gm—K 5 1, 945)

### Cupric iodide, $\text{CuI}_2$

Exists only in very dil aqueous solution (Traube, B 17 1064)

### Copper periodide, $\text{CuI}_4$

Sol in  $\text{H}_2\text{O}$  (Walker and Dover, Chem Soc 1905, 87 1588)

### Copper ammonium iodide ammonia

See Cupriammonium iodide ammonia

### Cuprous mercuric iodide, $\text{Cu}_2\text{I}_2, \text{HgI}_2$

$\text{KI} + \text{Aq}$  dissolves out  $\text{HgI}_2$

### Cuprous mercuric iodide ammonia, $\text{CuI}_2, 2\text{HgI}_2, 4\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  or acids Sol in a mixture of acetic acid and alcohol

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$  As above (Jorgensen, J pr (2) 2 347)

### Cupric nitrogen iodide, $\text{CuI}_2, \text{N}_2\text{H}_4\text{I}_2$

Decomp by  $\text{H}_2\text{O}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  (Guyard, C R 97 526)

### Cupric thallic iodide ammonia, $\text{CuI}_2, 2\text{THI}_3, 4\text{NH}_3$

Decomp slowly by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp Sol in alcohol

### Cuprous iodide ammonia, $\text{CuI}, \text{NH}_3$

Ppt (Anderline, Gazz ch it 1912, 42 I, 321)

$+4\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Very sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Silberad, Chem Soc 1905, 87 67)

$\text{Cu}_2\text{I}_2, 3\text{NH}_3$  (Lloyd, J phys Chem 1908, 12 399)

$\text{Cu}_2\text{I}_2, 4\text{NH}_3$  (Lloyd, J Phys 4 328)

$+ \text{H}_2\text{O}$  (Saglier, C R 104 1440)

$\text{Cu}_2\text{I}_2, 6\text{NH}_3$  (Lloyd)

### Cupric iodide ammonia, $\text{CuI}_2, 4\text{NH}_3 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp Not attacked by cold

alcohol or ether (Berthelmont, J P r m 15 445) (Pozzi-Escot, C R 1900, 130 30)

$\text{CuI}_2, 6\text{NH}_3$  Sol in liquid  $\text{NH}_3$  (Lloyd, Am Ch J 1908, 39 205)

$3\text{CuI}_2, 10\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  (Chardas, Am Ch J 1895, 17 302)

Sol in liq  $\text{NH}_3$  (Horn, Am Ch J 1908, 39 204)

### Cupriammonium iodide ammonia,

$3\text{Cu}(\text{NH}_3)_2\text{I}_2, 4\text{NH}_3$

Decomp by air and by  $\text{H}_2\text{O}$  (Richardson, Am Ch J 1895, 17 302)

### Copper periodide ammonia, $2\text{CuI}, \text{I}_2, 1\text{H}_2\text{O}$

Because of its insolubility it cannot be recryst from any solvent (Silberad, Chem Soc 1905, 87 66)

### Copper tetraiodide, ammonia, $\text{CuI}_4, 4\text{NH}_3$

(Jorgensen, J pr (2) 2 353)

### Copper hexaiodide ammonia, $\text{CuI}_6, 4\text{NH}_3$

Not decomp in  $\text{H}_2\text{O}$  in closed vessels (Jorgensen)

### Copper mercuric iodide ammonia,

$\text{CuHg}_2\text{I}_6, 5\text{NH}_3$

$\text{CuHgI}_3, 2\text{NH}_3$  Ppt Decomp by  $\text{H}_2\text{O}$  and by alcohol

$\text{CuHg}_2\text{I}_6, 3\text{NH}_3$  Ppt Decomp by long washing with  $\text{H}_2\text{O}$

$\text{CuHg}_2\text{I}_6, 4\text{NH}_3$  Ppt Decomp by  $\text{I}_2\text{O}$  Sl attacked by abs alcohol

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$  Ppt (Anderline, Gazz ch it 1912, 42, (1) 321, C C 1912, I 95)

### Copper nitride, $\text{Cu}_3\text{N}_2$

Decomp by dil or conc acids

Easily decomp by  $\text{H}_2\text{O}$  when finely powdered (Rossel, C R 1895, 121 942)

### Copper suboxide, $\text{Cu}_4\text{O}$

Not attacked by  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{SO}_4 + \text{Aq}$  into  $\text{Cu}$  and  $\text{CuSO}_4$ , dil  $\text{HCl} + \text{Aq}$  has similar action Not attacked by  $\text{NH}_4\text{OH}$

$+ \text{Aq}$  or  $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Pogg 120 1)

$\text{Cu}_2\text{O}$  Not attacked by dil or conc acids, even aqua regia Slowly sol in  $\text{Aq}$  (Bailey and Hopkins, Chem Soc 1890, 57 272)

Is a solution of oxide in  $\text{Cu}$  (Zeit angew Ch 1908, 21 51)

Converted by  $\text{Cl} + \text{Aq}$  into cuprous chloride

### Cuprous oxide, $\text{Cu}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{SO}_4 + \text{Aq}$  or cold very dil  $\text{HNO}_3 + \text{Aq}$  into a cupric salt and  $\text{Cu}$

Converted by  $\text{Cl} + \text{Aq}$  into cuprous chloride

Solubility of  $\text{Cu}_2\text{O}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ 

Conc of total Cu		Conc of total $\text{NH}_3$

(Donnan and Thomas, Chem Soc 1911, 99 1791)

Sol in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose)

Sl sol in excess of  $\text{KOH} + \text{Aq}$  (Chodnew)

Sol in conc  $\text{MgCl}_2$  and  $\text{FeCl}_2 + \text{Aq}$  (Hunt, C R 69 1357)

Sl attacked by liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 827)

Mn (cuprite) Sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , and  $\text{NH}_4\text{OH} + \text{Aq}$

Cupric oxide,  $\text{CuO}$ 

Insol in  $\text{H}_2\text{O}$  Easily sol in acids Sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  but dissolves on addition of a few drops of acid or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Insol in dil, but sol in warm conc  $\text{NaOH}$ , and  $\text{KOH} + \text{Aq}$  (Low, Z anal 9 463)

$\text{CuO}$  prepared at a low temp is easily sol in dil acids, but when ignited is slowly sol in boiling conc acids, but moderately rapidly in a cold mixture of  $\text{NH}_4\text{I} + \text{HCl}$  (Joannis, C R 1886, 102 1161)

Solubility in  $\text{N-HNO}_3$  1 l of the solution contains 0 4802 g atoms Cu at  $25^\circ$  (Jaeger, Z anorg 1901, 27, 33)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$ 

	Time	G $\text{CuO}$ in 10 cem of the solution
0 25N-HF	1 1/4 hrs	0 0431
	3 3/4 "	0 0619
	25 1/4 "	0 0812

(Deussen, Z anorg 1905, 44 421)

Solubility of  $\text{CuO}$  in  $\text{HF}$  at  $25^\circ$ 

$\text{Cu} = \text{g-atoms Cu}$  in 1 l of the solution

HF normality	Cu
0 12	0 0307
0 28	0 1164
0 57	0 2494
1 08	0 388
2 28	0 463

(Jaeger, Z anorg 1901, 27 29)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{KF}$  at  $25^\circ$ 

$\text{Cu} = \text{g-atoms Cu}$  in 1 l of the solution

HF normality	Cu
0 12	0 0356
0 28	0 06437
0 57	0 1442
1 11(1 08)	0 2451
2 17(2 28)	0 2517

(Jaeger, l c)

Sl sol in large excess of  $\text{KOH} + \text{Aq}$  (de Coninck, C C 1904, II, 65)

Slowly sol in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$  and less easily in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Rose)

Sol in boiling  $\text{H}_2\text{O}$  solutions of  $\text{Al}$ ,  $\text{Gl}$ ,  $\text{U}$ ,  $\text{Cr}_2$ ,  $\text{Fe}_2$ , or  $\text{Bi}$  nitrates and chlorides,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{Hg}_2(\text{NO}_3)_2$ ,  $\text{SbCl}_3$ ,  $\text{SnCl}_4$ , and  $\text{SnCl}_4$ , with pptn of oxides of the bases of those salts Unacted upon by boiling  $\text{H}_2\text{O}$  solutions of  $\text{Mn}$ ,  $\text{Mg}$ ,  $\text{Ni}$ ,  $\text{Co}$ ,  $\text{Zn}$ ,  $\text{Ce}$ , or

Fe nitrates or chlorides,  $\text{AgNO}_3$ ,  $\text{Pb(NO}_3)_2$ ,  $\text{Cd(NO}_3)_2$ , and  $\text{HgCl}_2$  (Persoz)

Pure  $\text{CuO}$  is very sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  but the solution is greatly increased by the addition of  $\text{NH}_4$  salts (Muthmann, C C 1904 II, 410)

Sol in hot  $(\text{NH}_4)_2\text{SO}_4$  or  $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$  (Jumau, Electrochem Ind 1908, 6 258)

15% dissolves in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  in 24 hrs (Schnabel, Z B H Sal 1880, 23 282)

Sl attacked by liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

Solubility in N-acetic acid 1 l of the solution contains 0.1677 g-atoms Cu at 25° (Jaeger, Z anorg 1902, 27 33)

Insol in acetone (Naumann, B 1904, 37 4329, Erdmann, C C 1899, II 1014)

Sl sol in benzamide (Dessaignes, A ch 1852, (3), 34 146)

Insol in piperidine (Cahours, C R 1852, 34 481)

Sol in acid amines as asparagin (Piria, A ch 1848, (3), 22 160)

Sol in amines alone or mixed with  $\text{NH}_3$  (Lance, Dissert 1905)

Slowly sol in Ca or any other alkali succrate + Aq, but not in cane sugar + Aq (Hunton)

Solubility in (calcium succrate + sugar) + Aq  
1 l solution containing 418.6 g sugar and 34.3 g  $\text{CaO}$  dissolves 10.26 g  $\text{CuO}$

1 l solution containing 296.5 g sugar and 24.2 g  $\text{CaO}$  dissolves 5.68 g  $\text{CuO}$

1 l solution containing 174.4 g sugar and 14.1 g  $\text{CaO}$  dissolves 3.47 g  $\text{CuO}$  (Bodenbender, J B 1866 600)

Polypeptides in aqueous solution dissolve  $\text{CuO}$  by short boiling (Fischer, B 1906, 39 576)

$+ \frac{1}{2} \text{H}_2\text{O} = 6\text{CuO} + \text{H}_2\text{O}$  Insol in dil, but sol in conc  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$

Sol in volatile oils

See also Cupric hydroxide

Min *Melaconite* Sol in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$

**Cuprocupric oxide**,  $\text{Cu}_5\text{O}_3 = 2\text{Cu}_2\text{O}$ ,  $\text{CuO}$  (Favre and Maumené)

$\text{Cu}_5\text{O}_3 + \text{H}_2\text{O} = \text{Cu}_2\text{O}$ ,  $\text{CuO} + \text{H}_2\text{O}$  When freshly pptd., sol in  $\text{HCl} + \text{Aq}$ , but insol after drying (Siewert, J B 1866 257)

$\text{Cu}_4\text{O}_3 = \text{Cu}_2\text{O}$ ,  $2\text{CuO}$  (Siewert)

All oxides of Cu except  $\text{Cu}_2\text{O}$ ,  $\text{Cu}_3\text{O}$ ,  $\text{CuO}$ , and  $\text{Cu}_2\text{O}$ , are mixtures (Osborne, Sil Am J (3) 32 33, Debray, C R 99 583)

**Copper dioxide**,  $\text{CuO}_2 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Decomp by acids with formation of cupric salt and  $\text{H}_2\text{O}_2$  (Weltzien, A 140 207)

**Cuprous oxide ammonia** (cuprosammonium oxide)

Known only in solution (Wagner, C C 1863 239)

**Cupric oxide ammonia** (cuprammonium hydroxide),  $3\text{CuO}$ ,  $4\text{NH}_3 + 6\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (Kane, A ch 72 283)

$\text{CuO}$ ,  $4\text{NH}_3 + 4\text{H}_2\text{O}$  Very deliquescent  
Decomp in the air and by  $\text{H}_2\text{O}$  (Malaguti and Sarreau, A ch (3) 9 438)

**Cuprous oxybromide**,  $\text{Cu}_2\text{Br}_2$ ,  $\text{CuO} + \text{H}_2\text{O}$

(Spring and Lucion, Bull Ac Belg (3) 24 21)

**Cupric oxybromide**,  $\text{CuBr}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids or  $\text{NH}_4\text{OH} + \text{Aq}$  (Brun, C R 109 66)

Insol in  $\text{H}_2\text{O}$  but decomp by continued boiling Sol in conc acetic acid, sl sol in conc  $\text{CuBr}_2 + \text{Aq}$  Insol in dil  $\text{KBr} + \text{Aq}$  (Richards, Proc Am Acad 1890, 25 215)

**Cupric oxybromide ammonia**,  $2\text{CuO}$ ,  $\text{CuBr}_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$

(Kohlschutter and Pudsches, B 1904, 37 1159)

**Cuprous oxychloride**,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{CuO} + 3\text{H}_2\text{O}$

(Spring and Lucion, Bull Ac Belg (3) 24 21)

**Cupric oxychloride**,  $\text{CuO}$ ,  $\text{CuCl}_2 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ . (Rousseau, C R 1890, 110 1263)

$2\text{CuO}$ ,  $\text{CuCl}_2$  Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$ , from which it is reprecipitated by dilution with  $\text{H}_2\text{O}$

$+ \text{H}_2\text{O}$  (Kane, A ch 72 277)

$+ 4\text{H}_2\text{O}$  (Gladstone, Chem Soc 8 211)

$3\text{CuO}$ ,  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  (Miller and Kendrick, Trans Roy Soc Can 1901, (2) 8, III 35)

$+ 3\text{H}_2\text{O}$  (Dupont and Jansen, Bull Soc 1893, (3), 9 193)

$+ 3\frac{1}{2}\text{H}_2\text{O}$  Insol in cold  $\text{H}_2\text{O}$ , sl decomp by boiling (Reindel, J pr 106 378)

Insol in boiling  $\text{H}_2\text{O}$  (Habermann, W A B 90 2 268)

$+ 4\text{H}_2\text{O}$  Sol in alkaline solution of  $\text{KNa}$  tartrate (Groger, Z anorg 1902, 31 327)

(Brunswick green) Insol in  $\text{H}_2\text{O}$  Easily sol in acids

Min *Atacamite* Sol in acids, and  $\text{NH}_4\text{OH} + \text{Aq}$

Sol in cold sat citric acid + Aq (Bolton, B 1880, 13 732)

$4\text{CuO}$ ,  $\text{CuCl}_2 + 6\text{H}_2\text{O}$  (Kane, Gm — K 5 1, 919)

$+ 8\text{H}_2\text{O}$  Min *Tallngite* (Church, Gm — K 5 1, 919)

$5\text{Cu(OH)}$ ,  $\text{Cu Cl}_2\text{Cl(OH)}$  Insol in  $\text{H}_2\text{O}$

Decomp by hot  $\text{H}_2\text{O}$  (Kuhling, B 1901, 34 2852)

$7\text{CuO}$ ,  $2\text{CuCl}_2 + 9\text{H}_2\text{O}$  (Reindel)

$6\text{CuO}$ ,  $\text{CuCl}_2 + 9\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol in acetic acid (Neumann, Repert, 37 304)

$8\text{CuO}$ ,  $\text{CuCl}_2 + 12\text{H}_2\text{O}$  Min *Footelite* (König, Zeit Kryst 1891, 19 601)

**Cupric zinc oxychloride**,  $\text{ZnO}$ ,  $2\text{ZnCl}_2$ ,  $5\text{CuO} + 6\text{H}_2\text{O}$   
(André, C R 1888, 106 855)

**Cupric oxychloride ammonia**,  $2\text{CuO}$ ,  $\text{CuCl}_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$   
(Dehéran, Gm — K 5 1, 932)

**Cupric oxyfluoride**,  $\text{CuO}$ ,  $\text{CuF}_2 + \text{H}_2\text{O}$   
Insol in  $\text{H}_2\text{O}$  (Berzelius) (Balbiano, Gazz ch it 14 74)

**Cupric oxyfluoride ammonia (cuprammonium oxyfluoride)**,  $\text{Cu}(\text{OH})\text{F}$ ,  $2\text{NH}_3$   
(Balbiano, Gazz ch it 14 74)  
 $3\text{CuO}$ ,  $\text{CuI}_2 + x\text{H}_2\text{O}$  (Tschirwinski, Gm — K, 5 1, 1584)

**Cuprous oxyiodide**,  $\text{Cu}_2\text{I}_2$ ,  $\text{CuO} + \text{H}_2\text{O}$   
(Spring and Lucion, Bull Ac Belg (3) 24 21)

**Cupric oxyiodide**,  $2\text{CuI}_2$ ,  $\text{CuO} + 4\text{H}_2\text{O}$   
Easily decomp by  $\text{H}_2\text{O}$  (Carnegie, Watts' Dict II, 257)

**Copper oxysulphide**,  $2\text{Cu}_2\text{S}$ ,  $\text{CuO}$   
Insol in  $\text{H}_2\text{O}$  (Maumené, A ch (3) 18 311)  
 $5\text{CuS}$ ,  $\text{CuO}$  Ppt (Pelouze)  
 $2\text{CuS}$ ,  $\text{CuO}$  Insol in  $\text{H}_2\text{O}$   
 $\text{CuS}$ ,  $\text{CuO}$  Insol in  $\text{H}_2\text{O}$   
Above comps do not exist (Pickering, Chem Soc 33 136)

**Copper phosphide**,  $\text{Cu}_3\text{P}_2$   
Easily sol in  $\text{HNO}_3$  or aqua regia, insol in  $\text{HCl} + \text{Aq}$  (Rose, Pogg 6 209)  
Sol in  $\text{HNO}_3$  and  $\text{Br} + \text{Aq}$  Decomp by hot conc  $\text{H}_2\text{SO}_4$  (Rubcnovitch, C R 1899, 128 1399)  
 $\text{Cu}_3\text{P}$  Sol in  $\text{HNO}_3 + \text{Aq}$  (Granger, A ch 1898, (7), 14 64)  
Crystallized Completely sol in hot  $\text{HNO}_3$ , aqua regia and  $\text{HF} + \text{HNO}_3$  Slowly sol in hot  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$  Not attacked by hot or cold  $\text{HF}$  or acetic acid (Maronneau, C R 1899, 128 939)  
 $\text{Cu}_3\text{P}_2$  Easily sol in  $\text{HNO}_3$  Sol in hot conc  $\text{H}_2\text{SO}_4$  Sol in conc  $\text{HCl} + \text{Aq}$  before the phosphide has been heated (Rose, Pogg 4 110)

$\text{Cu}_2\text{P}_2$  Easily sol in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Granger, Bull Soc (3) 9 661)

$\text{CuP}_2$  Decomp by  $\text{HNO}_3$ , not readily sol in  $\text{HCl}$  Easily attacked by  $\text{Cl}_2$  or  $\text{Br}_2 + \text{Aq}$  (Granger, C R 1895, 120 924)

$\text{Cu}_4\text{P}_2$  (Granger, C N 1898, 77 229)  
Very sol in  $\text{HNO}_3$  and  $\text{Br}_2 + \text{Aq}$  Decomp by hot conc  $\text{H}_2\text{SO}_4$  (Rubénovitch, C R 1899, 129 338)

**Cupric zinc phosphide**,  $10\text{Cu}_3\text{P}_2$ ,  $\text{Zn}_3\text{P}_2(?)$   
(Hvoslef, A 100 99)

**Copper phosphoselenide**,  $\text{CuSe}$ ,  $\text{P Se}$   
Insol in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ , sol in  $\text{HNO}_3 + \text{Aq}$  Insol in cold alkalis, but decomp slowly when heated therewith (Hahn, J pr 93 436)  
 $2\text{CuSe}$ ,  $\text{P}_2\text{Se}_3$  Attacked only by fuming  $\text{HNO}_3$  (Hahn)  
 $2\text{CuSe}$ ,  $\text{P}_2\text{Se}_5$  Sol only in  $\text{HNO}_3 + \text{Aq}$  (Hahn)

**Copper phosphosulphide**,  $2\text{Cu}_3\text{S}$ ,  $\text{P}_2\text{S}$   
 $\text{Cu}_3\text{S}$ ,  $\text{P}_2\text{S}$  (Berzelius)  
 $2\text{CuS}$ ,  $\text{P}_2\text{S}_3$  (Berzelius)  
 $\text{CuS}$ ,  $\text{P}_2\text{S}$  Insol in  $\text{H}_2\text{O}$  and dil  $\text{HCl} + \text{Aq}$  Sol in conc  $\text{HCl} + \text{Aq}$ , from which it is precipitated by  $\text{H}_2\text{O}$  (Berzelius, A 46 252)  
 $8\text{CuS}$ ,  $\text{P}_2\text{S}_5$  (Berzelius)  
 $\text{Cu}_4\text{PS}_3$  Sol in conc  $\text{HNO}_3$  and in aqua regia Insol in  $\text{HCl}$  Not attacked by hot  $\text{H}_2\text{SO}_4$  or conc  $\text{NaOH} + \text{Aq}$  (Ferrand, A ch 1899, (7), 17 407)

**Cuprous selenide**,  $\text{Cu}_2\text{Se}$   
Ppt Sol in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$   
Decomp by  $\text{HNO}_3$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fonzez-Diacon, C R 1900, 131 1207)  
Sol in  $\text{KCN} + \text{Aq}$  (Heyn and Bauer, Metall 1903, 3 84)  
Min *Berzelianite*

**Cupric selenide**,  $\text{CuSe}$   
(Little, A 112 211)  
Ppt Sol in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$  Decomp by  $\text{HNO}_3$  (Fonzez-Diacon, C R 1900, 131 1207)

**Cuprocupric selenide**,  $\text{Cu}_3\text{Se}_2$   
Min *Umangite* Sol in  $\text{HNO}_3$  (Klockmann, Zeit Kryst 1891 19, 270)

**Cuprous lead selenide**,  $3\text{Cu}_2\text{Se}$ ,  $\text{PbSe}$   
Min *Zorgite* Sol in cold conc  $\text{HNO}_3 + \text{Aq}$  with separation of  $\text{Se}$

**Cupric lead selenide**,  $\text{CuSe}$ ,  $\text{PbSe}$   
Sol in cold conc  $\text{HNO}_3$  with separation of  $\text{Se}$  (Karsten)  
 $\text{Cu}_3\text{Se}$ ,  $2\text{PbSe}$  As above  
 $\text{CuSe}$ ,  $4\text{PbSe}$  As above

**Cuprous silver selenide**,  $\text{Cu}_2\text{Se}$ ,  $\text{Ag}_2\text{Se}$   
Min *Eucarnite* Sol in hot  $\text{HNO}_3$  with decomp (Berzelius)

**Cuprous silicide**,  $\text{Cu}_4\text{Si}$   
Sol in warm dil or conc  $\text{HNO}_3$  Only sl sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HF}$  Sol in a mixture of  $\text{HNO}_3$  and  $\text{HF}$  Not attacked by solutions of alkalis (Vigouroux, C R 1906, 142 88)

$\text{Cu}_2\text{S}_3$  Sol in aqua regia and fused sodium potassium carbonate (de Chalmot, Am Ch J 1896, 18, 95)

$\text{Cu}_2\text{S}_1$  Decomp by water and moist air, and by acids and fused alkali (Vigouroux, C R 1896, 122 319)

### Cuprous sulphide, $\text{Cu}_2\text{S}$

More sol in  $\text{H}_2\text{O}$  than  $\text{Ag}_2\text{S}$ , but much less than PbS (Bodlander, Z phys Ch 1898 27, 64)

1 l  $\text{H}_2\text{O}$  dissolves  $3.1 \times 10^{-6}$  moles  $\text{Cu}_2\text{S}$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58 294)

Very slowly decomp by dil  $\text{H}_2\text{SO}_4$  in presence of oxygen (Thompson, Electrochem, Ind 1904 2, 225)

Decomp by conc  $\text{H}_2\text{SO}_4$  (Pickering, C N 1878, 37, 37)

Cold  $\text{HNO}_3$  + Aq dissolves out Cu and leaves CuS, hot  $\text{HNO}_3$  dissolves with separation of S. Sl sol in boiling conc HCl + Aq. Insol in  $(\text{NH}_4)_2\text{S}$  + Aq.

5N-HCl dissolves  $\text{Cu}_2\text{S}$  very slightly (0.0038 g Cu in  $7\frac{1}{2}$  hrs) but it is more sol in presence of Cl, when 0.672 g are dissolved in  $7\frac{1}{2}$  hours (Egl, Z anorg 1902, 30 46)

Sol with exclusion of air in  $\text{NH}_4\text{OH}$  + Aq (Malzac, Pat 1904)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

Min *Chalcocite* Completely sol in warm  $\text{HNO}_3$  with separation of S

### Cupric sulphide, $\text{CuS}$

Almost absolutely insol in  $\text{H}_2\text{O}$ , sol in 950,000 pts  $\text{H}_2\text{O}$ . When exposed to the air, dissolves in  $\text{H}_2\text{O}$  as  $\text{CuSO}_4$ . Easily sol in boiling  $\text{HNO}_3$  with separation of S. Difficultly sol in hot conc HCl + Aq. Insol in dil  $\text{H}_2\text{SO}_4$  + Aq (1.6) (Hoffmann, A 115 286)

Pptd by  $\text{H}_2\text{S}$  or  $(\text{NH}_4)_2\text{S}$  + Aq in presence of 100,000 pts  $\text{H}_2\text{O}$  (Pfaff), 200,000 pts  $\text{H}_2\text{O}$  (Lassaigne), 15,000 pts  $\text{H}_2\text{O}$  and 7500 pts HCl, but with 40,000 pts  $\text{H}_2\text{O}$  and 20,000 pts HCl no colour is visible (Reinsch)

1 l  $\text{H}_2\text{O}$  dissolves  $3.51 \times 10^{-6}$  moles  $\text{CuS}$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58 294)

Insol in  $\text{H}_2\text{SO}_3$  + Aq (Guerout, C R 1872, 75 1276)

Decomp by conc  $\text{H}_2\text{SO}_4$  (Kliche, J B 1890, 593)

Sol in  $(\text{NH}_4)_2\text{CO}_3$  + Aq (Berzelius) Sol in alkali bicarbonates + Aq

In sol in  $\text{NH}_4\text{NO}_3$  or  $\text{NH}_4\text{Cl}$  + Aq (Bicott) Insol in acidified conc alkali chlorides + Aq (Cushman, Am Ch J 1895, 17, 382)

Sol in  $\text{FeCl}_3$  + Aq with separation of S (Cumenge and Wimmer, Dingl 1883, 250 123)

Decomp by boiling  $\text{CuCl}_2$  + Aq in presence of HCl or NaCl (Raschig, Gm — K 5 1, 819)

Sol in  $\text{Fe}_2(\text{SO}_4)_3$  + Aq in presence of large excess of air (Thompson, Electrochem Ind 1904, 2, 228)

Insol in KOH, or  $\text{K}_2\text{S}$  + Aq, especially if boiling, appreciably sol in colourless and even more readily in hot yellow  $(\text{NH}_4)_2\text{S}$  + Aq

Sl sol in  $\text{Na}_2\text{S}$  + Aq, more easily in  $\text{NaSH}$  + Aq (Becker, Sill Am J (3) 33 199)

100 cc sat  $\text{Na}_2\text{S}$  + Aq (sp gr = 1.225) dissolve 0.0032 g  $\text{CuS}$  (Holland, Ann Chim Anal 1897, 2 243)

Sol in K polysulphides (3-64%) (Prost, Bull Soc Belg Chim 1897 103)

Appreciably sol in alkali polysulphides + Aq (Rossing, Z anal 1902, 41, 1)

Sol in considerable quantity in alkali sulpharsenates, sulphantimonates, and sulphostannates + Aq. Therefore when a mixed ppt of  $\text{CuS}$  and  $\text{As}_2\text{S}_3$ ,  $\text{Sb}_2\text{S}_3$ , or  $\text{SnS}$  is treated with  $\text{K}_2\text{S}$ , a portion of the  $\text{CuS}$  is dissolved (Wöhler, A 34 236)

Sol in alkali sulphovandates, or sulphotungstates + Aq (Storch, B 16 2015)

Sol in alkali sulphomolybdates + Aq (Debrav, C R 96 1616)

Insol in K thiocarbonate + Aq (Rosenbladt, Z anal 26 15)

Sol in KCN + Aq

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 827)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4329, Eidmann, C C 1899, II 1014)

Insol in Na xanthogenate (Ragg, Ch Z 1908, 32 677)

Solubility of  $\text{CuS}$  in sugar + Aq at  $t^\circ$   
g  $\text{CuS}$  per l of solution

$t^\circ$	1% sugar	30% sugar	50% sugar
17.5	0.5672	0.5632	0.9076
45	0.3659	0.7220	1.0549
75	1.1345	1.2033	1.2809

(Stolle, Z Ver Zuckerind 1900 50 331)

### Min *Covellic*

*Collodial* Aqueous solution is stable when it contains 5 g  $\text{CuS}$  in a litre, when it contains 4 or 5 times that amount it is decomposed in an hour

Solutions of salts of the following concentration cause a precipitate in the above solution. Salts of univalent elements—

### Salts of univalent elements—

$\text{K}_3\text{Fe}(\text{CN})_6$	1	62

(Spring and de Bock, Bull Soc (2) 58 165)

Copper polysulphide,  $\text{Cu}_2\text{S}_8$ *Amorphous* Ppt Decomp by boiling alcohol (Rossing, Z anorg 1900, 25 413) $\text{Cu}_2\text{S}_8$  *Amorphous* Ppt can be boiled with  $\text{H}_2\text{O}$  without decomposition (Rossing, Z anorg 1900, 25 4, 11) $\text{Cu}_2\text{S}_8$  Ppt, insol in alkali sulphides, decomp by conc  $\text{HNO}_3$  (Bodroux, C R 1900, 130 1398)

Could not be obtained (Rossing, Z anorg 1900, 25 414)

 $\text{Cu}_2\text{S}$  Ppt Decomp by  $\text{H}_2\text{O}$  Sol in alkali and barium polysulphides + Aq Decomp by colorless alkali sulphides + Aq (Rossing, Z anorg 1900, 25 407)Cuprous iron (ferric) sulphide,  $\text{Cu}_2\text{S}, \text{Fe}_2\text{S}_3$ Decomp by conc  $\text{HCl}$  + Aq Sol in boiling  $\text{HNO}_3$  + Aq of 1.2 sp gr (Schneider, J pr (2) 38 569)Min (*halcopyrite*) Insol in  $\text{HCl}$  + Aq When heated in a sealed tube with  $\text{H}_2\text{S}$  + Aq, a portion of it dissolves with difficulty and subsequent deposition of S (Senarmont, A ch (3) 32 168)Cuprocupric iron (ferric) sulphide,  $\text{Cu}_2\text{S}, \text{CuS}, \text{FeS}$ Min *Bornite* Sol in  $\text{HCl}$  + Aq with a residue of SCupric iron (ferric) sulphide,  $\text{CuS}, \text{Fe}_2\text{S}_3$ Min *Cubanite*Copper iron potassium sulphide,  $\text{K}_2\text{FeCu}_3\text{S}_4$ Sl attacked by cold dil  $\text{HCl}$  + Aq Decomp by warming (Schneider, Pogg 138 318)Copper iron sodium sulphide,  $\text{Na}_2\text{FeCu}_2\text{S}_4$ Sl attacked by cold dil, easily decomp by hot  $\text{HCl}$  + Aq (Schneider, Pogg 138 318)Cuprous lead sulphide,  $9\text{Cu}_2\text{S}, 2\text{PbS}$  $3\text{Cu}_2\text{S}, 2\text{PbS}$  $2\text{Cu}_2\text{S}, 2\text{PbS}$  Min *Cuprophumbite*

## Copper phosphorus sulphide

See Copper phosphosulphide

## Cupric platinum sulphide

See Sulphoplatinate, cupric

Cuprous potassium sulphide,  $4\text{Cu}_2\text{S}, \text{K}_2\text{S}$ 

(Ditte, C R 98 1429)

Cuprocupric potassium sulphide,  $3\text{Cu}_2\text{S}, 2\text{CuS}, \text{K}_2\text{S}$ Not decomp by very dil  $\text{HCl}$  + Aq, but easily by conc  $\text{HCl}$  + Aq on warming (Schneider, Pogg 138 311)Copper potassium polysulphide,  $\text{KCuS}_4$ Sl sol in cold  $\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  Decomp by conc and dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  Sl sol in alcohol (Biltz and Herms, B 1907, 40 977) $2\text{CuS}_8, \text{K}_2\text{S}$  Decomp by  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4\text{SH}$  + Aq (Priwoznik, B 5 1291) $\text{K}_2\text{Cu}_2\text{S}_{10}$  Easily sol in  $\text{H}_2\text{O}$  1 g is sol in less than 5 cc  $\text{H}_2\text{O}$  Rapidly decomp by dil acids, slowly by conc acids Sl sol in alcohol (Biltz and Herms, B 1907, 40 983)Cupric rubidium polysulphide,  $\text{RbCuS}_4$ 

As K salt (Biltz and Herms, B 1907, 40 978)

 $\text{Rb}_2\text{Cu}_2\text{S}_{10}$  Easily sol in  $\text{H}_2\text{O}$  Decomp by acids Sl sol in alcohol (Biltz and Herms, B 1907, 40 985)Cuprous silver sulphide,  $\text{Cu}_2\text{S}, \text{Ag}_2\text{S}$ Min *Stromeyerite* Sol in  $\text{HNO}_3$  + Aq with separation of S $\text{Cu}_2\text{S}, 3\text{Ag}_2\text{S}$  Min *Jalpaite* As aboveCuprous sodium sulphide,  $\text{Na}_2\text{S}, \text{Cu}_2\text{S}$ 

(Bodlander, Z Elektrochem 1905, 11 181)

 $\text{Na}_2\text{S}, 2\text{Cu}_2\text{S}$  (Bodlander, Z Elektrochem 1905, 11 181)

**Cuprocupric sodium sulphide**,  $\text{Cu}_2\text{S}$ ,  $\text{CuS}$ ,  $\text{Na}_2\text{S}$

Scarcely decomp by cold dil  $\text{HCl} + \text{Aq}$ , conc  $\text{HCl} + \text{Aq}$  decomp easily on warming, without, however, dissolving all the  $\text{Cu}_2\text{S}$ . Completely decomp by warm  $\text{HNO}_3 + \text{Aq}$  (Schneider, Pogg 138 315)

**Copper zinc sulphide**,  $\text{CuS}$ ,  $3\text{ZnS}$

**Copper sulphophosphide**

See Copper phosphosulphide

**Cupric telluride**,  $\text{CuTe}$

$\text{Cu}_2\text{Te}_3$  Insol in  $\text{H}_2\text{O}$  (Parkmann, Sill Am J (2) 3 335)

$\text{Cu}_2\text{Te}$  (Brauner, M 1889 423)

**Croceocobaltic bromide**,

$\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Br}$

Very sl sol in cold, easily in hot  $\text{H}_2\text{O}$  (Gibbs, Proc Am Acad 10 1)

— **chloraurate**,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{AuCl}_3$   
Difficultly sol in  $\text{H}_2\text{O}$

— **chloride**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$

Very sl sol in cold easily in hot  $\text{H}_2\text{O}$ , but more sol than the sulphate (Gibbs)

— **chloroplatinate**,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{PtCl}_4$

Can be recrystallised without decomp with difficulty (Gibbs and Genth, Sill Am J (2) 24 91)

— **chromate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{CrO}_4$   
Sl sol in  $\text{H}_2\text{O}$  (Gibbs)

— **dichromate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{Cr}_2\text{O}_7$   
Sl sol in  $\text{H}_2\text{O}$  (Gibbs)

— **periodide**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{I}$ ,  $\text{I}_2$

Difficultly sol in cold  $\text{H}_2\text{O}$  and alcohol  
Decomp by hot  $\text{H}_2\text{O}$  (Gibbs)

— **nitrate**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{NO}_3$

Sl sol in cold, easily sol in hot  $\text{H}_2\text{O}$  or dil acids. Much more sol than the sulphate (Gibbs)

Sol in about 400 pts cold  $\text{H}_2\text{O}$  (Jorgensen, Z anorg 5 163)

— **nitrite cobaltic nitrite**,  $3\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $\text{Co}(\text{NO}_2)_3$

Somewhat sol in  $\text{H}_2\text{O}$  (Jorgensen, Z anorg 5 178)

— **nitrite diamine cobaltic nitrite**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$

Nearly insol in cold, very sl sol in boiling  $\text{H}_2\text{O}$  (Jorgensen)

**Croceocobaltic phosphomolybdate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{O}$ ,  $24\text{MoO}_3$ ,  $\text{P}_2\text{O}_5$

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  (Gibbs, Am Ch J 3 317)

— **sulphate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{SO}_4$

Very sl sol in cold or hot  $\text{H}_2\text{O}$  more easily in hot dil  $\text{H}_2\text{SO}_4 + \text{Aq}$

**Cuprammonium compounds**

See Copper compounds, ammonia

**Cuprotetrammonium tetraiodide**

See Cupric tetraiodide ammonia

**Cupric acid**

Known only in solution (Kruger, Pogg 62 445)

**Calcium cuprate**

Decomp by  $\text{H}_2\text{O}$  with evolution of oxygen (Kruger and Crum, A 55 213)

**Cyanhydric acid**,  $\text{HCN}$

Miscible with  $\text{H}_2\text{O}$ , alcohol, and ether with absorption of heat

Sp gr of  $\text{HCN} + \text{Aq}$

% HCN	Sp gr	% HCN	Sp gr
1 60	0 9979	4 0	0 9940
1 68	0 9978	4 6	0 9930
1 77	0 9975	5 0	0 9923
2 0	0 9974	5 3	0 9914
2 1	0 9973	5 8	0 9900
2 3	0 9970	6 4	0 9890
2 5	0 9967	7 3	0 9870
2 7	0 9964	8 0	0 9840
3 0	0 9958	9 1	0 9815
3 2	0 9952	10 6	0 9768
3 6	0 9945	16 0	0 9570

(Ure, Quar J Sci 13 321)

$2\text{HCN}$  mixed with  $3\text{H}_2\text{O}$  causes a diminution of temp of  $9.75^\circ$  (Bussy and Buignet, A ch (4) 3 231)

Miscible with volatile oils and other organic compounds

**Cyanhydric iodhydric acid**,  $\text{HI}$ ,  $\text{HCN}$

Easily sol in  $\text{H}_2\text{O}$  or alcohol, with rapid decomp. Sl sol in ether (Gal, A 138 38)

**Cyanides**

The alkali cyanides are easily sol in  $\text{H}_2\text{O}$ , those of the alkali-earths are less sol, while all others are insol with the exception of  $\text{Hg}(\text{CN})_2$ . All cyanides are sol in  $\text{KCN} + \text{Aq}$

**Ammonium cyanide**,  $\text{NH}_4\text{CN}$

Unstable, easily sol in  $\text{H}_2\text{O}$  and alcohol

**Ammonium cobaltic mercuric cyanide**

See Cobaltcyanide, ammonium mercuric

**Ammonium cuprous cyanide,  $\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$** 

Ppt Decomp by acids

+ $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , less sol in alcohol

Decomp by acids and alkalis (Treadwell and Girsfeld, Z anorg 1904, 39 90)

$2\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$  Sl sol in  $\text{H}_2\text{O}$ , but decomp by long boiling therewith Sol in  $\text{HCN} + \text{Aq}$  (Dufau, A 88 278)

**Ammonium cuprous cyanide ammonia,  $\text{NH}_4\text{CN}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $\text{NH}_3$** 

Easily decomp (Treadwell and Girsfeld, Z anorg 1904, 39 90)

+ $2\text{H}_2\text{O}$  Insol in cold, decomp by boiling  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fleurent, C R 1893, 116 191)

$\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_3$  Insol in cold, sl sol in boiling  $\text{H}_2\text{O}$  without decomp Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fleurent, C R 1891, 113 1046)

$\text{NH}_4\text{CN}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3 + 2\text{H}_2\text{O}$  (Fleurent, B 25 498R)

**Ammonium gold (aurous) cyanide  $\text{NH}_4\text{CN}$ ,  $\text{AuCN}$** 

Easily sol in cold or warm  $\text{H}_2\text{O}$  or in alcohol Insol in ether

**Ammonium gold (auric) mercuric cyanide, basic,  $3\text{NH}_4\text{CN}$ ,  $2\text{Au}_2\text{O}$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$  (Schmidt, Ch Z 1896, 20 633)****Ammonium mercuric silver cyanide, basic,  $\text{NH}_4\text{CN}$ ,  $2\text{Ag}_2\text{O}$ ,  $3\text{AgCN}$ ,  $4\text{Hg}(\text{OH})\text{CN} + \frac{1}{2}\text{H}_2\text{O}$** 

(Schmidt, Z anorg 1895, 9 431)

**Ammonium nickel cyanide,  $2\text{NH}_4\text{CN}$ ,  $\text{Ni}(\text{CN})_2$** 

Easily decomposed

**Ammonium tungsten cyanide**

See Tungstocyanide, ammonium

**Ammonium zinc cyanide,  $2\text{NH}_4\text{CN}$ ,  $\text{Zn}(\text{CN})_2$** 

Sol in  $\text{H}_2\text{O}$

**Ammonium cyanide mercuric nitrate silver cyanide basic,  $2\text{Hg}(\text{OH})\text{NO}_3$ ,  $3\text{NH}_4\text{CN}$ ,  $4\text{AgCN}$** 

(Schmidt, Z anorg 1895, 9 431)

**Arsenic tricyanide,  $\text{As}(\text{CN})_3$** 

Decomp by  $\text{H}_2\text{O}$  Not attacked by cold conc  $\text{H}_2\text{SO}_4$  Decomp on heating (Guenez, C R 1892, 114 1188)

**Barium cyanide,  $\text{Ba}(\text{CN})_2$** 

Rather sl sol in  $\text{H}_2\text{O}$ , more easily in  $\text{KCN} + \text{Aq}$  (Schulz, J pr 68 257)

10 pts  $\text{H}_2\text{O}$  dissolve 8 pts, and 10 pts 70% alcohol dissolve 18 pts  $\text{Ba}(\text{CN})_2$  at  $14^\circ$  (Joannis, A ch (5) 26 489)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

+ $2\text{H}_2\text{O}$  Very deliquescent  $\text{Ba}(\text{CN})_2$ ,  $\text{BaO}$  (Drechsel, J pr (2) 21 84)

**Barium cadmium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cd}(\text{CN})_2 + \text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$

Sl sol in alcohol (Loebe, Dissert, 1902)  $2\text{Ba}(\text{CN})_2$ ,  $3\text{Cd}(\text{CN})_2 + 10\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Weselsky, B 2 590)

**Barium cobaltous cobaltic cyanide**

See Cobaltocobaltcyanide, barium

**Barium cuprous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$** 

Sol in  $\text{H}_2\text{O}$  without decomp (Traube, Z anorg 1894, 8 21)

+ $\text{H}_2\text{O}$  (Weselsky, B 2 590)

Could not be obtained (Grossmann, Z anorg 1905, 43 101)

+ $4\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 101)

$2\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2 + 6\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 105)

**Barium gold (aurous) cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{AuCN} + 2\text{H}_2\text{O}$** 

Sl sol in cold but easily sol in hot  $\text{H}_2\text{O}$

Sl sol in alcohol (Lindbom, Lund Univ Arsk 12 No 6)

**Barium iridium cyanide**

See Iridicyanide, barium

**Barium manganous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$** 

Ppt (Descamps)

See also Manganocyanide and Manganicyanide, barium

**Barium mercuric cyanide,  $(\text{Ba}(\text{CN})_2)$ ,  $\text{Hg}(\text{CN})_2 + 3\text{H}_2\text{O}$** 

Very hygroscopic Very sol in  $\text{H}_2\text{O}$  (Grossmann, B 1904, 37 442)

**Barium mercuric cyanide iodide,  $\text{Ba}(\text{CN})_2$ ,  $\text{HgI}_2 + 6\text{H}_2\text{O}$** 

(Vurt, C R 1895, 121 499)

**Barium palladium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Pd}(\text{CN})_2 + 4\text{H}_2\text{O}$** 

See Palladocyanide, barium

**Barium nickel cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2 + 3\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$ , decomp by acids with pptn of  $\text{Ni}(\text{CN})_2$  (Weselsky, B 2 590)

**Barium silver cyanide**,  $\text{Ba(CN)}_2$ ,  $2\text{AgCN} + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Weselsky, B 2 589)

**Barium zinc cyanide**,  $\text{Ba(CN)}_2$ ,  $\text{Zn(CN)}_2 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  \*

**Cadmium cyanide, basic**,  $\text{CdO}_2\text{H}_2$ ,  $2\text{Cd(CN)}_2 + 4\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol (Loebe, Dissert, 1902)

**Cadmium cyanide**,  $\text{Cd(CN)}_2$

Sl sol in  $\text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  dissolve 1.7 pts  $\text{Cd(CN)}_2$  at  $15^\circ$  (Joannis)

Easily sol in acids, sol in  $\text{KCN} + \text{Aq}$  Sol in warm  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Wittstein)

Insol in benzonitrile (Naumann, B 1914, 47 1370)

**Cadmium calcium cyanide**,  $\text{Cd(CN)}_2$ ,  $4\text{Ca(CN)}_2 + 20\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and in alcohol (Loebe, Dissert, 1902)

**Cadmium chromic cyanide**

See Chromicyanide, cadmium

**Cadmium cobaltic cyanide**

See Cobalticyanide, cadmium

**Cadmium cuprous cyanide**,  $2\text{Cd(CN)}_2$ ,  $\text{Cu}_2(\text{CN})_2$

Permanent Insol in  $\text{H}_2\text{O}$  Sl sol in cold, easily in warm  $\text{HCl} + \text{Aq}$  without decomp, except by long boiling Insol in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts +  $\text{Aq}$  (Schuler)

**Cadmium cupric cyanide**,  $\text{Cd(CN)}_2$ ,  $\text{Cu(CN)}$

Very unstable

**Cadmium gold (aurous) cyanide**,  $\text{Cd(CN)}$ ,  $2\text{AuCN}$

Nearly insol in cold  $\text{H}_2\text{O}$  Sl sol in boiling  $\text{H}_2\text{O}$  Insol in alcohol (Landbom)

**Cadmium mercuric cyanide**,  $2\text{Cd(CN)}_2$ ,  $3\text{Hg(CN)}_2$

Permanent Readily sol in cold  $\text{H}_2\text{O}$  (Schuler)

**Cadmium mercuric cyanide mercuric iodide**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Varet, Bull Soc (3) 5 8)

+  $7\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C R 1890, 111, 679)

**Cadmium mercuric cyanide mercuric iodide**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Varet, Bull Soc (3) 5 8)

+  $7\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C R 1890, 111 679)

**Cadmium mercuric cyanide mercuric iodide ammonia**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2$ ,  $4\text{NH}_3$

Very easily decomp (Varet, Bull Soc (3) 6 22)

**Cadmium molybdenum cyanide**

See Molybdocyanide, cadmium

**Cadmium potassium cyanide**,  $\text{Cd(CN)}_2$ ,  $2\text{KCN}$

Sol in 3 pts cold, and 1 pt boiling  $\text{H}_2\text{O}$  Insol in absolute alcohol (Rammelsberg)

**Cadmium sodium cyanide**,  $\text{Na}_2\text{Cd}_2(\text{CN})_6$ ,  $+3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and in alcohol (Loebe, Dissert, 1902)

**Cadmium strontium cyanide**,  $\text{Cd(CN)}_2$ ,  $2\text{Sr(CN)}_2 + 3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and in alcohol (Loebe, Dissert 1902)

**Cadmium tungsten cyanide**,  $\text{Cd}_2\text{W(CN)}_8 + 8\text{H}_2\text{O}$

Nearly insol in  $\text{H}_2\text{O}$

Sl sol in dil  $\text{HCl}$  Sol in conc  $\text{NH}_4\text{OH} + \text{Aq}$

Insol in organic solvents (Olsson, Z anorg 1914, 88 68)

**Cadmium cyanide dihydrazine**,  $\text{Cd(CN)}_2$ ,  $(\text{N}_2\text{H}_4)_2$

Easily sol in dil acids (Franzen, Z anorg 1911, 70 152)

**Cæsium cuprous cyanide**,  $\text{CsCN}$ ,  $\text{CuCN} + 1\frac{1}{2}\text{H}_2\text{O}$

$\text{H}_2\text{O}$  separates  $\text{CuCN}$  (Grossmann, Z anorg 1905, 43 98)

$2\text{CsCN}$ ,  $\text{CuCN} + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 95)

$2\text{CsCN}$ ,  $3\text{CuCN}$  Insol in, and not decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 98)

**Cæsium tungsten cyanide**

See Tungstocyanide, cæsium

**Calcium cyanide**,  $\text{Ca(CN)}_2$

Sol in  $\text{H}_2\text{O}$ , but the solution is very unstable (Schulz)

$\text{Ca(CN)}_2$ ,  $3\text{CaO} + 15\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Joannis, A ch (5) 26 496)

**Calcium cuprous cyanide**,  $\text{Ca(CN)}_2$ ,  $\text{CuCN} + 4\text{H}_2\text{O}$

Easily decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 106)

$\text{Ca(CN)}_2$ ,  $3\text{CuCN} + 8\text{H}_2\text{O}$  Immediately

decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, **43** 99)

**Calcium gold (aurous) cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{AuCN} + 3\text{H}_2\text{O}$

Easily sol in hot or cold  $\text{H}_2\text{O}$  or in alcohol (Lindbom)

**Calcium manganous cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$

Ppt (Descamps)

See also Manganocyanide, calcium

**Calcium mercuric cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2 + 8\text{H}_2\text{O}$

Very deliquescent (Grossmann, B 1904, **37** 4143)

$2\text{Ca}(\text{CN})_2$ ,  $3\text{Hg}(\text{CN})_2 + 6\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Grossmann, B 1904, **37** 4143)

**Calcium mercuric cyanide iodide**,  $\text{Ca}(\text{CN})_2$ ,  $\text{HgI}_2$ ,  $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$

(Varet, C R 1895, **121** 499)

**Calcium nickel cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2 + \tau\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$

**Calcium tungsten cyanide**

See Tungstocyanide, calcium

**Calcium zinc cyanide**,  $(\text{Ca}(\text{CN})_2, \text{Zn}(\text{CN})_2 + 3\frac{1}{2}\text{H}_2\text{O})$

Sol in  $\text{H}_2\text{O}$  und in alcohol (Loebe, Dissert 1902)

**Cerous cyanide (?)**

Ppt Very easily decomp (Behringer, A **42** 139)

**Chromic cyanide, with MCN**

See Chromiocyanide, M

**Chromous potassium cyanide**

See Chromocyanide, potassium

**Cobaltous cyanide**,  $(\text{Co}(\text{CN})_2 + \text{H O})$

Insol in  $\text{H}_2\text{O}$  Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , and  $\text{KCN} + \text{Aq}$ , also in  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4\text{Cl}$  in  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl}$

**Cobaltous cyanide with 4MCN**

See Cobaltocyanide, M

**Cobaltic cyanide with 3MCN**

See Cobaltocyanide, M

**Cobalt gold (aurous) cyanide**,  $\text{Co}(\text{CN})_2$ ,  $2\text{AuCN}$

Insol in  $\text{H}_2\text{O}$  or cold  $\text{HCl} + \text{Aq}$

**Cobalt hydrazine cyanide**,  $(\text{N}_2\text{H}_4)_4\text{Co}(\text{CN})_6$   
Deliquescent (Franzen, Z anorg 1911, **70** 155)

**Cobaltous cyanide ammonia**,  $\text{Co}(\text{CN})_2$ ,  $2\text{NH}_3$

Unstable (Peters, B 1908, **41** 3178)

**Cuprous cyanide**,  $\text{Cu}_2(\text{CN})_2$

Insol in  $\text{H}_2\text{O}$  and dil acids Sol in  $\text{NH}_4\text{OH}$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{NH}_4$  succinate +  $\text{Aq}$ , and in hot  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  Sol in conc  $\text{HCl} + \text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$

Easily sol in conc  $\text{NH}_4\text{SCN}$  or  $\text{KSCN} + \text{Aq}$  Sl sol in  $\text{NaSCN} + \text{Aq}$  (Grossmann, Z anorg 1903, **37** 408)

Sl sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, **20** 827)

Very sl sol in pyridine (Schroeder, Dissert 1902)

Mol weight determined in pyridine (Werner, Z anorg 1897, **15** 20)

**Cupric cyanide**,  $\text{Cu}(\text{CN})_2$

Easily decomp Insol in  $\text{H}_2\text{O}$

Sol in pyridine (Schroeder, Dissert 1901)

Insol in methyl acetate (Naumann, B 1909, **42** 3790)

**Cuprocupric cyanide**,  $\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2 + 5\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp by boiling Sol in cold conc  $\text{HCl} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$   $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and in hot  $\text{NH}_4$  salts +  $\text{Aq}$  Easily sol in  $\text{KCN} + \text{Aq}$

+  $\text{H}_2\text{O}$  Ppt (Dufau)

+  $\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2 + \text{H O}$  Ppt

**Cuprous hydrazine cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{N}_2\text{H}_5\text{CN}$

Insol in alcohol and  $\text{H}_2\text{O}$  (Ferratini, C C 1912, I 1281)

**Cupric iridium cyanide**

See Iridiocyanide, cupric

**Cuprous lithium cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{LiCN} + \text{H O}$

Gradually decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, **43** 97)

**Cuprous magnesium cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Mg}(\text{CN})_2 + 11\text{H}_2\text{O}$

Decomp by  $\text{H O}$  (Grossmann, Z anorg 1905, **43** 103)

**Cuprous mercuric cyanide bromide**,  $\text{Cu}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2$ ,  $\text{HgBr}_2$

Sol in  $\text{H}_2\text{O}$  (Varet, C R 1890, **110** 148)

**Cupric molybdenum cyanide ammonia**

See Molybdocyanide ammonia, cupric

**Cuprous potassium cyanide,  $\text{Cu}(\text{CN})_2, 2\text{KCN}$** 

Sl sol in  $\text{H}_2\text{O}$ , with partial decomp. Decomp by acids, but not by alkalis

Decomp by boiling  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fleurent, C R 1893, 116 191)

Sol without decomp in conc  $\text{KSCN}$  (Grossmann, Z anorg 1903, 37 407)

Sol without decomp in  $\text{KCN} + \text{Aq}$  (Treadwell and Girsewald, Z anorg 1904, 38 94)

$\text{Cu}_2(\text{CN})_2, \text{KCN} + \text{H}_2\text{O}$  Almost insol in cold  $\text{H}_2\text{O}$ . 100 cc  $\text{H}_2\text{O}$  dissolve 0.0594 g at  $15^\circ$ . Decomp by much hot  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2(\text{CN})_2$ . Sol in  $\text{KCN} + \text{Aq}$  or in  $\text{NH}_4\text{OH} + \text{Aq}$  (Treadwell and Girsewald, Z anorg 1904, 38 93)

$3\text{Cu}_2(\text{CN})_2, 4\text{KCN}$  Sol in  $\text{H}_2\text{O}$

$\text{Cu}_2(\text{CN})_2, 6\text{KCN}$  Sol in  $\text{H}_2\text{O}$

**Cuprous potassium cyanide ammonia,  $\text{Cu}_2(\text{CN})_2, \text{KCN}, \text{NH}_3$** 

(Treadwell and Girsewald, Z anorg 1904, 38 94)

**Cuprous potassium cyanide potassium sulphocyanide,  $\text{Cu}_2(\text{CN})_2, 4\text{KCN}, 2\text{KSCN}, \text{H}_2\text{O}$** 

Easily sol in cold  $\text{H}_2\text{O}$  (Itzig, B 1902, 35 108)

**Cupric potassium cyanide,  $\text{Cu}(\text{CN})_2, 2\text{KCN}$** 

Sol in  $\frac{3}{4}$  pt  $\text{H}_2\text{O}$  at  $15^\circ$  and  $\frac{1}{3}$  pt at  $100^\circ$  (Bugnet, J Pharm 1859, (3), 35 168)

**Cuprocupric potassium cyanide  $\text{Cu}_2(\text{CN})_2, \text{Cu}(\text{CN})_2, 2\text{KCN}$** 

(Straus, Z anorg 1895, 9 15)

**Cuprous rubidium cyanide,  $\text{Cu}(\text{CN})_2, 2\text{RbCN}$** 

Sl sol in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$  (Grossmann, Z anorg 1905, 43 100)

$3\text{Cu}(\text{CN})_2, 4\text{RbCN}$  Sl sol in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$  (Grossmann, Z anorg 1905, 43 98)

**Cuprous silver cyanide,  $\text{Cu}(\text{CN})_2, 2\text{AgCN}$** 

Ppt

$\text{Cu}(\text{CN})_2, 6\text{AgCN}$  Sol in excess of  $\text{Cu}(\text{CN})_2, \text{KCN} + \text{Aq}$  (Rummelsberg)

**Cuprous sodium cyanide,  $\text{Cu}(\text{CN})_2, 2\text{NaCN}$** 

(Treadwell, Z anorg 1894 8 21)

+  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ . Sol in excess of  $\text{NaCN} + \text{Aq}$  (Grossmann, Z anorg 1905 43 96)

$\text{Cu}_2(\text{CN})_2, \text{NaCN} + 2\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1905, 43 96)

$\text{Cu}_2(\text{CN})_2, 4\text{NaCN} + 6\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  without decomp (Grossmann, Z anorg 1905, 43 96)

$\text{Cu}(\text{CN})_2, 6\text{NaCN} + 6\text{H}_2\text{O}$  Very sol in

$\text{H}_2\text{O}$  without decomp (Grossmann, Z anorg 1905, 43 96)

**Cuprous strontium cyanide,  $\text{Cu}_2(\text{CN})_2, \text{Sr}(\text{CN})_2 + 8\text{H}_2\text{O}$** 

$\text{H}_2\text{O}$  separates  $\text{Cu}_2(\text{CN})_2$  (Grossmann, Z anorg 1905, 43 103)

**Cuprous cyanide ammonia,  $\text{Cu}_2(\text{CN})_2, 2\text{NH}_3$** 

Nearly insol in cold  $\text{H}_2\text{O}$ . Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  in absence of oxygen. Insol in alcohol and ether. Decomp by hot  $\text{H}_2\text{O}$  and acids (Treadwell and Girsewald, Z anorg 1904, 39 87)

**Cuprocupric cyanide ammonia,  $\text{Cu}_2(\text{CN})_2, \text{Cu}(\text{CN})_2, 2\text{NH}_3$** 

(Malmberg, Arch Pharm 1898, 236 256) +  $\text{H}_2\text{O}$  Sl sol in cold, decomp by boiling  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Dufau, A 88 278)

$\text{Cu}(\text{CN})_2, \text{Cu}_2(\text{CN})_2, 3\text{NH}_3$  (Mills, Z Ch 1867 545)

Sl decomp by boiling  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  and can be recryst therefrom. Insol in alcohol and ether. Decomp by alkalis and acids (Treadwell and Girsewald, Z anorg 1904, 39 96)

$\text{Cu}(\text{CN})_2, \text{Cu}_2(\text{CN})_2, 4\text{NH}_3$  Insol in cold decomp by hot  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Treadwell and Girsewald, Z anorg 1904, 39 92)

$2\text{Cu}_2(\text{CN})_2, \text{Cu}(\text{CN})_2, 2\text{NH}_3$  Insol in  $\text{H}_2\text{O}$ , alcohol and ether. Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp by boiling acids and alkalis (Treadwell and Girsewald, Z anorg 1904, 39 92)

+  $\text{H}_2\text{O}$  (Monthier, J Pharm 11 257)

$\text{Cu}(\text{CN})_2, 2\text{Cu}(\text{CN})_2, 4\text{NH}_3$  (Hillen kamp, A 97 215)

$\text{Cu}(\text{CN})_2, 2\text{Cu}_2(\text{CN})_2, 6\text{NH}_3$  (Schiff and Beechi, A 134 33)

$2\text{Cu}(\text{CN})_2, \text{Cu}(\text{CN})_2, 2\text{NH}_3 + 3\text{H}_2\text{O}$

(Fleurent C R 114 1060)

$2\text{Cu}(\text{CN})_2, \text{Cu}(\text{CN})_2, 4\text{NH}_3 + \text{H}_2\text{O}$  Correct formula for  $\text{Cu}(\text{CN})_2, \text{Cu}(\text{CN})_2, 4\text{NH}_3$  (Bouveault, Bull Soc (3) 4 641)

**Cuprous cyanide ammonium sulphocyanide  $\text{Cu}(\text{CN})_2, 3\text{NH}_4\text{SCN}$** 

Decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1903, 37 409)

**Cupric cyanide hydrazine,  $\text{Cu}(\text{CN})_2(\text{NH}_2)_2$** 

Insol in  $\text{H}_2\text{O}$  and cold dil acids

Sol in warm dil acids (Franzen, Z anorg 1911, 70 154)

**Cuprous cyanide mercuric iodide,  $\text{Cu}_2(\text{CN})_2, \text{HgI}_2$** 

Sol in  $\text{H}_2\text{O}$  (Varet, Bull Soc (3) 4 484)

**Cuprous cyanide potassium sulphocyanide,**  $\text{Cu}_2(\text{CN})_2, 3\text{KSCN}$

Decomp by  $\text{H}_2\text{O}$  (Grossmann, Z anorg 1903, 37 409)

**Gold (aurous) cyanide,  $\text{AuCN}$**

Insol in  $\text{H}_2\text{O}$ , alcohol, or ether Not attacked by dil, or conc acids, even boiling aqua regia

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in soluble cyanides  $+ \text{Aq}$

Slowly decomp by boiling  $\text{KOH} + \text{Aq}$ , also by  $(\text{NH}_4)_2\text{S} + \text{Aq}$

Sol in  $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$  (Bentel, Z anorg 1912, 78 152)

**Gold (auric) cyanide with  $\text{MCN}$**

See Auricyanide, M

**Gold (auroauric) mercuric cyanide auric mercuric chloride,  $4\text{AuCN}, \text{Au}(\text{CN})_3, 5\text{Hg}(\text{CN})_2, 7\text{AuCl}_3, 5\text{HgCl}_2$**   
(Schmidt, Ch Z 1896, 20 633)

**Gold (aurous) potassium cyanide,  $\text{AuCN}, \text{KCN}$**

Sol in 7 pts cold, and less than 0.5 pt boiling  $\text{H}_2\text{O}$  Sl sol in cold, and somewhat more sol in boiling alcohol Insol in ether (Himly, A 42 160)

Decomp by warm acids, even tartaric, and acetic acids

**Gold (aurous) sodium cyanide,  $\text{AuCN}, \text{NaCN}$**

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  Sl sol in alcohol (Lindbom)

**Gold (aurous) strontium cyanide,  $2\text{AuCN}, \text{Sr}(\text{CN})_2 + 3\text{H}_2\text{O}$**

As the Na salt

**Gold (aurous) zinc cyanide,  $2\text{AuCN}, \text{Zn}(\text{CN})_2$**

Nearly insol in hot or cold  $\text{H}_2\text{O}$

Insol in cold  $\text{HCl} + \text{Aq}$

**Gold (auric) cyanide auric mercuric chloride,  $\text{Au}(\text{CN})_3, \text{AuCl}_3, 2\text{HgCl}_2$**

(Schmidt, Ch Z 1896, 20 633)

**Gold (auroauric) cyanide aurous mercuric chloride,  $12\text{AuCN}, 3\text{Au}(\text{CN})_3, 4\text{AuCl}_3, 2\text{HgCl}_2$**

(Schmidt, Ch Z 1896, 20 633)

**Gold (auroauric) cyanide mercuric chloride  $15\text{AuCN}, 2\text{Au}(\text{CN})_3, 5\text{HgCl}_2$**

(Schmidt, Ch Z 1896, 20 633)

**Iridium cyanide,  $\text{Ir}(\text{CN})_3$**

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCN} + \text{Aq}$

**Iridium cyanide with  $\text{MCN}$**

See Iridicyanide, M

**Lanthanum cyanide,  $\text{La}(\text{CN})_3$**

Ppt (Frenichs and Smith, B 11 910, 1151)

**Lead cyanide,  $\text{Pb}(\text{CN})_2$**

Sl sol in cold, more in hot  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3 + \text{Aq}$ , and  $\text{KCN} + \text{Aq}$  Partially sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , and  $\text{NH}_4$  salts  $+ \text{Aq}$  Not pptd in presence of Na citrate

Above compound is  $2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$  (Joannis, A ch (5) 26 204)

$2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$

**Lead tungsten cyanide**

See Tungstocyanide, lead

**Lead zinc cyanide,  $\text{Pb}(\text{CN})_2, 2\text{Zn}(\text{CN})_2$**

Ppt (Rammelsberg)

**Lead cyanide chloride,  $2\text{Pb}(\text{CN})_2, \text{PbCl}_2$**

Insol in  $\text{H}_2\text{O}$  (Grissom and Thorp, Am Ch J 10 229)

**Lithium mercuric cyanide mercuric iodide,  $2\text{Li}(\text{CN})_3, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}$**

Deliquescent, sol in  $\text{H}_2\text{O}$  (Varet, C R 111 526)

**Magnesium cyanide,  $\text{Mg}(\text{CN})_2$**

Known only in aqueous solution which decomposes on evaporation (Schulz)

**Magnesium mercuric cyanide,  $2\text{Mg}(\text{CN})_2, 3\text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$**

(Grossmann, B 1904, 37 4143)

**Magnesium mercuric cyanide mercuric bromide,  $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgBr} + 8\text{H}_2\text{O}$**

Very sol in  $\text{H}_2\text{O}$  (Varet, Bull Soc (3) 7 170)

**Magnesium mercuric cyanide mercuric iodide,  $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$  (Varet, Bull Soc (3) 7 170)

**Magnesium platinum cyanide**

See Platinocyanide, magnesium

**Magnesium tungsten cyanide**

See Tungstocyanide, magnesium

**Manganous and manganic cyanides**

See Manganocyanhydric, and Manganocyanhydric acids

**Manganous strontium cyanide,  $2\text{Mn}(\text{CN})_2, \text{Sr}(\text{CN})_2$**

Ppt (Descamps)

See also Manganocyanide, strontium

**Manganous tungsten cyanide**

See Tungstocyanide, manganous

**Manganic cyanide, with MCN**

See Manganicyanide, M

**Manganous cyanide with MCN**

See Manganocyanide, M

**Mercuric cyanide, basic,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$** Sl sol in cold, moderately sol in hot  $\text{H}_2\text{O}$   
Sol with decomp in  $\text{KOH}$ ,  $\text{KCN}$ , or  $\text{KCl} + \text{Aq}$  (Johnston)Decomp by  $\text{H}_2\text{O}$  over  $80^\circ$  (Holdermann, Arch Pharm 1906, 244 135)Cold  $\text{H}_2\text{O}$  dissolves about 1%, boiling  $\text{H}_2\text{O}$  about 5% (Borelli, Gazz ch it 1908, 38 (1), 361)11% dissolves in  $\text{H}_2\text{O}$  at ord temp (Richard, J Chm Phys (6) 18 555)At  $0^\circ$  1/100 mol dissolve in 1 l  $\text{H}_2\text{O}$ At  $25^\circ$  1/32 " " " " "At  $90^\circ$  1/10 " " " " "

(Borelli, Gazz ch it 1908, 38 (1), 361)

1000 cc cold  $\text{H}_2\text{O}$  dissolve 1.35g (Holdermann, Arch Pharm 1906, 244 135)Less sol in cold  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2$  (Pieverling, J B 1899, 783)

Somewhat sol in dil alcohol

Practically insol in alcohol, ether,  $\text{C}_2\text{H}_6$  and all organic solvents (Borelli, Gazz ch it 1908, 38, (1), 361)Sol in 110 pt alcohol of  $90^\circ$  Bé (Richard, J Chm Phys (6), 18 555) $3\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$  (Joannis, A ch (5) 26 469)Moderately sol in  $\text{H}_2\text{O}$  (Barthe, J Pharm 1896, (6), 3 186)Very sol in hot, less sol in cold  $\text{H}_2\text{O}$  (Holdermann, Arch Pharm 1904, 242 32)Easily sol in  $\text{HCl}$  (Joannis A ch 1882, (5) 26 511) $\text{Hg}(\text{CN})_2$ ,  $3\text{HgO}$  More sol in  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ **Mercuric cyanide,  $\text{Hg}(\text{CN})_2$** Moderately sol in  $\text{H}_2\text{O}$ 100 pts  $\text{Hg}(\text{CN})_2 + \text{Aq}$  sat at  $101.1^\circ$  contain 35 pts  $\text{Hg}(\text{CN})_2$ , or 100 pts  $\text{H}_2\text{O}$  dissolve 53.85 pts  $\text{Hg}(\text{CN})_2$  at  $101.1^\circ$  (Griffiths)Sol in 8 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Abl)Sol in 11 pts cold, and 2.5 pts boiling  $\text{H}_2\text{O}$  (Wittstein)8 g are sol in 100 g  $\text{H}_2\text{O}$  at  $-0.45^\circ$  (Guthrie, Phil Mag 1878, (5) 6 40)100 g  $\text{H}_2\text{O}$  dissolve 9.3 g at  $13.5^\circ$  (Gimofeyev, Dissert 1894)100 cc sat solution contain 9.3 g at  $20^\circ$  (Konowalow, J russ Soc 1898, (4) 30 367)Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 0.44$  mol l (Sherrill, Z phys Ch 1903, 43 735)1 l  $\text{H}_2\text{O}$  dissolves 0.3956 mol (Hofmann and Wagner, Z Elektrochem 1909, 15 444)100 g  $\text{H}_2\text{O}$  dissolve 12.5 g at  $15^\circ$  (Marsh and Struthers, Chem Soc 1905, 87 1879)100 g  $\text{H}_2\text{O}$  dissolve 11.27 g at  $25^\circ$  Sp gr of solution = 1.0813 (Herz and Anders, Z anorg 1907, 62 164) $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.23%  $\text{Hg}(\text{CN})_2$  has sp gr  $20^\circ/20^\circ = 1.0572$  $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 9.07%  $\text{Hg}(\text{CN})_2$  has sp gr  $20^\circ/20^\circ = 1.0743$ 

(Le Blanc and Rohland, Z phys Ch 1896, 19 282)

Sp gr at  $16^\circ/4^\circ$  of  $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.8921%  $\text{Hg}(\text{CN})_2 = 1.06376$ , containing 5.4037% = 1.04246, containing 7.5009% = 1.06049 (Schonrock, Z phys Ch 1893, 11 770)Not decomp by acids except hot conc  $\text{H}_2\text{SO}_4$ Sol without decomp in  $\text{HNO}_3 + \text{Aq}$  (Berzelius)1 l  $\text{NH}_4\text{OH} + \text{Aq}$  (5.2%  $\text{NH}_3$ ) dissolves 204.3 g at about  $25^\circ$  (Konowalow)

Solubility in bases

1 l  $\text{H}_2\text{O}$  containing 0.3286 mols  $\text{KOH}$  dissolves 0.5179 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.2350 mols  $\text{NaOH}$  dissolves 0.4840 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.4775 mols  $\text{NaOH}$  dissolves 0.5977 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.9475 mols  $\text{NaOH}$  dissolves 0.79603 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.970 mols  $\text{LiOH}$  dissolves 0.6543 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.480 mols  $\text{LiOH}$  dissolves 0.5500 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.243 mols  $\text{LiOH}$  dissolves 0.4840 mols  $\text{Hg}(\text{CN})_2$ 

(Hofmann and Wagner, Z Elektrochem 1909, 15 444)

Solubility in  $\text{KCN} + \text{Aq}$  at  $25^\circ$ 

Concentration of $\text{KCN}$ Mols per litre	Solubility of $\text{Hg}(\text{CN})_2$ Mols per litre
0.0493	0.4855
0.0985	0.5350
0.1970	0.627

(Sherrill, Z phys Ch 1903, 43 719)

Solubility in  $\text{Na}_2\text{CO}_3 + \text{Aq}$ 1 l  $\text{H}_2\text{O}$  containing 0.4923 mols  $\text{Na}_2\text{CO}_3$  dissolves 0.4956 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.2443 mols  $\text{Na}_2\text{CO}_3$  dissolves 0.4464 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.1250 mols  $\text{Na}_2\text{CO}_3$  dissolves 0.4147 mols  $\text{Hg}(\text{CN})_2$ 1 l  $\text{H}_2\text{O}$  containing 0.0000 mols  $\text{Na}_2\text{CO}_3$  dissolves 0.3952 mols  $\text{Hg}(\text{CN})_2$ 

(Hofmann and Wagner, Z Elektrochem, 1909, 15 444)

Solubility in  $\text{KNO}_3 + \text{Aq}$  at  $25^\circ$

1 l  $\text{H}_2\text{O}$  containing 0.9574 mols  $\text{KNO}_3$   
dissolves 0.5383 mols  $\text{Hg}(\text{CN})_2$   
1 l  $\text{H}_2\text{O}$  containing 0.4614 mols  $\text{KNO}_3$   
dissolves 0.4619 mols  $\text{Hg}(\text{CN})_2$   
1 l  $\text{H}_2\text{O}$  containing 0.0000 mols  $\text{KNO}_3$  dis-  
solves 0.3956 mols  $\text{Hg}(\text{CN})_2$   
(Hofmann and Wagner, Z Elektrochem 1909,  
15 444)

Insol in liquid  $\text{CO}_2$  (Buchner, Z phys  
Ch 1906, 54 674)

Very easily sol in liquid  $\text{NH}_3$  (Franklin,  
Am Ch J 1898, 20 829)

Solubility of  $\text{Hg}(\text{CN})_2$  in ethyl alcohol at  $t^\circ$

$t^\circ$	% $\text{HgCl}_2$
0	8.3
10	8.8
20	9.25
30	9.8
40	10.3

96.76	1.056	1.9374
100	0.714	0.9097

(Herz and Anders, Z anorg 1907, 52 165)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

Solubility in organic solvents at 18-20°

100 g tetrachlormethane dissolve 0.001 g  $\text{Hg}(\text{CN})_2$

100 g bromoform dissolve 0.005 g  $\text{Hg}(\text{CN})_2$

100 g ethyl bromide dissolve 0.013 g  $\text{Hg}(\text{CN})_2$

100 g ethylene dibromide dissolve 0.001 g  $\text{Hg}(\text{CN})_2$

(Sule, Z anorg 1900, 25 401)

100 g acetonitrile dissolve 9.58 g  $\text{Hg}(\text{CN})_2$  at 18° (Naumann and Schier, B 1914 47 249)

Solubility in benzonitrile at 18° = 1.0 g in 100 g (Naumann, B 1914, 47 1370)

Sl sol in ethyl amine (Shinn, J I ys Chem 1907, 11 538)

Very sol in liquid methyl amine (G bs, J Am Chem Soc 1906, 28 1419)

Sol in paratoluidine (Werner, Z anorg 1897, 15 7)

Mol weight determined in pyridine and benzonitrile (Werner, Z anorg 1897, 15 20 and 32)

100 g pyridine dissolve 64.8 g  $\text{Hg}(\text{CN})_2$  at 18° (Schroeder, Z anorg 1905, 44 1)

#### Solubility in pyridine

Mols per 100 $\text{Hg}(\text{CN})_2$	Temp of Solidification	Mols per 100 $\text{Hg}(\text{CN})_2$	Temp of Solidification
7.1	9	22.9	45

**Mercuric nickel cyanide ammonia**,  $2\text{Hg}(\text{CN})_2 \cdot 4\text{Ni}(\text{CN})_2 \cdot 5\text{NH}_3 + 2\text{H}_2\text{O}$

(Papiermeister, Dissert 1898)

$5\text{Hg}(\text{CN})_2 \cdot 18\text{Ni}(\text{CN})_2 \cdot 8\text{NH}_3 + 15\text{H}_2\text{O}$  (Papiermeister, Dissert 1898)

**Mercuric potassium cyanide,  $\text{Hg}(\text{CN})_2, 2\text{KCN}$** 

Sol in 4 4 pts cold  $\text{H}_2\text{O}$ , sl sol in alcohol, decomp by acids

100 g  $\text{H}_2\text{O}$  dissolve 22.7 g (Fronmüller, B 1878, 11 92)

Abundantly sol in liquid  $\text{NH}_3$  (Franklin, Z phys Ch 1909, 69 295)

**Mercuric silver cyanide, basic,  $\text{Hg}(\text{CN})_2, \text{HgO}, 7\text{AgCN}$** 

Ppt (Bloxam, B 16 2669)

**Mercuric silver cyanide mercuric sulphate,  $\text{Hg}(\text{CN})_2, 2\text{AgCN}, \text{HgSO}_4 + \text{H}_2\text{O}$** **Mercuric sodium cyanide,  $\text{Hg}(\text{CN})_2, \text{NaCN} + 1\frac{1}{2}\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (Grossmann, B 1904, 37 4141)

**Mercuric strontium cyanide,  $\text{Hg}(\text{CN})_2, \text{Sr}(\text{CN})_2 + 5\text{H}_2\text{O}$** 

Very hygroscopic. Sol in  $\text{H}_2\text{O}$  (Grossmann, B 1904, 37 4142)

**Mercuric strontium cyanide iodide,  $\text{Sr}(\text{CN})_2, \text{HgI}_2, \text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$** 

(Varet, C R 1895, 121 499)

**Mercuric thallium cyanide,  $\text{Hg}(\text{CN})_2, 2\text{TlCN}$** 

Easily sol in  $\text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  dissolve 7.9 pts at  $1^\circ$ , and 10.3 pts at  $10^\circ$  (Fronmüller, B 11 92)

**Mercuric zinc cyanide,  $4\text{Zn}(\text{CN})_2, \text{Hg}(\text{CN})_2$** 

Insol in  $\text{H}_2\text{O}$  (Dunstan, Chem Soc 6 666)

**Mercuric zinc cyanide mercuric bromide ammonia,  $\text{Hg}(\text{CN})_2, \text{Zn}(\text{CN})_2, \text{HgBr}_2, 4\text{NH}_3$** 

Decomp by  $\text{H}_2\text{O}$  Sl sol in cold  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C R 1889, 109 810)

**Mercuric cyanide ammonia,  $\text{Hg}(\text{CN})_2, \text{NH}_3$** 

Very sol in  $\text{H}_2\text{O}$   $\text{NH}_4\text{OH} + \text{Aq}$  and alcohol (Varet, C R 1889, 109 903)

Sl sol in  $\text{H}_2\text{O}$  (Schmidt, B 1894, 27 232)

$\text{SiH}_4(\text{CN})_2 + 2\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$  easily decomp (Varet Bull Soc (5) 6 221)

**Mercuric cyanide bromide,  $\text{Hg}(\text{CN})_2, \text{HgBr}_2$** 

Very sl sol even in boiling  $\text{H}_2\text{O}$  (Prussia, Gazz ch it 1898, 28, (2), 114)

**Mercuric cyanide barium bromide,  $2\text{Hg}(\text{CN})_2, \text{BaBr}_2 + 6\text{H}_2\text{O}$** 

Easily sol especially in hot  $\text{H}_2\text{O}$  and alcohol (Varet, C R 1895, 121 398)

**Mercuric cyanide cadmium bromide,  $\text{Hg}(\text{CN})_2, \text{CdBr}_2 + 3\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, Bull Soc (3) 5 8)

$2\text{Hg}(\text{CN})_2, \text{CdBr}_2 + 4.5\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C R 1890, 111 680)

**Mercuric cyanide cadmium bromide ammonia  $2\text{Hg}(\text{CN})_2, \text{CdBr}_2, 4\text{NH}_3 + 2\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$

Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C R 1891, 112 535)

**Mercuric cyanide calcium bromide,  $2\text{Hg}(\text{CN})_2, \text{CaBr}_2 + 5\text{H}_2\text{O}$** 

Sol in 1 pt cold, and 0.25 pt boiling  $\text{H}_2\text{O}$ , also in 2 pts cold, and 1 pt boiling 90% alcohol (Custer)  $+ 7\text{H}_2\text{O}$  (Varet, C R 1895, 121 399)

**Mercuric cyanide cupric bromide ammonia,  $2\text{Hg}(\text{CN})_2, \text{CuBr}_2, 4\text{NH}_3$** 

Decomp by  $\text{H}_2\text{O}$ , sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, Bull Soc (3) 6 221)

**Mercuric cyanide lithium bromide,  $2\text{Hg}(\text{CN})_2, 2\text{LiBr} + 7\text{H}_2\text{O}$** 

Deliquescent (Varet, C R 111 526)

**Mercuric cyanide magnesium bromide**

See Magnesium mercuric cyanide mercuric bromide

$\text{Hg}(\text{CN})_2, 2\text{KBr}$  Very sol in  $\text{H}_2\text{O}$  (Harth, Z anorg 1897, 14 351)

**Mercuric cyanide potassium bromide,  $\text{Hg}(\text{CN})_2, \text{KBr} + 2\text{H}_2\text{O}$** 

Sol in 13.34 pts  $\text{H}_2\text{O}$  at  $18^\circ$ , and less than 1 pt boiling  $\text{H}_2\text{O}$  (Brett)

Sol without decomp in hot dil  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$  (Brett)

Contains  $1\frac{1}{2}\text{H}_2\text{O}$  (Berthelot, A ch (5) 29 226)

**Mercuric cyanide sodium bromide,  $\text{Hg}(\text{CN})_2, \text{NaBr} + 1\frac{1}{2}\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and alcohol

**Mercuric cyanide strontium bromide,  $2\text{Hg}(\text{CN})_2, \text{SrBr}_2 + 6\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and in alcohol (Varet, C R 1895, 121 399)

**Mercuric cyanide zinc bromide,  $\text{HgBr}_2, \text{Hg}(\text{CN})_2, \text{Zn}(\text{CN})_2 + 8\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, Bull Soc (3) 5 8)

**Mercuric cyanide zinc bromide ammonia,  $\text{HgBr}_2, \text{Hg}(\text{CN})_2, \text{Zn}(\text{CN})_2, 4\text{NH}_3$** 

As the corresponding chloride (Varet)

**Mercuric cyanide chloride**,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgCl}_2$   
Sol in  $\text{H}_2\text{O}$  Decomp by alcohol, which  
dissolves out  $\text{HgCl}_2$

**Mercuric cyanide ammonium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_4\text{Cl}$   
Sol in  $\text{H}_2\text{O}$  and alcohol (Poggiale)  
 $\text{Hg}(\text{CN})_2$ ,  $4\text{NH}_4\text{Cl}$

**Mercuric cyanide barium chloride**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{BaCl}_2 + 4\text{H}_2\text{O}$   
Efflorescent Easily sol in  $\text{H}_2\text{O}$  and alcohol  
 $+6\text{H}_2\text{O}$  (Dexter)

**Mercuric cyanide barium chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{BaCl}_2$ ,  $4\text{NH}_3$   
Decomp by  $\text{H}_2\text{O}$  Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
(Varet, Bull Soc (3) 6 221)

**Mercuric cyanide cadmium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{CdCl}_2 + 2\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet,  
Bull Soc (3) 5 8)

**Mercuric cyanide calcium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CaCl}_2 + 6\text{H}_2\text{O}$   
Efflorescent Very sol in  $\text{H}_2\text{O}$  (Varet,  
C R 1895, 121 349)

**Mercuric cyanide cerium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{CeCl}_3 + 8\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (Ahlén, Bull Soc (2)  
27 365)

**Mercuric cyanide cobaltous chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $2\text{CoCl}_2 + 4\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Poggiale)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CoCl}_2 + 7\text{H}_2\text{O}$  (Dexter)

**Mercuric cyanide cupric chloride**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{CuCl}_2 + 6\text{H}_2\text{O}$   
Efflorescent  
Sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet,  
C R 1888, 107 1002)

$2\text{Hg}(\text{CN})_2$ ,  $\text{CuCl}_2 + 6\text{H}_2\text{O}$  Efflorescent  
Very sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$   
(Varet, C R 1888, 107 1002)

**Mercuric cyanide cupric chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CuCl}_2$ ,  $4\text{NH}_3$   
Decomp by  $\text{H}_2\text{O}$  Sl sol in cold  $\text{NH}_4\text{OH}$   
 $+ \text{Aq}$  (Varet, Bull Soc (3) 6 221)

**Mercuric cyanide didymium chloride**,  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{DyCl}_3 + 8\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (Ahlen)

**Mercuric cyanide erbium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{ErCl}_3 + 8\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  (Ahlen)

**Mercuric cyanide hydrazine chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{N}_2\text{H}_4$ ,  $\text{HCl}$   
Very sol in  $\text{H}_2\text{O}$

Nearly insol in alcohol and ether (Fe-  
ratini, Gazz ch it 1912, 42 (1), 154)

**Mercuric cyanide ferric chloride**,  $2\text{Hg}(\text{CN})$   
 $\text{FeCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$   
(Dexter)

**Mercuric cyanide lanthanum chloride**,  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{LaCl}_3 + 8\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  (Ahlén)

**Mercuric cyanide magnesium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{MgCl}_2 + 2\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  and dil alcohol (Po-  
ggiale)

**Mercuric cyanide manganous chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{MnCl}_2 + 3\text{H}_2\text{O}$   
Efflorescent Very sol in  $\text{H}_2\text{O}$  (Poggiale)

**Mercuric cyanide nickel chloride**,  $\text{Hg}(\text{CN})$ ,  
 $\text{NiCl}_2 + 6\text{H}_2\text{O}$   
Deliquescent Sol in  $\text{H}_2\text{O}$  (Poggiale)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{NiCl}_2 + 7\text{H}_2\text{O}$  (Dexter)

**Mercuric cyanide chloride nickel chlori-**  
**oxychloride**,  $11\text{Hg}(\text{CN})_2$ ,  $8\text{HgCl}_2$ ,  $2\text{NiCl}_2$ ,  
 $8\text{Ni}(\text{OH})\text{Cl} + 76\text{H}_2\text{O}$   
(Papiermeister, Dissert 1898)

**Mercuric cyanide potassium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KCl} + \text{H}_2\text{O}$   
Sol in 675 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Bret)  
Sol in alcohol

**Mercuric cyanide sodium chloride**,  $\text{Hg}(\text{CN})$ ,  
 $\text{NaCl}$   
Easily sol especially in hot  $\text{H}_2\text{O}$ , insol in  
alcohol (Poggiale)

**Mercuric cyanide strontium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{SrCl}_2 + 6\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  and dil alcohol (Va-  
t, C R 1895, 121 349)

**Mercuric cyanide yttrium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{YCl}_3 + 8\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  (Ahlen, Bull Soc (2)  
27 365)

**Mercuric cyanide zinc chloride**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{ZnCl}_2 + 6\text{H}_2\text{O}$   
Efflorescent Sol in  $\text{H}_2\text{O}$  (Kane)  
 $\text{HgCl}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2 + 7\text{H}_2\text{O}$  ef-  
florescent Very sol in  $\text{H}_2\text{O}$  (Varet, Bull  
Soc (3) 5 8)

**Mercuric cyanide zinc chloride ammonia**,  
 $\text{HgCl}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{ZnCl}_2$ ,  $4\text{NH}_3$   
Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
(Varet, Bull Soc (3) 6 221)  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $\text{HgCl}_2$ ,  $6\text{NH}_3$  (Varet,  
C R 106 1080)

**Mercuric cyanide potassium chromate***See Chromate mercuric cyanide, potassium***Mercuric cyanide potassium ferrocyanide,**  
 $3\text{Hg}(\text{CN})_2, \text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ Readily sol in  $\text{H}_2\text{O}$ **Mercuric cyanide hydrazine,  $\text{Hg}(\text{CN})_2,$**   
 $\text{N}_2\text{H}_4$ Very sol in  $\text{H}_2\text{O}$  with partial decomp (Hofmann and Marburg, A 1899, 305 215)  
 $\text{Hg}(\text{CN})_2, \text{N}_2\text{H}_4$  Ppt (Franzen, Z anorg 1911, 70 154)**Mercuric cyanide potassium hydroxide,**  
 $\text{Hg}(\text{CN})_2, \text{KOH}$ (Hofmann and Wagner, B 1908, 41 321)  
 $+1\frac{1}{2}\text{H}_2\text{O}$  (Hofmann and Wagner, B 1908, 41 1630)  
 $2\text{Hg}(\text{CN})_2, \text{KOH} + \text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$   
(Hofmann and Wagner, B 1908, 41 320)**Mercuric cyanide sodium hydroxide,**  
 $\text{Hg}(\text{CN})_2, \text{NaOH} + 1\frac{1}{2}\text{H}_2\text{O}$  or  $\text{H}_2\text{O}$ 

(Hofmann and Wagner, B 1908, 41 1631)

**Mercuric cyanide barium iodide,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{BaI}_2 + 4\text{H}_2\text{O}$ Slowly deliquescent Sol in 16.5 pts cold, and 0.4 pt boiling  $\text{H}_2\text{O}$  Sol in 22.5 pts cold, and 1.6 pts hot 90% alcohol Solution is decomp on boiling (Custer)**Mercuric cyanide cadmium iodide,  $\text{Hg}(\text{CN})_2,$**   
 $\text{Cd}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$ *See Cadmium mercuric cyanide mercuric iodide***Mercuric cyanide caesium iodide,  $\text{Hg}(\text{CN})_2,$**   
 $\text{CsI}$ Recryst from  $\text{H}_2\text{O}$  without decomp  
Decomp by acids (Mathewson and Wells, Am Ch J 1903, 30 433)**Mercuric cyanide calcium iodide,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{CaI}_2 + 6\text{H}_2\text{O}$ Sl efflorescent More sol in  $\text{H}_2\text{O}$  than corresponding Sr comp (Custer)**Mercuric cyanide lithium iodide,  $\text{Hg}(\text{CN})_2,$**   
 $2\text{Li}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}$ *See Cyanide, lithium mercuric mercuric iodide***Mercuric cyanide magnesium iodide,**  
 $\text{Hg}(\text{CN})_2, \text{Mg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$ *See Cyanide, magnesium mercuric mercuric iodide***Mercuric cyanide potassium iodide,  $\text{Hg}(\text{CN})_2,$**   
 $\text{KI}$ Sol in 16 pts cold, and less hot  $\text{H}_2\text{O}$  Sol in 96 pts cold alcohol of  $34^\circ$  Baumé (Caillet) Sl sol in ether Decomp by acids  
 $3\text{Hg}(\text{CN})_2, 2\text{KI} + \frac{1}{2}\text{H}_2\text{O}$  (Berthelot)**Mercuric cyanide sodium iodide,  $\text{Hg}(\text{CN})_2,$**   
 $\text{NaI} + 2\text{H}_2\text{O}$ Sol in  $4\frac{1}{2}$  pts  $\text{H}_2\text{O}$  at  $18^\circ$ , and  $\frac{9}{7}$  pt boiling  $\text{H}_2\text{O}$ Sol in 2 pts boiling, and  $6\frac{1}{2}$  pts cold 90% alcohol (Custer)**Mercuric cyanide strontium iodide,**  
 $2\text{Hg}(\text{CN})_2, \text{SrI}_2 + 6\text{H}_2\text{O}$ Sol in 7 pts  $\text{H}_2\text{O}$  at  $18^\circ$ , and  $\frac{1}{2}$  pt at b-pt  
Sol in 4 pts 90% alcohol at  $18^\circ$ , and  $\frac{1}{2}$  pt at b-pt (Custer)**Mercuric cyanide zinc iodide,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{ZnI}_2 + 6\text{H}_2\text{O}$ Efflorescent, sol in  $\text{H}_2\text{O}$ **Mercuric cyanide iodide potassium cyanide,**  
 $\text{HgI}_2, \text{Hg}(\text{CN})_2, 2\text{KCN}$ 

Easily decomp by dil acids (Rupp Apoth Ztg, 23 374)

**Mercuric cyanide cadmium nitrate,**  
 $2\text{Hg}(\text{CN})_2, \text{Cd}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$ , not by alcohol (Nylander, J B 1859 271)**Mercuric cyanide cobalt nitrate,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{Co}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$ , not by alcohol (Nylander)**Mercuric cyanide copper nitrate,  $\text{Hg}(\text{CN})_2,$**   
 $\text{Cu}(\text{NO}_3)_2 + 5\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$ , not by alcohol (Nylander)**Mercuric cyanide ferrous nitrate,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{Fe}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$ , not by alcohol (Nylander)**Mercuric cyanide manganous nitrate,**  
 $\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 5\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$ , not by alcohol (Nylander) $2\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$  As above**Mercuric cyanide nickel nitrate,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{Ni}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ Decomp by  $\text{H}_2\text{O}$  not by alcohol (Nylander)**Mercuric cyanide silver nitrate,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{AgNO}_3 + 2\text{H}_2\text{O}$ Sl sol in cold, more readily in hot  $\text{H}_2\text{O}$   
Sol with decomp in  $\text{HNO}_3 + \text{Aq}$   
As sol in alcohol as in  $\text{H}_2\text{O}$ **Mercuric cyanide zinc nitrate,  $2\text{Hg}(\text{CN})_2,$**   
 $\text{Zn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ Sol in  $\text{H}_2\text{O}$  with decomp Not decomp by alcohol (Nylander, J B 1859 271)

**Mercuric cyanide nitrate silver cyanide, basic,**  
 $\text{Hg}(\text{N}_2\text{O}_2)\text{CN}$ ,  $10\text{AgCN}$ ,  $\text{Hg}(\text{OH})\text{NO}_2$   
 (Schmidt, Z anorg 1895, 9 431)

**Mercuric cyanide potassium selenocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSeCN}$

Sl sol in cold, much more easily sol in hot  $\text{H}_2\text{O}$  or alcohol. Traces dissolve in ether (Cameron and Davy, C N 44 63)

**Mercuric cyanide nickel sulphate,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NiSO}_4 \cdot 9\text{H}_2\text{O}$   
 (Papiermeister, Dissert 1898)

**Mercuric cyanide ammonium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_4\text{SCN}$   
 Easily sol in hot  $\text{H}_2\text{O}$  (Cleve, Bull Soc (2) 23 71)

**Mercuric cyanide barium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ba}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$   
 Permanent Sol in hot  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide cadmium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Cd}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$   
 Permanent Sol in hot  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide calcium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ca}(\text{SCN})_2 \cdot 8\text{H}_2\text{O}$   
 Sol in  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide cerium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Ce}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$   
 Easily sol in hot  $\text{H}_2\text{O}$  (Jolin)

**Mercuric cyanide didymium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Dy}(\text{SCN})_3 \cdot 6\text{H}_2\text{O}$   
 Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide erbium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $2\text{Er}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$   
 Sl sol in cold, easily in hot  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide lanthanum sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $1\text{La}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$   
 Very sol in  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide magnesium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Mg}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$   
 Permanent. Easily sol in hot  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide potassium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSCN}$   
 Permanent. Easily sol in hot  $\text{H}_2\text{O}$  (Cleve)  
 $+2\text{H}_2\text{O}$  (Philp, Z Ch 1867 552)

**Mercuric cyanide rubidium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Rb}(\text{SCN})$   
 Sol in hot  $\text{H}_2\text{O}$  without decomp (Grossmann, B 1904, 37 1259)

**Mercuric cyanide samarium sulphocyanide**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Sm}(\text{SCN})_2 \cdot 12\text{H}_2\text{O}$   
 Easily sol in  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide sodium sulphocyanide**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NaSCN} \cdot 2\text{H}_2\text{O}$   
 Efflorescent Sol in  $\text{H}_2\text{O}$  (Cleve, Bu Soc (2) 23 71)

**Mercuric cyanide strontium sulphocyanide**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Sr}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$   
 Efflorescent (Cleve)

**Mercuric cyanide yttrium sulphocyanide**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Y}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$   
 Sl sol in warm, much less in cold  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide zinc sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$   
 Sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Mercuric cyanide zinc sulphocyanide ammonia,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2$ ,  $3\text{NH}_3$   
 Not efflorescent. Decomp by  $\text{H}_2\text{O}$

**Mercuric cyanide potassium thiosulphate,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{K}_2\text{S}_2\text{O}_3$   
 Permanent Sol in  $\text{H}_2\text{O}$  (Kessler)  
 $+ \text{H}_2\text{O}$  (Fock and Kluss, B 24 1355)

**Molybdenum hydroxyl potassium cyanide,**  
 $\text{K}_3\text{Mo}(\text{OH})_2(\text{CN})_5$   
 (Rosenheim and Koss, Z anorg 1906, 1 155)  
 $\text{K}_3\text{Mo}(\text{OH})_2(\text{CN})_5$ , Very sol in  $\text{H}_2\text{O}$  (Rosenheim and Koss)

**Molybdenum cyanide with MCN**  
 See Molybdocyanide M

**Molybdenyl potassium cyanide,**  
 $\text{MoO}_2(\text{CN})_2$ ,  $2\text{KCN}$   
 Very sol in  $\text{H}_2\text{O}$ . Aqueous solution is stable in presence of alkalis.  
 Insol in alcohol (Pouchard, C R 18 4, 118 805)  
 $\text{MoO}(\text{CN})_2$ ,  $2\text{KCN}$  Sol in  $\text{H}_2\text{O}$ . Insol in alcohol (Hofmann, Z anorg 1896, 2 287)  
 $+ \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Insol in alcohol (Hofmann)  
 $+ 4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Insol in alcohol (Hofmann)

**Nickel cyanide,**  $\text{Ni}(\text{CN})_4 \cdot 2\text{H}_2\text{O}$   
 Insol in  $\text{H}_2\text{O}$ . Insol in conc  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HNO}_3 + \text{Ag}$  but decomp by heating the solid with Sol in  $\text{NH}_4\text{OH}$ , warm  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4$  succinate +  $\text{Ag}$ , also in  $\text{KCN} + \text{aq}$ . Sl sol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Ag}$  (Wittstein)  
 Insol in methyl acetate (Naumann B 1909, 42 3790)

+3H<sub>2</sub>O, +3½H<sub>2</sub>O, +3¼ H<sub>2</sub>O, +4¼H<sub>2</sub>O, and +5¼H<sub>2</sub>O (Papiermeister, Dissert 1898)

+4H<sub>2</sub>O (Hofmann and Hochtlen, B 1903, 36 1149)

**Nickel potassium cyanide**, Ni(CN)<sub>2</sub>, 2KCN + H<sub>2</sub>O

Sol in H<sub>2</sub>O Decomp by acids with residue of insol Ni(CN)<sub>2</sub>

+½H<sub>2</sub>O (Rammelsberg)

**Nickel sodium cyanide**, Ni(CN)<sub>2</sub>, 2NaCN + 3H<sub>2</sub>O

Sol in H<sub>2</sub>O, decomp by acids with residue of Ni(CN)<sub>2</sub>

**Nickel strontium cyanide**, Ni(CN)<sub>2</sub>, Sr(CN)<sub>2</sub> + xH<sub>2</sub>O

Sol in H<sub>2</sub>O (Handl, J B 1859 273)

**Nickel cyanide ammonia**, Ni(CN)<sub>2</sub>, NH<sub>3</sub> + ½H<sub>2</sub>O

Scarcely attacked by H<sub>2</sub>O or dil acids

Sol in conc H<sub>2</sub>SO<sub>4</sub> Sol in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq, conc NH<sub>4</sub>OH + Aq (NH<sub>4</sub>)<sub>2</sub>C<sub>2</sub>O<sub>4</sub> + Aq, (NH<sub>4</sub>)<sub>2</sub>S + Aq, and KCN + Aq Decomp by boiling with NaOH or KOH (Bernoulli and Grether, Ch Z 1901, 25 436)

**Nickel cyanide trihydrazine**, Ni(CN)<sub>2</sub>, (N<sub>2</sub>H<sub>4</sub>)<sub>3</sub>

Ppt (Franzen, Z anorg 1911, 70 155)

**Osmium cyanide**, Os(CN) (?)

Insol in H<sub>2</sub>O, not attacked by acids

See also Osmocyanhydric acid

**Osmium potassium cyanide**

See Osmocyanide, potassium

**Palladous cyanide**, Pd(CN)

Insol in H<sub>2</sub>O Insol in dil acids Sol in KCN or NH<sub>4</sub>OH + Aq, also in conc HCN + Aq

**Platinous cyanide**, Pt(CN)<sub>2</sub>

Insol in H<sub>2</sub>O, alkalis, or acids Sol in KCN + Aq When freshly pptd, sol in NH<sub>4</sub>OH + Aq

**Platinous cyanide with MCN**

See Platinocyanide, M

**Potassium cyanide**, KCN

Deliquescent Very sol in H<sub>2</sub>O

100 pts KCN + Aq, sat at b-pt 103.3°, contain 55 pts KCN, i e 100 pts H<sub>2</sub>O dissolve 122.2 pts KCN at 103.3° (Griffiths)

KCN + Aq containing 3.25% KCN has sp gr = 1.0154, 6.5% KCN, 1.0316 (Kohlrausch, W Ann 1879 1)

KCN + Aq containing 9.64% KCN has sp gr 20°/20° = 1.0514

KCN + Aq containing 14.42% KCN has sp gr 20°/20° = 1.0768 (Le Blanc and Rohland, Z phy ch 1896, 19 278)

Moderately sol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 829)

Almost insol in absolute alcohol

Sol in 80 pts 95% alcohol when boiling, and easily sol in 35% alcohol (Geiger, A 1 50)

100 pts absolute methyl alcohol dissolve 4.91 pts at 19.5°, 100 pts absolute ethyl alcohol dissolve 0.87 pt at 19.5° (de Bruyn, Z phys Ch 10 783)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1904, 37 3601)

100 g glycerol dissolve 32 g KCN at 15.5° (Ossendowski, Pharm J 1907, 79 575)

Sol in CS<sub>2</sub> when pure (Loughlin, J B 1875 234)

Wholly insol in CS<sub>2</sub> (Moldenhauer, Z anal 16 199)

Sl sol in benzonitrile (Naumann, B 1914, 47 1369)

**Potassium chromium tetroxide pentacyanide**, K<sub>3</sub>[(CrO<sub>4</sub>)<sub>2</sub>(CN)<sub>5</sub>] + 5H<sub>2</sub>O

Very hygroscopic

Sol in H<sub>2</sub>O (Riesenfeld, B 1908, 41 3548)

**Potassium chromium tetroxide dicyanide ammonia**, K<sub>2</sub>[CrO<sub>4</sub>(CN) NH<sub>3</sub>] + 5H<sub>2</sub>O

Hygroscopic in the air

Easily sol in H<sub>2</sub>O and in NH<sub>4</sub>OH + Aq (Riesenfeld, B 1908, 41 3545)

**Potassium rhodium cyanide**

See Rhodocyanide, potassium

**Potassium ruthenium cyanide**

See Ruthenocyanide, potassium

**Potassium silver cyanide**, KCN, AgCN

Sol in 4.7 pts H<sub>2</sub>O at 15°, 4 pts at 20°, and in much less at higher temp Sol in 25 pts 85% alcohol (Baup, A ch (3) 53 464)

**Potassium silver sodium cyanide**, 2KCN, NaCN, 3AgCN

Sol in 4.4 pts H<sub>2</sub>O at 15°, and 22 pts 85% alcohol at 17° (Baup)

**Potassium tungsten cyanide**

See Tungstocyanide, potassium

**Potassium uranyl cyanide**,

(UO<sub>2</sub>)(CN)<sub>2</sub>, 2KCN

Ppt Sol in H<sub>2</sub>O Sl sol in presence of large excess of KCN (Alox A ch 1901 (7) 24 417)

**Potassium vanadium cyanide**, K<sub>3</sub>V(CN)

Readily sol in H<sub>2</sub>O, decomp slowly in neutral aq solution, rapidly in acid aq solution,

insol in alcohol (Locke, Am Ch J 1898, 20 601)

$K_4V(CN)_6 + 3H_2O$  Sol in  $H_2O$

Insol in alcohol and ether (Petersen, Z anorg 1904, 38 345)

**Potassium zinc cyanide**,  $2KCN$ ,  $Zn(CN)_2$

100 pts  $H_2O$  dissolve 11 pts at  $20^\circ$  (Sharwood, Eng Min J 1904, 77 845)

**Potassium cyanide molybdenum dioxide**,  $4KCN$ ,  $MoO_3 + 5H_2O$

Sol in  $H_2O$  Insol in alcohol (Hofmann, Z anorg 1896, 12 287)

+  $6H_2O$  "Potassium dioxotetracyanomolybdate"

Very sol in  $H_2O$  (Winkler, Dissert 1909)

+  $8H_2O$  (Rosenheim, Kohn and Garfunkel, Z anorg 1910, 65 174)

+  $10H_2O$  Decomp by conc  $HCl$ ,  $HNO_3$  and  $H_2SO_4$

Not acted upon by cold dil acids (v der Heide and Hofmann, Z anorg 1896, 12 285)

$5KCN$ ,  $MoO_3 + 8H_2O$  Sol in  $H_2O$  Insol in alcohol (Kalscher, Dissert 1902)

**Potassium cyanide molybdenum dioxide hydroxylamine**,  $4KCN$ ,  $MoO_3$ ,  $NH_2OH + H_2O$

Sol in  $H_2O$

Decomp by dil acids (v der Heide and Hofmann, Z anorg 1896, 12 282)

**Potassium cyanide molybdenum sulphide**,  $6KCN$ ,  $Mo_2S_3 + 5H_2O$

Easily sol in  $H_2O$  Decomp by dil acids (Hofmann, Z anorg 1896, 12 289)

Very sol in  $H_2O$  Slowly decomp in the cold by dil mineral acids (v der Heide and Hofmann, Z anorg 1896, 12 289)

**Potassium cyanide molybdenum sulphocyanide**,  $2KCN$ ,  $MoS_2(CN)_2$

(Péchar, C R 1894, 118, 806)

$5KCN$ ,  $Mo_3S_4(CN)_3 + 7H_2O$  Sol in  $H_2O$  Stable toward dil acids and alkalies (Hofmann, Z anorg 1896, 12 289)

**Potassium cyanide molybdenum sulphonyl cyanide**,  $4KCN$ ,  $Mo_2SO(CN)_2 + 4H_2O$

Sol in  $H_2O$  Stable toward dil acids (Hofmann, Z anorg 1896, 12 289)

**Potassium cyanide nitrite**,  $KCN$ ,  $KNO_2 + \frac{1}{2}H_2O$

Sol in  $H_2O$ , decomp slowly by  $H_2O$ , explosive (Hofmann, Z anorg 1895, 10 260-261)

**Potassium cyanide sulphur dioxide**,  $KCN$ ,  $SO_2 + H_2O$

Much more sol in hot than cold  $H_2O$  (Étard, C R 88 649)

$KCN$ ,  $HCN$ ,  $2SO_2 + 3H_2O$  Very sl so in cold  $H_2O$ , decomp by hot  $H_2O$  (Étard)

**Rubidium tungsten cyanide**

See Tungstocyanide, rubidium

**Rhodium cyanide**,  $Rh(CN)_3$

Ppt Not decomp by acids Sol in  $KCN + Aq$  (Martius, A 117 361)

**Rhodium cyanide with 3KCN**

See Rhodicyanide, potassium

**Ruthenium cyanide with 4MCN**

See Ruthenocyanide, M

**Silver cyanide**,  $AgCN$

Sl sol in  $H_2O$

$2.2 + 10^{-4}$  g sol in 1 liter of  $H_2O$  at  $19.96^\circ$  (Böttger, Z phys ch 1903, 46 603)

1 l solution in  $H_2O$  contains 0.000043  $AgCN$  at  $17.5^\circ$  (Abegg and Cox, Z phy Ch 1903, 46 11)

Solubility in  $H_2O$  at  $25^\circ = 2.22 + 10$  mol per l (Lucas, Z anorg 1904, 41 198)

Insol in dil acids Decomp by conc acids Not sol to any extent in  $HCN + A$

Freshly pptd  $AgCN$  is not dissolved by cold dil  $HNO_3$ , but is attacked by very d  $HNO_3$  on boiling From dry  $AgCN$  is dissolved 5% by boiling 1 hour with 1%  $HNO_3 + Aq$  Conc  $HNO_3$  dissolves more (Brunc B 1901, 34 1605)

Sol in  $NH_4OH + Aq$  Sol in boiln  $KCl$ ,  $NaCl$ ,  $CaCl_2$ ,  $BaCl_2$ , or  $MgCl_2 + Aq$ , b very slowly sol therein at ord temp Sol  $Na_2S_2O_3$ ,  $K_4Fe(CN)_6$ ,  $(NH_4)_2CO_3$ ,  $(NH_4)_2SCN$ ,  $NH_4NO_3$ , and  $NH_4$  succinate +  $Aq$ , and large amt of hot  $NH_4Cl + Aq$  (Wittstem

Sol in  $KCN$ ,  $NaCN$ ,  $Ba(CN)_2$ ,  $Ca(CN)$  or  $Sr(CN)_2 + Aq$  Insol in  $KOH$ , or  $NaOH + Aq$  Sol in conc boiling  $AgNO_3 + A$  (Wohler)

Sol in 431.7 pts 5%  $NH_4OH + Aq$  (c gr 0.998) at  $12^\circ$ , in 184.5 pts 10%  $NH_4OH$   $Aq$  (sp gr 0.96) at  $18^\circ$  (Longi, Gazz, c it 13 87)

Sl sol in  $Na$  citrate +  $Aq$

Sol in  $Hg(NO_3)_2 + Aq$

1 l of a 3-N solution of  $AgNO_3$  dissolv 3 1.216 g  $AgCN$  at  $25^\circ$  (Hellwig, Z anorg 1900, 25 177)

Very sol in  $(NH_4)_2S_2O_3 + Aq$  (Rosenheim and Steinhäuser, Z anorg 1900, 105)

Moderately sol in liq  $NH_3$  (Frankl, Am Ch J 1898 20 829)

Sl sol in liq  $HF$  (Franklin, Z anorg 1905, 46 2)

Abundantly sol in quinoline at  $60^\circ$  (Var, C R 1893, 116 60)

Sl sol in ethyl amine (Shinn, J ph Chem 1907, 11 538)

Insol in methyl acetate (Bezold, Dissert 1906, Naumann, B 1909, 42 3790), etl 1

acetate (Hamers, Dissert 1906, Naumann, B 1910, 43 314)

**Silver hydrogen cyanide**,  $\text{AgCN}$ ,  $\text{HCN}$   
(Euler, B 1903, 36 1859)

**Silver sodium cyanide**,  $\text{AgCN}$ ,  $\text{NaCN}$

Sol in 5 pts  $\text{H}_2\text{O}$  at  $20^\circ$  and in much less hot  $\text{H}_2\text{O}$  Sol in 24 pts 85% alcohol at  $20^\circ$  (Baup, A ch (3) 53 468)

**Silver thallous cyanide**,  $\text{AgCN}$ ,  $\text{TlCN}$

Easily sol in  $\text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  dissolve 4.7 pts at  $0^\circ$ , and 7.4 pts at  $16^\circ$  (Fronmuller, B 11 92)

**Silver tungsten cyanide**

See Tungstocyanide, silver

**Silver cyanide ammonia**,  $\text{AgCN}$ ,  $\text{NH}_3$

Efflorescent Decomp on air  
Very sol in ammonia at  $-10^\circ$  (Joannis, C R 1894, 118 1151)

**Silver cyanide hydrazine**,  $\text{AgCN}$ ,  $\text{N}_2\text{H}_4$

Decomp in the air  
Decomp by  $\text{H}_2\text{O}$  (Franzen, Z anorg 1911, 70 153)

**Silver cyanide nitrate**,  $2\text{AgCN}$ ,  $\text{AgNO}_3$

Decomp by  $\text{H}_2\text{O}$

**Sodium cyanide**,  $\text{NaCN}$

Sol in  $\text{H}_2\text{O}$  and 75% alcohol  
+  $\frac{1}{2}\text{H}_2\text{O}$ , and  $2\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ , sl sol in alcohol (Joannis, A ch (5) 26 484)

**Sodium tungsten cyanide**

See Tungstocyanide, sodium

**Sodium zinc cyanide**,  $\text{NaCN}$ ,  $\text{Zn}(\text{CN})_2 + 2\frac{1}{2}\text{H}_2\text{O}$

Much more sol in  $\text{H}_2\text{O}$  than the corresponding K Zn salt (Rammelsberg)  
+  $8\text{H}_2\text{O}$  (Loebe, Dissert 1902)

**Sodium cyanide molybdenum dioxide**,  $4\text{NaCN}$ ,  $\text{MoO}_2 + 6\text{H}_2\text{O}$

(Winkler, Dissert 1909)  
+  $14\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Rosenheim, Garfunkel and Kohn, Z anorg 1910, 65 174)

**Sodium cyanide molybdenum dioxide hydroxylamine**,  $4\text{NaCN}$ ,  $\text{MoO}_2$ ,  $\text{NH}_2\text{OH} + \text{H}_2\text{O}$

As K comp (Winkler, Dissert 1909)

**Strontium cyanide**,  $\text{Sr}(\text{CN})_2 + 4\text{H}_2\text{O}$

Very unstable, very deliquescent, and sol in  $\text{H}_2\text{O}$  (Joannis, A ch (5) 26 496)

**Strontium tungsten cyanide**

See Tungstocyanide, strontium

**Strontium zinc cyanide**,  $2\text{Sr}(\text{CN})_2$ ,  $3\text{Zn}(\text{CN})_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and alcohol (Loebe, Dissert 1902)

**Thallous cyanide**,  $\text{TlCN}$

100 pts  $\text{H}_2\text{O}$  dissolve 16.8 pts at  $28.5^\circ$  (Fronmuller, B 6 1178)

**Thallothallic cyanide**,  $\text{Tl}_2(\text{CN})_4 = \text{TlCN}$ ,  $\text{Tl}(\text{CN})_3$

Easily sol in  $\text{H}_2\text{O}$   
100 pts  $\text{H}_2\text{O}$  dissolve 27.3 pts at  $30^\circ$ , 15.3 pts at  $12^\circ$ , 9.7 pts at  $0^\circ$  (Fronmuller, B 11 92)

**Thallous tungsten cyanide**

See Tungstocyanide, thallous

**Thallous zinc cyanide**,  $2\text{TlCN}$ ,  $\text{Zn}(\text{CN})_2$

Easily sol in  $\text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  dissolve 8.7 pts at  $0^\circ$ , 15.2 pts at  $14^\circ$ , and 29.6 pts at  $31^\circ$  (Fronmuller, B 11 92)

**Tungsten cyanide with MCN**

See Tungstocyanide, M

**Zinc cyanide**,  $\text{Zn}(\text{CN})_2$

Insol in  $\text{H}_2\text{O}$  and alcohol Sol in alkalies  
Easily sol in  $\text{KCN} + \text{Aq}$  Sol in hot  $\text{NH}_4$  salts +  $\text{Aq}$  (Wittstein)

Easily sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Gore)  
Sol in  $\text{KOH} + \text{Aq}$  Solution is when less than 1 mol  $\text{Zn}(\text{CN})_2$  to 2  $\text{KOH}$  is present When proportion  $\text{ZnO}_2\text{H}_2$  soon separates

Sol in dil  $\text{KCN} + \text{Aq}$  (Sharwood, J Am Chem Soc 1903, 25 587)

Sl sol in conc Zn salts +  $\text{Aq}$  1 l conc  $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$  dissolves 4 g, and 1 l conc  $\text{ZnSO}_4 + \text{Aq}$  dissolves 2 g  $\text{Zn}(\text{CN})_2$   
Insol in  $\text{HCN} + \text{Aq}$  Easily sol in dil acids (Joannis)

Very sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 830)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

**Zinc cyanide ammonia**,  $\text{Zn}(\text{CN})_2$ ,  $2\text{NH}_3$

Decomp on air (Varet, C R 105 1070)  
+  $\text{H}_2\text{O}$  Decomp on air Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet)

**Zinc cyanide dihydrazine**,  $\text{Zn}(\text{CN})_2$ ,  $2\text{N}_2\text{H}_4$

Decomp by  $\text{H}_2\text{O}$  (Franzen, Z anorg 1911, 70 153)

**Cyanogen**,  $\text{CN}$

$\text{H}_2\text{O}$  absorbs  $4\frac{1}{2}$  vols  $\text{CN}$  gas at  $20^\circ$  Alcohol absorbs 23 vols, and ether 5 vols at the same temperature (Gay-Lussac)

The solution gradually decomposes, but this is prevented by traces of acids

0.221 mol litre are dissolved in  $H_2O$  at  $0^\circ$  (Naumann, Z Electrochem 1910, 16 177)

Oil of turpentine absorbs 5 vols (Gay-Lussac) Absorbed by many essential oils

Very sol in  $CuCl_2 + Aq$   
Absorbed with decomp by  $NH_4OH + Aq$  and other alkaline liquids

Absorbed by aniline (Jacquemain, C R 100 1006)

### Cyclotriborene, $B_3H_3$

Insol in  $H_2O$  (Ramsay and Hatfield, Proc Chem Soc 1901, 17 152)

### Decamine cobaltic sulphite,

Sol in  $H_2O$  (Vortmann and Magdeburg, B 22 2636)

### Decamine cobaltisulphurous acid

#### Cobaltic decamine cobaltisulphite,

Ppt (Vortmann and Magdeburg, B 22 2635)

#### Sodium decamine cobaltisulphite,

Sol in  $H_2O$  (Vortmann and Magdeburg, B 22 2635)

### Diamide, $N_2H_4$

See Hydrazine

### Diamine chromium sulphocyanhydric acid, $Cr(NH_3)_{12}(SCN)_3, HSCN + H_2O$

Sol in  $H_2O$  (Nordenskiöld, Z anorg 1 130)

### Diamine chromium diaquo sulphocyanide, $Cr(NH_3)_2(SCN)_3 + 2H_2O$

Sol in  $H_2O$  from which it is pptd by con  $HCl + Aq$  (Nordenskiöld, Z anorg 1 137)

### Ammonium diamine chromium sulphocyanide, $Cr(NH_3)_3(SCN)_3, NH_4SCN$

(Reinecke's salt) Quite easily sol in  $H_2O$ , less in alcohol, and insol in benzene. Slowly decomp by boiling  $H_2O$  or dil acids (Nordenskiöld, Z anorg 1 130)

+  $H_2O$  Insol in absolute ether (Christensen, J pr (2) 45 218)

### Ammonium diamine chromium sulphocyanide iodide, $Cr(NH_3)_2(SCN)_3, NH_4SCN, I$

### Barium ———, $[Cr(NH_3)_3(SCN)_3]_2, Ba(SCN)_2$

Sol in  $H_2O$  and alcohol (N)

### Cadmium diamine chromium sulphocyanide, $Cd(SCN)_2, [Cr(NH_3)_2(SCN)_3]_2 + H_2O$

Nearly insol in cold, sl sol in hot  $H_2O$   
Sl sol in boiling alcohol (Christensen, J pr (2) 45 371)

### Cupric ———, $Cu(SCN)_2, [Cr(NH_3)_2(SCN)_3]_2$

Insol in  $H_2O$  or dil acids (Reinecke, A 126 116)

### Ferric ———, $[Cr(NH_3)_2(SCN)_3]^1 Fe(SCN)_3 (N)$

### Luteocobaltic ———, $Co(NH_3)_6(SCN)_3[Cr(NH_3)_2(SCN)_3]_3$

As good as insol in cold  $H_2O$  Sl sol in hot  $H_2O$  and alcohol (Christensen, J pr (2) 45 370)

### Mercuric ———, $[Cr(NH_3)_2(SCN)_3] Hg(SCN)_2$

Insol in  $H_2O$  (N)

Insol in  $H_2O$  and dil acids (Reinecke)

### Potassium ———, $Cr(NH_3)_2(SCN)_3 KSCN$

Properties as the  $NH_4$  salt (N)

$Cr(NH_3)_2(SCN)_3, KSCN, I$  As the  $NH_4$  salt (N)

### Sodium ———, $NaSCN, Cr(NH_3)_2(SCN)_3$

Sol in  $H_2O$ , alcohol, and ether (Reinecke)

### Diamine cobaltic nitrite ammonium nitrite, $Co(NH_3)_2(NO_2)_3, NH_4NO_2$

Sol in  $H_2O$  (Frdmann)

### ——— nitrite lead nitrite,

Sol in hot  $H_2O$  with partial decomp

### ——— nitrite mercurous nitrite,

Ppt Not sol in hot  $H_2O$  without decomp

### ——— nitrite potassium nitrite,

Sol in  $H_2O$  (Frdmann, J pr 97 35)

### ——— nitrite silver nitrite,

Ppt Crystallises out of hot  $H_2O$  (Erdmann)

### ——— nitrite thallium nitrite,

Crystallises out of hot  $H_2O$  without decomp

**Dichroco-baltic carbonate,**

Sol in  $\text{H}_2\text{O}$  (Vortmann, B 15 1901)

**Dichroco-baltic chloride,  $\text{Co}(\text{NH}_3)_3\text{Cl}_3 + \text{H}_2\text{O}$** 

Quite sol in cold  $\text{H}_2\text{O}$ , dil acids, conc  $\text{H}_2\text{SO}_4$ , or dil alcohol

From solution in conc  $\text{H}_2\text{SO}_4$ , the salt is precipitated by much  $\text{HCl} + \text{Aq}$  Composition is  $\text{Co}(\text{NH}_3)_3(\text{OH}_2)\text{Cl}_3$  (Jorgensen, Z anorg 5 189)

**— nitrate,  $\text{Co}(\text{NH}_3)_3(\text{NO}_3)_3 + 4\text{H}_2\text{O}$** 

Deliquescent Sol in  $\text{H}_2\text{O}$  More sol in dil  $\text{HNO}_3 + \text{Aq}$  than praseocobaltic nitrate (Vortmann, B 15 1897)

*Anhydrous* Insol in  $\text{H}_2\text{O}$  as such, but converted into above salt thereby (Jorgensen, Z anorg 5 186)

**— nitrite,  $\text{Co}(\text{NH}_3)_3(\text{NO}_2)_3$** 

Difficultly sol in cold, but rather easily sol in hot  $\text{H}_2\text{O}$

**— sulphate,  $[\text{Co}(\text{NH}_3)_3]_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  (Vortmann, B 15 1900)

**— sulphite,  $[\text{Co}(\text{NH}_3)_3]_2(\text{SO}_3)_3 + \text{H}_2\text{O}$** 

Nearly insol in cold, slowly decomp by hot  $\text{H}_2\text{O}$  Decomp by acids or  $\text{KOH} + \text{Aq}$  Insol in cold, sol in warm  $\text{NH}_4\text{OH} + \text{Aq}$  (Kunzel, J pr (1) 72 209) According to Geuther (A 128 157), is a double salt—

**Didymium,  $\text{D}_1$** 

Slowly decomp by  $\text{H}_2\text{O}$  Insol in cold conc  $\text{H}_2\text{SO}_4$  Sol in dil acids

Compound of two elements, neodymium and praseodymium (v Welsbach, W A B 92 317)

**Didymium bromide,  $\text{D}_1\text{Br}_3 + 6\text{H}_2\text{O}$** 

Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Cleve)

**Didymium nickel bromide,  $2\text{D}_1\text{Br}_3 \cdot 3\text{NiBr} + 18\text{H}_2\text{O}$** 

Deliquescent Very sol in  $\text{H}_2\text{O}$  (Frerichs and Smith, A 191 342)

**Didymium zinc bromide,  $\text{D}_1\text{Br}_3 \cdot 3\text{ZnBr}_2 + 12\text{H}_2\text{O}$** 

Extremely deliquescent (Cleve, Bull Soc (3) 43 361)

**Didymium chloride,  $\text{D}_1\text{Cl}_3$** 

*Anhydrous* Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol (Marignac)

+  $6\text{H}_2\text{O}$  Deliquescent Easily sol in  $\text{H}_2\text{O}$  and alcohol (Marignac)

**Didymium mercuric chloride,  $2\text{D}_1\text{Cl}_3, 9\text{HgCl}_2 + 24\text{H}_2\text{O}$** 

More sol in  $\text{H}_2\text{O}$  than the corresponding La salt (Marignac)

$\text{D}_1\text{Cl}_3, 4\text{HgCl}_2 + 11\text{H}_2\text{O}$  Not deliquescent Easily sol in  $\text{H}_2\text{O}$

**Didymium stannic chloride**

See Chlorostannate, didymium

**Didymium fluoride,  $\text{D}_1\text{F}_3 + \frac{1}{2}\text{H}_2\text{O}$** 

Precipitate (Cleve)

**Didymium hydrogen fluoride,  $2\text{D}_1\text{F}_3, 3\text{HF}$** 

Precipitate (Smith)

Does not exist (Cleve)

**Didymium potassium fluoride,  $\text{D}_1\text{F}_3, \text{KF} + \text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (Brauner, B 15 114)

+  $\frac{1}{2}\text{H}_2\text{O}$  As above (B)

$2\text{D}_1\text{F}_3, 3\text{KF} + \text{H}_2\text{O}$  As above (B)

**Didymium hydroxide,  $\text{D}_1_2\text{O}_5\text{H}_6$** 

Insol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , but is sl sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose)

See also  $\text{D}_1_2\text{O}_3$

**Didymium penthydroxide,  $\text{D}_1\text{O}_4\text{H}_3 = \text{D}_1_2\text{O}_5, 3\text{H}_2\text{O}$** 

Precipitate (Brauner, B 15 113)

**Didymium zinc iodide,  $2\text{D}_1\text{I}_3, 3\text{ZnI}_2 + 24\text{H}_2\text{O}$** 

Very deliquescent (Frerichs and Smith)

**Didymium oxide,  $\text{D}_1_2\text{O}_3$** 

With  $\text{H}_2\text{O}$  slowly forms  $\text{D}_1_2\text{O}_5\text{H}_6$

Sol in conc, or dil mineral acids (Marignac), and in acetic acid (Heimann) Sol in ammonium salts +  $\text{Aq}$

Slightly more slowly sol in conc  $\text{NH}_4\text{NO}_3 + \text{Aq}$  than  $\text{La}_2\text{O}_3$  (Damour and Deville)

A solution of  $\text{NH}_4\text{NO}_3$  in  $\text{H}_2\text{O}$  that can dissolve 29 mols  $\text{I}_2\text{O}_5$  dissolves 1 mol  $\text{D}_1_2\text{O}_3$  (Brauner, B 15 114)

Insol in acetone (Naumann, B 1904, 37 4329)

**Didymium peroxide,  $\text{D}_1_4\text{O}_7$** 

Sol in acids with decomp (Frerichs, B 7 799)

Not obtained by Cleve (B 11 910)

The contradictory statements concerning the composition of  $\text{D}_1$  peroxide are owing to the fact that praseodidymium is the only one of the constituents of  $\text{D}_1$  which easily forms a peroxide (v Welsbach)

**Didymium pentoxide,  $\text{D}_1_2\text{O}_5$** 

Sol in dil  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  in the cold without evolution of gas, but gas is evolved if treated with conc acids Insol in  $\text{HF} + \text{Aq}$  Sl sol in cold  $\text{NH}_4\text{NO}_3 + \text{Aq} = \text{D}_1_4\text{O}_9$  (Cleve)

**Didymium oxybromide,  $\text{D}_1\text{OBr}$** 

(Frerichs and Smith)

**Didymium oxychloride,  $\text{D}_1\text{OCl}$** 

*Anhydrous* Insol in  $\text{H}_2\text{O}$  (Smith)  
 $+3\text{H}_2\text{O}$  Sol in cold dil  $\text{HNO}_3 + \text{Aq}$   
 (Marignac) Sl sol in  $\text{HCl} + \text{Aq}$  (Hermann)

**Didymium oxysulphide,  $\text{D}_1\text{O}_2\text{S}$** 

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  without  
 residue (Marignac)

**Didymium sulphide,  $\text{D}_1\text{S}_2$** 

Insol in  $\text{H}_2\text{O}$  Decomp by dil acids  
 (Marignac, A ch (3) 38 159)  
 Insol in acetone (Naumann, B 1904,  
 37 4329)

**Disulphuric acid,  $\text{H}_2\text{S}_2\text{O}_7$** 

See Disulphuric acid

**Dithionic acid (Hyposulphuric acid),**

Known only in aqueous solution, which is  
 stable only when dil Can be evaporated in  
 vacuo until sp gr = 1.347, but decomp upon  
 further evaporation (Welter and Gay-  
 Lussac, A ch 10 312)

**Dithionates**All dithionates are sol in  $\text{H}_2\text{O}$ **Aluminum dithionate,  $\text{Al}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$** 

Extremely deliquescent Easily sol in  $\text{H}_2\text{O}$   
 or absolute alcohol (Kluss, A 246 218)

**Aluminum ammonium dithionate,**

Sl deliquescent Sol in  $\text{H}_2\text{O}$  (Kluss, A  
 246 303)

**Ammonium dithionate,  $(\text{NH}_4)_2\text{S}_2\text{O}_6$** 

Very sol in  $\text{H}_2\text{O}$  Sol in 0.79 pt  $\text{H}_2\text{O}$  at  
 $16^\circ$ , with reduction of temp Not decomp  
 on boiling Insol in absolute alcohol (Heeren,  
 Pogg 7 172)

Contains  $\frac{1}{2}\text{H}_2\text{O}$  Sol in 0.56 pt  $\text{H}_2\text{O}$  at  
 $19^\circ$  (Kluss, A 246 194)

**Ammonium cadmium dithionate,**

Sol in  $\text{H}_2\text{O}$  (Kluss, A 246 298)

**Ammonium cobalt dithionate,  $9(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Sol in  $\text{H}_2\text{O}$  (Kluss)

**Ammonium cupric dithionate,  $(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Sol in  $\text{H}_2\text{O}$

**Ammonium ferrous dithionate,  $3(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Sol in  $\text{H}_2\text{O}$  (Kluss, A 246 300)  
 $9(\text{NH}_4)_2\text{S}_2\text{O}_6, 2\text{Fe}_2\text{S}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$  Sol  
 in  $\text{H}_2\text{O}$  (Kluss)

**Ammonium manganous dithionate,**

Sol in  $\text{H}_2\text{O}$  (Kluss, A 246 301)

**Ammonium nickel dithionate,  $9(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Sol in  $\text{H}_2\text{O}$  (Kluss)

**Ammonium zinc dithionate,  $5(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Easily sol in  $\text{H}_2\text{O}$  (Kluss, A 246 296)  
 $9(\text{NH}_4)_2\text{S}_2\text{O}_6, 2\text{ZnS}_2\text{O}_6 + 16\frac{1}{2}\text{H}_2\text{O}$  Easily  
 sol in  $\text{H}_2\text{O}$  (Kluss)

**Ammonium dithionate chloride,  $(\text{NH}_4)_2\text{S}_2\text{O}_6,$** 

Sol in  $\text{H}_2\text{O}$  (Fock and Kluss, B 24  
 3017)

**Barium dithionate,  $\text{BaS}_2\text{O}_6 + 2\text{H}_2\text{O}$** 

Not efflorescent Sol in 7.17 pts  $\text{H}_2\text{O}$  at  
 $8^\circ$ , 4.04 pts at  $18^\circ$ , and 1.1 pts  $\text{H}_2\text{O}$  at  $100^\circ$   
 Insol in alcohol (Gay-Lussac, Heeren)  
 Sol in 0.994 pt  $\text{H}_2\text{O}$  at  $102^\circ$ , the boiling-  
 point of the sat solution (Baker, Bull  
 Soc (2) 44 166)

Insol in methyl acetate (Naumann, B  
 1909, 42 3790)  
 $+4\text{H}_2\text{O}$  Very efflorescent (Heeren)

**Barium magnesium dithionate,  $\text{BaMg}(\text{S}_2\text{O}_6)_2$** 

Sol in  $\text{H}_2\text{O}$  (Schiff, A 118 97)

**Barium rubidium dithionate,  $\text{BaRb}_4(\text{S}_2\text{O}_6)_3$** 

Sol in  $\text{H}_2\text{O}$  Solubility is diminished by  
 presence of excess of  $\text{Rb}_2\text{SO}_4$ , but increased by  
 $\text{BaS}_2\text{O}_6$  (Bodlander, Chem Ztg 14 1140)

**Barium sodium dithionate,  $\text{BaNa}_4(\text{S}_2\text{O}_6)_3 +$** 

Sol in  $\text{H}_2\text{O}$  Decomp by recrystallisation  
 (Kraut, A 118 95)  
 $+6\text{H}_2\text{O}$  (Schiff)

**Barium dithionate chloride,  $\text{Ba}_2\text{S}_2\text{O}_6, \text{BaCl}_2 +$** 

(Fock and Kluss, B 23 3001)

**Bismuth dithionate, basic,  $\text{Bi}_2\text{O}_3, \text{S}_2\text{O}_6 +$** 

Efflorescent Insol in  $\text{H}_2\text{O}$ , but decomp  
 thereby into the following salt Easily sol  
 in dil acids, especially  $\text{HCl} + \text{Aq}$  (Kluss, A  
 246 183)

$4\text{Bi}_2\text{O}_3, 3\text{S}_2\text{O}_6 + 5\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol  
 in dil acids (Kluss)

**Cadmium dithionate**

Deliquescent in moist air, very sol in  $H_2O$  (Heeren, Pogg 7 183)

**Cadmium dithionate ammonia**,  $CdS_2O_6 \cdot 4NH_3$ 

Decomp by alcohol, sol in  $NH_4OH + Aq$ , but decomp on heating (Rammelsberg, Pogg 58 298)

**Cæsium dithionate**,  $Cs_2S_2O_6$ 

Easily sol in  $H_2O$  (Chabrié, C R 1901, 133 297)

**Calcium dithionate**,  $CaS_2O_6 \cdot 4H_2O$ 

Sol in 2 46 pts  $H_2O$  at  $19^\circ$ , 0 8 pt. at  $100^\circ$  Insol in alcohol (Heeren, Pogg 7 178)  
 Insol in acetone (Naumann, B 1904, 37 4329)

**Cerous dithionate**,  $Ce_2(S_2O_6)_3 + 24H_2O$ 

Very sol in  $H_2O$  (John)  
 +3, and  $5H_2O$  (Wyruboff)

**Chromic dithionate**,  $Cr_2(S_2O_6)_3 + 18H_2O$ 

Sol in  $H_2O$  and alcohol (Kluss, A 246 189)  
 $3Cr_2O_3 \cdot 4S_2O_6 + 24H_2O$  Easily sol in  $H_2O$  or alcohol Insol in ether (Kluss)

**Cobaltous dithionate**,  $CoS_2O_6 \cdot 6H_2O$ 

Not deliquescent Very sol in  $H_2O$  (Heeren)  
 + $8H_2O$  Sol in 0 49 pt  $H_2O$  at  $19^\circ$  Sol in absolute alcohol (Kluss, A 246 203)

**Cupric dithionate basic**,  $4CuO \cdot S_2O_6 + 4H_2O$ 

Very sl sol in  $H_2O$  (Heeren, Pogg 7 18)  
 Insol in  $H_2O$ , easily sol in dil acids (Kluss, A 246 208)  
 + $3H_2O$  Insol in  $H_2O$  and  $NaC_2H_3O_2 + Aq$ , sol in traces in conc  $CuS_2O_6 + Aq$  Easily sol in dil acids, even  $HC_2H_3O_2$ , or  $H_2S_2O_6 + Aq$  (Kluss)

**Cupric dithionate**,  $CuS_2O_6 + 4H_2O$ 

Not efflorescent Very sol in  $H_2O$  Insol in alcohol (Heeren)  
 + $5H_2O$  (Efflorescent Sol in 0 64 pt  $H_2O$  at  $18.5^\circ$  (Kluss, A 246 204)

**Cupric dithionate ammonia**,  $CuS_2O_6 \cdot 4NH_3$ 

Difficultly sol in cold  $H_2O$ , moderately sol in  $H_2O$  at  $40^\circ$  Decomp by much  $H_2O$  or by heating the solution above  $60^\circ$  Decomp by  $HCl + Aq$  (Heeren)  
 Can be recryst from  $NH_4OH + Aq$   
 Sol in liquid  $NH_3$  (Horn, Am Ch J 1908, 39 213)  
 $CuS_2O_6 \cdot 9NH_3$  Decomp at ord temp in the air  
 Insol in liquid  $NH_3$  (Horn, Am Ch J 1908, 39 213)

**Dydium dithionate**,  $Dy_2(S_2O_6)_3 + 24H_2O$ 

Extremely sol in  $H_2O$  (Cleve)

**Erbium dithionate**,  $Er_2(S_2O_6)_3 + 18H_2O$ 

Very sol in  $H_2O$  or alcohol, insol in ether (Hoglund)

**Glucinum dithionate, basic**,  $5GfO \cdot 2S_2O_6 + 14H_2O$ 

Easily sol in  $H_2O$  and absolute alcohol (Kluss, A 246 196)

**Iron (ferrous) dithionate**,  $FeS_2O_6 + 5H_2O$ 

Very sol in  $H_2O$  Insol in alcohol Decomp in aqueous solution into  $FeSO_4$  by boiling (Heeren, Pogg 7 181)  
 + $7H_2O$  Sol in 0 59 pt  $H_2O$  at  $18.5^\circ$  (Kluss, A 246 198)

**Iron (ferric) dithionate, basic**,  $8Fe_2O_3 \cdot S_2O_6 + 20H_2O$ 

Insol in  $H_2O$  or alcohol Very sl sol in  $H_2S_2O_6 + Aq$ , easily sol in  $HCl + Aq$  (Heeren)  
 Contains  $14H_2O$  (Kluss, A 246 200)  
 $3Fe_2O_3 \cdot S_2O_6 + 8H_2O$  Insol in  $H_2O$  Easily sol in acids (Kluss, A 246 201)

**Lanthanum dithionate**,  $La_2(S_2O_6)_3 + 16H_2O$ , and  $24H_2O$ 

Sol in  $H_2O$  (Cleve)

**Lead dithionate, basic**,  $2PbO \cdot S_2O_6 + 2H_2O$ 

Very difficultly sol in  $H_2O$  (Heeren, Pogg 7 171)  
 $10PbO \cdot S_2O_6 + 2H_2O$  Sl sol in  $H_2O$  (Heeren)

**Lead dithionate**,  $PbS_2O_6 + 4H_2O$ 

Easily sol in  $H_2O$  (Heern)  
 Sol in 0 869 pt  $H_2O$  at  $20.5^\circ$  (Baker, C N 36 203)

**Lead strontium dithionate**,  $(Pb, Sr)S_2O_6 + 4H_2O$ 

(Rammelsberg)

**Lithium dithionate**,  $Li_2S_2O_6 + 2H_2O$ 

Sl deliquescent, and easily sol in  $H_2O$  Insol in alcohol (Rammelsberg)

**Magnesium dithionate**,  $MgS_2O_6 + 6H_2O$ 

Sol in 0 85 pt  $H_2O$  at  $13^\circ$  Solution can be boiled without decomp (Heeren, Pogg 7 179)  
 Sol in 0 692 pt  $H_2O$  at  $17^\circ$  (Baker, C N 36 203)

**Manganous dithionate**,  $MnS_2O_6 + 3H_2O$ 

Sol in  $H_2O$  (Kraut, A 118 98)  
 + $6H_2O$  Efflorescent Sol in  $H_2O$  (Magnac, J B 1855 380)

**Mercurous dithionate,  $\text{Hg}_2\text{S}_2\text{O}_6$** 

Sl sol in cold, decomp by hot  $\text{H}_2\text{O}$   
(Rammelsberg)

**Mercuric dithionate, basic,  $5\text{HgO}$ ,  $2\text{S}_2\text{O}_6$** 

Sl sol in cold, decomp by hot  $\text{H}_2\text{O}$   
Easily sol in  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg,  
Pogg 59 472)

**Mercuric dithionate,  $\text{HgS}_2\text{O}_6 + 6\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  or on standing (Kluss,  
A 246 216)

**Nickel dithionate,  $\text{NiS}_2\text{O}_6 + 6\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (Topsoe)  
Sol in 0.897 pt  $\text{H}_2\text{O}$  at  $12^\circ$  (Baker, C N  
36 203)

**Nickel dithionate ammonia,  $\text{NiS}_2\text{O}_6$ ,  $6\text{NH}_3$** 

Can be recryst from warm  $\text{NH}_4\text{OH} + \text{Aq}$   
Decomp by  $\text{H}_2\text{O}$  (Rammelsberg, Pogg  
58 295)

**Nickel dithionate hydrazine,  $\text{NiS}_2\text{O}_6$ ,  
 $3\text{N}_2\text{H}_4$** 

Unstable  
Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg  
1908, 60 267)

**Potassium dithionate,  $\text{K}_2\text{S}_2\text{O}_6$** 

Not deliquescent Sol in 16.5 pts  $\text{H}_2\text{O}$  at  
 $16^\circ$ , and 1.58 pts at  $100^\circ$  Insol in alcohol  
(Heeren)

Sol in 2.65 pts  $\text{H}_2\text{O}$  at  $16^\circ$  (Dumas)  
Sol in 16.5 pts  $\text{H}_2\text{O}$  at  $16^\circ$ , in 1.58 pts  
boiling  $\text{H}_2\text{O}$   
Insol in alcohol (Heeren, Pogg 1826, 7  
72)

**Praseodymium dithionate,  $\text{Pr}_2(\text{S}_2\text{O}_6)_3 + 12\text{H}_2\text{O}$** 

Deliquescent, very sol in  $\text{H}_2\text{O}$  (von  
Schule, Z anorg 1898, 18 361)

**Rubidium dithionate,  $\text{Rb}_2\text{S}_2\text{O}_6$** 

Sol in  $\text{H}_2\text{O}$  (Topsoe and Christiansen)

**Ruthenium dithionate,  $\text{RuS}_2\text{O}_6$** 

Ppt from aq sol by alcohol (Antony,  
Gazz ch it 1898, 28 139-142)

**Silver dithionate,  $\text{Ag}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$** 

Sol in 2 pts  $\text{H}_2\text{O}$  at  $16^\circ$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$   
(Heeren, Pogg 7 191)

**Silver sodium dithionate,  $\text{AgS}_2\text{O}_6$ ,  $\text{Na}_2\text{S}_2\text{O}_6$   
 $+ 4\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (Kraut, A 118 96)

**Silver dithionate ammonia,  $\text{Ag}_2\text{S}_2\text{O}_6$ ,  $4\text{NH}_3$** 

Sol in  $\text{H}_2\text{O}$  without decomp (Rammels-  
berg, Pogg 58 298)

**Sodium dithionate,  $\text{Na}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$** 

Sol in 2.1 pts  $\text{H}_2\text{O}$  at  $16^\circ$ , and in 1.1 pts  
boiling  $\text{H}_2\text{O}$  Insol in alcohol

Fuming  $\text{HCl} + \text{Aq}$  precipitates the salt  
from aqueous solution (Heeren, Pogg 7  
76)  
 $+ 6\text{H}_2\text{O}$  (Kraut, A 117 97)

**Strontium dithionate,  $\text{SrS}_2\text{O}_6 + 4\text{H}_2\text{O}$** 

Sol in 4.5 pts  $\text{H}_2\text{O}$  at  $16^\circ$ , 1.5 pts boiling  
 $\text{H}_2\text{O}$  Insol in alcohol (Heeren, Pogg 7  
177)

**Thallous dithionate,  $\text{Tl}_2\text{S}_2\text{O}_6$** 

Very easily sol in  $\text{H}_2\text{O}$  (Werther)

**Thallous dithionate sulphate,  $3\text{Tl}_2\text{S}_2\text{O}_6$   
 $\text{Tl}_2\text{SO}_4$** 

Sol in  $\text{H}_2\text{O}$  (Wyrouboff, Ann Phys  
Beibl 8 802)

**Thorium dithionate,  $\text{Th}(\text{S}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$  (?)**

Very unstable (Kluss, A 246 188)

**Tin (stannous) dithionate,  $\text{SnS}_2\text{O}_6$** 

Known only in solution  
 $8\text{SnO}$ ,  $\text{S}_2\text{O}_6 + 9\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  Sol  
in dil acids, even dithionic acid +  $\text{Aq}$  (Kluss  
A 246 186)

**Uranous dithionate,  $6\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 10\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$ , sol in warm  $\text{HCl} + \text{Aq}$   
(Kluss, A 246 191)

$7\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 8\text{H}_2\text{O}$  As above  
 $8\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 21\text{H}_2\text{O}$  As above

**Vanadyl dithionate,  $(\text{VO})_2\text{S}_2\text{O}_6$** 

Sol in  $\text{H}_2\text{O}$  (Bevan, C N 38 294)

**Yttrium dithionate,  $\text{Y}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$** 

Not deliquescent Easily sol in  $\text{H}_2\text{O}$ , but  
difficultly sol in alcohol Insol in ether  
(Cleve, Bull Soc (2) 21 344)

**Zinc dithionate,  $\text{ZnS}_2\text{O}_6 + 6\text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$ , decomp on boiling  
(Heeren, Pogg 7 183)

**Zinc dithionate ammonia,  $\text{ZnS}_2\text{O}_6$ ,  $4\text{NH}_3$** 

Decomp with  $\text{H}_2\text{O}$ , sol in warm, less sol  
in cold  $\text{NH}_4\text{OH} + \text{Aq}$  (Rammelsberg, Pogg  
58 297)

$+ \text{H}_2\text{O}$  Ppt (Ephraim, B 1915, 48  
640)

**Dysprosium, Dy**

(Lecoq de Boisbaudran, C R 102 1005)

**Dysprosium chloride,  $\text{DyCl}_3 + 6\text{H}_2\text{O}$** 

Deliquescent, sol in  $\text{H}_2\text{O}$  (Urban, C R  
1908, 146 129)

**Europium****Europium chloride,  $\text{EuCl}_2$** 

Sol in  $\text{H}_2\text{O}$  Stable in very dil aqueous solution, but decomp when the solution is concentrated at  $100^\circ$  (Urban, C R 1911, 153 1157)

**Erbium, Er**

Decomposes  $\text{H}_2\text{O}$  (Hoglund)

The so-called element "erbium" can be further decomp into simple substances (Kruss, Z anorg 3 353)

**Erbium bromide,  $\text{ErBr}_3 + 9\text{H}_2\text{O}$** 

Very deliquescent

**Erbium chloride,  $\text{ErCl}_3 + 6\text{H}_2\text{O}$** 

Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol (Hoglund)

**Erbium mercuric chloride,  $\text{ErCl}_3, 5\text{HgCl}_2 + x\text{H}_2\text{O}$** 

Deliquescent (Cleve)

**Erbium fluoride,  $\text{ErF}_3$** 

Insol in  $\text{H}_2\text{O}$  Verv sl sol in  $\text{HF} + \text{Aq}$  (Hoglund, Bull Soc (2) 18 193)

**Erbium hydroxide,  $\text{Er}_2\text{O}(\text{OH})_4$** 

Insol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$   
Easily sol in acids Decomp ammonium salts by boiling therewith

**Erbium iodide,  $\text{ErI}_3$** 

Very deliquescent Very sol in  $\text{H}_2\text{O}$  and alcohol Insol in ether (Hoglund)

**Erbium oxide,  $\text{Er}_2\text{O}_3$** 

Difficultly but completely sol in warm  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq}$  Decomp  $\text{NH}_4$  salts by boiling therewith

**Erbium peroxide,  $\text{Er}_2\text{O}_5$** 

Preecipitate (Cleve, Bull Soc (2) 43 53)

**Erbium sulphide**

Decomp in moist air and with acids

**Erythrochromium bromide,**

Very easily sol in  $\text{H}_2\text{O}$  Insol in  $\text{HBr} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Jorgensen, J pr (2) 25 598)

**— bromide, basic,  $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{OH})\text{Br})_4 + \text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$  (Jorgensen)

**— chloriodide,  $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}\text{ClI})_4 + \text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  and in alcohol (Jorgensen)

**Erythrochromium chloroplatinate,**

Nearly insol in  $\text{H}_2\text{O}$  (Jorgensen)

**— dithionate, basic,**

Insol in  $\text{H}_2\text{O}$  Easily sol in very dil  $\text{HNO}_3$ ,  $\text{HBr}$ ,  $\text{HCl} + \text{Aq}$  Sol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$  (Jorgensen)

**— nitrate,  $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{NO}_3)_5 + \text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  Insol in dil  $\text{HNO}_3 + \text{Aq}$  Sol in conc  $\text{HNO}_3$  with decomp Very sol in dil  $\text{NH}_4\text{OH} + \text{Aq}$  Insol in alcohol (Jorgensen)

**— nitrate, basic,  $\text{HO}(\text{Cr}_2(\text{NH}_3)_{10}(\text{NO}_3)_4\text{OH} + 3\frac{1}{2}\text{H}_2\text{O}$** 

Sol in cold  $\text{H}_2\text{O}$  (Jorgensen)

**— sulphate,  $[\text{HO}(\text{Cr}_2(\text{NH}_3)_{10})_2(\text{SO}_4)_5$** 

Nearly insol in  $\text{H}_2\text{O}$  (Jorgensen)

**Tetraferriammonium,  $\text{Fe}_2\text{N}$** 

See Iron nitride

**Ferric acid****Barium ferrate,  $\text{BaFeO}_4 + \text{H}_2\text{O}$** 

Ppt Can be boiled for some time with  $\text{H}_2\text{O}$  without decomp Decomp by mineral acids Sol in dil acetic acid (Fremy, A ch (3) 12 373)

Insol in  $\text{H}_2\text{O}$ , not readily acted upon by acids when dry (Roscn, J Am Chem Soc 1895, 17 766)

Ppt Easily decomp by acids (Moeser, Arch Pharm 1895, 233 526)

Insol in acetone (Naumann, B 1904, 37 429)

**Calcium ferrate,  $\text{CaFe}_2\text{O}_4$** 

Sol in  $\text{H}_2\text{O}$  (Rosell, J Am Chem Soc 1895 17 760-69)

**Potassium ferrate,  $\text{K}_2\text{FeO}_4$** 

Very deliquescent Easily sol in cold  $\text{H}_2\text{O}$  with evolution of much heat Decomp by standing or warming Decomp by acids or alkalis (Fremy, A ch (3) 12 569)

Sol in  $\text{H}_2\text{O}$ , insol in alcohol (Moeser, Arch Pharm 1895, 233 526)

Quickly decomp by potassium carbonate or carbonate, sugar, or albumin without separation of  $\text{Fe}_2\text{O}_3$ , by alcohol with separation of  $\text{Fe}_2\text{O}_3$ , Potassium oxalate, acetate, formate, and benzoate, also citrate decomp much more slowly Insol in conc  $\text{KOH} + \text{Aq}$  (Wickham, A 33 41)

**Sodium ferrate,  $\text{Na}_2\text{FeO}_4$** 

Sol in  $\text{H}_2\text{O}$  and in conc  $\text{NaOH} + \text{Aq}$  (Fremy, l c)

**Strontium ferrate,  $\text{SrFeO}_4$** 

Sl sol in  $\text{H}_2\text{O}$  by which it is decomp  
Decomp by acids  
Sol in aqueous solutions of Na and K salts with partial decomp  
Insol in sat  $\text{SrBr}_2 + \text{Aq}$ , alcohol and ether (Eidmann, B 1903, 36, 2290)

**Ferricomolybdic acid**

**Ammonium ferricomolybdate,  $3(\text{NH}_4)_2\text{O} \cdot \text{Fe}_2\text{O}_3 \cdot 12\text{MoO}_3 + 19\text{H}_2\text{O}$**   
Ppt (Hall, J Am Chem Soc 1907, 29 697)

**Ferricyanhydric acid,**

$\text{H}_3\text{Fe}(\text{CN})_3$ , (or  $\text{H}_2\text{Fe}_2(\text{CN})_{12}$ )  
Easily sol in  $\text{H}_2\text{O}$  or alcohol Solution decomposes slowly by standing, more rapidly by heating Insol in ether

**Ferricyanides**

The alkali, and alkaline-earth ferricyanides are sol in  $\text{H}_2\text{O}$ , the others are insol The ferricyanides of metals, the oxides of which are sol in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ , are themselves sol in those reagents

**Ammonium ferricyanide,  $(\text{NH}_4)_3\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$**

Permanent Readily sol in  $\text{H}_2\text{O}$  (and alcohol?)

**Ammonium ferrous ferricyanide,  $\text{NH}_4\text{FeFe}(\text{CN})_6 + 1\frac{1}{2}\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$  and not pptd by alcohol from aqueous solution More stable than the corresponding K salt

**Ammonium lead ferricyanide,  $\text{NH}_4\text{PbFe}(\text{CN})_6 + 3\text{H}_2\text{O}$**

**Ammonium potassium ferricyanide,  $(\text{NH}_4)_2\text{KFe}(\text{CN})_6$**

Sol in  $\text{H}_2\text{O}$  (Schaller, Bull Soc (2) 1 275)

**Barium ferricyanide,  $\text{Ba}_3[\text{Fe}(\text{CN})_6]_2 + 20\text{H}_2\text{O}$**

Easily sol in  $\text{H}_2\text{O}$ , insol in alcohol (Schuler, W A B 77 692)

**Barium potassium ferricyanide,  $\text{BaKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$**

Permanent Easily sol in  $\text{H}_2\text{O}$ , less in alcohol

**Barium ferricyanide bromide,  $\text{Ba}_3[\text{Fe}(\text{CN})_6] \cdot 2\text{BaBr}_2 + 20\text{H}_2\text{O}$**

Easily sol in  $\text{H}_2\text{O}$  Boiling alcohol does not dissolve out  $\text{BaBr}_2$  (Rammelsberg, J pr (2) 39 463)

**Bismuth ferricyanide,  $\text{Bi}_3[\text{Fe}(\text{CN})_6]_3$**

Insol in  $\text{H}_2\text{O}$ , but decomp by boil therewith (Muir, Chem Soc 32 40)

**Cadmium ferricyanide ammonia,**

$\text{Cd}_3[\text{Fe}(\text{CN})_6]_2 \cdot 6\text{NH}_3 + 3\text{H}_2\text{O}$   
Effloresces to form—  
 $\text{Cd}_3[\text{Fe}(\text{CN})_6]_2 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$  Insol  
 $\text{H}_2\text{O}$  (Wyrouboff, A hc (5) 10 413)

**Calcium ferricyanide,  $\text{Ca}_3[\text{Fe}(\text{CN})_6]_2 + 1$  or  $12\text{H}_2\text{O}$**

Deliquescent Sol in  $\text{H}_2\text{O}$  and dil alcohol

**Calcium potassium ferricyanide,**

$\text{CaKFe}(\text{CN})_6$   
Sol in  $\text{H}_2\text{O}$

**Cerous ferricyanide,  $\text{CeFe}(\text{CN})_6 + 4\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$ , easily decomp (John)

**Chromic ferricyanide (?)**

Ppt

**Cobaltous ferricyanide,  $\text{Co}_3[\text{Fe}(\text{CN})_6]_2$**

Insol in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$

**Cobaltous ferricyanide ammonia,**

$\text{Co}_3[\text{Fe}(\text{CN})_6]_2 \cdot 4\text{NH}_3 + 6\text{H}_2\text{O}$

**Cobaltic ferricyanide ammonia**

See Luteo,- purpureo,- etc cobaltic ferricyanide

**Cuprous ferricyanide,  $(\text{Cu}_2)_3[\text{Fe}(\text{CN})_6]$**

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in  $\text{NH}_4$  salts  
 $\text{Aq}$  (Wittstein)

**Cupric ferricyanide,  $\text{Cu}_3[\text{Fe}(\text{CN})_6]_2$**

Insol in  $\text{H}_2\text{O}$  or  $\text{NH}_4$  salts +  $\text{Aq}$  Sol in  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Wittstein)  
Insol in  $\text{HCl} + \text{Aq}$

**Iron (ferrous) ferricyanide,  $\text{Fe}_3[\text{Fe}(\text{CN})_6]_2 \cdot x\text{H}_2\text{O}$**

(Turnbull's blue) Properties as ferri ferrocyanide (Prussian blue), with which it is perhaps identical (Gintl, Z anal 21 110)

**Iron (ferrosoferric) ferricyanide,**

$\text{Fe}_{13}(\text{CN})_{35} = \text{Fe}^{+4}_4\text{Fe}^{+3}_9[\text{Fe}(\text{CN})_6]_5$   
(Prussian green) Insol in  $\text{H}_2\text{O}$  or conc  $\text{HCl} + \text{Aq}$ , but slowly decomp by boiling therewith  
 $\text{Fe}_3(\text{CN})_9 + 4\text{H}_2\text{O} = \text{Fe}^{+3}_3\text{Fe}^{+2}_3[\text{Fe}(\text{CN})_6]_4 + 12\text{H}_2\text{O}$  Properties as above (Reynolds, Chem Soc 54 767)

**Iron (ferrous) potassium ferricyanide,**

$\text{KFe}_2(\text{CN})_6 = \text{KFeFe}(\text{CN})_6 + 4$ , or  $3\text{H}_2\text{O}$   
(Soluble Prussian blue) Sol in  $\text{H}_2\text{O}$ , but insol in salts +  $\text{Aq}$  or alcohol

Salt of the same composition, called "Williamson's blue," is insol in  $H_2O$

**Lead ferricyanide, basic**,  $Pb_3[Fe(CN)_6]_2$ ,  
 $3PbO_2H_2 + 11H_2O$   
(Schuler)

**Lead ferricyanide**,  $Pb_3[Fe(CN)_6]_2 + 16H_2O$   
Sl sol in  $H_2O$ , more sol in hot, than cold  
 $H_2O$ , but decomp on boiling (Gmelin)  
 $+4H_2O$  Easily sol in  $H_2O$ , sl sol in  
alcohol (Schuler, W A B 77 692)

**Lead potassium ferricyanide**,  $PbKFe(CN)_6$   
 $+3H_2O$   
Sol in 4.75 pts  $H_2O$  at  $16^\circ$ , and the solu-  
tion decomp on standing (Schuler)  
 $+1\frac{1}{2}H_2O$  Efflorescent Much more sol  
in  $H_2O$  than the Pb salt Insol in alcohol  
(Wyrouboff)

**Lead ferricyanide nitrate**,  $Pb_3[Fe(CN)_6]_2$ ,  
 $Pb(NO_3)_2 + 12H_2O$   
Sol in 13.31 pts  $H_2O$  at  $16^\circ$  (Schuler)  
 $+11H_2O$  (Joannis, A ch (5) 26 528)

**Magnesium ferricyanide**,  $Mg_3[Fe(CN)_6]_2$   
Sol in  $H_2O$

**Magnesium potassium ferricyanide**,  
 $MgKFe(CN)_6$   
(Reindel, J pr 103 166)

**Manganous ferricyanide**,  $Mn_3[Fe(CN)_6]_2$   
Insol in  $H_2O$ , acids,  $NH_4OH$ , or  $NH_4$  salts  
 $+Aq$

**Mercurous ferricyanide**,  $Hg_2Fe(CN)_6$   
Ppt (Fernekes, J Am Chem Soc 1906, 28 604)

**Mercuric ferricyanide**,  $Hg_2[Fe(CN)_6]_2$   
Very sol in  $H_2O$  Solution quickly decomp  
(Fernekes, J Am Chem Soc 1906, 28 603)

**Nickel ferricyanide ammonia**,  $Ni_3[Fe(CN)_6]_2$ ,  
 $4NH_3 + H_2O$   
Sol in  $Ni_4OH + Aq$  (Reynoso, A ch (3)  
30 254)

**Nickel ferricyanide**,  $Ni_3[Fe(CN)_6]_2(?)$   
Ppt Insol in  $HCl + Aq$

**Potassium ferricyanide**,  $K_3Fe(CN)_6$ , (or  
 $K_4Fe_2(CN)_{12}$ )  
Permanent Easily sol in  $H_2O$

100 pts  $H_2O$  dissolve pts  $K_3Fe(CN)_6$  at  $t^\circ$

$t^\circ$	Pts salt	t	Pts salt	t	Pts salt
4 4	33 0	15 6	40 8	100	77 5
10	36 6	37 8	58 8	104 4	82 6

(Wallace, Chem Soc 7 80)

100 pts  $H_2O$  at  $13^\circ$  dissolve 38 pts, and the  
solution has sp gr = 1.630 (Schiff, A 113  
350)

1 l sat solution in  $H_2O$  at  $25^\circ$  contains  
385.5 g  $K_3Fe(CN)_6$  (Grube, Z Electrochem  
1914, 20 342)

Sp gr of  $K_3Fe(CN)_6 + Aq$  at  $13^\circ$

% salt	Sp gr	% salt	Sp gr	% salt	Sp gr
1	1.0051	11	1.0595	21	1.1202
2	1.0103	12	1.0653	22	1.1266
3	1.0155	13	1.0712	23	1.1331
4	1.0208	14	1.0771	24	1.1396
5	1.0261	15	1.0831	25	1.1462
6	1.0315	16	1.0891	26	1.1529
7	1.0370	17	1.0952	27	1.1596
8	1.0426	18	1.1014	28	1.1664
9	1.0482	19	1.1076	29	1.1732
10	1.0538	20	1.1039	30	1.1802

(Schiff)

Sp gr of  $K_3Fe(CN)_6 + Aq$  at  $25^\circ$

Concentration of $K_3Fe(CN)_6$ $+Aq$	Sp gr
1—normal	1.0574
$\frac{1}{2}$ —"	1.0289
$\frac{1}{4}$ —"	1.0143
$\frac{1}{8}$ —"	1.0092

(Wagner, Z phys Ch 1890, 5 37)

Sat  $K_3Fe(CN)_6 + Aq$  boils at  $104.4^\circ$   
(Wallace)

1 l sat solution at  $25^\circ$  of  $K_3Fe(CN)_6 +$   
 $K_4Fe(CN)_6$  contains 338.1 g  $K_3Fe(CN)_6$  and  
79.02 g  $K_4Fe(CN)_6$  (Grube)

Solubility of  $K_3Fe(CN)_6 + K_4Fe(CN)_6$  in  
 $KOH + Aq$  at  $25^\circ$

KOH Normality	g per l	
	$K_3Fe(CN)_6$	$K_4Fe(CN)_6$
0.4687	309	66.64
0.9628	275.3	55.19
1.949	200.8	35.95

(Grube)

Solubility in  $KOH + Aq$  at  $25^\circ$

KOH Normality	g $K_3Fe(CN)_6$ per l
0.4687	342.7
0.9628	302.3
1.949	215.1

(Grube, Z Electrochem, 1914, 20 342)

Insol in liquid  $NH_3$  (Franklin, Am Ch  
J 1898, 20 828)

Insol in absolute alcohol, and only sl sol in dil alcohol

Sol in acetone (Naumann, B 1904, **37** 4328)

Insol in methyl acetate (Naumann, B 1909, **42** 3790), ethyl acetate (Naumann, B 1910, **43** 314)

Insol in benzonitrile (Naumann, B 1914, **47** 1370)

**Potassium sodium ferricyanide,**  
 $\text{KNa}_2\text{Fe}(\text{CN})_6$

Sol in  $\text{H}_2\text{O}$

K NaFe(CN)<sub>6</sub> Sol in  $\text{H}_2\text{O}$

$\text{K}_3\text{Na}_3[\text{Fe}(\text{CN})_6]_2$  Sol in  $\text{H}_2\text{O}$   
+  $3\text{H}_2\text{O}$

**Potassium ferricyanide iodide,**  $\text{K}_3\text{Fe}(\text{CN})_6$ ,  
KI

Very unstable

**Silver ferricyanide,**  $\text{Ag}_3\text{Fe}(\text{CN})_6$

1 l  $\text{H}_2\text{O}$  dissolves 0.00066 g  $\text{Ag}_3\text{Fe}(\text{CN})_6$  at  $20^\circ$  (Whitby, Z anorg 1910, **67** 108)

Sol in  $\text{NH}_4\text{OH}$ , and hot  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but insol in  $\text{NH}_4$  salts + Aq

Insol in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$  (Wackenroder, A **41** 317)

**Silver ferricyanide ammonia,**  $2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  
 $3\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Gintl)

$2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  $5\text{NH}_3$  (Carlo, Gazz ch it 1910, **40** (2) 477)

**Sodium ferricyanide,**  $\text{Na}_3\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$

Deliquescent Sol in 53 pts cold, and 15 pts boiling  $\text{H}_2\text{O}$  Insol in alcohol, but not pptd thereby from aqueous solution (Bette)

**Ferrinitrososulphydic acid**

See Ferroheptanitrososulphydic acid

**Ferrocyanhydric acid,**  $\text{H}_4\text{Fe}(\text{CN})_6$

Sol in  $\text{H}_2\text{O}$  and alcohol

100 pts  $\text{H}_2\text{O}$  dissolve 15 pts acid at  $14^\circ$  (Joannis, A ch (5) **26** 514)

Insol in ether, and much less sol in ethyl alcohol than in alcohol Insol in conc  $\text{HCl} + \text{Aq}$

**Ferrocyanides**

The ferrocyanides of the alkali and alkali-earth metals are sol in  $\text{H}_2\text{O}$ , the others are insol, but sol in alkalis + Aq in case the base is sol therein

**Aluminum ferrocyanide,**  $\text{Al}_4[\text{Fe}(\text{CN})_6]_3 + 17\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$

Sl sol in  $\text{HCl} + \text{Aq}$  with partial decomp (Wyruboff, A ch (5) **8** 446)

**Ammonium ferrocyanide,**  $(\text{NH}_4)_4\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , insol in alcohol

+  $\text{H}_2\text{O}$  (Berzelius)

**Ammonium cadmium ferrocyanide ammonia**  
 $(\text{NH}_4)_2\text{Cd}_2[\text{Fe}(\text{CN})_6]_2, 2\text{NH}_3 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wyruboff, A ch (5) **10** 413)

**Ammonium calcium ferrocyanide,**  
 $(\text{NH}_4)_2\text{CaFe}(\text{CN})_6$

Sl sol in  $\text{H}_2\text{O}$  (Kunheim and Zimmer man, Dingl **252** 478)

100 g sat solution in  $\text{H}_2\text{O}$  contain 0.25% at  $16^\circ$  (Brown, J phys Ch 1898, **2** 51)

**Ammonium cuprous ferro cyanide,**  
 $(\text{NH}_4)_2\text{Cu}_2\text{Fe}(\text{CN})_6$

Insol in  $\text{H}_2\text{O}$  and alcohol

Decomp in the air (Messner, Z anorg 1895, **8** 382)

**Ammonium cupric ferrocyanide,**  
 $(\text{NH}_4)_2\text{CuFe}(\text{CN})_6$

Ppt

+  $\text{H}_2\text{O}$  Very unstable Insol in  $\text{H}_2\text{O}$  decomp by boiling  $\text{H}_2\text{O}$  (Messner, Z anorg 1895, **8** 384)

**Ammonium lithium ferrocyanide,**  
 $(\text{NH}_4)_2\text{Li}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Wyruboff, A ch (4) **21** 270)

**Ammonium magnesium ferrocyanide,**  
 $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$

1 l sat solution at  $17^\circ$  contains 2.18 g  $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$  (Robins in Chem Soc 1900 **95**)

**Ammonium manganous ferrocyanide,**  
 $(\text{NH}_4)_2\text{MnFe}(\text{CN})_6$

Ppt (Blum, Z anal **30** 281)

**Ammonium potassium ferrocyanide,**  
 $\text{NH}_4\text{K}_3\text{Fe}(\text{CN})_6 + 5\text{H}_2\text{O}$

Insol in cold, more easily in hot  $\text{H}_2\text{O}$  Insol in alcohol

$(\text{NH}_4)_2\text{KFe}(\text{CN})_6 + 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

**Ammonium potassium ferrocyanide ammonium chloride,**  $(\text{NH}_4)_4\text{KFe}(\text{CN})_6$   
 $2\text{NH}_4\text{Cl}$

Sol in  $\text{H}_2\text{O}$  (Etard, J pr (2) **31** 150)

**Ammonium ferrocyanide bromide,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6, 2\text{NH}_4\text{Br}$

Permanent Very sol in  $\text{H}_2\text{O}$

**Ammonium ferrocyanide chloride,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6, 2\text{NH}_4\text{Cl} + 3\text{H}_2\text{O}$

Permanent Very sol in  $\text{H}_2\text{O}$ , but less so than  $\text{NH}_4\text{Cl}$  (Bunsen)

**Antimony ferrocyanide**,  $\text{Sb}_4[\text{Fe}(\text{CN})_6]_3 + 25\text{H}_2\text{O}$

Ppt (Atterberg)

**Barium ferrocyanide**,  $\text{Ba}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$

Permanent Sl sol in  $\text{H}_2\text{O}$

Sol in 584 pts cold, and 116 pts boiling  $\text{H}_2\text{O}$  (Duflos, 1832), sol in 1800 pts cold  $\text{H}_2\text{O}$  (Porrett, 1814), sol in 1920 pts cold, and about 100 pts boiling  $\text{H}_2\text{O}$  (Thomson), sol in 2000 pts cold, and 100 pts boiling  $\text{H}_2\text{O}$  (Ure's Diet)

Sol in 1000 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and 100 pts at  $75^\circ$  (Wyruboff, A ch (4) 16 292)

Sol in  $\text{HNO}_3$ ,  $\text{HCl}$ , or conc  $\text{H}_2\text{SO}_4 + \text{Aq}$

**Barium cupric ferrocyanide**,  $\text{BaCuFe}(\text{CN})_6$

Insol in  $\text{H}_2\text{O}$  (Messner, Z anorg 1895, 8 389)

**Barium potassium ferrocyanide**,

$\text{BaK}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Sol in 38 pts cold, and 9 5 pts boiling  $\text{H}_2\text{O}$  (Duflos, 1832), in 36 4 pts  $\text{H}_2\text{O}$  at  $14^\circ$ , and 11 9 pts at b-pt (Mosander)

Not more sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  than in  $\text{H}_2\text{O}$   
Sol in dil, insol in conc  $\text{HCl} + \text{Aq}$  (Rose)  
+  $5\text{H}_2\text{O}$  Sol in 300 pts  $\text{H}_2\text{O}$  at ord temp (Wyruboff)

**Bismuth ferrocyanide**,  $\text{Bi}_2\text{Fe}(\text{CN})_6 + 5\text{H}_2\text{O}$  (?)

Sl sol in pure  $\text{H}_2\text{O}$  (Wyruboff)

$\text{Bi}_4[\text{Fe}(\text{CN})_6]_3$  Ppt (Muir, Chem Soc 31 657)

**Bismuth potassium ferrocyanide**,

$\text{BiKFe}(\text{CN})_6 + 7\text{H}_2\text{O}$ , or  $4\text{H}_2\text{O}$

Ppt

**Cadmium potassium ferrocyanide**,

$\text{CdK}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$

Formula given by Wyruboff is  $\text{Cd}_5\text{K}_6[\text{Fe}(\text{CN})_6]_4 + 11\text{H}_2\text{O}$  (?)

**Calcium ferrocyanide**,  $\text{Ca}_{12}\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  Sol in 0 66 pt  $\text{H}_2\text{O}$  at  $90^\circ$  and not pptd by cooling, and is apparently less sol in warm than cold  $\text{H}_2\text{O}$  (Wyruboff, A ch (4) 16 280)

**Calcium cuprous ferrocyanide**,

$\text{CaCu}_2\text{Fe}(\text{CN})_6$  (Messner, Z anorg 1894, 8 387)

**Calcium cupric ferrocyanide**,  $\text{CaCuFe}(\text{CN})_6$

Insol in  $\text{H}_2\text{O}$  (Messner, Z anorg 1895 8 388)

**Calcium potassium ferrocyanide**,

$\text{CaK}_2\text{Fe}(\text{CN})_6$

Sl sol in  $\text{H}_2\text{O}$  (Kunheim and Zimmerman, Dingl 252 478)

+  $3\text{H}_2\text{O}$  Sol in 795 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and 145 pts at b-pt, with decomp in the latter case

Sol in dil, insol in conc  $\text{HCl} + \text{Aq}$  Sol in  $\text{HNO}_3$  of 1 2 sp gr (Mosander)

Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$

**Calcium sodium ferrocyanide**,

$\text{CaNa}_6[\text{Fe}(\text{CN})_6]_2$

Sol in  $\text{H}_2\text{O}$

**Calcium strontium ferrocyanide**,

$\text{CaSrFe}(\text{CN})_6 + 10\text{H}_2\text{O}$

Efflorescent Sol in about 3 pts  $\text{H}_2\text{O}$  (Wyruboff, A ch (4) 21 278)

**Cerium ferrocyanide**,  $\text{Ce}_4[\text{Fe}(\text{CN})_6]_3 + 30\text{H}_2\text{O}$

Ppt (Wyruboff)

**Cerium potassium ferrocyanide**,

$\text{CeKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Ppt (John)

+  $4\text{H}_2\text{O}$  (Wyruboff)

**Chromic ferrocyanide**,  $\text{Cr}_2[\text{Fe}(\text{CN})_6]_3 + 20\text{H}_2\text{O}$

Ppt

**Cobaltous ferrocyanide**,  $\text{Co}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$

Wholly insol in  $\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{SO}_4$  with decomp Insol in  $\text{HCl} + \text{Aq}$  Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  Sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$

**Cobaltous ferrocyanide ammonia**,

$\text{Co}_2\text{Fe}(\text{CN})_6 \cdot 8\text{NH}_3 + 10\text{H}_2\text{O}$

Ppt Decomp on standing (Curda, Z Ch 1869 369)

$\text{Co}_2\text{Fe}(\text{CN})_6 \cdot 12\text{NH}_3 + 9\text{H}_2\text{O}$  As above (Curda)

**Cobaltous potassium ferrocyanide**,

$\text{CoK}_2\text{Fe}(\text{CN})_6$

Ppt (Wyruboff)

$\text{Co}_6\text{K}_5[\text{Fe}(\text{CN})_6]_4$  (?) Ppt Insol only in presence of an excess of  $\text{K}_4\text{Fe}(\text{CN})_6$  (Wyruboff)

**Columbium potassium ferrocyanide**,

$\text{Cb}_{16}\text{K}[\text{Fe}(\text{CN})_6]_2 + 67\text{H}_2\text{O}$  (?)

Sol in  $\text{H}_2\text{O}$  (Wyruboff)

$\text{Cb}_{12}\text{K}_2\text{Fe}(\text{CN})_6 + 39\text{H}_2\text{O}$  (?) Sol in  $\text{H}_2\text{O}$  (W)

$(\text{CbO})_4\text{K}_9[\text{Fe}(\text{CN})_6]_6 + 10\text{H}_2\text{O}$  (?) Ppt (Atterberg)

**Cuprous ferrocyanide**,  $\text{Cu}_2\text{Fe}(\text{CN})_6$

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in  $\text{NH}_4\text{Cl} + \text{Aq}$

**Cupric ferrocyanide, basic**,  $\text{CuFe}(\text{OH})_4(\text{CN})_4$   
Ppt (Bong, Bull Soc 23 231)

**Cupric ferrocyanide**,  $\text{Cu}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$   
Insol in  $\text{H}_2\text{O}$  or acids Insol in  $\text{NH}_4$   
salts + Aq Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  Sol in  
 $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$  and in  $\text{KCN} + \text{Aq}$   
Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J  
1898, 20 827)  
+  $10\text{H}_2\text{O}$  Sol in excess of  $\text{K}_4\text{Fe}(\text{CN})_6 +$   
Aq, especially if hot (Wyruboff)

**Cupric ferrocyanide ammonia (cupram-  
monium ferrocyanide)**,  $\text{Cu}_2\text{Fe}(\text{CN})_6$ ,  
 $4\text{NH}_3 + \text{H}_2\text{O}$   
Insol in  $\text{H}_2\text{O}$  or alcohol Sol in  $\text{NH}_4\text{OH} +$   
Aq (Bunsen)  
 $\text{Cu}_2\text{Fe}(\text{CN})_6$ ,  $8\text{NH}_3 + \text{H}_2\text{O}$

**Cuprous magnesium ferrocyanide**,  
 $\text{Cu}_2\text{MgFe}(\text{CN})_6$   
Very unstable Decomp in air  
Insol in  $\text{H}_2\text{O}$  (Messner, Z anorg 1895,  
8 385)

**Cupric magnesium ferrocyanide**,  
 $\text{CuMgFe}(\text{CN})_6$   
Insol in  $\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$   
Very unstable (Messner, Z anorg 1895, 8  
387)

**Cuprous potassium ferrocyanide**,  
 $\text{Cu}_2\text{K}_2\text{Fe}(\text{CN})_6$   
Insol in  $\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}$   
Decomp by acids Insol in alcohol (Mess-  
ner, Z anorg 1895, 8 378)  
+  $1\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , alcohol, or ether  
Decomp by acids Sol in  $\text{KCN} + \text{Aq}$   
 $\text{K}_2\text{Cu}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$   
+  $5\text{H}_2\text{O}$  (Wofor)  
+  $6\text{H}_2\text{O}$  (Wyruboff)

**Cupric potassium ferrocyanide**,  $\text{K}_2\text{CuFe}(\text{CN})_6$   
+  $\text{H}_2\text{O}$   
Insol in cold sl decomp by boiling  $\text{H}_2\text{O}$   
 $\text{K}_2\text{Cu}_2[\text{Fe}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$  Ppt

**Cuprous sodium ferrocyanide**,  
 $\text{Cu}_2\text{Na}_2\text{Fe}(\text{CN})_6$   
Decomp by boiling  $\text{H}_2\text{O}$ , insol in alcohol,  
insol in  $\text{H}_2\text{O}$ , decomp by acids (Messner,  
Z anorg 1895, 8 373)

**Cupric sodium ferrocyanide**,  
 $\text{CuNa}_2\text{Fe}(\text{CN})_6$   
Insol in cold  $\text{H}_2\text{O}$  Decomp by boiling  
 $\text{H}_2\text{O}$  (Moissan, Z anorg 1895, 8 376)

**Cupric strontium ferrocyanide**,  
 $\text{CuSrFe}(\text{CN})_6$   
Insol in  $\text{H}_2\text{O}$  (Messner, Z anorg 1895,  
8 389)

**Didymium potassium ferrocyanide**,  
 $\text{D}_2\text{KFe}(\text{CN})_6 + 4\text{H}_2\text{O}$   
Ppt (Cleve)  
+  $2\text{H}_2\text{O}$  (Wyruboff)

**Erbium potassium ferrocyanide**,  $\text{ErKFe}(\text{CN})_6$   
+  $x\text{H}_2\text{O}$   
(Hoglund)

**Gallium ferrocyanide**  
Sol in boiling  $\text{HCl} + \text{Aq}$  (de Boisbau an,  
C R 99 526)

**Glucinum ferrocyanide**,  $\text{Gl}_2\text{Fe}(\text{CN})_6$ ,  $4\text{Gl}_2\text{H}_2$   
+  $7\text{H}_2\text{O}$  (?)  
Sol in  $\text{H}_2\text{O}$  (Atterberg)

**Iron (ferric) ferrocyanide**,  $\text{Fe}_7(\text{CN})_{11} =$   
 $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3 + x\text{H}_2\text{O}$   
(Prussian blue) Insol in  $\text{H}_2\text{O}$ , al hol,  
ether, or oils Decomp slowly by b ling  
 $\text{H}_2\text{O}$  Insol in dil mineral acids S in  
conc  $\text{HCl} + \text{Aq}$ , and conc  $\text{H}_2\text{SO}_4$  witho de-  
comp Sol in  $\text{H}_2\text{C}_2\text{O}_4$  or  $\text{NH}_4$  tartrate Aq  
Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by N OH,  
or  $\text{KOH} + \text{Aq}$  Not pptd in presence of tar-  
trates or citrates

**Iron (ferrous) potassium ferrocyanide**  
 $\text{FeK}_2\text{Fe}(\text{CN})_6$   
Insol in  $\text{H}_2\text{O}$  Decomp on air

**Iron (ferric) potassium ferrocyanide**  
 $\text{FeKFe}(\text{CN})_6$   
Is probably ferrous potassium ferricy anide,  
which see

**Iron (ferric) ferrocyanide ammonia**,  
 $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3$ ,  $6\text{NH}_3 + 9\text{H}_2\text{O}$   
Insol in  $\text{NH}_4$  tartrate + Aq

**Lanthanum potassium ferrocyanide**,  
 $\text{LaKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$   
Ppt

**Lead ferrocyanide**,  $\text{Pb}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$   
Insol in  $\text{H}_2\text{O}$ , acids, or  $\text{NH}_4\text{OH} + \text{Aq}$   
(Wyruboff, A ch (5) 8 480)  
Sl sol in conc  $\text{H}_2\text{SO}_4$ , from whic it is  
pptd by  $\text{H}_2\text{O}$  (Berzelius)  
Sol in hot  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4$  succinat + Aq,  
insol in other  $\text{NH}_4$  salts + Aq (Witts in)  
Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett)  
Not pptd in presence of Na citrate  
(Spiller)

**Lithium ferrocyanide**,  $\text{Li}_4\text{Fe}(\text{CN})_6 + 9\text{H}_2\text{O}$   
Deliquescent Very sol in  $\text{H}_2\text{O}$

**Lithium potassium ferrocyanide**,  
 $\text{Li}_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  Sol in 15 pts  $\text{H}_2\text{O}$  at  
ord temp (Wyruboff, A ch (4) 2 274)

**Magnesium ferrocyanide**,  $\text{Mg}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$

Sol in 3 pts cold  $\text{H}_2\text{O}$  (Bette, A 22 148)

**Magnesium potassium ferrocyanide**,  $\text{MgK}_2\text{Fe}(\text{CN})_6$

Sol in 1575 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and 238 pts at  $100^\circ$  Solution is decomp by boiling (Storer's Dict)

1 l sat solution at  $17^\circ$  contains 1.95 g  $\text{MgK}_2\text{Fe}(\text{CN})_6$  (Robinson, Chem Soc 1909, 75 1353)

**Manganous ferrocyanide**,  $\text{Mn}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  Insol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$

**Manganic ferrocyanide**,  $\text{Mn}_2\text{Fe}_3(\text{CN})_{12}$

Insol in  $\text{H}_2\text{O}$  Easily decomp in the air Sol in  $\text{HCl}$  (Straus, Z anorg 1895, 9 8)

**Manganous potassium ferrocyanide**,  $\text{MnK}_2\text{Fe}(\text{CN})_6$

Ppt (Berzelius)  
5 $\text{Mn}_2\text{Fe}(\text{CN})_6$ , 4 $\text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O} (?)$   
Ppt Sol in dil  $\text{HCl} + \text{Aq}$  (Wyruboff)

**Mercuric potassium ferrocyanide**,  $\text{K}_2\text{HgFe}(\text{CN})_6$

Insol in  $\text{H}_2\text{O}$  Appreciably sol in  $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$  (Fernekes, J Am Chem Soc 1906 28 87)

**Molybdenum ferrocyanide**,  $\text{Mo}_4\text{Fe}(\text{CN})_6 + 20\text{H}_2\text{O} (?)$

Very sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Wyruboff)  
 $\text{Mo}_2\text{Fe}(\text{CN})_6 + 8\text{H}_2\text{O} (?)$  (W)  
 $+ 14\text{H}_2\text{O} (?)$  Very sol in  $\text{H}_2\text{O}$ , insol in alcohol (W)

**Molybdenum potassium ferrocyanide**,

$\text{K}_4\text{Mo}_8[\text{Fe}(\text{CN})_6]_2 + 40\text{H}_2\text{O} (?)$   
(Wyruboff)  
 $\text{K}_2(\text{MoO}_4)_3[\text{Fe}(\text{CN})_6]_2$ , 2 $\text{MoO}_3 + 20\text{H}_2\text{O} (?)$  (Atterberg)  
 $\text{K}_2\text{Mo}_2[\text{Fe}(\text{CN})_6]_2$ , 2 $\text{MoO}_3 + 12\text{H}_2\text{O} (?)$  (Atterberg)

**Nickel ferrocyanide**,  $\text{Ni}_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$ , or  $14\text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in  $\text{NH}_4$  salts +  $\text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$

**Nickel ferrocyanide ammonia**,  $\text{Ni}_2\text{Fe}(\text{CN})_6$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$

Completely insol in  $\text{H}_2\text{O}$  and not attacked thereby, sol in  $\text{NH}_4\text{OH} + \text{Aq}$  to form—

$\text{Ni}_2\text{Fe}(\text{CN})_6$ , 10 $\text{NH}_3 + 4\text{H}_2\text{O}$  Decomp by hot  $\text{H}_2\text{O}$  (Reynoso, A ch (3) 30 252)

$\text{Ni}_2\text{Fe}(\text{CN})_6$ , 2 $\text{NH}_3 + 4$ , and 9 $\text{H}_2\text{O}$  Hygro-

scopic Easily decomp (Gintl, J B 1868 304)

$\text{Ni}_2\text{Fe}(\text{CN})_6$ , 8 $\text{NH}_3 + 4\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (G)

$\text{Ni}_2\text{Fe}(\text{CN})_6$ , 12 $\text{NH}_3 + 9\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , but less so than the above compounds (G)

**Nickel potassium ferrocyanide**,  $\text{NiK}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Ppt (Wyruboff)

**Osmium ferrocyanide**,  $\text{Os}_2\text{Fe}(\text{CN})_6$

Ppt (Martius, A 117 368)

**Potassium ferrocyanide**,  $\text{K}_4\text{Fe}(\text{CN})_6$

Permanent Easily sol in cold, and more easily in hot  $\text{H}_2\text{O}$

Sol in 4.23 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , or 100 pts  $\text{H}_2\text{O}$  dissolve 23.6 pts salt at  $15^\circ$  (Schiff, A 113 350)

100 pts  $\text{H}_2\text{O}$  dissolve 27.8 pts at  $12^\circ$ , 65.8 pts at  $37^\circ$ , 87.6 pts at  $65^\circ$ , and 90.6 pts at  $96.3^\circ$  (Thomson)

Sol in 4 pts cold, and 2 pts boiling  $\text{H}_2\text{O}$  (Wittstein)

100 pts  $\text{H}_2\text{O}$  dissolve 29.2 pts salt at  $15^\circ$ , and solution has sp gr = 1.441 (Michel and Kraft, A ch (3) 41 478)

Solubility of  $\text{K}_4\text{Fe}(\text{CN})_6$  in  $\text{H}_2\text{O}$  at  $t^\circ$

(Wagner, Z phys Ch 1890, 5 37)

## Solubility in KOH + Aq at 25°

KOH Normality	g $K_4Fe(CN)_6 \cdot 3H_2O$ per l
0.09984	308.5
0.2496	283.5
0.4963	247.1
0.7036	217.4
0.9415	184.8
1.395	132.1
1.883	86.12

(Grube, Z. Electrochem, 1914, 20, 342)

$K_4Fe(CN)_6 + NaCl + Aq$  sat at 20° contains 26.6 g NaCl and 17.8 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$ , sat at 93° it contains 27.4 g NaCl and 35.9 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$  (Conroy, J. Soc. Chem. Ind. 1898, 17, 105)

$K_4Fe(CN)_6 + KCl + Aq$  sat at 21° contains 27.2 g KCl and 4.2 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$ , sat at 99° it contains 39.6 g KCl and 17.0 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$  (Conroy)

$K_4Fe(CN)_6 + Na_2CO_3 + Aq$  sat at 22° contains 29.9 g  $Na_2CO_3$  and 26.7 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$ , sat at 97° it contains 42.0 g  $Na_2CO_3$  and 27.5 g  $K_4Fe(CN)_6$  per 100 g  $H_2O$  (Conroy)

Insol in liquid  $NH_3$  (Franklin, Am. Ch. J. 1898, 20, 829)

Insol in alcohol even when dilute

Insol in methyl acetate (Naumann, B. 1909, 42, 3790)

Insol in ethyl acetate (Naumann, B. 1904, 37, 3601)

Insol in benzonitrile (Naumann, B. 1914, 47, 1370)

Sol in acetone (Naumann, B. 1904, 37, 4328)

+  $3H_2O$  1 l sat solution in  $H_2O$  contains 319.4 g  $K_4Fe(CN)_6 \cdot 3H_2O$  (Grube, Z. Electrochem. Z. 1914, 20, 342)

Two modifications with different solubilities

25.0 g of  $\alpha$  modification are contained in 100 g of solution at 20°

24.6 g of  $\beta$  modification are contained in 100 g of solution at 20° (Briggs, Chem. Soc. 1911, 99, 1024)

32.0 g  $K_4Fe(CN)_6$  (anhydrous) are dissolved in 100 g  $H_2O$  at 25° (Wagner, Z. phys. Ch. 1910, 71, 425)

**Potassium samarium ferrocyanide,**  
 $KSmFe(CN)_6 \cdot 5H_2O$

Precipitate (Clève)

**Potassium sodium ferrocyanide,**  
 $KNa_3Fe(CN)_6 \cdot 12H_2O$

Sol in  $H_2O$

$KNa_2Fe(CN)_6 \cdot 8H_2O$  Easily sol in  $H_2O$

$K_3NaFe(CN)_6 \cdot 3H_2O$  Permanent Easily sol in  $H_2O$ , insol in alcohol

**Potassium sodium ferrocyanide nitrate,**  
 $K_2Na_2Fe(CN)_6 \cdot 4KNO_3$

Sol in  $H_2O$  (Martius)

**Potassium strontium ferrocyanide,**  
 $K_2SrFe(CN)_6 \cdot 3H_2O$

Easily decomp Sol in  $H_2O$ , sl sol in alcohol (Wyrouboff, A. ch. (4) 21, 276)

**Potassium stannic ferrocyanide,**  
 $KSn_3[Fe(CN)_6]_2 \cdot 68H_2O$  (?)

Ppt (Wyrouboff)  
 $K_4Sn_{10}[Fe(CN)_6]_{11} \cdot 230H_2O$  (?) (Atterberg)

**Potassium titanium ferrocyanide,**  
 $K_3Ti_3[Fe(CN)_6]_2 \cdot 11H_2O$  (?)

Ppt Sol in  $K_4Fe(CN)_6 + Aq$  (Wyrouboff)

$K_4Fe(CN)_6 \cdot 11Ti_3Fe(CN)_6 \cdot 43H_2O$  )  
Ppt (Wyrouboff)

$K_2(TiO)_3[Fe(CN)_6]_2 \cdot 23H_2O$  (?) (Atterberg)

$K_2(TiO)_{11}[Fe(CN)_6]_8 \cdot 110H_2O$  (?) (Atterberg)

**Potassium tungsten ferrocyanide,**  
 $KW_2Fe(CN)_6 \cdot 7H_2O$  (?)

Sol in  $H_2O$  (Wyrouboff)  
 $K_2W_5Fe(CN)_6 \cdot 20H_2O$  Sol in  $H_2O$  (W)

**Potassium uranium ferrocyanide,**  
 $K_2U_3[Fe(CN)_6]_2 \cdot 6H_2O$  (?)

Ppt (Wyrouboff)  
 $K_2(UO_2)_3[Fe(CN)_6]_2 \cdot 6H_2O$  Ppt (Atterberg)

$K_6(UO_2)_5[Fe(CN)_6]_4 \cdot 12H_2O$  Sol in  $H_2O$  (Atterberg)

**Potassium vanadium ferrocyanide,**  
 $K_{18}V[Fe(CN)_6]_6 \cdot 39H_2O$  (?)

Ppt Sl sol in  $H_2O$  (Wyrouboff)  
 $K_6(VO)[Fe(CN)_6]_4 \cdot 60H_2O$  (?) Ppt (Atterberg)

**Potassium ytterbium ferrocyanide,**  
 $KYbFe(CN)_6 \cdot 3H_2O$

Ppt Sol in excess  $K_4Fe(CN)_6$  Aq (Clève, Z. anorg. 1902, 32, 140)

**Potassium yttrium ferrocyanide,**  
 $KYFe(CN)_6 \cdot 2H_2O$

Ppt (Wyrouboff, A. ch. (5) 8, 444)

**Potassium zinc ferrocyanide,**  
 $K_4Zn_3[Fe(CN)_6]_4 \cdot 12H_2O$

Absolutely insol in  $H_2O$  (Wyrouboff, A. ch. (5) 8, 485)

**Potassium ferrocyanide carbonyl,**  
 $K_3Fe(CN)_5(CO) \cdot 3\frac{1}{2}H_2O$

See Carbonyl ferrocyanide, potassium

**Rubidium ferrocyanide,**  $Rb_4Fe(CN)_6 \cdot H_2O$

Sol in less than 1 pt  $H_2O$  at ord temp with great absorption of heat (Wyrouboff, A. ch. (4) 16, 307)

**Silver ferrocyanide**,  $\text{Ag}_4\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ 

Insol in  $\text{H}_2\text{O}$  or dil acids Insol in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq Sol in KCN + Aq  
Decomp by warm  $\text{NH}_4\text{OH} + \text{A-}$  (Weith, Z Ch (2) 5 381)

**Silver ferrocyanide ammonia**,  $\text{Ag}_4\text{Fe}(\text{CN})_6, 2\text{NH}_3 + \text{H}_2\text{O}$ 

(Wyruboff)  
+  $6\text{H}_2\text{O}$  (Gintl)

**Sodium ferrocyanide**,  $\text{Na}_4\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$ 

Efflorescent Less sol in  $\text{H}_2\text{O}$  than  $\text{K}_4\text{Fe}(\text{CN})_6$  Sol in 4.5 pts  $\text{H}_2\text{O}$  at  $12^\circ$  (John)  
100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 22 pts (Ure's Dict)

100 pts  $\text{H}_2\text{O}$  dissolve at

$18^\circ$	$20^\circ$	$42^\circ$	$53^\circ$	
16.7	17.875	30.2	37.1	pts $\text{Na}_4\text{Fe}(\text{CN})_6$
$58^\circ$	$60^\circ$	$77^\circ$	$80^\circ$	
41.7	42.5	54.8	59.2	pts $\text{Na}_4\text{Fe}(\text{CN})_6$
$96^\circ$	$98^\circ$	$98.5^\circ$		
62.1	61.6	6.30	pts $\text{Na}_4\text{Fe}(\text{CN})_6$	

(Conroy, J Soc Chem Ind 1898, 17 104)

+  $10\text{H}_2\text{O}$

100 pts  $\text{H}_2\text{O}$  dissolve at

$18^\circ$	$20^\circ$	$42^\circ$	
29.45	31.85	58.5	pts $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$
$53^\circ$	$58^\circ$	$60^\circ$	
75.9	88.4	90.2	pts $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$
$77^\circ$	$80^\circ$	$96^\circ$	
129.5	146.0	157.0	pts $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$
$98^\circ$	$98.5^\circ$		
156.5	161.0	pts $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$	

(Conroy)

**Strontium ferrocyanide**,  $\text{Sr}_2\text{Fe}(\text{CN})_6 + 15\text{H}_2\text{O}$ 

Efflorescent Sol in 2 pts cold, and less than 1 pt boiling  $\text{H}_2\text{O}$  (Bette)  
Excessively sol in  $\text{H}_2\text{O}$  (Wyruboff, A ch (4) 16 280)  
+  $8\text{H}_2\text{O}$  (Wyruboff)

**Thallous ferrocyanide**,  $\text{Tl}_4\text{Fe}(\text{CN})_6 + 2\text{H}_2\text{O}$ 

100 pts  $\text{H}_2\text{O}$  dissolve 0.37 pt at  $18^\circ$ , and 3.93 pts at  $101^\circ$  (Lamy)  
Sol in KCN + Aq (Kuhlmann)

**Thorium ferrocyanide**,  $\text{ThFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ 

Ppt (Cleve, Bull Soc (2) 24 355)

**Tin (stannous) ferrocyanide**,  $\text{Sn}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ 

Insol in  $\text{H}_2\text{O}$  or acids, sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Wyruboff)

**Tin (stannic) ferrocyanide**,  $\text{Sn}_3[\text{Fe}(\text{CN})_6]_2 + 18\frac{1}{2}\text{H}_2\text{O}$  (?)

(Wyruboff)

**Titanium ferrocyanide**,  $\text{Tl}_7[\text{Fe}(\text{CN})_6]_2$  (?)

Ppt (Wyruboff)

**Uranium ferrocyanide**,  $\text{UFe}(\text{CN})_6 + 10\text{H}_2\text{O}$ 

Ppt (Wyruboff)

**Vanadyl ferrocyanide**,  $(\text{VO})_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$ 

Ppt (Atterberg)

**Yttrium ferrocyanide**,  $\text{Y}_4[\text{Fe}(\text{CN})_6]_3$ 

Easily sol in  $\text{H}_2\text{O}$ , insol in alcohol (Popp, A 131 179)

**Zinc ferrocyanide**,  $\text{Zn}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ 

Insol in  $\text{H}_2\text{O}$  or acids  
Insol in  $\text{HCl} + \text{Aq}$  (Lea, Sill Am J (2) 31 191)

Sol in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq (Wittstein)

Insol in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett)  
Sl sol in boiling  $\text{K}_4\text{Fe}(\text{CN})_6$ , or  $\text{K}_2\text{Fe}(\text{CN})_6 + \text{Aq}$  (Gore)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{NaCl} + \text{Aq}$  sat at  $21^\circ$  contains 29.0 g NaCl and 5.8 g  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g  $\text{H}_2\text{O}$ , sat at  $90^\circ$  it contains 24.7 g NaCl and 21.3 g  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g  $\text{H}_2\text{O}$

**N<sub>4</sub>**

Very sl sol in  
Am Ch J 1898, 20

Insol in alcohol  
+  $4\text{H}_2\text{O}$  Absolutely insol in  $\text{H}_2\text{O}$  (Wyruboff, A ch (5) 8 485)  
+  $8\text{H}_2\text{O}$  (Weith, A 147 329)  
+  $10\text{H}_2\text{O}$  (Pebal, A 233 165)

**Ferrotetranitrososulphidic acid**,

$\text{H}_2\text{S}_2(\text{NO})_4\text{Fe}$

Insol in  $\text{H}_2\text{O}$ , sl sol in alcohol, more easily in ether, very sol in  $\text{CS}$  or  $\text{CHCl}_3$   
Not obtained in a pure state (Pawel, B 15 2600)

**Ethyl ferrotetranitrososulphide**,

$(\text{C}_2\text{H}_5)_2\text{S}(\text{NO})_4\text{Fe}$

Insol in  $\text{H}_2\text{O}$ , difficultly sol in alcohol, more easily in ether, and very easily in  $\text{CS}$ ,  $\text{CHCl}_3$ ,  $\text{C}_2\text{H}_5\text{I}$ , or  $\text{C}_6\text{H}_6$  (Pawel, B 15 2609)

**Ferrous** —,  $\text{FeS}_2(\text{NO})_4\text{Fe}$ 

More difficultly sol in  $\text{H}_2\text{O}$  and alcohol than the hepta salt  
Sol in ether

**Potassium** —,  $\text{K}_2\text{S}_2(\text{NO})_4\text{Fe} + 4\text{H}_2\text{O}$ 

Sol in  $\text{H}_2\text{O}$  Easily sol in alcohol, insol in ether (Pawel, B 15 2600)  
True composition of "nitrosulphide of

iron and potassium" of Roussin (A ch (3) 52 297) (Pawel, B 13 1949)

**Sodium ferrotetranitrososulphide,**  
 $\text{Na}_2\text{S}_2(\text{NO})_4\text{Fe}_2+8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , easily sol in alcohol, insol in ether (Pawel)

True composition of "nitrosulphide of iron and sodium" of Roussin (Pawel)

**Thallium** —,  $\text{Tl}_2\text{S}_2(\text{NO})_4\text{Fe}_2$

Insol in  $\text{H}_2\text{O}$ , alcohol, or ether (Pawel)

**Ferroheptanitrososulphydic acid,**  
 $\text{HS}_2(\text{NO})\text{Fe}_4$

Insol in  $\text{H}_2\text{O}$ , alcohol, and ether Easily sol in  $\text{CS}_2$  or  $\text{CHCl}_3$  (Pawel, B 15 2604)

May be called Ferrinitrososulphydic acid

**Ammonium ferroheptanitrososulphide,**  
 $\text{NH}_4\text{S}_2(\text{NO})_7\text{Fe}_4+\text{H}_2\text{O}$

Less easily sol in  $\text{H}_2\text{O}$  than the K compound (Pawel, B 15 2600)

"Binitrosulphide of iron" of Roussin Sol in about 2 pts boiling  $\text{H}_2\text{O}$ , very sl sol in cold  $\text{H}_2\text{O}$  Very sol in alcohols, methyl, ethyl, or amyl, and in  $\text{HC}_2\text{H}_3\text{O}_2$  Miscible with ether Insol in  $\text{CS}_2$  or  $\text{CHCl}_3$

Decomp by conc  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$   
 Not attacked by  $\text{H}_2\text{C}_2\text{O}_4$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6+$

sl in  $\text{NH}_4\text{OH}$ , and  $\text{KOH}+\text{Aq}$  (Roussin, A ch (3) 52 286)

Sol in  $\text{H}_2\text{O}$  Insol in alcohol (Hofmann, Z anorg 1895, 9 299)

**Barium** —

Easily sol in  $\text{H}_2\text{O}$  (Pawel)

**Cæsium** —,  $\text{Fe}_4(\text{NO})_7\text{S}_2\text{Cs}+\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Difficultly sol in alcohol and ether (Pawel)

Sparingly sol in  $\text{H}_2\text{O}$  (Hofmann, Z anorg 1895, 9 298)

**Calcium** —

Easily sol in  $\text{H}_2\text{O}$  (Pawel)

**Ferrous** —,  $\text{Fe}[\text{S}_2(\text{NO})_7\text{Fe}_4]_2+8\text{H}_2\text{O}$

More easily sol in  $\text{H}_2\text{O}$  than Na salt (Pawel)

**Lead** —

Difficultly sol in  $\text{H}_2\text{O}$  (Pawel)

**Magnesium** —

Easily sol in  $\text{H}_2\text{O}$  (Pawel)

**Potassium** —,  $\text{KS}_2(\text{NO})_7\text{Fe}_4$

Sol in  $\text{H}_2\text{O}$ , alcohol, and very sol in ether with slight decomp (Pawel, B 15 2600)

**Rubidium ferroheptanitrososulphide,**  
 $\text{RbS}_2(\text{NO})_7\text{Fe}_4$

Less soluble in  $\text{H}_2\text{O}$  than the  $\text{NH}_4$  salt (Pawel)  
 $+\text{H}_2\text{O}$  Ppt (Hofmann, Z anorg 1895 9 298)

**Sodium** —,  $\text{NaS}_2(\text{NO})_7\text{Fe}_4+2\text{H}_2\text{O}$

More sol in  $\text{H}_2\text{O}$  than the potassium salt (Pawel)

**Thallium** —,  $\text{TlS}_2(\text{NO})_7\text{Fe}_4+\text{H}_2\text{O}$

Very difficultly sol in  $\text{H}_2\text{O}$  More easily sol in alcohol (Pawel) (Hofmann, Z anorg 1895, 9 297)

**Ferrodinitrosothiosulphonic acid**

**Ammonium ferrodinitrosothiosulphonate,**  
 $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{NH}_4+\text{H}_2\text{O}$

Can be cryst from warm  $\text{H}_2\text{O}$  without decomp (Hofmann, Z anorg 1895, 8 321)

**Cæsium** —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Cs}$

Sparingly sol in  $\text{H}_2\text{O}$  (Hofmann)

**Potassium** —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{K}+\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  without decomp at 80

Sol in 50% alcohol

Sol in  $\text{H}_2\text{SO}_4$  without decomp (Hofmann)

**Rubidium** —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Rb}+\text{H}_2\text{O}$

Less sol in  $\text{H}_2\text{O}$  than the corresponding Na salt (Hofmann)

**Sodium** —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Na}+2\text{H}_2\text{O}$

Closely resembles K salt, but is more so in  $\text{H}_2\text{O}$  and alcohol (Hofmann)

**Ferrotungstic acid**

Sol in  $\text{H}_2\text{O}$  (Laurent, C R 31 693)

**Ammonium manganous ferrotungstate,**  
 $12(\text{NH}_4)_2\text{O}, 6\text{MnO}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O}, 45\text{WO}_3+81\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Laurent)

**Barium ferrotungstate,**  $21\text{BaO}, 2\text{Fe}_2\text{O}_3, 45\text{WO}_3+27\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Laurent)

**Potassium ferrotungstate,**  $9\text{K}_2\text{O}, 2\text{Fe}_2\text{O}_3, 12\text{H}_2\text{O}, 45\text{WO}_3+54\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Laurent)

$18\text{K}_2\text{O}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O}, 45\text{WO}_3+54\text{H}_2\text{O}$  (Laurent)

**Ferrous acid**

**Barium ferrite,**  $\text{BaO}, \text{Fe}_2\text{O}_3$

Ppt (List, B 11 1512)

**Calcium ferrite,  $4\text{CaO}, \text{Fe}_2\text{O}_3$** 

Insol in  $\text{H}_2\text{O}$ , or sugar +  $\text{H}_2\text{O}$  Decomp by the weakest acids, but not by boiling  $\text{KOH} + \text{Aq}$  (Pelouze, A ch (3) 33 5)

$\text{CaO}, \text{Fe}_2\text{O}_3$  (List)  
 $3\text{CaO}, \text{Fe}_2\text{O}_3$  Much less readily attacked by  $\text{H}_2\text{O}$  and acids than the silicates (Hilpert, B 1909, 42 4581)

$3\text{CaO}, 2\text{Fe}_2\text{O}_3$  As above (Hilpert, B 1909, 42 4581)

**Calcium ferrite chloride,  $\text{CaO}, \text{Fe}_2\text{O}_3, \text{CaCl}_2$** 

Not decomp by  $\text{H}_2\text{O}$  (Chateher, C R 99 276)

**Cupric ferrite,  $\text{CuO}, \text{Fe}_2\text{O}_3$** 

Ppt (List)  
 +  $5\text{H}_2\text{O}$  (List)

**Ferrous argentous ferrite,  $2\text{FeO}, \text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$  (?)**

Easily decomp by  $\text{HCl} + \text{Aq}$  Not completely sol in dil  $\text{HNO}_3 + \text{Aq}$  Easily sol in conc  $\text{HNO}_3$  Decomp by acetic acid (Rose, Pogg 10 323)

**Magnesium ferrite,  $\text{MgO}, \text{Fe}_2\text{O}_3$** 

Insol in  $\text{H}_2\text{O}$  Not attacked by boiling conc  $\text{HNO}_3$  (Deville C R 52 1264)

Min *Magnesioferrite* Difficultly sol in  $\text{HCl} + \text{Aq}$  (Rammelsberg, Pogg 107 451)  
 +  $4\text{H}_2\text{O}$  Ppt (List, B 11 1512)  
 $6\text{MgO}, \text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$  Ppt  
 +  $15\text{H}_2\text{O}$  Min *Pyroaurite*

**Manganous ferrite,  $\text{MnO}, \text{Fe}_2\text{O}_3$** 

Ppt (List)

**Nickel ferrite,  $\text{NiO}, \text{Fe}_2\text{O}_3$** 

Ppt (List)

**Potassium ferrite,  $3\text{K}_2\text{O}, 4\text{Fe}_2\text{O}_3$** 

Decomp by  $\text{H}_2\text{O}, \text{KOH} + \text{Aq}, \text{NaOH} + \text{Aq}$ , etc, but only slowly by  $\text{NH}_4\text{Cl} + \text{Aq}$  (Salm-Horstmar, J pr 55 349)

$\text{K}_2\text{Fe}_2\text{O}_4$  Decomp by  $\text{H}_2\text{O}$  (Rousseau and Bernheim, C R 107 240)

**Silver (argentous) ferrite,  $\text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$  (?)**

Decomp by dil  $\text{HNO}_3 + \text{Aq}$  (Rose, Pogg 10 323)

**Sodium ferrite,  $\text{Na}_2\text{O}, \text{Fe}_2\text{O}_3$** 

$\text{Na}_2\text{O}$  is dissolved out by  $\text{H}_2\text{O}$  Easily sol in dil  $\text{HCl} + \text{Aq}$  Not easily decomp by  $\text{NH}_4\text{Cl} + \text{Aq}$  (Salm-Horstmar)

**Zinc ferrite,  $\text{ZnO}, \text{Fe}_2\text{O}_3$** 

Sol in boiling conc  $\text{HCl} + \text{Aq}$  (Ebelmen, A ch (3) 33 47)

Min *Franklinite*

**Flavocobaltic compounds**

See also Xanthocobaltic compounds

**Flavocobaltic chloraurate,**

$(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{AuCl}_4$

More easily sol than the chloroplatinate Not wholly insol in absolute alcohol (Jorgensen, Z anorg 5 159)

— **chloroplatinate**,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_6$   
 As the chloroplatinite (Jorgensen)

— **chloroplatinite**,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_4$   
 Somewhat sol in  $\text{H}_2\text{O}$ , and not insol in 50% alcohol (Jorgensen)

— **chromate**,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{Cr}_2\text{O}_7$   
 Ppt (Jorgensen)

— **nitrate**,  $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$   
 Sol in about 33 pts cold  $\text{H}_2\text{O}$ , insol in  $\text{HNO}_3$  (Jorgensen)  
 $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3, \text{HNO}_3$  Decomp by  $\text{H}_2\text{O}$  or alcohol (Jorgensen)

— **cobaltic nitrite**,  $3(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4, \text{Co}_2(\text{NO}_2)_6 + 2\text{H}_2\text{O}$   
 Sl sol in  $\text{H}_2\text{O}$  (Jorgensen, Z anorg 5 179)

— **diamine cobaltic nitrite**,  
 $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4,$   
 $(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$   
 Very sl sol in  $\text{H}_2\text{O}$  (Jorgensen)

— **sulphate**,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{SO}_4$   
 Sl sol in  $\text{H}_2\text{O}$ , more easily in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Jorgensen)

**Fluoborhydric acid,  $\text{HBF}_4$** 

Decomp by  $\text{H}_2\text{O}$  very rapidly (Landolph, C R 86 603)

**Aluminum fluoboride,  $2\text{AlF}_3, 3\text{BF}_3$** 

Sol in  $\text{H}_2\text{O}$  only when acidulated, sol in acids (Berzelius)

**Ammonium fluoboride,  $\text{NH}_4\text{BF}_4$** 

Easily sol in  $\text{H}_2\text{O}$  Sol in 4 pts  $\text{H}_2\text{O}$  at  $16^\circ$ , and 1 02–1 05 pts boiling  $\text{H}_2\text{O}$  (Stolba, Chem techn Cent Anz 7 459) Sl sol in alcohol

**Barium fluoboride,  $\text{Ba}(\text{BF}_4)_2 + 2\text{H}_2\text{O}$** 

Deliquescent, easily sol in  $\text{H}_2\text{O}$ , decomp by alcohol (Berzelius)

**Cæsium fluoboride,  $\text{CsBF}_4$** 

100 pts  $\text{H}_2\text{O}$  dissolve 0 92 pt  $\text{CsBF}_4$  at  $20^\circ$ , and 0 04 pt at  $100^\circ$  (Godeffroy, B 9 1367)  
 0 02 pts arc sol in 100 pts  $\text{H}_2\text{O}$  at  $20^\circ$  (Erdmann, Arch Pharm 1894, 232 21)

**Calcium fluoboride,  $\text{Ca}(\text{BF}_4)_2$** 

Decomp by  $\text{H}_2\text{O}$ , with formation of a sol acid salt and an insol basic salt (Berzelius)

**Cupric fluoboride,  $\text{Cu}(\text{BF}_4)_2$** 

Deliquescent, and very sol in  $\text{H}_2\text{O}$  (Berzelius)

**Lead fluoboride,  $\text{Pb}(\text{BF}_4)_2$** 

Sol in  $\text{H}_2\text{O}$  Decomp by boiling with  $\text{H}_2\text{O}$  or alcohol into an acid soluble, and a basic insoluble salt (Berzelius)

**Lithium fluoboride,  $\text{LiBF}_4$** 

Hygroscopic Easily sol in  $\text{H}_2\text{O}$  (Berzelius)

**Magnesium fluoboride**

Easily sol in  $\text{H}_2\text{O}$  (Berzelius)

**Potassium fluoboride,  $\text{KBF}_4$** 

Sol in 223 pts  $\text{H}_2\text{O}$  at  $20^\circ$  (Stolba)

Sol in 70.4 pts cold  $\text{H}_2\text{O}$  (Berzelius)

Sol in 15.94 pts  $\text{H}_2\text{O}$  at  $100^\circ$  (Stolba)

1.43 pts are sol in 100 pts  $\text{H}_2\text{O}$  at  $20^\circ$  (Erdmann, Arch Pharm 1894, 232 21)

Not more sol in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ , sol in hot  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{M}_2\text{CO}_3 + \text{Aq}$  (Berzelius) More sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose, Pogg 80 276) Insol in 20%  $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Stromeyer) Insol in cold, sl sol in boiling alcohol

**Rubidium fluoboride,  $\text{RbBF}_4$** 

100 pts  $\text{H}_2\text{O}$  dissolve 0.55 pt at  $20^\circ$ , and 1.0 pt at  $100^\circ$  (Godeffroy, B 9 1337)

0.55 pts are sol in 100 pts  $\text{H}_2\text{O}$  at  $20^\circ$  (Erdmann, Arch Pharm 1894, 232 21)

**Sodium fluoboride,  $\text{NaBF}_4$** 

Easily sol in  $\text{H}_2\text{O}$  Very sl sol in alcohol (Berzelius)

**Yttrium fluoboride**

Sol in  $\text{H}_2\text{O}$  with excess of acid (Berzelius)

**Zinc fluoboride,  $\text{Zn}(\text{BF}_4)_2$** 

Deliquescent Sol in  $\text{H}_2\text{O}$  (Berzelius)

**Fluoboric acid,  $\text{HBF}_4$** 

See Fluoborhydric acid

$\text{H}_4\text{B}_2\text{O}_7$ ,  $3\text{HF}$  and  $\text{H}_4\text{B}_2\text{O}_9$ ,  $2\text{HF}$  (?) Fume on air, and are decomp with  $\text{H}_2\text{O}$  (Landolph, B 12 1583)

$\text{HBO}_2$ ,  $3\text{HF}$  Decomp by  $\text{H}_2\text{O}$  (Berzelius, Pogg 59 644)

Is either a mixture, or a solution of  $\text{HBO}_2$  in  $\text{HF}$ , and is decomp by distillation, and the salts are decomp by recrystallisation (Basarow, C R 78 1698)

**Potassium fluoborate,  $\text{K}_2\text{B}_2\text{O}_5\text{F}_2$  (?)**

Sl deliquescent Scarcely sol in boiling alcohol (Schiff, A Suppl 5 175)

See Boron trioxide potassium fluoride,  $\text{B}_2\text{O}_3$ ,  $2\text{KF}$

**Fluochromic acid****Ammonium fluochromate,  $\text{NH}_4\text{CrO}_5\text{F}$** 

Sol in  $\text{H}_2\text{O}$  (Varenne, C R 91 989)

**Potassium fluochromate,  $\text{KCrO}_5\text{F}$** 

Efflorescent Sol in  $\text{H}_2\text{O}$ , with gradual decomp (Streng, A 129 225)

**Fluocolumbic acid**

See also Fluoxycolumbic acid

**Ammonium fluocolumbate fluoxycolumbate,  $(\text{NH}_4)_2\text{CbF}_3$ ,  $2\text{CbOF}_3$ ,  $\text{NH}_4\text{F}$** **Cadmium fluocolumbate,  $\text{Cd}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$** 

Insol in, and decomp by  $\text{H}_2\text{O}$  (Streng)

**Cobalt fluocolumbate,  $\text{Co}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$** 

Insol in, and decomp by  $\text{H}_2\text{O}$  (Streng)

**Copper fluocolumbate,  $\text{Cu}_2\text{HCbF}_{10} + 9\text{H}_2\text{O}$** 

Insol in, and decomp by  $\text{H}_2\text{O}$

**Ferrous fluocolumbate,  $\text{Fe}_3\text{H}_4\text{Cb}_2\text{F}_{20} + 19\text{H}_2\text{O}$** 

As above

**Manganous fluocolumbate,  $\text{Mn}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$** **Mercuric fluocolumbate,  $\text{Hg}_3\text{CbF}_{11} + 8\text{H}_2\text{O}$** 

As above

**Nickel fluocolumbate,  $\text{Ni}_3\text{H}_4\text{Cb}_2\text{F}_{20} + 19\text{H}_2\text{O}$** 

As above

**Potassium fluocolumbate,  $\text{K}_2\text{CbF}_7$** 

Decomp by solution in  $\text{H}_2\text{O}$  (Marginal A ch (4) 8 34)

**Rubidium fluocolumbate,  $\text{Rb CbF}_7$** 

Sol in  $\text{H}_2\text{O}$  and  $\text{HF} + \text{Aq}$  Insol in alcohol (Pennington, J Am Chem Soc 1896, 18 58)

**Zinc fluocolumbate,  $\text{Zn}_5\text{H}_5\text{Cb}_3\text{F}_{30} + 28\text{H}_2\text{O}$** 

Insol in cold  $\text{H}_2\text{O}$ , decomp by hot  $\text{H}_3\text{PO}_4$  (Santesson, Bull Soc (2) 24 52)

**Fluodithionic acid****Cesium monofluodithionate,**

$\text{S}_2\text{O}_5(\text{OH})\text{FCs}_2 + \text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  with decomp

Sol in  $\text{HF}$ , very unstable (Weinland Z anorg 1899, 21 66)

**Potassium difluodithionate,  $\text{S}_2\text{O}_5\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  with decomp

Sol in  $\text{HF}$ , very unstable (Weinland)

**Rubidium difluodithionate**,  $\text{S}_2\text{O}_5\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  with decomp  
Sol in  $\text{HF}$ , very unstable (Weinland)

**Fluogermanic acid**,  $\text{H}_2\text{GeF}_6$

Known only in solution (Winkler, J pr (2) 36 177)

**Potassium fluogermanate**,  $\text{K}_2\text{GeF}_6$

Sol in 173.98 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Winkler)  
Sol in 184.61 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Kruss and Nilson, B 20 1896)  
Sol in 34.07 pts  $\text{H}_2\text{O}$  at  $100^\circ$  (Winkler)  
Sol in 38.76 pts  $\text{H}_2\text{O}$  at  $100^\circ$  (Kruss and Nilson)  
Insol in alcohol

**Difluoriodic acid**

**Ammonium difluoriodate**,  $\text{NH}_4\text{IO}_2\text{F}_2$

Like K salt  
Sol in 40%  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 20 30)  
Sol in  $\text{H}_2\text{O}$  Easily decomp (Weinland, B 1897, 30 868)

**Cæsium difluoriodate**,  $\text{CsIO}_2\text{F}_2$

(Weinland, Z anorg 1899, 20 36)

**Cæsium hydrogen difluoriodate**,  
 $\text{CsIO}_2\text{F}_2, \text{HIO}_2\text{F}_2 + 2\text{H}_2\text{O}$

Efflorescent Sol in  $\text{H}_2\text{O}$  with decomp  
(Weinland, Z anorg 1899, 22 257)

**Potassium difluoriodate**,  $\text{KIO}_2\text{F}_2$

Sol in  $\text{H}_2\text{O}$  Decomp in moist air  
(Weinland, B 1897, 30 867)  
Decomp in air Sol in  $\text{H}_2\text{O}$  with decomp  
Sol without decomp in 40%  $\text{HF} + \text{Aq}$   
(Weinland, Z anorg 1899, 20 31)

**Rubidium difluoriodate**,  $\text{RbIO}_2\text{F}_2$

Resembles K salt Sol in  $\text{HF} + \text{Aq}$   
(Weinland, Z anorg 1899, 20 35)

**Rubidium hydrogen difluoriodate**,  
 $\text{RbIO}_2\text{F}_2, \text{HIO}_2\text{F}_2 + 2\text{H}_2\text{O}$

Sol in 40-60%  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 260)

**Sodium difluoriodate**,  $\text{NaIO}_2\text{F}_2$

Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1897, 30 868)  
Sol in  $\text{HF}$  (Weinland, Z anorg 1899, 20 37)

**Fluomanganic acid**,  $\text{H}_2\text{MnF}_6$

Decomp by  $\text{H}_2\text{O}$  Sol in alcohol and ether in absence of  $\text{H}_2\text{O}$  (Nickles, C R 65 107)

**Ammonium fluomanganate**,  $(\text{NH}_4)_2\text{MnF}_6$

More sol than the K salt (Nickles, C R 65 107)  
True composition is  $(\text{NH}_4)_4\text{Mn}_2\text{F}_{10} = 4\text{NH}_4\text{F}, \text{Mn}_2\text{F}_6$  (Christensen, J pr (2) 34 41)

**Cobalt fluomanganate**,  $2\text{CoF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Christensen)

**Nickel fluomanganate**,  $2\text{NiF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Christensen)

**Potassium fluomanganate**,  $\text{K}_2\text{MnF}_6$

Difficultly sol in  $\text{H}_2\text{O}$  Decomp by much  $\text{H}_2\text{O}$  (Nickles, C R 65 107)  
Composition is  $\text{K}_4\text{Mn}_2\text{F}_{10} = 4\text{KF}, \text{Mn}_2\text{F}_6$   
Also with  $2\text{H}_2\text{O}$  (Christensen, J pr (2) 34 41)

Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{HCl}, \text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  with decomp Can be recryst from 40%  $\text{HF} + \text{Aq}$  Insol in acetic acid (Weinland and Lauenstein, Z anorg 1899, 20 41)

**Rubidium fluomanganate**,  $\text{Rb}_2\text{MnF}_6 + 2\text{H}_2\text{O}$

As the K salt (Weinland and Lauenstein, Z anorg 1899, 20 44)

**Silver fluomanganate**,  $\text{Ag}_2\text{Mn}_2\text{F}_8 + 14\text{H}_2\text{O}$   
(Christensen, J pr (2) 34 41)

**Sodium fluomanganate**,  $4\text{NaF}, \text{Mn}_2\text{F}_6$

Decomp by much  $\text{H}_2\text{O}$  (Christensen)

**Zinc fluomanganate**,  $2\text{ZnF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Christensen)

**Fluomolybdc acid**

See Fluoxyhypomolybdc, and Fluoxymolybdc acids

**Fluopalladous acid**

**Potassium fluopalladite**,

Sl sol in  $\text{H}_2\text{O}$

**Sodium fluopalladite**

Sl sol in  $\text{H}_2\text{O}$  (Berzelius)

**Fluoperboric acid**

**Ammonium fluoperborate**,  
 $\text{NH}_4\text{OOB}(\text{F})\text{OOB}(\text{F})\text{OONH}_4$

Ppt Insol in ether (Petrenko, C C 1902, I 1191)

**Potassium fluoperborate**,  $\text{K}_4\text{B}_4\text{F}_4\text{O}_{11} + \text{H}_2\text{O}$

Dry salt is rather stable  
Easily sol in  $\text{H}_2\text{O}$  Aqueous solution decomp rapidly when warmed, at ordinary

temp the decomp proceeds slowly Insol in alcohol (Melikoff, B 1899, **32** 3350)  
 $\text{KOOB(F)OOB(F)OK} + 1\frac{1}{2}\text{H}_2\text{O}$  Ppt  
 Insol in ether (Petrenko, C C **1902**, I 1191, J Russ, phys chem Soc **34** 37)

### Fluoperuranic acid

**Potassium fluoperuranate**,  $\text{K}_4\text{U}_4\text{F}_{15}\text{O}_{15} + 4\text{H}_2\text{O} = 3\text{UO}_4\text{KF}, \text{UO}_3\text{F}_2, \text{KF} + 4\text{H}_2\text{O}$   
 Ppt (Lordkipanidse, C C **1900**, II 525)

**Sodium fluoperuranate**,  $\text{UO}_4\text{NaF} + 5\text{H}_2\text{O}$   
 Ppt (Lordkipanidse, C C **1900**, II 525)

### Fluophosphamide, $\text{PF}_3(\text{NH}_2)_2$

Sol in  $\text{H}_2\text{O}$  (Poulenc, A ch (6) **24** 566)

### Fluophosphoric acid

**Monocæsium monofluophosphate**,  
 $\text{P}(\text{OH})_3(\text{OCs})\text{F}$

Like the K salt (Weinland, Z anorg 1899,

— — — — — phosphate,

$\frac{1}{2}\text{F} + \text{Aq}$ , decomp in the air  
 Z anorg 1899, **21** 44)

**Potassium monofluophosphate**,  
 $\text{KHFPO}_3 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ , unstable (Weinland, B 1898, **31** 124-125)

**Monorubidium monofluophosphate**,  
 $\text{P}(\text{OH})_3(\text{ORb})\text{F}$

Sol in 40%  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, **21** 47)

**Rubidium monofluophosphate**,  
 $\text{RbHFPO}_3 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1898, **31** 124)

### Fluoplatinic acid

**Ammonium fluoplatinate**

Secomp by  $\text{H}_2\text{O}$  to a sol acid, and an insol basic salt Insol in alcohol (Berzelius)

**Potassium fluoplatinate**

Deliquescent Insol in alcohol Decomp by  $\text{H}_2\text{O}$  (Berzelius)

**Sodium fluoplatinate**

Decomp by  $\text{H}_2\text{O}$  (Berzelius)

### Fluor- and Fluoro-

See Fluor-

### Fluorhydric (Hydrofluoric) acid, $\text{HF}$ or $\text{H}_2\text{F}_2$

Attracts  $\text{H}_2\text{O}$  from air with great avidity. Very sol in  $\text{H}_2\text{O}$  with evolution of much heat. Sat solution has sp gr 1.25 (H Davy)

On boiling the aqueous solution an acid of constant composition is obtained, which boils at  $120^\circ$ , has sp gr 1.15, and contains 35.37%  $\text{HF}$  (Bineau, A ch (3) **7** 257) The residual acid after boiling contains 36 to 38%  $\text{HF}$ , and by standing over  $\text{CaO}$  gives off  $\text{HF}$  until an acid containing 32.5 to 32.7%  $\text{HF}$  is formed. Weaker acids increase their strength to 32.2 to 32.4%  $\text{HF}$ , while an acid containing 32.5%  $\text{HF}$  remains unchanged (Roscoe, A **116**. 218)

Does not attack gutta-percha Sol in  $\text{H}_2\text{SO}_4$

Sp gr of  $\text{HF} + \text{Aq}$  at  $15^\circ$

24 47	1 087
29 83	1 103

(Hill)

Aq solution of sp gr 1 138 at 18° contains 43 2% HF and has a constant bpt of 111° at 750 mm (Deussen, Z anorg 1906, 49 297)

The strongest acid that can be obtained by distillation contains 48 17% HF and boils at 125–125 5° (Gore)

### Fluorides

The alkali fluorides, also AgF and SnF<sub>2</sub>, are sol in H<sub>2</sub>O, the fluorides of Fe, Sr, and Cd are sl sol, the others are insol in H<sub>2</sub>O. Most fluorides are sol in acids, especially HF + Aq

Insol in liquid NH<sub>3</sub> (Franklin, Am Ch J 1898, 20 822)

See under each element

### Fluorine, F<sub>2</sub>

Decomposes H<sub>2</sub>O and all organic solvent with great violence (Moissan, C R 103 202 and 256)

Liquified at –185° to a yellowish liquid which does not dissolve glass nor ignite cooled Si, B, C, S, P, or Fe (Moissan, C R 1897, 124 1202–1204)

### Fluomolybdic acid

Ammonium fluomolybdate, (NH<sub>4</sub>)MoF<sub>4</sub> + H<sub>2</sub>O

Somewhat more sol in H<sub>2</sub>O than the K salt. Hydrolysed by H<sub>2</sub>O (Rosenheim, Z anorg 1905, 46 321)

(NH<sub>4</sub>)<sub>2</sub>Mo<sub>2</sub>F<sub>8</sub> + 2H<sub>2</sub>O (Rosenheim)

Potassium fluomolybdate, KMoF<sub>4</sub> + H<sub>2</sub>O

Nearly insol in H<sub>2</sub>O (Rosenheim)

### Fluoselenenic acid

Ammonium monofluoselenate,

SeO<sub>3</sub>(OH)(NH<sub>4</sub>)<sub>2</sub>

Not hygroscopic

Easily sol H<sub>2</sub>O with decomp

Sol in HF (Weinland, Z anorg 1899, 21 58)

Tripotassium difluodiselenate, Se<sub>2</sub>O<sub>7</sub>·3K<sub>2</sub>H + H<sub>2</sub>O

Decomp in the air, sol in H<sub>2</sub>O with decomp, sol in HF (Weinland)

Tri-rubidium difluodiselenate, Se<sub>2</sub>O<sub>7</sub>·F<sub>2</sub>·Rb<sub>3</sub>H + H<sub>2</sub>O

Decomp in the air, sol in H<sub>2</sub>O with decomp, sol in HF (Weinland, Z anorg 1899, 21 57)

**Fluosilicic acid,  $\text{H}_2\text{SiF}_6$** 

Sp gr of  $\text{H}_2\text{SiF}_6 + \text{Aq}$  at  $17.5^\circ$  ( $\text{H}_2\text{O}$  at  $17.5^\circ = 1.000$ )

% $\text{H}_2\text{SiF}_6$	Sp gr	% $\text{H}_2\text{SiF}_6$	Sp gr
2	1.0161	20	1.1748
4	1.0324	22	1.1941
6	1.0491	24	1.2136

10	1.0834	28	1.2537
12	1.1011	30	1.2742
14	1.1190	32	1.2951
16	1.1373	34	1.3162
18	1.1559		

(Stolba, J pr 90 193)

+  $2\text{H}_2\text{O}$  Very deliquescent, and sol in  $\text{H}_2\text{O}$  (Kessler, C R 90 1285) Solution decomp into HF and  $\text{SiF}_4$  on evaporation, when it becomes concentrated

**Fluosilicates**

Most of the fluosilicates are sol in  $\text{H}_2\text{O}$ , but the alkali salts (especially K) and the Ba salt are only sl sol in  $\text{H}_2\text{O}$

**Aluminum fluosilicate,  $\text{Al}_2(\text{SiF}_6)_3$** 

Easily sol in  $\text{H}_2\text{O}$  After evaporating to dryness, the residue is slowly but completely sol in  $\text{H}_2\text{O}$  (Deville, A ch (3) 61 327)

Insol in acetone (Naumann, B 1904, 37 4328)

**Aluminum fluosilicate silicate,  $\text{Al}_2\text{SiF}_{10}$ ,  $5\text{Al}_2\text{SiO}_5$** 

Min Topaz Insol in acids

**Ammonium fluosilicate,  $(\text{NH}_4)_2\text{SiF}_6$** 

Sol in 538 pts  $\text{H}_2\text{O}$  at  $17.5^\circ$  to form a solution of 1.0961 sp gr, sol in 18 pts hot  $\text{H}_2\text{O}$ , sol in 45.5 pts alcohol of 31% (Stolba, C C 1877 418)

Insol in acetone (Naumann, B 1904, 37 4329, Erdmann, C C 1899, II 1014)

$3\text{NH}_4\text{F} \cdot \text{SiF}_4 = (\text{NH}_4)_2\text{SiF}_6 \cdot \text{NH}_4\text{F}$  Sol in  $\text{H}_2\text{O}$  (Maignac, Ann Min (5) 15 221)

**Barium fluosilicate,  $\text{BaSiF}_6$** 

Sol in 3802 pts cold  $\text{H}_2\text{O}$  (Fresenius, A 59 120)

Sol in 3731 pts  $\text{H}_2\text{O}$  at  $17.5^\circ$  in 3315 pts at  $21^\circ$ , in 1175 pts at  $100^\circ$  (Stolba, J pr 96 22)

Sol in 640-733 pts  $\text{H}_2\text{O}$  containing a little HCl (Fresenius)

488 pts HCl + Aq containing 4.25% HCl dissolve 1 pt at  $22^\circ$  (Stolba)

More sol in  $\text{HNO}_3 + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Fresenius)

272 pts  $\text{HNO}_3 + \text{Aq}$ , containing 8%  $\text{NO}_2$ , dissolve 1 pt at  $22^\circ$  (Stolba)

1 pt  $\text{BaSiF}_6$  dissolves in 428 pts sat  $\text{NH}_4\text{Cl} + \text{Aq}$ , in 589 pts sat  $\text{NH}_4\text{Cl} + \text{Aq} + 2$  vols  $\text{H}_2\text{O}$  (Mallet, Sill Am J (2) 28 48)

1 pt  $\text{BaSiF}_6$  dissolves in 306 pts sat  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $22^\circ$ , in 361 pts 15% solution of  $\text{NH}_4\text{Cl}$ , in 563 pts sat boiling  $\text{NaCl} + \text{Aq}$ , in 349 pts 10% solution of  $\text{NaCl}$  at boiling temp, in 2185 pts 10% solution of  $\text{NaCl}$  at  $20^\circ$ , in 1140 pts 5% solution of  $\text{NaCl}$  at  $20^\circ$  (Stolba)

Nearly absolutely insol in alcohol (Fresenius)

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%), HCl + Aq (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3.7%)  
1 pt  $\text{BaSiF}_6$  is sol in pts of solutions of given composition

$\text{H}_2\text{O}$	Alcohol	HCl + Aq	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{BaSiF}_6$
50	50	0	0	37,219

97 09	0	1 25	1 66	3,247
75 0	25	0	0	16,914

(Fresenius, Z anal 29 143)

**Cadmium fluosilicate,  $\text{CdSiF}_6 + 6\text{H}_2\text{O}$** 

Extremely sol in  $\text{H}_2\text{O}$  Easily sol in 50% alcohol (Engelskirchen, Dissert 1903)

**Cæsium fluosilicate,  $\text{CsSiF}_6$** 

Sol in 166 pts  $\text{H}_2\text{O}$  at  $17^\circ$ , and much less hot  $\text{H}_2\text{O}$  Insol in alcohol (Preis, J pr 103 410)

**Calcium fluosilicate,  $\text{CaSiF}_6 + 2\text{H}_2\text{O}$** 

Sl sol in, and partly decomp by  $\text{H}_2\text{O}$  Sol in HF and HCl + Aq Sol in fluosilicic acid without decomp Easily sol in 60% alcohol (Fleischer)

**Cerium fluosilicate**

Very difficulty sol in  $\text{H}_2\text{O}$ , acetic, or fluosilicic acids Insol in alcohol (Stolba, C C 1874 130)

**Chromium fluosilicate**

Deliquescent (Berzelius)

Efflorescent Sol in  $\text{H}_2\text{O}$  (Börlin)

**Cobaltous fluosilicate,  $\text{CoSiF}_6 + 6\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  (Berzelius)

**Cuprous fluosilicate,  $\text{Cu}_2\text{SiF}_6$** 

Insol in  $\text{H}_2\text{O}$  (Berzelius, Pogg 1 199)

**Cupric fluosilicate,  $\text{CuSiF}_6 + 6\text{H}_2\text{O}$** 

Deliquescent in moist, efflorescent in dry air

Sol in 0.428 pt  $\text{H}_2\text{O}$  at  $17^\circ$  Sp gr of solution sat at  $17^\circ = 1.6241$

Sol in 17.5 pts alcohol of 62 vol % at  $20^\circ$ , in 150 pts of 85% at  $20^\circ$ , in 617 pts of 92% at  $20^\circ$  (Stolba, J pr 102 7)

**Insol** in methyl acetate (Naumann, B 1909, 42 3790)  
Contains  $6\frac{1}{2}$  H<sub>2</sub>O (Stolba)  
+  $5\frac{1}{2}$  H<sub>2</sub>O (Knop and Wolf)

**Cupric fluosilicate phosphate**,  $\text{CuSiF}_6$ ,  
 $\text{Cu}_3(\text{PO}_4)_2$

**Insol** in H<sub>2</sub>O, but easily sol in dil HCl + Aq (Thorpe and Rodger, Chem Soc 55 320)

**Glucinum fluosilicate**

Known only in solution

**Iron (ferrous) fluosilicate**,  $\text{FeSiF}_6 \cdot 6\text{H}_2\text{O}$   
Easily sol in H<sub>2</sub>O (Berzelius)

**Iron (ferric) fluosilicate**,  $\text{Fe}_2(\text{SiF}_6)_3$   
Sol in H<sub>2</sub>O (Berzelius)

**Lead fluosilicate**,  $\text{PbSiF}_6 \cdot 2\text{H}_2\text{O}$

Deliquescent Easily sol in H<sub>2</sub>O  
**Insol** in acetone (Naumann, B 1904, 37 4329)  
+ 4H<sub>2</sub>O (Marignac)

**Lithium fluosilicate**,  $\text{Li}_2\text{SiF}_6 \cdot 2\text{H}_2\text{O}$

100 pts H<sub>2</sub>O at 17° dissolve 73 pts crystalline salt (Marignac)  
100 pts cold H<sub>2</sub>O dissolve 52.6 pts crystals  
Sol in dil alcohol (Stolba, J pr 91 456)  
100 pts alcohol of 46 vol % dissolve about 4 pts, and 100 pts alcohol of 79 vol % dissolve about 0.4 pt crystals (Stolba, Z anal 3 311)

**Insol** in ether or benzene  
**Insol** in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)  
**Insol** in methyl acetate (Naumann, B 1909, 42 3790)  
**Insol** in ethyl acetate (Naumann, B 1904, 37 3601)

**Magnesium fluosilicate**,  $\text{MgSiF}_6 \cdot 6\text{H}_2\text{O}$

Efflorescent Sol in 1534 pts cold H<sub>2</sub>O, forming a solution of 1.235 sp gr at 17.5° Separates out SiO<sub>2</sub> on warming, which nearly all redissolves on cooling (Stolba, C C 1877 578)

**Magnesium fluosilicate silicate**,  $\text{Mg}_3\text{Si}_2\text{F}_{18}$ ,  
 $\pi\text{Mg}_3\text{Si}_2\text{O}_9$

Min *Humite* *Chondrodite* Gelatinises with HCl, or H<sub>2</sub>SO<sub>4</sub> + Aq

**Manganous fluosilicate**,  $\text{MnSiF}_6 \cdot 6\text{H}_2\text{O}$

Sol in H<sub>2</sub>O (Marignac, J pr 83 202)  
100 pts dissolve in 71.4 pts H<sub>2</sub>O at 17.5°, and sp gr of solution = 1.44825 Much more sol in hot H<sub>2</sub>O, and less sol in alcohol, the stronger the alcohol (Stolba, C C 1883 292)

**Mercurous fluosilicate**,  $\text{Hg}_2\text{SiF}_6$

Sl sol in H<sub>2</sub>O without decomp (Lemaire, C C 1897, I 1046)  
+ 2H<sub>2</sub>O Sl sol in H O More easily sol in acidified H<sub>2</sub>O, but precipitated by HCl + Aq (Berzelius)

**Mercuric fluosilicate, basic**,  $\text{HgSiF}_6$ ,  $\text{HgO} + 3\text{H}_2\text{O}$

Decomp by H<sub>2</sub>O, but sol in weakest acids (Berzelius, Pogg 1 200)

**Mercuric fluosilicate**,  $\text{HgSiF}_6 \cdot 6\text{H}_2\text{O}$

Deliquescent, and easily sol in H<sub>2</sub>O (Finkener, Pogg 111 246)

**Nickel fluosilicate**,  $\text{NiSiF}_6 \cdot 6\text{H}_2\text{O}$

Easily sol in H<sub>2</sub>O (Marignac, Ann Min (5) 15 262)

**Potassium fluosilicate**,  $\text{K}_2\text{SiF}_6$

Sol in 833.1 pts H<sub>2</sub>O at 17.5°, and 104.8 pts at 100° (Stolba, J pr 103 396) Sol in 3800 pts cold, and more easily sol in hot H<sub>2</sub>O (Fresenius)

More sol in HCl + Aq than in H O  
Sol in 337 pts HCl + Aq of 26.5% at 14°, in 307 pts of 25.7% at 15°, in 340 pts of 14.1% at 14°, in 303 pts of 13.6% at 15°, in 327 pts of 9.6% at 14°, in 313 pts of 9.2% at 15°, in 376 pts of 2.7% at 14°, in 319 pts of 2.4% at 15°, in 409 pts of 1.8% at 14° (Stolba, l c)

Sol in 428 pts sat, and 589 pts dil NH<sub>4</sub>Cl + Aq (Mallet)  
Much less sol in K<sub>2</sub>SO<sub>4</sub>, KNO<sub>3</sub>, or KCl + Aq, but more sol in NH<sub>4</sub>Cl + Aq than in H<sub>2</sub>O (Stolba)

Sol in 24,066 pts K<sub>2</sub>SO<sub>4</sub> + Aq containing 9.92% K<sub>2</sub>SO<sub>4</sub> at 17°, in 17,858 pts containing 6% at 18°, in 19,530 pts containing 5% at 17°, in 10,721 pts containing 1% at 17°

Sol in 125,000 pts KNO<sub>3</sub> + Aq containing 18.4% KNO<sub>3</sub> at 15°, in 43,478 pts containing 8.7% at 15°, in 1735 pts containing 8.8% at 100°, in 35,814 pts containing 4.3% at 15°, in 10,203 pts containing 1.00% at 15°

Sol in 40,070 pts KCl + Aq containing 25% KCl at 17°, in 38,352 pts containing 18.4% at 17°, in 41,254 pts containing 13.4% at 14°, in 24,032 pts containing 6.7% at 12°, in 1200 pts containing 0.65% at 17°, in 1095 pts containing 0.45% at 18°

Sol in 358 pts NH<sub>4</sub>Cl + Aq containing 26.3% NH<sub>4</sub>Cl at 17°, in 306 pts containing 15% at 15°, in 339 pts containing 10% at 15°, in 436 pts containing 5% at 15° (Stolba, J pr 103 306)

**Insol** in liquid CO (Buchner, Z phys Ch 1906, 54 674)

**Insol** in liquid NH<sub>3</sub> (Gore, Am ch J 1898, 20 829)

Completely pptd from aqueous solution by an equal vol of alcohol

**Si sol in benzonitrile** (Naumann, B 1914, 47 1369)  
**Insol in methyl acetate** (Naumann, B 1909, 42 3790)

### Rubidium fluosilicate, $\text{Rb}_2\text{SiF}_6$

Sol in 625 pts  $\text{H}_2\text{O}$  at  $20^\circ$ , and 73 05–74 5 pts at  $100^\circ$  More sol in acidified water  
**Insol in alcohol** (Stolba, J pr 101 1)  
**Insol in  $\text{H}_2\text{O}$**  (Eggeling, Z anorg 1905, 46 175)  
 Less sol in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$  (Gossner, Zeit Kryst 1904, 38 149)

### Silver fluosilicate, $\text{Ag}_2\text{SiF}_6 + 4\text{H}_2\text{O}$

Deliquescent Easily sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 221)

### Sodium fluosilicate, $\text{Na}_2\text{SiF}_6$

Much more sol in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$ , especially in hot  $\text{H}_2\text{O}$  Addition of acid does not increase solubility (Berzelius)

Sol in 153 3 pts  $\text{H}_2\text{O}$  at  $17 5^\circ$ , and 40 66 pts at  $100^\circ$  Easily forms supersaturated solutions (Stolba, Z anal 11 199)

Much less sol in  $\text{NaCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Stolba, J pr 1865 (1) 96 26)

Precipitated completely from aqueous solution by alcohol (Rose)

**Insol in methyl acetate** (Naumann, B 1909, 42 3790)

### Strontium fluosilicate, $\text{SrSiF}_6 + 2\text{H}_2\text{O}$

Sol in cold  $\text{H}_2\text{O}$ , but decomp somewhat on heating Sol in 31 06 pts  $\text{H}_2\text{O}$  (Fresenius)

Easily sol in acidified  $\text{H}_2\text{O}$  without decomp Sol in alcohol

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%),  $\text{HCl} + \text{Aq}$  (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3 7%)  
 1 pt  $\text{SrSiF}_6$  is sol in pts of solutions of given composition

$\text{H}_2\text{O}$	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{SrSiF}_6$
50	50	0	0	15 29
74 1	25	0	0	82 93
70 8	25	4 2	0	50 9
77 95	20	0 9	1 15	55 0
73	25	0 9	1 1	82 97
75	25	0	0	147 4
95 24	0	2 04	2 72	7 3

(Fresenius, Z anal 29 143)

### Thallous fluosilicate, $\text{Tl}_2\text{SiF}_6 + 2\text{H}_2\text{O}$

Very easily sol in  $\text{H}_2\text{O}$  (Kuhlmann)

### Thorium fluosilicate, $\text{Th}(\text{OH})_2\text{SiF}_6$ (?)

(Cleve)

### Tin (stannic) fluosilicate, $\text{SnF}_4, \text{SiF}_4$

Very easily sol in  $\text{H}_2\text{O}$  (Berzelius)

### Uranyl fluosilicate

Very sl sol in acids (Berzelius)

Sol in alcohol (Stolba, Z anal 3 71)

### Vanadium fluosilicate

Deliquescent Sol in  $\text{H}_2\text{O}$  (Guyard, Bull Soc (2) 25 352)

### Yttrium fluosilicate

**Insol in pure, sol in acidified  $\text{H}_2\text{O}$**  (Berzelius)

### Zinc fluosilicate, $\text{ZnSiF}_6 + 6\text{H}_2\text{O}$

Very easily sol in  $\text{H}_2\text{O}$  (Berzelius)

### Zirconium fluosilicate

Sol in  $\text{H}_2\text{O}$  Solution clouds up on boiling (Berzelius)

### Fluostannic acid

### Ammonium fluostannate, $(\text{NH}_4)_2\text{SnF}_6$

Sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 224)

$4\text{NH}_4\text{F}, \text{SnF}_4$  Sol in  $\text{H}_2\text{O}$  (Marignac)

### Barium fluostannate, $\text{BaSnF}_6$

Slowly sol in  $\text{H}_2\text{O}$

$+3\text{H}_2\text{O}$  Sol in 18 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Marignac, Ann Min (5) 15 246)

Decomp by warming with  $\text{H}_2\text{SO}_4$  with evolution of  $\text{HF}$  (Emich, M 1904, 25 1912)

### Calcium fluostannate, $\text{CaSnF}_6 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 250)

### Cadmium fluostannate, $\text{CdSnF}_6 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Marignac)

### Cobaltous fluostannate, $\text{CoSnF}_6 + 6\text{H}_2\text{O}$

(Gossner, Zeit Kryst 1907, 42 482)

### Cupric fluostannate, $\text{CuSnF}_6 + 4\text{H}_2\text{O}$

Not deliquescent (Marignac, Ann Min (5) 15 291)

### Lithium fluostannate, $\text{Li}_2\text{SnF}_6 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 242)

### Magnesium fluostannate, $\text{MgSnF}_6 + 6\text{H}_2\text{O}$

Not deliquescent Sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 256)

### Manganous fluostannate, $\text{MnSnF}_6 + 6\text{H}_2\text{O}$

Slowly efflorescent (Marignac)

### Nickel fluostannate, $\text{NiSnF}_6 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 262)

**Potassium fluostannate,  $K_2SnF_6 + H_2O$** 

Two modifications—(a) *Thin plates* Sol in 23 pts  $H_2O$  at  $100^\circ$ , and in 15–16 pts at  $18^\circ$  (Marignac)

(b) *Octahedra* Sol in 3 pts  $H_2O$  at  $100^\circ$ , and 27 pts at  $18^\circ$  (Marignac)

Sol in hot  $H_2O$  Can be crvst from hot  $H_2O$  With conc  $H_2SO_4$ , HF is evolved (Emich, M 1904, 25 911)

**Potassium hydrogen fluostannate,  $3KF, HF, SnF_4$** 

Sol in  $H_2O$  (Marignac)

**Silver fluostannate,  $Ag_2SnF_6 + 4H_2O$** 

Sl deliquescent Easily sol in  $H_2O$  (Marignac)

**Sodium fluostannate,  $Na_4SnF_6$** 

Sol in 18–19 pts  $H_2O$  at  $20^\circ$  (Marignac)

**Strontium fluostannate,  $SrSnF_6 + 2H_2O$** 

Sol in 5.5 pts  $H_2O$  at  $18^\circ$  (Marignac)

**Zinc fluostannate,  $ZnSnF_6 + 6H_2O$** 

Sol in  $H_2O$  (Marignac)

**Fluosulphonic acid,  $HSO_3F$** 

See Sulphuryl hydroxyl fluoride

**Ammonium fluosulphonate,  $FSO_3NH_4$** 

Easily sol in  $H_2O$  from which it can be cryst

Sol in ethyl alcohol, more sol in methyl alcohol Can be crvst from abs alcohol (Traube, B 1913, 46 2528)

**Sodium fluosulphonate,  $FSO_3Na$** 

Hydroscoptic

Sol in alcohol and acetone (Traube)

**Fluosulphuric acid****Tricæsium difluodisulphate,  $S_2O_7F_2Cs_3H + H_2O$** 

As the K salt (Weinland, Z anorg 1899, 21 53)

**Tripotassium difluodisulphate,  $S_2O_7F_2K_3H + H_2O$** 

Sol in HF, quite stable in air, sol in  $H_2O$  with decomp (Weinland, Z anorg 1899, 21 51)

**Trirubidium difluodisulphate,  $S_2O_7F_2Rb_3H + H_2O$** 

Sol in HF (Weinland, Z anorg 1899, 21 53)

**Fluotantallic acid****Ammonium fluotantalate,  $(NH_4)_2TaF_7$** 

Very sol in  $H_2O$  (Marignac, A ch (4) 9 272)

$(NH_4)_2TaF_7$  (Balke, J Am Chem Soc 1905, 27 1151)

**Cæsium fluotantalate,  $CsTaF_6$** 

Can be recryst from HF + Aq (Balke)

$Cs_2TaF_7$  Can not be recryst from  $H_2O$  as it tends to go into  $CsF, TaF_5$  (Balke, J Am Chem Soc 1905, 27 1151)

$15CsF, TaF_5$  Sl sol in  $H_2O$  (Pennington, J Am Chem Soc 1896, 18 59)

**Calcium fluotantalate**

Difficulty sol in  $H_2O$  (Berzelius)

**Cupric fluotantalate,  $Cu_2TaF_7 + 4H_2O$** 

Deliquescent Easily sol in  $H_2O$  (Marignac, A ch (4) 9 294)

**Lead fluotantalate**

Difficulty sol in  $H_2O$  (Berzelius)

**Lithium fluotantalate,  $LiF, TaF_5 + 2H_2O$** 

Can be recryst from conc HF (Balke, J Am Chem Soc 1905, 27 1143)

**Potassium fluotantalate,  $K_2TaF_7$** 

Sl sol in cold, much more easily in hot  $H_2O$  Decomposes, with formation of a white precipitate on boiling (Berzelius)

Much more sol in HF + Aq 1 pt of the salt is sol in 200 pts  $H_2O$  containing a trace of HF, and in 150–160 pts of  $H_2O$  containing a little more HF (Marignac, A ch (4) 9 267)

**Potassium hydrogen fluotantalate,  $KF, HF, TaF_5$  (?)**

Sol in  $H_2O$  (Berzelius)

**Rubidium fluotantalate,  $Rb_2TaF_7$** 

Sol in HF + Aq (Pennington, J Am Ch Soc 1896, 18 58)

$3RbF, 2TaF_5$  (Balke, J Am Chem Soc 1905, 27 1151)

**Sodium fluotantalate,  $3NaF, TaI_5$** 

Easily sol in  $H_2O$

$Na_2TaF_7 + H_2O$  Sol in  $H_2O$  (Marignac)

**Thallos fluotantalate,  $11LiTaF_7$** 

Sol in  $H_2O$  On boiling the aqueous solution tantalic acid separates

Decomp by conc  $H_2SO_4$  Difficulty sol in cold, easily sol in hot HF (Ephrum B 1909, 42 4461)

**Zinc fluotantalate,  $ZnTaF_7 + 7H_2O$** 

Very deliquescent Sol in  $H_2O$  (Marignac, A ch (4) 9 249)

**Fluotelluric acid****Ammonium fluotellurate,  $NH_4Tel_5 + H_2O$** 

Decomp by  $H_2O$  (Hogbom, Bull Soc (2) 35 60)

**Barium fluotellurate**,  $\text{Ba}(\text{TeF}_6)_2 + \text{H}_2\text{O}$

As above

**Potassium fluotellurate**,  $\text{KTeF}_6$

As above

$\text{TeO}_3\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$  Stable in dry air, only sl sol in  $\text{H}_2\text{O}$  with decomp, sol in HF (Weinland, Z anorg 1899, 21 61)

**Rubidium difluotellurate**,  $\text{TeO}_3\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  with decomp Sol in HF (Weinland, Z anorg 1899, 21 62)

**Fluotitanic acid**

Known only in solution as titanium hydrogen fluoride

**Ammonium fluotitanate**,  $(\text{NH}_4)_2\text{TiF}_6$

Sol in  $\text{H}_2\text{O}$  (Marignac)

$3\text{NH}_4\text{F}$ ,  $\text{TiF}_4$  Sol in  $\text{H}_2\text{O}$  (Marignac)

**Ammonium fluosequititanate**,  $6\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_6$

Easily sol in  $\text{H}_2\text{O}$  Sl sol in  $\text{NH}_4\text{F} + \text{Aq}$  (Petersen, J pr (2) 40 54)

Insol in  $\text{NH}_4\text{F} + \text{Aq}$  (Piccini, C R 97 1064)

$4\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_6$  Properties as the corresponding K salt (Piccini, B 18 257 R)

e,  $\text{BaTiF}_6$

$\text{H}_2\text{O}$  More easily sol in a (Engelskirchen, Dissert

$+\frac{1}{2}\text{H}_2\text{O}$  (Emich, M 1904, 25 907)

**Cadmium fluotitanate**,  $\text{CdTiF}_6 + 6\text{H}_2\text{O}$

Extremely sol in  $\text{H}_2\text{O}$  Easily sol in 50% alcohol (Engelskirchen, Dissert 1903)

**Cesium fluotitanate**,  $\text{Cs}_2\text{TiF}_6$

More sol in hot than cold  $\text{H}_2\text{O}$  and much more sol than the Rb comp (Engelskirchen, Dissert 1903)

$4\text{CsF}$ ,  $\text{TiF}_4$  More sol in  $\text{H}_2\text{O}$  than  $\text{Cs}_{15}\text{TaF}_{20}$  and is not decomp by pure  $\text{H}_2\text{O}$  (Pennington, J Am Chem Soc 1896, 18 60)

**Calcium fluotitanate**,  $\text{CaTiF}_6 + 3\text{H}_2\text{O}$

Decomp by pure  $\text{H}_2\text{O}$  Sol without decomp in acidified  $\text{H}_2\text{O}$  (Berzelius)

Separates a precipitate with cold  $\text{H}_2\text{O}$ , which dissolves on heating (Marignac, Ann Min (5) 15 250)

**Cupric fluotitanate**,  $\text{CuTiF}_6 + 4\text{H}_2\text{O}$

Sol in pure  $\text{H}_2\text{O}$  with partial decomp, easily and completely sol in acidified  $\text{H}_2\text{O}$  (Berzelius)

**Cupric fluotitanate ammonium fluoride**,

$\text{CuTiF}_6$ ,  $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$

Efflorescent Easily sol in  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 267)

**Cupric fluotitanate potassium fluoride**,

$\text{CuTiF}_6$ ,  $\text{KF} + 4\text{H}_2\text{O}$

As the above salt (Marignac)

**Ferrous fluotitanate**,  $\text{FeTiF}_6 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Weber, Pogg 120 287)

**Ferric fluotitanate**

Decomp by  $\text{H}_2\text{O}$  (Berzelius)

**Lead fluotitanate**

Easily sol in  $\text{H}_2\text{O}$  (Berzelius)

**Lithium fluotitanate**,  $\text{Li}_2\text{TiF}_6 + 2\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Engelskirchen, Dissert, 1903)

**Magnesium fluotitanate**,  $\text{MgTiF}_6 + 6\text{H}_2\text{O}$

Easily sol in cold  $\text{H}_2\text{O}$  (Marignac, Ann Min (5) 15 257)

**Nickel fluotitanate**,  $\text{NiTiF}_6 + 6\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Weber, Pogg 120 282)

**Potassium fluotitanate**,  $\text{K}_2\text{TiF}_6$

Difficultly sol in cold, much more easily in hot  $\text{H}_2\text{O}$

100 pts  $\text{H}_2\text{O}$  dissolve at

0° 3° 6° 10° 14° 20°

0 556 0 667 0 775 0 909 1 042 1 28 pts  $\text{K}_2\text{TiF}_6$  (Marignac, A ch (4) 8 65)

Sol in 78 6 pts  $\text{H}_2\text{O}$  at 21° Sol in acids (Piccini, Gazz (h) 1886, 16 104)

Sol in 78 pts  $\text{H}_2\text{O}$  at 20°, 9 4 pts at 100° By addition of small amount of HF, the solubility is increased (Weiss and Kaiser, Z anorg 1910, 65 354)

Sol in HF (Marchetti, Z anorg 1895, 10 66)

$+\text{H}_2\text{O}$  Much less sol in  $\text{H}_2\text{O}$  in presence of KBr or KI (Hall, J Am Chem Soc 1904, 26 1246)

Sol in  $\text{H}_2\text{O}$  or HF with decomp (Marchetti, Z anorg 1895, 10 66)

**Potassium fluosesquititanate**,  $4\text{KF}$ ,  $\text{Ti}_2\text{F}_6$

Scarcely sol in  $\text{H}_2\text{O}$ , sol in dil acids (Piccini, B 18 257 R)

**Rubidium fluotitanate**,  $\text{Rb}_2\text{TiF}_6$

Very sl sol in cold, somewhat more sol in hot  $\text{H}_2\text{O}$  (Engelskirchen, Dissert 1903)

**Silver fluotitanate**

Very deliquescent (Marignac)

**Sodium fluotitanate**,  $\text{Na}_2\text{TiF}_6$

Much more sol in  $\text{H}_2\text{O}$  than the corresponding potassium salt (Marignac, Ann Min (5) 15 238)

**Sodium hydrogen fluotitanate**,  $\text{Na}_2\text{TiF}_6$ ,  $\text{NaHF}_2$   
Sol in  $\text{H}_2\text{O}$  (Marignac)

**Strontium fluotitanate**,  $\text{SrTiF}_6 + 2\text{H}_2\text{O}$   
Sol in cold  $\text{H}_2\text{O}$  Solution clouds up on heating (Marignac)

**Zinc fluotitanate**,  $\text{ZnTiF}_6 + 6\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (3) 60 304)

### Fluovanadic acid

**Ammonium fluovanadate**,  $3\text{NH}_4\text{F}$ ,  $\text{VF}_3$   
Moderately sol in  $\text{H}_2\text{O}$  More easily sol in dil acids Nearly insol in alcohol or MF + Aq (Petersen, J pr (2) 40 52)  
 $2\text{NH}_4\text{F}$ ,  $\text{VF}_3 + \text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$   
Sl sol in alcohol (Petersen)  
 $\text{NH}_4\text{F}$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$  As above (Petersen)

**Cadmium fluovanadate**,  $\text{CdF}_2$ ,  $\text{VF}_3 + 7\text{H}_2\text{O}$   
Very sl sol in  $\text{H}_2\text{O}$  (Piccini and Giorgis, Gazz ch it 22, 1 89)

**Cobalt fluovanadate**,  $\text{CoF}_2$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  without decomp (Petersen, l c)

**Nickel fluovanadate**,  $\text{NiF}_2$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$   
As the Co salt (Petersen)

**Potassium fluovanadate**,  $2\text{KF}$ ,  $\text{VF}_3 + \text{H}_2\text{O}$   
Sl sol in  $\text{H}_2\text{O}$ , easily sol in acids Insol in  $\text{KF} + \text{Aq}$  (Petersen, J pr (2) 40 51)

**Potassium fluovanadate fluoxyvanadate**,  $4\text{KF}$ ,  $\text{VF}_3$ ,  $\text{VOF}_3$   
Easily sol in  $\text{H}_2\text{O}$ , and still more easily in  $\text{HF} + \text{Aq}$  Sl sol in  $\text{KF} + \text{Aq}$  (Petersen, J pr (2) 40 274)

**Sodium fluovanadate**,  $5\text{NaF}$ ,  $2\text{VF}_3 + \text{H}_2\text{O}$   
As the potassium salt (Petersen)

**Thalious fluovanadate**,  $\text{TlF}$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$   
Sol with decomp in conc  $\text{H}_2\text{SO}_4$ , dil  $\text{HNO}_3$ , or cold dil  $\text{HCl}$   
Insol in  $\text{NaOH} + \text{Aq}$  (Ephraim, B 1909, 42 4460)  
 $2\text{TlF}$ ,  $\text{VF}_3 + \text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$   
Sol in conc  $\text{H}_2\text{SO}_4$ , dil  $\text{HNO}_3$ , or cold dil  $\text{HCl}$  with decomp  
Insol in cold or hot  $\text{NaOH} + \text{Aq}$  (Ephraim, B 1909, 42 4461)

**Zinc fluovanadate**,  $\text{ZnF}_2$ ,  $\text{VF}_3 + 7\text{H}_2\text{O}$   
Sl sol in cold  $\text{H}_2\text{O}$  Decomp on heating (Piccini and Giorgis)

### Fluoxycolumbic acid

**Ammonium fluoxycolumbate**,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$   
*Cubic salt* Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (4) 8 38)  
 $2\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$  *Lamellar salt* Much more sol in  $\text{H}_2\text{O}$  than  $2\text{KF}$ ,  $\text{CbOF}_3$  (M)  
 $5\text{NH}_4\text{F}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$  *Hexagonal salt* (M)  
 $\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$  *Rectangular salt* (M)

**Ammonium fluoxycolumbate columbium fluoride**,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ ,  $\text{CbF}_5$   
(Marignac)

**Cupric fluoxycolumbate**,  $\text{CuF}_2$ ,  $\text{CbOF}_3 + 4\text{H}_2\text{O}$   
Sl deliquescent Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (4) 8 42)

**Potassium fluoxycolumbate**,  $2\text{KF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$   
Sol in 12.5-13 pts  $\text{H}_2\text{O}$  at  $17-21^\circ$  Much more sol in hot  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac)  
 $3\text{KF}$ ,  $\text{CbOF}_3$  Decomp by  $\text{H}_2\text{O}$  into above salt (M)  
 $5\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (M)  
 $4\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (M)  
 $3\text{KF}$ ,  $2\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Petersen, J pr (2) 40 287)  
 $\text{KF}$ ,  $\text{Cb}_2\text{O}_5 + 3\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Petersen)  
 $2\text{KF}$ ,  $3\text{Cb}_2\text{O}_5\text{F}$  Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HF}$  (Kruss and Nilson, B 20 1689)  
See also Fluoxypercolumbate, potassium

**Potassium hydrogen fluoxycolumbate**,  $3\text{KF}$ ,  $\text{HF}$ ,  $\text{CbOF}_3$   
Sol in  $\text{H}_2\text{O}$  (Marignac)

**Sodium fluoxycolumbate**,  $2\text{NaF}$ ,  $\text{CbOF}_3 + 2\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$   
 $\text{NaF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$  (Marignac)

**Zinc fluoxycolumbate**,  $\text{ZnF}_2$ ,  $\text{CbOF}_3 + 6\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Marignac, A ch (4) 8. 41)

### Fluoxyhypomolybdic acid

**Ammonium fluoxyhypomolybdate**,  $\text{MoOF}_3$ ,  $2\text{NH}_4\text{F}$   
Decomp by  $\text{H}_2\text{O}$  (Mauro, Gazz ch it 19 179)  
 $3\text{MoOF}_3$ ,  $5\text{NH}_4\text{F} + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Mauro)

**Cupric fluoxyhypomolybdate**,  $\text{CuF}_2$ ,  $\text{MoOF}_3 + 4\text{H}_2\text{O}$   
Deliquescent Sol in  $\text{H}_2\text{O}$  (Mauro, Real Ac Linc 1892, 1 194)

**Potassium fluoxyhypomolybdate**,  $\text{MoOF}_3$ ,  $2\text{KF} + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  with decomp  
Sol in  $\text{HF}$  or  $\text{HCl} + \text{Aq}$  (Mauro and Panabianco, Gazz ch it 12 80)  
 $3\text{MoOF}_3$ ,  $5\text{KF} + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with decomp (Mauro, Gazz ch it 19 179)

**Thallous fluoxyhypomolybdate**,  $2\text{TlF}$ ,  $\text{MoOF}_3$

(Mauro, B 1894, 27R 109)

**Zinc fluoxyhypomolybdate**,  $\text{ZnF}_2$ ,  $\text{MoOF}_3 + 6\text{H}_2\text{O}$

Rapidly deliquescent Sol in  $\text{H}_2\text{O}$   
(Mauro, Real Ac Linc 1892 1 194)

**Fluoxyhypovanadic acid**

See Fluoxyvanadic acid

**Fluoxymanganic acid**

**Ammonium fluoxymanganate**,  $(\text{NH}_4)_2\text{MnOF}_4$

Precipitate (Nicklès)

**Potassium fluoxymanganate**,  $\text{K}_2\text{MnOF}_4$

Precipitate (Nicklès, C R 65 107)

**Sesquifluoxymanganic acid**

**Potassium sesquifluoxymanganate**,

$\text{K}_4\text{Mn}_2\text{O}_7 = 4\text{KF}$ ,  $\text{Mn}_2\text{O}_7$

Precipitate (Nicklès)

**Fluoxymolybdic acid**

See also Fluoxyhypomolybdic, and fluoxypermolybdic acids

**Ammonium fluoxymolybdate**,  $\text{NH}_4\text{F}$ ,  $\text{MoO}_2\text{F}_2$

Sol in  $\text{H}_2\text{O}$  (Mauro, Gazz ch it 20 109)

$+ \text{H}_2\text{O}$  More sol in  $\text{H}_2\text{O}$  than  $2\text{NH}_4\text{F}$ ,  $\text{MoO}_2\text{F}_2$  (Delafontaine, N Arch Sci ph nat 30 250)

Correct formula is  $3\text{NH}_4\text{F}$ ,  $\text{MoO}_2\text{F}_2$  (Mauro, Gazz ch it 18 120)

$2\text{NH}_4\text{F}$ ,  $\text{MoO}_2\text{F}_2$  Much more sol than  $2\text{KF}$ ,  $\text{MoO}_2\text{F}_2$  (Delafontaine)

$3\text{NH}_4\text{F}$ ,  $\text{MoO}_2\text{F}_2$  Sol in  $\text{H}_2\text{O}$  (Mauro)

$5\text{NH}_4\text{F}$ ,  $3\text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Mauro, Gazz ch it 20 109)

**Ammonium fluoxymolybdate molybdate**,

$\text{MoO}_2\text{F}_2$ ,  $4\text{NH}_4\text{F}$ ,  $(\text{NH}_4)_2\text{MoO}_4$

Sol in  $\text{H}_2\text{O}$ , but with decomp (Mauro, Gazz ch it 18 120)

**Cadmium fluoxymolybdate**,  $\text{CdF}_2$ ,  $\text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$

Sl efflorescent (Delafontaine, J B 1867 236)

**Cobaltous fluoxymolybdate**,  $\text{CoF}_2$ ,  $\text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Delafontaine, J B 1867 236)

**Cupric fluoxymolybdate**,  $\text{CuF}_2$ ,  $\text{MoO}_2\text{F}_2 + 4\text{H}_2\text{O}$

Deliquescent (Mauro, Real Ac Linc 1892, 1 194)

**Nickel fluoxymolybdate**,  $\text{NiF}_2$ ,  $\text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Delafontaine, J B 1867 236)

**Potassium fluoxymolybdate**,  $2\text{KF}$ ,  $\text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$

Easily sol in boiling  $\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  with decomp Sol in  $\text{HF}$  (Marchetti, Z anorg 1895 10 68)  
 $\text{KF}$ ,  $\text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$  Gradually efflorescent (Delafontaine)

**Rubidium fluoxymolybdate**,  $2\text{RbF}$ ,  $2\text{MoO}_2\text{F}_2 + 2\text{H}_2\text{O}$

Sol in cold, more sol in hot  $\text{H}_2\text{O}$  (Delafontaine)

**Sodium fluoxymolybdate**,  $\text{NaF}$ ,  $\text{MoO}_2\text{F}_2 + \frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Delafontaine)

**Thallous fluoxymolybdate**,  $2\text{TlF}$ ,  $\text{MoO}_2\text{F}_2 + \text{H}_2\text{O}$

Sol in hot  $\text{H}_2\text{O}$  (Delafontaine)

**Zinc fluoxymolybdate**,  $\text{ZnF}_2$ ,  $\text{MoO}_2\text{F}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Delafontaine)

**Fluoxypercolumbic acid**

**Potassium fluoxypercolumbate**,  $2\text{KF}$ ,  $\text{CbO}_2\text{F}_2 + \text{H}_2\text{O}$

(Piccini, Z anorg 2 21)  
Sol in  $\text{H}_2\text{O}$  with decomp  
Sol in  $\text{HF}$  (Marchetti, Z anorg 1895, 10 67)

**Fluoxypermolybdic acid**

**Ammonium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2$ ,  $3\text{NH}_4\text{F}$

Sol in  $\text{H}_2\text{O}$  (Piccini, Z anorg 1 51)

**Cæsium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2$ ,  $2\text{CsF} + \text{H}_2\text{O}$

(Piccini)

**Potassium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2$ ,  $2\text{KF} + \text{H}_2\text{O}$

Not very sol in  $\text{H}_2\text{O}$ , more sol in  $\text{HF} + \text{Aq}$  without decomp (Piccini)

**Rubidium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2$ ,  $2\text{RbF} + \text{H}_2\text{O}$

Somewhat more sol in  $\text{H}_2\text{O}$  than K salt  
Easily sol in  $\text{HF} + \text{Aq}$  (Piccini)

### Fluoxypertantalic acid

**Potassium fluoxypertantalate**,  $2\text{KF}$ ,  $\text{TaO}_2\text{F}_3 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Piccini, Z anorg 2 21)

**Fluoxypertitanic acid**,  $\text{TiO}_2\text{F}_2$ ,  $\text{HF}$

Known only in solution (Piccini, B 18 255 R)

**Ammonium fluoxypertitanate**,  $\text{TiO}_2\text{F}_2$ ,  $2\text{NH}_4\text{F}$

Very unstable (Piccini, Gazz ch it 17 479)

$\text{TiO}_2\text{F}_2$ ,  $3\text{NH}_4\text{F}$  Sol in  $\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}_2$  (Piccini, Z anorg 1895, 10 439)

$2\text{TiO}_2\text{F}_2$ ,  $3\text{NH}_4\text{F}$  Sol in  $\text{H}_2\text{O}$  (Piccini, B 18 698 R)

**Barium fluoxypertitanate**,  $\text{TiO}_2\text{F}_2$ ,  $\text{BaF}_2$   
Precipitate Easily sol in acids (Piccini, B 18 698 R)

$2\text{TiO}_2\text{F}_2$ ,  $3\text{BaF}_2$  Insol in  $\text{H}_2\text{O}$ , sol in dil acids (Piccini, Gazz ch it 17 479)

**Potassium fluoxypertitanate**,  $\text{TiO}_2\text{F}_2$ ,  $2\text{KF}$

Sol in  $\text{H}_2\text{O}$  (Piccini, B 21 1391)

Sol in  $\text{H}_2\text{O}_2$  (Piccini, Z anorg 1895, 10 438)

### Fluoxypertungstic acid

**Potassium fluoxypertungstate**,  $2\text{KF}$ ,  $\text{WO}_3\text{F} + \text{H}_2\text{O}$

(Piccini, Z anorg 2 11)

### Fluoxytantalic acid

See also Fluoxypertantalic acid

**Ammonium fluoxytantalate**,  $3\text{NH}_4\text{F}$ ,  $\text{TaOF}_2$

Easily sol in  $\text{H}_2\text{O}$  The solution clouds up by standing or on warming (Joly, C R 81 1266)

### Fluoxytitanic acid

See also Fluoxypertitanic acid

**Barium fluoxytitanate**,  $\text{TiOF}_2$ ,  $\text{BaF}_2$

Insol in  $\text{H}_2\text{O}$ , sol in dil acids (Piccini, Gazz ch it 17 479)

### Fluoxytungstic acid

**Ammonium fluoxytungstate**,  $2\text{NH}_4\text{F}$ ,  $\text{WO}_2\text{F}_2$

Very sol in  $\text{H}_2\text{O}$  (Marignac, A ch (3) 69 65)

$\text{NH}_4\text{F}$ ,  $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$   
Crystallises unchanged from  $\text{H}_2\text{O}$  containing  $\text{HF}$  (Marignac)

**Ammonium fluoxytungstate tungstate**,  $4\text{NH}_4\text{F}$ ,  $\text{WO}_2\text{F}_2$ ,  $(\text{NH}_4)_2\text{WO}_4$

Incompletely sol in  $\text{H}_2\text{O}$  Residue dissolves in  $\text{NH}_4\text{OH} + \text{Aq}$  (Marignac)

**Cadmium fluoxytungstate**

Very sol in  $\text{H}_2\text{O}$  (Marignac)

**Cupric fluoxytungstate**,  $\text{CuF}_2$ ,  $\text{WO}_2\text{F}_2 + 4\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Marignac, C R 55 888)

**Cupric fluoxytungstate ammonium fluoride**,  $\text{CuF}_2$ ,  $\text{WO}_2\text{F}_2$ ,  $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Marignac)

**Manganese fluoxytungstate**

Very sol in  $\text{H}_2\text{O}$  (Marignac)

**Nickel fluoxytungstate**,  $\text{NiF}_2$ ,  $\text{WO}_2\text{F}_2 + 10\text{H}_2\text{O}$

Deliquescent Very sol in  $\text{H}_2\text{O}$  (Marignac)

**Potassium fluoxytungstate**,  $\text{KF}$ ,  $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$

Can be recrystallised without decomp only from  $\text{H}_2\text{O}$  containing  $\text{HF}$  (Marignac, A ch (3) 69 70)

$2\text{KF}$ ,  $\text{WO}_2\text{F}_2 + \text{H}_2\text{O}$  Difficultly sol in cold, more easily in hot  $\text{H}_2\text{O}$  (Berzelius)

Sol in 17 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Marignac)

Can be recrystallised without decomp from  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{HF}$  (Marignac)

Sol in  $\text{H}_2\text{O}$  with decomp Sol in  $\text{HF}$  (Marchetti, Z anorg 1895, 10 71)

See also Fluoxypertungstate, potassium

### Silver fluoxytungstate

Very easily sol in  $\text{H}_2\text{O}$  (Marignac)

**Sodium fluoxytungstate**,  $2\text{NaF}$ ,  $\text{WO}_2\text{F}_2$

More sol in  $\text{H}_2\text{O}$  than the corresponding K compound (Berzelius)

**Thallos fluoxytungstate**,  $\text{TlF}$ ,  $\text{WO}_2\text{F}_2$

Insol in  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$

(Ephraim and Heymann, B 1909, 42 4463)

$2\text{TlF}$ ,  $\text{WO}_2\text{F}_2$  Insol in  $\text{H}_2\text{O}$  but decomp thereby (Ephraim and Heymann, B 1909, 42 4462)

$3\text{TlF}$ ,  $2\text{WO}_2\text{F}_2$  Insol in  $\text{H}_2\text{O}$  Decomp by acids (Ephraim and Heymann, B 1909, 42 4462)

**Zinc fluoxytungstate**,  $\text{ZnF}_2$ ,  $\text{WO}_2\text{F}_2 + 10\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Marignac)

**Fluoxyuranic acid**

**Ammonium fluoxyuranate**,  $3\text{NH}_4\text{F}$ ,  $\text{UO}_2\text{F}_2$   
 Easily sol in  $\text{H}_2\text{O}$ , less in  $\text{HF}$  Insol in alcohol (Bolton)  
 100 g solution sat at  $27^\circ$  contain 10.11 g salt  
 100 g solution sat at  $81.3^\circ$  contain 20.71 g salt

(Burger, Dissert 1904)

**Barium fluoxyuranate**,  $3\text{BaF}_2$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$   
 Traces dissolve in hot  $\text{H}_2\text{O}$  Easily sol in dil acids (Bolton)

**Potassium fluoxyuranate**,  $3\text{KF}$ ,  $\text{UO}_2\text{F}_2$   
 Sol in 8 pts  $\text{H}_2\text{O}$  at  $21^\circ$  Insol in alcohol and ether (Bolton, J pr 99 269)  
 Does not exist (Smithells, Chem Soc 43 125)  
 $4\text{KF}$ ,  $\text{UO}_2\text{F}_2$  Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids (Ditte, C R 91 115)  
 $5\text{KF}$ ,  $2\text{UO}_2\text{F}_2$  (Baker, Chem Soc 35 760)  
 $3\text{KF}$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$  (Baker)

**Sodium fluoxyuranate**,  $\text{NaF}$ ,  $\text{UO}_2\text{F}_2$   
 $+2\text{H}_2\text{O}$  Not efflorescent  
 $+4\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  and dil acids Sl sol in conc  $\text{HCl} + \text{Aq}$  Sol in conc  $\text{H}_2\text{SO}_4$ , J B 1866 212)  
 $\text{UO}_2\text{F}_2$  (Ditte)  
 Does not exist (Smithells, Chem Soc 43 125)

**Fluoxyvanadic acid**

**Ammonium fluoxyvanadate**,  $12\text{NH}_4\text{F}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_3$

Easily sol in  $\text{H}_2\text{O}$ , and not attacked by cold conc  $\text{H}_2\text{SO}_4$  (Baker, Chem Soc 33 388)

Formula is  $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$  (Petersen, J pr (2) 40 289)  
 $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$  Sol in  $\text{H}_2\text{O}$  (Petersen, l c)

Much less sol in  $\text{H}_2\text{O}$  in presence of  $\text{NH}_4\text{F}$  (Piccini and Giorgis, Gazz ch it 27 1 65)  
 $+ \text{H}_2\text{O}$  (Piccini and Giorgis, Gazz ch it 1892, 22 55)

$3\text{NH}_4\text{F}$ ,  $\text{VOF}_2$  "Hypovanadate" Quite sol in  $\text{H}_2\text{O}$  Very sl sol in  $\text{MF} + \text{Aq}$  Less sol in alcohol than in  $\text{H}_2\text{O}$  (Petersen, J pr (2) 40 195)

$2\text{NH}_4\text{F}$ ,  $\text{VOF}_2$  Sol in  $\text{H}_2\text{O}$  (Petersen)  
 $+ \text{H}_2\text{O}$  (Piccini and Giorgis)

$7\text{NH}_4\text{F}$ ,  $4\text{VOF}_2 + 5\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Petersen)

$3\text{NH}_4\text{F}$ ,  $2\text{VO}_2\text{F}$  Sol in  $\text{H}_2\text{O}$  without decomp Sol in conc  $\text{HF} + \text{Aq}$  (Piccini and Giorgis, Gazz ch it 24 1 68)

$3\text{NH}_4\text{F}$ ,  $2\text{VOF}_3 + \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with decomp  
 $\text{V}_2\text{O}_5$ ,  $2\text{NH}_4\text{F}$  (Ditte, C R 106 270)

$\text{V}_2\text{O}_5$ ,  $8\text{NH}_4\text{F} + 4\text{H}_2\text{O}$  As above  
 $\text{V}_2\text{O}_5$ ,  $4\text{NH}_4\text{F} + 4\text{H}_2\text{O}$  As above Sol in  $\text{H}_2\text{O}$

**Ammonium hydrogen fluoxyvanadate**,  $7\text{NH}_4\text{F}$ ,  $\text{HF}$ ,  $4\text{VO}_2\text{F}$

Verv sol in  $\text{H}_2\text{O}$  (Petersen, J pr (2) 40 284)

**Ammonium hydrogen trifluoxyvanadate**,  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_3$

Easily sol in  $\text{H}_2\text{O}$  Sl sol in  $\text{MF} + \text{Aq}$  (Petersen, J pr (2) 40 280)

$3\text{NH}_4\text{F}$ ,  $3\text{HF}$ ,  $2\text{VOF}_3$  Sol in  $\text{H}_2\text{O}$  (Baker, Chem Soc 33 388)

Identical with  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_3$  (Petersen)

**Barium fluoxyvanadate**,  $\text{BaF}_2$ ,  $\text{VO}_2\text{F}$

Ppt (Ephram, Z anorg 1903, 35 79)

**Cadmium fluoxyvanadate**,  $\text{CdF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$

"Hypovanadate" As the Co salt (Piccini and Giorgis)

**Cobalt fluoxyvanadate**,  $\text{CoF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$

"Hypovanadate" Sol in  $\text{H}_2\text{O}$  (Piccini and Giorgis)

**Nickel fluoxyvanadate**,  $\text{NiF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$

"Hypovanadate" As the Co salt (Piccini and Giorgis)

**Potassium fluoxyvanadate**,  $7\text{KF}$ ,  $3\text{VOF}_2$

Very sl sol in  $\text{H}_2\text{O}$  and  $\text{MF} + \text{Aq}$  Easily sol in dil acids (Petersen, J pr (2) 40 199)

$2\text{KF}$ ,  $\text{VOF}_2$  As above (Petersen)

$2\text{KF}$ ,  $2\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$  (Ditte, C R 105 1067)

$2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$  As above

$2\text{KF}$ ,  $4\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$  As above

$4\text{KF}$ ,  $\text{V}_2\text{O}_5$  Less sol than  $4\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ , and  $+3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

$4\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$ , and  $+6\text{H}_2\text{O}$  Less sol than  $2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$

$8\text{KF}$ ,  $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ , and  $+3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

**Potassium trifluoxyvanadate**,  $2\text{KF}$ ,  $\text{VOF}_3$

Ppt (Petersen, J pr (2) 40 272)

$6\text{KF}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_3 + 2\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Insol in cold conc  $\text{H}_2\text{SO}_4$  (Baker, Chem Soc 33 300)

Formula is  $3\text{KF}$ ,  $2\text{VO}_2\text{F}$  (Piccini and Giorgis)

See also Fluovanadate fluoxyvanadate, potassium

**Potassium fluoxyvanadate**,  $2\text{KF}$ ,  $\text{VO}_2\text{F}$

Easily sol in  $\text{H}_2\text{O}$  (Petersen, J pr (2) 40 278)

3KF, VO<sub>2</sub>F As above (Petersen)  
 3KF, 2VO<sub>2</sub>F Sol in H<sub>2</sub>O, scarcely attacked by H<sub>2</sub>SO<sub>4</sub> (Piccini and Giorgis)

**Potassium hydrogen fluoxyvanadate**, 3KF, HF, 2VOF<sub>3</sub>  
 Sol in H<sub>2</sub>O (Petersen)

**Sodium fluoxyvanadate**, 8NaF, 3VOF<sub>2</sub>+2H<sub>2</sub>O

Sol in H<sub>2</sub>O (Petersen, J pr (2) 40 200)  
 3NaF, VO<sub>2</sub>F, VOF<sub>3</sub> (?) Very easily decomp (Piccini and Giorgis)  
 2NaF, 2V<sub>2</sub>O<sub>5</sub>+10H<sub>2</sub>O Sol in H<sub>2</sub>O (Ditte, C R 106 270)

4NaF, V<sub>2</sub>O<sub>5</sub> As above  
 4NaF, 3V<sub>2</sub>O<sub>5</sub>+18H<sub>2</sub>O As above  
 6NaF, V<sub>2</sub>O<sub>5</sub>+5H<sub>2</sub>O As above  
 8NaF, V<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O (As above)

**Thallous fluoxyvanadate**, 2TlF, VOF<sub>2</sub>

Somewhat sol in cold H<sub>2</sub>O without decomp  
 Sol in boiling H<sub>2</sub>O with exception of a black residue, which is easily sol in dil H<sub>2</sub>SO<sub>4</sub> (Ephraim, B 1909, 42 4460)

3TlF, 2VO<sub>2</sub>F Insol in H<sub>2</sub>O Sol in H<sub>2</sub>O containing H<sub>2</sub>SO<sub>4</sub> (Ephraim and Heymann, B 1909, 42 4459)

**Zinc fluoxyvanadate**, ZnF<sub>2</sub>, ZnO, 2VOF<sub>3</sub>+14H<sub>2</sub>O

Decomp on air, sol in H<sub>2</sub>O (Baker, Chem Soc 33 388)

True composition is represented by the formula ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O (Petersen)

ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O Very sol in H<sub>2</sub>O (Piccini and Giorgis)

ZnF<sub>2</sub>, VOF<sub>3</sub>+7H<sub>2</sub>O "Hypovanadate"  
 Sol in cold H<sub>2</sub>O, but decomp by boiling, sol in dil HF+Aq (Piccini and Giorgis)

## Fluozirconic acid

**Ammonium fluozirconate**, (NH<sub>4</sub>)<sub>2</sub>ZrF<sub>6</sub>

Sol in H<sub>2</sub>O  
 3NH<sub>4</sub>F, ZrF<sub>4</sub> Sol in H<sub>2</sub>O (Marignac)

**Cadmium fluozirconate**, 2CdF<sub>2</sub>, ZrF<sub>4</sub>+6H<sub>2</sub>O

Sol in H<sub>2</sub>O, can be recrystallised therefrom (Marignac, A ch (3) 60 257)

CdZrF<sub>6</sub>+6H<sub>2</sub>O Sol in H<sub>2</sub>O (Marignac)

**Cæsium fluozirconate**, CsF, ZrF<sub>4</sub>+H<sub>2</sub>O

Sol in H<sub>2</sub>O without decomp (Wells, Z anorg 1895, 10 434)

2CsF, ZrF<sub>4</sub> Sol in H<sub>2</sub>O without decomp (Wells, Z anorg 1895, 10, 434)

2CsF, 3ZrF<sub>4</sub>+2H<sub>2</sub>O Only sl sol in H<sub>2</sub>O (Wells, Z anorg 1895, 10 434)

**Cupric fluozirconate**, 2CuF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O

Easily sol in cold H<sub>2</sub>O (Marignac, A ch (3) 60 296)

3CuF<sub>2</sub>, 2ZrF<sub>4</sub>+16H<sub>2</sub>O Sol in H<sub>2</sub>O (Marignac)

**Lithium fluozirconate**, 2LiF, ZrF<sub>4</sub>

Ppt (Wells, Am J Sci 1897, (4) 3 468)

4LiF, ZrF<sub>4</sub>+½H<sub>2</sub>O Sol in H<sub>2</sub>O with decomp (Wells, Am J Sci 1897, (4) 3 469)

**Magnesium fluozirconate**, MgZrF<sub>6</sub>+5H<sub>2</sub>O

Sol in H<sub>2</sub>O (Marignac)

**Manganous fluozirconate**, MnZrF<sub>6</sub>+5H<sub>2</sub>O

Sol in H<sub>2</sub>O (Marignac, J pr 83 202)

**Nickel fluozirconate**, 2NiF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O

Sol in H<sub>2</sub>O (Marignac, A ch (3) 60 291)

NiZrF<sub>6</sub>+6H<sub>2</sub>O Sol in H<sub>2</sub>O (Marignac)

**Nickel potassium fluozirconate**, K<sub>2</sub>ZrF<sub>6</sub>,

NiZrF<sub>6</sub>+8H<sub>2</sub>O

Sol in H<sub>2</sub>O (Marignac)

**Potassium fluozirconate**, KF, ZrF<sub>4</sub>+H<sub>2</sub>O

Much more sol in hot, than cold H<sub>2</sub>O (Marignac)

2KF, ZrF<sub>4</sub>=K<sub>2</sub>ZrF<sub>6</sub> 100 pts H<sub>2</sub>O dissolve at 2°, 0.781 pt, at 15°, 1.41 pts, at 19° 1.69 pts, at 100°, 25.0 pts K<sub>2</sub>ZrF<sub>6</sub> (Marignac)

Insol in liquid NH<sub>3</sub> (Gore, Am Ch J 1898, 20 829)

3KF, ZrF<sub>4</sub>

**Sodium fluozirconate**, 5NaF, ZrF<sub>4</sub>

100 pts H<sub>2</sub>O dissolve 0.387 pt at 18°, and 1.67 pts at 100° (Marignac)

2NaF, ZrF<sub>4</sub> (Wells, Am J Sci 1897, (4) 3 469)

5NaF, 2ZrF<sub>4</sub> Sol in H<sub>2</sub>O with decomp (Wells)

**Tellurium fluozirconate**, TeF, ZrF<sub>4</sub>

Sol in H<sub>2</sub>O without decomp (Wells, Am J Sci 1897, (4) 3 470)

+H<sub>2</sub>O Sol in H<sub>2</sub>O without decomp (Wells)

3TeF, ZrF<sub>4</sub> Sol in H<sub>2</sub>O without decomp (Wells)

5TeF, 3ZrF<sub>4</sub> Sol in H<sub>2</sub>O without decomp (Wells)

**Zinc fluozirconate**, ZnZrF<sub>6</sub>+6H<sub>2</sub>O

Sol in H<sub>2</sub>O (Marignac)

2ZnF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O Sol in H<sub>2</sub>O (Marignac, A ch (3) 60 257)

## Fulminating gold

See Auroamidoimide

## Fulminating platinum

See Fulminoplatinum

**Fulminating silver**

See Silver nitride

**Fulminoplatinum compounds**

*Dichlorofulminoplatinum*

*Trichlorofulminoplatinum*

*Tetrachlorofulminoplatinum*

*Chloroxyfulminoplatinum*

**Fusocobaltic chloride,  $\text{Co}(\text{NH}_3)_4(\text{OH})\text{Cl}_2 + \text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$ , from which it is precipitated by  $\text{NH}_4\text{Cl} + \text{Aq}$ , decomp by boiling  $\text{H}_2\text{O}$ , pptd from aqueous solution by alcohol (Fremy, C R 32 501)

**— nitrate,  $\text{Co}(\text{NH}_3)_4(\text{OH})(\text{NO}_3)_2 + \text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  Properties as the chloride (Fremy)

**— sulphate,  $\text{Co}(\text{NH}_3)_4(\text{OH})\text{SO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fremy, C R 32 501)

Insol in  $\text{H}_2\text{O}$  Sol in conc  $\text{HCl} + \text{Aq}$ , or  $\text{H}_2\text{SO}_4$ , from which it is precipitated by  $\text{H}_2\text{O}$  (Vortmann, N 6 412)

**Fusible white precipitate**

See Mercuridiammonium chloride

**Gadolinium, Gd**

(Marignac, C R 102 92)

**Gadolinium bromide,  $\text{GdBr}_3 + 6\text{H}_2\text{O}$** 

Sol in  $\text{HBr}$  (Benedicks, Z anorg 1900, 22 403)

**Gadolinium chloride,  $\text{GdCl}_3 + 6\text{H}_2\text{O}$** 

Somewhat deliquescent Sol in  $\text{H}_2\text{O}$  (Benedicks)

**Gadolinium platinum chloride**

See Chloroplatinate, gadolinium

**Gadolinium fluoride,  $\text{GdF}_3$** 

Insol in  $\text{H}_2\text{O}$ , sl sol in hot  $\text{HF}$  (Popovici, B 1908, 41 635)

**Gadolinium hydroxide,  $\text{Gd}(\text{OH})_3$** 

Ppt (Benedicks, Z anorg 1900, 22 402)

**Gadolinium oxide,  $\text{Gd}_2\text{O}_3$** 

Sol in acids (de Boisbaudran, C R 111 394)

Somewhat hygroscopic, easily sol in acids (Benedicks)

**Gallium, Ga**

Not decomp by  $\text{H}_2\text{O}$ , easily sol in cold  $\text{HCl} + \text{Aq}$  Slowly sol in warm dil  $\text{HNO}_3 + \text{Aq}$  Not attacked by conc  $\text{HNO}_3$  free from

$\text{N}_2\text{O}_3$  below  $40-50^\circ$ , and only slowly in presence of  $\text{N}_2\text{O}_3$  (Dupré, C R 86 720)

Easily sol in cold or warm  $\text{KOH} + \text{Aq}$  (de Boisbaudran, A ch (5) 10 100)

**Gallium bromide,  $\text{GaBr}_3$** 

Deliquescent, and sol in  $\text{H}_2\text{O}$

**Gallium dichloride,  $\text{GaCl}_2$** 

Deliquescent, and decomp by  $\text{H}_2\text{O}$  (Nilson and Petersen, C R 107 527)

**Gallium chloride,  $\text{GaCl}_3$** 

Deliquescent, and very sol in little  $\text{H}_2\text{O}$  Decomp by much  $\text{H}_2\text{O}$ , with formation of basic salt, which is slowly sol in dil  $\text{HCl} + \text{Aq}$

**Gallium hydroxide**

Sol in acids, sol in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ , less easily in  $\text{NH}_4\text{OH} + \text{Aq}$ , even in presence of ammonium salts

**Gallium iodide,  $\text{GaI}_3$** 

Deliquescent, and sol in  $\text{H}_2\text{O}$  (de Boisbaudran and Jungfleisch, C R 86 578)

**Gallium suboxide,  $\text{Ga}_2\text{O}_3$  (?)**

Sol in  $\text{HNO}_3 + \text{Aq}$  (Dupré)

Sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$

**Gallium oxide,  $\text{Ga}_2\text{O}_3$** 

Sol in acids

**Germanium, Ge**

Insol in  $\text{HCl} + \text{Aq}$  Easily sol in aqua regia Decomp by  $\text{HNO}_3 + \text{Aq}$  to oxide Conc  $\text{H}_2\text{SO}_4$  decomp to sulphate Insol in boiling  $\text{KOH} + \text{Aq}$  (Winkler, J pr (2) 34 177, 36 177)

**Germanium tetrabromide,  $\text{GeBr}_4$** 

Decomp by  $\text{H}_2\text{O}$  (Winkler)

**Germanium dichloride,  $\text{GeCl}_2$** 

Decompl by  $\text{H}_2\text{O}$  (Winkler)

**Germanium tetrachloride,  $\text{GeCl}_4$** 

Sinks in  $\text{H}_2\text{O}$ , and is gradually decomp thereby (Winkler, J pr 34 177)

Insol in and not attacked by hot conc  $\text{H}_2\text{SO}_4$  (Friedrich, W A B 102, 2b 540)

**Germanium chloroform,  $\text{GeHCl}_3$** 

Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Winkler)

**Germanium tetrafluoride,  $\text{GeF}_4$** 

Deliquescent, and sol in  $\text{H}_2\text{O}$   $+ 3\text{H}_2\text{O}$  Deliquescent Melts in its crystal  $\text{H}_2\text{O}$  when warmed (Winkler)

**Germanium potassium fluoride**

See Fluogermanate, potassium

**Germanium hydride,  $\text{GeH}_4$** Sl sol in hot  $\text{HCl}$  Sol in  $\text{NaOCl} + \text{Aq}$  (Voegelen, Z anorg 1902, 30 327)**Germanium tetraiodide,  $\text{GeI}_4$** Deliquescent, and sol in  $\text{H}_2\text{O}$  with decomp (Winkler)**Germanium monoxide,  $\text{GeO}$** Not appreciably sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Easily sol in  $\text{HCl} + \text{Aq}$  Insol in alkalis (Winkler, J pr (2) 34 177)Somewhat sol in  $\text{H}_2\text{O}$ , insol in  $\text{H}_2\text{SO}_4 + \text{Aq}$ , even when hot and conc (van Bemmelen, R t c 6 205)**Germanium dioxide,  $\text{GeO}_2$** Not very difficultly sol in  $\text{H}_2\text{O}$  Sol in 247 1 pts  $\text{H}_2\text{O}$  at  $20^\circ$ , in 93 3 pts at  $100^\circ$  (Winkler)Easily sol in alkali carbonates or hydrates  $+ \text{Aq}$ , sl sol in acids**Germanium oxychloride,  $\text{GeOCl}_2$** Insol in  $\text{H}_2\text{O}$ , sol in acids (Winkler, J pr (2) 36 177)**Germanium monosulphide,  $\text{GeS}$** Sol in 402 9 pts  $\text{H}_2\text{O}$  Sol in conc hot  $\text{HCl} + \text{Aq}$  Sol in  $\text{KOH} + \text{Aq}$  Sol in  $(\text{NH}_4)_2\text{S} + \text{Aq}$  when precipitated Insol in  $(\text{NH}_4)_2\text{S} + \text{Aq}$  if crystalline Also exists in a colloidal state (Winkler)**Germanium disulphide,  $\text{GeS}_2$** Sol in 221 9 pts  $\text{H}_2\text{O}$  Easily sol in  $\text{KOH} + \text{Aq}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  Insol in acids Exists also in a colloidal state (Winkler)**Glass**

Numerous and extensive researches have been made on the action of  $\text{H}_2\text{O}$  and various solutions on glass. The older work has a certain historical interest, but only a brief statement of some of the more important results can be given here. For a very thorough résumé of the work before the year 1861, Storer's Dictionary, p 555, should be consulted.

All glass is more or less attacked by  $\text{H}_2\text{O}$ , the more easily the greater the amount of alkali present, the finer it is powdered, and the higher the temperature.

Glass as that of a flask is decomposed to a considerable extent by several days boiling with  $\text{H}_2\text{O}$  a portion of the fixed alkali being dissolved but when powdered glass is rubbed with distilled  $\text{H}_2\text{O}$  in a mortar the  $\text{H}_2\text{O}$  remains pure and exhibits no alkalinity (Scheele).

Glass of alembics is partially dissolved by long boiling with  $\text{H}_2\text{O}$  (Lavoisier).

$\text{H}_2\text{O}$  extracts potash or soda from glass together with

a portion of the silica the decomposition taking place the more easily in proportion as the glass is richer in alkalis more minutely divided or the temperature of the water higher (Bischof Kasin Arch. 1 443).

Powdered crown glass and some varieties of window glass render cold  $\text{H}_2\text{O}$  alkaline when in contact therewith (Dumas).

100 pts finely divided flint glass lose 7 pts potash when boiled one week with  $\text{H}_2\text{O}$  (Griffiths Q J Sci. 20 258).

Retorts of ordinary or flint glass are partially dissolved by  $\text{H}_2\text{O}$  when it is evaporated thereon (Chevreul 1811).

Finely powdered plate glass (Faraday Pogg 18 569) and Thuringian potash glass (Ludwig Arch Pharm. 91 47) reddened moistened turmeric paper.

The alkaline reaction disappears by continued washing but reappears when the glass is freshly rubbed (Griffiths).

Cold  $\text{H}_2\text{O}$  takes up  $\text{SiO}_2$  as well as alkali from glass powder (Fuchs).

Powdered lead glass gives up appreciable amounts of PbO to weakly acidified  $\text{H}_2\text{O}$  (Pelouze).

When powdered white glass containing 12 4%  $\text{Na}_2\text{O}$ , 15 5%  $\text{CaO}$ , and 72 1%  $\text{SiO}_2$  is treated repeatedly with  $\text{H}_2\text{O}$  more than 3% of the glass is dissolved and the undissolved part gives up 1 5%  $\text{CaO}$  to  $\text{HCl} + \text{Aq}$  with effervescence. A glass containing more alkali is 16 3%  $\text{Na}_2\text{O}$ , 6 4%  $\text{CaO}$ , 77 3%  $\text{SiO}_2$  lost with the same treatment 18 2% and the residue gave up 2%  $\text{CaO}$  to  $\text{HCl} + \text{Aq}$  (Pelouze C R 43 117).

In the above case the fineness of the glass has an influence as well as its composition. When the same sample of glass was boiled 1 hour with  $\text{H}_2\text{O}$  amounts were dissolved in the proportion 1 4 28 according as the glass was in form of a coarse fine or very fine powder. Glass of the composition of the above samples as given by Pelouze lost 10 and 32% respectively.

If powdered glass is boiled with  $\text{H}_2\text{O}$  and  $\text{CO}_2$  conducted into the solution it is absorbed if boiled with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$  is dissolved (Pelouze).

Glass tubes are converted into a white crystalline mass by heating with  $\text{H}_2\text{O}$  several months to  $75\text{--}150^\circ$  lead glass and Bohemian glass most easily. English crown glass least. A little  $\text{H}_2\text{O}$  attacks glass more than much  $\text{H}_2\text{O}$ .

The action of  $\text{H}_2\text{O}$  is greatly increased by finely pulverising the glass.

$\text{H}_2\text{O}$  dissolved 10% of a glass containing 12%  $\text{Na}_2\text{O}$ , 15 5%  $\text{CaO}$ , and 72 5%  $\text{SiO}_2$ , and 32% of another glass containing 16 3%  $\text{Na}_2\text{O}$ , 6 4%  $\text{CaO}$ , and 77 3%  $\text{SiO}_2$  (Vogel, B A Munchen, 1867 437).

Action of  $\text{H}_2\text{O}$  on a glass containing 74%  $\text{SiO}_2$ , 8 6%  $\text{CaO}$ , 14%  $\text{Na}_2\text{O}$ , 0 6%  $\text{K}_2\text{O}$ , with traces of  $\text{Al}_2\text{O}_3$ ,  $\text{Fe}_2\text{O}_3$ ,  $\text{MnO}$ , and  $\text{MgO}$ .

By boiling with  $\text{H}_2\text{O}$  a decrease of 3 9 mg was observed for the first hour, which soon became constant at 2 2 mg per hour. The action was then proportional to the time, and also to the surface in contact with the liquid, but independent of the amount of liquid evaporating.

The action decreases rapidly with the temperature, so that at  $90\text{--}100^\circ$  only  $\frac{1}{4}$  as much glass is dissolved as by boiling  $\text{H}_2\text{O}$  (Emmerling, A 150 257).

When steam condenses in tubes of Na glass, they are so strongly attacked that the  $\text{H}_2\text{O}$  has an alkaline reaction, but tubes of hard or Bohemian K glass are not so strongly attacked (Tollens, B 9 1540).

The effect of  $\text{H}_2\text{O}$  is so great as to impart a distinctly alkaline reaction to water condensing in a tube of ordinary glass. By condensing water in long tubes of various kinds of glass the following results were obtained.

I Easily fusible Thuringian glass Surface exposed = 324 sq cm

After 2 hours, 620 mg KOH were dissolved

After 3 hours more, 360 mg KOH were dissolved

After 3 hours more, 332 mg KOH were dissolved

After 3 hours more, 208 mg KOH were dissolved

After 3 hours more, 208 mg KOH were dissolved

Or, in 14 hours, 1728 mg KOH were dissolved

II Less easily fusible Thuringian glass Surface exposed = 499 sq cm

After 3 hours, 192 mg KOH were dissolved

After 3 hours more, 152 mg KOH were dissolved

After 3 hours more, 124 mg KOH were dissolved

After 3 hours more, 112 mg KOH were dissolved

Or, after 12 hours, 580 mg KOH were dissolved

III Combustion tubing of very difficultly fusible Bohemian glass Surface exposed = 1130 sq cm

After 3 hours 416 mg KOH were dissolved

After 3 hours more 416 mg KOH were dissolved

After 3 hours more 416 mg KOH were dissolved

After 3 hours more 416 mg KOH were dissolved

Or, after 12 hours, 1664 mg KOH were dissolved

IV Easily fusible Bohemian glass Surface exposed = 1394 sq cm

After 3 hours, 788 mg KOH were dissolved

After 3 hours more, 856 mg KOH were dissolved

After 3 hours more, 197 mg KOH were dissolved

Or, after 9 hours, 2432 mg KOH were dissolved (Kreusler and Henzold, B 17 34)

From the above the following table has been calculated

50 ccm H<sub>2</sub>O dissolves from a surface of 1000 sq m in 1 hour —

960 mg from easily fusible Thuringian glass

128 mg from less fusible Thuringian glass

12 mg from combustion tube of Bohemian glass

20 mg from harder tube of Bohemian glass

(Kreusler and Henzold, B 17 34)

100 ccm H<sub>2</sub>O dissolves so much glass from a flask every 2 seconds when in contact therewith that 01 ccm  $\frac{1}{2}$  normal oxalic acid is neutralised thereby (Bohlig, Z anal 23 518)

Action of H<sub>2</sub>O on various kinds of Na glass  
1 g of finely powdered glass was boiled 10–15 minutes in a silver dish with 100 ccm H<sub>2</sub>O, and the per cent of Na<sub>2</sub>O (or K<sub>2</sub>O) in the solution was determined

	%Na <sub>2</sub> O (K <sub>2</sub> O)
Orthoclase feldspar	0 17
Glass of a Bohemian combustion tube	0 56
“ flask (German manuf)	0 69
“ champagne bottle	1 7
Natrolite	1 32
Glass of a wine bottle (Hungarian)	2 22
Glass which was attacked by H <sub>2</sub> O under pressure	3 7
Lead glass	3 8
Glass that broke easily	4 8
Glass tubing that became rough when fused	6 1
Glass tubing that became opaque by fusing	14 35
Solid water glass	26 97

(Wartha, Z anal 24 220)

The relative ease by which various kinds of glass are attacked by H<sub>2</sub>O is shown by the following table The glass was powdered and heated on a water bath with exclusion of atmospheric CO<sub>2</sub>

Potassium water glass	291
Sodium water glass	196
Yellow glass rich in alkali	34
Thuringian glass	19
Ditto from Tittel and Co	8
Window glass	8
Lead glass from Jena	6
Bohemian glass from Kavalier	2 4
Lead crystal glass	1 4
Thermometer glass, 16IV, from Jena	1 0
Zinc glass, 362, from Jena	0 8
Lead glass, 434, from Jena	0 6
Lead glass, 483, from Jena	0 2
Heaviest lead silicate, from Jena	0 0

(Mylus, C C 1888 1313)

Solubility of various kinds of glass in H<sub>2</sub>O

The amounts dissolved from various kinds of glass by heating 5 hours with H<sub>2</sub>O were as follows

Yellow glass rich in alkali (13% K <sub>2</sub> O, 15% Na <sub>2</sub> O)	249 mg
Poor Thuringian glass (6 6% K O, 16 5% Na <sub>2</sub> O)	91 4 “
Glass from Tittel and Co (7 1% K <sub>2</sub> O, 14 3% Na <sub>2</sub> O)	30 4 “
Bottle glass from Schilling (4 2% K <sub>2</sub> O, 11 9% Na <sub>2</sub> O)	13 0 “
Bohemian glass from Kavalier (13 3% K <sub>2</sub> O, 11 4% Na <sub>2</sub> O)	10 1 “
Rhenish window glass (13 5% Na <sub>2</sub> O)	8 4 “
Lead crystal glass from Ehrenfeld (12 1% K <sub>2</sub> O)	8 5 “
Green bottle glass (1 3% K <sub>2</sub> O, 9 5% Na <sub>2</sub> O)	6 5 “

Solubility of various kinds of glass in  $H_2O$ —*Continued*

Thermometer glass 16III from Jena (14.0% $Na_2O$ , 7% $ZnO$ )	6 4 mg
Lead glass, No 483, from Jena (47% $PbO$ , 7.3% $K_2O$ )	3 3 "
Lead silicate	0 6 "

(Mylus and Forster, B 22 1100)

By calculation from the electrical conductivity of the solutions formed, various data were obtained by Kohlrausch (B 24 3565), which showed that different varieties of glass were attacked in very different degree by cold  $H_2O$ , and, moreover, the amount dissolved was proportionately much greater during the first few minutes of treatment with  $H_2O$  than afterwards, and, furthermore, the rate of decrease was much faster for good glass than poor. Increase of temperature increased the rate of solubility to a very great degree, the increase for  $1^\circ C$  being about 17%. In 7 hours at  $80^\circ$  half as much was dissolved as in 6 months at  $18^\circ$ . Extensive tables are given (Kohlrausch, B 24 3651). See also Kohlrausch (W Ann 44 577).

A very extensive research on the action of  $H_2O$  on glass, with a historical review of the work previously done on the subject, has been published by Mylius and Forster (Z anal 31 241). The general results may be summed up as follows—

1 The solution of glass in  $H_2O$  is caused by a decomposition, by which free alkali is formed

2 The silicic acid of the glass is brought into solution by a secondary reaction of the free alkali in the solution

3 The constituents of the solution change according to the conditions of the digestion

4 The amount of alkali going into solution from a given surface under certain conditions is a measure for the resistance of a glass under those conditions

5 The rate of attack of glass surfaces by cold  $H_2O$  decreases rapidly with the length of time of digestion, and finally approaches a constant value

6 The solubility increases very rapidly with increase of temperature

7 The ratio of the solubility of several kinds of glass is dependent on the temperature

8 From glasses which show the same ease of attack unequal amounts of substance may be dissolved

9 The solubility of a glass is influenced by the condition of the surface from "weathering" by prolonged exposure to the  $CO_2$  and  $H_2O$  of the air

10 The poorer a glass is the less will its solubility decrease by prolonged treatment with  $H_2O$

11 A good glass is essentially less easily

attacked after having been previously treated with  $H_2O$

12 After treatment with  $H_2O$ , glass surfaces have the property of fixing alkali from the solutions formed, and giving it up again by a subsequent treatment with  $H_2O$

13 Potassium glass is much more sol than sodium glass (contrary to previous researches), but the difference decreases as the glass becomes richer in  $CaO$

14 In glass flasks which are to be only slightly attacked by cold or hot  $H_2O$ , the  $CaO$ , alkalis, and  $SiO_2$  must stand in a fixed relation to each other

15 Of the more common varieties of glass, lead flint glass is least sol in  $H_2O$ , but its surface is corroded, and it is easily decomposed by acids

(Mylus and Forster, Z anal 31 241)

Bottle glass containing much  $Al_2O_3$  is easily attacked by acids

From powdered flint glass boiling  $HCl + Aq$  extracts K but no Pb (Griffiths)

Bottles of flint glass with  $(NH_4)_2CO_3 + Aq$  became so fragile that on shaking pieces of glass were detached (Griffiths)

All glass is decomposed by  $HF$

Conc  $H_3PO_4$  also attacks all glass

Glass containing small amounts of  $SiO_2$  are attacked by  $H_2SO_4$  poorer glass by boiling  $HCl$   $HNO_3$  and aqua regia (Berzelius)

Conc  $HNO_3$  does not act on flint glass at  $145-150^\circ$  (Sorby C R 50 990)

Glass of ordinary chemical apparatus gives up traces of metals to  $HCl$  and  $HNO_3 + Aq$ , but hard Bohemian glass consisting of 75%  $SiO_2$ , 15%  $K_2O$ , 10%  $CaO$ , resists the action of warm conc acids, also an easily fusible Na K glass with 77%  $SiO_2$ , 77%  $K_2O$ , 5%  $Na_2O$ , 10.3%  $CaO$ , is not easily attacked (Stas)

$KOH$ , and  $NaOH + Aq$  dissolve  $SiO_2$  from glass the more easily the hotter and the more conc the solutions are (Muller)  $NH_4OH$ , and  $(NH_4)_2CO_3 + Aq$  attack many kinds of glass, especially flint glass.  $CaO \cdot H_2O$  attacks glass appreciably at  $45^\circ$  and lower, still more strongly on boiling (Lamy, A ch (5) 14 155)

The action of various solvents on the glass mentioned on page 359 in Emmerling's experiments is as follows

The action of  $HCl + Aq$  containing 0.2 to 3%  $HCl$  is practically null, but is increased either by dilution or concentration. A very small quantity (0.02%)  $HCl$  added to  $H_2O$  almost wholly prevents its action on glass. With  $HCl + Aq$  (11%  $HCl$ ) a decrease of 4.2 mg was noticed in the first hour, and only 3-4 mg afterwards. The same is the case for  $HNO_3 + Aq$  in still greater degree, 0.008%  $HNO_3$  sufficing to nearly counteract the solvent action of  $H_2O$

$H_2SO_4 + Aq$  has about double the solvent effect possessed by  $H_2O$

Oxalic and acetic acids both diminish the solvent action of  $H_2O$

The addition of even traces (0.04%) of

$\text{Na}_2\text{CO}_3$  increases the solvent action, and this is further rapidly increased by an increase in the amount of  $\text{Na}_2\text{CO}_3$ .  $\text{Na}_2\text{CO}_3 + \text{Aq}$  containing 1%  $\text{Na}_2\text{CO}_3$  dissolves about 10 times as much as pure  $\text{H}_2\text{O}$ , i.e. about 35 mg per hour.

The above is also the case with  $\text{KOH} + \text{Aq}$ , but in even greater degree.  $\text{KOH} + \text{Aq}$  containing 0.025%  $\text{KOH}$  dissolved three times as much as pure  $\text{H}_2\text{O}$ .

$(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  has about the same action as  $\text{H}_2\text{O}$ .

With  $\text{NH}_4\text{OH} + \text{Aq}$  (9%  $\text{NH}_3$ ) 7 mg decrease for the first hour, and 3 mg afterwards was noticed. The concentration of the  $\text{NH}_4\text{OH} + \text{Aq}$  was apparently without effect.

The addition of  $\text{NH}_4\text{Cl}$  decreases the solvent action of  $\text{H}_2\text{O}$  proportionately to the amount added, but with new flasks large amounts are dissolved.

With  $\text{NH}_4\text{Cl} + \text{Aq}$  (7%  $\text{NH}_4\text{Cl}$ ) 4.2 mg were dissolved in the first hour, and the amount dissolved gradually decreased to null after 24 hours on account of the liberation of  $\text{HCl}$  by the decomp. of  $\text{NH}_4\text{Cl}$ .

$\text{NaCl}$ ,  $\text{KCl}$ ,  $\text{KNO}_3$ , and  $\text{Na}_2\text{SO}_4$  show a similar behaviour to that of  $\text{NH}_4\text{Cl}$ .

$\text{Na}_2\text{HPO}_4 + \text{Aq}$  containing 0.4%  $\text{Na}_2\text{HPO}_4$

has six times the solvent action of pure  $\text{H}_2\text{O}$  but the action is not increased by further concentration.

In general, those salts the acids of which form insol. Ca salts, as  $\text{Na}_2\text{CO}_3$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ , increase the solvent action of  $\text{H}_2\text{O}$ , and this effect is greater the more concentrated the solution.  $\text{KCl}$ ,  $\text{KNO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{CaCl}_2$  decrease the effect, and the stronger the solution the less is the action.

All Na glass with approximately the above composition has the same power of resistance against  $\text{H}_2\text{O}$ . Bohemian K glass shows a greater resistance, especially against acids (Emmerling, A 150 257).

Action of various reagents on hard Bohemian glass 100 ccm substance dissolved mg glass in 6 days at 100°

#### Composition of above varieties of glass

	1	2	3	4	5	6	7	8	9	10
$\text{SiO}_2$	76 22	74 09	76 39	68 56	74 48	74 69	66 75	74 12	77 07	74 40
$\text{Al}_2\text{O}_3$		0 40	0 50	1 85	0 50	0 45	1 31	0 50	0 30	0 70
$\text{CaO}$	4 27	5 85	5 50	7 60	7 15	7 85	13 37	8 55	8 10	8 85
$\text{K}_2\text{O}$		7 32	4 94	2 24	6 64	8 64	05 50	4 86	3 75	4 40
$\text{Na}_2\text{O}$	19 51	12 34	12 67	19 75	11 23	8 37	3 07	11 97	10 78	11 65

It is seen that glass which resists the attack of  $\text{H}_2\text{O}$  also resists acids and alkalis, and that the relative resistance of all varieties to any of the solutions is the same. Therefore the action of  $\text{H}_2\text{O}$  may be accepted as a criterion for judging of the resistance of a glass to all solvents. Glass No 10, in which the molecular ratio of  $\text{SiO}_2$  :  $\text{CaO}$  :  $\text{K}_2\text{O}$  ( $\text{Na}_2\text{O}$ ) is 8 : 1 : 1.5, is recommended as best suited for chemical uses (Weber and Sauer, B 25 70).

Mylus and Forster (B 25 97) recommend a glass in which the molecular ratio of  $\text{SiO}_2$  :  $\text{CaO}$  :  $\text{K}_2\text{O}$  ( $\text{Na}_2\text{O}$ ) is 7 : 2 : 1.1 as the best suited for chemical apparatus.

In an exhaustive research on the action of aqueous solutions on glass, which cannot be given in full on account of its great length, the following conclusions are reached—

1 Solutions of caustic alkalis act on glass much more strongly than  $\text{H}_2\text{O}$ , dissolving all the constituents of the glass—that is, the glass as such. Very dilute solutions form an exception.

2 Of the caustic alkalis,  $\text{NaOH} + \text{Aq}$  has the strongest action, then come  $\text{KOH}$ ,  $\text{NH}_4\text{OH}$ , and  $\text{BaO}_2\text{H}_2 + \text{Aq}$  in the order named.

3 Increase in temperature increases the

strength of the attack of alkalis very considerably

4 At high temperatures, the ease with which glass is attacked increases at first rapidly with the concentration of the alkali, but afterwards more slowly

5 At ordinary temperatures very concentrated alkali solutions have less action on glass than dil solutions

6 Solutions of pure alkalis, if not too conc, act less on glass than when contaminated with small amounts of  $\text{SiO}_2$

7 Alkali carbonates + Aq attack glass much more than  $\text{H}_2\text{O}$ , even when they are very dilute The action corresponds less to that of the caustic alkalis than to that of other salts With equivalent concentration,  $\text{Na}_2\text{CO}_3$  + Aq has a stronger action than  $\text{K}_2\text{CO}_3$  + Aq

8 The action of salt solutions on glass is a compound one, depending both on the concentration and the kind of salt dissolved, and is made up of the action of the  $\text{H}_2\text{O}$  and the salt in solution

9 Each kind of attack is differently influenced by the composition of the glass

10 Solutions of those salts, the acids of which form insol Ca salts, have a stronger action than  $\text{H}_2\text{O}$ , and the action increases with the concentration

11 Solutions of those salts, the acids of which form sol Ca salts, have less action than  $\text{H}_2\text{O}$ , and the action decreases with the concentration (Forster, B 25 2494)

Data on this subject published since the first edition of this work have not been considered

### Glucinic acid

Potassium glucinate,  $\text{K}_2\text{GlcO}_2$

Very deliquescent Sol in  $\text{H}_2\text{O}$  and acids (Kruss and Moraht B 23 733)

### Glucinum (Beryllium), Gl

Not attacked by hot or cold  $\text{H}_2\text{O}$  Sol in cold dil  $\text{HNO}_3$  + Aq (Wohler, Pogg 13 577)

Sol only in boiling conc  $\text{HNO}_3$  + Aq (Debray, A ch (3) 44 5)

Sol in dil  $\text{HCl}$  + Aq dil and conc  $\text{H}_2\text{SO}_4$  + Aq, and  $\text{KOH}$  + Aq, but insol in  $\text{NH}_4\text{OH}$  + Aq (Wohler, Debray)

Sol in hot  $\text{HCl}$ , hot conc  $\text{HNO}_3$ , and hot conc  $\text{H}_2\text{SO}_4$  (Lebeau, A ch 1399, (7) 16 474)

### Glucinum azomide, $\text{GlcN}_3$

Decomp by hot  $\text{H}_2\text{O}$  (Curtius, J pr 1898, (2), 58 292)

### Glucinum borocarbide, $3\text{Glc}_2\text{C}$ , $\text{B}_3\text{C}$

Insol in  $\text{H}_2\text{O}$  Easily sol in mineral acids especially  $\text{HNO}_3$  (Lebeau, A ch 1899, (7) 16 481)

$\text{C}_4\text{B}_6\text{Gl}_6$  Stable in air

Easily sol in mineral acids, conc and dil (Lebeau, C R 1898, 126 1349)

### Glucinum bromide, $\text{GlcBr}_2$

Sol in  $\text{H}_2\text{O}$  with evolution of much heat (Wohler)

Sol in abs alcohol (Lebeau, A ch 1899, (7) 16 484)

### Glucinum carbide, $\text{Glc}_2\text{C}$

Decomp by  $\text{H}_2\text{O}$  Slowly attacked by cold or hot conc  $\text{HCl}$  and  $\text{HNO}_3$  Gradually but completely sol in dil acids (Lebeau, A ch 1899, (7), 16 476)

$\text{Glc}_2$  Not easily decomp by strong acids Easily sol with decomp in dil acids (Lebeau, C R 1895, 121 497)

### Glucinum chloride, $\text{GlcCl}_2$

Anhydrous Fumes and deliquesces in air Sol in  $\text{H}_2\text{O}$  with hissing and evolution of much heat Easily sol in alcohol

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 828)

Sol in alcohol and ether Sl sol in  $\text{C}_6\text{H}_6$ ,  $\text{CHCl}_3$ ,  $\text{Cl}_4$  and  $\text{CS}_2$  (Lebeau, A ch 1899, (7) 16 493)

Insol in acetone (Naumann, B 1904, 37 4329)

+  $4\text{H}_2\text{O}$  Very hygroscopic Easily sol in  $\text{H}_2\text{O}$  and in alcohol (Mieletner, Z anorg 1913, 80 73)

### Glucinum chloride ammonia, $\text{GlcCl}_2 \cdot 4\text{NH}_3$

(Mieletner, Z anorg 1913, 80 73)

### Glucinum chloride iodine trichloride,

$2\text{ICl}_3$ ,  $\text{GlcCl}_2 + 8\text{H}_2\text{O}$

Hygroscopic (Winland, Z anorg 1902, 30 140)

### Glucinum ferric chloride, $\text{GlcCl}_2$ , $\text{FeCl}_3 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Neumann, A 244 329)

### Glucinum mercuric chloride, $\text{GlcCl}_2$ , $3\text{HgCl}_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Atterberg, B 6 1288)

### Glucinum thallic chloride, $3\text{GlcCl}_2$ , $2\text{TlCl}_3$

Cryst from  $\text{HCl}$  solution (Neumann, A 244 348)

### Glucinum stannic chloride

See Chlorostannate, glucinum

**Glucinum fluoride, basic,  $2\text{GIO}$ ,  $5\text{GIF}_2$** 

Sol in  $\text{H}_2\text{O}$  (Lebeau, A ch 1899, (7) 16 484)

**Glucinum fluoride,  $\text{GIF}_2$** 

Deliquescent Sol in  $\text{H}_2\text{O}$  Insol in anhydrous HF Sol in alcohol (Lebeau, C R 1898, 126 1421)

Sol in  $\text{H}_2\text{O}$  in all proportions Somewhat sol in abs alcohol Easily sol in 90% alcohol, also in a mixture of alcohol and ether Insol in anhydrous HF (Lebeau, A ch 1899, (7) 16 484)

**Glucinum potassium fluoride,  $\text{GIF}_2$ , KF**

Sl sol in  $\text{H}_2\text{O}$  (Awdejew) Much more sol in hot than cold  $\text{H}_2\text{O}$  (Berzelius)

$\text{GIF}_2$ , 2KF Sol in about 50 pts  $\text{H}_2\text{O}$  at  $20^\circ$ , and 19 pts boiling  $\text{H}_2\text{O}$  (Marignac)

**Glucinum sodium fluoride,  $\text{GIF}_2$ ,  $2\text{NaF}$** 

Sol in 34 pts  $\text{H}_2\text{O}$  at  $100^\circ$ , and 68 pts at  $18^\circ$  (Marignac)

**Glucinum hydroxide,  $\text{GIO}_2\text{H}_2$** 

Easily sol in acids Sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$  Sol in  $\text{CO}_2 + \text{Aq}$ , 100 ccm sat  $\text{CO}_2 + \text{Aq}$  dissolve 0.0185 g GIO (Sestini, Gazz ch it 20 313)

Also sol in KOH, NaOH,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , especially when freshly precipitated, also in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Debray)

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  containing  $\text{NH}_4\text{Cl} + \text{Aq}$

Very sl sol in  $\text{Li}_2\text{CO}_3 + \text{Aq}$  (Gmelin)

Sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Berthier)

Sol in  $\text{BaO}_2\text{H}_2 + \text{Aq}$ , from which it is pptd by  $\text{NH}_4$  salts, but not by boiling Sol in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$  when freshly pptd

Sol in  $\text{NH}_4\text{F} + \text{Aq}$  (Helmholtz, Z anorg 3 130)

**Solubility of  $\text{GIO}_2\text{H}_2$  in  $\text{NaOH} + \text{Aq}$** 

G Na in 20 ccm	G GI in 20 ccm
0 3358	0 0358
0 6717	0 0882
0 8725	0 1175

$\text{NH}_4\text{OH}$	5 hrs	½-N NaOH	Very sl sol

(Haber)

**Glucinum iodide,  $\text{GlI}_2$** Sol in  $\text{H}_2\text{O}$  with evolution of much heat (Wohler)Decomp in moist air and by  $\text{H}_2\text{O}$ 

Sol in abs alcohol Insol in most neutral organic solvents, as benzene, toluene, etc (Lebeau, C R 1898, 126 1273)

Insol in  $\text{C}_6\text{H}_6$ ,  $\text{C}_7\text{H}_8$ , and oil of turpentine Easily sol in  $\text{CS}_2$  Sol in anhydrous alcohols without evolution of heat (Lebeau, A ch 1899, (7) 16 490)**Glucinum iodide ammonia,  $2\text{GlI}_2, 3\text{NH}_3$** 

Ppt (Lebeau, A ch 1899, (7) 16 492)

**Glucinum oxide,  $\text{GlO}$** *Crystalline* Insol in acids except conc  $\text{H}_2\text{SO}_4$  (Ebelmen, C R 32 710)*Amorphous* Absolutely insol in  $\text{H}_2\text{O}$  The higher the temp to which the substance has been heated the more insol is it in acids Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Insol in conc  $\text{NH}_4\text{Cl} + \text{Aq}$ , or KOH, and  $\text{NaOH} + \text{Aq}$  (Rose)When obtained by ignition of  $\text{GlSO}_4$ , it is very slowly but completely sol in HCl, and  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Rose)Insol in hydracids Sol in conc  $\text{H}_2\text{SO}_4$  (Lebeau, C R 1896, 123 819)Insol in liquid  $\text{NH}_3$  (Gore, Am ch J 1898, 20 828)**Glucinum peroxide basic,  $2\text{GlO}_2, 3\text{GlO}$**  $+ 8\frac{1}{2}\text{H}_2\text{O}$  (Komarovskii, Chem Soc 1913, 104 (2) 707)**Glucinum oxybromides**Sol in  $\text{H}_2\text{O}$  if three or less equivalents of base are present to one of acid, insol if more of the base is present (Ordway, Am J Sci (2) 26 207)**Glucinum oxychloride,  $\text{Gl}_2\text{OCl}_2 = \text{GlO}, \text{GlCl}_2$** Insol in  $\text{H}_2\text{O}$   
 $3\text{GlCl}, 2\text{GlO} + 2\text{H}_2\text{O} (?)$  Sol in  $\text{H}_2\text{O}$  (Atterberg) $\text{GlCl}_2, 3\text{GlO} + 3\text{H}_2\text{O} (?)$  Sol in  $\text{H}_2\text{O}$ , but solution soon becomes cloudy and deposits a fine ppt By boiling the solution it is decomposed into above salt, and  $\text{GlCl}_2, 12\text{GlO}_2\text{H}_2 + 10\text{H}_2\text{O}$ , which is insol in  $\text{H}_2\text{O}$ , decomp into  $\text{GlO}_2\text{H}_2$  by washing Sol in acids (Atterberg)**Glucinum oxyfluoride,  $5\text{GlF}_2, 2\text{GlO}$** Readily sol in  $\text{H}_2\text{O}$  (Lebeau, C R 1898, 126 1419)**Glucinum phosphide**Decomp by  $\text{H}_2\text{O}$  (Wohler)**Glucinum selenide**Sl sol in  $\text{H}_2\text{O}$  (Berzelius)

**Glucinum sulphide**

Slowly sol without decomp in  $H_2O$ , but easily decomp by acids (Wohler)

**Gold, Au**

Gold which has been pptd from  $AuCl_3 + Aq$  by  $FeSO_4$  is sl sol in  $HCl$  (Awerkiew, Z anorg 1909, 61 10)

Not attacked by  $H_2O$  Insol in  $HNO_3$  or  $HCl + Aq$  Easily sol in aqua regia or any mixture evolving  $Cl$  or  $Br$  Sol in selenic acid, or antimonie acid +  $Aq$ , less easily in arsenic acid +  $Aq$  Sol in mixtures of  $HCl$  and nitrates, or  $HNO_3$  and chlorides, also in  $(NaCl + KNO_3 + K_2Al_2(SO_4)_4) + Aq$  (?) Insol in  $H_2SO_4$ , except in presence of  $KMnO_4$ ,  $HNO_3$ , or  $HIO_3$  Sol in a solution of  $I$  in ether in direct sunlight

Sol in solutions of ferric, and cupric salts Sol in  $HCl + Aq$  containing  $H_2CrO_4$ ,  $H_2MnO_4$ ,  $H_2SeO_4$ ,  $H_3AsO_4$ , or  $FeCl_3$  (Wurtz)

Attacked by fuming  $HCl$  (sp gr 1.178) at ord temp in direct light, especially in the presence of a trace of  $MnCl_2$ , but not attacked in the dark even in the presence of this salt (Berthelot, C R 1904, 138 1298)

100 ccm hot conc  $HCl$  dissolve 0.008 g yellow Au powder in 4 hours (Hanriot and Raoult, C R 1912, 155 1086)

Upon boiling 25 and 50 cc  $HCl + Aq$  (sp gr 1.178), dil to 125 cc with 250 mg sheet  $Au \frac{1}{8}$  in square, 0.009 in thick, weighing 250 mg for several hours, there was no loss of weight of  $Au$  (McCaughy, J Am Chem Soc 1909, 31 1263)

From 5 g finely divided ordinary yellow gold, 100 cc  $HNO_3$  of 22° B dissolve 0.002 g in 2 hrs

100 cc  $HNO_3$  of 32° B dissolve 0.0119 g in 2 hrs

100 cc  $HNO_3$  of 36° B dissolve 0.028 g in 2 hrs

100 cc  $HNO_3$  monohydrate dissolve 0.076 g in 2 hrs (Hanriot and Raoult, C R 1912, 155 1085)

From 5 g brown gold

100 ccm  $HNO_3$  of 22° Baume dissolve 0.006 g in 2 hrs

100 ccm  $HNO_3$  of 32° Baume dissolve 0.039 g in 2 hrs

100 ccm  $HNO_3$  of 36° Baume dissolve 0.078 g in 2 hrs

100 ccm  $HNO_3$  monohydrate dissolve 1.540 g in 2 hrs (Hanriot and Raoult)

Sl sol in boiling  $HNO_3$  (sp gr = 1.42) The solution deposits  $Au$  by standing several days (Dewey, J Am Chem Soc 1910, 32 320)

Best composition of aqua regia for dissolving  $Au$  is 200 cc  $HCl$  (sp gr 1.1946) 45 cc  $HNO_3$  (sp gr 1.4) and 245 cc  $H_2O$  1 pt  $Au$  is sol in 4.3 pts of such a mixture (Priwoznik, C C 1910, II 1743)

Sol in 1 pt  $HNO_3 + 4$  pts  $HCl$  as representing the most economical mixture (Priwoznik, Chem Soc 1911, 100 (2), 484)

Easily sol in nitrosulphonic acid from sulphuric acid manufacture, when mixed with equal parts conc  $HCl + Aq$  (Borntrager, Rep anal Ch 1887 741)

Sol in hot conc  $H_2SO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_3O_4$ ,  $PbO_2$ ,  $Pb_2O_3$ ,  $Pb_3O_4$ ,  $CrO_3$ ,  $CrO_4$  and  $Ni_2O_3$  Solution also takes place slowly in the cold Sol in hot  $H_2SO_4 + KMnO_4$  Slowly sol in cold, more rapidly in hot  $H_2SO_4 + HNO_3$  (Lenher, J Am Chem Soc 1904, 26 550)

Sol in a hot solution of crystalline telluric acid in  $H_2SO_4$  or  $H_3PO_4$

Sol in hot  $H_3PO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_3O_4$ , the higher oxides of lead,  $CrO_3$ , chromium tetroxide and nickel oxide Solution takes place more slowly in the cold Sol in hot  $H_3PO_4$  in the presence of  $KMnO_4$  Slowly sol in a cold, more rapidly sol in a hot mixture of  $H_3PO_4$  and  $HNO_3$

Sol in hot arsenic acid in the presence of  $MnO_2$ ,  $Mn_2O_3$  and  $Mn_3O_4$  (Lenher, J Am Chem Soc 1904, 26 550)

Gold leaf is not attacked by cold conc  $H_2SeO_4$ , when completely free from halogens, but is dissolved by conc  $H_2SeO_4$  at 300° (Lenher, J Am Chem Soc 1902, 24 354)

Solubility of thin sheet  $Au$  in  $HCl$  solution of non alum

Time hours	Mg Au dissolved			
	1 g Fe 25 cc HCl	1 g Fe 50 cc HCl	2 g Fe 25 cc HCl	2 g Fe 50 cc HCl

(Awerkiew)

Colloidal gold is sol in dil alkalis (Paal, B 1902, 35 2236)

Rather quickly sol in 10-15% solution I in KI+Aq

Very slowly sol in 5% solution of I in KI+Aq

Scarcely sol in more dil solution of I in KI+Aq

Easily sol in 10% NH<sub>4</sub>I+I Less easily sol in 5% NH<sub>4</sub>I+I (Doring)

Sol in cold Na<sub>2</sub>S+Aq when Na<sub>2</sub>S is present in proportion of 843 pts Na<sub>2</sub>S to 1 pt Au (Becker, Sil, Am J (3) 33 199)

In finely divided state Au is sol in boiling KCN+Aq Not attacked by boiling HgCl<sub>2</sub>+Aq (Vogel, J pr 20 366)

Solubility of Au (disks) in KCN+Aq with  
(A) oxygen passed through solution, and  
(B) agitated with oxygen

% KCN	g Au dissolved in 24 hours	
	A	B
1	0 00845	0 0187
5	0 01355	0 0472
20	0 0115	0 0314
50	0 00505	0 108

(Maclaurin, Chem Soc 1893, 63 729)

The solution of Au in KCN+Aq is essentially hastened by sunlight (Caldecott, Proc Chem Soc 1904, 20 199)

The presence of oxygen is necessary for the solution of Au in KCN+Aq. The rate of solution of Au in KCN+Aq varies with the strength of the solution, being small for conc solutions, increasing as the solution becomes more dilute, reaching a maximum at 0.25% KCN, and then again diminishing (Maclaurin, Chem Soc 1895, 67 211)

## Solubility of Au (strips) in dil KCN+Aq

% KCN	Mg Au dissolved in 24 hours
0	0 010
0 0005	0 043-0 07
0 001	0 10-0 23
0 0016	0 16
0 002	0 44
0 00325	1 77
0 004	4 29
0 008	48 43
0 016	74 96
0 0325	150 54
0 065	168 12

(Christy, Elektrochem Z 1901, 7 205)

Finely divided metallic gold is completely sol at the ord temp in solutions of potassium ferrocyanide. Solution takes place very slowly even when the potassium ferrocyanide solution is boiling (Beutel, Z anorg 1912, 78 158)

Sol in  $\text{RbCl}_4$ +Aq (Erdmann, Arch Pharm 1894, 232, 30)

Not attacked by  $\text{FeCl}_3$ +Aq when air is excluded but very energetically attacked in presence of HCl and oxygen (McIlhiney, Am J Sci, 1896, (4), 2 293)

Not attacked by several days heating with  $\text{SOCl}_2$  at  $150^\circ$ . At  $200^\circ$  there is action in 10 days (North, J Am Chem Soc 1912, 34 892)

$\text{SO}_2\text{Cl}_2$  in excess dissolves pulverulent Au by several hours heating at  $160^\circ$  (North, Bull Soc (4), 9 647)

Sol in  $\text{PCl}_3$  (Baudrimont, A ch (4) 2 416)

Easily sol in acid solutions of thiocarbamide especially in presence of suitable oxidizing compounds (Morr, Chem Soc 1906, 89 1345)

Gold arsenide,  $\text{AuAs}$ 

$\text{H}_2\text{O}$  or alcohol slowly extracts As,  $\text{HNO}_3$ +Aq converts into Au and  $\text{H}_3\text{AsO}_4$ . Sol in aqua regia. Not attacked by cold, decomp by hot conc  $\text{H}_2\text{SO}_4$  (Tivoli, C C 1887 778, J B 1887 610)

Gold bismuthide,  $\text{Au}_3\text{Bi}$ 

Min Maldonite Sol in aqua regia

Aurous bromide,  $\text{AuBr}$ 

Insol in  $\text{H}_2\text{O}$  (Thomsen, C C 1860 606)

Insol in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$

Sol in  $\text{NH}_4\text{OH}$ +Aq with decomp

Decomp by HBr and KBr+Aq Sol in KCN+Aq without decomp Slowly decomp by alcohol, ether, acetone and moist  $\text{CHCl}_3$  (Lengfeld, Am Ch J 1901, 26 325)

Gold (auroauric) bromide,  $\text{Au}_2\text{Br}_4$ 

Not deliquescent  $\text{H}_2\text{O}$  or ether dissolves out  $\text{AuBr}_3$  (Thomsen, C C 1860 606)

Does not exist (Kruss, B 20 640)

Existence is maintained by Petersen (J pr (2) 46 334)

Auric bromide,  $\text{AuBr}_3$ 

Not deliquescent Slowly sol in  $\text{H}_2\text{O}$ , more readily in ether

Can be recryst from  $\text{AsBr}_3$ ,  $\text{SbBr}_3$ ,  $\text{TiBr}_3$  or  $\text{SnBr}_2$  (Lindet, Bull Soc 1886, (2) 45 149)

Sol in methyl acetate (Naumann, B 1909, 42 3790)

Aurous phosphorus tribromide,  $\text{AuBr}$ ,  $\text{PBr}_3$ 

Decomp by  $\text{H}_2\text{O}$  (Lindet, J pr (2) 32 494)

Auric phosphorus pentabromide,  $\text{AuBr}_3$ ,  $\text{PBr}_5$ 

Decomp by  $\text{H}_2\text{O}$  (Lindet)

Aurous bromide phosphorus trichloride,  $\text{AuBr}$ ,  $\text{PCl}_3$ 

Decomp by  $\text{H}_2\text{O}$  (Lindet)

## Auric praseodymium bromide,

$\text{PrBr}_3$ ,  $\text{AuBr}_3$ + $10\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sol in conc HBr (Von Schule, Z anorg 1898, 18 355)

## Aurous bromide ammonia,

$\text{AuBr}$ ,  $2\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  and dil HCl

Sol in aqua regia (Meyer, C R 1906, 143 281)

Gold carbide,  $\text{Au}_2\text{C}_2$ 

Ppt Decomp by boiling  $\text{H}_2\text{O}$  without evolution of  $\text{C}_2\text{H}_2$  Decomp by HCl with evolution of  $\text{C}_2\text{H}_2$  (Mathews, J Am Chem Soc 1900, 22 110)

Aurous chloride,  $\text{AuCl}$ 

Insol in  $\text{H}_2\text{O}$ , but gradually decomp thereby into Au and  $\text{AuCl}_3$  (Thomsen, J pr (2) 13 341)

Insol in  $\text{H}_2\text{O}$  and dil  $\text{HNO}_3$

Decomp by conc  $\text{HNO}_3$  to Au and  $\text{AuCl}_3$

Sol in HCl, HBr and in sol of alkali chloride and bromides, with decomp

Decomp by alcohol, ether and acetone (Lengfeld, Am Ch J 1901, 26 324)

**Gold (auric) chloride,  $\text{AuCl}_3$** 

Deliquescent Very sol in  $\text{H}_2\text{O}$  Sol in 147 pts  $\text{H}_2\text{O}$  (Abl) Sol in conc  $\text{HCl}$ , or  $\text{HNO}_3$ +Aq without decomp

$\text{AsCl}_3$  dissolves about 22% at  $160^\circ$  and 2.5% at  $15^\circ$  Solubility in  $\text{SbCl}_3$  is about the same Much less sol in  $\text{SnCl}_4$  or  $\text{TiCl}_4$ ,  $\text{SnCl}_4$  dissolving 4% at  $160^\circ$  and hardly a trace at  $0^\circ$  Very sl sol in hot or cold  $\text{SiCl}_4$  (Lindet, Bull Soc (2) 45 149)

Sl sol in liquid  $\text{NH}_3$  (Franklin and Kraus, Am Ch J 1898, 20 829)

Sol in alcohol with gradual decomp (Gmelin) Sol in ether with decomp in light or on long standing Ether extracts  $\text{AuCl}_3$  from  $\text{AuCl}_3$ +Aq (Proust) Sol in volatile oils with gradual decomp

Sol in ether (Myhus, Z anorg 1911, 70 207)

Very sol in ether (Willstätter, B 1903, 36 1830)

Completely sol in ether (Frank, C C 1913, II 541)

Insol in or decomp by alcohol, ether,  $\text{CS}_2$ ,  $\text{C}_6\text{H}_6$ , oil of turpentine, pentane, hexane,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl nitrate, nitrobenzol, ethyl acetate, ethyl propionate and pyridine (Lenher, J Am Chem Soc 1903, 25 1138)

+ $2\text{H}_2\text{O}$  (Thomsen)

**Auroauric chloride,  $\text{Au}_2\text{Cl}_4$** 

Decomp by  $\text{H}_2\text{O}$  into  $\text{AuCl}_3$  and  $\text{AuCl}$  (Thomsen, J pr (2) 13 357)

Does not exist (Kruss and Schmidt, J pr (2) 38 77)

Existence is maintained by Christensen (J pr (2) 46 323)

**Auric chloride with  $\text{MCl}$** 

See Chloraurate, M

**Auric nitrosyl chloride,  $\text{AuCl}_3$ ,  $\text{NOCl}$** 

Sol in  $\text{H}_2\text{O}$  with decomp (Sudborough, Chem Soc 59 662)

**Aurous phosphorus trichloride,  $\text{AuCl}$ ,  $\text{PCl}_3$** 

Decomp by  $\text{H}_2\text{O}$  Sol in about 100 pts  $\text{PCl}_3$  at  $15^\circ$ , and about 8 pts at  $120^\circ$  Sol in  $\text{AsCl}_3$  (Lindet, C R 101 1492)

**Auric phosphorus pentachloride,  $\text{AuCl}_3$ ,  $\text{PCl}_5$** 

Decomp by  $\text{H}_2\text{O}$  Nearly insol in  $\text{PCl}_5$  Sol in  $\text{AsCl}_3$  (Lindet)

**Aurous potassium chloride,  $\text{AuCl}$ ,  $\text{KCl}$** 

Decomp by  $\text{H}_2\text{O}$  or  $\text{HCl}$ +Aq into  $\text{KCl}$ ,  $\text{KAuCl}_4$ , and  $\text{Au}$  (Berzelius)

**Auric potassium chloride**

See Chloraurate, potassium

**Auric selenium chloride,  $\text{AuCl}_3$ ,  $\text{SeCl}_4$** 

Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{AsCl}_3$  (Lindet, C R 101 1492)

**Gold (aurous) sodium chloride,  $\text{AuCl}$ ,  $\text{NaCl}$** 

Insol in  $\text{H}_2\text{O}$  Sol in alcohol (Meillet, J Pharm 3 447)

Formula is  $4\text{NaCl}$ ,  $\text{AuCl}$ ,  $\text{AuCl}_3$  (Jørgensen)

**Auric sodium chloride**

See Chloraurate, sodium

**Auric sulphur chloride,  $\text{AuCl}_3$ ,  $\text{SCl}_4$** 

Easily decomp by  $\text{H}_2\text{O}$  (Lindet, C R 101 1492)

**Aurous chloride ammonia,  $\text{AuCl}$ ,  $\text{NH}_3$** 

Ppt Unstable (Diemer, J Am Chem Soc 1913, 35 554)

$\text{AuCl}$ ,  $3\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  and dil acids

Sol in aqua regia Sol in conc  $\text{H}_2\text{SO}_4$  with decomp (Meyer, C R 1906, 143 282)

$\text{AuCl}$ ,  $12\text{NH}_3$  (Meyer)

**Auric fluoride,  $\text{AuF}_3$** 

Very unstable

Is incapable of existence not only in presence of  $\text{H}_2\text{O}$  but under the ordinary conditions met with in the laboratory and in nature (Lenher, J Am Chem Soc 1903, 25 1138)

**Auric hydroxide,  $\text{Au}_2\text{O}_3\text{H}_2$** 

Nearly insol in most acids Easily sol in very conc  $\text{HNO}_3$ +Aq (Proust), from which all  $\text{Au}_2\text{O}_3\text{H}_2$  is separated by dilution (Fremy) Extremely sl sol in fuming  $\text{HNO}_3$  Sol in dil  $\text{HNO}_3$ +Aq when pure (Kruss, A 237 281) Not attacked by  $\text{H}_3\text{PO}_4$  Insol in  $\text{HF}$  Sol in  $\text{HCl}$ , or  $\text{HBr}$ +Aq (Fremy)

Sol in  $\text{H}_2\text{SeO}_4$ +Aq (Mitscherlich)

Sl sol in conc  $\text{H}_2\text{SO}_4$ , somewhat sol in  $\text{HC}_2\text{H}_3\text{O}_3$ +Aq (Rose)

Nearly insol in cold  $\text{KOH}$ +Aq, but dissolved on boiling Insol in  $\text{NH}_4\text{OH}$ +Aq or alkali carbonates + Aq (Rose) Sl sol in boiling  $\text{CaCl}_2$ +Aq,  $\text{NaCl}$ +Aq,  $\text{BaCl}_2$ +Aq (Pelletier) Sol in  $\text{NH}_4\text{CN}$ , and  $\text{KCN}$ +Aq (Himly)

Sl sol in  $\text{KCl}$ , or  $\text{NaCl}$ +Aq (Pelletier) Sol in  $\text{K}_4\text{Fe}(\text{CN})_6$ +Aq at ord temp rapidly on boiling (Beutel, Z anorg 1912, 78 154)

$\text{AuO}$ ,  $\text{OH}=\text{Au}_2\text{O}_3$ ,  $\text{H}_2\text{O}$  (Kruss)

**Auroauric hydroxide,  $\text{Au}_3\text{O}_2(\text{OH})_2=3\text{Au}_2\text{O}_2+2\text{H}_2\text{O}$** 

Insol in boiling conc  $\text{KOH}$ +Aq Decomp by conc  $\text{HCl}$  or  $\text{HNO}_3$ +Aq into  $\text{Au}$  and  $\text{Au}_2\text{O}_3$ , which dissolves (Schottlander, A 217 336)

**Aurous iodide,  $\text{AuI}$** 

Insol in cold, decomp by hot  $\text{H}_2\text{O}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3$ +Aq, with separation of  $\text{Au}$  Decomp immediately by ether, more slowly by alcohol

Partially sol in KI,  $\text{FeI}_3$ , or  $\text{HI} + \text{Aq}$  (Pelletier) Sl attacked by  $\text{NH}_4\text{OH}$ , or  $\text{NaCl} + \text{Aq}$  at  $35^\circ$  (Fordos) Instantly decomp by  $\text{KOH} + \text{Aq}$

#### Gold (auric) iodide, $\text{AuI}_3$

Insol in  $\text{H}_2\text{O}$  Sol in alkali iodides, and  $\text{HI} + \text{Aq}$  Decomp on air or by alkalis (Johnston, Phil Mag J 9 266)

#### Aurous iodide ammonia, $\text{AuI}, \text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  or dil acids (Meyer, C R 1906, 143 281)

Sol in aqua regia

$\text{AuI}, 6\text{NH}_3$  (Meyer)

#### Aurous oxide, $\text{Au}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  or alcohol Decomp by boiling with  $\text{HCl} + \text{Aq}$  into Au and  $\text{AuCl}_3$   $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  do not attack Sol in cold aqua regia Sol in  $\text{HI} + \text{Aq}$  Sol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when freshly precipitated (Berzelius)

According to Kruss (A 237 281) all hitherto prepared  $\text{Au}_2\text{O}$  is impure Pure  $\text{Au}_2\text{O}$  is sol in cold  $\text{H}_2\text{O}$  when freshly precipitated, from which hydroxide is precipitated by boiling Partly sol in  $\text{HCl}$ , or  $\text{HBr} + \text{Aq}$  Sol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when freshly precipitated Not affected by any other acid or solvent (Kruss)

The so-called solution of  $\text{Au}_2\text{O}$  in  $\text{H}_2\text{O}$  is in reality a colloidal suspension (Vanino, B 1905, 38 462)

#### Auric oxide, $\text{Au}_2\text{O}_3$

See Auric hydroxide

#### Auroauric oxide, $\text{Au}_2\text{O}_2$

Sol in cold  $\text{HCl} + \text{Aq}$  forms insol comp with  $\text{HF}$  (Piat, C R 70 842)

Obtained pure by Kruss (A 237 296)

#### Gold phosphide, $\text{Au}_4\text{P}_6$

Not attacked by  $\text{HCl} + \text{Aq}$   $\text{HNO}_3$  forms  $\text{H}_3\text{PO}_4$  and leaves undissolved Au (Schrotter, J B 1849 247)

$\text{AuP}$  Decomp on air or with  $\text{H}_2\text{O}$  (Cavazzi, Gazz ch it 15 40)

$\text{Au}_3\text{P}_4$  Readily attacked by aqua regia or  $\text{Cl}_2 + \text{Aq}$  (Granger, C R 1897, 124 498)

#### Gold purple (mixture of Au and $\text{SnO}_2$ )

Insol in  $\text{H}_2\text{O}$  Easily sol in aqua regia  $\text{HCl} + \text{Aq}$  dissolves all Sn and leaves Au

Boiling  $\text{HNO}_3 + \text{Aq}$  dissolves a little Sn

Insol in boiling  $\text{KOH} + \text{Aq}$  (Berzelius)  $\text{KOH} + \text{Aq}$  extracts excess of  $\text{SnO}_2$ , and the residue becomes sol in  $\text{H}_2\text{O}$ , from which it is pptd by  $\text{NH}_4\text{Cl} + \text{Aq}$  (Figuer, A ch (3) 11 353)

Sol, when still moist, in  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol if it has been dried

Obtained in colloidal state in aqueous solution containing 0.58 g Au and 5.41 g  $\text{SnO}_2$

in a litre This solution may be concentrated without coagulation The solution is coagulated by dil  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , more easily by dil  $\text{H}_2\text{SO}_4 + \text{Aq}$ , also by  $\text{KCl}$ ,  $\text{HgCl}_2$ ,  $\text{FeSO}_4 + \text{Aq}$ , and many other salts Not coagulated by alcohol, but easily when ether is added to the alcohol (Schneider, Z anorg 5 80)

#### Gold (auric) selenide, $\text{Au}_2\text{Se}_3$

$\text{HNO}_3 + \text{Aq}$  dissolves out Se Sol in aqua regia or alkali sulphides + Aq (Uelsmann, J B 1860 90)

#### Aurous sulphide, $\text{Au}_2\text{S}$

Easily sol in  $\text{H}_2\text{O}$  when freshly prepared, but precipitated from aqueous solution by  $\text{HCl}$ ,  $\text{KCl}$ , or  $\text{NaCl} + \text{Aq}$  When dried is insol in  $\text{H}_2\text{O}$

Insol in boiling dil or conc  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  Easily sol in aqua regia,  $\text{HCl} + \text{Aq}$  with  $\text{KClO}_4$ , etc Slowly sol in alkali monosulphides + Aq Easily sol in polysulphides + Aq

Insol in  $\text{KOH} + \text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$  (Kruss, B 20 2369)

Known also in colloidal state in aqueous solution containing 1.74 g  $\text{Au}_2\text{S}$  per l (Schneider, B 24 2241)

#### Auric sulphide, $\text{Au}_2\text{S}_3$

Insol in  $\text{H}_2\text{O}$  and acids except aqua regia, sol in alkali sulphides, or  $\text{KOH} + \text{Aq}$  (Berzelius)

Does not exist (Kruss, B 22 2369), but has since been made by Antony and Lucchesi (Gazz ch it 20 601) Insol in  $\text{HCl}$ , or dil  $\text{HNO}_3 + \text{Aq}$  Decomp by conc  $\text{HNO}_3$ ,  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  with separation of Au Sl decomp by  $\text{NH}_4\text{OH} + \text{Aq}$  Easily sol in  $\text{KCN} + \text{Aq}$ , decomp by  $(\text{NH}_4)_2\text{S} + \text{Aq}$  Sol in cold  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S} + \text{Aq}$ , decomp on boiling (Antony and Lucchesi, Gazz ch it 21, 2 209)

Insol in ether (Hofmann, B 1904, 37 246)

#### Auroauric sulphide, $\text{Au}_2\text{S}_2$

Insol in  $\text{H}_2\text{O}$  or acids except aqua regia Sl sol in cold alkali monosulphides + Aq, but easily sol on warming Sol in cold polysulphides + Aq, but less in ammonium polysulphide than the other alkali polysulphides

Not attacked by cold, but easily sol in hot  $\text{KOH} + \text{Aq}$  Sol in  $\text{KCN} + \text{Aq}$  (Hoffmann and Kruss, B 20 2704)

Obtained also in colloidal state in aqueous solution containing 0.8 g per l (Schneider)

Insol in  $\text{Na}_2\text{S} + \text{Aq}$  sat with S (Ditte, A ch 1907, (8) 12 273)

#### Aurous potassium sulphide, $\text{Au}_2\text{S}, 3\text{K}_2\text{S}$

(Antony and Lucchesi, Gazz ch it 1896, 26 (2) 350)

$\text{Au}_2\text{S}_3, 4\text{K}_2\text{S} + 12\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$   
(Ditte, C R 1895, 120 322)

**Gold silver sulphide,  $\text{Ag}_3\text{AuS}_2$**

Ppt (Lucchesi, Gazz ch it 1896, 26 350-53)

**Aurous sodium sulphide,  $\text{NaAuS} + 4\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$  and alcohol (Yorke, Chem Soc Q J 1 236)

$+5\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Ditte, C R 1895, 120 321)

$\text{Na}_3\text{AuS}_2$  Sol in  $\text{H}_2\text{O}$  (Lucchesi, Gazz ch it 1896, 26 350-53)

$\text{Au}_2\text{S}_3, 2\text{Na}_2\text{S} + 20\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$   
(Ditte, C R 1895, 120 321)

**Gold telluride**

Ppt (Berzelius, Pogg 8 178)

**Gold silver telluride,  $\text{Au}_2\text{Te}_2, \text{Ag}_2\text{Te}$**

Min *Sylvanite* Sol in  $\text{HNO}_3 + \text{Aq}$  with separation of Au, in aqua regia with separation of AgCl

$3\text{Ag}_2\text{Te}, \text{Au}_2\text{Te}$  Min *Petzite* |

**Hartshorn, salts of**

(Antropoff, Roy Soc Proc 1910, 83 A 480)

Completely insol in benzene and in alcohol  
(Ramsay, Chem Soc 1895, 67 684)

**Hexamine chromium compounds**

See Luteochromium compounds

**Hexamine cobaltic compounds,**

$\text{Co}_2(\text{NH}_3)_6\text{X}_3$

See Dichrochromic compounds

$\text{Co}(\text{NH}_3)_6\text{X}_3$

See Luteocobaltic compounds

**Hexamine iridium chloride,  $\text{Ir}_2(\text{NH}_3)_6\text{Cl}_6$**

See Iridotriamine chloride

**Hexathionic acid,  $\text{H}_2\text{S}_6\text{O}_6$**

Known only in aqueous solution, which decomposes rapidly, even in presence of free sulphuric acid (Debus, A 244 76)

**Potassium hexathionate,  $\text{K}_2\text{S}_6\text{O}_4$**

Sol in  $\text{H}_2\text{O}$ , with rapid decomp Not obtained in pure state (Debus, A 244 76)

**Holmium, Ho**

**Holmium oxide,  $\text{Ho}_2\text{O}_3$**

(Cleve, C R 89 478, 91 328)

Consists of at least two elements (Lecoq de Boisbaudran, C R 102 1005)

Consists of seven elements (Kruss and Nilson)

**Sesquihydraurylamine,  $(\text{AuOH})_3\text{N}, \text{NH}_3 = \text{Au}_3\text{N}_2 + 3\text{H}_2\text{O}$**

Decomp by boiling with  $\text{H}_2\text{O}$  (Raschig, A 235 341)

**Hydrazidophosphoric acid**

**Barium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_3)_2\text{O}_2\text{Ba}$

(Ephraim, B 1911, 44 3420)

**Lead hydrazidophosphate,  $\text{OP}(\text{N}_2\text{H}_3)_2\text{O}_2\text{Pb}$**

Easily sol in  $\text{HNO}_3$  (Ephraim)

**Potassium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_3)_2(\text{OK})_2$  (Ephraim)

**Sodium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_3)_2(\text{ONa})_2$

Can be cryst from dil alcohol (Ephraim)

**Hydrazine,  $\text{N}_2\text{H}_4 = \text{NH}_2 - \text{NH}_2$**

Very sol in  $\text{H}_2\text{O}$  (Curtius, B 20 1632)

Very hygroscopic, decomp by  $\text{H}_2\text{O}$ , solvent for sulphur, KCl, KBr,  $\text{KNO}_3$  (de Bruyn, R t c 1894, 13 433-40, Chem Soc 1895, 68 (2) 347)

Mixes in all proportions with alcohols, sl sol in organic solvents (Lobry de Bruyn, Chem Soc 1897, 72 (2) 22)

**Hydrazine amidosulphonate,**

Very sol in  $\text{H}_2\text{O}$  (Sabanejeff, Z anorg 1899, 20 22)

**Hydrazine azouimide,  $\text{N}_2\text{H}_4, \text{HN}_3$** 

Deliquescent Easily sol in  $\text{H}_2\text{O}$  Sl sol in alcohol, and can be crystallised therefrom (Curtius, B 24 2344)

**Hydrazine borate,  $(\text{N}_2\text{H}_4)_2(\text{B}_2\text{O}_3)_3$** 

Sol in  $\text{H}_2\text{O}$  (Dschawachow, C C 1902, I 1394)

$(\text{N}_2\text{H}_4)_3(\text{H}_2\text{B}_2\text{O}_7)_2$  Sol in  $\text{H}_2\text{O}$  (Dschawachow, C C 1902, I 1394)

+5 $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Dschawachow, C C 1902 I 1394)

+10 $\text{H}_2\text{O}$  Ppt (Dschawachow, C C 1902 I 1394)

**Hydrazine cuprous bromide chloride,**

(Ranfaldi, Real Ac Linc 1906 (5) 15, II, 95)

**Hydrazine mercuric bromide,**

Very sol in  $\text{H}_2\text{O}$ , sol in alcohol and acetone Sl sol in acetic ether

Insol in alcohol ether (Ferratin, C A 1912 1612)

**Hydrazine zinc bromide,  $2\text{N}_2\text{H}_4\text{HBr}, \text{ZnBr}_2 + \text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$ , sol in alcohol and acetone (Ferratin, C A 1912 1612)

**Hydrazine carbonate**

Very deliquescent, but only sl sol in  $\text{H}_2\text{O}$  Sl sol in alcohol (Curtius and Jay, J pr 1889, (2) 39 41)

**Hydrazine zinc carbonate hydrazine,**

Easily sol in  $\text{H}_2\text{O}$  (Ebler and Schott, J pr 1909, (2) 79, 72)

**Hydrazine chlorate,  $\text{N}_2\text{H}_4, \text{HClO}_3$** 

Very sol in  $\text{H}_2\text{O}$ , sl sol in alcohol Insol in ether,  $\text{CHCl}_3$  and benzol (Salvadori, Gazz ch it 1907, 37, (2) 32)

**Hydrazine dichlorate,  $\text{N}_2\text{H}_4, 2\text{HClO}_3$** 

Ppt Decomp in aq solution (Luricentine, J Am Chem Soc 1915, 37 1123)

**Hydrazine cupric chloride,  $\text{N}_2\text{H}_4\text{Cl}, \text{CuCl}_2 + \frac{1}{2}\text{H}_2\text{O}$** 

Decomp by  $\text{H}_2\text{O}$  (Ranfaldi, Real Ac Linc 1906, (5) 15, II 95)

+2 $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Ranfaldi)

**Hydrazine mercuric chloride,  $\text{N}_2\text{H}_4\text{Cl}, \text{HgCl}_2$** 

(Hoffmann and Marburg, A 1899, 305 221)

**Hydrazine dithionate,  $\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$** 

Sol in  $\text{H}_2\text{O}$ , decomp on standing in aq solution (Sabanejeff, Z anorg 1899, 20 21)

$2\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$  Sol in  $\text{H}_2\text{O}$  (Sabanejeff)

**Hydrazine fluosilicate,  $\text{N}_2\text{H}_4, \text{H}_2\text{SiF}_6$** 

Easily sol in  $\text{H}_2\text{O}$

Difficultly sol in ethyl and methyl alcohol (Ebler, J pr 1910, (2) 81 552)

**Hydrazine fluotitanate,  $(\text{N}_2\text{H}_4)_2, \text{H}_2\text{TiF}_6 + 2\text{H}_2\text{O}$** 

Ppt Sol in  $\text{H}_2\text{O}$  (Ebler, J pr 1910, (2) 81 555)

**Hydrazine monohydrobromide,  $\text{N}_2\text{H}_4, \text{HBr}$** 

Very easily sol in  $\text{H}_2\text{O}$  or hot alcohol (Curtius and Schultz, J pr (2) 42 537)

**Hydrazine dihydrobromide,  $\text{N}_2\text{H}_4, 2\text{HBr}$** 

Easily sol in  $\text{H}_2\text{O}$  Sl sol in alcohol (Curtius and Schulz, J pr (2) 42 535)

**Hydrazine monohydrochloride,  $\text{N}_2\text{H}_4, \text{HCl}$** 

Extremely sol in  $\text{H}_2\text{O}$  Sl sol in boiling absolute alcohol (Curtius and Jay, J pr (2) 39 38)

**Hydrazine dihydrochloride,  $\text{N}_2\text{H}_4, 2\text{HCl}$** 

Easily sol in cold  $\text{H}_2\text{O}$ , sl sol in hot alcohol (Curtius, l c)

Sol in 2 67 pts  $\text{H}_2\text{O}$  at  $23^\circ$  Sp gr of sat solution at  $20^\circ/4^\circ = 1.4226$  (Schiff, Z phys Ch 1896, 21 292)

Sp gr of aqueous solution at  $20^\circ$

% salt	Sp gr
25	1.1183
20	1.0923
15	1.0675
10	1.0436
5	1.0206

(Schiff, Z phys Ch 1896, 21 292)

Nearly insol in hot absolute alcohol (Curtius and Jay, J pr (2) 39 37)

**Hydrazine dihydrofluoride,  $\text{N}_2\text{H}_4, 2\text{HF}$** 

Easily sol in  $\text{H}_2\text{O}$  Nearly insol in alcohol (Curtius and Schulz, J pr (2) 42 533)

**Hydrazine monohydroiodide,  $\text{N}_2\text{H}_4, \text{HI}$** 

Easily sol in  $\text{H}_2\text{O}$  (Curtius and Schulz)

**Hydrazine dihydroiodide,  $\text{N}_2\text{H}_4, 2\text{HI}$** 

Very deliquescent Easily sol in  $\text{H}_2\text{O}$  Sl sol in alcohol (Curtius and Schulz, J pr (2) 42 536)

**Trihydrazine dihydroiodide**,  $3N_2H_4, 2HI$ 

Easily sol in  $H_2O$  and alcohol (Curtius and Schulz, J pr (2) 42 540)

**Hydrazine hydroxide**,  $N_2H_4, H_2O$ 

Miscible with  $H_2O$  or alcohol, but not with ether, chloroform, or benzene (Curtius and Schulz, J pr (2) 42 530)

**Hydrazine hypophosphate**,  $N_2H_4, H_4P_2O_6$ 

Sl sol in  $H_2O$  15 pts dissolve in 100 pts  $H_2O$  (Sabanejeff, Z anorg 1898, 17 490)

**Hydrazine hypophosphate ammonia**,

$N_2H_4, H_4P_2O_6, NH_3$   
Sol in  $H_2O$  (Sabanejeff, Z anorg 1899, 20 23)

**Hydrazine mercuric iodide**,

$2N_2H_4I, HgI_2 + H_2O$   
Very sol in  $H_2O$ , alcohol, acetone, acetate ether  
Insol in ether Excess of  $H_2O$  decomp (Ferratin, Gazz ch it 1912, 42 (1), 172)

**Hydrazine zinc iodide**,

$ZnI_2, 2N_2H_4, HI + \frac{1}{2}H_2O$   
Very sol in  $H_2O$ , sol in alcohol and acetone (Ferratin, C A 1912 1612)

**Hydrazine nitrate**,  $N_2H_4, HNO_3$ 

Very sol in  $H_2O$ , sl sol in abs alcohol (Sabanejeff, Z anorg 1899, 20 24)

Solubility in  $H_2O$  at  $t^\circ$

$t^\circ$	g $N_2H_4, HNO_3$ per 100 g	
	Sat solution	$H_2O$
10	63 63	174 9
15	68 47	217 2
20	72 70	266 3
25	76 61	327 5
30	80 09	402 2
35	83 06	490 3
40	85 86	607 2
45	88 06	737 6
50	91 18	1034
55	93 58	1458
60	95 51	2127

(Sommer, Z anorg 1914, 86 85)

 **$N_2H_4, 2HNO_3$**  Very unstable

Sol in  $H_2O$  but solution cannot be concentrated beyond 30% without decomp

Decomp by abs alcohol

Very sol in hydrazine hydroxide + Aq (Sabanejeff, Z anorg 1898, 20 25)

**Hydrazine nitrite**,  $N_2H_4, HNO_2$ 

Very sol in  $H_2O$  Pptd by ether from solution in alcohol, insol in ether

Very hygroscopic (Sommer, Z anorg 1913, 83 125)

**Hydrazine perchlorate**,  $N_2H_4, HClO_4 + 2H_2O$ 

Sol in 148 pts  $H_2O$  at  $30^\circ$  and 34 pts alcohol, crystallizes from boiling absolute alcohol (Salvadori, Ch Z 31 680)

+  $3H_2O$

Solubility in  $H_2O$  at  $t^\circ$

$t^\circ$	% $N_2H_4, HClO_4$	Sp gr
18	41 72	1 264
35	66 9	1 391

(Carlson, Dissert 1910)

**Hydrazine diperchlorate**,  $N_2H_4, 2HClO_4 + 2H_2O$ 

Efflorescent

Deliquescent

102 pts salt sol in 100 pts  $H_2O$  at  $29^\circ$

2 8 pts salt sol in 100 pts alcohol

1 0 pt " " " 100 " ether

(Turrentine, J Am Chem Soc 1915, 37 1123)

**Hydrazine phosphate**,  $N_2H_4, H_3PO_4$ 

Very sol in  $H_2O$  (Sabanejeff, Z anorg 1898, 17 488)

$N_2H_4, 2H_3PO_4$  Sol in  $H_2O$  (Sabanejeff)

**Hydrazine phosphite**,  $N_2H_4, H_3PO_3$ 

Sol in  $H_2O$  (Sabanejeff, Z anorg 1898, 17 468)

**Hydrazine hydrogen phosphite**,

$N_2H_4, 2H_3PO_3$   
Less sol in  $H_2O$  than the normal salt (Sabanejeff)

**Hydrazine selenate**,  $N_2H_4, H_2SeO_4$ 

Sol in  $H_2O$  with decomp (Rimini, C C 1907, I 86)

**Hydrazine zinc selenate**,

$(N_2H_4)_2SeO_4, ZnSeO_4$   
Sl sol in  $H_2O$  but more sol than Cu salt (Rimini and Malagnini, Gazz ch it 1907, 37 (1), 265)

**Hydrazine sulphocyanide**,  $N_2H_4, HSCN$ 

Very deliquescent Sol in  $H_2O$  and alcohol (Curtius and Herdenreich, J pr 1895, [2] 52 488)

**Hydrazine sulphate**,  $N_2H_4, H_2SO_4$ 

Sol with difficulty in cold, easily in hot  $H_2O$  Insol in alcohol (Curtius, l c)

100 pts  $H_2O$  dissolve 3 055 pts salt at  $22^\circ$  (Curtius and Jay, J pr (2) 39 39)

$2N_2H_4, H_2SO_4$  Very deliquescent, and

sol in  $H_2O$  Insol in alcohol (Curtius, J pr (2) 44 101)

**Hydrazine sulphite**,  $(N_2H_4)_2H_2SO_3$   
(Sabanejeff, Z anorg 1899, 20, 24)

**Hydrazine pyrosulphite**,  $2N_2H_4, H_2S_2O_5$   
Sol in  $H_2O$  with decomp, insol in alcohol  
(Sabanejeff, Z anorg 1899, 20 23)

**Hydrazine thiosulphate**,  $(N_2H_4)_2H_2S_2O_3$   
Ppt (Not pure) (Ferratin, Gazz ch it 1912, 42 (1) 138)

**Hydrazine lead thiosulphate**,  
 $PbS_2O_3, 2(N_2H_4)_2H_2S_2O_3 + H_2O$   
Insol in  $H_2O$  and alcohol  
Sol in  $HCl + Aq$  and in  $HNO_3 + Aq$   
(Ferratin, C A 1912 1612)

**Hydrazine silver thiosulphate**,  
 $Ag_2S_2O_3, (N_2H_4)_2H_2S_2O_3$   
Insol in  $H_2O$ , sol in  $NH_4OH + Aq$  and in  
 $HNO_3$  (Ferratin)

**Hydrazine sulphinic acid**

**Barium hydrazine disulphate**,  
 $Ba_2N_2(SO_2)_2$   
Insol in  $H_2O$ , sol in acids (Ephraim,  
B 1911, 44 390)

**Hydrazinesulphonic acid**,  $N_2H_3SO_2OH$   
Sol in about 24 pts  $H_2O$  at ord temp De-  
comp by mineral acids, nearly insol in  
alcohol and other organic solvents (Traube,  
B 1914, 47 941)

**Ammonium hydrazinesulphonate**,  
 $(N_2H_3SO_3)NH_4$   
Deliquescent, decomp by acids (Traube)

**Barium hydrazinesulphonate**,  
 $(N_2H_3SO_3)_2Ba + 2H_2O$   
Sol in  $H_2O$ , pptd by alcohol, decomp by  
acids (Traube)

**Calcium hydrazinesulphonate**,  
 $(N_2H_3SO_3)_2Ca + H_2O$   
Sol in  $H_2O$  Decomp by acids Insol in  
alcohol (Traube)

**Potassium hydrazinesulphonate**,  $N_2H_3SO_3K$   
Decomp by acids (Traube)

**Silver hydrazinesulphonate**,  $N_2H_3SO_3Ag$   
(Traube)

**Sodium hydrazinesulphonate**,  
 $N_2H_3SO_3Na + H_2O$   
Decomp by acids (Traube)

**Strontium hydrazinesulphonate**,  
 $(N_2H_3SO_3)_2Sr + 2H_2O$

Sol in  $H_2O$  Decomp by acids Insol in  
alcohol (Traube)

**Hydriodic acid**, HI  
See Iodhydric acid

**Hydrobromic acid**, HBr  
See Bromhydric acid

**Hydrochloric acid**, HCl  
See Chlorhydric acid

**Hydrofluorboric acid**,  $HBF_4$   
See Fluoborhydric acid

**Hydrofluoric acid**, HF  
See Fluorhydric acid

**Hydrogen**,  $H_2$   
Sl absorbed by  $H_2O$

Sol in 150 pts  $H_2O$  1 vol  $H_2O$  absorbs 0.016 vol H  
Recently boiled  $H_2O$  absorbs 1.53% H (Henry 1803)  
100 vols  $H_2O$  at  $18^\circ$  absorb 4.6 vols H (de Saussure  
1814)

1 vol  $H_2O$  absorbs 0.0193 vol H at 760 mm  
and all temperatures between  $0^\circ$  and  $23.6^\circ$   
(Bunsen)

Later work does not confirm the above state-  
ment

Absorption of H by  $H_2O$  at t and 760 mm  
 $\beta$  = coefficient of absorption,  $\beta_1$  = "solu-  
bility" (see under Oxygen)

(Just, Z phys Ch 1901, 37 359)

Extended investigations have been made by Findlay and Shen (Chem Soc 1912, 101 1465) on the effect of colloids on solubility of  $H_2$  in  $H_2O$ . See original article

Hydrogen arsenide  
See Arsenic hydride

Hydrogen peroxide,  $H_2O_2$

Miscible with  $H_2O$ . Not stable in conc solution. Aqueous solution gives up its  $H_2O_2$  to ether. Ethereal solution is more stable than an aqueous solution of the same strength, and may be distilled without decomp. Miscible with alcohol.

Very stable in aq solution of various conc if perfectly free from impurity such as compds of heavy metals, etc (Woffenstein, B 1894, 27 3307)

Coefficient of distribution between ether and  $H_2O$  determined at  $3^\circ$ ,  $7^\circ$ , and  $17.5^\circ$  with varying quantities (17—5%) of  $H_2O_2$  (Osipoff, C C 1903, II 1265)

As sol in ether as in  $H_2O$ . A 50% solution in  $H_2O$  still contained about 25%  $H_2O_2$  after

being shaken 6 times with large quantities of fresh ether

Insol in petroleum ether (Bruhl, B 1895, 28 2855)

+H<sub>2</sub>O, and +2H<sub>2</sub>O Does not solidify at -20° (Wolffenstein, B 1894, 27 3311)

**Hydrogen phosphide, gaseous (Phosphine), PH<sub>3</sub>**

Very slightly absorbed by H<sub>2</sub>O  
Statements as to solubility in H<sub>2</sub>O vary considerably

(a) *Difficultly inflammable gas*—  
1 vol H<sub>2</sub>O absorbs 0 1122 vol PH<sub>3</sub> (Dyb-kowsky, J B 1866 735)

1 vol H<sub>2</sub>O absorbs 0 125 vol PH<sub>3</sub> (H Davy)

(b) *Easily inflammable gas*—  
1 vol H<sub>2</sub>O absorbs 0 018 vol PH<sub>3</sub> (Gengembre, Crell Ann 1 450)

1 vol H<sub>2</sub>O absorbs 0 0214 vol PH<sub>3</sub> (Henry)

1 vol H<sub>2</sub>O absorbs 0 025 vol PH<sub>3</sub> (Davy)

1 vol H<sub>2</sub>O absorbs 0 125 vol PH<sub>3</sub> (Dalton, Ann Phil 11 7)

1 vol H<sub>2</sub>O absorbs 0 255 vol PH<sub>3</sub> (Raymond, Scher J 5 389)

1 vol H<sub>2</sub>O dissolves 0 26 vols PH<sub>3</sub> at 17° (Stock, Bottger and Lenger, B 1909, 42 2855)

Sol in conc H<sub>2</sub>SO<sub>4</sub> without immediate decomp (Buff, Pogg 16 363)

1 vol 50% H<sub>2</sub>SO<sub>4</sub> dissolves 0 05 vol PH<sub>3</sub> (S B and L)

Absorbed by CuSO<sub>4</sub>+Aq and by Br (Berthelot)

Absorbed rapidly by Cu<sub>2</sub>Cl<sub>2</sub>+Aq with formation of Cu<sub>2</sub>Cl<sub>2</sub>, 2PH<sub>3</sub>, and Cu<sub>2</sub>Cl<sub>2</sub>, 4PH<sub>3</sub> (Ruban, C R 88 581)

1 vol alcohol of 0 85 sp gr absorbs 0 5 vol, 1 vol ether absorbs 2 vols (Graham)

Sol in volatile oils, 1 vol oil of turpentine absorbs 3 25 vols (Graham)

Several varieties of blood absorb PH<sub>3</sub>

**Hydrogen phosphide, liquid, P H<sub>4</sub>**

Insol in H<sub>2</sub>O Apparently sol in alcohol and oil of turpentine, but solution is very quickly decomp (Thénard, A ch (3) 145)

**Hydrogen phosphide, solid, P<sub>4</sub>H**

Insol in H<sub>2</sub>O and alcohol (Leverrier, A ch 60 174)

Insol in all liquids except liquid PH<sub>2</sub> (Thénard, A ch (3) 14 5)

Instantly decomp by HNO<sub>3</sub>, or H SO<sub>4</sub>+Aq Sol with decomp in alcoholic solution of KOH (Thénard)

Somewhat sol in liquid phosphorus (Buck, Dissert 1904)

P<sub>4</sub>H<sub>2</sub> Insol in all solvents (Stock, Bottger and Lenger, B 1909, 42 2851)

P<sub>4</sub>H<sub>6</sub> Sol in liquid hydrogen phosphide and molten P There are no other solvents which appreciably dissolve it Insol in liquid PH<sub>3</sub> (S B and L)

**Hydrogen selenide, H<sub>2</sub>Se**

More sol in H<sub>2</sub>O than hydrogen sulphide (Berzelius)

Solubility coefficient of H<sub>2</sub>Se at t°

t°	Sol Coeff
4	3 77 vols
9 65	3 43
13 2	3 31
22 5	2 70

(Forcrand and Fonzes-Diacon, C R 1902, 134 171)

Sol in cold COCl<sub>2</sub> (Besson, C R 1869, 122 140)

**Hydrogen silicide**

See Silicon hydride

**Hydrogen sulphide, H<sub>2</sub>S**

(a) *Liquid* Dissolves S on warming, which separates on cooling

(b) *Gas*

1 vol H<sub>2</sub>O absorbs 1 08 vols H<sub>2</sub>S at 10° (Henry 1803)

1 vol H<sub>2</sub>O absorbs 2 53 vols H<sub>2</sub>S at 15° (de Sausure Ann Phil 6 340)

1 vol H<sub>2</sub>O absorbs 3 vols H<sub>2</sub>S at 11° (Gay Lussac and Thénard)

1 vol H<sub>2</sub>O absorbs 3 66 vols H<sub>2</sub>S at ord temp (Thompson)

1 vol H<sub>2</sub>O absorbs 2 5 vols H<sub>2</sub>S at ord temp (Dalton)

1 vol H<sub>2</sub>O absorbs 4 3706-0 083687t+0 0005213t<sup>2</sup> vols H<sub>2</sub>S at temperatures between 2 and 43 3° (Bunsen and Schonfeld, A 93 26)

At 0° and about 820 mm pressure, 1 ccm H<sub>2</sub>O absorbs 100 ccm H<sub>2</sub>S, while only about 4 ccm are absorbed at ord pressure (de Forcrand and Villard, C R 106 1402)

1 vol H<sub>2</sub>O at 760 mm pressure and t° absorbs V vols H<sub>2</sub>S, reduced to 0° and 760 mm

t	V	t°	V	t°	V
0	4 3706	14	3 3012	28	2 4357

\* Carius

(McLauchlan)

Sol in methyl acetate (Marchand), ether (Higgins)

Insol in caoutchou

Sol in glycerine in less amount than in  $H_2O$ . If a certain vol of  $H_2O$  dissolves 100 pts  $H_2S$ , the same vol of glycerine (1 pt glycerine + 1 pt  $H_2O$ ) dissolves only 60 pts  $H_2S$ , but the solution is very stable. After standing a year there is no appreciable decomp (Lapage, J Pharm (4) 5 256)

According to Lindo (C N 57 173), the solution in glycerine is no more stable than that in  $H_2O$

Sol in  $CS_2$

Solubility in organic substances + Aq  
1 = value of  $H_2S$  dissolved in organic substance + Aq as determined by titration  
10 = value of  $H_2S$  dissolved in  $H_2O$  as determined by titration  
 $t^\circ = 25^\circ$

Solution	1/10
$N-NH_4C_2H_5O_2$	1.09
$N-C_4H_9O_6$	0.944
$3-N-C_4H_9O_6$	0.858
$N-(NH_2)_2CO$	1.02
pure $C_2H_5(OH)_3$	0.863

(McLauchlan, Z phys Ch 1903, 44 615)

Solubility in acetic acid + Aq at  $25^\circ$

Molecules of $CH_3COOH$ in 100 molecules $CH_3COOH + H_2O$	Molecules of $H_2O$ in 100 molecules $CH_3COOH + H_2O$	1/10
0	100	1.00

67.8	32.2	1.40
81.0	19.0	1.83
98.58	1.42	3.81

(McLauchlan)

Hydrogen persulphide,  $H_2S_2$  or  $H_2S_8$

Decomp by contact with  $H_2O$ , in which it is apparently insol. Sol in ether with subsequent decomp. Sol in  $CS_2$  (Thénard, A ch 48 79)

$H_2S_2$  Quickly decomp by ether, acetic ether, ethyl, or amyl alcohol.  $H_2S$  has no action

Conc  $HCl$ , or  $HC_2H_3O_2 + Aq$  have no action. Sol in a solution of S in  $CS_2$ , and in liquid hydrocarbons

Chloroform dissolves without decomp (Sabatier, C R 100 1346, 1585)

Alkalies, and  $K_2S + Aq$  decomp instantly

Decomp by  $H_2O$ , dil and conc  $HCl$ , conc  $H_2SO_4$ , alkali and alcohol. Sol in alcohol containing  $HCl$  but soon decomp in this solution. Miscible in all proportions and without decomp with benzene, ether and  $CS_2$  (Bloch, B 1908, 41 1977)

Formula is  $H_2S_8$  (Rebs, A 246 356)  
+  $7H_2O$ . Easily decomp by heat (de Forcrand and Villard, C R 106 1402)

Hydrogen trisulphide,  $H_2S_3$

Decomp by  $H_2O$ , dil and conc  $HCl$ , conc  $H_2SO_4$ , alkali and alcohol. Somewhat sol in alcohol containing  $HCl$ , but slowly decomp in this solution. Miscible with ether, benzene and  $CS_2$ , and these solutions are relatively stable (Bloch, B 1908, 41 1974)

**Hydrogen telluride,  $H_2Te$** 

Sl sol in  $H_2O$  Decomp in the air (Ernyei, Z anorg 1900, 25 313)

**Hydrosulphuric acid,  $H_2S$** 

See Hydrogen sulphide

**Hydrosulphurous acid,  $H_2SO_2$** 

See Hyposulphurous acid

**Hydroxylamic acid**
**Calcium hydroxylamate,  $Ca(ONH_2)_2$** 

Very explosive, decomp by  $H_2O$  (Ebler and Schott, J pr 1908, (2) 78 323)

**Zinc hydroxylamate  $Zn(ONH_2)_2$** 

Decomp by  $H_2O$  (Ebler and Schott)

**Zinc hydroxylamate, hydroxylamme,**

Very unstable

Insol in abs alcohol (Ebler and Schott)

**Hydroxylamine,  $NH_2O=NH_2(OH)$** 

Known only in solution

Sol in alcohol (Lossen, J pr 96 462)

Prepared in free state by de Bruyn

Very deliquescent, and sol in  $H_2O$  and alcohol Sl sol or insol in  $CHCl_3$ ,  $C_6H_6$ , ether, or ethyl acetate

Methyl alcohol at 5° dissolves 35%, ethyl alcohol at 15°, 15%, boiling dry ether, 12%, boiling ethyl acetate, 16% (de Bruyn, R t c 11 18)

**Hydroxylamine arsenate,  $AsO_4H_3(NH_2O)_3$** 

Sl sol in cold  $H_2O$ , sol in hot  $H_2O$  from which it can be cryst (Hofmann, A 1899, 307 331)

**Hydroxylamine azouimide**

See Azouimide, hydroxylamine

**Hydroxylamine bromide,  $NH_2OH, HBr$** 

Very sol in  $H_2O$ , insol in ether by which it is pptd from solution in alcohol (Adams, Am Ch J 1902, 28 205)

$2NH_2OH, HBr$  Easily sol in  $H_2O$ , insol in ether and ligroin Sl sol in alcohol (Adams)

**Hydroxylamine mercuric bromide hydroxylamine,  $2NH_2OH, 2HBr, HgBr_2, 2NH_2OH$** 

Decomp by  $H_2O$  and methyl alcohol

Readily decomp by alkalis (Adams)

**Hydroxylamine calcium,  $HO Ca ONH_2$** 

Partially decomp by  $H_2O$  at ordinary temp (Hofmann, Z anorg 1898, 16 464)

**Hydroxylamine chloride, basic,  $NH_2(OH)Cl, NH_2OH$** 

Sol in  $H_2O$  Alcohol precipitates from aqueous solution Insol in ether (Lossen)  $2NH_2(OH)Cl, NH_2OH$  Deliquescent, very sol in  $H_2O$ , less in alcohol, and insol in ether (Lossen)

**Hydroxylamine chloride,  $NH_2(OH)Cl$** 

Not deliquescent Very sol in  $H_2O$  and hot ordinary alcohol Sl sol in absolute alcohol Insol in ether (Lossen)

Sol in 12 pts  $H_2O$  at 17° (Schiff, Z phys Ch 1896, 21 290)

Sp gr of aqueous solution at 17°

% salt	sp gr
40	1 1852
28	1 1260
20	1 0888
14	1 0616
10	1 0437
7	1 0303
5	1 0214
3 5	1 0147

(Schiff, Z phys Ch 1896, 21 290)

100 pts absolute methyl alcohol dissolve 164 pts at 1975°, 100 pts absolute ethyl alcohol dissolve 443 pts at 1975° (de Bruyn, Z phys Ch 10 783)

Somewhat sol in alcohol (Adams, Am Ch J 1902, 28 204)

**Hydroxylamine mercuric chloride,  $NH_2OH, HCl, HgCl_2$** 

Very sol in  $H_2O$  and alcohol Less sol in ether (Adams, Am Ch J 1902, 28 213)

$5(NH_2OH)_2, HCl, 2HgCl_2$  Sol in cold  $H_2O$  alcohol and ether More easily sol in methyl alcohol Sol in  $HCl$  The slightest trace of alkali causes decomp (Adams)

**Hexahydroxylamine cobaltic bromide,**

(Werner, B 1905, 38 897)

**Hexahydroxylamine cobaltic chloride,**

Very stable toward  $HCl$  (Werner, B 1905, 38 895)

**Hexahydroxylamine cobaltic nitrate,**

(Werner)

**Hexahydroxylamine cobaltic sulphate,**

Easily sol in  $H_2O$  (Werner)

**Hydroxylamine columbate,  $CbO_6N_3H_{10}$** 

Explosive Sl sol in  $H_2O$  (Hofmann, Z anorg 1898, 16 473)

**Hydroxylamine dithionate,  $(\text{NH}_2\text{OH})_2$ ,**

Sol in  $\text{H}_2\text{O}$ , decomp on heating the aq solution (Sabanejeff, Z anorg 1898, 17 485)

**Hydroxylamine fluosilicate,  $(\text{NH}_3\text{O})_2$ ,  $\text{H}_2\text{SiF}_6$  +  $2\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$  Nearly insol in methyl and abs ethyl alcohol (Ebler, J pr 1908, (2), 78 338)

**Hydroxylamine fluotitanate,  $(\text{NH}_3\text{O})_2$ ,  $\text{H}_2\text{TiF}_6$** 

Sol in  $\text{H}_2\text{O}$  Sl sol in methyl alcohol (Ebler, J pr 1908, (2) 78 340)

**Hydroxylamine hypophosphite,**

Very sol in  $\text{H}_2\text{O}$  (Sabanejeff, Z anorg 1898, 17 483)

Sol in  $\text{H}_2\text{O}$  and absolute alcohol Insol in ether (Hofmann and Kohlschutter, Z anorg 1898, 16 469)

**Hydroxylamine potassium hypophosphite,**

Easily sol in  $\text{H}_2\text{O}$ , decomp on heating, sol in hot abs alcohol (Hofmann and Kohlschutter, Z anorg 1898, 16 468)

**Hydroxylamine hypophosphate,**

Easily sol in  $\text{H}_2\text{O}$  (Sabanejeff, Z anorg 1898, 17 489)

**Hydroxylamine iodide,  $\text{NH}_2\text{OH}$ , HI**

Hygroscopic, sol in methyl alcohol Very explosive (Wolfenstein and Groll, B 1901, 34 2419)

**Dihydroxylamine iodide,  $(\text{NH}_2\text{OH})_2$ , HI**

Deliquescent More sol in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol than the tri compound Is decomp when recryst from these solvents Insol in ether (Dunstan, Chem Soc 1896, 69 841)

**Trihydroxylamine iodide,  $(\text{NH}_2\text{OH})_3$ , HI**

Deliquescent in moist air Sol in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol Insol in ether (Dunstan)

**Hydroxylamine nitrate,  $\text{NH}_3(\text{OH})\text{NO}_3$** 

Very sol in  $\text{H}_2\text{O}$  and absolute alcohol (Lossen)

**Hydroxylamine orthophosphate,**

Sl sol in cold  $\text{H}_2\text{O}$  (Lossen)

Only sl sol in  $\text{H}_2\text{O}$  (Hofmann, A 1899, 307 330)

Moderately sol in  $\text{H}_2\text{O}$  (Ross, Chem Soc 1906, 90, (2) 19)

**Solubility in  $\text{H}_2\text{O}$** 

1 g of aqueous solution contains at

0°	10°	
0 012	0 015 g	hydroxylamine phosphate,
20°	30°	
0 019	0 027 g	hydroxylamine phosphate,
40°	50°	
0 040	0 055 g	hydroxylamine phosphate,
60°	70°	
0 077	0 102 g	hydroxylamine phosphate,
80°	90°	
0 133	0 168 g	hydroxylamine phosphate

(Adams, Am Ch J 1902, 28 204)

$(\text{NH}_3\text{OH})\text{H}_2\text{PO}_4$  Hygroscopic Aq solution is decomp on heating (Sabanejeff, B 1897, 30 287)

**Hydroxylamine phosphite,  $(\text{NH}_3\text{OH})_2\text{HPO}_3$** 

Sol in  $\text{H}_2\text{O}$  and absolute alcohol (Hofmann and Kohlschutter, Z anorg 1898, 16 467)

$(\text{NH}_3\text{OH})\text{H}_2\text{PO}_3$  Sol in  $\text{H}_2\text{O}$  Insol in alcohol (Sabanejeff, Chem Soc 1900, 78, (2), 14)

**Hydroxylamine phosphite ammonia,**

Sol in  $\text{H}_2\text{O}$  (Sabanejeff, Chem Soc 1900, 78, (2) 14)

**Hydroxylamine sodium,  $\text{NaONH}_2$** 

Very hygroscopic (de Bruyn, R t c 1892, 11 18)

**Hydroxylamine sulphate,  $(\text{NH}_3\text{OH})_2\text{SO}_4$** 

Easily sol in  $\text{H}_2\text{O}$  Precipitated from concentrated aqueous solution by alcohol (Lossen)

Sol in conc  $\text{NH}_4\text{OH}$  + Aq Insol in alcohol and ether (Preibisch, J pr 1873, (2) 7 480)

Not deliquescent Sol in  $\frac{3}{4}$  of its wt of  $\text{H}_2\text{O}$  at 20° (Divers and Haga, Chem Soc 1896, 69 1665)

1 g of aqueous solution contains at

-8°	0°	+10°	
0 307	0 329	0 366 g	hydroxylamine sulphate,
20°	30°	40°	
0 413	0 441	0 482 g	hydroxylamine sulphate,
50°	60°	90°	
0 522	0 560	0 685 g	hydroxylamine sulphate

(Adams, Am Ch J 1902, 28 203)

Dry hydroxylamine sulphate is insol in abs and almost insol in 95% alcohol (Adams)

For double salts, see under sulphuric acid  $\text{NH}_2\text{OH}$ ,  $\text{H}_2\text{SO}_4$  Deliquescent Sol in  $\text{H}_2\text{O}$  (Divers, Chem Soc 1895, 67 226)

**Hydroxylamine tungstate,  $4\text{NH}_2\text{OH}$ ,  $3\text{WO}_3$  +  $3\text{H}_2\text{O}$** 

Moderately sol in  $\text{H}_2\text{O}$  (Allen and Gottschalk, Am Ch J 1902, 27 338)

**Hydroxylamine uranate**,  $\text{UO}_4(\text{NH}_3\text{O})_2 + \text{H}_2\text{O}$

Decomp by heat (Hofmann, Z anorg 1897, 15 78)

**Hydroxylamine uranate ammonia**,

Decomp by  $\text{H}_2\text{O}$  (Hofmann, Z anorg 1897, 15 79)

**Hydroxylamine metavanadate**,  $\text{VO}_3\text{N}_5\text{H}_{15}$

Decomp by moisture (Hofmann, Z anorg 1898, 16 472)

**Hydroxylamine metavanadate ammonia**,

Easily decomp by  $\text{H}_2\text{O}$  and  $\text{HCl}$  (Hofmann, Z anorg 1898, 16 471)

**Hydroxylamine monosulphonic acid**,

"Sulphazidic acid" of Fremy

"Sulphhydroxylamic acid" of Claus

Sol in  $\text{H}_2\text{O}$  Slowly decomp on boiling (Raschig, A 241 161)

**Ammonium hydroxylamine monosulphonate**,

(Sabanéjef, Z anorg 1898, 17 491)

**Monobarium** — — —,  $(\text{HONHSO}_3)_2\text{Ba} + \text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 55 760)

**Dibarium** — — —,  $\text{Ba}(\text{HONSO}_3)_2\text{Ba} + \text{H}_2\text{O}$

Nearly insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$  (Divers and Haga, Chem Soc 55 760)

**Potassium** — — —,  $\text{HONH}(\text{SO}_3\text{K})$

"Potassium sulphazidic acid" of Claus

Sol in cold  $\text{H}_2\text{O}$  Easily sol in hot  $\text{H}_2\text{O}$  without decomp Insol in alcohol (Raschig, A 241 161)

**Hydroxylamine disulphonic acid**,

"Disulphhydroazotic acid" of Claus

"Sulphazotic acid" of Fremy

Not known in free state (Raschig, A 241 161)

**Barium hydroxylamine disulphonate**,

Practically insol in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Divers, Chem Soc 1894, 65 559)

**Barium potassium** — — —

Above salts are all ppts (Divers, Chem Soc 1894, 65 561)

**Barium sodium hydroxylamine disulphonate**,

Above salts are ppts (Divers)

**Potassium** — — —,  $\text{HON}(\text{SO}_3\text{K})_2 + 2\text{H}_2\text{O}$

"Potassium disulphhydroxazotate" of Claus (A 158 75) Insol in cold  $\text{H}_2\text{O}$

Very unstable Very difficultly sol in  $\text{H}_2\text{O}$ , more easily in dil  $\text{KOH} + \text{Aq}$  (Raschig, A 241 161)

$\text{HON}(\text{SO}_3\text{K})_2, \text{KON}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$  True composition of potassium sulphazotate of Fremy (Divers and Haga, Chem Soc 1900, 77 432)

**Potassium sodium** — — —

$3\text{K}_2\text{NS}_2\text{O}_7, 2\text{Na}_3\text{NS}_2\text{O}_7 + 2\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

$6\text{K}_2\text{NS}_2\text{O}_7, \text{Na}_3\text{NS}_2\text{O}_7, \text{H}_3\text{NS}_2\text{O}_7 + 20\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

$\text{K}_2\text{Na}_{11}\text{H}_3(\text{NS}_2\text{O}_7)_7 + 5\text{H}_2\text{O}$  Less sol in  $\text{H}_2\text{O}$  than the others

$\text{K}_{15}\text{Na}_5\text{H}_4(\text{NS}_2\text{O}_7)_8 + 9\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$

$\text{KNa}_4\text{H}(\text{NS}_2\text{O}_7)_2 + \text{H}_2\text{O}$  Readily sol in  $\text{H}_2\text{O}$

$\text{K}_6\text{NaH}_2(\text{NS}_2\text{O}_7)_3 + 2\text{H}_2\text{O}$  Moderately sol in  $\text{H}_2\text{O}$

$\text{KNaHNS}_2\text{O}_7 + 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Divers, Chem Soc 1894, 65 552)

**Potassium strontium** — — —

Ppt (Divers)

**Potassium hydroxylamine disulphonate nitrite**,  $\text{HON}(\text{SO}_3\text{K})_2, \text{KNO}_2$

Very sl in  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 1900, 77 433)

$\text{K}_5\text{H}(\text{NS}_2\text{O}_7)_2, 3\text{KNO}_2 + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Divers and Haga)

$2\text{KON}(\text{SO}_3\text{K})_2, \text{KNO}_2 + 4\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  which decomp it into its constituent salts (Divers and Haga)

$+ 6\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  which decomp it into its constituent salts (Divers and Haga)

$2\text{K}_5\text{H}(\text{NS}_2\text{O}_7), 7\text{KNO}_2 + 3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Divers and Haga)

$3\text{K}_5\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2$  Decomp by  $\text{H}_2\text{O}$  (Divers and Haga)

**Potassium hydroxylamine disulphonate sodium chloride**,  $5\text{K}_2\text{HNS}_2\text{O}_7, 8\text{NaCl} + 3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Divers, Chem Soc 1894, 65 551)

**Sodium hydroxylamine disulphonate,**

Sol in somewhat more than its own wt of  $\text{H}_2\text{O}$  at  $14^\circ$  (Divers, Chem Soc 1894, 65 546)

$\text{Na}_2\text{HNS}_2\text{O}_7$ ,  $2\text{Na}_2\text{NS}_2\text{O}_7 + 3\text{H}_2\text{O}$  Sol in less than 1.5 pts  $\text{H}_2\text{O}$  at  $14^\circ$  (Divers)

**Hydroxylamine isomonosulphonic acid,**

Very hygroscopic Sol in water, sol in alcohol (Sommer, B 1914, 47 1226)

[Compare Raschig, A 1887, 241 161]

**Hydroxylamine isodisulphonic acid****Ammonium hydroxylamine isodisulphonate,**

3 pts are sol in 2 pts  $\text{H}_2\text{O}$  at  $18^\circ$  Apt to form supersat solutions (Haga, Chem Soc 1906, 89 246)

**Dipotassium ———,  $\text{K}_2\text{HS}_2\text{O}_7\text{N}$** 

Only sl sol in cold  $\text{H}_2\text{O}$  Easily sol in boiling  $\text{H}_2\text{O}$  Decomp by hot dil HCl (Raschig, B 1906, 39 246)

6.44 pts are sol in 100 pts  $\text{H}_2\text{O}$  at  $16.4^\circ$

7.18 " " " " 100 "  $\text{H}_2\text{O}$  "  $17.8^\circ$

8.05 " " " " 100 "  $\text{H}_2\text{O}$  "  $20^\circ$

(Haga, Chem Soc 1906, 39 243)

**Tripotassium ———,  $(\text{SO}_3\text{K})\text{ONK}(\text{SO}_3\text{K}) + 2\text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$ , ppt by alcohol (Haga)

**Disodium ———,  $(\text{SO}_3\text{Na})\text{ONH}(\text{SO}_3\text{Na})$** 

Very sol in  $\text{H}_2\text{O}$ , insol in alcohol by which it is ppt from aqueous solution (Haga)

**Trisodium ———,  $(\text{SO}_3\text{Na})\text{ONNa}(\text{SO}_3\text{Na}) + 2\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$ , ppt by alcohol (Haga)  
 $+ 3\text{H}_2\text{O}$  Sol in 1.3 pts  $\text{H}_2\text{O}$  at  $20^\circ$  Less sol in  $\text{NaOH} + \text{Aq}$  (Divers, Chem Soc 1894, 65 546)

**Hydroxylamine trisulphonic acid****Ammonium hydroxylamine trisulphonate,**

Sol in 0.61 pts  $\text{H}_2\text{O}$  at  $16^\circ$  (Haga, Chem Soc 1904, 85 84)

**Potassium ———,  $2(\text{SO}_3\text{K})\text{ON}(\text{SO}_3\text{K})_2 + 3\text{H}_2\text{O}$** 

1 pt is sol in 25.37 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Haga)

**Sodium ———,  $(\text{SO}_3\text{Na})\text{ON}(\text{SO}_3\text{Na})_2 + 2\text{H}_2\text{O}$** 

Sol in 2.84 pts  $\text{H}_2\text{O}$  at  $21.5^\circ$

**Dihydroxylamine sulphonic acid,**

"Sulphazinous acid" of Fremy  
 Known only in its salts (Raschig, A 241 161)

**Potassium dihydroxylamine sulphonate,**

Not obtained in pure state, forms basic salt  $\text{KO} \cdot \text{HO} \cdot \text{NSO}_3\text{K}$ , which is quite sol in  $\text{H}_2\text{O}$ , and corresponds to "sulfazite de potasse" of Fremy (A ch (3) 15 421)

Sol in  $\text{H}_2\text{O}$ , insol in alcohol and ether (Fremy)

**Hydroxylodoplatindiamine sulphate,**

Very sl sol, even in boiling  $\text{H}_2\text{O}$  (Carl-gren, Sv V A F 47 312)

**Hydroxylonitratoplatindiamine nitrate,**

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$   
 Very sl sol in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$  (Cleve)

**—— pyrophosphate,**

Very sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Hydroxyloplatinamine hydroxide,**

Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids, even  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  Not decomp by boiling  $\text{KOH} + \text{Aq}$  (Gerhardt, Compt Chem 1849 490)

**Hydroxyloplatinamine nitrate,**

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$ , not attacked by cold  $\text{HCl} + \text{Aq}$  (Cleve)

**—— oxalate,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{C}_2\text{O}_4 + \text{H}_2\text{O}$** 

Sol in hot  $\text{H}_2\text{O}$

**—— sulphate,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{SO}_4 + \text{H}_2\text{O}$** 

Difficultly sol in  $\text{H}_2\text{O}$  (Cleve)

**Hydroxyloplatinamine bromide,**

Sl sol, even in boiling  $\text{H}_2\text{O}$  (Carl-gren, Sv V A F 47 320)

**—— chloride,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{Cl}_2$** 

Sol in 206 pts cold, and 49 pts boiling  $\text{H}_2\text{O}$  (Carl-gren, Sv V A F 47 316)

**—— chromate,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{Cr}_2\text{O}_7$** 

Very sl sol in cold or hot  $\text{H}_2\text{O}$  (Carl-gren, Sv V A F 47 319)

**Hydroxyloplatindiamine iodide,**

Sl sol in hot or cold  $\text{H}_2\text{O}$  (Carlgrén)

— **nitrate,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_3)_2$ 

Sl sol in cold, moderately sol in hot  $\text{H}_2\text{O}$  (Gerhardt, A 76 315)

Sol in 343 pts cold, and 38 pts boiling  $\text{H}_2\text{O}$  (Carlgrén, Sv V A F 47 318)

— **nitrite,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_2)_2$ 

Easily sol in  $\text{H}_2\text{O}$  (Carlgrén)

— **sulphate,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{SO}_4$ 

Very sl sol in boiling  $\text{H}_2\text{O}$  (Cleve)  
+  $4\text{H}_2\text{O}$  Efflorescent (Carlgrén, Sv V A F 47 313)

**Hydroxyloplatindiamine nitrate,**

Very easily sol in  $\text{H}_2\text{O}$  (Cleve)

**Hydroxyloplatinsmidiamine nitrate,**

Easily sol in  $\text{H}_2\text{O}$  (Cleve)

— **sulphate,**

Sol in hot  $\text{H}_2\text{O}$

**Hydroxylodiplatindiamine chloride,**

Extremely sl sol in  $\text{H}_2\text{O}$

— **dichromate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{Cr}_2\text{O}_7)_2$ 

Ppt (Cleve)

— **nitrate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{NO}_3)_4$ 

Very sl sol in cold, more easily in hot  $\text{H}_2\text{O}$  (Cleve)

— **phosphate,**  $(\text{OH}) \text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{PO}_4\text{H})_2$ 

Ppt

— **sulphate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_6)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ 

Ppt Nearly insol in  $\text{H}_2\text{O}$

**Hydroxylsulphatoplatindiamine**

Easily sol in  $\text{H}_2\text{O}$  (Cleve)

— **chloride,**  $(\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2\text{Cl} \begin{array}{c} \text{SO}_4 \\ \text{SO}_4 \end{array} + 2\text{H}_2\text{O}$ 

Moderately sol in cold, very sol in hot  $\text{H}_2\text{O}$

**Hydroxylsulphatoplatindiamine chloroplatinate,**

Ppt

— **chromate,**

Sl sol in  $\text{H}_2\text{O}$

— **dichromate,**  $\left[ (\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2 \begin{array}{c} \text{SO}_4 \\ \text{SO}_4 \end{array} \right]_2 \text{Cr}_2\text{O}_7$ 

Sl sol in  $\text{H}_2\text{O}$

— **nitrate,**  $(\text{OH})\text{Pt}(\text{N}_2\text{H}_6)_2 \text{NO}_3 \begin{array}{c} \text{SO}_4 \\ \text{SO}_4 \end{array}$ 

Sol in hot  $\text{H}_2\text{O}$

— **sulphate,**

Sl sol in  $\text{H}_2\text{O}$  (Cleve)

**Hypoantimonic acid****Calcium hypoantimonate (?)**,  $\text{Ca}_2\text{Sb}_3\text{O}_8$ 

Min Romeite Insol in acids

**Potassium hypoantimonate,**  $\text{K}_2\text{Sb}_2\text{O}_5$ 

Sol in hot  $\text{H}_2\text{O}$  Sol in 425 pts boiling  $\text{H}_2\text{O}$  (Brandes) Sol in boiling  $\text{KOH} + \text{Aq}$  (Berzelius)

$\text{K}_2\text{Sb}_4\text{O}_9$  Ppt

**Hypoboric acid****Sodium hypoborate,**  $\text{NaOBH}_3$ 

Deliquescent, decomp in aq solution at room temp Decomp by acids Sl sol in alcohol with decomp (Stock, B 1914, 47 821)

**Hypobromous acid, HBrO**

Known only in aqueous solution

Solution containing 6.21 pts Br as  $\text{HBrO}$  in 100 ccm  $\text{H}_2\text{O}$  decomposes at  $30^\circ$  If dilute solution is distilled in vacuo, an acid containing 0.736 pt Br as  $\text{HBrO}$  in 100 ccm is obtained at first, but the distillate slowly grows weaker Dil solution, stable at ordinary temp, decomp by heating over  $60^\circ$  (Dancer A 125 237)

**Barium hypobromite**

Known only in solution

**Calcium hypobromite bromide**

Deliquescent, and sol in  $H_2O$  with partial decomp (Berzelius)

**Potassium hypobromite, KBrO**

Known only in solution

**Sodium hypobromite**

Known only in solution

**Strontium hypobromite**

Known only in solution

**Hypochlorous acid,  $HClO$** 

Miscible with  $H_2O$ . Decomposes at  $0^\circ$  in the dark, more rapidly at higher temp or in light. The stronger the solution the more rapid the decomposition. Moderately strong acid may be distilled without any considerable decomp, a stronger acid distilling over at first, and afterwards an acid weaker than the original acid. Very conc or very dil acids decomp by distillation.

**Ammonium hypochlorite**

Known only in aqueous solution, which decomposes at once

**Barium hypochlorite**

Known only in solution

**Calcium hypochlorite,  $Ca(OCl)_2 + 4H_2O$** 

Deliquescent, and sol in  $H_2O$  (Kinzgett, Chem Soc (2) 13 404)

**Calcium hypochlorite chloride, etc (bleaching powder),  $Ca(OCl)_2$ ,  $CaCl_2$ ,  $Ca(OH)_2 + H_2O$** 

Not deliquescent. Sol in  $H_2O$ . Alcohol does not dissolve out  $CaCl_2$ . Sol in 20 pts  $H_2O$  with a slight residue.

Correct formula is  $CaOCl_2$  (Lunge and Schappi, Kraut, A 214 354),  $Ca \overset{OCl}{OH}$  (Stahlschmidt, B 8 869),  $CaOCl$ ,  $Cl$  (Odling)

$CaCl_2$  is dissolved out by alcohol. Formula =  $2Ca \overset{OH}{OCl} CaCl + 2H_2O$  (Dreyfuss, Bull Soc (2) 41 600)

**Didymium hypochlorite,  $D_1(OCl)_3$** 

Difficultly sol in  $H_2O$ . Easily sol in acids (Frerichs and Smith, A 191 348)

**Lanthanum hypochlorite,  $La(OCl)_3$** 

Easily sol in  $H_2O$  (Frerichs and Smith)

**Lithium hypochlorite,  $LiClO$** 

Known only in solution (Kraut, A 1882, 214 356)

**Magnesium hypochlorite**

Known only in solution

**Potassium hypochlorite,  $KClO$** 

Known only in solution

**Silver hypochlorite,  $AgClO$** 

Very sol in  $H_2O$ , and decomp very quickly (Stas, Acad R de Belg 35 103)

**Sodium hypochlorite,  $NaClO$** 

Known only in solution

**Hypoiodic acid,  $I_2O_4$** 

See Iodine tetroxide

**Hypoiodous acid,  $HOI$** 

Known only in solution which decomp on standing (Taylor, C N 1897, 76 97)

**Calcium hypoiodite iodide,  $Ca(OI)_2$ ,  $CaI_2$** 

Not very unstable (Lunge and Shoch, B 15 1883)

**Hyponitric acid,  $N_2O_4$** 

See Nitrogen tetroxide

**Hyponitrous acid,  $HNO$ , or better  $H_2N_2O_2$** 

Known only in aqueous solution. Solution is quite stable (van der Plaats, B 10 1507)

Very deliquescent, sol in  $H_2O$  and alcohol, sol in ether, chloroform, benzene, sl sol in petroleum ether (Hantzsch and Kaufmann, A 1896, 292 323)

**Ammonium hyponitrite,  $(NH_4)_2N_2O_2$** 

Sol in  $H_2O$  and in alcohol (Jackson, C N 1893, 68 266)

**Ammonium hydrogen hyponitrite,  $NH_4.HN.O_2$** 

Easily sol in  $H_2O$ . The solid salt slowly decomp at ord temp into ammonia,  $H_2O$  and  $N_2O$  (Hantzsch and Kaufmann, A 1896, 292 328)

**Barium hyponitrite,  $Ba.N_2O_2$** 

Nearly insol in, but gradually decomp by  $H_2O$ . Sol in conc acids with evolution of  $N_2O$ , but sol in dil  $HCl_2H_3O_2 + Aq$  without decomp (Zorn, B 15 1007)

+ $4H_2O$  Sl sol in  $H_2O$ , insol in alcohol and ether (Kirschner, Z anorg 1898, 16 424)

+ $zH_2O$  Efflorescent (Maquenne, C R 108 1303)

**Barium hydrogen hyponitrite,  $BaH_2(N_2O_2)_2$** 

Easily sol in  $H_2O$  (Zorn, B 1882, 15 1011)

**Calcium hyponitrite,  $Ca.N_2O_2 + 4H_2O$** 

Nearly insol in  $H_2O$ , easily sol in dil acids (Maquenne, C R 108 1303)

Sl sol in  $H_2O$ , insol in alcohol (Kirschner, Z anorg 1898, 16 426)

**Cupric hyponitrite, basic,  $\text{CuN}_2\text{O}_2$ ,  $\text{Cu}(\text{OH})_2$** 

Insol in  $\text{H}_2\text{O}$ , not decomp by hot  $\text{H}_2\text{O}$   
Sol in dil acids and in ammonia. Decomp  
by  $\text{NaOH}$  (Divers, Chem Soc 1899, **75** 121)  
Insol in  $\text{H}_2\text{O}$  Sol in dil acids and in  
 $\text{NH}_4\text{OH} + \text{Aq}$  (Kirschner, Z anorg 1898,  
**16** 430)

**Cuprous hyponitrite,  $\text{Cu}_2\text{N}_2\text{O}_2 + 2\text{H}_2\text{O}$** 

Ppt (Kolotow, C C **1891**, I 1859)  
Cannot be formed (Divers, Chem Soc  
1899, **75** 121)

**Lead hyponitrite, basic,  $\text{PbN}_2\text{O}_2$ ,  $\text{PbO}$** 

Insol in  $\text{H}_2\text{O}$  Sol in dil acids from which  
it may be pptd by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$  (Kirschner, Z anorg 1898, **16** 430)

**Lead hyponitrite,  $\text{PbN}_2\text{O}_2$** 

Insol in  $\text{H}_2\text{O}$ , sol in dil acids from which  
it may be pptd by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_3 + \text{Aq}$   
(Kirschner)

**Mercuric hyponitrite, basic,  $3\text{HgO}$ ,  $\text{HgN}_2\text{O}_2 + 3\text{H}_2\text{O}$** 

Ppt Sl sol even in boiling dil  $\text{HNO}_3$   
Scarcely sol in conc, very sol in warm dil  
 $\text{HCl}$  (Ray, Chem Soc 1897, **71** 349)

**Mercurous hyponitrite,  $\text{Hg}_2\text{N}_2\text{O}_2$** 

Sol in dil  $\text{HNO}_3$  with slow decomp (Ray,  
Chem Soc 1907, **91** 1404)

**Mercuric hyponitrite,  $\text{HgN}_2\text{O}_2$** 

Sol in  $\text{HCl}$ , and in  $\text{NaCl} + \text{Aq}$   
Sl sol in very dil alkali (Divers, Chem  
Soc 1899, **75** 119)

**Potassium hyponitrite,  $\text{K}_2\text{N}_2\text{O}_2$** 

Sol in  $\text{H}_2\text{O}$  (van der Plaats)  
Stable when dry  
Sol in 90% alcohol, and sl sol in abs  
alcohol (Divers, Chem Soc 1899, **75** 103)

**Silver hyponitrite (nitrosyl silver),  
 $\text{Ag}_2\text{N}_2\text{O}_2$** 

Insol in  $\text{H}_2\text{O}$  Easily sol in dil  $\text{HNO}_3 +$   
 $\text{Aq}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$

Decomp by  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{S}$ , and boiling  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (van der Plaats)

Insol in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , sol in  $\text{NH}_4\text{OH}$   
 $+ \text{Aq}$  (Divers, C N **23** 206)

Sol in dil  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  and in conc  
 $\text{NH}_4\text{OH} + \text{Aq}$ , decomp by  $\text{HCl}$  (Kirsch-  
ner, Z anorg 1898, **16** 431)

**Sodium hyponitrite,  $\text{Na}_2\text{N}_2\text{O}_2 + 6\text{H}_2\text{O}$** 

Sol in  $\text{H}_2\text{O}$  (van der Plaats)

**Strontium hyponitrite,  $\text{SrN}_2\text{O}_2$** 

Easily sol in  $\text{H}_2\text{O}$  (Roederer, Bull  
Soc 1906, (3) **35** 715)  
 $+ 5\text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{O}$ , easily sol

in dil acids (Maquenne, C R **108** 1303)

Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol (Kirsch-  
ner, Z anorg 1898, **16** 426)

**Hypophosphomolybdic acid,  $\text{Mo}_5\text{O}_8$ ,  
 $7\text{H}_2\text{PO}_2 + 3\text{H}_2\text{O}$** 

Very sl sol in cold  $\text{H}_2\text{O}$  Scarcely sol  
in cold dil  $\text{H}_2\text{SO}_4$  Sol in cold conc  $\text{H}_2\text{SO}_4$   
Sol in warm conc  $\text{HCl}$  Warm  $\text{HNO}_3$   
oxidizes forming clear solution (Mawrow,  
Z anorg 1901, **28** 164)

**Ammonium hypophosphomolybdate,  
 $2(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_3\text{PO}_2$ ,  $8\text{MoO}_3 + 2\text{H}_2\text{O}$** 

Not very sol in cold  $\text{H}_2\text{O}$ , readily in hot  
 $\text{H}_2\text{O}$  (Gibbs, Am Ch J **3** 402)

**Hypophosphoric acid,  $\text{H}_4\text{P}_2\text{O}_6$** 

Very deliquescent, and sol in the least  
amount of  $\text{H}_2\text{O}$  (Joly, C R **101** 1058)  
100 cc  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 4 1%  $\text{P}_2\text{O}_4$   
has sp gr = 1 036

100 cc  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 12 3%  
 $\text{P}_2\text{O}_4$  has sp gr = 1 122

(Salzer, A 1878, **194** 28)

$+ \text{H}_2\text{O}$  (Sanger, A **232** 14)

Does not exist (Joly)

$+ 2\text{H}_2\text{O}$  Appears to be the only stable  
hydrate between  $0^\circ$  and  $60^\circ$

Sanger's hydrate,  $\text{H}_4\text{P}_2\text{O}_6 + \text{H}_2\text{O}$ , and  
Joly's anhydride could not be obtained  
(Rosenheim, B 1908, **41** 2711)

**Aluminum hypophosphate,  $\text{Al}_4(\text{P}_2\text{O}_6)_3 +$   
 $23\text{H}_2\text{O}$** 

Easily sol in mineral acids Sol in  $\text{Na}_4\text{P}_2\text{O}_6$   
 $+ \text{Aq}$  (Palm, Dissertation, Rostock, **1890**)

**Ammonium hypophosphate,  $(\text{NH}_4)_4\text{P}_2\text{O}_6 +$   
 $\text{H}_2\text{O}$** 

Sol in 30 pts  $\text{H}_2\text{O}$  (Salzer, A **194** 32)

**Ammonium hydrogen hypophosphate,  
 $(\text{NH}_4)_2\text{H}_2\text{P}_2\text{O}_6$** 

Sol in 14 pts cold, and 4 pts boiling  $\text{H}_2\text{O}$   
(Salzer, A **194** 32)

**Ammonium trihydrogen hypophosphate,  
 $\text{NH}_4\text{H}_3\text{P}_2\text{O}_6$** 

Sol in  $\text{H}_2\text{O}$  (Salzer, A **211** 1)

**Ammonium magnesium hypophosphate,  
 $(\text{NH}_4)_2\text{MgP}_2\text{O}_6 + 6\text{H}_2\text{O}$** 

Precipitate (Salzer, A **232** 114)

**Barium hypophosphate,  $\text{Ba}_2\text{P}_2\text{O}_6$** 

Very slightly sol, but not wholly insol in  
 $\text{H}_2\text{O}$  Very slightly sol in acetic acid, but  
more soluble in hydrochloric, and hypophos-  
phoric acids (Salzer, A **194** 34)

**Barium hydrogen hypophosphate,  $\text{BaH}_2\text{P}_2\text{O}_6$   
 $+ 2\text{H}_2\text{O}$** 

Soluble in about 1000 pts  $\text{H}_2\text{O}$  Solution  
decomposes by heating (Salzer, A **194** 34)

**Bismuth hypophosphate**,  $\text{Bi}_4(\text{P}_2\text{O}_6)_3 + 8\frac{1}{2}\text{H}_2\text{O}$

Completely sol in  $\text{HCl} + \text{Aq}$ , also in warm  $\text{HNO}_3 + \text{Aq}$  Insol in boiling dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Sl sol by long boiling with conc  $\text{H}_2\text{SO}_4$  (Palm, Rostock, 1890)

**Cadmium hypophosphate**,  $\text{Cd}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in dil acids (Draue, B 21 3403)

**Cadmium potassium hydrogen hypophosphate**,  $\text{CdK}_3(\text{H}_2\text{P}_2\text{O}_6)_2 + 2\frac{1}{2}\text{H}_2\text{O}$

(Bausa, Z anorg 1894, 6 147)

**Cadmium sodium hypophosphate**,  $\text{CdNa}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp thereby Sol in dil acids (Draue)

**Calcium hypophosphate**,  $\text{Ca}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , difficultly sol in  $\text{HC}_2\text{H}_3\text{O}_2$ , easily sol in  $\text{H}_4\text{P}_2\text{O}_6$ , or  $\text{HCl} + \text{Aq}$  (Salzer, A 194 36)

**Calcium hydrogen hypophosphate**,  $\text{CaH}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$

Sol in 60 pts  $\text{H}_2\text{O}$  (Salzer, A 232 114)

**Chromic hypophosphate**,  $\text{Cr}_4(\text{P}_2\text{O}_6)_2 + 34\text{H}_2\text{O}$

Sol in  $\text{HCl} + \text{Aq}$  on sl warming, also in  $\text{HNO}_3 + \text{Aq}$  Not completely sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but completely sol in conc (Palm, Dissertation, Rostock, 1890)

**Cobaltous hypophosphate**,  $\text{Co}_2\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Easily sol in acids (Draue, B 21 3403)

**Cobaltous potassium hypophosphate**,  $\text{CoK}_2\text{P}_2\text{O}_6 + 5\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 156)

**Cobaltous potassium hydrogen hypophosphate**,  $\text{CoH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$

**Cobaltous sodium hypophosphate**,  $\text{CoNa}_2\text{P}_2\text{O}_6 + 1\frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp thereby Sol in dil acids (Draue, B 21 3403)

**Cupric hypophosphate**,  $\text{Cu}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in dil acids (Draue, B 21 3403)

Ppt (Bausa, Z anorg 1894, 6 145)

**Cupric potassium hydrogen hypophosphate**,  $\text{CuH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 152)

**Glucinum hypophosphate**,  $\text{Gl}_2\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Moderately sol in all mineral acids (Palm, Rostock, 1890)  $+ 3\text{H}_2\text{O}$  (Rammelsberg)

**Iron (ferrous) hypophosphate**,  $\text{Fe}_2\text{P}_2\text{O}_6 + 4\frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in cold  $\text{HCl} + \text{Aq}$  Decomp by hot  $\text{HNO}_3 + \text{Aq}$  into  $\text{Fe}_4(\text{P}_2\text{O}_6)_3$  Insol in  $\text{HNO}_3 + \text{Aq}$  Insol in boiling dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Somewhat sol in cold  $\text{H}_2\text{SO}_4$ , but a ppt separates out on heating (Palm, Rostock, 1890)

**Iron (ferric) hypophosphate**,  $\text{Fe}_4(\text{P}_2\text{O}_6)_3 + 20\text{H}_2\text{O}$

Easily sol in  $\text{HCl} + \text{Aq}$  Wholly insol in  $\text{HNO}_3$ , and dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Completely sol in conc  $\text{H}_2\text{SO}_4$  by warming a short time, but a ppt separates out on boiling (Palm)

**Lead hypophosphate**,  $\text{Pb}_2\text{P}_2\text{O}_6$

Insol in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , sol in dil  $\text{HNO}_3 + \text{Aq}$  (Salzer)

**Lithium hypophosphate**,  $\text{Li}_4\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$

Very sl sol in  $\text{H}_2\text{O}$  (Salzer, A 194 28)

Sol in 120 pts  $\text{H}_2\text{O}$  at ord temp (Rammelsberg, J pr (2) 45 153)

$\text{Li}_2\text{H}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$  Deliquescent (Rammelsberg)

**Magnesium hypophosphate**,  $\text{Mg}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$

Sol in 15,000 pts  $\text{H}_2\text{O}$ , sl sol in acetic, easily in hypophosphoric, or mineral acids (Salzer, A 232 114)

$+ 24\text{H}_2\text{O}$  (Rammelsberg)

**Magnesium hydrogen hypophosphate**,

$\text{MgH}_2\text{P}_2\text{O}_6 + 4\text{H}_2\text{O}$

Sol in 200 pts  $\text{H}_2\text{O}$  (Salzer, A 232 114)

**Manganese hypophosphate**,  $\text{Mn}_2\text{P}_2\text{O}_6 + 2\frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sol in mineral acids, insol in acetic acid (Palm, Dissertation, Rostock, 1890)

**Manganous potassium hydrogen hypophosphate**,  $\text{MnH}_2\text{P}_2\text{O}_6, \text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 150)

**Manganous sodium hypophosphate**,  $\text{Mn}_2\text{P}_2\text{O}_6, \text{Na}_4\text{P}_2\text{O}_6 + 11\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sol in mineral acids (Palm)

**Nickel hypophosphate**,  $\text{Ni}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in dil acids (Draue, B 21 3401)

**Nickel potassium hypophosphate**,

$\text{NiK}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 155)

**Nickel potassium hydrogen hypophosphate**,

$\text{NiH}_2\text{P}_2\text{O}_6, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 144)

**Nickel sodium hypophosphate**,  $\text{NiNa}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp thereby Easily sol in dil acids (Draue)

**Potassium hypophosphate**,  $\text{K}_4\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$

Sol in  $\frac{1}{4}$  pt  $\text{H}_2\text{O}$ , insol in alcohol (Salzer, A 211 1)

**Potassium hydrogen hypophosphate**,  $\text{K}_3\text{HP}_2\text{O}_6 + 3\text{H}_2\text{O}$

Sol in  $\frac{1}{2}$  pt  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Potassium dihydrogen hypophosphate**,  $\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$ , and  $+2\text{H}_2\text{O}$

Sol in 3 pts cold, and 1 pt boiling  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Potassium trihydrogen hypophosphate**,  $\text{KH}_3\text{P}_2\text{O}_6$

Sol in  $1\frac{1}{2}$  pts cold, and  $\frac{1}{2}$  pt hot  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Potassium pentahydrogen dihypophosphate**,  $\text{K}_3\text{H}(\text{P}_2\text{O}_6)_2 + 2\text{H}_2\text{O}$

Sol in  $2\frac{1}{2}$  pts cold, and  $\frac{4}{5}$  pt boiling  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Potassium sodium hypophosphate**,  $\text{Na}_2\text{K}_2\text{P}_2\text{O}_6 + 9\text{H}_2\text{O}$

Sol in about 25 pts cold, and 3 pts hot  $\text{H}_2\text{O}$  (Bausa, Z anorg 1894, 6 158)

**Potassium zinc hypophosphate**,  $\text{ZnH}_2\text{P}_2\text{O}_6 \cdot 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$

Ppt (Bausa, Z anorg 1894, 6 148)

**Silver hypophosphate**,  $\text{Ag}_4\text{P}_2\text{O}_6$

Sl sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  Very sl sol in  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$  (Salzer, A 232 114)

**Sodium hypophosphate**,  $\text{Na}_4\text{P}_2\text{O}_6 + 10\text{H}_2\text{O}$

Sol in about 30 pts cold, much more easily in hot  $\text{H}_2\text{O}$  (Salzer)

**Sodium hydrogen hypophosphate**,  $\text{Na}_3\text{HP}_2\text{O}_6 + 9\text{H}_2\text{O}$

Sol in 22 pts  $\text{H}_2\text{O}$  (Salzer)

**Sodium dihydrogen hypophosphate**,  $\text{Na}_2\text{H}(\text{P}_2\text{O}_6) + 6\text{H}_2\text{O}$

Sol in 45 pts cold, and 5 pts boiling  $\text{H}_2\text{O}$  More sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Insol in alcohol (Salzer, A 187 331)

**Sodium trihydrogen hypophosphate**,  $\text{NaH}_3\text{P}_2\text{O}_6$

Sol in  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Sodium trihydrogen dihypophosphate**,

Very efflorescent Sol in 15 pts cold  $\text{H}_2\text{O}$  (Salzer, A 211 1)

**Thallium hypophosphate**,  $\text{Tl}_4\text{P}_2\text{O}_6$

Sl sol in  $\text{H}_2\text{O}$  Decomp in sunlight (Joly, C R 1894, 118 650)

**Thallium hydrogen hypophosphate**,  $\text{Tl}_2\text{H}_2\text{P}_2\text{O}_6$

Sol in  $\text{H}_2\text{O}$  (Joly)

**Zinc hypophosphate**,  $\text{Zn}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids (Draue, B 21 3403)

**Hypophosphorosomolybdic acid**

**Barium hypophosphorosomolybdate**,

$\text{BaO}, \text{Mo}_7\text{O}_{20}, 3\text{H}_3\text{PO}_4 + 12\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$  and  $\text{BaCl}_2 + \text{Aq}$  (Mawrow, Z anorg 1902, 29 156)

**Hypophosphorous acid**,  $\text{H}_3\text{PO}_2$

Very sol in  $\text{H}_2\text{O}$  and alcohol (Rose)

**Aluminum hypophosphite**

Not deliquescent, but very sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 86)

**Ammonium hypophosphite**,  $\text{NH}_4\text{H}_2\text{PO}_2$

Sol in  $\text{H}_2\text{O}$ , less deliquescent than the potassium salt (Wurtz, A ch (3) 7 193)  
Very sol in absolute alcohol (Dulong)  
Moderately sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 826)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4328)

**Barium hypophosphite**,  $\text{Ba}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$

Sol in 3 5 pts cold, and 3 pts boiling  $\text{H}_2\text{O}$   
Insol in alcohol (Wurtz, A 43 323)

**Bismuth hypophosphite**,  $\text{Bi}(\text{H}_2\text{PO}_2)_3$

Ppt (Vanino, J pr 1906, (2) 74 150)  
 $+ \text{H}_2\text{O}$  Sol in acid  $\text{Bi}(\text{NO}_3)_3 + \text{Aq}$  (Haga, Chem Soc 1895, 67 229)

**Cadmium hypophosphite**

Sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 91)

**Calcium hypophosphite**,  $\text{Ca}(\text{PH}_2\text{O}_2)_2$

Sol in 6 pts cold, and not much more sol in hot  $\text{H}_2\text{O}$  Insol in strong, very sol in weak alcohol (Rose, Pogg 9 361)

**Calcium cobaltous hypophosphite**

$2\text{Ca}(\text{PH}_2\text{O}_2)_2, \text{Co}(\text{PH}_2\text{O}_2)_2 + 2\text{H}_2\text{O}$   
Efflorescent (Rose, Pogg 12 295)

**Calcium ferrous hypophosphite**

Sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 294)

**Cerous hypophosphite**,  $\text{Ce}(\text{PH}_2\text{O}_2)_3 + \text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Rammelsberg, B A B 1872 437)

**Chromium hypophosphite**,  $\text{Cr}_2(\text{OH})_2(\text{H}_2\text{PO}_2)_4$

*Anhydrous* Insol in  $\text{H}_2\text{O}$  or dil acids  
+  $3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Wurtz, A ch (3) 16 196)

**Cobaltous hypophosphite**,  $\text{Co}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$

Efflorescent Easily sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 87)

**Cupric hypophosphite**,  $\text{Cu}(\text{PH}_2\text{O}_2)_2$

Very sol in  $\text{H}_2\text{O}$ , but very easily decomp on heating (Wurtz, A ch (3) 16 199)

**Glucinum hypophosphite**

Sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 86)

**Iron (ferrous) hypophosphite**,  $\text{Fe}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Rose, Pogg 12 294)

**Iron (ferric) hypophosphite**

Difficultly sol in  $\text{H}_2\text{O}$  or acids Decomp on boiling Sl sol in  $\text{H}_3\text{PO}_2 + \text{Aq}$  (Rose)

**Lead hypophosphite**,  $\text{Pb}(\text{PH}_2\text{O}_2)_2$

Difficultly sol in cold, more easily in hot  $\text{H}_2\text{O}$  Insol in alcohol (Rose, Pogg 12 288)

**Lithium hypophosphite**,  $\text{LiH}_2\text{PO}_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Rammelsberg, B A B 1872 416)

**Magnesium hypophosphite**,  $\text{Mg}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$

Efflorescent in dry air Sol in  $\text{H}_2\text{O}$  (Rose)

**Manganous hypophosphite**,  $\text{Mn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$

Permanent Very sol in  $\text{H}_2\text{O}$  (Wurtz, A ch (3) 16 195)

**Mercurous hypophosphite nitrate**,

$\text{Hg}_2\text{H}_2\text{PO}_2, \text{HgNO}_3 + \text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  with rapid decomp  
Sol in hot conc  $\text{HNO}_3$  (Haga, Chem Soc 1895, 67 227)

**Nickel hypophosphite**,  $\text{Ni}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$

Efflorescent Sol in  $\text{H}_2\text{O}$  (Rammelsberg, B 5 494)

**Nickel hypophosphite ammonia**,

$\text{Ni}(\text{HPO}_2)_2, 6\text{NH}_3$   
(Ephraim, B 1913, 46 3111)

**Platinous hypophosphite**  $\text{Pt}(\text{PH}_2\text{O}_2)_2$

Insol in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4 + \text{Aq}$ , etc Sol in  $\text{HNO}_3 + \text{Aq}$  Insol in alcohol (Engel, C R 91 1068)

**Potassium hypophosphite**,  $\text{KH}_2\text{PO}_2$

Very deliquescent Very sol in  $\text{H}_2\text{O}$  sol in weak, less in absolute alcohol Insol in ether (Wurtz, A ch (3) 7 192)  
Sl sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

**Sodium hypophosphite**,  $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$

Very deliquescent Somewhat less sol than the K salt Very sol in absolute alcohol (Dulong)

Very sol in  $\text{H}_2\text{O}$ , and somewhat less sol in alcohol (Rammelsberg, B A B 1872 412)  
Sl sol in liquid  $\text{NH}_3$  (Franklin, Am Ch. J 1898, 20 829)

**Strontium hypophosphite**,  $\text{Sr}(\text{PH}_2\text{O}_2)_2$

Very easily sol in  $\text{H}_2\text{O}$  (Dulong)  
Insol in alcohol (Wurtz)

**Thallous hypophosphite**,  $\text{TlH}_2\text{PO}_2$

Sol in  $\text{H}_2\text{O}$  (Rammelsberg, B A B 1872 492)

**Uranyl hypophosphite**,  $\text{UO}_2(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg, Chem Soc (2) 11 1)

**Vanadyl hypophosphite**,  $\text{V}_2\text{O}_5(\text{H}_2\text{PO}_2)_4 + 2\text{H}_2\text{O}$

Insol in cold, sl sol in hot  $\text{H}_2\text{O}$   
Sol in hot dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  and in warm conc  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$   
Insol in oxalic acid (Mawrow, Z anorg 1907, 55 147)

**Zinc hypophosphite**,  $\text{Zn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$   
+  $6\text{H}_2\text{O}$  Efflorescent (Wurtz, A ch (3) 16 195)

**Zirconium hypophosphite**,  $\text{Zr}(\text{OPH}_2\text{O})_4 + \text{H}_2\text{O}$

Sensitive to light Insol in alcohol, by which it is pptd from aqueous solution (Hauser, Z anorg 1913, 84 93)

**Hypophosphotungstic acid**

**Potassium hypophosphotungstate**,  $4\text{K}_2\text{O}, 6\text{H}_3\text{PO}_2, 18\text{WO}_3 + 7\text{H}_2\text{O}$

Precipitate Sol in hot, very sl sol in cold  $\text{H}_2\text{O}$  (Gibbs, Am Ch J 5 361)

**Hyposulpharsemous acid**

**Hyposulpharsenites**,  $\text{As}_2\text{S}_2, \text{M}_2\text{S}$

Difficultly sol in  $\text{H}_2\text{O}$  (Berzelius)  
Do not exist (Nilson, B 4 989)

**Hyposulphuric acid**,  $\text{H}_2\text{S}_2\text{O}_6$

See Dithionic acid

**Hyposulphurous acid,  $\text{H}_2\text{S}_2\text{O}_3$** See **Thiosulphuric acid****Hyposulphurous (Hydrosulphurous) acid,  $\text{H}_2\text{SO}_2$** 

Known only in dil aqueous solution, which decomposes rapidly

Correct formula is  $\text{H}_2\text{S}_2\text{O}_4$ , according to Bernthsen (A 211 285)More sol in alcohol than in  $\text{H}_2\text{O}$  (Rossler, Arch Pharm (3) 25 845)**Ammonium hyposulphite,  $(\text{NH}_4)_2\text{S}_2\text{O}_4$** 

Known only in solution (Prudhomme, Bull Soc 1899, (3) 21 326)

**Ammonium hydrogen hyposulphite,  $\text{NH}_4\text{HS}_2\text{O}_4$** 

Known only in solution (Prudhomme, Bull Soc 1899, (3) 21 326)

**Calcium hyposulphite,  $\text{CaS}_2\text{O}_4 + 1.5\text{H}_2\text{O}$** Difficultly sol in  $\text{H}_2\text{O}$  (Bazlen, B 1905, 38 1059)**Magnesium hyposulphite,  $\text{MgS}_2\text{O}_4$** 

(Billv, C R 1905, 140 936)

**Potassium hyposulphite,  $\text{K}_2\text{S}_2\text{O}_4 + 3\text{H}_2\text{O}$** 

Easily decomp

Insol in alcohol (Bazlen, B 1905, 38 1058)

**Sodium hyposulphite,  $\text{Na}_2\text{S}_2\text{O}_4$** *Anhydrous* Stable in dry air (Bazlen, B 1905, 38 1061)100 g  $\text{H}_2\text{O}$  dissolve 24.1 g of the anhydrous salt at  $20^\circ$  (Jellinek, Z anorg 1911, 70 130) $+2\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$ 

11.6 g of the solution contain at

 $20^\circ$  1.91 g  $\text{Na}_2\text{S}_2\text{O}_4$  $10^\circ$  1.67 g $1^\circ$  1.49 g

(Jellinek, Z anorg 1911, 70 128)

Insol in alcohol (Bazlen, B 1905, 38 1058)

**Sodium zinc hyposulphite,  $\text{Na}_2\text{S}_2\text{O}_4, \text{ZnS}_2\text{O}_4$** Less sol in  $\text{H}_2\text{O}$  than  $\text{ZnS}_2\text{O}_4$  (Bazlen, B 1905, 38 1060)**Strontium hyposulphite,  $\text{SrS}_2\text{O}_4$** Sol in  $\text{H}_2\text{O}$  (Moissan, C R 1902, 135 653)**Zinc hyposulphite,  $\text{ZnS}_2\text{O}_4$** Easily sol in  $\text{H}_2\text{O}$ , about 1 pt in 7 pts  $\text{H}_2\text{O}$ . Forms supersat solutions readily (Bazlen, B 1905, 38 1060)**Hypovanadic acid,  $\text{V}_2\text{O}_2(\text{OH})_4$** See **Vanadium tetrhydroxide****Hypovanadic acid,  $\text{H}_2\text{V}_4\text{O}_9$** See **Vanadous acid****Hypovanadic acid with vanadic acid**See **Vanadicovanadic acid****Imidodimetaarsenic acid****Ammonium imidodimetaarsenate,** $(\text{NH}_4\text{O}_2\text{As}_2\text{O}_5\text{NH})$ 

(Rosenheim and Jacobsohn, Z anorg 1906, 50 307)

**Imidochromic acid****Ammonium imidochromate,** $\text{NHCrO}(\text{ONH}_4)_2$ Very sol in  $\text{H}_2\text{O}$  with decomp (Rosenheim and Jacobsohn, Z anorg 1906, 50 299)**Ammonium potassium imidochromate,** $\text{NH}_4\text{KCrO}_5\text{NH}$ Decomp on solution in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg 1906, 50 302)**Imidodimidochromic acid****Ammonium imidodimido chromate,** $\text{NH}[\text{CrO}(\text{NH})\text{ONH}_4]_2$ 

(Rosenheim and Jacobsohn, Z anorg 1906, 50 303)

**Imidomolybdic acid****Potassium imidomolybdate,  $\text{KMoO}(\text{OK})_2$** 

Unstable in air

Very hygroscopic Very sol in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg 1906, 50 305)**Dimidodiphosphorhormonic acid,** $\text{HO}-\text{PO} < \begin{smallmatrix} \text{NH} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{NH}_2$ Correct formula for *pyrophosphotriamic acid* of Gladstone (Mente, A 248 241)**Imidodiphosphoric acid,** $\text{HO}-\text{PO} < \begin{smallmatrix} \text{O} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{OH}$ Correct name for *pyrophosphamic acid* (Mente, A 248 251)**Barium imidodiphosphate,  $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} > \text{NH}$** Sl sol in  $\text{H}_2\text{O}$  (Mente, A 248 243)**Barium imidodiphosphate, basic,** $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} > \text{N}-\text{Ba}-\text{N} \begin{smallmatrix} \text{PO}-\text{O} \\ \text{PO}-\text{O} \end{smallmatrix} \text{Ba} +$  $2\text{H}_2\text{O}$ 

Ppt (Mente)

**Ferric imidodiphosphate**

Sl sol in conc acids (Mente, A 248 241)

**Silver imidodiphosphate,  $\text{Ag}_3\text{H}_2\text{P}_2\text{NO}_6$** 

Insol in  $\text{H}_2\text{O}$  (Stokes, Am Ch J 1896, 18 660)

$\text{Ag}_4\text{HP}_2\text{NO}_6$  Ppt (Stokes)

**Dimidodiphosphoric acid,**

Correct name for *pyrophosphodiamic acid* (Mente, A 248 241)

**Barium dimidodiphosphate,**

Sl sol in dil acids (Mente, A 248 244)

**Sodium dimidodiphosphate, basic,**

Sl sol in  $\text{H}_2\text{O}$  (Mente, A 248 245)

**Dimidotriphosphoric acid****Silver dimidotriphosphate,  $\text{Ag}_3\text{H}_4\text{P}_3\text{N}_2\text{O}_8$** 

Insol in  $\text{H}_2\text{O}$  Very sol in  $\text{NH}_4\text{OH} + \text{Aq}$

Rather sl sol in dil  $\text{HNO}_3$  (Stokes, Am Ch J 1896, 18 657)

$\text{Ag}_3\text{H}_2\text{P}_3\text{N}_2\text{O}_8$  Insol in  $\text{H}_2\text{O}$  Very sol in  $\text{NH}_4\text{OH} + \text{Aq}$

Decomp by  $\text{HNO}_3$  (Stokes)

**Trisodiumdimidotriphosphate,**

Sol in  $\text{H}_2\text{O}$

Insol in alcohol (Stokes)

**Trumidotetraphosphoric acid****Silver trumidotetraphosphate**

Ppt (Stokes, Am Ch J 1898, 20 755)

**Sodium trumidotetraphosphate,**

Easily sol in  $\text{H}_2\text{O}$ , insol in sodium acetate solution and dil alcohol (Stokes, Am Ch J 1898, 20 754)

**Imidosulphamide,  $\text{NH}_2\text{SO}_2\text{NH}\text{SO}_2\text{NH}_2$** 

"Sulphamide" of Traube

Very sol in  $\text{H}_2\text{O}$  with decomp appreciably sol in cold, easily sol in hot methyl and ethyl alcohol Insol in  $\text{C}_6\text{H}_6$ , and  $\text{CHCl}_3$  Sl sol in ether, cold and hot acetic ether and glacial acetic acid Moderately stable toward alkalis (Hantzsch and Stuer, B 1905, 38 1022)

**Ammonium imidosulphamide,**

(Hantzsch and Stuer)

**Imidosulphonic acid,**

Ammondisulphonic acid of Claus Known only in aqueous solution (Divers and Haga, Chem Soc 61 943)

Very unstable (Berglund, B 9 252)

**Ammonium imidosulphonate, basic,**

Sol in 9 pts of  $\text{H}_2\text{O}$  Solution is stable

Insol in alcohol

Sl sol in warm conc  $\text{H}_2\text{SO}_4$  without decomp (Rose, Pogg 1834, 32 81)

Much less sol than the neutral salt (Berglund, B 9 255)

"Parasulphatammon"

+ $\text{H}_2\text{O}$  Gradually efflorescent Sol in  $\text{H}_2\text{O}$  with subsequent decomp (Divers and Haga)

**Ammonium imidosulphonate,  $\text{HN}(\text{SO}_3\text{NH}_4)_2$** 

Sol in  $\text{H}_2\text{O}$  (Raschig, A 241 161)

**Ammonium barium imidosulphonate,**

Very sl sol in  $\text{H}_2\text{O}$  (Divers and Haga)

$(\text{NH}_4)_2\text{Ba}_5\text{N}_4(\text{SO}_3)_8 + 8\text{H}_2\text{O}$  (D and H)

**Ammonium calcium imidosulphonate**

(Divers, Chem Soc 1892, 61 968)

**Ammonium sodium imidosulphonate,**

Very sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Divers and Haga)

**Ammonium sodium imidosulphonate nitrate,**

Very sol in  $\text{H}_2\text{O}$  (Divers and Haga)

**Barium imidosulphonate,  $\text{Ba}[\text{N}(\text{SO}_3)_2\text{Ba}]_2 + 5\text{H}_2\text{O}$** 

Sl sol in  $\text{H}_2\text{O}$  (Berglund, B 9 255)

Sol in dil  $\text{HNO}_3 + \text{Aq}$  without decomp (Divers and Haga)

$\text{HN}(\text{SO}_3)_2\text{Ba} + \text{H}_2\text{O}$  Moderately sol in  $\text{H}_2\text{O}$  (D and H)

**Barium mercury imidosulphonate,**

Almost insol in cold  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 1892, 61 977)

**Barium sodium imidosulphonate,**

Sparsely sol in  $\text{H}_2\text{O}$  Readily sol in  $\text{HNO}_3$  or  $\text{HCl}$  (Divers, Chem Soc 1892, 61 967)

**Calcium imidosulphonate**,  $\text{Ca}[\text{N}(\text{SO}_3)_2\text{Ca}]_2 + 6\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Berglund)

**Calcium mercury imidosulphonate**,  
 $\text{N}_2\text{Hg}[(\text{SO}_3)_2\text{Ca}]_2$

Very sol in  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 1896, 69 1629)

**Calcium mercury imidosulphonate chloride**,  
 $(\text{NS}_2\text{O}_6\text{Ca})_2\text{Hg}_2\text{Cl} + 12\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 1896, 69 1629)

**Calcium sodium imidosulphonate**,  
 $\text{NaN}(\text{SO}_3)_2\text{Ca} + 3\text{H}_2\text{O}$

Sl sol in cold  $\text{H}_2\text{O}$  (Divers and Haga, Chem Soc 61 968)

**Lead imidosulphonate**,  $(\text{PbOHSO}_3)_2\text{NPbOH}$

Ppt (Berglund)

Insol in  $\text{H}_2\text{O}$  (Divers and Haga)

$(\text{PbOH})_3\text{N}(\text{SO}_3)_2$ ,  $\text{PbO}$  Insol in  $\text{H}_2\text{O}$ , easily sol in dil  $\text{HNO}_3 + \text{Aq}$  (D and H)

**Mercurous imidosulphonate, basic**,  
 $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}_2]\text{O} + 6\text{H}_2\text{O}$

Much more sol in dil  $\text{HNO}_3$  than mercuric salt Sol in cold conc  $\text{KI} + \text{Aq}$ , leaving half  $\text{Hg}$  as metal (Divers and Haga, Chem Soc 1896, 69 1631)

**Mercuric imidosulphonate, basic**,  
 $\text{NH}(\text{SO}_3)_2\text{Hg}$

Easily decomp (Divers and Haga)

**Mercuriomercuric imidosulphonate**,  
 $[\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}^{\text{I}}]\text{O} + 3\text{H}_2\text{O}$

(Divers and Haga)

$[\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}^{\text{I}}]\text{O}$ ,  $[\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}_2]$ ,  $\text{Hg}^{\text{II}}\text{N}(\text{SO}_3)_2\text{Hg}^{\text{I}}\text{O} + 6\text{H}_2\text{O}$  (Divers and Haga)

**Mercury sodium imidosulphonate, basic**,  
 $\text{Hg}_2\text{ON}(\text{SO}_3)_2\text{Na} + 2\text{H}_2\text{O}$

Slightly efflorescent Decomp by long washing with  $\text{H}_2\text{O}$  Much more readily sol in  $\text{HCl}$  than in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  and is wholly decomp thereby (Divers and Haga, Chem Soc 1892, 61 983)

**Mercury sodium imidosulphonate**,  
 $\text{HgN}_2(\text{SO}_3)_2\text{Na} + 6\text{H}_2\text{O}$

Sparsely sol in cold  $\text{H}_2\text{O}$

Readily sol in  $\text{HNO}_3$  and in  $\text{HCl}$

Decomp by  $\text{HCl}$  immediately, but not by  $\text{HNO}_3$  (Divers and Haga, Chem Soc 1892, 61 951)

**Potassium imidosulphonate, basic**,  
 $\text{KN}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Raschig, A 241 161)

Less sol than neutral salt (Berglund)

**Potassium imidosulphonate**,  $\text{HN}(\text{SO}_3\text{K})_2$

Sol in  $\text{H}_2\text{O}$  (Raschig, A 241 161)

= Potassium ammoniumsulphonate of Claus  
Difficultly sol in cold  $\text{H}_2\text{O}$ , sol in 64 pts  $\text{H}_2\text{O}$  at  $23^\circ$  (Fremy) Gradually decomp by boiling (Claus)

Sl sol in  $\text{H}_2\text{O}$  (Berglund, B 9 255)

**Potassium mercury imidosulphonate**,  
 $\text{N}_2\text{Hg}(\text{SO}_3\text{K})_4 + 4\text{H}_2\text{O}$

See Mercurimidosulphonic acid.

**Silver imidosulphonate**,  $\text{AgN}(\text{SO}_3\text{Ag})_2$

Sl sol in  $\text{H}_2\text{O}$  (Berglund)

**Silver sodium imidosulphonate**,  
 $\text{NaN}(\text{SO}_3\text{Ag})_2$

Sl sol in  $\text{H}_2\text{O}$  (Divers and Haga)

$\text{AgNa}_2\text{N}(\text{SO}_3)_2$  Sl sol in  $\text{H}_2\text{O}$ , but more sol than the two preceding salts (D and H)

**Sodium imidosulphonate**,  $\text{HN}(\text{SO}_3\text{Na})_2 + 2\text{H}_2\text{O}$

Not efflorescent Very sol in  $\text{H}_2\text{O}$  (Diver and Haga)

$\text{NaN}(\text{SO}_3\text{Na})_2 + 12\text{H}_2\text{O}$  Efflorescent Sl sol in cold  $\text{H}_2\text{O}$ , but very sol in hot  $\text{H}_2\text{O}$  Sol in 5.4 pts  $\text{H}_2\text{O}$  at  $27.5^\circ$  (Divers and Haga)

**Sodium strontium imidosulphonate**,  
 $\text{SrNaNS}_2\text{O}_6 + 3\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Divers, Chem Soc 1896, 69 1625)

**Strontium imidosulphonate**,  
 $\text{Sr}[\text{N}(\text{SO}_3)_2\text{Sr}]_2 + 6\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$  (Berglund)

+  $12\text{H}_2\text{O}$  Somewhat sol in hot  $\text{H}_2\text{O}$  (Divers, Chem Soc 1896, 69 1623)

**Imidotrisulphoorthophosphoric acid**,  
 $\text{NH}_4\text{P}(\text{SH})_3$

Insol in  $\text{CS}_2$  and readily decomp by  $\text{H}_2\text{O}$  (Stock, B 1906, 39 1991)

**Ammonium imidotrisulphoorthophosphate**,  
 $\text{NH}_4\text{P}(\text{SNH}_2)_3$

Very hygroscopic

Loses  $\text{NH}_3$  in the air

Somewhat sol in liquid  $\text{NH}_3$

Decomp by any other solvent in which it is sol (Stock, B 1906, 39 1983)

**Diammonium hydrogen imidotrisulphoorthophosphate**,  $\text{SHP}(\text{SNH}_2)_2\text{NH}_4$

(Stock, B 1906, 39 1983)

**Ammonium dihydrogen ———**,  
 $\text{SNH}_4\text{P}(\text{SH})_2\text{NH}_4$

(Stock)

**Dissodium hydrogen imidosulphocorthophosphate**,  $\text{SHP}(\text{SNa})_2\text{NH}$

Very easily sol in  $\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$   
Somewhat sol in methyl and ethyl alcohol (Stock)

**Diamidopentasilphopyrophosphoric acid**,  
 $\text{P}_2\text{S}_5\text{N}_2\text{H}_8$

Not known in pure state (Stock, B 1906, 39 1967)

**Ammonium diamidopentasilphopyrophosphate**,  $\text{S}[\text{P}(\text{SNH}_4)_2\text{NH}]_2$

Very hygroscopic  
Sol in cold  $\text{H}_2\text{O}$  with decomp (Stock, B 1906, 39 1978)

### Indosulphurous acid

**Ammonium imidosulphite**,  $\text{HN}(\text{SO}_2\text{NH}_4)_2$

Somewhat deliquescent  
Very unstable Easily sol in  $\text{H}_2\text{O}$  with decomp into thiosulphate and amidosulphate  
Insol in alcohol (Divers and Ogawa, Chem Soc 1901, 79 1100)

**Ammonium barium imidosulphite**,  
 $\text{Ba}(\text{SO}_2\text{NH}\text{SO}_2\text{NH}_4)_2$

$\text{H}_2\text{O}$  (Divers, Chem Soc 1901,

**Potassium imidosulphite**,  $\text{NH}(\text{SO}_2\text{K})_2$

(Divers and Owaga, Proc Chem Soc 1900, 16 113)

Very sol in  $\text{H}_2\text{O}$  (Divers, Chem Soc 1901, 79 1101)

**Imidosulphuryl amide**,  $\text{S}_2\text{O}_4\text{N}_3\text{H}_5 =$

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp by conc  $\text{HCl}$  Insol in alcohol sat with  $\text{NH}_3$  (Mente, A 248 265)

### Indic acid

**Magnesium indate**,  $\text{MgIn}_2\text{O}_4 + 3\text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq}$  (Renz, B 1901, 34 2764)

### Indium, In

Does not decomp hot  $\text{H}_2\text{O}$   
Sol in dil  $\text{HCl}$ , and  $\text{H}_2\text{SO}_4 + \text{Aq}$  Decomp by conc  $\text{H}_2\text{SO}_4$  Easily sol in  $\text{HNO}_3 + \text{Aq}$  Insol in acetic acid Insol in  $\text{KOH} + \text{Aq}$  (Winkler, J pr 102 273)  
Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 830)

$\frac{1}{2}$  ccm oleic acid dissolves 0.0039 g In in 6 days (Gates, J phys Chem 1911, 15 143)

**Indium monobromide**,  $\text{InBr}$

Decomp by hot  $\text{H}_2\text{O}$  Easily sol in acids  
Easily sol in cold conc  $\text{HCl}$  (Thiel, Z anorg 1904, 40 328)

**Indium dibromide**,  $\text{InBr}_2$

Decomp by hot  $\text{H}_2\text{O}$  Easily sol in acids (Thiel, Z anorg 1904, 40 329)

**Indium tribromide**,  $\text{InBr}_3$

Deliquescent Very sol in  $\text{H}_2\text{O}$

**Indium monochloride**,  $\text{InCl}$

Deliquescent Decomp by  $\text{H}_2\text{O}$  into  $\text{InCl}_3$  and In (Nilson and Pettersson, Chem Soc 43 820)

**Indium dichloride**,  $\text{InCl}_2$

Deliquescent in moist air, decomp by  $\text{H}_2\text{O}$  into  $\text{InCl}_3$  and In (Nilson and Pettersson, Chem Soc 43 818)

**Indium trichloride**,  $\text{InCl}_3$

Very deliquescent, sol in  $\text{H}_2\text{O}$  with hissing and great evolution of heat

**Indium lithium chloride**

Extremely deliquescent Sol in  $\text{H}_2\text{O}$  (Meyer, A 150 144)

**Indium potassium chloride**,  $3\text{KCl}$ ,  $\text{InCl}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Meyer)

**Indium trifluoride**,  $\text{InF}_3 + 3\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , readily decomp (Thiel, B 1904, 37 175)

1 l  $\text{H}_2\text{O}$  dissolves 86.4 g at  $25^\circ$  Decomp on boiling (Thiel, Z anorg 1904, 40 331)

$+9\text{H}_2\text{O}$  Sl sol in cold  $\text{H}_2\text{O}$   
Sol in  $\text{HCl}$  and in  $\text{HNO}_3$   
Insol in alcohol and ether (Chabré, C R 1905, 140 90)

**Indium hydrosulphide**

Decomp by acids (Meyer)

**Indium hydroxide**,  $\text{In}_2\text{O}_3\text{H}_6$

Sol in acids, also in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  but the solution clouds up on standing or boiling, with separation of  $\text{In}_2\text{O}_3\text{H}_6$  Insol in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$

Sl sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Renz, B 1904, 37 2110)

Sl sol in alkylamines but completely ppt by addition of the hydrochloride of the base (Renz, B 1903, 36 2754)

**Indium moniodide**,  $\text{InI}$

Slowly decomp in moist air Not attacked by boiling  $\text{H}_2\text{O}$

Sol in dil  $\text{HNO}_3$  in presence of  $\text{AgNO}_3$   
Very slowly sol in cold, more rapidly sol in

hot acids with evolution of  $H_2$  Very sol in sulphurous acid

Insol in alcohol ether and chloroform (Thiel, Z anorg 1910, 66 302)

**Indium diiodide,  $InI_2$**

(Thiel, Z anorg 1910, 66 302)

**Indium triiodide,  $InI_3$**

Deliquescent (Meyer)

Sol in  $CHCl_3$  Decomp by xylene (Thiel, Z anorg 1904, 40 330)

**Indium nitride,  $InN$**

Decomp by heat (Franz Fischer, B 1910, 43 1469)

**Indium monoxide,  $InO$**

Gradually sol in  $HCl + Aq$  (Winkler, J pr 94 1)

**Indium sesquioxide,  $In_2O_3$**

Slowly sol in cold, easily in hot acids

Four modifications

(1) Yellow Amorphous Sol in acids Its hydroxide is insol in ammonia and  $NH_4Cl$

(2) White Amorphous Insol in acids

(3) White Amorphous Sol in acids Its hydroxide is sol in ammonia, but pptd by  $NH_4Cl$

(4) Crystallized Crystalline modification is insol in acids (Renz, B 1904, 37 2112) Insol in liquid  $NH_3$  (Gore, Am Ch J 1898, 20 830)

**Indium oxide,  $In_2O_3 = 3InO, 2In_2O_3 (?)$**

(Winkler)

$In_4O_6 = 2InO, In_2O_3 (?)$  (Winkler)

**Indium oxybromide (?)**

Not decomp by hot acids or alkalies (Meyer, A 150 137)

**Indium oxychloride,  $InOCl$**

Very sl sol in  $H_2O$  (Thiel, B 1904, 37 176)

Very sl sol in cold or hot dil acids Quickly sol in hot conc acids (Thiel, Z anorg 1904, 40 327)

**Indium triselenide,  $In_2Se_3$**

Sol in strong acids with evolution of  $H_2Se$  (Thiel, Z anorg 1910, 66 315)

**Indium sulphide,  $In_2S$**

Sol in acids (Thiel, Z anorg 1904, 40 326)

**Indium monosulphide,  $InS$**

Easily sol in  $HCl$  with evolution of  $H_2S$  Sol in  $HNO_3$  with evolution of oxides of nitrogen (Thiel, Z anorg 1910, 66 314)

**Indium sesquisulphide,  $In_2S_3$**

Partially sol in  $(NH_4)_2S + Aq$

**Indium potassium sulphide,  $In_2S_3, K_2S$**

Insol in  $H_2O$ , decomp by weak acids with separation of  $In_2S_3$ , sol in conc acids (Schneider, J pr (2) 9 209)

**Indium silver sulphide,  $In_2S_3, Ag_2S$**

Insol in  $H_2O$  (Schneider, l c)

**Indium sodium sulphide,  $In_2S_3, Na_2S + 2H_2O$**

Insol in  $H_2O$  (Schneider, l c)

**Indium monotelluride,  $InTe$**

Sol in  $HNO_3$ , insol in  $HCl + Aq$  (Thiel, Z anorg 1910, 66 318)

**Infusible white precipitate**

**Diiodamine,  $NHI_2$**

Decomp by  $H_2O$

**Iodammonium iodide,  $NIH_3I$**

Decomp by  $H_2O$ , caustic alkalies, and acids Sol in  $KI + Aq$ , alcohol, ether  $CS_2$ ,  $CHCl_3$  (Guthrie, Chem Soc (2) 1 239)

**Iodauric acid,  $HAuI_4 (?)$**

Not known with certainty

**Ammonium iodaurate**

Deliquescent Decomp by  $H_2O$  (Johnston, Phil Mag (3) 9 266)

**Barium iodaurate**

Sol in  $BaI_2 + Aq$

**Cæsium iodaurate,  $CsAuI_4$**

(Gupta, J Am Chem Soc 1914, 36 748)

**Ferrous iodaurate**

Sol in  $H_2O$  (Johnston)

**Potassium iodaurate,  $KAuI_4$**

Decomp by  $H_2O$  Sol in  $KI$ , and  $HI + A$  (Johnston)

**Sodium iodaurate**

Very deliquescent (Johnston)

**Iodauricyanhydric acid,  $HAu(CN)_2I$**

Known only in its salts

**Barium iodauricyanide,  $Ba[Au(CN)_2I]_2 + 10H_2O$**

Sl sol in cold, easily in hot  $H_2O$  Easily sol in alcohol (Lindbom, Lund Univ Arsk 12 No 6)

**Calcium iodauryanide**,  $\text{Ca}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$

Not stable (L)

**Cobalt iodauryanide**,  $\text{Co}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$

Most insol of all iodauryanides, and only sl sol in warm  $\text{H}_2\text{O}$  Easily sol in alcohol

**Potassium iodauryanide**,  $\text{KAu}(\text{CN})_2\text{I}_2 + \text{H}_2\text{O}$

Sl sol in cold, easily sol in warm  $\text{H}_2\text{O}$  and alcohol (L)

**Strontium iodauryanide**,  $\text{Sr}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$

### Iodhydric Acid, HI

Very easily and quickly absorbed by  $\text{H}_2\text{O}$ , with evolution of much heat

Solution is decomp on exposure to the air  
1 vol  $\text{H}_2\text{O}$  absorbs 450 vols HI at  $10^\circ$  (Thomson)

1 vol  $\text{H}_2\text{O}$  absorbs 425 vols HI at  $10^\circ$  (Berthelot, C R 76 679)

Weak or strong solutions when boiled in an atmosphere of H leave a residue of constant composition, which distils unchanged at  $126^\circ$  (de Luynes), at  $127^\circ$  (Roscoe, Chem Soc 13 146, Naumann, Topsoe), at  $128^\circ$  (Bineau, A ch (3) 7 266), and has a sp gr of 1.67 (Naumann), of 1.70 (Bineau, de Luynes), of 1.708 (Topsoe), and contains 56.26 % HI (Bineau), 57.0% HI (Roscoe), 57.75% HI (Topsoe).

By conducting dry H gas through the aqueous solution of HI, a constant residue is obtained, containing 60.3-60.7% HI if temp is  $15-19^\circ$ , and 58.2-58.5% HI if temp is  $100^\circ$  (Roscoe)

### Solubility of HI in $\text{H}_2\text{O}$ at $t^\circ$

t	% HI	Solid Phase
-10	20.3	Ice
-20	29.3	
-30	35.1	
-40	39	
-50	42	
-60	44.4	Ice + HI, $4\text{H}_2\text{O}$

(Meerburg, Z anorg 1905, 45 330)

More sol in  $\text{KI} + \text{Aq}$  than in  $\text{H}_2\text{O}$  Sol in  
 warm  $\text{H}_2\text{SO}_4 + \text{Aq}$

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch  
 J 1898, 20 829)

Insol in alcohol

Insol in methyl acetate (Naumann, B  
 1909, 42 3790), ethyl acetate (Naumann,  
 B 1910, 43 314)

+  $\frac{1}{2}\text{H}_2\text{O}$  (Ditte, C R 70 621)

Potassium hydrogen iodate,  $\text{KH}(\text{IO}_3)_2$

Sol in 18 65 pts  $\text{H}_2\text{O}$  at  $17^\circ$  (Meineke, A  
 261 360)

Sol in 75 pts  $\text{H}_2\text{O}$  at  $15^\circ$  Insol in  
 alcohol (Serullas, A ch 22 181)  
 See also Meerburg under  $\text{KIO}_3$

Potassium dihydrogen iodate,  $\text{KH}_2(\text{IO}_3)_2$   
 Sol in 25 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Serullas, A ch  
 43 117)

See also Meerburg under  $\text{KIO}_3$

Potassium tellurium iodate

See Iodotellurate, potassium

Potassium uranyl iodate,

$\text{KUO}_2(\text{IO}_3)_3 + 3\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ , dil salt solutions and  
 $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$  (Artmann, Z anorg 1913,  
 79 340)

Potassium iodate chloride,  $\text{KH}(\text{IO}_3)_2, 2\text{KCl}$

Sol in 19 pts  $\text{H}_2\text{O}$  at  $15^\circ$  with decomp  
 Cold alcohol dissolves out  $\text{KCl}$

Potassium iodate molybdate,  $\text{KIO}_3, \text{MoO}_3 +$   
 $2\text{H}_2\text{O}$

See Molybdatiodate, potassium

Potassium iodate selenate

See Iodoselenate, potassium

Potassium iodate sulphate,  $\text{KIO}_3, \text{KHSO}_4$

Decomp by  $\text{H}_2\text{O}$  (Maignac, J B 1856  
 299)

$\text{KHIO}_3, \text{KHSO}_4$  More sol in  $\text{H}_2\text{O}$  than  
 $\text{KHIO}_3$  (Serullas)

Potassium iodate tungstate

See Tungstiodate, potassium

Rubidium iodate,  $\text{RbIO}_3$

100 pts  $\text{H}_2\text{O}$  dissolve 2 1 pts  $\text{RbIO}_3$  at  
 $23^\circ$  Easily sol in cold  $\text{HCl} + \text{Aq}$  (Wheeler  
 Sill Am J 144 123)

Rubidium hydrogen iodate,  $\text{RbH}(\text{IO}_3)_2$

Sl sol in cold, more readily in hot  $\text{H}_2\text{O}$ ,  
 $\text{RbIO}_3$  separating on cooling Insol in alco-  
 hol (Wheeler)

$\text{RbH}_2(\text{IO}_3)_3$  As above (Wheeler)

Rubidium iodate chloride,  $\text{RbIO}_3, \text{HCl}$ , or  
 $\text{HIO}_3, \text{RbCl}$

Decomp by cold  $\text{H}_2\text{O}$  (Wheeler)

$3\text{RbCl}, 2\text{HIO}_3$  Sol in  $\text{H}_2\text{O}$ , from which  
 $\text{RbIO}_3$  separates (Wheeler)

Rubidium iodate selenate

See Iodoselenate, rubidium

Samarium iodate,  $\text{Sm}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$

Precipitate (Cleve)

**Scandium iodate**,  $\text{Sc}(\text{IO}_3)_3$ +10, 13, 15, and  $18\text{H}_2\text{O}$

Nearly insol in  $\text{H}_2\text{O}$  (Crookes, Phil Trans 1910, 210 A, 361)

**Silver iodate**,  $\text{AgIO}_3$

$1.89 \times 10^{-4}$  moles or  $5.36 \times 10^{-2}$  g  $\text{AgIO}_3$  are sol in 1 liter  $\text{H}_2\text{O}$  at  $25^\circ$  (Noyes and Kohr, Z phys Ch 1903, 42 338)

Sl sol in  $\text{H}_2\text{O}$   $4.35 \times 10^{-2}$  g are dissolved in 1 liter of sat solution at  $20^\circ$  (Bottger, Z phys Ch 1903, 46 603)

1 l  $\text{H}_2\text{O}$  dissolves 40 mg  $\text{AgIO}_3$  at  $18^\circ$  (Kohlrausch, Z phys Ch 1904, 50 356)

1 l  $\text{H}_2\text{O}$  dissolves 0.0275 g  $\text{AgIO}_3$  at  $9.43^\circ$ , 0.039 g at  $18.4^\circ$ , 0.0539 g at  $26.6^\circ$  Solubility increases rapidly with temp (Kohlrausch, Z phys Ch 1908, 64 168)

1 l  $\text{H}_2\text{O}$  dissolves 0.039 g  $\text{AgIO}_3$  at  $20^\circ$  (Whitby, Z anorg 1910, 67 108)

Not completely insol in  $\text{H}_2\text{O}$  (Rose) Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , sol in  $\text{HNO}_3 + \text{Aq}$  (Naquet, J B 1860 201) Sol in conc  $\text{KI} + \text{Aq}$  (Ladenburg, A 135 1)

Sol in 27,700 pts  $\text{H}_2\text{O}$  at  $25^\circ$ , in 42.4 pts 5%  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ , in 2.1 pts 10%  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ , in 1044.3 pts 35%  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.21) at  $25^\circ$  (Longi, Gazz ch it 13 87)

Solubility in  $\text{HNO}_3 + \text{Aq}$  at  $25^\circ$

Normality $\text{HNO}_3$	G $\text{AgIO}_3$ dissolved per l
0.000	0.0503
0.125	0.0864
0.250	0.1075
0.500	0.1414
1.00	0.2067
2.00	0.3319
4.00	0.6985
8.00	1.5875

(Hill and Simmons, Z phys Ch 1909, 67 602)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 829)

Insol in methyl acetate (Bezold, Dissert 1906, Naumann, B 1909, 42 3790), ethyl acetate (Humeis, Dissert 1906, Naumann, B 1910, 43 314)

**Silver iodate ammonia**,  $2\text{AgIO}_3 \cdot 3\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Very sol in cold  $\text{H}_2\text{O}$  (Ditte, A ch (6) 21 145)

$\text{AgIO}_3 \cdot 2\text{NH}_3$

Sl sol in conc  $\text{NH}_4\text{OH} + \text{Aq}$  (Rosenheim, A 1899, 308 52)

**Sodium iodate**,  $\text{NaIO}_3$

100 pts  $\text{H}_2\text{O}$  dissolve 7.25 pts  $\text{NaIO}_3$  at  $14.5^\circ$  (Gay-Lussac) 100 pts  $\text{H}_2\text{O}$  dissolve 2.52 pts at  $0^\circ$ , 9.07 pts at  $20^\circ$ , 14.39 pts at  $60^\circ$ , 27.7 pts at  $80^\circ$ , 33.9 pts at  $100^\circ$  (Krem-

ers, Pogg 97 5) Sat solution boils at  $102^\circ$  (Kremers),  $105^\circ$  (Ditte)

Sol in warm  $\text{H}_2\text{SO}_4 + \text{Aq}$  diluted with  $\frac{1}{2}$  vol  $\text{H}_2\text{O}$  Crystallizes out on standing over  $\text{H}_2\text{SO}_4$  (Ditte)

Solubility of  $\text{NaIO}_3$  in  $\text{HIO}_3 + \text{Aq}$  at  $30^\circ$

% $\text{HIO}_3$ in the solution	% $\text{NaIO}_3$ in the solution	Solid phase

(Meerburg, Z anorg 1905, 45 334)

Insol in alcohol Sol in dil  $\text{HCl} \cdot \text{H}_2\text{O} + \text{Aq}$

Insol in methyl acetate (Naumann, B 1909, 42 3790)  $+ 1\frac{1}{2}\text{H}_2\text{O}$  See Meerburg above

**Sodium diiodate**,  $\text{Na}_2\text{O}, 2\text{H}_2\text{O}$

See Meerburg under  $\text{NaIO}_3$

**Sodium triiodate**,  $\text{NaIO}_3, 2\text{HIO}_3 + \frac{1}{2}\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Blomstrand, J pr (2) 42 337)

See also Meerburg under  $\text{NaIO}_3$

**Sodium iodate bromide**,  $\text{NaIO}_3, 2\text{NaBr} + 9\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Rammelsberg)

**Sodium iodate chloride**,  $\text{NaIO}_3, \text{NaCl} + 4\text{H}_2\text{O}$ , and  $2\text{NaIO}_3, 3\text{NaCl} + 18\text{H}_2\text{O}$

Cold  $\text{H}_2\text{O}$  dissolves out  $\text{NaCl}$

**Sodium iodate iodide**,  $\text{NaIO}_3, \text{NaI}$

Hot  $\text{H}_2\text{O}$  or alcohol dissolves out  $\text{NaI} + 8\text{H}_2\text{O}$

$+ 10\text{H}_2\text{O}$

$2\text{NaIO}_3, 3\text{NaI} + 20\text{H}_2\text{O}$  (Penny, A 37 202)

Stable in a solution of  $\text{NaI} + \text{NaOH} + \text{Aq}$  (Eakle, C C 1896, II 650)

### Strontium iodate, $\text{Sr}(\text{IO}_3)_2$

*Anhydrous* Insol in  $\text{H}_2\text{SO}_4$  (Ditte), easily sol in cold  $\text{HCl} + \text{Aq}$  (Rammelsberg, Pogg 44 575)

+  $\text{H}_2\text{O}$  Difficultly sol in  $\text{H}_2\text{O}$   
+  $6\text{H}_2\text{O}$  Sol in 416 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and 138 pts at  $100^\circ$  (Gay-Lussac), 342 pts at  $15^\circ$ , and 110 pts at  $100^\circ$  Difficultly sol in warm  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg, Pogg 44 575)

### Thalious iodate, $\text{TlIO}_3$

Difficultly sol in warm  $\text{H}_2\text{O}$  (Oettinger)  
Insol in  $\text{H}_2\text{O}$ , difficultly sol in  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg)

Sl sol in  $\text{H}_2\text{O}$   
0.58  $\times 10^{-1}$  g are dissolved in 1 liter of sat solution at  $20^\circ$  (Böttger, Z phys Ch 1903, 46 603)

2.12  $\times 10^{-3}$  mols = 0.667 g are sol in 1 l  $\text{H}_2\text{O}$  at  $25^\circ$  (Spencer, Z phys Ch 1912, 80 707)

Sol in a little  $\text{NH}_4\text{OH} + \text{Aq}$ , also in boiling  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq}$  Insol in alcohol (Oettinger)

+  $\frac{1}{2}\text{H}_2\text{O}$  Very sl sol in  $\text{H}_2\text{O}$  or dil boiling acids (Ditte, A ch (6) 21 145)

**hallic iodate, basic**,  $\text{Ti}(\text{OH})(\text{IO}_3)_2 + \text{H}_2\text{O} = \text{Ti}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 3\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sol in cold  $\text{HCl} + \text{Aq}$ , and warm dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Ditte, A ch (6) 21 145)

### Thallic iodate, $\text{Ti}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sl sol in  $\text{HNO}_3 + \text{Aq}$   
Decomp by alkalis (Rammelsberg)

+  $12\text{H}_2\text{O}$  Difficultly sol in  $\text{H}_2\text{O}$   
Easily sol in dil acids (Gewecke, Z anorg 1912, 75, 275)

### Thorium iodate, $\text{Th}(\text{IO}_3)_4$

Precipitate (Cleve)

### Tin (stannous) iodate

Ppt Sol in  $\text{SnCl}_2 + \text{Aq}$ , insol in  $\text{NaIO}_3 + \text{Aq}$

### Tin (stannic) iodate

Ppt

### Uranous iodate

Precipitate Very unstable (Rammelsberg)

### Uranyl iodate, $\text{UO}_2(\text{IO}_3)_2$

Sol or insol in  $\text{HNO}_3$  and  $\text{H}_3\text{PO}_4 + \text{Aq}$ , according to method of preparation (Ditte)

+  $\text{H}_2\text{O}$  Sl sol in  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg)

### Ytterbium iodate, $\text{Yb}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$

Ppt (Cleve, Z anorg 1902, 32 136)

### Yttrium iodate, $\text{Y}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$

Sol in 190 pts  $\text{H}_2\text{O}$  (Berlin)

### Zinc iodate, $\text{Zn}(\text{IO}_3)_2$

*Anhydrous* (Ditte, A ch (6) 21 145)  
+  $2\text{H}_2\text{O}$  Sol in 114 pts cold, and 76 pts hot  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 43 665)  
Sol in  $\text{HNO}_3$ , and  $\text{NH}_4\text{OH} + \text{Aq}$   
Exists also in a very sol modification (Mylhus and Funk, B 1897, 30 1723)

### Zinc iodate ammonia, $3\text{Zn}(\text{IO}_3)_2, 8\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$ , sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , from which it is pptd by alcohol (Rammelsberg, Pogg 44 563)

$\text{Zn}(\text{IO}_3)_2, 2\text{NH}_3$  Insol in  $\text{H}_2\text{O}$  (Ditte, A ch (6) 21 145)

$\text{Zn}(\text{IO}_3)_2, 3\text{NH}_3 + \text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Ditte)

$\text{Zn}(\text{IO}_3)_2, 4\text{NH}_3$  (Ditte, A ch 1890, (6) 21 164) (Ephraim, B 1915, 48 53)

### Periodic acid

See Periodic acid

### Iodides

The iodides are in general easily sol in  $\text{H}_2\text{O}$ , exceptions are  $\text{HgI}_2$ ,  $\text{PbI}_2$ ,  $\text{AgI}$ ,  $\text{Cu}_2\text{I}_2$ , and  $\text{BiI}_3$ , also the iodides of the Pt metals, all of which are insol  $\text{SnI}_4$ ,  $\text{SbI}_3$ , and  $\text{TI}_3$  are decomp by  $\text{H}_2\text{O}$  Many iodides are more sol in solutions of salts than in  $\text{H}_2\text{O}$ , and several are sol in alcohol or ether

See under each element

### Iodine, $\text{I}_2$

Sol in 5524 pts  $\text{H}_2\text{O}$  at  $0\ 12^\circ$  (Wittstein J B 1857 123)

Sol in 7000 pts  $\text{H}_2\text{O}$  at  $15^\circ$

Sol in 3800 pts  $\text{H}_2\text{O}$  at  $15^\circ$

Sol in 500 pts  $\text{H}_2\text{O}$  (Jacquelin)

Sol in 7196 pts  $\text{B}_2\text{O}_3$  at  $18\ 75^\circ$  (Abl)

Pure  $\text{H}_2\text{O}$  dissolves 0.01519173 g I per litre, or I is sol in 6582 pts  $\text{H}_2\text{O}$  at  $6\ 3^\circ$  (Dossius and Weith, Zeit Ch 12 378)

Sol in about 4500 pts  $\text{H}_2\text{O}$  (Hager, Comm 1883)

Sol in 7000 pts  $\text{H}_2\text{O}$  (Cap and Garot, J Pharm (3) 26 80)

1 l  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves 0.3387 g  $\text{I}_2$  (Jakowkin, Z phys Ch 1895, 18 590)

1 l  $\text{H}_2\text{O}$  dissolves 1.342 millimols of iodine at  $25^\circ$  (Noyes, Z phys Ch 1898, 27 359)

When iodine is shaken with  $\text{H}_2\text{O}$  at  $15^\circ$ , 1 pt dissolves in 3750 pts  $\text{H}_2\text{O}$ , when iodine and  $\text{H}_2\text{O}$  are heated together and then cooled to  $15^\circ$ , 1 pt iodine dissolves in 3500 pts  $\text{H}_2\text{O}$

At  $30^\circ$ , 1 pt is sol in 2200 pts  $\text{H}_2\text{O}$  (Dietz, Chem Soc 1899, 76, (2) 150)

1 l  $\text{H}_2\text{O}$  dissolves 0.279 grams  $\text{I}_2$  at  $25^\circ$  (McLauchlan, Z phys Ch 1903, 44 617)

Solubility of  $I_2$  in  $H_2O$  at  $t^\circ$ 

$t^\circ$	g I per l $H_2O$
18	0 2765
25	0 3395
35	0 4661
45	0 6474
55	0 9222

(Hartley, Chem Soc 1908, 93 744)

Solubility of  $I_2$  in  $H_2O$  at  $t^\circ$ 

$t^\circ$	g per l	milhat per l
0	0 1649	1 30
20	0 2941	2 30
40	0 5684	4 56

(Fedotieff, Z anorg 1910, 69 30)

1 32 millimol  $I_2$  are sol in 1 l  $H_2O$  (Bray, J Am Chem Soc, 1910, 32 938)

Calculated from electrical conductivity of sat  $I_2$ +Aq 1 l  $H_2O$  dissolves 0 0006383 mols  $I_2$  at  $0^\circ$  (Jones, J Am Chem Soc 1915, 37 256)

Conc  $H_2SO_4$ ,  $HCl$ ,  $HNO_3$ ,  $H_3PO_4$ ,  $HC_2H_3O_2$ , tartaric, or citric acids+Aq dissolve  $I_2$ , but give it up to  $CS_2$  on shaking therewith (Tessier, Z anal 11 313)

Sol in 150 pts  $H_2SO_4$  on warming, but crystallizes out in part on cooling (Kraus)

Much more sol in  $HBr$ +Aq than in pure  $H_2O$ ,  $HBr$ +Aq of sp gr 1 486 dissolves 3-4% (Bineau)

Sl sol in  $HCl$ +Aq Easily sol in even dil  $HI$ +Aq

1 l 0 001 N- $HCl$ +Aq sat with  $I_2$  contains 0 338 g I (Bray and Mackay, J Am Chem Soc 1910, 32 1919)

1 l 0 1 N- $HNO_3$ +Aq sat with  $I_2$  contains 0 340 g I (Sunmet, Z phys Ch 1905, 53 644)

1 l 0 1 N- $H_2SO_4$ +Aq sat with I contains 0 341 g  $I_2$  (Sunmet)

Sol in  $H_2SO_4$ +Aq with decomp

1 l 0 9 N  $H_3BO_3$  dissolves 0 300 g  $I_2$  at  $25^\circ$  (McLauchlan, Z phys Ch 1903, 44 617)

100 cc of a 10% solution of  $BaBr_2$  dissolve 0 231 g  $I_2$  at  $13.5^\circ$  (Meyer, Z anorg 1902, 30 114)

100 cc of a 10% solution of  $BaCl_2$  dissolve 0 067 g  $I_2$  at  $18.5^\circ$  (Meyer)

100 cc of a 10% solution of  $BaI_2$  dissolve 6 541 g  $I_2$  at  $13.5^\circ$  (Meyer)

100 cc of a 10% solution of  $CaBr_2$  dissolve 0 274 g  $I_2$  at  $13.5^\circ$  (Meyer)

100 cc of a 10% solution of  $CaCl_2$  dissolve 0 078 g  $I_2$  at  $18.5^\circ$  (Meyer)

100 cc of a 10% solution of  $CaI_2$  dissolve 8 062 g  $I_2$  at  $13.5^\circ$  (Meyer)

Easily sol in boiling dil  $HgCl_2$ +Aq (Selmi)

Solubility in  $HgCl_2$ +Aq at  $25^\circ$ 

## 10 ccm of the solution contain

(Arctowski, Z anorg 1894, 6 404)

1 l  $CS_2$  dissolves 230 g  $I_2$  at 25°

1 l  $CHBr_3$  dissolves 189 55 g  $I_2$  at 25°

1 l  $CCl_4$  dissolves 30 33 g  $I_2$  at 25° (Jakowkin, Z phys Ch 1895, 18 590)

#### Solubility in $CS_2$

100 g of the sat solution contain at

-80°	-87°	-92 5°	-94°
0 509	0 440	0 391	0 378 g $I_2$

(Arctowski, Z anorg 1896, 11 274)

When an aqueous solution of I is shaken with  $CS_2$ , 400 pts go into solution in  $CS_2$  for 1 pt remaining in  $H_2O$  (Berthelot and Jungfleisch, C R 69 338)

Abundantly sol in methane (Villard, A ch 1897, (7) 10 387)

Easily sol in hot, less in cold naphtha (Pelletier and Walker)

Sol in about 8 pts hot petroleum from Amiano (de Saussure)

Sl sol in cold, more readily in hot benzene (Mansfield) Easily sol in benzene (Morde, A ch (3) 39 452)

#### Solubility in benzene

100 g of the sat solution contain at

4 7°	6 6°	10 5°	13 7°	16 3°
8 08	8 63	9 60	10 44	11 23 g $I_2$

(Arctowski, Z anorg 1896, 11 276)

1 l benzene sat with iodine at 25° contains 139 g iodine Abegg, Z anorg 1906, 50 409)

1 l nitrobenzene dissolves 50 62 g  $I_2$  at 16-17° (Dawson and Gawler, Chem Soc 1902, 81 524)

#### Solubility of $I_2$ in nitrobenzene + iodides at room temp

(Dawson and Goodson, Chem Soc 1904, 85 796)

Sol in quinoline (Beckmann and Gabel, Z anorg 1906, 51 236)

Easily sol in oil of turpentine, but an explosion soon occurs (Walker)

Sol in oil of mandarin (Luca)

Sol in oil of arnica root (Zeller)

Very sol in  $\text{CS}_2$ , hgnone, furfurol, glycerine, aldehyde, chloral, warm retinole, toluene, salicylic acid, methyl nitrate, methyl salicylate, mercaptan, amyl carbamate, ethyl sulphhydrate, allyl iodide, ethyl disulphocarbonate, carbon chloride,  $\text{SCl}_2$ ,  $\text{ICl}_3$ ,  $\text{H}_2\text{S}_8$ , chlorochromic acid, amyl valerianate, valerianic acid, warm butyric acid, creosote, aniline, quinoline, methylsalicylic acid. Quickly sol in oil of dill, peppermint, sassafras, and tansy. Slowly sol in oil of cloves, cinnamon, cajeput, and rue. Other essential oils decompose it (Various authorities)

Sol in potassium croconate + Aq (Gmelin)

Sol in potassium antimony tartrate + Aq  
176 pts  $\text{H}_2\text{O}$  + 6 pts potassium antimony tartrate dissolve 2.75 pts I, 378 pts  $\text{H}_2\text{O}$  + 6 pts potassium antimony tartrate dissolve 4.12 pts I

More sol in tannic acid than in  $\text{H}_2\text{O}$  1 pt I is sol in 450 pts  $\text{H}_2\text{O}$  with 3.3 pts tannic acid at  $12^\circ$ , 1 pt I is sol in 240 pts  $\text{H}_2\text{O}$  with 0.015 pt tannic acid at about  $30^\circ$  (Koller, Zeit Ch 1866 380)

200 g  $\text{H}_2\text{O}$  containing 0.3 g tannic acid dissolve 10 g I (Hager, Comm 1883)

Sol in considerable quantity, especially on warming, in resorcin, orcin, or phloroglucin + Aq, without coloration or formation of HI + Aq. These solutions withdraw I from  $\text{CS}_2$  solution, and do not give it up on boiling, but on evaporation in vacuo the I is sublimed in a pure state (Hlasiwetz, Z anal 6 447)

Partition coefficient for iodine between  $\text{CS}_2$  and Aq at  $25^\circ\text{C}$

A = concentration of the water layer

(Landau, Z phys Ch 1910, 73 205)

Iodine monobromide,  $IBr$

Slowly sol in  $H_2O$  with slight decomp  
Sol in  $CHCl_3$ ,  $CS_2$ , ether, and alcohol  
+5 $H_2O$  (Lowig, Pogg 14 485) Does  
not exist (Bornemann, A 189 183)

**Iodine pentabromide,  $\text{IBr}_5(?)$**

Sol in  $\text{H}_2\text{O}$  with separation of iodine (Lowig, Pogg 14 485)

**Iodine monochloride,  $\text{ICl}$**

Decomp by  $\text{H}_2\text{O}$ , sol without decomp in alcohol, ether, and  $\text{HCl} + \text{Aq}$   
Sol in  $\text{CS}_2$

**Iodine hydrogen chloride,  $\text{ICl}$ ,  $\text{HCl}$**

Unstable Sol in ether (Schutzenberger, C R 84 389)

**Iodine trichloride,  $\text{ICl}_3$**

Deliquescent With  $\text{H}_2\text{O}$ , a part is dissolved without decomp, and the rest is decomp The aqueous solution contains more unchanged  $\text{ICl}_3$ , the more conc it is (Serullas) Precipitated from aqueous solution by  $\text{H}_2\text{SO}_4$  Sol in  $\text{HCl} + \text{Aq}$  Sol in warm conc  $\text{H}_2\text{SO}_4$  without decomp Sol in alcohol, and benzene Decomp by small amount of  $\text{CS}_2$  (Christomanos, B 10 434) Ether does not remove it from aqueous solution (Serullas)

**Iodine lithium chloride,  $\text{ICl}_3$ ,  $\text{LiCl} + 4\text{H}_2\text{O}$**

See Lithium chloroiodide

**Iodine trichloride magnesium chloride,  $2\text{ICl}_3$ ,  $\text{MgCl}_2 + 5\text{H}_2\text{O}$**

Very deliquescent and easily decomposed (Filhol, J Pharm 25 442)  
 $+ 8\text{H}_2\text{O}$  Hydrosopic (Weinland, Z anorg 1902, 30 141)

**Iodine trichloride manganous chloride,  $2\text{ICl}_3$ ,  $\text{MnCl}_2 + 8\text{H}_2\text{O}$**

Hydrosopic (Weinland, Z anorg 1902, 30 139)

**Iodine trichloride nickel chloride,  $2\text{ICl}_3$ ,  $\text{NiCl}_2 + 5\text{H}_2\text{O}$**

If  $\text{CCl}_4$  dissolves out  $\text{ICl}_3$  (Weinland, Z anorg 1902, 30 138)

**Iodine monochloride phosphorus pentachloride,  $\text{ICl}$ ,  $\text{PCl}_5$**

Very deliquescent, decomp by  $\text{H}_2\text{O}$

**Iodine potassium chloride,  $\text{ICl}_3$ ,  $\text{KCl}$**

Sol in  $\text{H}_2\text{O}$  with decomp  
Ether dissolves out  $\text{ICl}_3$  (Filhol, J Pharm 25 433, 506)  
See Potassium chloroiodide

**Iodine sodium chloride,  $\text{ICl}_3$ ,  $\text{NaCl} + 2\text{H}_2\text{O}$**

See Sodium chloroiodide

**Iodine trichloride strontium chloride,  $2\text{ICl}_3$ ,  $\text{SrCl}_2 + 8\text{H}_2\text{O}$**

Hydrosopic (Weinland, Z anorg 1902, 30 142)

**Iodine trichloride sulphur tetrachloride,  $\text{ICl}_3$ ,  $\text{SCl}_4$**

Very deliquescent in air, decomp by  $\text{H}_2\text{O}$  Decomp with formation of clear solution by dil  $\text{HNO}_3 + \text{Aq}$  (Weber, Pogg 128 459)  
 $\text{SCl}_2$ ,  $2\text{ICl}_3$  (Jallard, J B 1860 95)  
Correct formula is as above (Weber, l c)  
 $2\text{ICl}_3$ ,  $\text{SCl}_4$  Sol in  $\text{SO}_2\text{Cl}_2$ ,  $\text{SOCl}_2$ ,  $\text{POCl}_3$ , warm  $\text{SCl}_2$ , petroleum ether, ligroin,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ ,  $\text{CS}_2$  and abs ether (Ruff, B 1904, 37 4519)

**Iodine trichloride zinc chloride,  $2\text{ICl}_3$ ,  $\text{ZnCl}_2 + 8\text{H}_2\text{O}$**

Unstable Hydrosopic (Weinland, Z anorg 1902, 30 140)

**Iodine pentafluoride,  $\text{IF}_5$**

Fumes in air, decomp with  $\text{H}_2\text{O}$  (Gore, C N 24 291)  
Decomp by  $\text{H}_2\text{O}$  into iodic acid and  $\text{HF}$  Decomp by solutions of the alkalis (Moissan, C R 1902, 135 564)

**Iodine trioxide,  $\text{I}_2\text{O}_3$**

Decomp by  $\text{H}_2\text{O}$  (Ogier, C R 85 957, 86 722)  
Probably a mixture

**Iodine tetroxide,  $\text{I}_2\text{O}_4(?)$**

Insol in cold, decomp by hot  $\text{H}_2\text{O}$ , insol in alcohol Decomp by  $\text{HNO}_3 + \text{Aq}$  Sol in  $\text{H}_2\text{SO}_4$  (Millon, J pr 34 319, 337)

**Iodine pentoxide,  $\text{I}_2\text{O}_5$**

Very sol in  $\text{H}_2\text{O}$ , and in dil alcohol Insol in absolute alcohol, ether,  $\text{CS}_2$ , chloroform, and hydrocarbons  
Forms hydrates, iodic acid  $\text{HIO}_3$ , and  $3\text{I}_2\text{O}_5$ ,  $\text{H}_2\text{O}$ , insol in ordinary alcohol  
For sp gr of aqueous solution see iodic acid

**Iodine oxides,  $\text{I}_{10}\text{O}_{19}$ ,  $\text{I}_3\text{O}_{13}$**

The compounds  $\text{I}_{10}\text{O}_{19}$  (Millon, J pr 34 336), and  $\text{I}_3\text{O}_{13}$  (Kimmerer, J pr 83 81), are probably mixtures  
Millon's oxides are impure  $\text{I}_2\text{O}_4$  (Kappeler, B 1911, 44 3496)

**Iodine sulphur oxide,  $5\text{I}_2\text{O}_7$ ,  $\text{SO}_3$**

Decomp by  $\text{H}_2\text{O}$  (Kimmerer)  
 $\text{I}_2\text{O}_5$ ,  $3\text{SO}_3$  Decomp by  $\text{H}_2\text{O}$ , sl sol in hot  $\text{SO}_4$  (Weber, B 20 86)  
 $= (\text{IO})_2(\text{SO}_4)_3$  Iodyl sulphate (?)

**Iodine oxyfluoride,  $\text{IOF}_3 + 5\text{H}_2\text{O}$**

Fumes in the air (Weinland, Z anorg 1908, 60 163)

**Iodine sulphide,  $\text{S I}_2$**

Sol in  $\text{CS}_2$  (Linebarger, Am Ch J 1895, 17 57)

**Iodine sulphoxide,  $I_2SO_3$ (?)**

Decomp by  $H_2O$  (Schultz-Sellack)  
 $I_2(SO_3)_2$ (?) Decomp by  $H_2O$  (Weber, J pr (2) 25 224)  
 $I_2(SO_3)_4$ (?) As above (Weber)  
 See also Iodosulphuric anhydride

**Iodiridic acid****Ammonium iodiridate,  $(NH_4)_2IrI_6$** 

Very easily sol in cold  $H_2O$ , decomp on warming Insol in alcohol (Oppler, J B 1857 263)

**Potassium iodiridate,  $K_2IrI_6$** 

Very easily sol in  $H_2O$  Insol in alcohol

**Sodium iodiridate,  $Na_2IrI_6$** 

Insol in cold, sl sol in hot  $H_2O$  Easily sol in acids (Oppler)

**Iodiridous acid****Ammonium iodiridite,  $(NH_4)_6Ir_2I_{12}+H_2O$** 

Very sol in  $H_2O$ , but decomp on warming (Oppler)

**Potassium iodiridite,  $K_6Ir_2I_{12}$** 

Insol in  $H_2O$ , or alcohol Slowly sol in acids, easily in warm alkalies + Aq

**Silver iodiridite,  $Ag_6Ir_2I_{12}$** 

Ppt

**Iodochloroplatinodiamine chloride,**

Sl sol in  $H_2O$

**Iodochromic acid****Potassium iodochromate,  $KCrO_3I$** 

Decomp by boiling  $H_2O$  (Guyot, C R 73 46)

See also Chromiodic acid

**Iodomolybdic acid**

See Molybdoiodic acid

**Iodonitratoplatinmonodiamine bromide,**

Very sl sol in  $H_2O$  (Cleve)

**Iodonitratoplatinodiamine nitrate,**

Quite easily sol in hot  $H_2O$  (Cleve)

**Iodopalladous acid****Potassium iodopalladite**

Deliquescent (Lassaigne)

**Iodophosphoric acid**

See Phosphoiodic acid

**Iodoplatinamine iodide,  $I_2Pt(NH_3)_2I_2$** 

Sol in  $H_2O$ , especially easily if boiled (Cleve)

**Iodoplatinodiamine iodide,  $I_2Pt(N_2H_5)_2I_2$** 

Sol in  $H_2O$ , especially when hot (Cleve)

**— mercuric iodide,  $I_2Pt(N_2H_5)_2, 2HgI_2$** 

Extremely difficultly sol in cold  $H_2O$ , partly decomp by boiling (Jorgensen, Gr K 3 1214)

**— nitrate,  $I_2Pt(N_2H_5NO_3)_2$** 

More sol in hot than cold  $H_2O$

**— sulphate,  $I_2Pt(N_2H_5)_2SO_4$** 

Very sl sol in  $H_2O$  (Jorgensen, J pr (15 429)

**Iodoplatinsemidiamine iodide,**

Sl sol in  $H_2O$  (Jorgensen, J pr (2) 1 345)

**— periodide,  $I_3Pt(NH_3)_2I, I_2$** 

Moderately sl sol in  $H_2O$  (Cleve)

**Iododiplatinamine iodide,  $I_2Pt_2(N_2H_5)_2I_4$** 

Insol in  $H_2O$

**Iododiplatinodiamine anhydroiodide,**

Insol in  $NH_4OH$  + Aq

**— anhydronitrate,  $I_2Pt_2(N_2H_5)_4O(NO_3)_2$** 

Easily sol in warm  $H_2SO_3$  + Aq (Cleve)

**— iodide,  $I_2Pt_2(N_2H_5)_4I_4$** 

Ppt

**— nitrate,  $I_2Pt_2(N_2H_5)_4(NO_3)_4+4H_2O$** 

Sl sol in cold, moderately sol in hot  $H_2O$  (Cleve)

**— phosphate,  $I_2Pt_2(N_2H_5)_4[O_3P(OH)]_2$** 

Nearly insol in  $H_2O$

**— sulphate,  $I_2Pt_2(N_2H_5)_4(SO_4)_2$** 

Nearly insol in  $H_2O$

**— platodiamine sulphate,  $I_2Pt_2(N_2H_5)_4SO_4Pt(NH_3)_2SO_4$** 

Very sl sol in  $H_2O$  (Carlgren Sv V A F 47 306)

**Iodoplatinic acid,  $H_2PtI_6+9H_2O$** 

Deliquescent Easily sol in  $H_2O$ , with decomp into  $PtI_4$  and  $HI$  on standing or warming (Topsoe)

**Ammonium iodoplatinate,  $(\text{NH}_4)_2\text{PtI}_6$**

Easily sol in  $\text{H}_2\text{O}$  (Topsoe)  
 $\text{NH}_4\text{I}$ ,  $\text{PtI}_4$  Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol (Lassaigne, A ch (2) 51 128)

**Barium iodoplatinate,  $\text{BaPtI}_6$**

Deliquescent, but less so than  $\text{Na}_2\text{PtI}_6$  which it otherwise resembles (Lassaigne)

**Calcium iodoplatinate,  $\text{CaPtI}_6 \cdot 12\text{H}_2\text{O}$**

Not so deliquescent as Na salt

**Cobalt iodoplatinate,  $\text{CoPtI}_6 \cdot 9\text{H}_2\text{O}$**

Very deliquescent

**Lead tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Pb}, \text{Pb}(\text{OH})_2$**

Ppt (Bellucci, C C 1902, I 625)

**Magnesium iodoplatinate,  $\text{MgPtI}_6 \cdot 9\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$

**Manganese iodoplatinate,  $\text{MnPtI}_6 \cdot 9\text{H}_2\text{O}$**

Very deliquescent

**Mercuric tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Hg}$**

Ppt (Bellucci, C C 1902, I 625)

**Nickel iodoplatinate,  $\text{NiPtI}_6 \cdot 9\text{H}_2\text{O}$**

Very deliquescent

**Potassium iodoplatinate,  $\text{K}_2\text{PtI}_6$**

Easily sol in  $\text{H}_2\text{O}$  Insol in alcohol Not attacked by cold conc  $\text{H}_2\text{SO}_4$

**Silver tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Ag}$**

Ppt (Bellucci, C C 1902, I 625)

**Sodium iodoplatinate,  $\text{Na}_2\text{PtI}_6 \cdot 6\text{H}_2\text{O}$**

Not deliquescent, but easily sol in  $\text{H}_2\text{O}$  and alcohol (Vauquelin) Deliquescent (Lassaigne)

**Thallium tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Tl}$**

Ppt (Bellucci, C C 1902, I 625)

**Zinc iodoplatinate,  $\text{ZnPtI}_6 \cdot 9\text{H}_2\text{O}$**

Easily sol in  $\text{H}_2\text{O}$

**Iodoplatinocyanhydric acid,  $\text{H}_2\text{Pt}(\text{CN})_4\text{I}_2$**

See Periodoplatinocyanhydric acid

**Silver iodoplatinocyanide,  $\text{Ag}_2(\text{PtI}_4(\text{CN})_4)$**

Ppt (Miolati, Gazz ch it 1900, 30 588)

**Strontium iodoplatinocyanide platinumocyanide,  $\text{SrPt}(\text{CN})_4\text{I}_2, 10\text{SrPt}(\text{CN})_4 + x\text{H}_2\text{O}$**

(Holst)

**Iodopurpleochromium chloride,  $\text{ICr}(\text{NH}_3)_5\text{Cl}_2$**

Quite sol in  $\text{H}_2\text{O}$  (Jorgensen, J pr (2) 25 83)

**— chloroplatinate,  $\text{ICr}(\text{NH}_3)_5\text{PtCl}_6$**

Precipitate (Jorgensen, l c)

**— iodide,  $\text{ICr}(\text{NH}_3)_5\text{I}_2$**

Difficultly sol in  $\text{H}_2\text{O}$  Insol in  $\text{HI}$ , or  $\text{KI} + \text{Aq}$ , insol in alcohol (Jorgensen, l c)

**— nitrate,  $\text{ICr}(\text{NH}_3)_5(\text{NO}_3)_2$**

Much less sol in  $\text{H}_2\text{O}$  than the chloride (Jorgensen, l c)

**Iodopurpleocobaltic iodide,  $\text{CoI}(\text{NH}_3)_5\text{I}_2$**

(Claudet)

Does not exist (Jorgensen, J pr (2) 25 94)

**Iodopurpleorhodium chloride,  $\text{IRh}(\text{NH}_3)_5\text{Cl}_2$**

Relatively easily sol in  $\text{H}_2\text{O}$ , insol in  $\text{HCl} + \text{Aq}$  and alcohol Insol in  $\text{KI} + \text{Aq}$  (Jorgensen, J pr (2) 27 433)

**— fluosilicate,  $\text{IRh}(\text{NH}_3)_5\text{SiF}_6$**

Nearly insol in cold  $\text{H}_2\text{O}$

**— iodoplatinate,  $\text{IRh}(\text{NH}_3)_5\text{PtI}_6$**

Ppt

**— iodide,  $\text{IRh}(\text{NH}_3)_5\text{I}_2$**

Very sl sol in cold  $\text{H}_2\text{O}$ , more sol in hot  $\text{H}_2\text{O}$ , insol in dil  $\text{HI} + \text{Aq}$ , and alcohol (Jorgensen, J pr (2) 27 433)

**— nitrate,  $\text{IRh}(\text{NH}_3)_5(\text{NO}_3)_2$**

Sl sol in  $\text{H}_2\text{O}$ , more easily sol in hot  $\text{H}_2\text{O}$ , insol in dil  $\text{HNO}_3 + \text{Aq}$ , and alcohol

**— sulphate,  $\text{IRh}(\text{NH}_3)_5\text{SO}_4$ , and  $+3\text{H}_2\text{O}$**

Sl sol in even hot  $\text{H}_2\text{O}$  (Jorgensen)

**Iodoselenic acid**

**Ammonium iodoselenate,  $2(\text{NH}_4)_2\text{O}, \text{I O}_5, 2\text{SeO}_3 + \text{H O}$**

Decomp by  $\text{H}_2\text{O}$  (Weinland, B 1903, 36 1400)

$2(\text{NH}_4)_2\text{O}, 3\text{I O}_5, 2\text{SeO}_3 + 5\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with decomp (?) (Weinland)

**Potassium iodoselenate,  $2\text{K}_2\text{O}, \text{I O}_5, 2\text{SeO}_3 + \text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$  (Weinland)  
 $2\text{K}_2\text{O}, 3\text{I O}_5, 2\text{SeO}_3 + 5\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with decomp (?) (Weinland)

**Rubidium iodoseleate**,  $2\text{Rb}_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_2$   
 $+5\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Weinland)

### Iodostannous acid

Data concerning solubility of  $\text{SnI}_2$  in  $\text{HI} + \text{Aq}$  indicate formation of this compound (Young, J Am Chem Soc 1897, 19 853)

### Iodosulphobismuthous acid

**Cuprous iodosulphobismuthite**,  $2\text{Cu}_2\text{S}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$

Decomp by  $\text{H}_2\text{O}$  at ord temp Decomp by mineral acids with evolution of  $\text{H}_2\text{S}$  (Ducatte, C R 1902, 134 1213)

**Lead iodosulphobismuthite**,  $\text{PbS}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$

Insol in  $\text{H}_2\text{O}$  Partially decomp by boiling  $\text{H}_2\text{O}$  Decomp by dil mineral acids with evolution of  $\text{H}_2\text{S}$  (Ducatte)

### Iodosulphuric acid

**Ammonium iodosulphate**,  $(\text{NH}_4)_2\text{SO}_3\text{I}_2(?)$

Very sol in  $\text{H}_2\text{O}$  (Zinno, N Rep Pharm 20 449)

**Mercuric iodosulphate**,  $\text{Hg}_2(\text{SO}_4)\text{I}_2$

See Mercuric sulphate iodide

**Potassium iodosulphate**,  $\text{K}_2\text{SO}_3\text{I}_2(?)$

Sol in 7 14 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Zinno, N Rep Pharm 20 449)

**Sodium iodosulphate**,  $\text{Na SO}_3\text{I}_2 + 10\text{H}_2\text{O}$

Sol in 3 64 pts  $\text{H}_2\text{O}$  at  $15^\circ$  and in dil alcohol (Zinno, N Rep Pharm 20 449)

Does not exist (Michaelis and Koethe, B 6 999)

**Iodosulphuric anhydride**,  $\text{ISO}_3$

Decomp very violently by  $\text{H}_2\text{O}$  (Weber, J pr (2) 25 224)

**Duodosulphuric anhydride**,  $\text{I}_2\text{SO}_3$

Decomp with  $\text{H}_2\text{O}$ , but not so violently as  $\text{ISO}_3$  (Weber, J pr (2) 25 224)

**Iodotrisulphuric anhydride**,  $\text{I}(\text{SO}_3)_3$

Decomp by  $\text{H}_2\text{O}$  (Weber, J pr (2) 25 224)

### Iodotelluric acid

**Ammonium iodotellurate**,  $(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Weinland, Z anorg 1901, 28 52)

$(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 8\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Weinland, B 1900, 33 1017)

**Cæsium iodotellurate**,  $\text{Cs}_2\text{TeI}_4$

Insol in  $\text{CsI}$ , or  $\text{HI} + \text{Aq}$  Decomp slowly by cold, rapidly by hot  $\text{H}_2\text{O}$  (Wheeler, Sil Am J 145 267)

**Potassium iodotellurate**,  $\text{K}_2\text{TeI}_6 + 2\text{H}_2\text{O}$

Sl efflorescent Somewhat sol in  $\text{KI} + \text{Ac}$  and dil  $\text{HI} + \text{Aq}$  (Wheeler)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $\text{TeO}_3 + 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  Partially decomp on recryst from  $\text{H}_2\text{C}$  (Weinland, Z anorg 1901, 28 53)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  without decomp (Weinland)

**Rubidium iodotellurate**,  $\text{Rb}_2\text{TeI}_6$

Sl sol in  $\text{HI}$ , or  $\text{RbI} + \text{Aq}$  Decomp b  $\text{H}_2\text{O}$  Somewhat sol in alcohol (Wheeler  $\text{Rb}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Weinland))

**Iodotetramine chromium iodide**,

$\text{ICr}(\text{NH}_3)_4\text{I}_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  Pptd by alcohol (Cleve)

**Iodotetramine cobaltic sulphate**,

$\text{ICo}(\text{NH}_3)_4\text{SO}_4$

(Vortmann and Blasberg, B 22 2652)

**Iodotungstic acid**

See Tungstioiodic acid

**Iodous acid**,  $\text{I}_2\text{O}_3$

See Iodine trioxide

**Iodovanadic acid**,  $\text{I}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$

Very easily sol in  $\text{H}_2\text{O}$   
 $2\text{V}_2\text{O}_5$ ,  $3\text{I}_2\text{O}_5 + 18\text{H}_2\text{O}$  (Ditte, C R 102 757)

**Ammonium iodovanadate**,  $3(\text{NH}_4)_2\text{O}$ ,  $2\text{V}_2\text{O}_5$

$5\text{I}_2\text{O}_5 + 20\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Ditte, C R 102 1019)

**Irididamine compounds**,  $\text{Cl} \cdot \text{Ir}(\text{NH}_3)_4\text{X}_2$

See Chloriridamine compounds

**Iridic acid**

**Potassium iridate** (?)

Sol in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$

**Iridicyanhydric acid**,  $\text{H}_3\text{Ir}(\text{CN})_6$

Easily sol in  $\text{H}_2\text{O}$ , still more easily in alcohol, less in ether (Martius, A 117 369)

**Barium iridicyanide**,  $\text{Ba}_3[\text{Ir}(\text{CN})_6]_2 + 18\text{H}_2\text{O}$

Efflorescent Easily sol in hot or cold  $\text{H}_2\text{O}$  Nearly insol in alcohol Not decomp by acids

**Cupric iridicyanide ammonia**,  $\text{Cu}_3\text{Ir}_2(\text{CN})_{12}$ ,  
 $6\text{NH}_3 + 4\text{H}_2\text{O}$

Ppt Decomp in air (Rumbach, Z anorg  
 1907, **52** 413)

**Potassium iridicyanide**,  $\text{K}_3\text{Ir}(\text{CN})_6$   
 Easily sol in  $\text{H}_2\text{O}$

**Silver iridicyanide ammonia**,  $\text{Ag}_3\text{Ir}(\text{CN})_6$ ,  
 $2\text{NH}_3 + 3\text{H}_2\text{O}$

Ppt Decomp in the light (Rumbach, Z  
 anorg 1907, **52** 414)

### **Iridium, Ir**

Insol in all acids, including aqua regia,  
 except when in finely divided state, as  
 "iridium black," when it is sol in aqua regia  
 (Claus, J pr **42** 251)

### **Iridium ammonia compounds**

See—

**Chlorirididamine comps**,  $\text{ClIr}(\text{NH}_3)_2\text{X}$

**Iridotramine** "  $\text{Ir}(\text{NH}_3)_3\text{X}_3$

**Iridopentamine** "  $\text{Ir}(\text{NH}_3)_5\text{X}_3$

**Iridotetramine** "  $\text{Ir}(\text{NH}_3)_4\text{X}_2$

**Iridoquoopentamine** "  $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)\text{X}_3$

**Iridosoamine** "  $\text{Ir}(\text{NH}_3)_2\text{X}_2$

**Iridosodamine** "  $\text{Ir}(\text{NH}_3)_4\text{X}_2$

### **Iridium tribromide**, $\text{IrBr}_3 + 4\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  Insol in alcohol or  
 ether (Birnbäum)

### **Iridium tetrabromide**, $\text{IrBr}_4$ , or $\text{H}_2\text{IrBr}_6$

Deliquescent Sol in  $\text{H}_2\text{O}$  and alcohol  
 (Birnbäum)

See **Bromiridic acid**

### **Iridium hydrogen sesquibromide**, $3\text{HBr}$ , $\text{IrBr}_3 + \text{H}_2\text{O} = \text{H}_3\text{IrBr}_6 + 3\text{H}_2\text{O}$

See **Bromiridous acid**

### **Iridium sesquibromide with MBr**

See **Bromiridite, M**

### **Iridium tetrabromide with MBr**

See **Bromiridate, M**

### **Iridium phosphorous bromide**, $\text{IrBr}_3$ , $3\text{PBr}_3$

Partly decomp by  $\text{H}_2\text{O}$  into a sol, and  
 insol modification Sol in  $\text{PBr}_3$  (Geisen-  
 heimer)

$\text{IrBr}_3$ ,  $2\text{PBr}_3$  Not easily attacked by  $\text{H}_2\text{O}$   
 $\text{IrBr}_4$ ,  $2\text{PCl}_3$

See **Iridium phosphorus chlorobromide**

### **Iridium carbide**, $\text{IrC}_4(?)$

(Berzelius)

Stable toward  $\text{H}_2\text{O}$ , acids, and alcohol  
 (Strecker, B 1909, **42** 1773)

### **Iridium monochloride**, $\text{IrCl}$

Insol in acids and bases (Wohler, B  
 1913, **46** 1584)

### **Iridium dichloride**, $\text{IrCl}_2$

Insol in acids and bases (Wohler, B  
 1913, **46** 1585)

### **Iridium trichloride**, $\text{IrCl}_3$

Insol in acids or alkalis (Claus, C C  
 1861 690)

Insol in  $\text{H}_2\text{O}$ , acids and alkalis, (Leadé,  
 C R 1899, **129** 1251)

+  $4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Claus)

### **Iridium tetrachloride**, $\text{IrCl}_4$ , or $\text{H}_2\text{IrCl}_6(?)$

Deliquescent, and easily sol in  $\text{H}_2\text{O}$

### **Iridium trichloride with MCl**

See **Chloriridite, M**

### **Iridium tetrachloride with MCl**

See **Chloriridate, M**

### **Iridium chloride with potassium chloride and sulphite**

See **Chloriridosulphite, potassium**

### **Iridium phosphorus chloride**, $\text{IrP}_2\text{Cl}_9$

Insol in cold  $\text{H}_2\text{O}$  Sl decomp by hot  
 $\text{H}_2\text{O}$  (Geisenheimer, A ch (6) **23** 254)

$\text{IrP}_2\text{Cl}_{10}$  Very sol in chloroform (G)

$\text{IrP}_2\text{Cl}_{12}$  Easily sol in  $\text{PCl}_3$ , or  $\text{CHCl}_3$ ,  
 also in  $\text{CS}_2$  with gradual decomp Sl sol in  
 cold  $\text{H}_2\text{O}$  Decomp by boiling into  $\text{IrCl}_3$ ,  
 $3\text{H}_3\text{PO}_4$  Sl sol in benzene, ligrom and  $\text{CCl}_4$   
 (Strecker, B 1909, **42** 1772)

+  $\text{H}_2\text{O}$  Insol in  $\text{PCl}_3$  at  $100^\circ$  Very  
 slowly sol in boiling  $\text{H}_2\text{O}$  (Geisenheimer, A  
 ch (6) **23** 266)

$\text{IrP}_3\text{Cl}_{15}$  Decomp by  $\text{H}_2\text{O}$  into  $2\text{IrCl}_3$ ,  
 $3\text{H}_3\text{PO}_3$ ,  $3\text{H}_3\text{PO}_4$ . Violently decomp by  
 alcohol Sl sol in cold, more in hot  $\text{POCl}_3$ ,  
 without decomp Very sol in  $\text{PCl}_3$  with  
 decomp into  $\text{IrP}_3\text{Cl}_{12}$ , similarly in  $\text{PBr}_3$  Sol  
 in  $\text{AsCl}_3$  with combination Sol in  $\text{CS}_2$  with  
 decomp Sol in  $\text{SCl}_2$  with combination  
 Easily sol in cold  $\text{C}_6\text{H}_6$  with decomp Insol  
 in  $\text{CCl}_4$  Sol in  $\text{CHCl}_3$  with decomp (Gei-  
 senheimer, A ch (6) **23** 254)

### **Iridium phosphorus arsenic chloride**,

$2\text{IrP}_3\text{Cl}_{15}$ ,  $5\text{AsCl}_3$

Sol in  $\text{H}_2\text{O}$  with decomp into correspond-  
 ing acid (Geisenheimer, C R **110** 1336)

$\text{IrCl}_3$ ,  $2\text{PCl}_3$ ,  $2\text{AsCl}_3$  Very sol in  $\text{H}_2\text{O}$   
 with decomp Sol in  $\text{AsCl}_3$ , insol in  $\text{CCl}_4$   
 (Geisenheimer)

### **Iridium phosphorus sulphur chloride**, $\text{IrCl}_3$ , $2\text{PCl}_3$ , $2\text{SCl}_2$

Very sol in sl amt  $\text{H}_2\text{O}$ , with decomp into  
 an acid analogous to chlorophosphoridic acid  
 Sol in  $\text{SCl}_2$  (Geisenheimer)

**Iridium phosphorus chlorobromide**,  $\text{IrBr}_4 \cdot 2\text{PCl}_3$   
(Geisenheimer, C R 111 40)

**Iridium dihydroxide**,  $\text{IrO}_2 \cdot 2\text{H}_2\text{O} = \text{IrO}_4\text{H}_4$   
Insol in dil  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  Slowly but completely sol in  $\text{HCl} + \text{Aq}$  Sol in  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq}$  (Claus, J pr 39 104)

**Iridium sesquihydroxide**,  $\text{Ir}_2\text{O}_3\text{H}_6$   
Not attacked by acids, except slightly by conc  $\text{HCl} + \text{Aq}$  (Claus, C C 1861 690)

**Iridium triiodide**,  $\text{IrI}_3$   
Very sl sol in cold, somewhat more in hot  $\text{H}_2\text{O}$  Insol in alcohol (Oppler, J B 1857 263)

**Iridium tetraiodide**,  $\text{IrI}_4$   
Insol in  $\text{H}_2\text{O}$  or acids (Lassaigne)  
Sol in solutions of iodides (Oppler)

**Iridium triiodide with MI**  
See Iodiridite, M

**Iridium tetraiodide with MI**  
See Iodiridate, M

**Iridium dioxide**,  $\text{IrO}_2$   
Very sl sol in acids  
Freshly pptd Sol in conc  $\text{H}_2\text{SO}_4$ , hot 2-N  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{HCl}$  Insol in 2-N  $\text{KOH}$  and sl sol in hot 1-N  $\text{KOH}$   
Dried in a desiccator Sol in  $\text{HCl}$  Insol in  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  and  $\text{KOH}$   
Dried at  $100^\circ$  Sol in hot conc  $\text{HCl}$  Insol in  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  and  $\text{KOH}$  (Wohler, Z anorg 1908, 57 334)  
See also Iridium dihydroxide

**Iridium trioxide**,  $\text{IrO}_3$   
Unstable (Wohler, Z anorg 1908, 57 340)

**Iridium sesquioxide**,  $\text{Ir}_2\text{O}_3$   
Insol in acids  
Sol in conc  $\text{H}_2\text{SO}_4$ , and hot conc  $\text{HCl}$  Forms colloidal solution with dil  $\text{HCl}$  Conc  $\text{HNO}_3$  converts it into the dioxide  
Insol in  $\text{KOH} + \text{Aq}$  (Wohler, Z anorg 1908, 57 339)

**Iridium oxybromide**,  $\text{Ir}_2\text{Br}_3\text{O}_2 = 2\text{IrBr}_4 \cdot \text{IrO}_2$   
Not decomp by  $\text{H}_2\text{O}$  (Geisenheimer, A ch (6) 23 286)

**Iridium phosphide**,  $\text{Ir}_2\text{P}$   
(Clarke and Joslin, Am Ch J 5 231)

**Iridium sesquiselelide**,  $\text{Ir}_2\text{Se}_3$   
Insol in  $\text{HNO}_3$ , slowly sol in hot aqua regia (Chabré and Bouchonnet, C R 1903, 137 1060)

**Iridium monosulphide**,  $\text{IrS}$   
Insol in  $\text{HNO}_3 + \text{Aq}$ , and very sl sol if at all in aqua regia (Berzelius)  
Sol in  $\text{K}_2\text{S}$ , and  $\text{KSH} + \text{Aq}$   
 $+ x\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$ , sol in cold  $\text{HNO}_3 + \text{Aq}$  Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  or dil acids More sol in  $\text{K}_2\text{S} + \text{Aq}$  than  $\text{PtS}_2$  (Berzelius)

**Iridium disulphide**,  $\text{IrS}_2$   
Not attacked by  $\text{H}_2\text{O}$ , but decomp when exposed moist in air Not attacked by sat  $\text{HCl} + \text{Aq}$  or by conc  $\text{HNO}_3 + \text{Aq}$ , but is oxidised by fuming  $\text{HNO}_3 + \text{Aq}$ , and aqua regia Insol in  $\text{NH}_4$  sulphides, or polysulphides +  $\text{Aq}$  Slowly sol in alkali polysulphides +  $\text{Aq}$  (Antony, Gazz ch it 23, 1 190)

**Iridium sesquisulphide**,  $\text{Ir}_2\text{S}_3$   
Sl sol in  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3$ , or  $\text{K}_2\text{S} + \text{Aq}$

**Iridotriamine chloride**,  $\text{Ir}(\text{NH}_3)_3\text{Cl}_3$   
Sl sol in  $\text{H}_2\text{O}$  Not attacked by boiling  $\text{H}_2\text{SO}_4$  (Palmaer, B 22 15)

**Iridotetraamine chloride**,  $\text{Ir}(\text{NH}_3)_4\text{Cl}_3$   
Very sol in  $\text{H}_2\text{O}$  (Palmaer, B 22 15)

— chlorosulphate,  $[\text{Ir}(\text{NH}_3)_4\text{Cl}_2]\text{SO}_4 + 4\text{H}_2\text{O}$   
(Palmaer)

**Iridopentamine bromide**,  $\text{Ir}(\text{NH}_3)_5\text{Br}_3$   
Sol in 352 pts  $\text{H}_2\text{O}$  at  $12.5^\circ$  (Palmaer, B 23 3817)

— bromochloride,  $\text{Ir}(\text{NH}_3)_5\text{ClBr}_2$   
Sol in  $\text{H}_2\text{O}$  (Palmaer, B 24 2090)

— bromonitrite,  $\text{Ir}(\text{NH}_3)_5\text{Br}(\text{NO}_2)_2$   
Sol in 179 pts  $\text{H}_2\text{O}$  at  $18^\circ$  (Palmaer)

— bromosulphate,  $\text{Ir}(\text{NH}_3)_5\text{BrSO}_4 + \text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Palmaer)

— carbonate,  $[\text{Ir}(\text{NH}_3)_5]_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$  (Claus, J pr 63 99)

— trichloride,  $\text{Ir}(\text{NH}_3)_3\text{Cl}_3$   
Sol in 153.1 pts  $\text{H}_2\text{O}$  at  $15.1^\circ$  (Palmaer, B 23 3810)  
Sol in hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$  (Claus, J pr 69 30)

— chlorobromide,  $\text{Ir}(\text{NH}_3)_5\text{ClBr}_2$   
Sol in 213.6 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Palmaer)

— chloroiodide,  $\text{Ir}(\text{NH}_3)_5\text{ClI}_2$   
Sol in 104.5 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Palmaer)

— chlorooxalate,  $\text{Ir}(\text{NH}_3)_5\text{ClC}_2\text{O}_4$   
Sl sol in  $\text{H}_2\text{O}$  (Palmaer)

**Iridopentamine chloronitrate,**Sol in 51.54 pts  $\text{H}_2\text{O}$  at  $15.4^\circ$  (Palmaer)— **chloronitrite,**Easily sol in  $\text{H}_2\text{O}$  (Palmaer)— **chloroplatinate,**  $\text{Ir}(\text{NH}_3)_5\text{Cl}_3, \text{PtCl}_4$ Very sl sol in  $\text{H}_2\text{O}$  (Palmaer)— **chlorosulphate,**  $\text{Ir}(\text{NH}_3)_5\text{ClSO}_4 + 2\text{H}_2\text{O}$ Sol in 134.5 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Palmaer)— **hydroxide,**  $\text{Ir}(\text{NH}_3)_5(\text{OH})_3$ 

Known only in solution, which decomp on evaporation (Claus)

— **nitrate,**  $\text{Ir}(\text{NH}_3)_5(\text{NO}_3)_3$ Moderately sol in  $\text{H}_2\text{O}$  (Claus)Sol in 349 pts  $\text{H}_2\text{O}$  at  $16^\circ$  (Palmaer)— **sulphate,**  $[\text{Ir}(\text{NH}_3)_5]_2(\text{SO}_4)_3$ Sol in  $\text{H}_2\text{O}$  (Claus)**Iridoaquopentamine bromide,**Sol in 4 pts  $\text{H}_2\text{O}$  Pptd from aqueous solution by  $\text{HBr} + \text{Aq}$  (Palmaer, B 24 2090)— **chloride,**  $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)\text{Cl}_3$ Sol in 1.2 to 1.5 pts  $\text{H}_2\text{O}$  at ord temp Pptd by  $\text{HCl} + \text{Aq}$  from aqueous solution (Palmaer, B 24 2090)— **nitrate,**  $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)(\text{NO}_3)_3$ Sol in about 10 pts  $\text{H}_2\text{O}$  at  $17^\circ$  Pptd from aqueous solution by  $\text{HNO}_3 + \text{Aq}$  (Palmaer)**Iridonitrous acid,**  $\text{H}_6\text{Ir}_2(\text{NO}_2)_{12}$ Easily sol in  $\text{H}_2\text{O}$  (Gibbs, B 4 281)**Ammonium iridonitrite,**  $(\text{NH}_4)_6\text{Ir}_2(\text{NO}_2)_{12}$ Almost insol in cold  $\text{H}_2\text{O}$ , decomp by hot  $\text{H}_2\text{O}$  with evolution of  $\text{N}_2$ . Decomp by hot conc  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ . Insol in sat  $\text{NH}_4\text{Cl} + \text{Aq}$  (Leidich, C R 1902, 134 1583)**Barium iridonitrite iridochloride,**Sol in  $\text{H}_2\text{O}$  (Lang)**Mercuric iridonitrite,**  $\text{Hg}_2\text{Ir}_2(\text{NO}_2)_{12}$ Insol in  $\text{H}_2\text{O}$  (Gibbs, B 4 280)**Potassium iridonitrite,**  $\text{K}_6\text{Ir}_2(\text{NO}_2)_{12}$ Sl sol in cold, more sol in boiling  $\text{H}_2\text{O}$ . Decomp by hot  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Insol in  $\text{KCl} + \text{Aq}$  (Leidich, Bull Soc 1902, (3) 27 937) $+ 2\text{H}_2\text{O}$  Moderately sol in  $\text{H}_2\text{O}$ **Potassium iridonitrite iridochloride,**Sol in  $\text{H}_2\text{O}$ **Silver iridonitrite,**  $\text{Ag}_6\text{Ir}_2(\text{NO}_2)_{12}$ Difficultly sol in cold, more easily in hot  $\text{H}_2\text{O}$ **Sodium iridonitrite,**  $\text{Na}_6\text{Ir}_2(\text{NO}_2)_{12} + 2\text{H}_2\text{O}$ Sl sol in  $\text{H}_2\text{O}$  Sol in cold  $\text{H}_2\text{O}$  Decomp by hot conc  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$  (Leidich, C R 1902, 134 1583)**Sodium iridonitrite iridochloride,**Sl sol in  $\text{H}_2\text{O}$  (Gibbs) $\text{Na}_6\text{Ir}_2(\text{NO}_2)_{12}, \text{Na}_6\text{Ir}_2\text{Cl}_6$  Insol in cold, sl sol in hot  $\text{H}_2\text{O}$  (Lang)**Iridosamine chloride,**  $\text{Ir}(\text{NH}_3)_2\text{Cl}_2$ Nearly insol in  $\text{H}_2\text{O}$  (Skoblikoff, A 84 275)— **sulphate,**  $\text{Ir}(\text{NH}_3)_2\text{SO}_4$ Easily sol in  $\text{H}_2\text{O}$  (Skoblikoff)**Iridosodium chloride,**  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{Cl}_2$ Insol in cold, decomp by hot  $\text{H}_2\text{O}$  (Skoblikoff)— **nitrate,**  $\text{Ir}(\text{N}_2\text{H}_5\text{NO}_3)_2$ Easily sol in  $\text{H}_2\text{O}$ — **sulphate,**  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{SO}_4$ Sl sol in cold, easily in boiling  $\text{H}_2\text{O}$  Sl sol in alcohol**Iridosulphuric acid****Potassium iridosulphate,**  $\text{K}_6\text{Ir}_2(\text{SO}_4)_6$ Sol in  $\text{H}_2\text{O}$  (de Boisbaudran, C R 96 1406)**Iridosulphurous acid****Ammonium iridosulphite,**  $(\text{NH}_4)_6\text{Ir}_2(\text{SO}_3)_6 + 6\text{H}_2\text{O}$ Slightly sol in  $\text{H}_2\text{O}$  (Birnbbaum, A 136 179)**Potassium iridosulphite,**  $\text{K}_6\text{Ir}_2(\text{SO}_3)_6 + 6\text{H}_2\text{O}$ Slightly sol in  $\text{H}_2\text{O}$ **Sodium iridosulphite,**  $\text{Na}_6\text{Ir}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}$ Scarcely sol in  $\text{H}_2\text{O}$ **Iron, Fe**Permanent in dry air, oxidises only slowly in moist air, but rapidly when in contact with air and  $\text{H}_2\text{O}$  simultaneously

Fe does not rust in contact with air and

H<sub>2</sub>O containing alkalis even in very small amounts (Payen, A ch 50 305)

Not attacked at ord temp by H<sub>2</sub>O free from air. More easily oxidised by NH<sub>4</sub> salts + Aq than by H<sub>2</sub>O when exposed to air simultaneously (Persoz, A ch (3) 24 506)

Iron is slowly attacked by distilled H<sub>2</sub>O in presence of air. 100 ccm distilled water removed 29 mg from 11.8 sq cm iron in one week, while air free from CO<sub>2</sub> was passed through the solution. In presence of CO<sub>2</sub>, 54 mg were removed (Wagner, Dingl 221 260)

CO<sub>2</sub> acts as a catalyst for the solution of Fe by H<sub>2</sub>O (Whitney, J Am Chem Soc 1903, 25 394)

Iron is most easily oxidised when it is exposed to air, and H<sub>2</sub>O is deposited on it at the same time in liquid form

100 l sea water dissolve 27.37 g from 1 sq metre Fe, 29.16 g from 1 sq metre steel, 1.12 g from 1 sq metre galvanised Fe (Calvert and Johnson, C N 11) 171)

Readily sol in HCl, dil H<sub>2</sub>SO<sub>4</sub> + Aq, and most other acids

Action of H<sub>2</sub>SO<sub>4</sub> + Aq (1 12) is very much accelerated by a few drops of PtCl<sub>4</sub> + Aq, the addition of As<sub>2</sub>O<sub>3</sub> arrests the action completely. Tartar emetic and HgCl<sub>2</sub> diminish the action, but do not arrest it. CuSO<sub>4</sub> + Aq strongly accelerates the action, and Ag<sub>2</sub>SO<sub>4</sub> + Aq also to a less extent

In the case of HCl + Aq, the addition of small amts of metallic salts also influences the action. Weak HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq has but little action, and the addition of PtCl<sub>4</sub> increases it, As<sub>2</sub>O<sub>3</sub> stops it, other solutions have no effect. With racemic and tartaric acids the phenomena are the same

With oxalic acid, PtCl<sub>4</sub> prevents the action. Saline solutions and even distilled H<sub>2</sub>O, when mixed with PtCl<sub>4</sub>, have slight solvent action (Millon, C R 21 45)

Above phenomena are due to galvanic action from metal deposited on the iron (Barreswill, C R 21 292)

H<sub>2</sub>SO<sub>4</sub> has only sl action on cast-iron at ord temp with exclusion of air

Weak acids have a strong action at higher temperatures

Charcoal pig-iron, and case-hardened cast-iron are much less attacked by weak acids at b-pt than other sorts of Fe. Scotch pig-iron is most strongly attacked

99.8% H<sub>2</sub>SO<sub>4</sub> has very sl action on iron at ord temp when air is excluded (Lunge, Dingl 261 131)

Resistance against dil H<sub>2</sub>SO<sub>4</sub> + Aq is greatly increased by increase in amt of C if chemically combined, less so by P or Si (Ledebur, Dingl 223 326)

*Passive Iron* —When Fe is treated with pure conc HNO<sub>3</sub> + Aq of 1.512–1.419 sp gr, it soon becomes coated with a bluish or black coating, apparently FeO, and when thus

covered Fe is not attacked by HNO<sub>3</sub> + Aq of any strength at ord temp or at the temp of a freezing mixture, but action occurs on heating. Nor is Fe attacked at ord temp by acid of 1.401 sp gr or even somewhat weaker acid, though action begins at once on heating. Very dil HNO<sub>3</sub> + Aq attacks Fe at ord temp with formation of NH<sub>4</sub>N<sup>+</sup> and Fe(NO<sub>3</sub>)<sub>2</sub>. The action of HNO<sub>3</sub> + Aq influenced by PtCl<sub>4</sub>. If acid containing 4 equivalents of H<sub>2</sub>O is diluted with 2–3 vol H<sub>2</sub>O, and then poured on Fe turnings, it dissolves at once with evolution of nitro fumes and formation of ferric salt, but if the acid one drop of PtCl<sub>4</sub> be added, on H gas is evolved, and NH<sub>4</sub>NO<sub>3</sub> and Fe(NO<sub>3</sub>)<sub>3</sub> are formed (Millon, C R 21 47)

The more H<sub>2</sub>O the acid contains the lower will be the temp at which the Fe remains passive. Shaking the wire hastens the passivity. Contact with Pt, Au, or C does not prevent it. Fe wire becomes passive by remaining 10 min in HNO<sub>3</sub> vapour (Renard, C R 79 159)

Iron may be made passive by HClO, HBrO<sub>3</sub>, HIO<sub>3</sub>, H<sub>2</sub>CrO<sub>4</sub>, in the same way as by HNO<sub>3</sub>.

Iron may also be made passive by moderate ignition

Passivity occurs with HNO<sub>3</sub> + Aq of 1.3 sp gr after a short time at 31°, but if temp 32°, passivity does not occur

Colourless HNO<sub>3</sub> + Aq of 1.42 sp gr produces passivity at 55° but not at 56°. Refuming HNO<sub>3</sub> + Aq of 1.42 sp gr produces passivity at 82° but not at 83° (Ordway, Sill Am J (2) 40 316)

The passivity of Fe is destroyed when it is placed in a magnetic field at a much lower temperature than when in normal condition (Nichols and Franklin, Sill Am J (3) 34 419)

Passivity depends on a coating of NO which hinders the action of the acid. All operation which removes this layer terminates the passivity, as shaking, rubbing, placing in vacuum, etc (Varenne, C R 89 783)

When Fe is plunged in HNO<sub>3</sub> + Aq of 1.4 sp gr there is a sudden evolution of gas which ceases after 3 to 20 seconds, and the surface becomes bright. The same phenomena take place with a more dilute acid, if of not less than 1.32 sp gr. In the latter case, there is an immediate evolution of gas, which suddenly ceases and the metal becomes bright but soon the acid begins to act again at single point, and the action gradually spreads over the whole surface, this, however, soon ceases again, and we have an "intermittent passivity"

If a part of a piece of iron is immersed in strong acid, the whole of it is made passive. This is explained by the NO spreading over the whole surface by capillarity

The passivity ceases when the Fe is placed in dil acid, after a longer or shorter time

according to the dilution of the acid,—when the acid has sp gr = 1.30, after 11 days  
 “ “ “ 1.28 “ 5 “  
 “ “ “ 1.26 “ 32 hours  
 “ “ “ 1.16 “ 12 “

Iron may also be made passive by long standing in NO gas under pressure (Varenne, C R 90 998)

Fe is made passive by a coating of  $\text{Fe}_3\text{O}_4$ , not by NO (Schonbein, Pogg 39 342) (Beetz, Pogg 67 286) (Ramann, B 14 1430)

Passivity may also be caused by  $\text{NH}_4\text{NO}_3$ +Aq, ammoniacal  $\text{AgNO}_3$ +Aq,  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{Fe}(\text{NO}_3)_2$ ,  $\text{Al}(\text{NO}_3)_3$ ,  $\text{Co}(\text{NO}_3)_2$ ,  $\text{Ni}(\text{NO}_3)_2$ , etc +Aq instead of  $\text{HNO}_3$ +Aq (Ramann, B 14 1933)

Hardly attacked by either dil or conc acids when they are under high pressure (Cailliet C R 68 395)

Iron is dissolved by  $\text{HNO}_3$ +Aq, even when very conc, but no gas is evolved and the process is very slow

$\text{HNO}_3$ +Aq of the following sp gr dissolves the given amts from strips of pure Fe

Sp gr of acid	Diminution of weight in 24 hours
1.28	0.82%
1.34	0.75
1.38	0.29
1.48	0.34
1.53	5.80

(Gautier and Charpy, C R 113 1451)

Insol in liquid chlorine below  $90^\circ$  (Lange, Zeit angew Ch 1900, 13 686)

Insol in liquid  $\text{NH}_3$  (Gore, Am ch J 1898, 20 828)

Not attacked by alkalis

Sol in  $\text{NaOH}$ +Aq (34%) when air is blown through the liquid (Zirnit, Ch Ztg 12 355)

$\text{NaOH}$ +Aq attacks iron and steel (Venator, Dingl 261 133)

$\text{NaOH}$ +Aq dissolves Fe between  $15^\circ$  and  $100^\circ$  (Dingl 261 131)

Presence of rusting material, and fats and oils greatly hinder it (Wagner)

Sol in alkali hydrogen carbonates+Aq (Berzelius)

Sat  $\text{NaCl}$ +Aq has sl but perceptible action on Fe.  $\text{NH}_4\text{Cl}$ +Aq has stronger action than  $\text{NaCl}$ +Aq (Lunge)

100 ccm  $\text{H}_2\text{O}$  containing 0.5 g  $\text{NaCl}$  or  $\text{KCl}$  removed 4.2 mg from 11.8 sq cm iron in one week, while air free from  $\text{CO}_2$  was passed through the solution, and 72 mg in presence of  $\text{CO}_2$

100 ccm  $\text{H}_2\text{O}$  containing 1 g  $\text{NH}_4\text{Cl}$  removed 45 mg, and 76 mg respectively under the above conditions

100 ccm  $\text{H}_2\text{O}$  containing 0.8 g  $\text{MgCl}_2$  re-

moved 49 mg, and 65 mg respectively under the above conditions

Not attacked by 100 ccm  $\text{H}_2\text{O}$  containing 1 g  $\text{Na}_2\text{CO}_3$ , or by  $\text{CaO}_2\text{H}_2$ +Aq (Wagner, Dingl 221 260)

Action of  $\text{KClO}_3$ +Aq  $\text{KClO}_3$ +Aq (6.3%  $\text{KClO}_3$ ) oxidised 11.21 g cast iron and 20.1 g pure iron from a surface of 1 sq metre in 7 hours,  $\text{KClO}_3$ +Aq (25%  $\text{KClO}_3$ ) oxidised 24.59 g cast, and 44.90 g pure Fe under above conditions,  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2$ +Aq ( $20^\circ$  Baume) obtained by passing Cl through  $\text{CaO}_2\text{H}_2$ +Aq oxidised 85 g cast, and 95 g pure Fe under the above conditions (Lunge and Deggele, J Soc Chem Ind 4 32)

Easily sol in organic acids

#### Comparative action of oils on Fe

	Amount Fe dissolved
Neatsfoot oil	0.0875 grains
Colza	0.0800 “
Sperm	0.0460 “
Lard	0.0250 “
Olive	0.0062 “
Linseed	0.0050 “
Seal	0.0050 “
Castor	0.0048 “
Paraffine	0.0045 “
Almond	0.0040 “
“Lubricating” oil	0.0018 “

(Watson, C N 42 190)

$\frac{1}{2}$  ccm oleic acid dissolves 0.0097 g Fe in 6 days (Gates, J phys Chem 1911, 15 143)

Fe dissolves in albumen solution to the extent of 1 to 2 per cent (Buchner, Arch Pharm (3) 20 417)

Attacked by sugar+Aq at  $115$ – $120^\circ$ , also by inverted sugar or malt extract, not by glycerine or mannite+Aq (Klein and Berg, C R 102 1170)

#### Iron arsenide, $\text{FeAs}_2$

Min *Lollingite* Sol in  $\text{HNO}_3$ +Aq with separation of  $\text{As}_2\text{O}_3$

$\text{Fe}_3\text{As}_4$  Min *Leucopyrite*

#### Iron arsenide sulphide, $\text{FeAsS}$ , $\text{FeS}$

Min *Arsenopyrite* Sol in  $\text{HNO}_3$ +Aq with separation of S and  $\text{As}_2\text{O}_3$ , wholly sol in aqua regia, not attacked by  $\text{HCl}$ +Aq

#### Iron boride, $\text{Fe}_2\text{B}$

Decomp by  $\text{H}_2\text{O}$  Sol in hot dil  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$  and in hot conc  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$  Sol in hot dil or cold conc  $\text{HNO}_3$  (Jassonneux, C R 1907, 145 122)

$\text{FeB}$  Sol in molten alkali carbonates, not sol in dil or conc  $\text{H}_2\text{SO}_4$  in the cold, sol in boiling  $\text{H}_2\text{SO}_4$  and in  $\text{HNO}_3$  (Moissan, Bull Soc 1895, (3) 13 958)

Stable in dry air Decomp by aqua regia,

not readily sol in conc  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$  (Moissan, C R 1895, 120 176)

$\text{FeBr}_2$  Decomp by  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3$  and in hot conc  $\text{HCl}$  (Jassonneix, C R 1907, 145 122)

#### Iron (ferrous) bromide, $\text{FeBr}_2$

Sol in  $\text{H}_2\text{O}$  Decomp by heating on air  
Sat  $\text{FeBr}_2 + \text{Aq}$  contains at

-21°	-7°	+10°	21°
47 0	48 3	52 3	53 7% $\text{FeBr}_2$ ,
37°	50°	65°	95°
56 0	58 0	59 4	63 3% $\text{FeBr}_2$

(Étard, A ch 1894, (7) 2 541)

+4 $\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ , pptd from cooled aq solution (Volkman, C C 1894, I 611)

+6 $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Löwig)  
+9 $\text{H}_2\text{O}$  (Volkman)

#### Ferrie bromide, $\text{FeBr}_3$

Deliquescent Sol in  $\text{H}_2\text{O}$ , alcohol, and ether (Löwig)

Sl sol in liq  $\text{NH}_3$  (Franklin, Am Ch 1898, 20 828)

+6 $\text{H}_2\text{O}$  Sol in alcohol and ether (Bolchakoff, C C 1898, II 660)

#### Ferrous mercuric bromide

Deliquescent (v Bonsdorff)

#### Ferrie rubidium bromide, $\text{Rb}_2\text{FeBr}_5 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Walden, Z anorg 1894, 7 32)

#### Ferrous stannic bromide

See Bromostannate, ferrous

#### Ferrous bromide nitric oxide, $3\text{FeBr}_2, 2\text{NO}$

Sol in  $\text{H}_2\text{O}$  Not isolated (Thomas, C R 1896, 123 944)

#### Ferrie bromochloride, $\text{FeCl}_2\text{Br}$

Very deliquescent, and sol in  $\text{H}_2\text{O}$ , alcohol, and ether. Notably sol in chloroform, benzene, and toluene Insol in  $\text{CS}_2$  (Lenormand, C R 116 820)

#### Iron carbide, $\text{Fe}_3\text{C}$

(Gurtt, J B 1856, 781)

Mixture of  $\text{Fe}$  and  $\text{FeC}_4$  (Tunner, Polyt Zentralbl 1861 1227)

$\text{Fe}_3\text{C}$  (Karsten, J pr 40 229)

$\text{Fe}_3\text{C}$  Sol in hot conc  $\text{HCl}$ , oxidized slowly by moist air (Campbell, Am Ch J 1896, 18 840-841)

$\text{Fe}_2\text{C}_2$  (Rammelsberg, C C 1847 60)

#### Iron molybdenum carbide, $\text{Fe}_3\text{C}, \text{Mo}_2\text{C}$

Sol in hydracids, insol in  $\text{HNO}_3$  (Williams, C R 1898, 127 484)

#### Iron tungsten carbide, $2\text{Fe}_3\text{C}, 3\text{W}_2\text{C}$

Insol in  $\text{H}_2\text{O}$  and hydracids, sol in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  (Williams, C R 1898, 127 11)

#### Iron carbonyl, $\text{Fe}(\text{CO})_5$

Slowly decomp on air Not attacked by dil  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$  Conc  $\text{HNO}_3 + \text{Aq}$ , or  $\text{Br}_2 + \text{Aq}$  decomp easily Sol alcoholic solution of  $\text{KOH}$  or  $\text{NaOH}$  with subsequent decomp Sol in alcohol, ether, benzene, mineral oils, etc (Mond and Langer, Chem Soc 59 1090)

$\text{Fe}_2(\text{CO})_7$  Decomp on air Not attacked by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$  Sol in alcohol potash Very much less sol in organic solvents than  $\text{Fe}(\text{CO})_5$  (Mond and Langer)

#### Ferrous chloride, $\text{FeCl}_2$

Deliquescent Easily sol in  $\text{H}_2\text{O}$  with evolution of heat, or in alcohol Insol in ether (Jahn)

Sol in 2 pts  $\text{H}_2\text{O}$  at 18 75° (Abl)

Sol in 1 pt strong alcohol (Wenzel)

Sp gr of  $\text{FeCl}_2 = \text{Aq}$  at 15 5°

Sp gr	% $\text{FeCl}_2$	% $\text{FeCl}_2, 4\text{H}_2\text{O}$

(Dunn, J Soc Chem Ind 1902, 21 390)

Insol in liquid HF (Franklin, Z anorg 1905, 46 2)

Sol in acetone, insol in methylal (Eidmann, C C 1899, II 1014)

Sol in acetone (Naumann, B 1904, 37 4328)

Sl sol in methyl acetate (Naumann, B 1909, 42 3790)

Sol in ethyl acetate (Naumann, B 1910, 43 314)

Insol in ethyl acetate (Naumann, B 1904, 37 3601)

Yellow modification is sol in benzonitrile (Naumann, B 1914, 47 1369)

Mol weight determined in pyridine (Werner, Z anorg 1897, 15 21)

+2H<sub>2</sub>O (Jonas)

+4H<sub>2</sub>O Deliquescent Easily sol in alcohol Sol in 0.68 pt cold H<sub>2</sub>O (Reimann, Mag Pharm 17 215)

Sat aq solution contains at

16° 18° 25° 28° 43°  
40 5 40 9 41 0 42 5 44 4% FeCl<sub>2</sub>,

50° 53° 72° 89° 96° 118°  
45 0 45 9 49 2 51 3 51 0 51 7% FeCl<sub>2</sub>

(Étard, A ch 1894, (7) 2 537)

100 g FeCl<sub>2</sub>, 4H<sub>2</sub>O + Aq contain 17.54 g Fe at 22.8°, 18.59 g at 43.2° (Boecke, N Jahrb Min 1911, I, 61)

More sol in water containing NO than in pure H<sub>2</sub>O (Gay, Bull Soc (2) 44 175)

Sol in hot HCl + Aq (Sabatier, Bull Soc 1895, (3) 13 599)

[Sabatier could not obtain FeCl<sub>2</sub> + 6H<sub>2</sub>O of Lesceur]

**Ferroferric chloride, Fe<sub>3</sub>Cl<sub>8</sub> + 18H<sub>2</sub>O**

Deliquescent (Lefort, J Pharm (4) 10 85)

**Ferric chloride, Fe<sub>2</sub>Cl<sub>6</sub> or FeCl<sub>3</sub>**

Very deliquescent, and sol in H<sub>2</sub>O with evolution of great heat

100 mols H<sub>2</sub>O dissolve mols anhydrous Fe<sub>2</sub>Cl<sub>6</sub> at t°

t°	Mols Fe <sub>2</sub> Cl <sub>6</sub>	t°	Mols Fe <sub>2</sub> Cl <sub>6</sub>
66	29 20	80	29 20
70	29 42	100	29 75
75	28 92		

(Roozeboom, Z phys Ch 10 477)

See also hydrated salts below

Solution in H<sub>2</sub>O is decomp into colloidal Fe<sub>2</sub>O<sub>3</sub>, xH<sub>2</sub>O and HCl, upon heating if conc, and on simple standing if dil

Krecke (J pr (2) 3 286) gives the following table

% Fe <sub>2</sub> Cl <sub>6</sub> in solution	Temp at which Craham's colloidal hydrate is formed	Temp at which Saint Gilles colloidal hydrate is formed	Temp at which oxychlorides are formed	Temp at which Fe <sub>2</sub> O <sub>3</sub> is formed
32	100-130°	100-130°	100°+	140°

+  $5\text{H}_2\text{O}$  Correct formula for +  $6\text{H}_2\text{O}$  salt

100 mols  $\text{H}_2\text{O}$  dissolve mols  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
12	12 87	30	15 12	55	19 15
20	13 95	35	15 64	56	20 00
27	14 85	50	17 50	55	20 32

(Roozeboom)

Melts in crystal  $\text{H}_2\text{O}$  at  $31^\circ$  (Engel, C R 104 1708), at  $56^\circ$  (Roozeboom)

+  $6\text{H}_2\text{O}$  Very deliquescent Sol in alcohol Ether dissolves out  $\text{Fe}_2\text{Cl}_6$

M-pt is  $31^\circ$  (Ordway) Contains only  $5\text{H}_2\text{O}$  (Roozeboom)

+  $7\text{H}_2\text{O}$  Melts in crystal  $\text{H}_2\text{O}$  at  $32.5^\circ$

100 mols  $\text{H}_2\text{O}$  dissolve mols  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 7\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
20	11 35	32	13 55	30	15 12
27 4	12 15	32 5	14 99	25	15 54

(Roozeboom)

+  $12\text{H}_2\text{O}$  Less deliquescent than  $\text{Fe}_2\text{Cl}_6$  or  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$

100 mols  $\text{H}_2\text{O}$  dissolve mols  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 12\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
-55	2 75	30	5 93	27 4	11 20

10	4 54	36	9 29		
20	5 10	30	10 45		

(Roozeboom)

Sol in alcohol Ether dissolves out  $\text{Fe}_2\text{Cl}_6$  Melts in crystal  $\text{H}_2\text{O}$  at  $37^\circ$  (Roozeboom), at  $35.5^\circ$  (Ordway)

**Ferric hydrogen chloride**,  $\text{FeCl}_3$ ,  $\text{HCl} + 2\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$  (Sabatier, Bull Soc (2) 197)

More sol in  $\text{H}_2\text{O}$  than  $\text{FeCl}_3$  (Engel, C R 104 1708)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride

+  $6\text{H}_2\text{O}$  (Roozeboom and Schrenemakers)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride

**Ferrous lithium chloride**,  $\text{FeCl}_2$ ,  $\text{LiCl} + 3\text{H}_2\text{O}$   
(Chassevant, A ch (6) 30 17)

**Ferric magnesium chloride**,  $\text{FeCl}_3$ ,  $\text{MgCl}_2 + \text{H}_2\text{O}$   
Deliquescent (Neumann, B 18 2890)

**Ferrous mercuric chloride**,  $\text{FeCl}_2$ ,  $\text{HgCl}_2 + 4\text{H}_2\text{O}$   
Deliquescent (v Bonsdorff)

**Ferric nitrosyl chloride**,  $\text{FeCl}_3$ ,  $\text{NOCl}$   
Very deliquescent (Weber, Pogg 118 477)

**Ferric phosphoric chloride**,  $\text{FeCl}_3$ ,  $\text{PCl}_5$   
Decomp by  $\text{H}_2\text{O}$  (Baudrimont, A ch (4) 2 15)

(Hinrichsen and Sachsel, *Z phys Ch* 1904, 50 95)

Difficultly sol in  $\text{AsBr}_3$  (Walden, Z anorg 1902, 29 374)

Attacked by liquid  $\text{NO}_2$  in the presence of traces of moisture (Frankland, Chem Soc 1901, 79 1361)

Sol in liquid  $\text{SO}_2$  (Walden, B 1899, 32 2864)

Sol in alcohol ether, acetic ether (Cann, C R 102 363), and acetone (Krug and M'Elroy, J anal Ch 6 184)

Sl sol in ethylamine (Shinn, J phys Chem 1907, 11 538)

Sol in benzonitrile (Naumann, B 1914, 47 1369)

Sol in methyl acetate (Naumann, B 1909, 42 3790)

Insol in ethyl acetate (Naumann, B 1910, 43 314)

1 g  $\text{FeCl}_3$  is sol in 1.59 g acetone at  $18^\circ$   
Sp gr of sat solution  $18^\circ/4^\circ = 1.160$  (Naumann, B 1904, 37 4333)

Sol in acetone and in methylal (Eidmann, C C 1899, II 1014)

Sol in quinoline (Beckmann and Gabel, Z anorg 1906, 51 236)

Sl sol in  $\text{CS}_2$  (Arctowski, Z anorg 1894, 6 257)

Mol weight determined in pyridine (Werner, Z anorg 1897, 15 22)

Sublimed

Sol in  $\text{AsCl}_3$ ,  $\text{POCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{PBr}_3$ , sl sol in  $\text{PCl}_5$  (Walden, Z anorg 1900, 25 214)

The salts with different amts of crystal  $\text{H}_2\text{O}$  have different solubilities (Roozeboom +  $4\text{H}_2\text{O}$  Melts in crystal  $\text{H}_2\text{O}$  at  $73.5^\circ$ )

100 mols  $\text{H}_2\text{O}$  dissolve mols  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 4\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$

0	4 13	37	8 33	8	13 70
10	4 54	36	9 29		
20	5 10	30	10 45		

(Roozeboom)

Sol in alcohol Ether dissolves out  $\text{Fe}_2\text{Cl}_6$   
Melts in crystal  $\text{H}_2\text{O}$  at  $37^\circ$  (Roozeboom), at  $35.5^\circ$  (Ordway)

**Ferric hydrogen chloride**,  $\text{FeCl}_3 \cdot \text{HCl} + 2\text{H}_2\text{O}$   
Decomp by  $\text{H}_2\text{O}$  (Sabatier, Bull Soc (2) 197)

More sol in  $\text{H}_2\text{O}$  than  $\text{FeCl}_3$  (Engel, C R 104 1708)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride

+  $6\text{H}_2\text{O}$  (Roozeboom and Schreinemakers)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride

**Ferrous lithium chloride**,  $\text{FeCl}_2 \cdot \text{LiCl} + 3\text{H}_2\text{O}$   
(Chassevant, A ch (6) 30 17)

**Ferric magnesium chloride**,  $\text{FeCl}_3 \cdot \text{MgCl}_2 + \text{H}_2\text{O}$

Deliquescent (Neumann, B 18 2890)

**Ferrous mercuric chloride**,  $\text{FeCl}_2 \cdot \text{HgCl}_2 + 4\text{H}_2\text{O}$

Deliquescent (v Bonsdorff)

**Ferric nitrosyl chloride**,  $\text{FeCl}_3 \cdot \text{NOCl}$

Very deliquescent (Weber, Pogg 118 477)

**Ferric phosphoric chloride**,  $\text{FeCl}_3 \cdot \text{PCl}_5$

Decomp by  $\text{H}_2\text{O}$  (Baudrimont, A ch (4) 2 15)

**Iron (ferrous) potassium chloride,  $\text{FeCl}_2$ ,  $2\text{KCl} + 2\text{H}_2\text{O}$**

Sol in  $\text{H}_2\text{O}$  (Berzelius)

**Ferric potassium chloride,  $\text{FeCl}_3$ ,  $2\text{KCl} + \text{H}_2\text{O}$**

A little  $\text{H}_2\text{O}$  dissolves out  $\text{FeCl}_3$  (Fritzsche J pr 18 483)

Sol in  $\text{H}_2\text{O}$  (Walden, Z anorg 1894, 71 332)

**Ferric rubidium chloride,  $\text{FeCl}_3$ ,  $3\text{RbCl}$**

Easily sol in  $\text{H}_2\text{O}$  Insol in  $\text{HCl} + \text{Aq}$  (Godefroy, Arch Pharm (3) 9 343)

$\text{FeCl}_3$ ,  $2\text{RbCl} + \text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Neumann, A 244 329)

Sol in  $\text{H}_2\text{O}$  (Walden, Z anorg 1894, 7 332)

**Ferric sulphur chloride,  $\text{FeCl}_3$ ,  $\text{SCL}_4$**

Very sensitive toward heat and moisture (Ruff, B 1904, 37 4518)

**Ferric thallium chloride,  $\text{FeCl}_3$ ,  $3\text{TlCl}$**

Decomp by  $\text{H}_2\text{O}$  Can be crystallised from  $\text{HCl} + \text{Aq}$  (Wohler, A 144 250)

**Ferrous chloride ammonia,  $3\text{FeCl}_2$ ,  $2\text{NH}_3$**

Decomp by  $\text{H}_2\text{O}$  (Rogstadus, J pr 86 310)

$\text{FeCl}_2$ ,  $6\text{NH}_3$  Loses  $4\text{NH}_3$  at  $100^\circ$  (Miller, J, 17 577)

Decomp in the air (Miller)

**Ferric chloride ammonia,  $\text{FeCl}_3$ ,  $\text{NH}_3$**

Slowly deliquescent Sol in  $\text{H}_2\text{O}$  with evolution of heat (Rose, Pogg, 24 302)

$\text{FeCl}_3$ ,  $6\text{NH}_3$  Not deliquescent, not sol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl}$  with decomp (Miller, Am Ch J 1895, 17 577)

Loses  $\text{NH}_3$  to give  $\text{FeCl}_3$ ,  $5\text{NH}_3$ , and  $\text{FeCl}_3$ ,  $4\text{NH}_3$

**Ferric chloride cyanhydric acid,  $\text{FeCl}_3$ ,  $2\text{HCN}$**

Deliquescent (Klein, A 74 85)

**Ferrous chloride nitric oxide,  $\text{FeCl}_2$ ,  $\text{NO}$**

Sol in  $\text{H}_2\text{O}$  without evolution of gas (Thomas, C R 1895, 121 204)

$+2\text{H}_2\text{O}$  Sol in cold  $\text{H}_2\text{O}$  without decomp (Thomas, C R 1895, 120 448)

$2\text{FeCl}_2$ ,  $\text{NO}$  Very hygroscopic (Thomas, C R 1895, 121 129)

$10\text{FeCl}_2$ ,  $\text{NO}$  Very hygroscopic (Thomas, C R 1895, 121 128)

**Ferric chloride nitric oxide,  $\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$**

Very hygroscopic Loses  $\text{NO}$  when exposed to the air

$2\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$  Very hygroscopic In contact with  $\text{H}_2\text{O}$  gives off  $\text{NO}$  (Thomas, C R 1895, 120 447)

**Iron (ferrous) fluoride,  $\text{FeF}_2$**

Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol and ether Partly sol in hot  $\text{HCl} + \text{Aq}$ , slowly sol in cold, easily in hot  $\text{HNO}_3$ , decomp by  $\text{H}_2\text{SO}_4$  (Poulenc, C R 115 941)

$+8\text{H}_2\text{O}$  Difficultly sol in  $\text{H}_2\text{O}$ , more easily if it contains  $\text{HF}$  (Berzelius)

**Ferroferric fluoride,  $\text{FeF}_3$ ,  $\text{FeF}_2 + 7\text{H}_2\text{O}$**

Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 268)

**Ferric fluoride,  $\text{FeF}_3$**

Sl sol in  $\text{H}_2\text{O}$ , insol in alcohol or ether Sl attacked by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Poulenc, C R 115 941)

$+4\frac{1}{2}\text{H}_2\text{O}$  More sol in hot than cold  $\text{H}_2\text{O}$  Insol in alcohol (Scheurer-Kestner, A ch (3) 68 472)

**Ferric nickel fluoride,  $\text{FeF}_3$ ,  $\text{NiF}_2 + 7\text{H}_2\text{O}$**

Sl sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 268)

**Ferrous potassium fluoride,  $\text{FeF}_2$ ,  $\text{KF} + 2\text{H}_2\text{O}$**

(Wagner, B 19 896)

$\text{FeF}_2$ ,  $2\text{KF}$  Sl sol in  $\text{H}_2\text{O}$  (Berzelius)

**Ferric potassium fluoride,  $\text{FeF}_3$ ,  $2\text{KF}$**

Somewhat sol in  $\text{H}_2\text{O}$ , especially if hot (Berzelius)

$+ \text{H}_2\text{O}$  (Chrstensen, J pr (2) 35 164)

$\text{FeF}_3$ ,  $3\text{KF}$  Properties as above (Berzelius)

**Ferric sodium fluoride,  $\text{FeF}_3$ ,  $2\text{NaF} + \frac{1}{2}\text{H}_2\text{O}$**

Rather easily sol in  $\text{H}_2\text{O}$  Solution decomp on heating Very sol in  $\text{FeCl}_3 + \text{Aq}$  (Nickles, J Pharm (4) 10 14)

$\text{FeF}_3$ ,  $3\text{NaF}$  (Wagner, B 19 896)

**Ferric thalious fluoride,  $2\text{FeF}_3$ ,  $3\text{TlF}$**

Sol in hot  $\text{H}_2\text{O}$ , less sol in cold Sl sol in  $\text{HF}$  (Ephraim, Z anorg 1909, 61 239)

**Ferrous titanium fluoride**

See Fluotitanate, ferrous

**Ferric zinc fluoride,  $\text{FeF}_3$ ,  $\text{ZnF}_2 + 7\text{H}_2\text{O}$**

Sl sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z anorg 1899, 22 269)

**Ferrous hydroxide,  $\text{FeO}_2\text{H}_2$**

Sol in 150,000 pts  $\text{H}_2\text{O}$  (Bineau, C R 41 509)

Insol in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  Sol in  $\text{NH}_4$  salts  $+ \text{Aq}$  Sl sol in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Mercer)

Not pptd in presence of  $\text{Na}$  citrate Insol in boiling cane sugar  $+ \text{Aq}$ , but sl sol when  $\text{KOH}$  has been added Not pptd in presence of much  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  (Rose)

Solubility in glycerine+Aq containing about 60% by vol of glycerine  
100 ccm of the solution contain 10 g FeO  
(Muller, Z anorg 1905, 43 322)

### Iron (ferric) hydroxides, $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O}$

Many indefinite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$  are known, and uncertainty exists as to their composition

According to van Bemmelen (R t c 7 106) there are probably no true definite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$

According to Tommasi (B 12 1924, 2334), there are two series of Fe hydroxides,  $\alpha$ , red hydroxides, and  $\beta$ , yellow hydroxides

$\alpha$  Hydroxides  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (unstable),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at 50°), and  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at 92°)

Sol in dil acids and in  $\text{Fe}_2\text{Cl}_6$ +Aq, and pptd from the latter solution by  $\text{Na}_2\text{SO}_4$ , or  $\text{H}_2\text{SO}_4$ +Aq

$\beta$  Hydroxides  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (stable below 70°),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at 105°),  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at 150°)

Sl sol in acids, and insol in  $\text{Fe}_2\text{Cl}_6$ +Aq (Tommasi)

The following more or less uncertain data are given

$2\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  Sol in HCl+Aq Very sl sol in  $\text{HNO}_3$ +Aq (Davies, Chem Soc (2) 4 69)

#### Min Turquoise

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  Insol in cold acids, difficultly sol in warm HCl and  $\text{H}_2\text{SO}_4$ +Aq, and especially in warm  $\text{HNO}_3$ +Aq (Schiff, A 114 199)

#### Min Goethite

$2\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$  Sl sol in tartaric, citric, or acetic acids, but easily sol in HCl+Aq (Wittstein)

Scarcely attacked by conc  $\text{HNO}_3$ , or HCl+Aq Sol in acetic acid or dil  $\text{HNO}_3$ , or HCl+Aq, from which solution it is pptd by trace of alkali salts (St Gilles)

#### Min Limonite

$3\text{Fe}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$  (Muck)

$\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  Easily sol in HCl+Aq

#### Min Xanthosiderite

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$  Sl sol in acetic acid of 1.03 sp gr, but easily sol if of 1.076 sp gr Sol in mineral acids (Lumberg, J B 1853 70)

Pptd  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O} = \text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  Insol in H<sub>2</sub>O, or in solutions of the alkalis or  $\text{NH}_4$  salts When recently pptd is easily sol in acids (Fresenius)

Sl sol in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts+Aq (Odling)

Apparently insol in  $\text{NH}_4\text{Cl}$ , or  $(\text{NH}_4)_2\text{CO}_3$ +Aq (Brett, 1837)

Sl sol in conc, but insol in dil KOH+Aq (Chodniew, J pr 28 221)

Sl sol in very conc KOH+Aq free from  $\text{CO}_2$  (Volcker, A 59 34)

Not at all sol in pure conc KOH+Aq, solubility noticed by previous observers being caused by the presence of silicic acid (Sandrock)

Sl sol in conc alkali carbonates+Aq

When freshly pptd, it is not acted upon by conc  $\text{K}_2\text{CO}_3$ +Aq (Grotthaus)

Readily sol in conc  $(\text{NH}_4)_2\text{CO}_3$ +Aq, but pptd by addition of  $\text{H}_2\text{O}$

Sol in excess of  $(\text{NH}_4)_2\text{CO}_3$ +Aq when pptd by that reagent (Wohler)

Sol in solutions of the alkali bicarbonates (Berzelius)

Sol in aqueous solutions of water-glass (Ordway)

Immediately dissolved by  $\text{H}_2\text{SO}_4$ +Aq

Sol in  $\text{NH}_4\text{F}$ +Aq (Helmholtz, Z anorg 3 124)

Sol in conc  $\text{Al}_2(\text{SO}_4)_3$ +Aq (Schneider, B 23 1352)

Sl sol in a solution of  $\text{MgCO}_3$ (?) (Bischhof)

Insol in ethylamine, or amylamine+Aq (Wurtz, A ch (3) 30 472)

Sol in boiling solution of  $\text{Bi}(\text{NO}_3)_3$ , with pptn of  $\text{Bi}_2\text{O}_3$  (Persoz)

Sol in  $\text{Cr}_2\text{Cl}_6$ +Aq, after 3 months 15 mols  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  were dissolved by 1 mol  $\text{Cr}_2\text{Cl}_6$  (Béchamp, A ch (3) 57 296)

Insol in fumaric acid, even when freshly pptd

When recently pptd, it is easily sol in  $\text{KHC}_4\text{H}_4\text{O}_6$ +Aq, but after drying it is difficultly sol therein

When moist easily sol in  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ +Aq, but after drying is scarcely sol therein when cold, and only sl sol when hot (Werther)

Easily sol in acetic, citric, and other acids (Wittstein)

Solubility in glycerine+Aq containing about 60% by vol of glycerine

100 ccm of the solution contain 0.8 g  $\text{Fe}_2\text{O}_3$  (Muller, Z anorg 1905, 43 322)

Easily sol in aqueous solution of succates of Ca, Ba, Sr, K, Na (Hunton, 1837)

Unacted upon by cane sugar+Aq (Gladstone)

Sl sol in cane sugar+Aq, from which it is pptd by  $(\text{NH}_4)_2\text{S}$ +Aq, but not by  $\text{NH}_4\text{OH}$ , or  $\text{K}_4\text{FeC}_6\text{N}_6$ +Aq (Pescher)

Solubility of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  in sugar solutions 1 l of sugar solution of given strength dissolves mg of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$

% Sugar	$\text{Mg Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$		
	at 17°	at 40°	at 75°
10	3.4	3.4	6.1
30	2.3	2.7	3.8
50	2.3	1.9	3.4

(Stoll, Z Ver Zuckind 1900 50 340)

Not pptd from solutions by alkalis or alkali carbonates in presence of many organic substances, as tartaric acid, sugar, etc

Not pptd by  $\text{NH}_4\text{OH}$  from solutions containing  $\text{Na}_2\text{P}_2\text{O}_7$  (Rose, Pogg 76 19)

Not pptd by  $\text{NH}_4\text{OH}$  in presence of Na citrate (Spiller)

**Soluble (a) By dialysis** Solutions containing 1% can be concentrated somewhat, whereupon they gelatinise. They also gelatinise by cold, or addition of traces of  $\text{H}_2\text{SO}_4$ , alkalis, alkali carbonates or sulphates, or neutral salts, not, however, by  $\text{HCl}$ ,  $\text{HNO}_3$ , alcohol, or sugar (Graham, A 121 46)

When a dil solution of a solid organic acid, or an alkali, or salt is added to a dialysed solution of  $\text{Fe}_2\text{O}_3\cdot\text{H}_2\text{O}$ , a coagulum sol in  $\text{H}_2\text{O}$  is formed, but if the solutions are conc the separating coagulum is no longer sol in  $\text{H}_2\text{O}$  (Athenstadt, C C 1871 822)

**(b) Pean St Gilles' hydroxide, or meta-iron hydroxide** Sol in  $\text{H}_2\text{O}$  Pptd from solution by traces of  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ +Aq, and alkalis, the ppt is insol in cold acids, but sol in pure  $\text{H}_2\text{O}$  (Pean St Gilles, A ch (3) 46 47)

See also table by Krecke in the article on ferric chloride

### Iron (Ferroferric) hydroxide, $\text{Fe}_3\text{O}_4$ , $\text{H}_2\text{O}$ (?)

Sol in acids

$\text{Fe}_3\text{O}_4$ ,  $4\text{H}_2\text{O}$  (Lefort)

### Ferrous iodide, $\text{FeI}_2$

Very deliquescent Sol in  $\text{H}_2\text{O}$  Solution decomp on evaporating

+ $4\text{H}_2\text{O}$  Very deliquescent, sl sol in  $\text{H}_2\text{O}$ , sol in ether (Jackson, Am Ch J 1900, 24 19)

+ $5\text{H}_2\text{O}$  Deliquescent Sol in alcohol Sol in sugar+Aq, and solution is much more stable than aqueous solution Easily sol in glycerine

Insol in methylene iodide (Retgers, Z anorg 3 343)

+ $4\text{H}_2\text{O}$ , and + $9\text{H}_2\text{O}$  Very sol, pptd from aq solution (Volkman, C C 1894, II 611)

### Ferric iodide, $\text{FeI}_3$

Has not been isolated Solution of I in  $\text{FeI}_2$ +Aq in the molecular ratio of I  $\text{FeI}_2$  probably contains  $\text{FeI}_3$

Very sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

### Ferrous mercuric iodide, $\text{FeI}_2$ , $2\text{HgI}_2$ + $6\text{H}_2\text{O}$

As the corresponding Mg salt (Dubon, C R 1907, 145 714)

### Ferrous iodide ammonia, $\text{FeI}_2$ , $6\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$  (Jackson, Am Ch J 1900, 24 27)

### Ferrous mercuric iodide

Very deliquescent Decomp by  $\text{H}_2\text{O}$ , sol in  $\text{HC}_2\text{H}_3\text{O}_2$  or alcohol

### Iron molybdenide, $\text{FeMo}_2$

Attacked by  $\text{HCl}$ +Aq with difficulty Sol in hot conc  $\text{H}_2\text{SO}_4$  (Steinacker)

### Iron nitride

Easily decomp by  $\text{H}_2\text{O}$  when finely powdered (Rossel, C R 1895, 121 942)

$\text{Fe}_3\text{N}$  Easily sol in  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{S}$  +Aq Very slowly decomp by  $\text{H}_2\text{O}$  (Schmidt, Pogg 125 37)

Sol in  $\text{HCl}$  with decomp, decomp by steam and by  $\text{H}_2\text{S}$  at  $200^\circ$  (Fowler, C 1894, 68 152)

$\text{Fe}_3\text{N}_2$  Probably the same as the above compound (Rogstadius, J pr 86 307)

### Iron nitrososulphantimonate, $\text{Fe}_4\text{S}(\text{NO})_6\text{Sb}$

(Low, C C 1865 948)

Does not exist, but was impure sodium ferrotetranitrososulphide (Pawel, B 15 260)

### Iron nitrososulphides

See Ferrotetranitrososulphidic acid and

Ferroheptanitrososulphide, ammonium

$\text{Fe}_3\text{S}_2\text{H}_2(\text{NO})_4$  (Roussin, C R 46 224)

$\text{Fe}_3\text{S}_2(\text{NO})_4$ + $2\text{H}_2\text{O}$  (Porczynsky, A 1 302)

$\text{Fe}_3\text{S}_2(\text{NO})_{18}$ + $4\text{H}_2\text{O}$  (Rosenberg, B 312)

The compound to which the above formulae were given was impure, according to Pawel (12 1407 and 1949, 15 2600), and contained more or less Na or  $\text{NH}_4$ . Pawel considers the substance as  $\text{NH}_4$  salt of ferroheptanitrosulphidic acid, which see

$\text{Fe}_3\text{S}_2\text{N}_3\text{O}_8$ + $1\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , alcohol, ether,  $\text{CHCl}_3$ , acetone and ethyl acetate Insol in benzene and light petroleum (Mar, C R 1896, 122, 138)

### Iron sodium nitrososulphide, $3\text{Na}_2\text{S}$ , $\text{Fe}_2$ , $2\text{NO}$

(Roussin)

$\text{Na}_3\text{FeS}_2(\text{NO})_{18}$  (Rosenberg)

Correct formula is  $\text{Na}_2\text{S}_2(\text{NO})_4\text{Fe}_2$ , sodium ferrotetranitrososulphide

### Iron nitrososulphocarbonate, $\text{Fe}_4\text{S}(\text{NO})_6\text{CS}_2$ , $3\text{H}_2\text{O}$

(Low, C C 1865 948)

Correct formula is  $\text{Na}_3\text{S}_2(\text{NO})_7\text{Fe}_4$ + $2\text{H}_2\text{O}$  sodium ferroheptanitrososulphide (Pawel, B 15 2600)

### Ferrous oxide, $\text{FeO}$

Insol in  $\text{H}_2\text{O}$  Sol in acids

Easily sol in  $\text{HCl}$ , and  $\text{HNO}_3$ +Aq, near insol in  $\text{H}_2\text{SO}_4$ , even when heated (Tissandier, C R 74 531)

### Ferric oxide, $\text{Fe}_2\text{O}_3$

Attacked by acids with difficulty, the more the higher it has been heated  $\text{HCl}$ +A is the best solvent, in which it is more quickly sol by long digestion at a gentle heat than by boiling (Fresenius)

Most easily sol in 16 pts of a mixture of 8 pts  $\text{H}_2\text{SO}_4$  and 3 pts  $\text{H}_2\text{O}$  (Mitscherlich, J pr 81 110)

Solubility of  $\text{Fe}_2\text{O}_3$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$

(Deussen)

Absolutely insol in  $\text{Br}_2 + \text{Aq}$  (Balard)  
 Insol in hot  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose)  
 Insol in  $\text{KOH} + \text{Aq}$  (Chodnew, J pr 28 222)

Slowly sol in an aq solution of calcium hydrogen carbonate. The velocity of the reaction may be much increased by the addition of small amounts of alkali sulphate or  $\text{CaSO}_4$  (Rohland, Z anal 1909, 48 629)

Insol in benzonitrile (Naumann, B 1914, 47 1370)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904, 37 4329)

Solubility in (calcium succrate + sugar) + Aq  
 1 l solution containing 418.6 g sugar and 34.3 g  $\text{CaO}$  dissolves 6.26 g  $\text{Fe}_2\text{O}_3$ , 296.5 g sugar and 24.2 g  $\text{CaO}$  dissolves 4.71 g  $\text{Fe}_2\text{O}_3$ , 174.4 g sugar and 14.1 g  $\text{CaO}$  dissolves 3.08 g  $\text{Fe}_2\text{O}_3$  (Bodenbender, J B 1865 600)

Solubility of  $\text{Fe}_2\text{O}_3$  in sugar solutions 1 l of sugar solution of given strength dissolves mg  $\text{Fe}_2\text{O}_3$

(Stolle, Z Ver Zuckerind, 1900, 50 340)

## Calcined

Solubility of calcined  $\text{Fe}_2\text{O}_3$  in acids at  $25^\circ$ 

Acid	Time	g $\text{Fe}_2\text{O}_3$ in 10 ccm of the solution
N-HF	4½ hrs	0 0889
	43½ "	0 2035
	129½ "	0 2194
N-HCl	4½ "	0 0224
	43½ "	0 1000
	139½ "	0 1910

(Deussen, Z anorg 1905, 44 413)

## See also Ferric hydroxide

Min Hematite Rather easily sol in  $\text{HCl} + \text{Aq}$ , but not readily sol in other acids

## Melacon oxide

## See Ferric hydroxides

Ferroferric oxide,  $6\text{FeO}, \text{Fe}_2\text{O}_3$ 

$\text{FeO}, \text{Fe}_2\text{O}_3 = \text{Fe}_3\text{O}_4$  With insufficient  $\text{HCl} + \text{Aq}$  for complete solution,  $\text{FeO}$  is dissolved and  $\text{Fe}_2\text{O}_3$  left (Berzelius)

Insol in  $\text{HNO}_3 + \text{Aq}$  at the ordinary temperature (Millon)

Insol in acetone (Naumann, B 1904, 37 4329)

Solubility of  $\text{Fe}_2\text{O}_3$  in sugar solutions 1 l of sugar solution of given strength dissolves mg  $\text{Fe}_2\text{O}_3$

% Sugar	mg $\text{Fe}_2\text{O}_3$		
	at 17.5°	at 45°	at 75°
10	10.3	10.3	12.4
30	12.4	10.3	12.4
50	14.5	10.3	14.5

(Stolle, Z Ver Zuckerind 1900, 50 340)

Min Magnetite Insol in  $\text{HNO}_3$ , but sol in hot  $\text{HCl} + \text{Aq}$

Iron sesquioxide zinc oxide,  $\text{Fe}_2\text{O}_3$ ,  $\text{ZnO}$

See Ferrite, zinc

### Ferric oxybromide

Basic ferric bromides containing three equivalents, or less, of base to one of acid may be obtained dissolved in  $\text{H}_2\text{O}$  (Ordway, Am J Sci (2) 26 202)

The most basic soluble compound obtained by three months' digestion of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  with  $\text{Fe}_2\text{Br}_6 + \text{Aq}$ , is  $\text{Fe}_2\text{Br}_6$ , 14 $\text{Fe}_2\text{O}_3$  (Béchamp)

### Ferric oxychlorides

(a) Soluble  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  dissolves in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ . By digesting until the acid reaction of the chloride has disappeared a solution of  $\text{Fe}_2\text{Cl}_6$ , 2 $\text{Fe}_2\text{O}_3$  is obtained (Pettenkofer, Report (2) 41 289)

By digesting for several days in the cold,  $\text{Fe}_2\text{Cl}_6$ , 5 $\text{Fe}_2\text{O}_3$  is obtained, and still more basic compounds by further addition of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . When the solution contains  $\text{Fe}_2\text{Cl}_6$ , 12 $\text{Fe}_2\text{O}_3$  it gelatinises, but still dissolves completely in  $\text{H}_2\text{O}$ . The most basic soluble compound is  $\text{Fe}_2\text{Cl}_6$ , 20 $\text{Fe}_2\text{O}_3$  (Béchamp, A ch (3) 57 296)

If the digestion is carried on several weeks, a solution containing  $\text{Fe}_2\text{Cl}_6$ , 23 $\text{Fe}_2\text{O}_3$  is obtained, this can be boiled and diluted without pptn, but  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  is precipitated by the addition of very many salts (Ordway, Sill Am J (2) 26 197)

Solutions containing 10 or less molecules  $\text{Fe}_2\text{O}_3$  to 1 mol  $\text{Fe}_2\text{Cl}_6$  can be dried without the oxychloride becoming insoluble (Ordway)

The above solutions do not become cloudy by boiling or diluting (Phillips)

A very dil solution of  $\text{Fe}_2\text{Cl}_6$ , 10 $\text{Fe}_2\text{O}_3$  remains clear after protracted boiling, and may be boiled without decomp even when  $\text{Fe}_2\text{Cl}_6$ , 20 $\text{Fe}_2\text{O}_3$  is present (Béchamp)

$\text{HNO}_3$ , and  $\text{HCl} + \text{Aq}$  form precipitates in the above solutions, which are sol on addition of more  $\text{H}_2\text{O}$ .  $\text{H}_2\text{SO}_4 + \text{Aq}$  forms a precipitate insol in  $\text{H}_2\text{O}$  (Béchamp)

$\text{Fe}_2\text{Cl}_6$ , 9 $\text{Fe}_2\text{O}_3$  is easily sol in  $\text{H}_2\text{O}$ , weak alcohol, and glycerine, but solutions are pptd by small amts of  $\text{H}_2\text{SO}_4$ ,  $\text{M}_2\text{SO}_4$ , citric or

tartaric acids, or a few drops of  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  (Jeannel, C R 46 799)

Solutions containing 5 mols  $\text{Fe}_2\text{O}_3$  to 1 n  $\text{Fe}_2\text{Cl}_6$  are completely precipitated by  $\text{K}_2\text{S}$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{KNO}_3$ ,  $\text{NaNO}_3$ ,  $\text{Zn(NO}_3)_2$ ,  $\text{KCl}$ ,  $\text{NaCl}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{CaCl}_2$ ,  $\text{MgCl}_2$ ,  $\text{ZnCl}_2$ ,  $\text{KBr}$ , or  $\text{KSCN}$  (Béchamp)

$\text{Ba(NO}_3)_2$  does not precipitate solutions of less than 18–20  $\text{Fe}_2\text{O}_3$  to 1  $\text{Fe}_2\text{Cl}_6$

$\text{Pb(NO}_3)_2$  or  $\text{Pb(C}_2\text{H}_3\text{O}_2)_2$  do not precipitate solutions containing the compound  $\text{Fe}_2\text{Cl}_6$ , 12 $\text{Fe}_2\text{O}_3$ , but a mixture of the two salts causes complete precipitation

Solution has been obtained containing  $\text{Fe}_2\text{O}_3$  to 1  $\text{FeCl}_3$ , probably owing to a formation of soluble colloidal  $\text{Fe}_2\text{O}_3$  (Magnier la Source, C R 90 1352)

Solubility determinations in the system  $\text{Fe}_2\text{O}_3$ ,  $\text{HCl}$  and  $\text{H}_2\text{O}$ , show that at 25° definite basic chloride is formed, but that a stable solid phase is one of a series of solid solutions containing  $\text{Fe}_2\text{O}_3$ ,  $\text{HCl}$  and  $\text{H}_2\text{O}$  (Cameron, J phys Chem 1907, 11 694)

(b) Insoluble  $\text{Fe}_2\text{Cl}_6$ , 6 $\text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$

(1) By exposing  $\text{FeCl}_3 + \text{Aq}$  to air Insol in  $\text{H}_2\text{O}$  sl sol in  $\text{HCl} + \text{Aq}$  (Wittstein)  
(2) From  $\text{FeCl}_2 + \text{Aq}$  and  $\text{HNO}_3$  Insol in  $\text{H}_2\text{O}$ , and sl sol in  $\text{HCl} + \text{Aq}$  (Béchamp)  
 $2\text{Fe}_2\text{Cl}_6$ , 25 $\text{Fe}_2\text{O}_3 + 41\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  (Béchamp)

$\text{Fe}_2\text{Cl}_6$ , 2 $\text{Fe}_2\text{O}_3 + 3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  with residue of  $\text{Fe}_2\text{O}_3$ , sl sol in dil acids (Rousseau, C R 110 1032)

$\text{Fe}_2\text{Cl}_6$ , 3 $\text{Fe}_2\text{O}_3$  As above (Rousseau, C R 113 542)

Ferric oxyfluoride, 3 $\text{Fe}_2\text{O}_3$ , 2 $\text{FeF}_3 + 4\text{H}_2\text{O}$

Ppt (Scheurer-Kestner)

Ferric oxysulphide,  $\text{Fe}_2\text{O}_3$ , 3 $\text{Fe}_2\text{S}_3$

(Rammelsberg)

Iron phosphide,  $\text{FeP}$

Very slowly (Freese), not (Hvoslef, A 10 99) sol in hot  $\text{HCl} + \text{Aq}$  Still more insol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Freese)

Slowly sol in  $\text{HNO}_3 + \text{Aq}$ , and easily soluble in aqua regia (Struve)

Insol in ammonium citrate +  $\text{Aq}$ , sl sol in  $\text{HCl}$  (Dennis, J Am Chem Soc 18 16 483)

$\text{Fe}_2\text{P}$  Slowly but completely sol in  $\text{H}_2\text{SO}_4$ , or dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  Sol in hot conc  $\text{H}_2\text{SO}_4$ , in  $\text{HNO}_3$ , and in aqua regia (Freese, Pogg 132 225)

Insol in all acids except in a mixture of  $\text{HNO}_3$  and  $\text{HF}$  (Maronneau, C R 190 130 657)

$\text{Fe}_3\text{P}_4$  Very slowly sol in hot conc  $\text{HCl} + \text{Aq}$  0.1 g dissolves by 4 days' heating with  $\text{HCl} + \text{Aq}$  0.3 g dissolves in hot conc  $\text{H}_2\text{SO}_4$  in 1½ hours, 0.4 g in 2 hours in  $\text{HNO}_3 + \text{Aq}$  Quite easily sol in aqua regia on warming (Freese)

$\text{Fe}_2\text{P}_3$  Insol in  $\text{HCl}$ ,  $\text{HNO}_3$  and aqua regia Sol in potassium hypobromite so

tion (Granger, Bull Soc 1896, (3) 15 1086)

$\text{Fe}_3\text{P}_3$  Very slowly sol in boiling  $\text{HCl} + \text{Aq}$  Easily sol in  $\text{HNO}_3$  or aqua regia (Struve, J B 1860 77)

Mixture (Freese, Pogg 132 225)

Almost insol in aqua regia Sol in fused alkali (Granger)

$\text{Fe}_3\text{P}$  Nearly insol in dil acids, rapidly sol in  $\text{HNO}_3$  or aqua regia, decomp by conc  $\text{HCl}$ , or  $\text{KOH} + \text{Aq}$  (Schneider, J B 1886 2026)

Of the nine iron phosphides described the constitution has been established for only two,  $\text{Fe}_3\text{P}$  and  $\text{Fe}_2\text{P}$

$\text{Fe}_3\text{P}$  Sol in conc  $\text{HCl}$

$\text{Fe}_2\text{P}$  Sol in hot aqua regia Insol in other acids (Le Chatelier, C R 1909, 149 709)

### Iron selenide, $\text{Fe}_2\text{Se}$

Not attacked by  $\text{HNO}_3$  or acetic acid SI attacked by conc  $\text{HCl}$  Readily attacked by aqua regia Sol in  $\text{HF}$  (Vigouroux, C R 1905, 141 829)

$\text{FeSe} + x\text{H}_2\text{O}$  Sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HCl}_2\text{H}_2\text{O}_2 + \text{Aq}$  Insol in alkalis, or  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Reeb, J Pharm (4) 9 173)

$\text{Fe}_2\text{Se}_3$  Sol in dil  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  with evolution of  $\text{H}_2\text{Se}$  Sol in conc  $\text{HNO}_3 + \text{Aq}$  (Little, A 112 211)

$\text{Fe}_2\text{Se}_4$  Decomp by fuming  $\text{HNO}_3$  (Fonzes-Diacon, C R 1900, 130 1711)

$\text{Fe}_7\text{Se}_8$  Decomp by fuming  $\text{HNO}_3$  (Fonzes-Diacon, C R 1900, 130 1711)

$\text{FeSe}_2$  Insol in conc  $\text{HCl}$ , decomp by fuming  $\text{HNO}_3$  (Fonzes-Diacon, C R 1900, 130 1711)

### Iron silicide, $\text{Fe}_3\text{Si}$

Difficultly sol in  $\text{HCl} + \text{Aq}$ , easily sol even in dil  $\text{HF} + \text{Aq}$  (Hahn, A 129 57)

$\text{Fe}_3\text{Si}$  Not easily sol in conc  $\text{HCl}$  and  $\text{HNO}_3$  but readily sol in  $\text{HF}$  (Moissan, C R 1895, 121 623)

$\text{Fe}_{10}\text{Si}_9$  Sol in hot  $\text{HCl} + \text{Aq}$  only when melted (Hahn)

by conc  $\text{HF}$  or  $\text{H}_2\text{SO}_4$  (Hahn)

Sol in cold  $\text{HF}$  (de Chalmot, Am Ch J 1897, 19 123)

Existence questioned by Jouve, (Bull Soc 1901, 25 290-293)

$\text{Fe}_3\text{Si}$  Sol in  $\text{HF}$  and in fused  $\text{KNO}_3$  and  $\text{KNaCO}_3$  (de Chalmot, J Am Chem Soc 1895, 17 924)

### Iron semisulphide, $\text{Fe}_2\text{S}$

Sol in dil acids with decomposition (Arfvedson, Pogg 1 72)

### Ferrous sulphide, $\text{FeS}$

Decomp by dil acids, with evolution of  $\text{H}_2\text{S}$  and without separation of S, except with  $\text{HNO}_3 + \text{Aq}$

$+x\text{H}_2\text{O}$  SI sol in  $\text{H}_2\text{O}$ , especially if hot (Berzelius)

1 l  $\text{H}_2\text{O}$  dissolves  $70.1 \times 10^{-6}$  moles  $\text{FeS}$  at  $18^\circ$  (Weigel, Z phys Ch 1907, 58 294)

Very violently decomp, even by dil acids Sol in  $\text{H}_2\text{SO}_3 + \text{Aq}$  Insol in  $\text{H}_2\text{S}$  or  $(\text{NH}_4)_2\text{S} + \text{Aq}$  SI sol in  $\text{Na}_2\text{S}$ , or  $\text{K}_2\text{S} + \text{Aq}$  SI in  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S} + \text{Aq}$  (de Koninck, Z angew Ch 1891 204)

Insol in  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett)

Not completely pptd in presence of Na citrate (Spiller)

Contrary to assertion of Persoz, it can be nearly completely pptd in presence of  $\text{Na}_4\text{P}_2\text{O}_7$  by  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Rose, Pogg 76 18)

Sol in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates (Storch, B 16 2015)

Sol in  $\text{KCN} + \text{Aq}$

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

Insol in methyl acetate (Naumann, B 1909, 42 3790)

Solubility of  $\text{FeS}$  in sugar solutions 1 l sugar of given strength dissolves mg  $\text{FeS}$

% Sugar	mg $\text{FeS}$		
	at $17.5^\circ$	at $45$	at $75^\circ$
10	3 8	3 8	5 3
30	7 1	9 1	7 2
50	9 9	19 8	9 1

(Stolle, Z Ver Zuckerind 1900, 50 300)

*Colloidal*—A very dilute solution has been obtained which coagulated very readily (Winssinger, Bull Soc (2) 49 452)

### Ferric sulphide, $\text{Fe}_2\text{S}_3$

Decomp by dil  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  with evolution of  $\text{H}_2\text{S}$ , leaving a residue of  $\text{FeS}_2$

$+1\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in alcoholic ammonia SI sol in  $(\text{NH}_4)_2\text{S} + \text{very dil Na}_2\text{S}_2\text{O}_4 + \text{Aq}$  (Phipson, C N 30 139)

### Iron disulphide, $\text{FeS}_2$

Insol in dil  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  Decomp by  $\text{HNO}_3$  or aqua regia with separation of S Insol in a 10% solution of alkali sulphide

Min *Pyrite Marcasite* Sol in a mixture of  $\text{Na}_2\text{S}$  and  $\text{NaOH} + \text{Aq}$   $\text{Na}_2\text{S} + \text{Aq}$ , or mixture of  $\text{Na}_2\text{S}$  and  $\text{NaSH} + \text{Aq}$ , insol in cold  $\text{NaSH} + \text{Aq}$  *Marcasite* is more easily sol in above than *pyrite* (Becker, Bull Am J (3) 33 199)

### Ferroferric sulphide, $\text{Fe}_3\text{S}_4$ or $\text{Fe}_7\text{S}_8$

Min *Pyrrhotite* Sol in dil acids with a residue of S Extremely slowly sol in a 10% solution of alkali sulphides (Terrell, C R 69 1360)

**Iron (ferrous) nickel sulphide,  $2\text{FeS}$ ,  $\text{NiS}$** Min *Penitlandite***Ferrous phosphorus sulphide,  $\text{FeS}$ ,  $\text{P}_2\text{S}_3$** 

(Berzelius)

$2\text{FeS}$ ,  $\text{P}_2\text{S}_3$  Slowly decomp by  $\text{H}_2\text{O}$  Insol in boiling  $\text{HCl} + \text{Aq}$ , decomp by aqua regia (Berzelius, A 46 256)

**Iron potassium sulphide (potassium sulphoferrite),  $\text{K}_2\text{Fe}_2\text{S}_4 = \text{K}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$** 

Insol in cold or hot  $\text{H}_2\text{O}$  Violently attacked by dil acids Not decomp by boiling with alkalis, alkali carbonates, or sulphides + Aq Decomp by  $\text{KCN}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  (Preis, J pr 107 16)

$\text{K}_2\text{S}$ ,  $2\text{FeS}$  (Schneider, Pogg 136 460)

**Iron silver sulphide (silver sulphoferrite),  $\text{Ag}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$** 

Not attacked by dil  $\text{HCl} + \text{Aq}$ , decomp by conc  $\text{HCl} + \text{Aq}$  (Schneider)

$2\text{Ag}_2\text{S}$ ,  $\text{FeS}_2$  (Schneider, Pogg 138 305)  
 $\text{Ag}_2\text{S}$ ,  $3\text{FeS}$ ,  $\text{FeS}_2$  Min *Sternbergite* Decomp by aqua regia

**Iron sodium sulphide (sodium sulphoferrite),  $\text{Na}_2\text{Fe}_2\text{S}_4 + 4\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  Decomp by very dil acids (Schneider, Pogg 138 302)

phosphide,  $\text{Fe}_2\text{PS}_3$

decomp by acids at  $100^\circ$  boiling  $\text{NaOH} + \text{Aq}$  (Ferrand, A ch 1899, (7) 17 410)

**Ferrous telluride,  $\text{FeTe}$** 

Insol in  $\text{H}_2\text{O}$ , sol in acids (Fabre, C R 105 277)

**Kermes**

**Lanthanic acid**

**Barium metalanthanate**,  $\text{Ba}(\text{H}_3\text{La}_5\text{O}_{15})_2$   
 (Baskerville, J Am Chem Soc 1904, 2 79)

**Lithium metalanthanate**,  $\text{LiH}_3\text{La}_5\text{O}_{15} + 2\text{H}_2\text{O}$   
 (Baskerville)

**Potassium metalanthanate**,  $\text{KH}_3\text{La}_5\text{O}_{15}$   
 $15\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  (Baskerville)

**Sodium metalanthanate**,  $\text{NaH}_3\text{La}_5\text{O}_{15} + 4\text{H}_2\text{O}$

Almost insol in  $\text{H}_2\text{O}$ , but decomp by 1 (Baskerville)

**Disodium tetralanthanate**,  $\text{Na}_2\text{La}_4\text{O}_7$

Insol in  $\text{H}_2\text{O}$  (Baskerville)

**Lanthanicotungstic acid**

**Ammonium lanthanicotungstate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$  (E F Smith, J Am Chem Soc 1904, 26 1481)

**Barium lanthanicotungstate**,  $5\text{BaO}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O}$

Ppt (E F Smith)

**Silver lanthanicotungstate**,  $5\text{Ag}_2\text{O}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 4\text{H}_2\text{O}$

Very insol in  $\text{H}_2\text{O}$  (E F Smith)

**Lanthanum, La**

Slowly decomp cold, rapidly hot  $\text{H}_2\text{O}$  Not attacked by cold conc  $\text{H}_2\text{SO}_4$ , but energetically by cold conc  $\text{HNO}_3 + \text{Aq}$  Sol in dil acids (Hillebrand and Norton, PoGL 155 633)

**Lanthanum bromide**,  $\text{LaBr}_3 + 7\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  Not very sol in absolute alcohol Insol in ether (Clcve, Sv V A H Bih 2 No 7)

**Lanthanum nickel bromide**,  $2\text{LaBr}_3$ ,  $3\text{NiBr}_3 + 18\text{H}_2\text{O}$

Deliquescent (Frenchs and Smith, A 191 355)

**Lanthanum zinc bromide**,  $2\text{LaBr}_3$ ,  $3\text{ZnBr}_3 + 36\text{H}_2\text{O}$

Very deliquescent (F and S)

**Lanthanum carbide**,  $\text{LaC}_2$

Decomp by  $\text{H}_2\text{O}$  and dil acids (Pettersson, B 1895, 28 2422)

Sol in conc  $\text{H}_2\text{SO}_4$  and dil acids, insol in conc  $\text{HNO}_3$

Sol in fused oxidizing agents, decomp by  $H_2O$  at ordinary temps (Moissan, C R 1896, 123 149)

### Lanthanum chloride, $LaCl_3$

Anhydrous Deliquescent (Hermann)  
Insol in acetone (Naumann, B 1904, 37 329)  
+  $7\frac{1}{2}H_2O$  Not deliquescent (Zschiesche)  
Easily sol in alcohol (Hermann)

### Lanthanum mercuric chloride, $2LaCl_3, HgCl_2 + \frac{8}{3}H_2O$

Not deliquescent Very sol in  $H_2O$  (Marignac, Ann Min (5) 15 272)

### Lanthanum stannic chloride

See Chlorostannate, lanthanum

### Lanthanum fluoride, $LaF_3 + H_2O$

Precipitate Sl sol in  $HCl + Aq$  (Cleve)

### Lanthanum hydrogen fluoride, $2LaF_3, 3HF$

Precipitate (Frerichs and Smith, A 191 355)  
Does not exist (Cleve, B 11 910)

### Lanthanum hydride, $La_2H_3$

Decomp by dil acids (Winkler, B 24 1966)

$LaH_3$  Decomp by  $H_2O$  Sol in acids with evolution of  $H_2$  Decomp by alkalis (Muthmann, A 1902, 325 266)

### Lanthanum hydroxide, $La_2O_3H_6$

Insol in  $H_2O$ , easily sol in acids, insol in  $KOH$ , or  $NaOH + Aq$   
Sol in citric acid (Baskerville, J Am Chem Soc 1904, 26 49)

### Lanthanum zinc iodide, $2LaI_3, 3ZnI_2 + 27H_2O$

Very sol in  $H_2O$  (Frerichs and Smith, A 191 358)

### Lanthanum nitride, $LaN$

Decomp by  $H_2O$  with evolution of  $NH_3$   
Sol in mineral acids Decomp by alkali (Muthmann, A 1902, 325 275)

### Lanthanum oxide, $La_2O_3$

Easily sol, even when ignited, in mineral and acetic acids (Hermann)  
Sol in boiling conc  $NH_4Cl + Aq$  (Mosander)  
Sol in cold conc  $NH_4NO_3 + Aq$  (Damour and Deville)  
Insol in  $(NH_4)CO_3 + Aq$  (Mosander)  
Insol in acetone (Naumann, B 1904, 37 4329)

### Lanthanum peroxide, $La_2O_6$

Sol in  $HCl, H_2SO_4, HNO_3$ , and  $HC_2H_3O_2 + Aq$  with decomp (Cleve, Bull Soc (2) 43 359)  
 $La_2O_6 + xH_2O$  Unstable Sol in dil  $H_2SO_4 + Aq$  with decomp (Mehkoff, Z anorg 1899, 21 71)

### Lanthanum oxybromide, $LaOBr$

Ppt (Frerichs and Smith)

### Lanthanum oxychloride, $3La_2O_3, 2LaCl_3$

Insol in  $H_2O$  Difficultly and slowly sol in  $HCl$ , or  $HNO_3 + Aq$  (Hermann)  
 $LaOCl$  Boiling  $H_2O$  dissolves only traces (Frerichs and Smith)

### Lanthanum sulphide, $La_2S_3$

Decomp by  $H_2O$  and acids (Didier)

### Lanthanum disulphide, $LaS_2$

Decomp by heat (Biltz, Z anorg 1911, 71 435)

### Lead, Pb

Lead in contact with  $H_2O$  and air free from  $CO_2$  gives a solution of  $PbO$  which turns litmus blue and turns red and is turned brown with  $H_2S$

$H_2O$  which has been boiled does not dissolve Pb if there is no access of air When shaken up with air it dissolves 0.01 to 0.008%  $PbO$  in 2 hours Pure spring water containing 1% grains salts in 2 pounds  $H_2O$  and no  $CO_2$  when conducted through a lead pipe 150 feet long dissolves so much lead that it turns brown with  $H_2S$  (Yorke Phil Mag J 5 82)

$CO_2$  or small amts of salts prevent the solution of Pb 1 vol  $H_2O$  with  $\frac{1}{2}$  vol  $CO_2$  dissolves only a trace of Pb Spring  $H_2O$  containing in 10 pounds 1.21 grains  $NaCl$  and  $CaCl_2$  and 6.4 grains  $CaCO_3$  dissolved in  $CO_2$  does not dissolve lead (Yorke)

If the amt of salts in solution equals  $\frac{1}{1000}$  the amt of  $H_2O$  and especially if they are carbonates very slight amts of Pb are dissolved (Christison Phil Mag J 21 158)

$CaCO_3$  dissolved in  $CO_2$  water decreases the solubility of Pb more than any other salt

Distilled  $H_2O$  quietly standing in a closed flask with lead and air free from  $CO_2$  deposits white flocks of  $PbO_2H_2$  and dissolves  $\frac{1}{1000}$  pt  $PbO$  The solution has an alkaline reaction (v. Bonsdorff Pogg 41 305)

Water of 3 hardness does not take up enough Pb to become injurious (Clarke J B 1856 608)

Soluble carbonates increase the solubility of Pb in  $H_2O$  (Nevins C C 1851 608) especially  $(NH_4)CO_3$  (Bottger)

Presence of  $H_2SO_4$  decreases the solubility of Pb (Horsford Chem Gaz 1849 247)

$H_2O$  containing  $K_2SO_4$  takes up only a trace of Pb (Wetzlar Schw J 54 324)

Presence of sulphates diminishes (Christison) does not diminish (Graham Miller and Hoffmann) the action of  $H_2O$  on Pb

$CaSO_4$  protects Pb but it is attacked by much  $MgSO_4$  (Nevins)

$NaCl + Aq$  dissolves only a trace of Pb  
 $\frac{1}{1000}$  pt in  $H_2O$  is not sufficient to prevent the action of  $Cl_2$  on Pb

Presence of chlorides increases the solubility (Graham Miller and Hoffmann Nevins)

$H_2O$  containing  $KNO_3$  does not corrode Pb

Nitrates hinder the action of  $H_2O$  (v. Bonsdorff)

Nitrates increase the action of  $H_2O$  (Graham Miller and Hoffman) Nitrates have no influence (Kersting)

10 lbs of  $H_2O$  dissolved the following amts from Pb pipes in 24 hours if distilled  $H_2O + 1\% Na_2CO_3$ , 0.38 grain Pb, if Duna water, 0.19 grain Pb, if canal water, 0.15 grain Pb, if distilled  $H_2O + 1\% NH_4NO_3$ , 0.15 grain Pb, if hard well water, 0.04 grain Pb, if distilled  $H_2O + 1\% KNO_3$ , 0.01 grain Pb (Kersting, Dingl 169 183)

200 l Manchester drinking water dissolved 2.094 g from 1 sq metre Pb in 8 weeks, 9 l well water dissolved 1.477 g from 1 sq metre Pb in 8 weeks, 11 l distilled  $H_2O$  containing

are dissolved 110 003 g from 1 sq metre Pb in 8 weeks, distilled  $H_2O$  free from air dissolved 1 829 g from 1 sq metre Pb in 8 weeks, sea water dissolved 0 038 g from 1 sq metre Pb in 8 weeks (Calvert and Johnson, C N 16 171)

A lead pipe taken up in Paris, which had been exposed to action of ordinary  $H_2O$  for 200 years, was found perfectly smooth and uncorroded (Belgrand, C R 77 1055)

Pb is attacked by all waters, hard or soft, even highly calcareous water dissolves some lead (Mayençon and Bergeret, C R 78 484)

Pure distilled  $H_2O$  does not act on Pb, but extremely small quantities of  $NH_3$ ,  $HNO_3$ , etc cause an action, but for this action on Pb the presence of air and  $CO_2$  is also required (Stallman, Dingl 180 366)

100 ccm distilled  $H_2O$  dissolved 3 mg from 11 8 sq cm lead in one week when air without  $CO_2$  was passed through the solution 8 mg were dissolved when the air contained  $CO_2$  (Wagner, Dingl 221 260)

Action of dil salt solutions on lead In 500 ccm of the solutions containing salt, bright sheets of lead of 5600 sq metres surface were so suspended that the liquid reached all parts of the metal without hindrance, and the amts dissolved determined after 24, 48, and 72 hours of action

Salt	Grammes salt per litre	Dissolved Pb in mg per litre		
		after 24	48	72 hrs

$KNO_3$	1 0	14	20
$Na_2CO_3$	1 0	0	
NaOH	0 923	430	
$CaO, H_2$	Saturated	137	

(Wagner, Dingl 221 260)

Solubility of Pb in salt solutions

25 sq cm were acted upon by a solution containing 0 2 g salt in a litre for 21 days

Three series of experiments were carried on I In corked flasks II In beakers covered with porous paper, diameter of mouth of beaker = 11 5 cm III In basins covered with porous paper, diameter of mouth of basin = 14 5 cm IV In corked flasks with constant current of air V In beakers half filled and covered with porous paper, the lead being suspended so that equal amts of surface were above and beneath the liquid

The amts in mgs of Pb dissolved were as follows —

Salt used	I	II	III	IV	V
$NH_4NO_3$	1 8	4 0	16 0		
$KNO_3$	1 6	0 5	6 0	1 5	
$CaCl_2$	3 0	2 8	5 5	3 5	3 5
$(NH_4)_2SO_4$	0 7	1 3	16 0	5 0	2 5
$K_2CO_3$	0 3	0 3	0 7	0 6	0 3
Dist $H_2O$	1 5	0 8	4 2	2 0	

(Muir, Chem Soc 36 660)

$H_2O$  sat with  $CO$  dissolves 0 012 g Pb to a litre in 3 days (Muir, C R 77 1529)

Action of  $H_2O$  charged with  $CO$  under 760 mm pressure on Pb 3 mg of Pb were dissolved per litre in 24 hours, and the amt was not increased by further action The addition of 100 mg  $K_2CO_3$  + 20 mg  $NH_4NO_3$  to a litre prevented all action

Action of  $H_2O$  charged with  $CO$  under 6 atmos pressure on Pb

14 8 mg were dissolved per l in 24 hours, and 24 mg per l in 48 hours

Action of various salt solutions added to above solution of  $CO$  were as follows —

	mg salt per l	mg Pb dissolved	
		after 24 hrs	after 48 hrs
$K_2CO_3$	80	13 2	32 0
$K_2CO_3$	160		6 0
$CaCl_2$	160	32 0	44 0
$NH_4NO_3$	16	5 0	
$NH_4NO_3$	40	10 0	35 0
Distilled $H_2O$		14 8	24 0

(Murr, C N 33 125)

The corrosion of Pb by ordinary distilled  $H_2O$  depends upon the presence of  $CO_2$  and O. If the dissolved  $CO_2$  is double the amt of the dissolved O, the action is most energetic. When  $CO_2$  is wholly absent and O present, the action is very slight, and when the  $H_2O$  contains  $1\frac{1}{2}$  or more vol %  $CO_2$  with normal amt of oxygen, there is no visible corrosion. Pure distilled H O containing neither O nor  $CO_2$  has no action on Pb. In the above cases the greater part of the Pb remains in the form of a white ppt or crust on the Pb, but in the case where O and  $CO_2$  are both present in the ratio of 1 2, very small amts of Pb go into solution in a few days, the amt, however, diminishes on standing. As the amt of  $CO_2$  increases, the amt of Pb dissolved in the  $H_2O$  also increases.

$NH_4OH$  alone does not protect Pb from corrosion, but when in combination with  $CO_2$  the action is much diminished.

$CaO_2H_2$ , and  $NaOH + Aq$  attack Pb much more actively in absence of CO and presence of air. In absence of dissolved O neither  $CaO_2H_2$  nor  $NaOH$  attacks Pb.

$Na_2CO_3 + Aq$  in absence of  $CO_2$  attacks Pb slightly, but  $NaHCO_3 + Aq$  has not the slightest action.

$CaH_2(CO_3)_2 + Aq$  also has not the slightest action on Pb, and the presence of  $CaCO_3$  and CO wholly prevents  $H_2O$  attacking Pb.

$CaSO_4 + Aq$  in presence of air forms a crust on Pb, but no Pb is found in solution, but if air is excluded there is no visible action. Presence of  $CO_2$  causes a strong corrosive action.

H O containing  $CaSO_4$  and  $CaH_2(CO_3)_2$  does not attack Pb.

The above reactions are not in the least altered by the presence of moderate amts of nitrates, chlorides, or ammonium, or organic compounds, but ammonium salts in excess have a strong solvent action on Pb. (Muller, J pr (2) 36 317.)

See also an extended report of the action of  $H_2O$  on Pb made to the Water Committee of Huddersfield, England, in 1886, by Messrs Crookes, Odling, and Lidy.

Very extended researches are published by Cornolley and Frew (Jour Soc Chem Ind 7 15), of which only the general conclusions can be given here.

The action of slaked lime, limestone, sand calcium silicate, mortar, etc., was tested. The results were as follows—

1 In nearly all cases the corrosion is greater with free exposure to the air than when air is excluded. The difference is especially great in those cases where the greatest action on the lead takes place. Aluminum hydroxide and blue clay form exceptions, and exert a greater corrosive action when air is excluded. In the case of  $CaCO_3$ , old mortar,  $CaSiO_3$ , or a mixture of  $CaCO_3$  and  $CaO_2H_2$ , the exclusion or presence of air makes no appreciable difference.

$KNO_3 + Aq$  shows a peculiar behaviour. In the presence of air it acts nearly as much on the Pb as pure  $H_2O$ , but when air is excluded it exerts nearly as much retarding action as  $CaSiO_3$ .

2 In the presence of air the action of  $H_2O$  on Pb is considerably increased by the presence of  $NH_4NO_3$  or  $CaO_2H_2$ , with exclusion of air, by  $CaSO_4$ , also by a mixture of  $CaO_2H_2$  and sand. All the other investigated substances, even  $KNO_3$ , hinder the action of  $H_2O$  on Pb either with or without exclusion of air.

3  $CaO_2H_2 + Aq$  exerts in all cases a much greater corrosive action than pure H O, and although this action is diminished by sand yet fresh mortar very quickly destroys lead pipes when in contact therewith. Old mortar, on the other hand, and also  $CaSiO_3$  and  $CaCO_3$ , have a protective action.

4 The fact is very important that sand,  $CaCO_3$ , old mortar,  $CaSiO_3$ , and a mixture of sand and  $CaCO_3$  afford considerable protection to lead against  $H_2O$ . A mixture of limestone and sandstone has more effect than the two substances separately.

5  $CaSiO_3$  totally prevents the corrosive action of  $KNO_3$  and  $NH_4NO_3$ , so that the lead is not attacked by solutions of those salts any more than by  $H_2O$  containing  $CaSiO_3$  alone. Sand, and a mixture of sand and  $CaCO_3$  have a similar effect, but not to such a degree.

6 The protective influence of  $CaCO_3$  does not appear to depend on the presence of  $CO_2$  and the formation of  $CaH_2(CO_3)_2$ .

7  $MgCO_3$  prevents the corrosion of Pb as much as  $CaSiO_3$ . (Cornolley and Frew, Jour Soc Chem Ind 7 15.)

Pb in contact with Zn or Fe is protected thereby from the solvent action of H O, and in fact the action is nearly null. Sn, on the other hand, increases the action. This is of importance in regard to the use of tin-coated lead pipes.

The presence of Cl salts does not influence the action of the  $H_2O$  on Pb, hard or soft H O provided it contains  $CO_2$  having a strong corrosive action. Removal of air from  $H_2O$  diminishes the solvent action. Simple filtration will remove all Pb from  $H_2O$  if suitable filters are used. (Flogel, J B 1888 2645.)

Pure distilled  $H_2O$  has strong corrosive action on Pb, which is very much weakened by addition of a solution of  $CaCO_3$  in carbonic acid water, but the presence of sulphates increase the action. Pb is not appreciably attacked by  $H_2O$  in presence of chlorides alone,

but very strongly when  $CaSO_4$  is also present.  $H_2O$  containing  $CO_2$  also corrodes Pb. The conclusion was drawn that the absence of action of  $H_2O$  on Pb in lead pipes is due to the presence of traces of  $CaH_2(CO_3)_2$  (Barbaglia and Gucci, C C 1888 934)

### Solubility in $H_2O$ containing various solids in solution

Water used	Pts of lead per 100 000			
	1	2	3	4
Water alone, unfiltered	8 19	12 98	8 19	4 09
Water alone, filtered	3 00	4 09	2 07	2 32
Water containing 0 049 g NaCl per l, unfiltered	1 36	2 73	0 68	4 04
" " " " " " filtered	0 68	1 50	0 67	1 36
Water containing 0 49 g $Na_2SO_4$ per l, unfiltered	3 41	6 83	2 05	1 84
" " " " " " filtered	2 05	3 41	1 64	1 77
$CaHCO_3$ +Aq containing 0 04 g CaO as carbonate per l	2 45	3 14	2 63	5 70
$CaHCO_3$ +Aq with NaCl	2 05	3 41	2 35	3 40
$CaHCO_3$ +Aq with $Na_2SO_4$	2 18	3 32	2 05	3 16
$CaSO_4$ +Aq containing 0 095 g CaO as sulphate per l	6 83	6 83	3 41	1 35
$CaSO_4$ +Aq with NaCl	5 46	6 57	3 51	1 50
$CaSO_4$ +Aq with $Na_2SO_4$	4 78	5 87	3 69	1 77

Column 1 gives the numbers for distilled water free from air, column 2 for distilled water aerated by agitation with air, column 3 for water continuously aerated by passing 1 litre of air through it per hour, column 4 for distilled water through which 1 litre of air and 400 cc of  $CO_2$  were passed per hour throughout the experiment (Antony and Benelli, Gazz ch it 1896, 26, (2) 97 and 352)

Almost insol in cold  $HCl$ +Aq, and only sl attacked when boiling. Completely sol in  $HNO_3$ +Aq if not too conc, but presence of  $H_2SO_4$  or  $HCl$  diminishes the solvent power to a great extent (Rose)

Granulated Pb is sl sol in conc  $HCl$ +Aq, addition of  $PtCl_4$  makes the action very energetic. Dil  $HCl$ +Aq may also be used with  $PtCl_4$  (Millon, C R 21 49)

$HCl$ +Aq of 12 sp gr, with Pb, gives off H at ord temp, more abundantly when heated. Evolution of H is hastened by placing Cu in contact with the Pb (Stolba, J pr 94 113)

Quickly decomp by hot  $HCl$ +Aq, slowly by cold (Sharpley, C N 50 126)

Scarcely acted upon by boiling conc  $HCl$ +Aq

Sol in aqua regia

$HNO_3$ +Aq is the best solvent, but Pb is as good as insol in a mixture of  $HNO_3$  and  $H_2SO_4$  (Berzelius)

Not acted upon by very conc  $HNO_3$ +Aq

Pb is only sl attacked by  $HNO_3$ +Aq of any strength below  $15^\circ$ . Above  $15^\circ$  it is most rapidly attacked by a rather weak acid (Montemartini, Gazz ch it 22 397)

Action of  $H_2SO_4$  on Pb

$H_2SO_4$  of 1 842 sp gr dissolves 201 g from 1 sq metre pure lead at ordinary temp (time?), and  $H_2SO_4$  of 1 705 sp gr dissolves only 59 g

Slight impurities in the lead lessen this

solubility (Calvert and Johnson, Chem Soc (2) 1 66)

Strongly attacked by 99 8%  $H_2SO_4$  at ord temp with exclusion of air (Lunge, Dingl 261 131)

When 0 2 g pure Pb was heated with 50 ccm  $H_2SO_4$  of  $66^\circ B$  there was no appreciable action below  $175^\circ$ . At  $230$ – $250^\circ$  all the Pb was suddenly converted into  $PbSO_4$ , which dissolved (Bauer, B 8 210)

Lead is slowly attacked by pure cold conc  $H_2SO_4$ +Aq (99 78%  $H_2SO_4$ ). Lead vessels which held the  $H_2SO_4$  were gradually destroyed by long standing (Napier and Lunge, C N 42 314)

$H_2SO_4$ +Aq (20%) does not evolve H under the same circumstances (Stolba)

Sol in  $HC_2H_3O_2$ +Aq when in contact with the air

Strong  $NH_4OH$ +Aq does not dissolve litharge, but lead immersed in  $NH_4OH$ +Aq 3 days gives an ammoniac solution (0 0139% lead (Endemann, Am Ch J 1897, 19 892)

Somewhat sol in  $NaCl$ +Aq (Reichelt, Dingl 172 155)

$NaCl$ +Aq attacks Pb at high temp (Lunge, l c)

Action of  $KClO_3$ .  $KClO_3$ +Aq (6 3%  $KClO_3$ ) oxidised 64 31 g Pb from 1 sq metre surface by boiling 7 hours,  $KClO_3$ +Aq (25%  $KClO_3$ ) oxidised 151 12 g under same conditions, and  $Ca(ClO_3)_2$ ,  $CaCl_2$ +Aq ( $20^\circ$  Baume)

tions, and  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2 + \text{Aq}$  (20° Baume), obtained by passing  $\text{Cl}_2$  through  $\text{CaO}_2\text{H}_2 + \text{Aq}$ , oxidised 437.70 g (Lunge and Deggeler, Jour Soc Chem Ind 4 31)

Insol in liquid  $\text{NH}_3$  (Gore, Am Ch J 1898, 20 828)

Sol in a solution of K in liquid  $\text{NH}_3$  (Kraus, J Am Chem Soc 1907, 29 1562)

$\frac{1}{2}$  ccm oleic acid dissolves 0.0592 g Pb in 6 days (Gates, J phys Chem 1911, 15 143)

Solubility of Pb in petroleum

If b-pt is under 230°, only slightest trace is dissolved in 4 months; if 230–300°, 0.0026% in 4 months, if over 300°, 0.0244% in 4 months; if over 300°, 0.0244% in 4 months

Solubility of Pb in commercial oil of turpentine and resin oil

	Temp	% Pb dissolved	
		in 8 days	in 14 days
Fresh oil of turpentine	15–20°	sl trace	0.0722
Old oil of turpentine	15–20	0.0522	0.1435
Fresh oil of turpentine	100	0.265	0.715
Old oil of turpentine	100	0.982	1.851
Fresh oil of turpentine	130–150	0.938	2.045
Old oil of turpentine	130–150	1.738	4.083
Fresh resin oil	15–20	trace	0.024
Old "	15–20	0.073	0.185
Fresh "	100	0.380	0.880
Old "	100	1.190	2.711
Fresh "	130–150	1.050	2.065
Old "	130–150	2.208	4.740

(Fngler and Kneis, Dingl 263 193)

Pb is slowly attacked by oil of turpentine (Am Chem 4 289)

The fatty oils dissolve Pb in considerable amt (Muller, J B 1878 1169)

Not attacked by sugar + Aq (Klein and Berg, C R 102 1176)

#### Lead potassium amide

*Su* Potassium ammonoplumbite

#### Lead azoimide, basic, $\text{PbO}$ , $\text{PbN}_6$

Insol in  $\text{H}_2\text{O}$  (Wohler, B 1913, 46 2054)

#### Lead azoimide, $\text{PbN}_6$

Insol in cold  $\text{H}_2\text{O}$ , much less sol in boiling  $\text{H}_2\text{O}$  than  $\text{PbCl}_2$ . 1 l  $\text{H}_2\text{O}$  dissolves about  $\frac{1}{2}$  g  $\text{PbN}_6$ . Easily sol in warm  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  insol in conc  $\text{NH}_4\text{OH} + \text{Aq}$  (Curtius, B 24 3344)

#### Lead bromide, $\text{PbBr}_2$

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$ , or in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2$  (Lowig)

1 l  $\text{H}_2\text{O}$  dissolves 6 g  $\text{PbBr}_2$  at 10°, addition of  $\text{HBr}$  causes a ppt which redissolves on further addition of  $\text{HBr}$ . 1000 pts of a liquid containing 720 pts  $\text{HBr}$  dissolve 550 g  $\text{PbBr}_2$ . This solubility increases by heating (Ditte, C R 92 718)

1 l  $\text{H}_2\text{O}$  dissolves 26.28 millimols  $\text{PbBr}_2$  at 25.2° (von Ende, Z anorg 1901, 26 159)

Solubility in 100 g  $\text{H}_2\text{O}$  at t°

t°	G $\text{PbBr}_2$
0	0.4554
15	0.7305
25	0.9744
35	1.3220

(Lichty, J Am Chem Soc 1903, 25 474)

Sl sol in  $\text{H}_2\text{O}$

$8.34 \times 10^{-1}$  gram are dissolved in 1 liter of sat solution at 20° (Bottger, Z phys ch 1903, 46 603)

Solubility of  $\text{PbBr}_2$  in  $\text{HNO}_3 + \text{Aq}$  at 25.2°

S=solubility in millimols per litre

$\text{HNO}_3$ normal	S
0.001	39.11
0.01	39.87
0.051	42.56
0.04 $\text{KNO}_3 +$	
0.01 $\text{HNO}_3$	42.77

(von Ende, Z anorg 1901, 26 162)

Slowly sol in cold, easily in warm  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Wittstein)

Not pptd in presence of Na citrate (Spiller)

Insol in  $\text{H}_2\text{O}$  containing  $\text{Pb}(\text{NO}_3)_2$  (von Ende, Z anorg 1901, 26 159)

Insol in benzene (Franchimont, B 16 387)

Moderately sol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

Insol in benzonitrile (Naumann, B 1914, 47 1370)

Insol in methyl acetate (Naumann, B 1909, 42 3790), ethyl acetate (Naumann, B 1910, 43 314)

Difficultly sol in acetone (Naumann, B 1904, 37 4328)

+3 $\text{H}_2\text{O}$  (Ditte, l c)

**Lead hydrogen bromide**,  $5\text{PbBr}_2, 2\text{HBr} + 10\text{H}_2\text{O}$

Sol in  $\text{HBr} + \text{Aq}$  (Ditte, C R 92 718)

**Lead magnesium bromide**,  $\text{PbBr}_2, 2\text{MgBr}_2 + 16\text{H}_2\text{O}$

Very deliquescent. Decomp immediately by  $\text{H}_2\text{O}$  or alcohol (Otto and Drewes, Arch Pharm 229 585)

**Lead potassium bromide (potassium bromoplumbite)**,  $\text{PbBr}_2, \text{KBr} + \text{H}_2\text{O}$

(Remsen and Herty, Am Ch J 14 124)

$+-\text{H}_2\text{O}$  (Wells, Sill Am J 145 129)

$\text{PbBr}_2, 2\text{KBr}$  Sol in a little  $\text{H}_2\text{O}$  without decomp, but decomp by an excess with separation of  $\text{PbBr}_2$  (Lowig)

$+\text{H}_2\text{O}$  (Wells, Sill Am J 145 129)

$2\text{PbBr}_2, \text{KBr}$  (Wells)

**Lead potassium perbromide**,  $\text{K}_3\text{Pb}_2\text{Br}_8 + 4\text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$  and alcohol (Wells, Z anorg 4 340)

**Lead rubidium bromide**,  $\text{PbBr}_2, 2\text{RbBr} + \frac{1}{2}\text{H}_2\text{O}$

(Wells, Sill Am J 146 34)

$2\text{PbBr}_2, \text{RbBr}$  (Wells)

uide

y  $\text{H}_2\text{O}$  (Lowig)

**Lead bromochloride**,  $\text{PbBrCl} = \text{PbBr}_2, \text{PbCl}_2$

Can be recrystallised from  $\text{H}_2\text{O}$  without decomp (Hes, C N 43 216)

$3\text{PbCl}_2, \text{PbBr}_2$  Sol in  $\text{H}_2\text{O}$  with decomp Sol in  $\text{HCl}$  and in  $\text{HBr}$  Insol in cold alcohol, sl sol in boiling alcohol (Thomas, C R 1899, 128 1235)

**Lead bromiodide**,  $\text{PbBrI} = \text{PbBr}_2, \text{PbI}_2$

Decomp by  $\text{H}_2\text{O}$  Cryst from a solution of  $\text{PbI}_2$  in  $\text{HBr}$  (Grissom and Thorp, Am Ch J 10 229)

$3\text{PbBr}_2, \text{PbI}_2$  Decomp by  $\text{H}_2\text{O}$  (Thomas, C R 1899, 128 1236)

$6\text{PbBr}_2, \text{PbI}_2$  (G and T)

**Lead bromosulphide**,  $\text{PbBr}_2, \text{PbS}$

Properties as chlorosulphide (Parmentier)

**Lead chloride**,  $\text{PbCl}_2$

Slowly sol in 135 pts  $\text{H}_2\text{O}$  at 12°, and in a much smaller quantity of hot  $\text{H}_2\text{O}$  (Bischof)

Sol in 30 pts cold and 22 pts hot  $\text{H}_2\text{O}$  (Wittstein)

Sol in 30 pts  $\text{H}_2\text{O}$  at 18.75° (Abl)

100 pts  $\text{H}_2\text{O}$  dissolve 4.59 pts  $\text{PbCl}_2$  at 1.5° (Ure's Dict)

100 pts  $\text{H}_2\text{O}$  dissolve 0.9712 pt  $\text{PbCl}_2$  at 20° (Formánek, C C 1887 270)

100 pts  $\text{H}_2\text{O}$  dissolve 0.946 pt  $\text{PbCl}_2$  at 17.7° (Bell, Chem Soc (2) 6 355)

Sol in 105.2 pts  $\text{H}_2\text{O}$  at 16.5° (Bell, C N 16 69)

100 pts  $\text{H}_2\text{O}$  dissolve 0.8 pt  $\text{PbCl}_2$  at 0°, 1.18 pts at 20°, 1.7 pts at 40°, 2.1 pts at 55°, 3.1 pts at 80° (Ditte, C R 92 718)

1.1  $\text{H}_2\text{O}$  dissolves 38.80 millimols  $\text{PbCl}_2$  at 25.2° (von Ende, Z anorg 1901, 26 148)

9.61 x 10<sup>-1</sup> gram are dissolved in 1 liter of sat solution at 20° (Eottger, Z phys ch 1903, 46 603)

Solubility in  $\text{H}_2\text{O}$

100 g  $\text{H}_2\text{O}$  dissolve g  $\text{PbCl}_2$  at t°

(Lichty, J Am Chem Soc 1903, 25 474)

33.6 millimols  $\text{Pb}$  are dissolved in 1 liter  $\text{H}_2\text{O}$  at 18° (Pleissner, C C 1907, II 1056)

1.1  $\text{H}_2\text{O}$  dissolves 77.76 milliequivalents  $\text{PbCl}_2$  at 25° Sp gr of the solution 25°/4° = 1.0069 (Harkins and Wunninghoff, J Am Chem Soc 1911, 33 1816)

0.0388 mol  $\text{mg}$   $\text{PbCl}_2$  are sol in 1 l  $\text{H}_2\text{O}$  (Kernot and Pomilio, Soc R Napoli, 1912, (3), XVII, 353)

A colloidal modification is sol in hot water to give cryst modification (Van de Veide, Ch Z 1893, 17 1908)

Solubility in  $\text{H}_2\text{O}$  is not much increased by the addition of acids (Fresenius)

Sol in conc  $\text{HCl} + \text{Aq}$ , from which it is pptd by  $\text{H}_2\text{O}$ , but less sol in dil  $\text{HCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Berzelius)

Sol in 1636 pts  $\text{H}_2\text{O}$  containing  $\text{HCl}$  (Bischof)

Sat solution of  $\text{PbCl}_2$  in  $\text{HCl} + \text{Aq}$  of 1.116 sp gr contains 2.566%  $\text{PbCl}_2$  at 16.5°

Solubility in  $\text{HCl} + \text{Aq}$  100 pts liquid containing pts  $\text{HCl}$  of 1.1162 sp gr in 100 pts  $\text{H}_2\text{O}$  dissolve pts  $\text{PbCl}_2$  at 17.7°

(Bronsted, Z phys Ch 1912, 80 208)

$\text{PbCl}_2$  is sol in 120 pts pure  $\text{H}_2\text{O}$ , but on adding 5%  $\text{NaCl}$  437 pts are required to effect solution. When  $\text{PbCl}_2$  is digested with conc  $\text{NaCl} + \text{Aq}$ , 1 pt dissolves in 129 pts of the liquid

A study of the equilibrium between lead chloride and sodium chloride in aqueous solution at  $13^\circ$ ,  $50^\circ$  and  $100^\circ$  shows that at none of these temp do these chlorides form a double salt (Demasseux, C R 1914, 158 702)

Min *Cotunnite*

**Lead tetrachloride**,  $\text{PbCl}_4$

Sol in  $\text{H}_2\text{O}$  with subsequent decomp (Rivot, Beudant, and Dagun, Ann Min (**5**) **4** 239)

Obtained in a pure state by Friedrich Sol in a little cold  $\text{H}_2\text{O}$ , but is decomp by warming or diluting Miscible with conc  $\text{HCl}$ +Aq, not attacked by conc  $\text{H}_2\text{SO}_4$  even on warming (Friedrich, W A B **102**, 2b 534)

**Lead tetrachloride with MCl**

See Chloroplumbate, M

**Lead magnesium chloride**,  $\text{PbCl}_2$ ,  $2\text{MgCl}_2$ +  
 $13\text{H}_2\text{O}$

Deliquescent Decomp by  $\text{H}_2\text{O}$  (Otto and Drewes, Arch Pharm **228** 495)

**Lead potassium chloride** (potassium chloroplumbite),  $\text{PbCl}_2$ , KCl

(Remsen and Herty, Am Ch J **14** 125)

Contains  $\frac{1}{3}$   $\text{H}_2\text{O}$  (Wells, Sill Am J **145** 130)

See also Demassieux,  $\text{PbCl}_2$ +KCl under  $\text{PbCl}_2$

$2\text{PbCl}_2$ , KCl (Wells)

See also Demassieux as above

**Lead rhodium chloride**

See Chlororhodite, lead

**Lead rubidium chloride**,  $\text{PbCl}_2$ ,  $2\text{RbCl}$ +  
 $\frac{1}{2}\text{H}_2\text{O}$

(Wells, Sill Am J **146** 34)

$2\text{PbCl}_2$ , RbCl (Wells)

**Lead sodium chloride**

Decomp by  $\text{H}_2\text{O}$

**Lead sodium tetrachloride**,  $2\text{PbCl}_4$ ,  $9\text{NaCl}$

Very sol in  $\text{H}_2\text{O}$  (Sobrero and Selmi, A ch (**3**) **29** 165)

See also Chloroplumbate, lead

**Lead thalious chloride**,  $\text{PbCl}_2$ ,  $3\text{TlCl}$

Sl sol in cold, more in hot  $\text{H}_2\text{O}$  (Noyes, Z phys Ch **9** 622)

$\text{PbCl}_2$ ,  $\text{TlCl}$  Ppt (Ephraim, Z anorg **1909**, **61** 245)

#### Lead chloriodide, $2\text{PbCl}_2, \text{PbI}_2$

Sol in hot  $\text{NH}_4\text{Cl} + \text{Aq}$  (Poggiale, J pr 35 329)

$\text{PbCl}_2, \text{PbI}_2$  Sol in hot  $\text{HCl} + \text{Aq}$  (Engelhardt)

Sol in  $\text{H}_2\text{O}$  (Thomas, C R 1898, 126 1351)

#### Lead chloroselenide

Decomp by boiling  $\text{H}_2\text{O}$  and by conc  $\text{KOH} + \text{Aq}$  (Fonze-Diacon, C R 1900, 130 1133)

#### Lead chlorosulphide, $\text{PbCl}_2, 3\text{PbS}$

Partially decomp by hot  $\text{H}_2\text{O}$  Not attacked by dil, but decomp by conc  $\text{HCl} + \text{Aq}$  (Hunsfeld, J pr 7 27)

$\text{PbS}, \text{PbCl}$  Decomp by  $\text{H}_2\text{O}$ , acids, or alkalies (Purmentier, C R 114 298)

$\text{ClPbS}_2, \text{PbS}_2, \text{PbS}, \text{PbCl}$  Ppt (Hofmann, B 1904, 37 250)

#### Lead fluoride, $\text{PbF}_2$

Very sl sol in  $\text{H}_2\text{O}$ , and not more in  $\text{HIF} + \text{Aq}$  (Berzelius, Pogg 1 31)

5.5 millimols are sol in 1000 ccm  $\text{H}_2\text{O}$  (Jacquet, Z anorg 1901, 27 35)

1 l  $\text{H}_2\text{O}$  dissolves 640 mg at 18° (Kohlrausch, Z phys Ch 1901, 50 356)

641 mg in 1 l of sat solution at 18° (Kohlrausch, Z phys Ch 1908, 64 168)

More sol in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$  Sl sol in  $\text{Kl} + \text{Aq}$  (Herty, Am Ch J 14 107)

Sl sol in dil  $\text{Hl} + \text{Aq}$ , insol in strong  $\text{HF} + \text{Aq}$

0.0150 g atoms Pb are sol in 1000 cc  $\text{Hl}$  (Jacquet, Z anorg 1901, 27 37)

Insol in liquid  $\text{Hl}$  (Franklin, Z anorg 1905, 46 2)

Insol in liquid  $\text{NH}_3$  (Gore, Am J Ch 1893, 20 828)

Insol in ethylacetate (Naumann, B 1910, 43 314)

Insol in acetone (Naumann, B 1904, 37 4329)

#### Lead potassium fluoride, $3\text{KF}, \text{HF}, \text{PbF}_4$

Decomp  $\text{H}_2\text{O}$ , stable in dry air (Brauner, Z anorg 1894, 7 7)

#### Lead silicon fluoride

See Fluosilicate, lead

#### Lead tantalum fluoride

See Fluotantalate, lead

#### Lead titanium fluoride

See Fluotitanate, lead

#### Lead fluoride sulphate

See Sulphate fluoride, lead

#### Lead hydroxide, $\text{PbO}_2\text{H}_2$

Not appreciably sol in  $\text{H}_2\text{O}$  (Jaeger, Z anorg 1901, 27 38)

1 l  $\text{H}_2\text{O}$  dissolves 0.155 g  $\text{PbO}_2\text{H}_2$  at 20° and 100° (Sehnal, C R 1909, 148 1396)

#### Solubility in $\text{NaOH} + \text{Aq}$

G Na in 20 ccm	G Pb in 20 ccm

0.3196	0.1736
0.5866	0.3532
0.9476	0.4071
1.7802	0.5170

(Rubenbauer, Z anorg 1902, 30 336)

#### Solubility of $\text{PbO}_2\text{H}_2$ in $\text{NaOH} + \text{Aq}$ at 25°

G mol per l		Solid Phase
Na	Pb	
0.274	0.0181	$\text{PbO}_2\text{H}_2$
0.431	0.287	"
0.476	0.319	"
0.745	0.489	"
1.132	0.711	"
1.519	0.101	"

(Wood, Chem Soc 1910, 97 884)

Insol in acetone (Naumann, B 1904, 37 4329)

$2\text{PbO}, \text{PbO}_2\text{H}_2 = 3\text{PbO}, \text{H}_2\text{O}$  Sol in 10,000 to 12,000 pts  $\text{H}_2\text{O}$  (Yorke) Sol in 7000 pts  $\text{H}_2\text{O}$  (v Bonsdorff, Pogg 41 307)

0.45 millimol Pb are sol in 1 liter  $\text{H}_2\text{O}$  at 18° (Pleissner, C C 1907, II 1056)

Sol in acids Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  Sol in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$  Sol in hot  $\text{NH}_4\text{Cl} + \text{Aq}$ , and reprecip by  $\text{NH}_4\text{OH} + \text{Aq}$

Solubility in  $\text{KOH} + \text{Aq}$ , according to Ditte (C R 94 130) When  $\text{KOH} + \text{Aq}$  is gradu-

ally added to lead hydroxide suspended in  $H_2O$ , the lead hydroxide is at first dissolved proportional to the amount of KOH, until the strength reaches 200 g KOH to 1 litre  $H_2O$ . The solubility then diminishes and increases again until 400 g KOH are dissolved in 1 litre  $H_2O$ . The amorphous lead hydroxide is then converted into crystalline  $2PbO(PbO_2H_2)$ . By further addition of KOH the solubility is suddenly decreased, and then increases again (Ditte)

Sol in triethyl toluenyl ammonium hydroxide + Aq

Sol in sorbine + Aq (Pelouze)

Sol in acetates + Aq (Mercer)

Sol in Ca, Ba, Sr, K, or Na succinate + Aq

Not pptd in presence of Na citrate + Aq (Spiller)

(Heise, J phys Ch 1912, 16, 273)

**Lead hydrogen iodide,  $\text{PbH}_2\text{I}_2 = \text{PbI}_2, 2\text{HI}$** Cold  $\text{H}_2\text{O}$  dissolves out  $\text{HI}$  Sol in hot  $\text{H}_2\text{O}$ , from which crystallizes  $\text{PbI}_2$  (Guyot, J chim med 12 247) $+10\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Berthelot, C R 91 1024)**Lead lithium iodide,  $\text{PbI}, \text{LiI} + 5\text{H}_2\text{O}$** Loses 1 mol  $\text{H}_2\text{O}$  at  $95^\circ$  and loses another mol  $\text{H}_2\text{O}$  at  $100^\circ$  (Bogorodski, C C 1894, II 515) $\text{PbI}_2, 2\text{LiI} + 6\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Mosnier, C R 1895, 120 446)**Lead magnesium iodide,  $\text{PbI}_2, 2\text{MgI}_2$** Decomp by  $\text{H}_2\text{O}$  and by alcohol (Mosnier, A ch 1897, (7) 12 402) $+16\text{H}_2\text{O}$  Very hygroscopic Decomp immediately by  $\text{H}_2\text{O}$  (Otto and Drewes, Arch Pharm 229 180)**Lead nickel iodide,  $\text{PbNi}_2\text{I}_6 + 3\text{H}_2\text{O}$** Decomp by  $\text{H}_2\text{O}$  (Mosnier, A ch 1897, (7) 12 411)**Lead potassium iodide (Potassium iodoplumbite),  $\text{PbI}_2, \text{KI}$** Permanent Completely decomp by  $\text{H}_2\text{O}$  Unacted upon by cold, but completely decomp by hot alcohol (Boullay, A ch (2) 34 366) $+2\text{H}_2\text{O}$  The only salt that could be obtained by Remsen and Herty (Am Ch J 14 110) $\text{PbI}_2, 2\text{KI}$  Sl sol in boiling chloroform, easily sol in strong  $\text{KI} + \text{Aq}$ , insol in alcohol (Brooks, C N 1898, 77 191) $+2\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$  (Berthelot, A ch (5) 29 289)

Does not exist (R and H)

 $+4\text{H}_2\text{O}$  (Ditte, C R 92 134) Does not exist (R and H) $\text{PbI}_2, 4\text{KI}$  Decomp by  $\text{H}_2\text{O}$ , insol in alcohol (Boullay) Does not exist (R and H) $3\text{PbI}_2, 4\text{KI} + 6\text{H}_2\text{O}$  (Berthelot, l c) Does not exist (R and H)**Lead potassium periodide,  $\text{K}_3\text{Pb}_2\text{I}_8 + 4\text{H}_2\text{O}$** Decomp by  $\text{H}_2\text{O}$  or alcohol (Wells, Z anorg 4 346)**Lead rubidium iodide,  $\text{PbI}_2, \text{RbI} + 2\text{H}_2\text{O}$** 

(Wells, Sil Am J 146 34)

**Lead silver iodide,  $\text{PbI}_2, 2\text{AgI}$** 

(Ruff and Geisel, B 1905, 38 2663)

**Lead silver iodide ammonia,  $\text{PbI}_2, 2\text{AgI}, 5\text{NH}_3$** 

(Ruff and Geisel, B 1905, 38 2663)

**Lead sodium iodide,  $\text{PbI}_2, \text{NaI}$** Decomp by  $\text{H}_2\text{O}$  (Poggiale, C R 20 1180) $+x\text{H}_2\text{O}$  (Remsen and Herty, Am Ch J 14 124) $\text{PbI}_2, 2\text{NaI} + 6\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  (Moissner, C R 1895, 120 445)**Lead iodide ammonia,  $\text{PbI}_2, 2\text{NH}_3$** Decomp by  $\text{H}_2\text{O}$  (Rammelsberg, Pogg 48 166)**Lead iodide carbonate**

See Carbonate iodide, lead

**Lead iodosulphide,  $\text{PbS}, 4\text{PbI}_2$** Decomp by light, heat, acids and alkalies (Lenher, J Am Chem Soc 1895, 17 512) Sol in conc  $\text{HI}$ , insol in dil  $\text{HI} + \text{Aq}$  (Lenher, J Am Chem Soc 1901, 23 681)  $\text{IPbS}_2\text{PbS}_2\text{PbI}$  Ppt (Hofmann, B 1904, 37 251)**Lead suboxide,  $\text{Pb}_2\text{O}$** Decomp by  $\text{H}_2\text{O}$  into  $\text{PbO}_2\text{H}_2$ Decomp by dil  $\text{H}_2\text{SO}_4, \text{HCl}, \text{HNO}_3, \text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , or alkalies, into  $\text{PbO}$ , which dissolves, and  $\text{Pb}$ , which dissolves or not, according to the reagent Sol in dil  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ **Lead monoxide (Litharge),  $\text{PbO}$** Sol in 7000 pts  $\text{H}_2\text{O}$  (Horsford)Pure  $\text{PbO}$  is insol in  $\text{H}_2\text{O}$  (Brandecke, Report 53 155, Siebold, Repert, 53 174, Herbergen, Repert 55 55) Sl sol in  $\text{H}_2\text{O}$  (York, Phil Mag (3) 5 82)0.31 millmoles  $\text{Pb}$  are dissolved in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  (Pleissner, C C 1907, II 1056)1.71  $\times 10^{-2}$  g are dissolved in 1 litre of sat solution at  $20^\circ$  (Bottger, Z phys Ch 1903, 46 603)

Easily sol in acids

Sol in KOH, or NaOH + Aq, also in  $\text{CaO} \cdot \text{H} + \text{Aq}$

Sol in boiling  $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$  with pptn of Aq

Sol in  $\text{CaCl}_2$ , and  $\text{SrCl}_2 + \text{Aq}$  (André, C R 104 359)

Sol in  $\text{MgCl}_2 + \text{Aq}$  (Voigt, Ch Ztg 13 695)

Sol in boiling  $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$  with pptn of  $\text{CaO}$

Partially sol in  $\text{Cd}(\text{NO}_3)_2$ , and  $\text{Mn}(\text{NO}_3)_2 + \text{Aq}$  with pptn of  $\text{CdO}$  and  $\text{MnO}$  respectively

Not acted upon by Mg, Ag, Co, Ni, or Ce nitrates + Aq (Persoz)

Very sol in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$  (Rochleder)

Insol in liquid  $\text{NH}_3$  (Franklin, Am Ch J 1898, 20 828)

Insol in acetone (Eidmann, C C 1899, II, 1014)

When finely pulverised, sol in cane sugar + Aq, but less than  $\text{Pb}_3\text{O}_4$  (Peschier)

Sol in glycerine. Readily sol in glucose + Aq (Persoz)

Sol in volatile oils (Schweitzer)

*Yellow modification*

Solubility in  $\text{H}_2\text{O}$  at 22°

	Solubility in g equiv per litre
1 Yellow $\text{PbO}$ , obtained by boiling lead hydroxide with 10% NaOH	$1.03 \times 10^{-4}$
2 Yellow $\text{PbO}$ , obtained by heating 1 at 630°	$1.05 \times 10^{-4}$
3 Yellow $\text{PbO}$ , obtained by heating at 740° red $\text{PbO}$ , formed by boiling lead hydroxide with conc NaOH	$1.00 \times 10^{-4}$
4 Yellow $\text{PbO}$ obtained by heating pure, commercial, yellow-brown $\text{PbO}$ at 620°	$1.09 \times 10^{-4}$

(Ruef, Z anorg 1906, 50 273)

*Red modification* Obtained by boiling lead hydroxide with conc NaOH + Aq

Solubility in  $\text{H}_2\text{O}$  at 22 =  $0.06 \times 10^{-4}$  g equiv per l (Ruef, Z anorg 1906 50 273)

*Yellow brown modification* Solubility in  $\text{H}_2\text{O}$  at 22 =  $1.10 \times 10^{-4}$  g equiv per litre (Ruef, Z anorg 1906, 50 273)

See also Lead

Min Mat coal

**Lead oxide (Red lead),  $\text{Pb}_3\text{O}_4$**

Insol in  $\text{H}_2\text{O}$

Converted by acids into  $\text{PbO}$  and salts of monoxide

Sol in a large amt of glacial acetic acid (Berzelius). Insol in acetic acid (Schonbein, J pr 74 325)

Solution in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  may decompose or not according to concentration of acid. When treated with an excess of  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  of 8° B,  $\text{Pb}_3\text{O}_4$  is quickly dissolved, but the solution soon deposits  $\text{PbO}_2$ , this decomposition is facilitated by dilution. But if  $\text{Pb}_3\text{O}_4$  is treated with a large excess of glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , it dissolves, and the solution is permanent if atmospheric air is excluded, and temp does not rise above 40° (Jacquelin, J pr 53 152)

Insol in acetone (Eidmann, C C 1899, II, 1014, Naumann, B 1904, 37 4329)

Easily sol in cane sugar + Aq (Peschier) Min *Minimum*

**Lead sesquioxide,  $\text{Pb}_2\text{O}_3$**

Insol in  $\text{H}_2\text{O}$  or in KOH + Aq

Decomp by strong acids into  $\text{PbO}_2$  and corresponding salt of monoxide

**Lead peroxide,  $\text{PbO}_2$**

Insol in  $\text{H}_2\text{O}$ . Sol in acids, also in conc alkali hydroxides + Aq. The solutions in acids are very unstable, except when concentrated and kept at a low temperature.

Decomp by cold HCl, HCN, HBr, and HI + Aq. Not attacked by other acids when cold, but decomp thereby when hot. Insol in moderately conc  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

There are two forms of  $\text{PbO}$ , the amorphous and the crystalline.

1 l of very conc  $\text{H}_2\text{SO}_4$  dissolves 10 millimols crystalline  $\text{PbO}$ .

Solubility of amorphous  $\text{PbO}$  in  $\text{H}_2\text{SO}_4 + \text{Ac}$  at 22°

99.5 millimols  $\text{PbO}$  are dissolved in 1 l of acid containing 1720 g  $\text{H}_2\text{SO}_4$ .

4 millimols  $\text{PbO}$  are dissolved in 1 l of acid containing 1097 g  $\text{H}_2\text{SO}_4$ .

$x$  = mols  $\text{H}_2\text{SO}_4$  per mole of  $\text{H}_2\text{O}$

$c$  = millimols  $\text{PbO}$  dissolved in 1 litre

$x$	$c$	$x$	$c$
0.32	0.82	0.20	$8 \times 10^{-4}$
0.30	0.4	0.15	$5 \times 10^{-4}$
0.25	7.10	0.10	$1 \times 10^{-4}$

(Dolezale and Fenech, Z anorg 1906 51 25, 5)

Decomp by  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol in conc KOH, or NaOH + Aq.

Sol with decomp in  $\text{H}_2(\text{NO}_3)_2 + \text{Aq}$  (Evoll)

Insol in acetone (Eidmann, C C 1899, II 1014, Naumann, B 1904 37 2913)

Min *Plattnerite*

**Lead manganese peroxide,  $\text{PbO}$ ,  $4\text{MnO}$**

Ppt (Gibbs and Parkmann, Sill Am J (2) 39 58)

**Lead oxybromide,  $\text{PbBr}_2$ ,  $\text{PbO}$** 

Insol in  $\text{H}_2\text{O}$
